NYSDEC Certifies Cleanup Requirements Achieved at Brownfield Site

The New York State Department of Environmental Conservation (NYSDEC) has determined that the cleanup requirements to address contamination related to the 3 Gates Circle Site ("site") located at 3 Gates Circle, Buffalo, Erie County under New York State's Brownfield Cleanup Program have been or will be met. Please see the map for the site location.

The cleanup activities were performed with oversight provided by NYSDEC. NYSDEC has approved a Final Engineering Report and issued a Certificate of Completion for the site. Copies of the Final Engineering Report and Notice of the Certificate of Completion are available at the location(s) identified below under "Where to Find Information."

Completion of Project

1. Excavation and off-site disposal of approximately 1,520 cubic yards of soils contaminated with No. 6 fuel oil to achieve Restricted Residential Soil Cleanup Objectives (RRSCOs).
2. Excavation and off-site disposal of approximately 1,090 cubic yards of soils/fill contaminated with polycyclic aromatic hydrocarbons (PAHs) and mercury to achieve RRSCOs.
3. Placing a site-wide cover system. The cover system consists of soil, crushed stones, asphalt covered areas, and concrete building slab/foundations. The soil and/or stone cover system has a minimum 2-foot thickness of soil meeting the Part 375 restricted residential use cover requirements. The soil cover and crushed stones were placed over an orange mesh demarcation layer where contamination remained below the cover system.
4. An Environmental Easement was placed on the property to restrict land use to restricted residential/commercial/industrial operations and prevent future exposure to any contamination remaining at the Site.
5. Implementation of a Site Management Plan (SMP) detailing requirements for management of remaining contamination as required by the Environmental Easement.
6. Implementation of an Excavation Work Plan to assure that future intrusive activities and soil/fill handling at the site are completed in a safe and environmentally responsible manner; and
7. Certification that the institutional and engineering controls are still in place and effective will be made annually.

Final Engineering Report Approved

NYSDEC has approved the Final Engineering Report, which:

- 1) Describes the cleanup activities completed.
- 2) Certifies that cleanup requirements have been or will be achieved for the site.
- 3) Describes any institutional/engineering controls to be used. An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction, when contamination left over after the cleanup action makes the site suitable for some, but not all uses. An *engineering control* is a physical barrier or method to manage contamination such as a cap or vapor barrier.
- 4) Certifies that a site management plan for any engineering controls used at the site has been approved by NYSDEC.

The following institutional controls have been or will be put in place on the site:

- Environmental Easement
- Soil Management Plan
- Land Use Restriction
- Groundwater Use Restriction

The following engineering controls have been or will be put in place on the site:

- Cover System

Next Steps

With its receipt of a Certificate of Completion, the applicant is eligible to redevelop the site. In addition, the applicant:

- has no liability to the State for contamination at or coming from the site, subject to certain conditions; and
- is eligible for tax credits to offset the costs of performing cleanup activities and for redevelopment of the site.

A Certificate of Completion may be modified or revoked if, for example, there is a failure to comply with the terms of the order or agreement with NYSDEC.

Background

Location: The site property is located at 3 Gates Circle in the City of Buffalo. It consists of approximately 6.88 acres and encompasses the former Millard Fillmore Gates Circle Hospital complex. The property is bounded by Delaware Avenue and commercial properties to the west; Linwood Avenue and a mix of commercial and residential properties to the east; Lafayette Avenue and a mix of commercial and residential properties to the north; and commercial properties to the south.

Site Features: The site consists of two buildings, cleared areas from demolition of buildings, debris from demolished buildings, and parking areas.

Current Zoning and Land Use: The site is currently zoned R5-residential.

Past Use of the Site: The site was initially developed for residential use and was partially used for tricycle manufacturing pre-1900. By 1916 the site was beginning to undergo use as a hospital facility, with continued expansion of the hospital complex (Millard Fillmore Gates Circle Hospital) through the early 1970's.

Site Geology and Hydrogeology: The subsurface soils generally consist of non-native soil/fills in upper four feet overlying native soil. The fill materials consist of sands, gravels, cinders, bricks, and slag. The native soil is very hard, medium plasticity, reddish brown lean clay present at varying thicknesses and overlying reddish brown sandy silt. The bedrock is approximately 30 feet below ground surface and is described as gray cherty limestone. Groundwater is approximately 11 feet below ground surface and flows northerly towards Scajaquada Creek.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's website at:

<http://www.dec.ny.gov/cfmx/extapps/derexternal/haz/details.cfm?pageid=3&progno=C915272>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses include recreation, housing, business or other uses.

A brownfield is any real property that is difficult to reuse or redevelop because of the presence or potential presence of contamination.

For more information about the BCP, visit: <http://www.dec.ny.gov/chemical/8450.html>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.

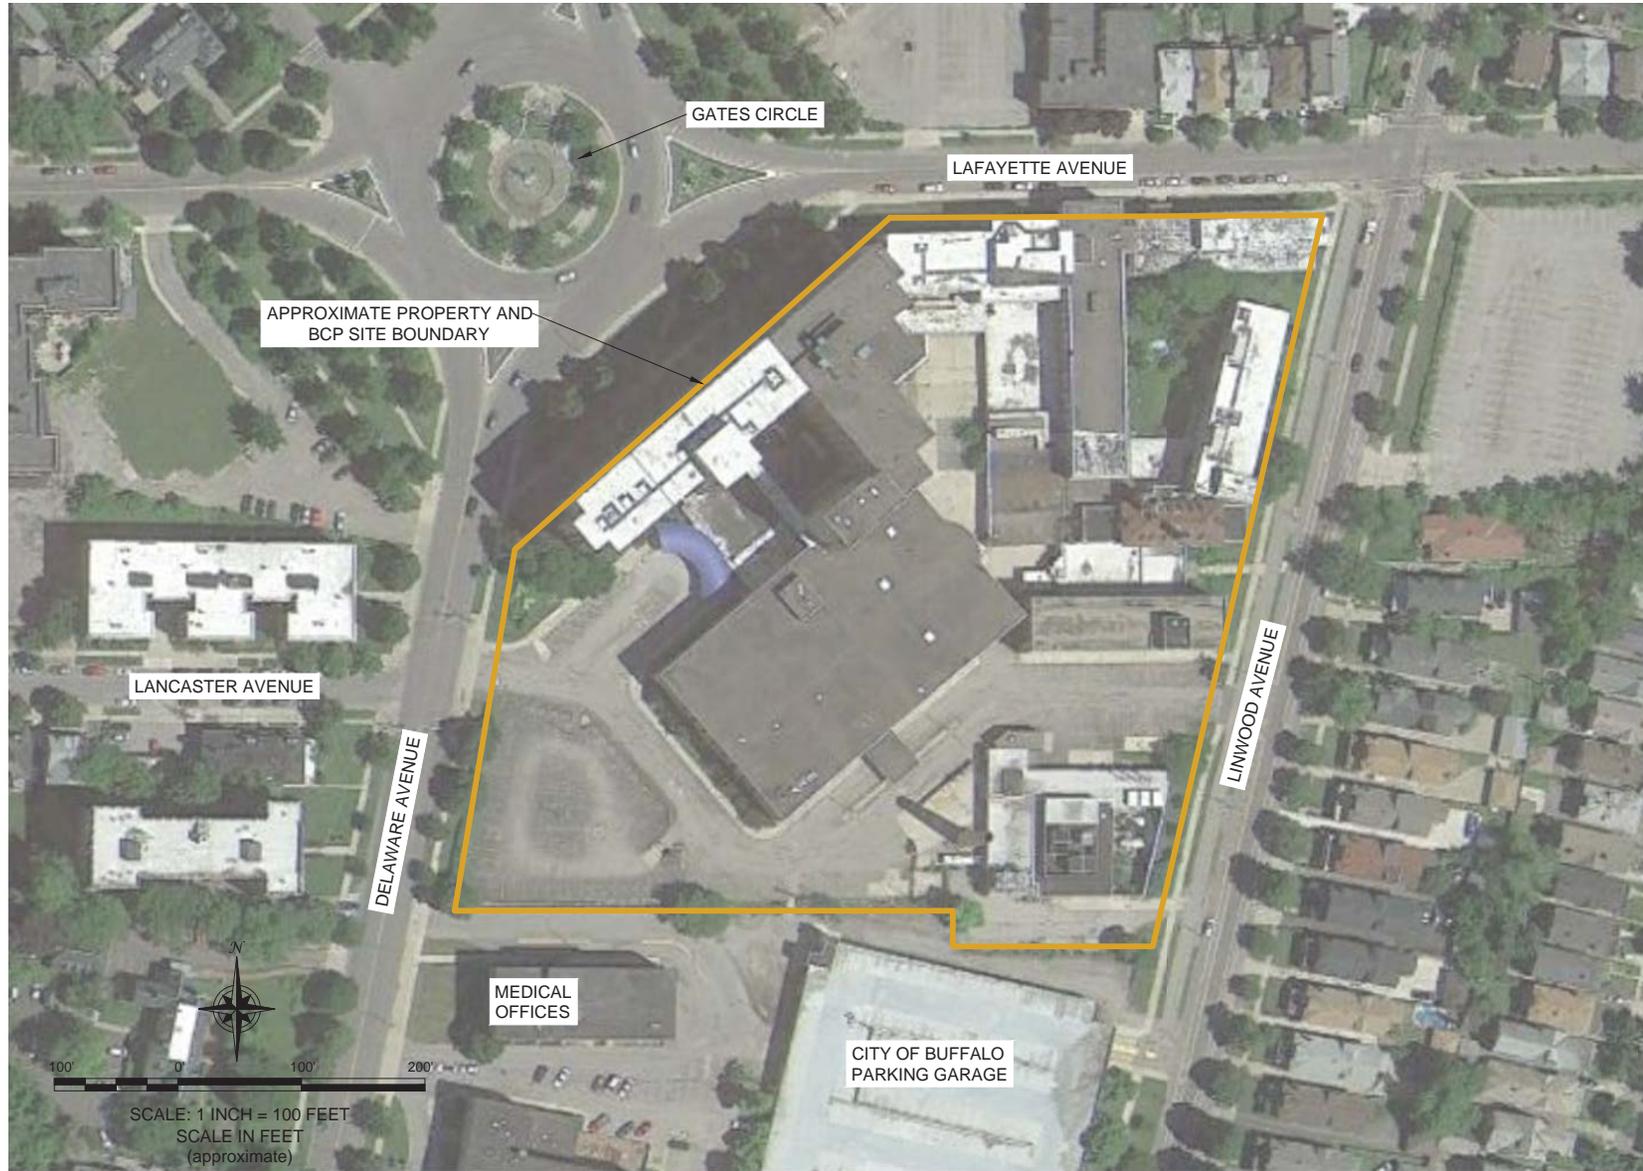

Receive Site Fact Sheets by Email

Have site information such as this fact sheet sent right to your email inbox. NYSDEC invites you to sign up with one or more contaminated sites county email listservs available at the following web page: <http://www.dec.ny.gov/chemical/61092.html>. It's quick, it's free, and it will help keep you *better informed*.

As a listserv member, you will periodically receive site-related information/announcements for all contaminated sites in the county(ies) you select.

Note: Please disregard if you already have signed up and received this fact sheet electronically.
