Re: *Summary Report of Confirmatory Sampling at East Shoring Area*
BCP Site No. C915260
1001 Main Street in Buffalo, New York

Mr. Walia:

This correspondence provides a summary of the soil boring investigation that was completed on April 15th and 16th at 1001 Main Street by C&S Engineers (C & S). The objective of the investigation was to confirm that soil quality immediately east of the sheet pile shoring along the eastern BCP boundary meets the commercial soil clean up objectives for this project from the surface to 40 feet below ground surface (BGS).

SUBSURFACE INVESTIGATION

A CME 55 geotechnical drill rig was used to advance soil borings at the locations shown on Figure 1. Soil borings were advanced using 3.25 inch hollow stem augers (HSAs). The soil samples were obtained using a two inch diameter split spoon sample. Standard split spoon sampling (every five feet) was conducted from ground surface to a depth of 20 feet; continuous split spoon sampling was conducted from 20 feet to the bottom of each boring (40 feet BGS).

Soil boring locations were spaced approximately 30 feet apart in accordance with the site sampling grid that has been set up with one boring per grid in a north south line approximately 10 feet east of the eastern line of sheet pile. A total of nine soil borings were advanced to a depth of 40 feet BGS.

The breathing area and soils were continuously monitored for volatile organic compounds (VOCs) with a Minirae photo-ionization detector (PID).

Soil samples from each split spoon were collected in plastic bags, sealed and then screened with a PID for the presence of VOCs. Split spoon blow counts (N values), soil types, odors, soil staining, the presence of groundwater and PID readings were noted and placed on a field log for each boring for inclusion in this report (Appendix A).

The soil sample from each boring with the highest PID reading was selected for laboratory analysis. If there were no PID readings of note for samples within a specific soil boring, then a soil sample at the saturated zone was selected for laboratory analysis, or if the location of the saturated zone was unclear during drilling, then the sample was collected at the depth of the known contaminant transport zone at that location (i.e. 38 – 40 feet in borings RB – 8 and EB –

9). Selected samples were placed into pre-cleaned certified Terracore sample vials, placed on ice, and shipped to Test America daily for analysis of VOCs using Method 8260 on a 24 hour turnaround time. A total of nine soil samples were submitted to the contract laboratory for analysis.

FIELD OBSERVATIONS

Eight of the nine borings were advanced to a total depth of 40 feet BGS without incident. EB – 5 hit refusal at 8 feet BGS. A second attempt was made to advance EB – 5 by moving the drill rig six feet to the north where refusal was again encountered at 8 feet BGS. A third attempt was made by moving the drill rig five feet to the west where refusal was again encountered at eight feet BGS. To collect a representative sample from this location, C & S received approval from the NYSDEC to collect the sample to the west of the sheet pile shoring at 30 to 31 feet BGS using an excavator.

A veneer of fill material was present in all borings that was less than five feet in thickness. This was underlain by medium brown fine sand with some silt and in some places red brown clay at depth. In one instance (EB – 9), medium grey fine to medium gravel and sand was encountered near the bottom of the borehole (Appendix 1 for EB -9 boring log). A mild petroleum odor was only detected in samples from EB – 9 from 32 to 40 feet BGS.

Head space screening results of bagged samples with a PID were typically less than 1.0 ppm. However, on occasion, a PID reading from a bagged soil sample was between 1.0 and 5.0 ppm. Only three soil samples had field PID readings greater than 5 ppm: EB – 9 - 34 to 36 feet; EB – 9 - 36 to 38 feet; and EB – 9 - 38 to 40 feet.

ANALYTICAL RESULTS

Confirmatory analytical results from the soil samples submitted for laboratory analysis indicated the presence of the VOCs acetone, ethyl benzene, tetrachloroethene, toluene and xylenes. Acetone was detected in four samples; ethyl benzene was detected in four samples, tetrachloroethene was detected in one sample; toluene was detected in 8 of the samples; and xylenes were detected in five of the samples analyzed.

Comparison of the analytical results to Part 375 Commercial Use SCOs indicates that there were no VOCs detected above the commercial SCOs. A data summary table is provided in Table 1 and the full laboratory reports are provided in Appendix B.

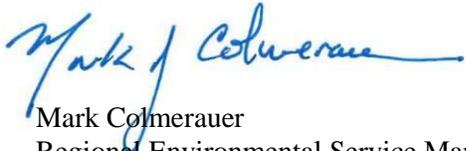

CONCLUSIONS

This soil investigation of soils immediately east of the shoring along the east side of the BCP boundary shows that soil quality with respect to VOCs do not exceed the NYCRR Part 375 SCOs for commercial use to 40 feet BGS, and therefore no additional remediation is proposed for this area of the project.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

TestAmerica Job ID: 480-36330-1

Qualifiers

GC/MS VOA

| Qualifier | Qualifier Description |
|-----------|--|
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| B | Compound was found in the blank and sample. |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| □ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CNF | Contains no Free Liquid |
| DER | Duplicate error ratio (normalized absolute difference) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision level concentration |
| MDA | Minimum detectable activity |
| EDL | Estimated Detection Limit |
| MDC | Minimum detectable concentration |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| ND | Not detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative error ratio |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

Laboratory: TestAmerica Buffalo

Narrative

**Job Narrative
480-36330-1**

Receipt

The samples were received on 4/15/2013 11:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.4° C.

GC/MS VOA

Method(s) 8260B: The method blank for batch 113009 contained methylene chloride and toluene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

List Number: 1

Creator: Janish, Carl

| Question | Answer | Comment |
|--|--------|---------|
| Radioactivity either was not measured or, if measured, is at or below background | True | |
| The cooler's custody seal, if present, is intact. | True | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the sample IDs on the containers and the COC. | True | |
| Samples are received within Holding Time. | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified | True | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter. | True | |
| If necessary, staff have been informed of any short hold time or quick TAT needs | True | |
| Multiphasic samples are not present. | True | |
| Samples do not require splitting or compositing. | True | |
| Sampling Company provided. | True | c+s |
| Samples received within 48 hours of sampling. | True | |
| Samples requiring field filtration have been filtered in the field. | N/A | |
| Chlorine Residual checked. | N/A | |

ANALYTICAL REPORT

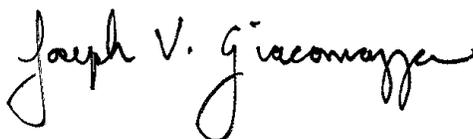

Job Number: 480-36412-1

Job Description: 979-1001 Main St., Buffalo Brownfields

For:

C&S Engineers, Inc.
90 Broadway
Buffalo, NY 14203

Attention: Mr. Mark Colmerauer

Approved for release.
Joe Giacomazza
Project Administrator
4/18/2013 4:07 PM

Designee for
Sally Hoffman
Project Manager II
sally.hoffman@testamericainc.com
04/18/2013

cc: Cody Martin

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report.

Job Narrative
480-36412-1

Receipt

The samples were received on 4/16/2013 4:20 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

GC/MS VOA

Method(s) 8260B: The method blank for batch 113252 contained toluene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.
