## **1.0 INTRODUCTION**

This document presents results of recent investigative activities that have been completed at 1130 Niagara Street in Buffalo, New York (the “Site”) (Figure 1) [Gerspach Properties LLC owns the property (and for this report will be designated as “Owner”). Curtis Screw Co., Inc. was the prior owner.

A Site Characterization Work Plan was proposed to the New York State Department of Environmental Conservation (NYSDEC) in late 2013 and was approved. Field work was completed onsite during February and March, 2014 when additional soil and groundwater information was collected.

### **1.1 Site History and Description**

The Site has been reportedly developed since approximately 1925. Occupants have included a steel company, a bowling alley, an auto parts and service station, a contractor’s yard, and a storage facility. From 1960-2005, Curtis Screw Co., Inc. occupied the Site as a manufacturer of machined parts for the automotive industry. The products were manufactured primarily of steel and aluminum, but also included brass. The plant included assorted machining operations such as screw machining, die grinding, aqueous cleaning, scrap metal recovery, oil recovery, and degreasing. Based on information from the Erie County Department of Real Property Tax Services available at <http://www.erie.gov/ecrpts/webprop.asp>, Curtis Screw Co., Inc. was identified as the owner of the Site from 1960 to 2005. Gerspach Properties, LLC purchased the Site in 2005. The Site was utilized by Leisure Living from 2005-2008, a swimming pool products online retailer, to operate its business and store its inventory. In June 2008 a fire destroyed the parcel 2 portion of the property. Leisure Living subsequently moved its operations to Tonawanda following the fire but continues to store some pool supplies at the Site. The office area remains vacant.

The Site is comprised of three parcels:

- Parcel 1 – 1130 Niagara Street is occupied by one building containing approximately 6,500 square feet of office space and approximately 41,000 square feet of manufacturing warehouse.
- Parcel 2 – 17 Gull Street formerly consisted of a two-to-three-story building prior to the building’s destruction by fire in 2008. The building had contained approximately 12,500 square feet consisting of a tool room (basement); a ground level assembly area; a grinding area; a second floor maintenance area; and, a third floor inspection and parts storage area. In addition, an 8,000 square foot paved loading dock area occupied the east area of the building.
- Parcel 3 – 103 West Ferry Street (currently identified as Robert Rich Way) is occupied by a parking lot of approximately 38,000 square feet and a stand-alone masonry storage building located in the southwest corner of the parcel.

## **2.0 GOALS AND OBJECTIVES**

As discussed with NYSDEC personnel at a meeting at the Site on September 24, 2013, the overall objective of the Site Characterization Work Plan is to evaluate the nature and extent of contamination at the Site. Specific objectives of the investigation were as follows:

- Sample existing groundwater and develop new wells to assess groundwater impacts from off-site and on-site sources by evaluating groundwater quality entering and leaving the site
- Advance a series of test trenches across the property to groundwater for the purpose of developing a soil profile across the property
- Advance a series of soil samples on interior of property
- Collect and analyze representative subsurface soil samples to supplement samples collected in previous investigations

### **3.0 PREVIOUS ENVIRONMENTAL INVESTIGATIONS AND REMEDIAL ACTIVITIES**

Historical information indicates that a significant amount of environmental work has been completed at the site. The following is a summary of the work that has been completed.

Historical information indicates the following investigations have been completed at the Site:

- 1987 NYSDEC Spill Report-NYSDEC spill report form for Spill # 8707193 was a failed tank test on a 6000 gallon cutting oil tank. The tank was repaired. On January 18, 1988, the test results were submitted to the NYSDEC, and the spill was closed.
- 1995 NYSDEC Spill Report - NYSDEC Spill Report Form for Spill # 950435 was a former release at the Site related to a UST tank removal project. Two 10,000 gallon heating oil tanks and one 500 gallon tank were removed. While the post-excavation samples exceeded levels, the exceedances were low, and NYSDEC assigned an inactive status to this spill.
- 2004 GZA Summary of Results Phase 2

GZA was retained to assess whether the historical Site usage of solvents (i.e., 1,1,1- trichloroethane), historical usage of PCBs in pad mounted transformers and oil staining proximate to floor drains and control joints within the building may have resulted in environmental impacts at the Site.

Residual petroleum contamination was present in subsurface soil and groundwater in the vicinity of the former 10,000-gallon USTs. NYSDEC was made aware that soil contamination was present at levels above TAGM 4046, but gave the Site an "inactive status" in a July 1995 letter.

Minor SVOC contamination were present in shallow surface soils in the parking lot of Parcel 3. The levels also exceeded TAGM 4046. Historical presence of chlorinated solvents at the Site (i.e., trichloroethene and 1,1,1- trichloroethane) impacted subsurface soil underneath the building on Parcel 1 and perched groundwater in the vicinity of SP-4. While these compounds were present in the environment above TAGM 4046 RRIOs and Class GA criteria, GZA concluded that they posed a minimal threat to human health and the environment.

Metals were present in fill material in the area of SP-8, above TAGM 4046 RRIO. GZA concluded that the presence of these metals did not pose a significant threat to human health or environment because they are generally immobile in soil and the chance for human exposure is small in the current location underneath the floor.

- 2009 CRA Limited Phase 2 Summary of Results

The Limited Phase 2 Summary of Results shows that three ~~areas~~ have benzo(a)pyrene at levels above RURIO-Comm. standard in soil borings SB-1, SB-2, SB-6, SB-8 and SB-9 through SB-11. The benzo(a)pyrene concentrations were relatively low levels, with the greatest concentration of 20 mg/Kg at SB-6. With these low concentrations and the anticipated use, it was concluded that it was unlikely that NYSDEC would require remediation regarding benzo(a)pyrene.

#### Open Pit Area

The area around the open pit (boring SB-12) has soils impacted with non-PCB containing oil(s). These impacts appeared to have also resulted in groundwater contamination as evidenced by the presence of a LNAPL layer within monitoring well MW-1(2009 map)

#### Suspected Parts Washing Area

VOC compounds were detected in the suspected parts washing area (boring SB-13) soils in concentrations below RURIO-Comm. standards. However, the groundwater was found to be impacted by TCE at a concentration of 290,000 ug/L at monitoring well MW-2 (referred to as EW-1 in the present report). The full extent of the TCE impacted groundwater was not determined.

- 2010 GZA Phase 2 Summary of Results

GZA developed the scope of work to further define the extent of petroleum contamination in the area of MW - 1. The work included completion of 16 soil probes, headspace screening of soil samples taken from a macrocore sampler at the soil probe locations, and the analysis of eight subsurface soil samples.

Subsurface conditions at soil probe locations SP-1, SP-3, SP-4, SP-5, SP-9, SP-12, SP- 13 and SP-14 contained a slight sheen and trace amounts of oil on the exterior of the soil sample, generally at depths from 8 to 14 feet deep. This oily sheen appeared to be limited, and not imbedded throughout the samples. However, in locations SP-7, SP-8 and SP-15 the oil appeared to be present throughout the silt clay glacial soil, accumulated in areas of gravel pieces.

Groundwater was not encountered during the soil probe investigation. Additionally, GZA installed three temporary micro-wells in locations SP-12, SP-5 and SP-10 to assess for possible oil accumulation and/or groundwater accumulation at the Site. GZA revisited the Site on October 6, 2010 to assess the presence of oil accumulation in the micro-wells. No oil was identified in the three micro-wells. Groundwater within these three wells was measured at depths of 7.2 feet at SP-5, 6.7 feet at SP-10, and 6.4 feet at SP-12.

No VOCs were detected at concentrations above method detection limits in the eight soil sample selected for analysis.

Several SVOCs were detected in the soil samples selected. However, no compounds were detected at concentrations above Unrestricted Use RIO.

In addition to analysis for VOCs and SVOCs, GZA also selected two composite samples identified as Comp-2 (composite from SP-7 and SP-8) and Comp-3 (composite from SP-8 and SP-15) for disposal characterization analysis for possible disposal at a landfill. The disposal characterization analysis identified the soil as non-hazardous.

Micro-wells installed in this area did not show an accumulation of oil within the wells or within the groundwater present in the wells.

- SJB 2011 Geo Subsurface Investigation Report

The subsurface investigation was at the request of the NYSDEC, based upon previous findings. SJB advanced 16 borings throughout the site. The results are summarized in the report and verified petroleum contamination.

- CEM August 2012 Soil Sampling Report

The samples from the 2012 soil samples taken by CEM were confirmation samples after the remediation of 132 tons of petroleum contaminated soil from the interior of the building following the recommendation of the 2010 CRA report.

Based upon the above-referenced reports, NYSDEC issued an inactive status letter in September 2012 for NYSDEC Spill No. 09-03551.

#### **4.0 OFF-SITE CONSIDERATIONS**

A review of EDR databases (Appendix A) was completed to evaluate adjacent sites or sites in close proximity that may have impacted soil and groundwater.

##### *Oliver Gear - 1120 Niagara Street*

Oliver Gear is an active manufacturing facility that is located immediately adjacent to the south of the site. It is a RCRA conditionally exempt small quantity generator (CESQG) of hazardous waste (under 100 kilograms per year). A review of the Sanborn Maps for this area shows Oliver absent on the 1925 Sanborn Map, but is present on the 1951 Sanborn map. A review of available databases from EDR indicates that there are no known USTs on site or record of spills.

##### *Modern Heat Treating - 1112 Niagara Street*

Immediately south of Oliver Gear is Modern Heat Treating and Fabricating. This active manufacturing facility has been at this location since before 1986 but after 1981. Modern treats metal products and is classified as a non-generator (does not presently generate hazardous waste); however this facility has been both a large quantity generator and small quantity generator of hazardous waste in the past. There was reportedly a 1,400 tank for methanol located on site, which was closed in place in 1998. A review of available databases from EDR indicates that there is no record of on-site spills.

##### *Rich Products Corp - 1145 Niagara Street*

Rich Products is an active manufacturing facility located immediately north of the site. A review of the Sanborn Maps for this area shows in 1951 that this site was occupied by a bottle works along Niagara Street and was an open undeveloped area to the west. The 1981 Sanborn Map shows that the bottle works was the Jones Rich Milk Company. To the west were two small buildings annotated as an annealing works and materials storage building. The rest of the property immediately north of the site was labeled as parking lot.

Rich Products is presently classified as a non-generator of hazardous waste; however the EDR database shows that Rich Products has generated various waste streams in the past including corrosives, ignitable wastes, acids and salts, halogenated solvents and mercury waste. A review of available databases from EDR indicates that there are no known active USTs on site at the present time. In 1992, there was an oil spill from a roof mounted generator which contained PCBs. This spill was contained and cleaned up. There have been occasional spills throughout its operational history, all of which have reportedly been satisfactorily cleaned up.

#### *Keystone Chromium Corporation - 1095 Niagara Street*

The former Keystone Chromium Corporation was located to the east and upgradient of the site across Niagara Street. Keystone Chromium Corporation operated a chrome plating facility from before 1951 to after 1986. This manufacturing facility was classified as a large quantity generator of hazardous waste. Review of the EDR database shows that Keystone had a significant spill of chromic acid in 1992 that washed into the Buffalo sewers and was “not compliant” with applicable state regulations during a 1998 NYSDEC site inspection. There are no records of USTs reported in the EDR database.

The impacts to soil and groundwater associated with these historic and current manufacturing operations have not been investigated (based on the available information). Given the nature of these operations and the timeframe over which the operations occurred, impacts to soil and groundwater (potentially including 1130 Niagara Street) would not be unexpected.

## **5.0 INVESTIGATION SCOPE OF WORK**

### **5.1 Introduction**

In general, soil and groundwater samples were collected from the northeast, southeast, northwest, southwest and center of the property to evaluate site conditions as well as to evaluate groundwater quality. Actual samples for analyses were selected in the field based upon stained soils, odorous soils, or elevated PID readings.

### **5.2 Surface and Subsurface Soil Assessment**

Subsurface conditions on the Site were further investigated by excavating three test pits on Parcels 2 (former building that burned) and Parcel 3 (parking lot) and by collecting additional soil samples within the interior of the building on Parcel 1 (former manufacturing facility) using a Geoprobe drill rig.

## Test Pits

The test pits were located on Parcels 2 and 3 in areas of Test pit 2 was in general vicinity of where former UST were located. (Figure 1).

Test pits were advanced with a backhoe to varying depths depending on the subsurface conditions encountered. Although test trenches varied in dimensions, they were roughly 2 to 4 feet wide, 8 to 12 feet deep and 4 to 6 feet long.

A detailed description of the soil stratigraphy and other observations (staining, odors) was completed at each trench. Total organic vapor monitoring was completed and recorded at each test pit with a Photo ionization detector (PID) with an 11.2 lamp capable of also detecting chlorinated solvents (Appendix B – Test Pit and Soil Boring Logs). Types of material, depth to bedrock or refusal and depth to groundwater were all noted. Once the test pit was logged and sampled, each test pit was backfilled with the materials that were excavated from the test pit and excavated soils were subsequently compacted in place prior to moving to the next test pit. Thus, no investigative derived waste was generated.

Three soil samples were collected (one from each test pit) and sent to a NYSDOH ELAP certified laboratory for analysis of VOCs, SVOCs, metals, pesticides and PCBs.

## Soil Borings

A total of four soil borings were completed within the interior of the building on Parcel 1. Three additional soil borings were completed outside of the building in close proximity to the test pits that were excavated to install groundwater monitoring wells on Parcels 2 and 3 (Figure 1). The seven soil borings were advanced on site using a Geoprobe drill rig to depths ranging from 7.0 feet at soil boring SB – 5 to 19.2 feet at SB – 6. Continuous soil sampling was conducted using a four foot long, 2 ½ inch diameter sampler resulting in four foot long soil sample cores, i.e. (0 - 4 feet, 4 - 8 feet, 8 - 12 feet, and 12 - 16 feet). A field technician logged all samples, performed visual observations, and field screened all soil core samples for VOCs using a PID.

### 5.3 Groundwater Investigation

Groundwater monitoring wells were installed in each of the seven soil borings completed as part of this investigation. In addition, the two existing CRA groundwater monitoring wells inside of the building were also used for groundwater sample collection. Each soil boring identification number was changed to a monitoring well designation; for example; soil boring SB – 1 subsequently was labeled MW – 1, SB – 2 was renamed MW – 2 and so on. For purposes of this report, existing CRA monitoring well MW – 1 has been renamed to EW – 2, and existing CRA monitoring well MW – 2 has been renamed to EW – 1. Four new wells were installed within the interior of the building, and three new groundwater monitoring wells were installed on exterior of the building (Figure 1).

Groundwater monitoring wells were installed as “micro-wells” consisting of a one-inch diameter, schedule 40 PVC casing with a ten-foot slotted PVC screen and solid PVC Riser pipe extending to the surface. Screens were positioned to straddle the groundwater surface and were extended to the bottom of the boring. A five foot screen was used to complete MW – 7 since this well was only 7 feet deep. Well construction diagrams are included as Appendix C.

To the extent possible, the groundwater monitoring wells were developed using disposable bailers; however three well volumes could not be extracted from the wells, and all wells were slow to recharge.

#### Groundwater Sampling

Groundwater samples were collected from five of the seven newly installed groundwater monitoring wells, and from the two existing site groundwater monitoring wells. Groundwater samples could not be collected from MW – 2 and MW – 6 because they were dry. Unfiltered groundwater samples were collected using disposable dedicated bailers for each sample and were noted to be turbid during the sample collecting event. Groundwater samples were subsequently submitted to a New York State approved laboratory and analyzed for TCL VOCs; TCL SVOCs; TAL Metals plus mercury; and Pesticides.

## 6.0 INVESTIGATION RESULTS

### 6.1 Soil Sample Results

Seven soil samples were analyzed for various analytes as part of this investigation consisting of three soil samples from the three respective test pits, and four samples from the four soil borings completed inside the building on Parcel 1. Soil samples for the three soil borings completed outside of the building were not analyzed as part of this investigation since these borings were placed in close proximity to the test pits where soil samples were collected and analyzed. The analytical results were compared to the NYSDEC Part 375 SCOs for both commercial and industrial scenarios. Laboratory analytical reports for the soil samples are included as Appendix D – Soil Analytical Results.

#### *Volatile Organic Compounds*

Three VOCs were detected in the soil samples above method detection limits. Cis – 1,2 dichloroethene was detected in sample TP – 1 at a concentration estimated at 0.0042 (J) parts per million (ppm) well below the Commercial SCO of 500 ppm.

Acetone was also detected in sample TP – 1 at a concentration estimated at 0.0142 (j) ppm well below the Commercial SCO of 500 ppm.

Trichloroethene was detected in sample TP -1 (0.0363 ppm), SB – 1 at an estimated value (0.00396 (J) ppm); SB – 2 (0.0332 ppm); and SB – 4 (0.0119 ppm) all well below the Commercial SCO of 200 ppm. VOC analytical results for these soil samples are summarized on Table 1 A.

### *Semi-volatile Organic Compounds*

Thirteen SVOCs were detected in these soil samples: Twelve SVOCs were detected in soil sample TP – 1; 13 SVOCs were detected in soil sample TP – 2; two SVOCs were detected in soil sample SB – 3; and eight SVOCs were detected in soil sample SB – 4. All detections were well below the Commercial SCOs for the respective compounds. SVOC analytical results for these soil samples are summarized on Table 1 B.

### *Metals*

Typical of urban industrial soils metals were detected in all of the soil samples analyzed. Soil sample TP – 3 was the only sample with metals that exceeded their respective Commercial SCOs. Barium was detected in soil sample TP – 3 at a concentration of 3,230 ppm, above the Commercial SCO of 400 ppm but well below the Industrial SCO of 10,000 ppm. Lead was detected at a concentration of 3,880 ppm in soil sample TP – 3 above the Commercial SCO of 1,000 ppm but below the Industrial SCO of 3,900 ppm. Metals analytical results for these soil samples are summarized on Table 1 C.

### *Pesticides and PCBs*

Samples TP – 1, TP – 2 and TP – 3 were also analyzed for pesticides. There were no pesticides detected in these soil samples above their respective method detection limits.

All seven of the soil samples were analyzed for PCBs. PCBs were only detected in soil sample TP – 3 at a concentration of 0.0178 ppm below the Commercial SCO of 1 ppm.

## 6.2 Groundwater Sample Results

Only seven of the nine groundwater monitoring wells were sampled since two of the newly installed groundwater monitoring wells (MW – 2 and MW – 6) were dry. The groundwater results were compared to NYSDEC Technical and Operational Guidance Series 1.1.1 (TOGS 1.1.1) ambient groundwater quality standards. Groundwater laboratory analytical reports are included as Appendix E – Groundwater Analytical Results.

### *Volatile Organic Compounds*

Twelve VOCs were detected in the seven groundwater samples collected from the groundwater monitoring wells. Acetone was detected in the groundwater samples collected from four of the wells (MW – 3, MW – 4, MW – 5 and MW – 7). Acetone was detected in two samples above the groundwater standard [50 micrograms per liter (ug/L)] at a concentration of 121 ug/L at MW – 4, and at a concentration of 50.8 ug/L at MW – 5.

Benzene was detected in the groundwater samples analyzed from MW – 4 and MW – 5. The concentration of benzene was 2.21 ug/L in the groundwater sample from MW – 5, which is above the groundwater standard of 1.0 ug/L.

The compound 2 – butanone was detected in the groundwater samples analyzed from MW – 3, MW – 4 and MW – 5 below the groundwater quality standard of 50 ug/L.

Chloroethane was detected in the groundwater sample from monitoring well MW – 1 at a concentration of 367 ug/L above the groundwater standard of 5 ug/L

Cyclohexane was detected in the groundwater sample from MW – 5; however, there is no groundwater standard for this compound.

The compound 1,1 – dichloroethane was detected in the groundwater samples from monitoring wells MW – 1 and MW – 5; it exceeded the groundwater standard of 5 ug/L at MW – 1 at a concentration 1030 ug/L.

The compound 1,1 – dichloroethene was detected in the groundwater samples from monitoring wells MW – 1 and EW – 1. In both cases the concentration exceeded the groundwater standard of 5 ug/L. The concentration of this compound in the groundwater sample from MW – 1 was 975 ug/L, and 2940 (J or estimated) ug/L at EW – 1.

The compound 1,1,1 – trichloroethane was detected in the groundwater samples from four wells MW – 1, MW – 4, MW – 5, and EW – 1. This compound exceeded the groundwater standard of 5 ug/L at MW – 1 (7760 ug/L) and at EW – 1 (2950J ug/L).

Methylcyclohexane was detected in the groundwater sample from MW – 5; however, there is no groundwater standard for this compound.

Trichloroethene was detected in the groundwater samples from five wells: MW – 1, MW – 4, MW – 5, EW – 1 and EW – 2. This compound was detected at concentrations above the groundwater standard of 5 ug/L in four samples at the following concentrations: 842 ug/L in the groundwater sample from MW – 1; 20.6 ug/L in the groundwater sample from MW – 4; 201,000 ug/L at EW – 1 and 192 ug/L at EW – 2.

Toluene was detected in the groundwater sample analyzed from MW – 5 at a concentration of 2.84 ug/L below the groundwater standard of 5 ug/L. Xylene was also detected at MW – 5 at an estimated concentration of 1.42 (J) ug/L below the groundwater standard of 5 ug/L.

#### *Semi-volatile Organic Compounds*

A sufficient amount of groundwater sample could only be obtained from MW – 1, MW – 3 and EW – 1 to allow for the analysis of SVOCs. There were no SVOCs detected above the detection limits for these respective compounds in the samples from these three wells.

#### *Metals*

The presence of metals in unfiltered groundwater was analyzed in six of the nine groundwater samples. A sufficient amount of water could not be collected from MW – 2 (dry), MW – 6 (dry) or MW – 7 to allow for analysis. Eighteen metals were detected in the six unfiltered groundwater samples. Only the thirteen metals with TOGS standards will be discussed.

Aluminum was detected in all six samples. It was detected above the groundwater standard of 2,000 ug/L at MW – 4 (39,800 ug/L), MW – 5 (2,050 ug/L), EW – 1 (6,530 ug/L) and EW – 2 (50,500 ug/L).

Arsenic was detected in two groundwater samples. The concentration of arsenic exceeded the groundwater standard of 50 ug/L in the groundwater sample from MW – 4 (57.7 ug/L), but was below the groundwater standard at EW – 2 (14.1 ug/L).

Barium was detected in all six samples analyzed above the method detection limit, but below the state standard of 2,000 ug/L.

Beryllium was detected in the groundwater sample from MW – 4 at an estimated concentration of 3.0 ug/L, at the state standard of 3 ug/L.

Chromium was detected at concentrations above the method detection limit in four of the groundwater monitoring wells samples (MW – 4, MW – 5, EW – 1 and EW – 2). It was detected at a concentration of 156 ug/L, above the groundwater standard of 100 ug/L at MW -5.

Copper was detected in five of the six groundwater samples analyzed at concentrations well below the groundwater standard of 1,000 ug/L.

Iron was detected in all six samples above the state standard of 600 ug/L. – MW-1 (2780 ug/l) MW-3(1620 ug/l) MW-4 (87600 ug/l) MW-5 (13900 ug/l) MW-1 (2780 ug/l) EW-1 (6600 ug/l) EW-2 (57700ug/l)

Lead was detected in four of the six groundwater samples that were analyzed, and was detected at concentrations above the state standard of 50 ug/L at MW – 4 (521 ug/L) and EW – 2 (68.4 ug/L).

Magnesium was detected above the state standard of 35,000 ug/L in five of the six groundwater samples that were analyzed. Concentrations ranged from a low of 17,500 ug/L at MW – 5 to a high of 127,000 ug/L at EW - 2.

Manganese was detected above the state standard of 600 ug/L in four of the six groundwater samples that were analyzed. Concentrations ranged from a low of 351 ug/L at MW – 3 to a high of 1,910 ug/L at MW - 5.

Mercury was detected in three of the groundwater samples below the state standard of 1.4 ug/L.

Nickel was detected in five of the six groundwater samples, but it only exceeded the groundwater standard of 200 ug/L at MW – 4 at a concentration 793 ug/L.

Zinc was detected in all six groundwater samples at concentrations well below the state standard OF 5,000 ug/L.

#### *Pesticides*

Groundwater samples MW – 1 and MW – 3 were analyzed for the presence of pesticide compounds. The pesticide beta-bhc was the only pesticide that was detected. It was detected in the sample from groundwater monitoring well MW – 1 at a concentration 0.1 ug/L

## **7.0 CONCLUSIONS**

The results of the soils sampling do not indicate widespread impacts to soils at the site.

The major groundwater contaminants detected are VOCs, and, in particular, chlorinated solvents and associated degradation products (trichloroethene, 1,1,1-trichloroethane, 1,1-dichloroethene, 1,1-dichloroethane and chloroethane). Results from the existing well EW-1 are lower than in 2009, but of the same order of magnitude, as measured in a previous investigation. VOCs were found to be present near the site perimeter at wells MW-1, MW-4, and MW-5.

Footnotes:

<sup>a</sup> The SCOs for unrestricted use were capped at a maximum value of 100 ppm. See Technical Support Document (TSD), section 9.3.

<sup>b</sup> For constituents where the calculated SCO was lower than the contract required quantitation limit (CRQL), the CRQL is used as the Track 1 SCO value.

<sup>c</sup> For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 1 SCO value for this use of the site.

<sup>d</sup> SCO is the sum of endosulfan I, endosulfan II and endosulfan sulfate.

<sup>e</sup> The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

<sup>f</sup> Protection of ecological resources SCOs were not developed for contaminants identified in Table 375-6.8(b) with "NS". Where such contaminants appear in Table 375-6.8(a), the applicant may be required by the Department to calculate a protection of ecological resources SCO according to the TSD.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS NFRAP site List***

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/11/2013 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>BUFFALO SEWER AUTHORITY WASTE</b>	<b>WEST FERRY ST.</b>	<b>NE 0 - 1/8 (0.088 mi.)</b>	<b>F38</b>	<b>207</b>

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### ***State- and tribal - equivalent CERCLIS***

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 08/19/2013 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 9 CBS UST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### State and tribal Brownfields sites

ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

A review of the ERP list, as provided by EDR, and dated 08/19/2013 has revealed that there is 1 ERP site within approximately 0.5 miles of the target property.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/19/2013 has revealed that there are 18 NY Spills sites within approximately 0.125 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that there are 14 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### *EDR Exclusive Records*

## EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 22 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 8 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Registry ID: 110000900598

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110046138201

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

**Tank Info:**

Tank Number: 001  
Tank Id: 172160  
Material Code: 0022  
Common Name of Substance: Waste Oil/Used Oil

**Equipment Records:**

F00 - Pipe External Protection - None  
C01 - Pipe Location - Aboveground  
I02 - Overfill - High Level Alarm  
A00 - Tank Internal Protection - None  
G01 - Tank Secondary Containment - Diking (Aboveground)  
J02 - Dispenser - Suction Dispenser  
L09 - Piping Leak Detection - Exempt Suction Piping  
B00 - Tank External Protection - None  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
D08 - Pipe Type - Equivalent Technology

Tank Location: 1  
Tank Type: Other

DEC Memo: 12/23/04:SAC telecon Paul Meosky - Hodgson Russ. Mr. Meosky reported contamination that was found around the former location of 3 tanks where there was a previous spill and clean up. The spill number was 9504353. 2 tanks were #2 fuel oil and the other tank was a cutting oil. Per Mr. Meosky, the contaminant of concern was cutting oil for Spill Number 9504353 and he believes this time it is the fuel oil. He will send in the analytical results, boring logs, and site map showing the boring locations. Mr. Meosky said for now he would be the contact person.1/27/05 CALL INTO MR. MEOSKY REQUESTING SUBMISSION OF THE INFORMATION HE INDICATED HE WAS TO HAVE PROVIDED ON 12/23/04.

REQUESTED A CALL BACK.2/22/05 RECD THE BORING LOGS FOR TWO BORINGS AND THE ANALYSIS OF SOIL AND GROUNDWATER FROM THESE LOCATIONS. THE SOIL EXCEEDS TAGMS FOR THE SVOC BENZO COMPOUNDS AND THE GROUNDWATER EXCEEDS FOR THE SAME COMPOUNDS. THE SAMPLES WERE COLLECTED FROM A FORMER UST REMOVAL THAT THE DEC MADE INACTIVE. CALL INTO MR. MEOSKY ASKING WHAT CURTIS SCREW PLANS ON DOING.6/27/05 LETTER REQUESTING INVESTIGATION AND REMEDIATION SENT TO CURTIS SCREW. A RESPONSE IS DUE BY 7/13/05.7/13/05 PAUL MEOSKY CALLED AND INDICATED HE WILL REVIEW THE STATUS OF THE SITE AND GET BACK TO ME WITHIN TWO WEEKS.10/27/05 EVAN CASEY WITH GREAT LAKES ENVIRONMENTAL NOTIFIED THIS OFFICE THAT HE COMPLETED SITE SAMPLING ON SATURDAY AND DIDN'T NOTIFY THIS OFFICE. HE SAID SAMPLES HAD BEEN SUBMITTED TO THE LABORATORY AND RESULTS ARE EXPECTED NEXT WEEK. HE SAID THE SAMPLES LOOKED CLEAN.1/23/06 DKK REVIEWED 11/3/05 AND 11/23/06 SOIL CLOSURE REPORTS, SUPPLEMENTAL FILE INFORMATION AND SPILL NO. 9504353(1995 TANK PULL & SOIL INVESTIGATION AT THIS SITE). RESIDUAL CONTAMINATION EXISTS BUT REMEDIAL ACTION IS NOT REQUIRED AT THIS TIME. SPILL SITE CAN BE MADE INACTIVE - LETTER SENT.

Remarks: GZA, inc. was doing a Phase II site assessment, a based on analytical results were STARS guidance values. Area where this was found is former tank location where there was a previous spill and was made "inactive."

APPROXIMATELY 5 FT OF PRODUCT WAS MEASURED IN MW1. JOHN KOLAGA INDICATED HE WOULD BE DISCUSSING THESE RESULTS WITH HIS CLIENT AND GET BACK TO ME SHORTLY.2/25/10 FG SPOKE TO MICHELLE WITTMAN WITH GZA 844-7047, 570-3219 CELL. SHE SAID THAT GZA IS PUMPING OFF THE PRODUCT FROM THE WELL TODAY AND WILL PLACE IT IN DRUMS ON SITE FOR LATER DISPOSAL. THEY WANT TO DETERMINE IF THE OIL WILL COME BACK AFTER PUMPING IT OUT. THEY WILL CONTINUE THIS ON A 5 DAY CYCLE AND WILL LET ME KNOW THE RESULTS ON A REGULAR BASIS. A PLAN TO DETERMINE THE EXTENT OF CONTAMINATION WILL BE PRESENTED ALONG WITH DISPOSAL RECEIPTS ONCE THE INFORMATION IS GATHERED.6/1/10 FG SPOKE TO MICHELLE WITTMAN WITH GZA WHO SAID THAT THE PROPERTY OWNER IS CONTINUING TO BAIL OFF THE OIL INTO A DRUM. SHE IS AWARE THAT ADDITIONAL SUBSURFACE INVESTIGATION AS WELL DISPOSAL OF THE BAILED OIL IS NECESSARY. SHE IS NOT THE CONSULTANT ON THIS PROJECT AT THIS TIME AND SUGGESTS THAT WE CONTACT THE PROPERTY OWNER.FG CONTACTED JOHN KOLAGA REQUESTING AN UPDATE ON THE STATUS OF THE SITE.7/13/10 JOHN KOLAGA PROVIDED AN UPDATE. HE AND MICHELLE WITTMAN OF GZA ARE CURRENTLY WORKING ON A PROPOSED WORK PLAN TO FURTHER INVESTIGATE AND DELINEATE THE EXTENT OF THE PETROLEUM CONTAMINATION IN THE VICINITY OF MW1. HE EXPECTS TO SUBMIT THE PROPOSAL DURING THE WEEK OF 7/29/10.8/27/10 RECEIVED AN APPROVED A SOIL BORING PROGRAM SCHEDULED FOR 9/13/10.11/2/10 Francine: You will have the GZA report on these activities by Friday at the latest. John Kolaga John T. Kolaga, Esq.Special CounselDAMON MOREY LLPThe Avant Building - Suite 1200200 Delaware AvenueBuffalo, New York 14202-2150p. 716.858.3760f. 716.856.551011/5/10 GZA SUBMITTED THE REPORT OF FINDINGS OF THE FURTHER DELINEATION ON THE PROPERTY. 16 BORINGS WERE COMPLETED. OIL CONTAMINATION IS WIDESPREAD AND THE SOURCE APPEARS TO BE NEAR MW1 AND/OR AN OPEN PIT NEAR MW1.FG SPOKE TO MR. KOLAGA WHO SAID HIS CLIENT IS UNABLE TO CONDUCT ANY REMEDIAL EFFORT AND WOULD CONSIDER GIVING ACCESS TO THE DEPT TO COMPLETE THE CLEANUP.11/19/10 FG SPOKE TO PAUL MEOSKY, ATTORNEY FOR CURTIS SCREW 848-1482 WITH HODGSON RUSS STATING THAT THE CONTAMINATION IDENTIFIED APPEARS TO HAVE COME FROM THE FORMER CURTISS SCREW OPERATION. HE SAID HE WILL REVIEW THE STATUS AND GET BACK TO ME BY DECEMBER 20, 2010. HE DID NOT WANT A COPY OF THE REPORT YET.1/24/11 PAUL MEOSKY SENT A LETTER DATED 1/11/11. MR. MEOSKY STATED THAT THEY ARE IN THE PROCESS OF COMMUNICATING WITH GERSPACH'S COUNSEL REGARDING GERSPACH'S ASSUMPTION OF RESPONSIBILITY FOR ANY LIABILITY WHICH MAY EXIST.FG SENT A LETTER TO MR. MEOSKY ON 1/14/11 STATING: I received your letter of 1/11/11 requesting the January 2010 Letter Report from GZA. Attached is that report for your reference.Please provide your response to the Department's January 4, 2011 letter by January 28, 2011. Please call me at 716-851-7220 if you have any questions.1/27/11 PAUL MEOSKY SUBMITTED A LETTER DATED 1/27/11 WHICH STATES THAT THEY HAVE CONTACTED GERSPACH COUNSEL REGARDING THEIR CONTRACTUAL AGREEMENT TO ACCEPT ANY ENVIRONMENTAL LIABILITY REGARDING THE PROPERTY. THEY REQUESTED THAT GERSPACH CONTACT DEC TO RESOLVE THE ENVIRONMENTAL LIABILITY. THEY RECD AN INITIAL RESPONSE FROM GERSPACH'S COUNSEL. THEY WILL CONTINUE TO CORRESPOND. THEY NEED MORE TIME TO ADDRESS THE ISSUES AND BELIEVE IT IS PREMATURE FOR CURTIS SCREW TO UNDERTAKE A COMPLETE ASSESSMENT OF THE ENVIRONMENTAL INFORMAITON PROVIDED OR TO CONSIDER PREPARING A REMEDIAL ACTION PLAN. THEY ARE DOING THEIR BEST TO MOVE THIS FORWARD.3/10/11 FG, GREG SUTTON, PAUL MEOSKY, CHUCK GUZZETTA & JEFFREY STRAVINO - REPRESENTING CURTIS SCREW- AND JOHN KOLAGA - REPRESENTING GERSPACH MET AT THE NYSDEC OFFICES AT 270 MICHIGAN AVENUE. WE AGREED THATTHEY WOULD PROVIDE A RESPONSE TO THE DEPARTMENT

WITHIN 30 TO 45 DAYS PROVIDING A WORK PLAN TO INVESTIGATE THE SOURCE OF CONTAMINATION. THEY WOULD WORK OUT AMONG THEMSELVES COSTS AND RESPONSIBILITY. 5/18/11 FG SITE INSPECTION. MET JEFF STRAVINO, JOHN KOLAGA AND DAVE STEINER WITH EMPIRE GEO ON SITE. WE INSPECTED THE SITE MICRO WELLS RECENTLY INSTALLED BY EMPIRE. THE THREE MICROWELLS INSTALLED BY EMPIRE HAD OIL IN THEM. THE ORIGINAL WELL INSTALLED BY GZA AND TWO OF THE THREE MICROWELLS ALSO INSTALLED BY GZA HAD OIL IN THEM. CURTIS SCREW AND GERSPACH WILL GET BACK TO THE DEPT AND DECIDE WHAT COURSE OF ACTION THEY WILL TAKE. 8/4/11 EMPIRE GEO SUBMITTED THE 7/29/11 SUPPLEMENTAL SUBSURFACE INVESTIGATION REPORT ON WORK COMPLETED ON 5/12/11. SOIL BORINGS E1 THROUGH E9 WERE ADVANCED THAT DAY. ELEVATED PID READINGS AND OIL TYPE ODORS WERE OBTAINED FROM VARYING DEPTHS AT ALL NINE SOIL PROBE LOCATIONS. EMPIRE BELIEVES THE OIL DISCOVERED IS AN UNIDENTIFIED OIL AND NOT A FUEL OIL. MW1 HAD 4 FT OF FLOATING PRODUCT. E4 HAD 2 FT OF WATER WITH 1/4 INCH OF FLOATING BLACK PRODUCT. E5 HAS VERY SMALL NODULES OF BLACK PRODUCT. E6 HAS 2 FT OF FLOATING BLACK PRODUCT AND NO WATER. SP5 AND SP12 DID NOT INDICATE FLOWATING PRODUCT, BUT A GOLDEN YELLOW OILY RESIDUE WAS FOUND. THIS OILY RESIDUE HAS AN ODOR AND APPEARANCE SIMILAR TO THAT OF THE PRODUCT THAT IS RECOVERED FROM EXISTING WELL MW1. SP10 NO EVIDENCE OF PETROLEUM PRODUCT IS PRESENT. 9/22/11 FG SPOKE TO JOHN KOLAGA WITH DAMON MOREY. HE SAID THAT THE PROPERTY OWNER IS INTERESTED IN REMOVING THE FLOORING TO DETERMINE IF THERE ARE ANY SOURCES UNDER THE FLOOR. THEY PLAN ON DOING THIS WORK IN THE NEXT SEVERAL WEEKS. MR. KOLAGA WILL NOTIFY THE DEPT OF THE DATE SO THAT WE CAN BE ON SITE. HE ALSO MENTIONED THAT OIL SAMPLES WERE COLLECTED FROM THE AREA WHERE THE TUMBLER WAS AND THEY WERE CROSS MATCHED WITH THE OIL IN THE WELLS AND IT WAS CONFIRMED THAT THEY WERE THE SAME. 11/8/11 FG SPOKE TO PAUL GERSPACH, OWNER 773-7500. HE SAID THEY EXCAVATED A PIT AND ARE RECOVERING OIL ON A DAILY BASIS. HE SAID HE WILL CONTACT ME THE NEXT TIME THEY ARE ON SITE SO THAT I CAN INSPECT. NONE OF THE OIL COLLECTED HAS BEEN DISPOSED OF YET. 11/9/11 FG SITE INSPECTION. MET PAUL GERSPACH AND SMITTY WITH LEISURE LIVING. THEY EXCAVATED THE FLOOR IN THE AREA OF WHERE THE PRODUCT WAS DISCOVERED. THE METAL TANK THAT WAS VISIBLE AT THE FLOOR WAS REMOVED AND CONCRETE WAS UNDER IT. THIS IS WHERE THE TUMBLER WAS ACCORDING TO SMITTY. THEY WERE ACTIVELY PUMPING OUT THE PRODUCT FROM THE MIDDLE OF THE EXCAVATION WITH A LOW FLOW PUMP THAT OPERATES CONTINUOUSLY. THEY ESTIMATE THEY ARE GETTING ONE QUART OF OIL PER DAY AND WILL CONTINUE UNTIL THE OIL/FREE PRODUCT IS DIMINISHED. THEY INSPECT THE SITE EVERY OTHER DAY TO MAKE SURE THE OPERATION CONTINUES. I TOLD THEM TO CONTACT ME IF THERE ARE ANY CHANGES AND THEY SAID THEY WOULD. THEY PLAN ON SEEING IF NOCO WILL ACCEPT THE OIL AND THEY WILL THROW THE SMALL NUMBER OF PADS USED IN THE REGULAR WASTE STREAM. 1/25/12 FG CONTACTED PAUL GERSPACH FOR AN UPDATE - LEFT A MESSAGE. 1/26/12 PAUL GERSPACH PROVIDED THE FOLLOWING UPDATE: Just a quick update: We have temporarily stopped siphoning off the oil in the wells, as the cold temperature is creating problems with the pumps. We plan to restart as soon as we get some consistently warmer weather, hopefully early March. The levels continue to diminish and we have hopes of finalizing this soon. Paul Gerspach, President Leisure Living 574 Main St. Tonawanda, NY 14150 1800-356-3025 Paul.Gerspach@LeisureLiving.com http://www.poolsupplies.com 3/25/12 MARTY DOSTER PROVIDED THE FOLLOWING UPDATE: Rich Products (Morgan Graham) is interested in acquiring this property. However they need to know if the site requires additional remediation and what the enforcement status is. I could not tell from

the UIS file other than the owner is operating some type of collection system. Morgan will likely be calling you. I think he may be thinking about BCP here. 4/5/12 LINDA OWEN CALLED AS SAID THAT THE PUMPING OF THE PRODUCT HAS BEGUN AGAIN. THEY WILL KEEP THE DEPARTMENT UPDATED. MS. OWEN SAID RICH PRODUCTS AND ANOTHER PARTY ARE INTERESTED IN PURCHASING THE PROPERTY. 6/28/12 FG SITE INSPECTION MET LINDA OWEN WITH LEISURE LIVING AND RAJ CHOPRA, CONSULTANT. LEISURE LIVING PLANS ON EXCAVATING THE CONTAMINATED MEDIA AND DISPOSING. THEY WILL SUBMIT A PLAN AND WORK START DATE WITHIN THE NEXT FEW WEEKS. 7/27/12 FG SITE INSPECTION. MET LINDA OWEN, ANDY AND RAJ CHOPRA ON SITE. OIL IN EXCAVATION. ADDITIONAL WORK NEEDS TO BE COMPLETED. THEY WILL NOTIFY THE DEPARTMENT WHEN WORK WILL BEGIN. EXCAVATION SAMPLES WERE COLLECTED FROM A SHALLOW EXCAVATION COMPLETED BY RAJ CHOPRA AND THEY SLIGHTLY EXCEEDED THE CP51 GUIDANCE LEVELS. THEY DID NOT REMOVE THE SOURCE AND ADDITIONAL EXCAVATION WILL BE COMPLETED. 8/6/12 FG SITE INSPECTION. MET RAJ CHOPRA AND DAVID, THE EXCAVATOR. THE SOURCE AREA WILL BE REMOVED TO THE PRODUCT LAYER. THEY WILL JACKHAMMER THE CONCRETE AND REMOVE THE SOIL. THE SOIL WILL BE STAGED ON SITE ON PLASTIC AND WILL BE DISPOSED AT THE TONAWANDA LANDFILL. 8/7/12 FG SITE INSPECTION. THE COMPANY COMPLETING THE EXCAVATION WAS ON SITE. THEY UNCOVERED WHAT APPEARED TO BE AN OIL PIT UNDER THE CONCRETE PAD THAT HELD THE TUMBLER. IT WAS BRICK LINED AND HAD A CONCRETE BOTTOM. APPROX 6 INCHES OF OIL WAS INSIDE. 8/8/12 FG SITE INSPECTION. RAJ CHOPRA ON SITE WITH THE EXCAVATOR COMPANY. EXCAVATED TO APPROX 7 FT DEPTH AND THE AREAS WHERE PRODUCT WAS FOUND PREVIOUSLY NOW DRIED UP AND NO OIL WAS PRESENT. THE FARTHEST SOUTH WALL HAD SOME WOOD PRESENT AND THAT WOOD WAS LEACHING OIL. THEY COULD NOT EXCAVATE ANY FURTHER IN THAT DIRECTION. THEY PLAN ON LEAVING A COLLECTION PIT OPEN TO SEE WHAT IS COLLECTED AFTER PADDING IT UP. LOOKING AT THE PREVIOUS BORINGS, OIL WAS FOUND TO 12 FT BGS. I REQUESTED THAT THEY EXCAVATE TO 12 FT IN THE AREA OF MW1 TO SEE IF THERE IS ANY RESIDUAL OIL. THEY SAID THEY WILL HAVE IT READY TOMORROW MORNING TO INSPECT. 8/9/12 FG SITE INSPECTION. LINDA OWEN, RAJ CHOPRA, EXCAVATOR ON SITE. TWO PITS WERE DUG TO 12 FT DEPTH. ONE WAS LOCATED ON THE NORTHWEST SECTION OF THE EXCAVATION AND THE OTHER WAS ON THE NORTHEAST SECTION OF THE EXCAVATION. NO OIL NOTED. EXCAVATION SAMPLES WILL BE COLLECTED AND A CLOSURE REPORT PROVIDED. 8/22/12 RAJ CHOPRA PROVIDED A CLOSURE REPORT DATED 8/21/12 THAT INCLUDED SAMPLING RESULTS AND DISPOSAL RECEIPTS. FG REQUESTED THAT A MAP BE PROVIDED TO DOCUMENT THE EXCAVATION AND THE SAMPLING LOCATIONS. MAP IS NEEDED BEFORE SITE REVIEW CAN BE COMPLETED. 8/31/12 RAJ CHOPRA PROVIDED THE SAMPLING MAP. BORING SB12B PREVIOUSLY COMPLETED ON THE SOUTH SIDE OF THE EXCAVATION SHOWED EVIDENCE OF OIL TO BE PRESENT. DUE TO THIS, FG REQUESTED THAT ADDITIONAL SUBSURFACE BORING BE COMPLETED IN THE AREA TO DETERMINE THE EXTENT OF CONTAMINATION. 9/10/12 FG SPOKE TO LINDA OWEN WITH LEISURE LIVING. SHE SAID THE ADJACENT PROPERTY ON THE OPPOSITE SIDE OF SB12B IS A DRIVEWAY OWNED BY OLIVER GEAR. THE OLIVER GEAR FOUNDATION IS ALONG THE DRIVEWAY AS WELL. THERE IS NOT SUFFICIENT AREA TO COLLECT A SAMPLE. THE SOURCE AREA OF THE OIL APPEARS TO HAVE BEEN REMOVED. 132 TONS OF CONTAMINATED SOIL WAS EXCAVATED AND DISPOSED AT THE TONAWANDA LANDFILL. MOST SAMPLES COLLECTED WERE BELOW GUIDANCE LEVELS. THE 7/18/12 SAMPLES EXCEED SVOC AT SOUTH AND EAST EXCAVATION SAMPLES. THE PHYSICAL PRESENCE OF OIL WAS PRESENT AT THE SOUTHWEST WALL. PETROLEUM WAS ALSO IDENTIFIED IN BORINGS OUTSIDE OF THE SOURCE AREA THAT HAS BEEN REMOVED. BECAUSE OF THE RESIDUAL OIL REMAINING THAT IS INACCESSIBLE, THE SITE IS INACTIVE. NO FURTHER WORK IS BEING REQUIRED.

Remarks:

MEGASON ON THE ROOF...HE GAVE ME THE PCB-IN-WIPES ANALYSIS THAT CHOPRA-LEE DID...OF THE 25 PCB-IN-WIPES TESTED, THE HIGHEST RESULTS WERE 2.36 PPB...THIS WAS BEFORE THEY CLEANED UP THE AREA, THEY WILL RETEST AFTER CLEAN UP...ALSO, THE EAST SIDE DRAIN CAME BACK ND...DAVE ALSO SAID THAT THEY WILL GET A LARGE CRANE TO REMOVE THE CLEANED AND EMPTY TRANSFORMER IN NOVEMBER...I TOLD HIM THAT THIS WOULD BE ACCEPTABLE...THEY PLAN TO HAVE THE TRANSFORMER INCINERATED...DAVE WILL KEEP ME INFORMED OF ANY OTHER ACTIONS.11/02/2000: RJJ RECEIVED THE ANALYTICAL RESULTS FROM THE TRANSFORMER AREA TAKEN 9/15 AND 10/25...THE PCB LEVELS WERE ALL BELOW OUR ACCEPTABLE LIMITS...THE WILL REMOVE THE TRANSFORMERS AROUND THANKSGIVING,AND SEND ME ALL CERTIFICATES OF DESTRUCTION.12/08/2000: RJJ TELECON DAVE MEGASON, HE SAID THAT DUE TO THE STORM, THEY COULDN'T REMOVE THE TRANSFORMERS, BUT THEY WILL AS SOON AS THE SNOW MELTS IN THEIR PARKING LOT...HE WILL CALL ME WHEN THEY DO THIS.04/24/2001: RJJ RECEIVED THE DISPOSAL RECEIPTS FOR THE TRANSFORMERS WHICH WERE TAKEN TO WASTE MANAGEMENT,INC...NO FURTHER ACTION NEEDED...SPILL CLOSED OUT. CALLER SAID THAT THEY HAD A SLOW PCB TRANSFORMER LEAK,ON THEIR ROOF,AND SOME OF THE OIL MIGHT HAVE RAN DOWN THE DRAIN INTO THE STREET SEWER...SPILL HAS BEEN CONTAINED AND BUFFALO SEWER HAS BEEN NOTIFIED.

DEC Memo: 5/4/05 FG SITE INSPECTION. MET BUFFALO FIRE DEPT ON SCENE. ANHYDROUS AMMONIA HAD BEEN RELEASED FROM THE COILS ON THE FREEZER TO THE BUILDING. THE WORK AREA HAD BEEN EVACUATED AND THE FIRE DEPT CLOSED OFF NIAGARA ST IN FRONT OF RICH. THEY DON'T KNOW HOW MUCH AMMONIA HAS BEEN RELEASED. THEY WILL DETERMINE THAT LATER. THE FIRE DEPT INDICATED THAT MOLLENBERG BETZ HAS REPAIRED THE LEAK. THE FIRE DEPT ALONG WITH MOLLENBERG BETZ WILL RELEASE THE AMMONIA FROM THE BLDG BY OPENING THE DOOR AND DRAWING OUT THE AMMONIA. BOTH THE FIRE DEPT AND MB WILL MONITOR AT THE DOOR. THEY DO NOT PLAN TO DISCHARGE MORE THAN 50PPM.5/6/05 FG SPOKE TO TOM FITZPATRICK WITH THE BUFFALO FIRE DEPT. HE SAID WHILE THEY WERE MONITORING THE RELEASE, LEVELS OF AMMONIA WENT UP TO 500 PPM. YESTERDAY LEVELS WERE BELOW 50PPM AND THE FIRE DEPT LEFT THE SCENE. HE SAID NIAGARA ST WAS OPENED BACK UP BEFORE 9PM THE NIGHT OF THE INCIDENT AND THEY RECD NO COMPLAINTS WHILE THE DISCHARGE WAS OCCURRING.FG SPOKE TO DARRYL BURGESS WITH RICH PRODUCTS SAID THAT THE AMOUNT OF AMMONIA RELEASED WAS 55 POUNDS. THE FREEZER IS BACK IN OPERATION AND THEY ARE BACK TO WORK. THEY ARE DESTROYING 40 TRUCKLOADS OF PRODUCT DUE TO POTENTIAL AMMONIA CONTAMINATION.SPILL SITE IS CLOSED WITH NO FURTHER WORK REQUIRED.  
Remarks: BFD hazmat is on scene, contained inside of a freezer.

**FINDS:**

Registry ID: 110000327030

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

**Tank Info:**

Tank Number: 1  
Tank ID: 167029  
Tank Status: Closed - Removed  
Material Name: Closed - Removed  
Capacity Gallons: 917  
Install Date: 06/01/1980  
Date Tank Closed: 07/01/1998  
Registered: True  
Tank Location: Underground  
Tank Type: Equivalent technology  
Material Code: 0009  
Common Name of Substance: Gasoline

Tightness Test Method: 01  
Date Test: 11/01/1993  
Next Test Date: Not reported  
Pipe Model: Not reported  
Modified By: TRANSLAT  
Last Modified: 03/04/2004

**Equipment Records:**

C02 - Pipe Location - Underground/On-ground  
F00 - Pipe External Protection - None  
I04 - Overfill - Product Level Gauge (A/G)  
G00 - Tank Secondary Containment - None  
B00 - Tank External Protection - None  
H00 - Tank Leak Detection - None  
A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
J02 - Dispenser - Suction Dispenser

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was  
"JFO"04/09/01: JFO ON SITE, MET WITH MARTY BORYSZAK AND SAL LOTEMPIO.  
THE FUEL OIL IS IN A CONCRETE DIKE. THE BOTTOM OF THE DIKE HAS HEAVY  
VEGETATION ON THE FLOOR. THE WILL CALL OP-TECH TO CLEANUP.04/12/01:  
JFO CALL FROM LINDA SCOTT OF OP-TECH. THEY HAVE 1 ROLLOFF FILLED FROM  
THE DIKE. APPROX ONE MORE ROLLOFF STILL IN THE DIKE TO BE REMOVED  
TODAY. 04/13/01: JFO ON SITE, NOTED TWO ROLLOFFS ON SITE. 1 FULL THE  
OTHER 1/2 FULL. STILL MORE CLEANUP NECESSARY IN THE DIKE.04/20/01:  
JFO ON SITE, MET WITH SAL LOTEMPIO OF BSA. THE DIKE HAS BEEN CLEANED.  
TWO FULL ROLLOFFS ON SITE. THE WATER IN THE DIKE HAS A SLIGHT SHEEN.  
THEY WILL PAD UP THE SHEEN. DISPOSAL RECEIPTS TO FOLLOW.05/01/01: JFO  
RECEIVED THE DISPOSAL RECEIPTS. NO FURTHER ACTION REQUIRED.CLOSED  
Remarks: MR BORYSZAK STATED THAT #6 FUEL OIL LEAKED FROM THE PIPING OF AN AST  
TO THE SECONDARY CONTAINMENT AREA. THEY WILL APPLY SAND AND WILL  
PICKUP AND DISPOSE. THE TANK WAS BEING HEATED IN PREPARATION FOR  
PERMANENT CLOSURE

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "JFO"11/30/00: RNL TELECON WITH JAMES CARUSO, THE CALLER, HE SAID OP-TECH IS ON SITE CLEANING UP, QUANTITY SPILLED IS UNKNOWN, TRANSFORMER HOLDS ABOUT 900 GALLONS BUT LEAK IS NEAR TOP OF UNIT12/1/00 FG SITE INSPECTION, MET DAN BENTIVOGLI. WE INSPECTED THE ROOF, 1ST FLOOR AND BASEMENT OF THE TREATMENT BUILDING. ALL AREAS WERE IMPACTED BY THIS SPILL. THE SPILL WENT THROUGH THE ELECTRICAL BUSHINGS FROM THE ROOF ALL THE WAY TO THE BASEMENT AND LANDED ON TOP OF THE AIR HEAD UNIT. THE BUSHING DUCT AND INSULATION IS ALL CONTAMINATED. THE ROOF TOP IS ALL CONTAMINATED. CLEANUP WILL CONTINUE NOW AND NEXT WEEK. THEY ARE TRYING TO GET THE BACKUP POWER GOING FIRST. THE CONTAMINATION LEVEL OF THE PCB OIL IS 550,000 PPM PCB'S. AN ORDER WAS APPARENT IN THE AREAS OF THE SPILLAGE. GE, WHO RECENTLY REPAIRED THE UNIT, IS RESPONSIBLE FOR THE SPILL BECAUSE THE SPILL CAME FROM AN IMPROPER REPAIR. GE, ACCORDING TO DAN BENTIVOGLI, AGREES AND THEY WILL COMPLETE THE REMEDIATION. MR. BENTIVOGLI SAID THAT THEY WILL SUBMIT A PLAN OF THE WORK THEY INTEND ON HAVING DONE SOMETIME NEXT WEEK. THE TRANSFORMER IS TO BE REMOVED IN APPROX 6 MONTHS ONCE THE BID PROCESS TO REMOVE IT IS FINAL.12/5/00 LINDA SCOTT FROM OP TECH CALLED AND SAID THAT THE PANELS WERE TAKEN OFF THE BUSBAR AND EVERYTHING WAS WIPED DOWN. THE TRANSFORMER WAS WIPED DOWN AND THE SPILL PADS ON THE ROOF WERE CHANGED. THE BASEMENT WAS ALSO WIPED DOWN. THEY ARE CONSIDERING WHAT NEEDS TO BE DONE AT THE BASEMENT CEILING. THEY MAY EPOXY OR CHIP OUT THE CONTAMINATION. GE IS TO REPLACE THE INSULATION AFTER OP TECH IS DONE WITH THEIR CLEANUP. 12/7/00 DAN BENTIVOGLI CALLED AND UPDATED THIS OFFICE ON THE STATUS OF THE REMEDIATION. HE SAID THAT OP TECH HAS COMPLETED ALL THE WORK THEY CAN RIGHT NOW. THEY ARE LETTING THE CEILING IN THE BASEMENT LEAK AND THEN WILL CHIP IT OUT THEN EPOXY IT. THEY WILL DO THIS WORK SOME TIME NEXT WEEK. THE ELECTRICAL BUSBARS AND RAILS IN THE DUCT WILL HAVE THE INSULATION REMOVED BY NEXT TUESDAY BY GE. DAN SAID THEY WILL THEN GET THE TRANSFORMER RUNNING AGAIN. HE WILL SUBMIT A REPORT NEXT WEEK.12/28/00 MARTY BORZAK WITH BSA CALLED AND SAID THAT DAN BENTIVOGLI HAS RETIRED. MARTY BORZAK WILL BE THE CONTACT NOW. HE

REQUESTED AN ON SITE MEETING TO DECIDE ON WIPE SAMPLE LOCATIONS. WE AGREED TO INCLUDE THE NYSDOH IN THIS MEETING.1/3/00 FG, CAMERON OCONNOR - NYSDOH, MARTY BORZAK, SAL LOTEMPPIO - BSA AND LINDA SCOTT - OP TECH, MET ON SITE AND DECIDED ON WIPE SAMPLE LOCATIONS. THERE WILL BE ONE TAKEN INSIDE THE BUS BAR, 6 IN THE BASEMENT AND 2 ON THE 1ST FLOOR, ONE ON THE FLOOR AND ONE ON THE PANEL. MR. LOTEMPPIO SAID THAT THE TRANSFORMERS WILL BE REPLACED IN AUGUST OR SEPTEMBER 2001. AT THAT TIME, THE ROOF AND DRAIN WILL BE REMEDIATED.1/9/01 RECD WIPE SAMPLES FROM BSA. THREE OF THE SAMPLES WERE ABOVE 100 UG/WIPE AND FOUR WERE BELOW.1 OUTSIDE COVER 1ST FLOOR 512 UG/WIPE2 FLOOR IN FRONT OF BUSBAR 5943 INSIDE BUSBAR 9494 CRACK#3 (BASEMENT) 5.15 INSIDE AIR VENT 7.06 TOP OF HIGHER AIR VENT 6.07 TOP OF LOWER AIR 17.4FG SPOKE TO LINDA SCOTT WITH OP TECH WHO SAID SHE WILL TRY TO CLEAN AT #'S 1,2 & 3 AND RESAMPLE.8/30/01 MARTY BORYZAK WITH BSA CALLED AND SAID THAT THEY WILL BEGIN WORK ON THE TRANSFORMERS. HE WILL SENT OVER A WORK PLAN FOR THE DRAINING AND REMOVAL OF THE TRANSFORMERS THEMSELVES. A REMEDIATION PLAN FOR THE ROOF FLOOR AND DRAIN WILL BE SUBMITTED AT A LATER DATE. 8/31/01 THE WORK PLAN FOR THE REMOVAL OF THE TRANSFORMERS HAS BEEN SUBMITTED. BSA WILL NOTIFY JOHN OTTO WHEN WORK WILL BEGIN. BSA WILL SUBMIT THE WORK PLAN FOR THE ROOF REMEDIATION BY 9/5/01.09/07/01 JFO ON SITE WITH MARTY BORYZAK. HE SHOWED ME WHERE THE PROBLEM IS AND EXPLAINED WHAT THEY ARE GOING TO DO. THEY WILL BE REMOVING THE TRANSFORMERS NEXT WEEK. THEY WILL THEN REMOVE THE STONE AND FLOOR DOWN TO THE CONCRETE. AFTER THIS IS COMPLETE THEY WILL EXCAVATE AROUND THE DOWNSPOUT.09/14/01 JFO ON SITE MET WITH MARTY BORYSZAK AND WAYNE CAMERON OF R&D ENGINEERING. THE ROOF FLOOR IS BEING REMOVED AND PLACED IN PLASTIC BAGS FOR DISPOSAL IN THE ROLLOFF ON SITE. WHEN IT IS REMOVED THEY WILL TAKE SWIPE TESTS FROM THE CONCRETE.09/20/01 JFO CALL FROM MARTY BORYSZAK. 80% OF THE SWIPE TESTS FAILED FOR PCB'S. HE WANTS TO MEET MONDAY THE 24TH @ 10:00 WITH FG AND REPRESENTATIVES FROM STERLING ENVIRONMENTAL AND R & D ENGINEERING. STERLING AND R&D WILL PRESENT OPTIONS TO BSA. MARTY B. WANTS TO BE SURE THEY ARE ACCEPTABLE TO DEC.09/24/01 JFO MEETING WITH REPS. FROM BSA, FERGUSON ELECTRIC, R&D & STERLING. SINCE THIS IS A RESTRICTED AREA THAT GETS VERY LITTLE TRAFFIC, MR LANG OF FURGUSON ELECTRIC WANTS TO INCAPSULATE THE CONTAMINATED FLOOR. I WILL CONVEY THIS TO PJB AND MLD AND GET BACK TO HIM TODAY OR TOMORROW WITH AN ANSWER. OPTION 2, WILL BE TO TRY TO CLEAN THE FLOOR AGAIN TO REDUCE THE PCB LEVELS BUT THIS MAY SPREAD THE CONTAMINATION TO CLEAN AREAS ON THE FLOOR.09/25/01 JFO SPOKE WITH MLD. HE SAID IF THE BSA FOLLOWED THE TSCA REQUIREMENTS IT WOULD NOT BE NECESSARY TO DO FURTHER WORK ON THE FLOOR OF THE ROOF. HE WILL CONTACT MR LANG TODAY AND EXPLAIN THIS TO HIM. I SPOKE WITH MARTY BORYSZAK OF BSA AND INFORMED HIM. NOW THEY WILL BE RINSING THE DOWN SPOUT WITH A SOLVENT TO CLEAN IT AND THEN RINSE WITH WATER. THEY WILL BE RECOVERING THE SOLVENT AND WATER AS THEY RINSE. EXCAVATION OF THE SOIL WILL TAKE PLACE WHEN THE DRAIN IS CLEAN. MARTY B WILL NOTIFY ME WHEN THE WORK WILL BEGIN.09/25/01 MLD SPOKE WITH ANDREW ENGLISH, BILL YEMAN AND DAVID GREENLAW (EPA-TSCA) AND CONCLUDED THAT THE CLEANUP RESULTS PROVIDED BY BSA (9/24/01) ARE HIGHER THAN EPAs PCB SPILL CLEANUP POLICY. HOWEVER, EPA DOES GIVE WAIVERS ON ROOFTOPS ETC. WHERE EXPOSURE IS LIMITED.THEREFORE, MLD CALLED TIM LANG OF FERGUSON ELECTRIC AND EXPLAINED THAT STERLING ENV. MUST CERTIFY THAT THEIR REMEDIATION EFFORT IS IN COMPLIANCE WITH EPA TSCA POLICY (PART 761.61...). ONCE THEY FORWARD EPA'S CONCURRENCE THEN DEC WILL BE FINISHED WITH THE ROOF PORTION OF THE SPILL. LANG WILL DISCUSS WITH WAYNE CAMERON (STERLING). MLD TELCON WITH WAYNE CAMERON. HE UNDERSTANDS THAT STERLING WILL CONTACT EPA AND GET

HE SAID HE WILL BE TAKING THE PROPERTY OVER AND IT SHOULD BE FINAL NEXT WEEK. HE HAS CONTACTED WASTE STREAM FOR ASSISTANCE WITH SAMPLING. HIS NUMBER IS 775-0645.6/2/11 FG CALLED FRANK GUZZO AND LEFT A MESSAGE REQUESTING AN UPDATE ON THE PROPERTY.2/7/12 CURRENT PROPERTY OWNER ACCORDING TO THE CITY OF BUFFALO REAL PROPERTY IS: NIAGARA FARGO SERVICES INC, 2915 FIX RD, GRAND ISLAND, NY 14072. LETTER SENT REQUESTING AND UPDATE BY 2/23/12.5/24/12 RIGHT OF ENTRY LETTER SENT TO FRANK GUZZO NIAGARA FARGO SERVICES 2915 FIX RD, GRAND ISLAND NY WITH A RESPONSE DUE BY 6/6/12.6/18/12 FRANK GUZZO SENT IN ANALYTICAL RESULTS FROM SAMPLES COLLECTED FROM THE TANK PIT WELLS ON SITE (2). THE 8260 RESULTS ARE ALL ND EXCEPT FOR MTBE WHICH IS BELOW 1PPB.FG CONTACTED MR. GUZZO TO NOTIFY HIM THAT THE UST'S MUST BE PROPERLY CLOSED OR REGISTERED. 6/20/12 FG REQUEST TO MR. GUZZO: Please provide the schedule that the work will be done. You should not delay registration due to a failed tightness test. The tanks should be registered if they are still on site and the registration should be submitted asap with the necessary tank upgrades done asap as well.MR. GUZZO'S RESPONSE TO FG'S REQUEST TO REGISTER THE UST'S: Will do,Ms.Gallego.I honestly believe that the 1 tank that didn't pass the tightness test failed due to some sort of disconnection and not because of an actual leak.When the pumps were removed in 2006,they

had a tremendous amount of difficulty removing 1 of them and did an inordinate amount of tugging on the main pipes under that particular pump, or perhaps the disconnect was caused by shifting. There is a fairly heavy amount of truck traffic on that stretch of Niagara Street, and the tanks are in pretty close proximity to the traffic lanes, due to the odd shape of the property. I would prefer to keep the tanks, so the direction I will be heading in, and ultimate goal will be to get all 3 to pass the tightness test so they can be registered. I will keep you abreast of the situation as it develops and progresses. I decided to test both wells this time so it would give some sort of a picture of the entire tank field. I really don't know what I'm looking at when reading the results, but did notice that the numbers have gone down progressively each time we've had the samples tested (over a period of 8 years) and was assured by Tony Bogolin (TestAmerica) that these latest test results showed very low amounts of contamination. I'm still convinced that the initial higher readings from years back were caused by the inexperienced repairman that Reid Petroleum sent out in August of 2003 (3 months before we stopped pumping gas at the location) to change a leak detector that had gone bad and slowed the pumps to a crawl - he neglected to use a catch basin when he was changing the part, and he was working almost directly above one of the monitoring wells. Thank you for getting back to me and I would just like to offer an apology one final time for the delay in getting back to you.

FG REQUEST TO MR. GUZZO TO REGISTER UST'S: Thank you for your recent submission of groundwater data from the onsite wells. The data appears to show very minor contamination in the tank pit groundwater wells. Your facility remains unregistered and one of the 3 underground storage tanks failed its tightness test. The tanks must be closed (removed) or registered. Please contact me to discuss your schedule to complete the work.

9/13/12 LETTER SENT TO FRANK GUZZO AT BOTH 1073 NIAGARA, BUFFALO AND 2915 FIX RD, GI REQUESTING RETESTING OF THE FAILED 6K UST AND REGISTRATION OF THE SITE BY OCTOBER 4, 2012. 10/9/12 FRANK GUZZO PROVIDED THE FOLLOWING UPDATE: Ms. Gallego: I know I was supposed to get the underground tanks tested and licensed by October 5th. Unfortunately, I don't have the financial wherewithal to do it at this time due to problems with my tenant at Niagara-Fargo. The amount of money I'm owed would more than cover most of the options I was given (in reference to the problem the last time my mother had the tanks tested) as I'm still pretty sure that the reason the 1 tank wouldn't hold pressure was due to a pipe disconnect/shift situation. I know this issue isn't really a concern of your office, but it's a reality for me and has had a profound impact on my finances in general. I would really love to get the testing/licensing done so it would be in good standing for 5 years. The only reason I waited this long to get back to you (or take action on the testing/licensing for that matter) is because my tenant keeps promising to pay in full. On September 1st, I issued him a deadline date of October 15th to make good on all his promises. It looks now like I will have to start eviction and civil proceedings instead as I've only received 1 paltry payment since then. I already have another tenant lined up, but will need some time to get the funds together. I don't know what else to do. I, personally, don't have any credit available to me and am going to have to try to scrape together the money to evict/file claim, as well as even pay the taxes on the property. I really appreciate the way you handled this situation with my mother back in 2007, as she has been ill for many years and you have been very fair as well as patient with me. Regretfully, I must ask

for more time as I know of no other alternative. As I mentioned previously, I only waited this long to address this because I've been hoping I would get the money out of my tenant. This actually happened with him 1 other time a few years back with a similar amount of money and he did finally pay, so my expectations weren't completely unrealistic. Unfortunately, I'm not too optimistic that it's going to happen this time. I mentioned in a previous e-mail that I've spent a considerable amount of time out of town this year as well tending to a problem with a sick relative and this has also put a strain on my resources as well as exacerbated the situation with my tenant, as I wasn't able to keep on top of him as much as I should have. I am going to be out of town again from today until the 17th of October. If I'm paid by any chance on/before my return, I will IMMEDIATELY commence work on this project. If not, my next actions will be along the lines of what I've previously mentioned, much to my (and I'm sure your) chagrin. Once again, I apologize for even having to write this, but I don't know what else to do. Thank You. frnkguzzo@gmail.com 11/29/12  
FG REQUESTED AN UPDATE ON THE STATUS OF THE SITE. 12/2/12 FRANK GUZZO PROVIDED THE FOLLOWING UPDATE: Unfortunately, the situation hasn't improved to the extent (or even anywhere close to it) to enable me to get the testing/registration done. I was trying to come to an amicable solution with my tenant so I wouldn't have to spend additional money on eviction and litigation. After issuing him the aforementioned deadline, he made one small payment and set up a monthly payment plan which he's failed to adhere to. Faced with no other option, I now have no choice but to evict him and find a new tenant. I've actually found a tenant, but he will be unable to start renting from me until February 2013 when his current lease expires. I'm going to barely be able to pay the taxes on the property when they are due at year's end, let alone come up with the funds to do the tank testing/registration. I know it was supposed to be done back in October, but the soonest it seems I'll have the financial ability to do it will be the spring of 2013. As I mentioned before, I really do want to get it done as soon as I'm able, as then I won't have to worry about it for another 5 years. I'm sorry to have to subject you to this tale of woe, but it is the sole reason it isn't already done. frnkguzzo@gmail.com 1/17/13 FG REQUESTED AN UPDATE ON THE STATUS OF THE SITE. MR. GUZZO PROVIDED THE FOLLOWING RESPONSE: Unfortunately, I hate having to start every communicate like this, but don't have many other choices for words at this point—nothing positive. The prospective tenant I had lined up is embroiled in a dispute with his soon to be ex-business partner that has rendered him unable to begin renting from me next month as I had been planning on. I do have another prospective tenant that has actually coveted the location for quite some time, (he is an ex-employee), but he wouldn't be able to come in until mid-March/early-April due to HIS current lease commitment. There is also one other person interested, but he doesn't have the appropriate equipment (as my shop doesn't come with any) and is trying to secure the financing to acquire it. In summary, while I've had yet another setback, I do have some hope for the near future, but not to the point where I can give you a specific time table/frame yet. When I'm able to do so, I'll let you know immediately. Thanks once again for your patience pertaining to this issue. frnkguzzo@gmail.com  
INSPECTION WITH ECO PHELPS REVEALED GASOLINE SATURATION IN NORTH LINE LEAK DETECTOR PIT. MANY DRUMS OF WASTE OIL IN REAR OF PROPERTY WITH SPILLAGE AROUND THEM. OWNER CLAIMS THAT LINE LEAK DETECTOR WORK RECENTLY DONE BY REID PETROLEUM. POOR HOUSEKEEPING; PBS VIOLATIONS;

Description: The Navy used 1 acre of land at the Naval Industrial Reserve Plant, Sterling Engine Plant, in Buffalo, New York. The building constructed on the site was used for testing marine engines. The buildings on the site are beneficially used by the current owner. There is a vault with three 5,000-gal. tanks in the northern portion of the site. The tanks are no longer in use. The current owner uses the area of the vault (and possibly inside the vault as well) for waste disposal. On 18 June 1943, the Navy purchased 1.00 acre of unimproved land for expansion of the Sterling Engine Company. On 8 February 1960, the site was transferred to the General Services Administration. On 20 October 1960, the GSA conveyed the site to a private party with no restrictive, recapture, or restoration clauses.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

parcels and is approximately 2.7 acres in size. The parcels are 1050 Niagara Street, 1054 Niagara Street and 1088 Niagara Street. Site Features: The site is bound by Albany Street to the north with commercial properties beyond; commercial manufacturing facility to the south; Niagara Street and residential properties beyond to the east; and railroad tracks, NYS I-190, and the Niagara River to the west. Current Zoning: The site is currently used for commercial and is also intended for commercial use. Historical Use: The 1050 Niagara Street parcel has a long history of being utilized for industrial operations since at least 1889. The Niagara Lithograph Company (current on-site building) operated a commercial printing company from at least 1930 through 1990. The Miken Companies, also a commercial printing company was located on-site until at least 2000. Historic Sanborn records indicate that two 25,000 gallon tanks, likely containing fuel oil and/or printing related solvents were located in the basement of the building. Lithographic printing operation historically utilized VOC-based solvent routinely for printing cleaning, degreasing and ink-solvents. The 1088 Niagara Street parcel (northern portion of the site) formerly included the International Brewing Company and American Gelatine corp operated on-site in the early 1900s. In at least 1925, Hygrade Oil Co. utilized the site as a service station and fuel distribution facility, including multiple petroleum storage and distribution tanks, gasoline pump house(s), and tank wagon loading house, which was historically located abutting the current 1050 Niagara Street building, from at least the 1920s through the 1960s. Gulf Oil Corporation and Hygrade Petroleum Co. were identified as on-site operators from at least the 1920s through at least 1960. Site Geology and Hydrogeology: The surface soils on the site is characterized as Urban Land, consisting of level to gently sloping land with 80 percent or more of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. Mapping of the surface soils in the vicinity of the site, based on the USDA soil survey, indicates the surficial geology of the area consists of various loams, with slopes typically ranging from 0-6%. The subsurface soil/fill can generally be described as sandy lean clay with varying amounts and depths of fill material (i.e., brick, concrete).

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RIGHT OF ENTRY. HE SAID HE WILL LOOK AT HIS RECORDS AN OURS AND GET BACK TO US ON REMEDIATION. LTR SENT REQUESTING HIS RESPONSE BY 8/2/00.7/19/00 RECD THE LCS PHASE I/II WHICH SHOWS SOILS AND BEDROCK GROUNDWATER CONTAMINATION. NO ANALYTICAL WAS COMPLETED. COPY OF THE REPORT WAS SENT TO ROGER HADLEY WITH TEXACO.8/7/00 RECD TEXACO RESPONSE. THEY INDICATED THAT THEY WILL COMPLETE A SITE ASSESSMENT AND EXPECT A WORK PLAN TO BE SUBMITTED BY EARLY SEPTEMBER 2000.9/21/00 JUDSON POLIKOFF WITH TEXACO CALLED AND SAID THAT MRS. WIESMORE RECEIVED THE RIGHT OF ENTRY BUT HASN'T RETURNED IT TO THEM YET. HE SAID TEXACO IS READY TO BEGIN WORK AS SOON AS SHE DOES.10/20/00 RECD THE SIGNED AGREEMENT WITH TEXACO. CAROL WIESMORE SIGNED IT AND IT NOW NEEDS TEXACO'S SIGNATURE. THIS DOCUMENT WAS MAILED TO TEXACO AND THEY WILL SIGN IT AND PROVIDE AN INVESTIGATION PLAN FOR THE SITE.11/6/00 RECD A LTR FROM TEXACO STATING THAT THEY SIGNED THE AGREEMENT AND RETURNED IT TO THE WIESMORE'S. TEXACO WILL PROVIDE A WORK PLAN BY 11/6/00.12/12/00 FG SPOKE TO DOUG LIDDELL WITH GES. HE SAID THAT HE BEGAN THE SITE INVESTIGATION YESTERDAY. THEY COMPLETED A BORING INTO ROCK AND DIDN'T FIND WATER AFTER DRILLING 35 FT. THEY LET THE BORING SIT OVERNIGHT AND DISCOVERED WATER AT 18 FT WHEN THEY CHECKED IT THIS MORNING. 2/20/01 JUDSON POLIKOFF CALLED AND SAID THAT HE WILL HAVE AN UPDATE REPORT IN BY THE END OF NEXT WEEK.3/7/01 RECD SITE ASSESSMENT. 11 BORINGS COMPLETED ON SITE. 3 BEDROCK WELLS AND ONE OVERBURDEN WELL INSTALLED. THE ONLY STARS EXCEEDANCE FOR SOIL IS AT SB6. ALL 4 WELLS HAVE SLIGHT EXCEEDANCES OF STARS/GROUNDWATER STANDARDS. TEXACO HAS PROPOSED TO SAMPLE THE WELLS QUARTERLY FOR A YEAR TO DETERMINE IF THESE LEVELS REMAIN STABLE.11/03/01: MF FOR FG, LETTER TO TEXACO REQUESTING QUARTERLY MONITORING, RESPONSE BY 12/3/01.11/20/01: MF FOR FG RECEIVED QUARTERLY MONITORING REPORT. GW MW'S SAMPLED 6/28/01, MW'S-3,4,5 & 6 WERE DRY. THE REST IN TOTAL 8021 PPB. MW#3 - 870.5 MW#4 - 737.4 MW#5 - 1114.3 12/17/01: MF FOR FG RECEIVED QUARTERLY REPORT. SAMPLING DONE 10/1/01. IN TOTAL 8021, PPB. MW#3 - 700 MW#4 - 1047 MW#5 - 1394 MW#6 - DRY06/11/02: MF FOR FG LETTER TO RP REQUESTING SUBMISSION OF THE QUARTERLY REPORT BY 7/3/02. CHEVRON HAS TAKEN OVER TEXACO & THE NEW CONTACTS ARE: MR. W.D. HOWARD MS. CARON S. KOLL CHEVRON ENV. MANAGEMENT COMPANY BLASLAND BOUCK & LEE INC. 2300 WINDY RIDGE PKY, SUITE 800S 6723 TOWPATH ROAD ATLANTA, GEORGIA 30339-5673 SYRACUSE, N.Y. 13214-0066 770-984-3085 FAX 770-984-4107 315-446-2570 x 14807/05/02: MF RECEIVED 7/1/02 BBL'S LETTER. BBL IS IN THE PROCESS OF SECURING ALL SITE FILES SINCE SITE WAS RECENTLY TRANSFERRED FROM TEXACO TO CHEVRON. TWO ROUNDS OF SAMPLING WILL BE PERFORMED THIS YEAR (2002).08/23/02: MF T/C CARON KOLL, SHE HAS 2 REPORTS TO BE SENT TO US. MW#6 DRY. WILL GET REPORTS TO US IN 2 WEEK.09/17/02: MF T/C CARON KOLL, REPORT COMPLETED. ADDITIONAL GW SAMPLED. BED ROCK VERY SHALLOW. MW#6 DRY OTHER 3 MW'S SCREENED AT DIFFERENT DEPTHS. Site Description:

Location: The 1318 Niagara Street Site is located in an urban area in the City of Buffalo, Erie County. The site is across from the intersection of Niagara Street and Lafayette Avenue. Site Features: The site is an empty relatively flat lot and slopes to the west. The site is bordered to the west by Penn Central Railroad and beyond that by NYS I-90 and the Black Rock Canal. Current Zoning/Use: The site is currently inactive, and is zoned for commercial use. The surrounding parcels are a rail corridor to the west, and commercial residential properties along Niagara Street to the north, south, and east. The nearest residential area is 150 feet east of the site. Historical Use(s): From 1909 to 1987 the site was used as a brewery, and from 1987 to 2004 utilized by private owners for unknown purpose. Prior uses that appear to have led to site contamination include two 20,000

Env Problem:

gallon underground storage tanks (USTs), a furnace pit, and nineteen 55 gallon drums containing PCBs and waste oil. In 2004 the City of Buffalo obtained the property through tax foreclosure and during demolition in 2006 found the USTs and furnace pit. An interim remedial measure (IRM) to remove surface soils impacted by PCBs as well as drums of waste and two 20,000 gallon tanks was completed in 2010. Two additional Site Investigations (SI's) were conducted in June through July 2011 and a Supplemental SI was conducted in November 2011. IRM-2 was conducted 2012 to remove highly contaminated PCB soil above 10 ppm from five discrete areas and placement of a soil cover. Endpoint samples from the second IRM showed PCB contaminated soils above 50 ppm remained. Site Geology and Hydrogeology: The site is overlain by 8-10 feet of fill underlain by 8-12 feet of silty clay to limestone bedrock. Shallow groundwater is at 20-25 feet, and generally flows to the west southwest.

Nature and Extent of Contamination Prior to Remediation: Based on investigations to date, the primary contaminants of concern are polychlorinated biphenyls (PCBs) in surface soils in the range of 0.043 parts per million (ppm) to 51 ppm. Surface water on site also indicated the presence of PCBs, however at trace levels. Drummed waste staged on site indicates the presence of hazardous waste levels of PCBs, chlorinated solvents, and fuel related compounds. Sludge material inside of two 20,000 gallon tanks staged onsite indicate the presence of lead at hazardous waste levels. Soil (on-site) - Based on the endpoint results from IRM soil excavations and the SI investigation work performed at the Site, PCB-contaminated fill material remains in the western portion of the Site. The contaminated fill material is found down to native clay soil which is typically encountered between six and eight feet below ground surface, but ranges from as little as 4 feet to as much as 15 feet. The known areas of the higher level PCB (i.e., greater than 50 ppm) soil contamination are located along the south and east walls of IRM-2 Excavation Area C and between IRM 2 Excavation areas A and B. The irregular pattern of contamination suggests that the contaminated soil was relocated during demolition activities of the Site buildings that were formerly located on the property. In general soil contamination is limited to PCBs in fill, however, soil at MW-03 adjacent to furnace pit showed metals (copper and zinc) at concentrations in excess of Commercial use SCOs in a soil sample from 18 ft to 20 feet below ground surface. Several samples from native clay soil showed PCB concentrations which exceeded the SCO. These exceedences were evident at depths of 12 feet or greater in the UST and furnace pit areas. In addition, one IRM-2 Area B bottom sample showed a PCB exceedence at a depth of approximately 7.5 feet. Figure 12 shows the remaining Commercial Use SCO exceedences based on all SI and IRM endpoint sampling results. Groundwater (on-site) - Groundwater contamination exists in monitoring wells MW-03, MW-04, and MW-05 at the Site. Several VOC compounds including 1,2,4-trichlorobenzene, 1,2-dichloroethane, benzene, cis-1,2-dichloroethene, trichloroethene, 1,1-dichloroethane, and vinyl chloride were detected at concentrations above the NYSDEC AWQSGV for these monitoring wells during both groundwater sampling events. The other two monitoring wells, MW-01 and MW-02, did not have any exceedences of the NYSDEC AWQSGV for VOCs during either groundwater sampling event. The only PCB impacts to groundwater at the Site were observed in MW-03. The 1,2,4-trimethylbenzene detection at MW-03 appears to be attributable to the Site as that compound was also detected in MW-3 soil at a

**S108925384**

relatively high level. The other VOC compounds observed in groundwater are most likely attributable to migration of chlorinated solvent contamination from the nearby Chem Core Site. Groundwater (off-site) - No off-site groundwater contamination was identified.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Site Description: Site Location: The ChemCore Buffalo site is a former chemical wholesaling facility located at 1382 Niagara Street in the City of Buffalo, Erie County, NY. Situated on a historically industrial corridor, the site is in close proximity to residential neighborhoods to the east and a Rail corridor to the west with both the Interstate I-190 highway and the Black Rock Canal (which leads from Lake Erie to the Niagara River) farther to the west. Site Features: The site is occupied by a 39,000 square foot industrial building on approximately 0.5 acres. The facility structure occupies most of the property parcel, with exposed soil in a driveway/yard area at the north end of the site. To the north of the driveway/yard area is a two-story structure which is operated by Great Lakes Pressed Steel Corporation. Just beyond the building to the north is West Delevan Avenue which dead-ends at the rail line and is used as a parking area/driveway. A large storm sewer line passes beneath this street and discharges into the Black Rock Canal. To the south of the site is the former location of the Garrett Leather Corporation. The western portion of this property has a warehouse building with enclosed loading docks at the north end abutting the site. The eastern part of the property is covered by asphalt parking and driveway areas and various concrete slabs, foundations and sidewalks. Current Zoning: The site is currently zoned as commercial. Historic Use(s): Since its construction, the facility has been used for commercial operations. During the initial operation of the company, a significant percentage of the business was related to supplying acids to metal fabrication industries. In the early 1930s, operations included a chemical handling facility, with several business and commercial tenants operating from rented portions of the site structure. From the review of an aerial photograph taken in 1938, the on-site building appeared to be similar to the condition existed prior to demolition and no significant changes have been made since 1938. During the 1950s, sales involved chlorinated solvents for dry-cleaning industries. In the 1970s and 1980s, the company sold chlorinated degreasing solvents. Another large percentage of sales involved inert materials such as diatomaceous earth, Fullers earth, and bentonite clay. The company also marketed propylene glycol and glycerine to the hand lotion industry and primary alcohol to the printing industry. Until 1980, ChemCore received diatomaceous earth via a rail spur located directly west of the building. During the 1970s and until 1988, the company received bulk liquid materials at a receiving station on the north side of the building. The materials were transferred into 55 gallon drums by a gravity operated drum filling machine connected to the truck with a hose. The company had an EPA hazardous waste identification number and was classified as a RCRA small quantity generator. There are no documented releases or disposal of hazardous waste into the subsurface at the site. It is believed that improper

Env Problem:

handling of chemicals in the past have contributed contamination to the subsurface soils at the site. ChemCore ceased its operations at the Buffalo facility in approximately 1999. The remedial investigation at the site was completed in 2002. A Record of Decision (ROD) was issued in 2003 that included the demolition of the buildings, excavation of contaminated soils and implementation of a groundwater pump and treatment systems with a five year review. Included in the remedial effort was a pilot study of enhanced bioremediation of groundwater for off-site groundwater contamination. The pump and treat system was operated for five years and shut down. Based on the success of the off-site bio-remediation study, a pilot study is in progress at the site to address the groundwater contamination that was not addressed by the pump and treat system. Site Geology and Hydrogeology: The subsurface in the vicinity of the site has three layers with bedrock at the bottom, a silty clay layer above the bedrock, and a fill layer at the top. At the ChemCore site, the thickness of the fill layer ranged from one to eight feet. The thickness of the silty clay layer ranged from 9 to 17.5 feet. The bedrock was found at depths ranging from 12.8 to 30 feet. The primary water-bearing unit identified at the site is the unconfined water table aquifer present in the bedrock. The groundwater table at the site was found to be at approximately 30 feet below the surface. Based on the water level data obtained during the RI, the groundwater at the site flows generally towards the Black Rock Canal. However, a southwesterly component in the groundwater flow was observed in the shallow bedrock zone. Groundwater flow in the shallow bedrock zone emanating from the site is impeded by a wedge of lacustrine silts and clays that drape over the sloping bedrock surface beneath the I-190 corridor. These confining sediments induce a southwesterly component in the groundwater flow. For this reason, the plume of dissolved groundwater contamination has migrated southwestward from the site. Prior to Remediation: As part of the bankruptcy agreement ChemCore completed a Phase I, Environmental Assessment to determine the value of the facility as collateral. As a result of the recommendations a Phase II, Limited Site Evaluation was completed which included several soil borings. Toxicity Characteristic Leaching Procedure (TCLP) samples taken from these borings indicated the presence of hazardous waste. The hazardous waste as identified consisted of primarily, tetrachloroethene (PCE), 1,1,1-trichloroethane, and trichloroethene (TCE). A study completed by the Department verified soil contamination at depth under the facility and under parking areas directly to the north and south of the facility. Installation and sampling of monitoring wells has indicated that the groundwater under the facility is also contaminated. Water level measurements from these wells and from nearby Black Rock Channel suggests a hydraulic connection between the two. The site was determined to be eligible for implementation of a Remedial Investigation/Feasibility Study (RI/FS) under State Superfund. The results of the RI indicated that PCE and TCE were detected most frequently and at highest concentrations in subsurface soil samples. PCE was detected as high as 38,000 parts per million (ppm) or milligram per kilogram (mg/kg) and TCE was detected as high as 8 ppm. The highest PCE concentration was found at the sampling location closer to the former PCE tank area. Volatile Organic Compounds (VOCs) were detected at low concentrations in sediment samples collected from Black Rock Canal but were below the clean up goals for sediment. Based upon the site history and groundwater data, the site does not appear to be the

source of contamination found in canal sediments. No VOCs were detected in surface water. Predominantly, VOCs such as PCE, TCE, vinyl chloride and other breakdown products of PCE were found in all well locations. PCE was found as high as 21,000 parts per billion (ppb) and TCE was found as high as 16,000 ppb. Cis-1,2-dichloroethene was found as high as 30,000 ppb. The concentration of contaminants in groundwater decreases rapidly southwest of the site and approaches groundwater standards at the farthest monitoring well. A Record of Decision (ROD) was issued in 2003 that included the demolition of the buildings, excavation of contaminated soils and implementation of a groundwater pump and treatment systems with a five year review. Included in the remedial effort was a pilot study of enhanced bioremediation of groundwater for off-site groundwater contamination. Post Remediation:As part of the remedial action the building was demolished, the contaminated soils were excavated for off-site disposal and an on-site groundwater pump and treat system was installed to address the groundwater contamination. The pilot study for the off-site groundwater contamination by bioremediation technology was completed. The contaminant concentration in off-site groundwater has declined and the groundwater monitoring is in progress. After five years of pump and treatment operation at the site to address the on-site groundwater contamination, the system was discontinued at the end of 2011. The pump and treat operation has reduced the contaminant concentration of on-site groundwater but the VOC concentration is still high. To address the on-site groundwater contamination, the bioremediation technology has been implemented at the site since November 2011. On-site and off-site groundwater is monitored on a periodic basis to determine the effectiveness of the bioremediation technology.

Health Problem: The site is fenced, thus limiting access. Most of the property is occupied by the building and parking areas cover the remainder of the property. Exposures via drinking water are not expected because nearby residences and businesses are served by public water.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FG"06/17/94: SITE VISIT 6/17/94. 40 GAL HYDROGEN PEROXIDE SPILLED FROM 2-30 GAL DRUMS. SPEEDI DRY PLACED ON SPILL-MAJORITY EVAPORATED. SMALL FIRE CAUSED BY MT DRUM. DRUMS OVERPACKED-SPEEDI DRY TO BE ADDED. 07/05/94: ESSEX WASTE CALLED TO SAY THAT CONTAM MATL TO BE DISPOSED WEEK OF JULY 11, 1994. 08/02/94: MANIFEST FOR DISPOSAL OF DRUMS OF PEROXIDE RECEIVED. SITE CAN BE CLOSED. 09/29/95: This is additional information about material spilled from the translation of the old spill file: HYDROGEN PEROXIDE 50.

Remarks: THREE 30 GALLON DRUMS OF HYDROGEN PEROXIDE AT SITE. ONE EMPTY,OTHER TWO FULL. THE EMPTY DRUM BEGAN SMOKING WHILE SITTING ON A WOODEN PALLET. THE TWO OTHER DRUMS WERE LEAKING.

Material:

Tank Test:

Count: 65 records.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/09/2013	Telephone: N/A
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 10/11/2013
Number of Days to Update: 62	Next Scheduled EDR Contact: 01/20/2014
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/09/2013	Telephone: N/A
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 10/11/2013

## ***Federal CERCLIS list***

### **CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/29/2013	Telephone: 703-412-9810
Date Made Active in Reports: 08/09/2013	Last EDR Contact: 10/18/2013
Number of Days to Update: 72	Next Scheduled EDR Contact: 12/09/2013
	Data Release Frequency: Quarterly

### **FEDERAL FACILITY: Federal Facility Site Information listing**

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 07/31/2012	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/09/2012	Telephone: 703-603-8704

	Data Release Frequency: Varies

## ***Federal CERCLIS NFRAP site List***

### **CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/29/2013	Telephone: 703-412-9810

### ***Federal RCRA non-CORRACTS TSD facilities list***

#### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/11/2013  
Date Data Arrived at EDR: 08/08/2013

### ***Federal RCRA generators list***

#### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/11/2013  
Date Data Arrived at EDR: 08/08/2013  
Date Made Active in Reports: 09/13/2013

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal institutional controls / engineering controls registries***

### **US ENG CONTROLS: Engineering Controls Sites List**

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 06/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2013	Telephone: 703-603-0695
Date Made Active in Reports: 10/03/2013	Last EDR Contact: 09/10/2013
Number of Days to Update: 104	Next Scheduled EDR Contact: 12/23/2013
	Data Release Frequency: Varies

### **US INST CONTROL: Sites with Institutional Controls**

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 06/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2013	Telephone: 703-603-0695
Date Made Active in Reports: 10/03/2013	Last EDR Contact: 09/10/2013
Number of Days to Update: 104	Next Scheduled EDR Contact: 12/23/2013
	Data Release Frequency: Varies

### **LUCIS: Land Use Control Information System**

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/20/2013	Source: Department of the Navy
Date Data Arrived at EDR: 08/23/2013	Telephone: 843-820-7326

Number of Days to Update: 70	Next Scheduled EDR Contact: 09/02/2013
	Data Release Frequency: Varies

## ***Federal ERNS list***

### **ERNS: Emergency Response Notification System**

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2012	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/17/2013	Telephone: 202-267-2180
Date Made Active in Reports: 02/15/2013	Last EDR Contact: 10/01/2013
Number of Days to Update: 29	Next Scheduled EDR Contact: 01/13/2014
	Data Release Frequency: Annually

## ***State- and tribal - equivalent CERCLIS***

### **SHWS: Inactive Hazardous Waste Disposal Sites in New York State**

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 08/19/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 08/22/2013	Telephone: 518-402-9622
Date Made Active in Reports: 09/12/2013	Last EDR Contact: 09/26/2013
Number of Days to Update: 21	Next Scheduled EDR Contact: 12/02/2013
	Data Release Frequency: Annually

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 01/01/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 02/20/2013	Telephone: 518-402-9814
Date Made Active in Reports: 03/15/2013	Last EDR Contact: 08/23/2013
Number of Days to Update: 23	Next Scheduled EDR Contact: 12/02/2013
	Data Release Frequency: Varies

### **State and tribal landfill and/or solid waste disposal site lists**

#### SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 07/08/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/10/2013	Telephone: 518-457-2051

Number of Days to Update: 61	Next Scheduled EDR Contact: 01/20/2014
	Data Release Frequency: Semi-Annually

### **State and tribal leaking storage tank lists**

#### LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 08/19/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 08/22/2013	Telephone: 518-402-9549
Date Made Active in Reports: 09/11/2013	Last EDR Contact: 09/26/2013
Number of Days to Update: 20	Next Scheduled EDR Contact: 12/02/2013
	Data Release Frequency: Varies

#### HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/08/2005	Telephone: 518-402-9549
Date Made Active in Reports: 07/14/2005	Last EDR Contact: 07/07/2005
Number of Days to Update: 6	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

#### INDIAN LUST R10: Leaking Underground Storage Tanks on Indian Land LUSTs on Indian land in Alaska, Idaho, Oregon and Washington.

Date of Government Version: 07/29/2013	Source: EPA Region 10
Date Data Arrived at EDR: 07/30/2013	Telephone: 206-553-2857
Date Made Active in Reports: 11/01/2013	Last EDR Contact: 10/28/2013

Data Release Frequency: Varies

#### VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 08/19/2013

Date Data Arrived at EDR: 08/22/2013

### **State and tribal Brownfields sites**

#### ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### **Local Brownfield lists**

##### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

### **Other Ascertainable Records**

#### RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

### ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 04/26/2013  
Date Data Arrived at EDR: 06/11/2013  
Date Made Active in Reports: 11/01/2013  
Number of Days to Update: 143

Source: EPA  
Telephone: 703-416-0223  
Last EDR Contact: 09/13/2013  
Next Scheduled EDR Contact: 12/23/2013  
Data Release Frequency: Annually

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

### SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

Data Release Frequency: Quarterly

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995  
Date Data Arrived at EDR: 07/03/1995  
Date Made Active in Reports: 08/07/1995

Last EDR Contact: 06/02/2008  
Next Scheduled EDR Contact: 09/01/2008  
Data Release Frequency: No Update Planned

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

### SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

### E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 06/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/13/2013	Telephone: 617-520-3000

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### Financial Assurance 2: Financial Assurance Information Listing

A listing of financial assurance information for hazardous waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

Date of Government Version: 10/31/2008  
Date Data Arrived at EDR: 11/25/2008  
Date Made Active in Reports: 12/11/2008

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013  
Date Data Arrived at EDR: 08/19/2013  
Date Made Active in Reports: 10/03/2013  
Number of Days to Update: 45

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

### Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Daycare Centers: Day Care Providers  
Source: Department of Health  
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands  
Source: Department of Environmental Conservation  
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## **GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM**

### **TARGET PROPERTY ADDRESS**

1130 NIAGARA STREET  
1130 NIAGARA STREET  
BUFFALO, NY 14213

### **TARGET PROPERTY COORDINATES**

Latitude (North):	42.9142 - 42° 54' 51.12"
Longitude (West):	78.8996 - 78° 53' 58.56"
Universal Transverse Mercator:	Zone 17
UTM X (Meters):	671445.9
UTM Y (Meters):	4753212.5
Elevation:	613 ft. above sea level

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	42078-H8 BUFFALO NW, NY CA10
Most Recent Revision:	1965

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### FEMA FLOOD ZONE

Target Property County  
ERIE, NY

FEMA Flood  
Electronic Data  
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 36029C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

### NATIONAL WETLAND INVENTORY

NWI Quad at Target Property  
BUFFALO NW

NWI Electronic  
Data Coverage  
YES - refer to the Overview Map and Detail Map

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### *Site-Specific Hydrogeological Data\*:*

Search Radius: 1.25 miles  
Status: Not found

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

#### **Soil Map ID: 1**

Soil Component Name: Urban land

Soil Surface Texture:  
Hydrologic Group: Not reported

Soil Drainage Class:  
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

---

#### **Soil Map ID: 2**

Soil Component Name: Urban

Soil Surface Texture:  
Hydrologic Group: Not reported

Soil Drainage Class:  
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 54 inches

No Layer Information available.

---

#### **Soil Map ID: 3**

Soil Component Name: Urban

Soil Surface Texture:  
Hydrologic Group: Not reported

Soil Drainage Class:

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

No Layer Information available.

---

### Soil Map ID: 4

Soil Component Name: Water

Soil Surface Texture:  
Hydrologic Group: Not reported

Soil Drainage Class:  
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

---

### Soil Map ID: 5

Soil Component Name: Udorthents

Soil Surface Texture:  
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

No Layer Information available.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

### WELL SEARCH DISTANCE INFORMATION

<u>DATABASE</u>	<u>SEARCH DISTANCE (miles)</u>
Federal USGS	1.000
Federal FRDS PWS	Nearest PWS within 1 mile
State Database	1.000

## **TOPOGRAPHIC INFORMATION**

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### **Scanned Digital USGS 7.5' Topographic Map (DRG)**

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## **HYDROLOGIC INFORMATION**

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

### **State Wetlands Data: Freshwater Wetlands**

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## **HYDROGEOLOGIC INFORMATION**

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## **GEOLOGIC INFORMATION**

### **Geologic Age and Rock Stratigraphic Unit**

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### **STATSGO: State Soil Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### **SSURGO: Soil Survey Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

0'-0" Ground Surface

The well was constructed in borehole SB - 1 upon completing the soil boring to 13.3 feet below ground surface (bgs).

A Geoprobe drill rig using direct push pneumatic methods was used to advance the soil boring.

Borehole Diameter = ~ 3"

Well Diameter = 1"

Screen = 10' screen 10 slot

Well Pack = 0 Morie Sand
