1.0 EXECUTIVE SUMMARY

Robert J. Szustakowski Environmental, Inc (RJS), completed all appropriate inquiries of the above-referenced site in accordance with ASTM E1527-05. This section summarizes the findings of the environmental professional. The reader is encouraged to read the entire report.

1.1 Report Findings

1.1.1 Site Description

The Site, addressed at 441 Ohio Street (aka 9 South Street), City of Buffalo, Erie County, New York, measures approximately 2.3 acres and includes one vacant commercial/industrial structure. The building, reportedly condemned in 2011, was noted to include vacant offices, a maintenance area, warehouse/storage space and loading docks. Demolition of the building is reportedly proposed. Exterior areas were noted to include gravel and concrete paved areas, trees and green areas.

1.1.2 Site Reconnaissance

The following potential environmental concerns were identified at the Site.

- The Site is located in an industrial area.
- Historic on-site operations reportedly included repair/maintenance of on-site bobcats, forklifts, and paper bailing and cutting machines.
- Hazardous/regulated materials (antifreeze, hydraulic oil, solvents for degreasing, etc.) and miscellaneous equipment remain on-site. Black staining was noted on the equipment within the building, but not to ground surfaces proximate to the equipment.
- Stained soils were observed proximate to dumpsters and a propane storage area located south of the on-site building. The staining was not noted to be extensive.
- Miscellaneous debris (paper, plastic, etc.) was noted on-site. No staining or evidence of release was noted proximate to the debris at the time of the site reconnaissance.
- A railroad spur was observed to run north-south along the eastern portion of the Site. No concerns (staining, odors, etc.) were noted along the railroad spur.
- Damaged plaster was observed on-site. Based on the age of the existing building, this
 material may contain asbestos.
- Peeling/chipping paint was observed on the wood structural members of the building. Based on the age of the existing building, this paint may contain lead.
- While no obvious evidence of mold growth was observed, due to the dilapidated nature of the building, the potential for mold growth exists. As demolition of the building is proposed, this is not considered a significant concern.
- The south adjacent property reportedly includes a sub-grade gun range. Lead impacts are often associated with gun ranges.

1.1.3 Site History

The existing structure, constructed in 1892, has mainly been utilized for warehousing purposes prior to being vacated in 2011. A portion of the existing building was also identified as being utilized as a bakery feed mill in at least 1950. The most recent occupant, Great Lakes Paper Fibers Corp., was a bailed paper warehouse operation. Operations associated with Great Lakes Paper Fibers Corp. also included paper cutting and maintenance of on-site equipment (forklifts, cutting machines, etc.). Previous site occupants historically included Erie Railroad Flour Warehouse, Erie Railroad Exchange - Lake and Transfer Warehouse, Great Lakes Paper Stock, Inc., Seaboard Great Lakes, Buffalo Waterfront Corp., and Erie Railroad Corp.

Railroad tracks are currently and have historically been located on-site.

Commercial and industrial uses were identified in connection with adjacent/nearby properties.

1.1.4 Regulatory Information

The Site was listed in the SWRCY database under Great Lakes Paper Fibers Corp. This listing is reportedly due to recyclables (paper) handling and recovery. "Closed" spills were also identified in connection with the Site. Lastly, the Site is included in the ERNS database. None of these suggest an on-going concern on-site.

While numerous database listings were identified in connection with adjacent/nearby properties, none of the listings suggested environmental concern at the Site.

1.1.5 Other Findings

While the Site is located in an industrial area, none of the information obtained/reviewed as part of this assessment suggested the potential for a VEC at the Site.

1.2 Conclusions

1.2.1 Findings

The following is a list of known or suspected RECs, historic RECs and de minimis conditions.

Known or Suspected RECs

- The Site is located in an industrial area.
- Historic on-site operations reportedly included repair/maintenance of on-site bobcats, forklifts, and paper bailing and cutting machines. As the Site was likely connected to the municipal sanitary sewer system during its entire use, this concern is reduced.
- Hazardous/regulated materials (antifreeze, hydraulic oil, solvents for degreasing, etc.) and miscellaneous equipment remain on-site. Black staining was noted on the equipment within the building, but not to ground surfaces proximate to the equipment.
- Stained soils were observed proximate to dumpsters and a propane storage area located south of the on-site building. The staining was not noted to be extensive.
- A railroad spur was observed to run north-south along the eastern portion of the Site. No concerns (staining, odors, etc.) were noted along the railroad spur. Note that additional railroad tracks were historically located on-site, as identified through review of historic Sanborn maps.
- The Site was listed in the SWRCY database under Great Lakes Paper Fibers Corp. (a previous occupant) apparently due to recyclables (paper) handling and recovery. The Site was also identified in the ERNS database.
- The south adjacent property reportedly includes a sub-grade gun range. Lead impacts are
 often associated with gun ranges. Adjacent/nearby properties were also identified as
 including gasoline tanks, a truck repair/welding operation, and railroad tracks.

Historic RECs

- Three "closed" spills, one of which was identified as a duplicate spill incident, were identified
 in connection with the Site.
- Numerous "inactive" and "closed" spill incidents were identified in connection with adjacent/nearby properties.

De Minimis Conditions

- Miscellaneous debris (paper, plastic, etc.) was noted on-site. No staining or evidence of release was noted proximate to the debris at the time of the site reconnaissance.
- Damaged plaster was observed on-site. Based on the age of the existing building, this
 material may contain asbestos.
- Peeling/chipping paint was observed on the wood structural members of the building. Based on the age of the existing building, this paint may contain lead.
- While no obvious evidence of mold growth was observed, due to the dilapidated nature of the building, the potential for mold growth exists. As demolition of the building is proposed, this is not considered a significant concern.
- A federal wetland area, identified proximate to the Buffalo River, was identified on the western portion of the Site.

• Research in the area of the Site suggests an average basement radon concentration of greater than four pCi/L relative to Erie County, New York. However, based on the commercial/industrial nature of the Site, radon should not be a concern.

Definition of REC: A REC is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property.

Definition of Historic REC: A historical REC is an environmental condition that in the past would have been considered a recognized environmental condition, but that may or may not be considered a recognized environmental condition currently. For example, a spill that has been remediated to the satisfaction of the appropriate regulators would be considered a historical recognized environmental condition.

Definition of de minimis: As per ASTM 1527-05, conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

1.2.2 ASTM RECs

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of 441 Ohio Street (aka 9 South Street), City of Buffalo, Erie County, New York, the Site. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the Site except for the following:

- The Site is located in an industrial area.
- Hazardous/regulated materials (antifreeze, hydraulic oil, solvents for degreasing, etc.) and miscellaneous equipment remain on the unoccupied Site.
- Railroad tracks are currently and have historically been located on-site. Impacts are often found along railroad tracks.
- Minor black staining was noted to the earthen ground surface on the southern portion of the Site.
- Adjacent/nearby properties, in addition to industrial operations, were identified as currently and/or historically including railroad tracks, a sub-grade gun range, gasoline tanks and a truck repair/welding operation.

1.2.3 Opinion

Based on RJS' study, the following summarizes the opinion of the environmental professionals relative to the Site.

The Site is located in an industrial area and has mainly been utilized for warehousing purposes in the past; no significant environmental concerns were identified in connection with the Site. While no further study is immediately warranted, impacts should be properly addressed if they are encountered in the future, especially during demolition and site re-development activities. No Phase II is recommended as there are no specific areas of concern (e.g., tanks, disposal areas, etc.). Rather, the Site is likely impacted by the long industrialized area in which the Site is located, which would not impact similar industrial uses at the Site.

The following should be noted.

- If not intended for future use, the hazardous/regulated materials and miscellaneous equipment should be removed from the Site and properly disposed of off-site. The stained soils and miscellaneous debris noted at the Site should also be properly disposed of off-site.
- A full asbestos survey is required prior to demolition activities. As previously indicated, damaged suspect ACMs were observed on-site; the survey should include sampling of these materials for asbestos. ACMs should be properly handled and disposed of off-site.
- Painted surfaces may contain lead. A lead survey should be completed prior to demolition activities.
- Elevated radon concentrations in the area of the Site should be considered during future site re-development.

- Future development may be hindered due to the presence of a federal wetland on-site/proximity of the Buffalo River. A wetland delineation study would be required to confirm this.
- While environmental concerns (tanks, truck repair, etc.) were identified in connection with adjacent/nearby properties, no visual or regulatory information suggested environmental concern on-site. In addition, in RJS' experience, the property owner would not be liable for an off-site release.

1.3 Data Gaps

Data gaps were encountered in completion of this inquiry. These included limited site history at five year intervals and the presence of stored materials and dense vegetation which hindered observations of ground surfaces. In addition, portions of the existing building, including a crawl space, could not be observed due to unsafe conditions (i.e., dilapidated areas, unsafe flooring, etc.). While hindered observations would be considered a significant data gap, such did not limit the environmental professional's ability to make conclusions regarding the property.

This report was completed in general accordance with ASTM E1527-05 with no significant deviations.

Definition of Data Gap: A data gap is defined by 40 CFR 312.10 as "a lack of or inability to obtain information required by the standards and practices" of preparation of this document "despite good faith efforts by the environmental professional" or others to gather such information.

1.4 Reliance and Declaration

This report was prepared for the exclusive use of FFZ Holdings, LLC, their respective affiliates and subsidiaries and all successors and assigns thereof. Any other use, or using this report in a fashion in which it was not intended, is at the sole risk of the user.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10. See Qualifications in Section 14.13.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Bryan Mayback Sr. Project Manager

Buyan Mayback

On Behalf Of Robert Szustakowski - President

2.0 PURPOSE

The primary purpose of this study was to provide FFZ Holdings, LLC, with sufficient information about the potential environmental risks associated with the Site. A secondary purpose of this study was to document the inquiry of the environmental professional for all appropriate inquiries for the Site. Specifically, this document is intended to provide the "all appropriate inquiries" for the purposes of the CERCLA Section 101(35)(B). Such is applicable to persons seeking to qualify for (i) the innocent landowner defense pursuant to CERCLA Sections 101(35) and 107(b)(3); (ii) the bona fide prospective purchaser liability protection pursuant to CERCLA Sections 101(40) and 107(r); and, (iii) the contiguous property owner liability protection pursuant to CERCLA Section 107(q). This report was not intended as part of the site characterization and assessment with use of a grant awarded under CERCLA Section 104(k)(2)(B).

3.0 SCOPE OF WORK

This Environmental Assessment report has been prepared in accordance with "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," ASTM E 1527-05 and is intended to address the site assessment portion for Innocent Landowners, Standards for Conducting All Appropriate Inquiries (40 CFR 312). The scope of work is intended to identify conditions indicative of releases or threatened releases of hazardous substance on, at, in or to the Site, via the following tasks.

- Review of information provided by the person seeking liability protection relative to: environmental
 cleanup liens; specialized knowledge or experience regarding the subject property; relationship of the
 purchase price to the fair market value of the property, if the property were not contaminated; and,
 commonly known or reasonably available information about the Site.
- Interviews with past and present owners, operators and occupants.
- Review of historical sources of information documenting the Site's first use.
- Review of Federal, state, tribal and local government records, as defined in 40CFR312.26, as provided by Environmental Data Resources (EDR), purchased by RJS and dated November 7, 2011.
- A visual inspection of the Site and adjoining properties (to the extent possible).
- While not included in the ASTM standard, the site reconnaissance also included a cursory visual
 inspection of the Site, facilities and improvements for suspect mold, asbestos and lead-based paint
 surfaces. Such should not be considered a complete inspection for these items.
- Preparation of this written report on all appropriate inquiries.

To the best of RJS' knowledge, the information contained in this report is true and accurate. RJS personnel have exercised due diligence in the compilation of the information contained herein appropriate to environmental professionals engaged in investigations of this sort. RJS makes no guarantees regarding the accuracy of information gained from other sources. A list of references used is included within the appendix. Additional limitations are also found within this report.

It should be noted that the due diligence does not merely include this study. The following information is the responsibility of the user and not of the environmental professional.

- Searches for environmental cleanup liens against the Site that are filed or recorded under any federal, tribal, state or local law, as required by 40 CFR section 312.25.
- Assessments of any specialized knowledge or experience on the part of the landowner, as required by 40 CFR section 312.28.
- An assessment of the relationship of the purchase price to the fair market value of the Site, if the property was not contaminated, as required by 40 CFR 312.29.
- An assessment of commonly known or reasonably ascertainable information about the Site, as required by 40 CFR section 312.30.

In addition, there are other requirements within 40 CFR 312 of the user post-purchase. Such should be reviewed with counsel.

4.0 SITE / VICINITY DESCRIPTION

The Site, measuring approximately 2.2 acres, is developed with one vacant commercial/industrial structure. Prior to being vacated, the Site was occupied by Great Lakes Paper Fibers Corp., a paper bailing and cutting operation. The building was noted to include vacant office space, paper cutting and bailing machines, loading docks and a maintenance area. Exterior areas were noted to include gravel and concrete paved areas, trees and green areas. Additional site information is provided below.

General Site Information

Name of Site	Commercial/Industrial Property (Historic Great Lakes
	Paper Fibers Corp.)
Site Address	441 Ohio Street (aka 9 South Street)
Site Use(s)	None Currently (Vacant)
Fronting Streets	South Street/Ohio Street
Site Size (acres)	Approximately 2.2 acres
Site Elevation (feet above mean sea	Approximately 575 feet
level)	
Site Topography	Generally flat
Nearest Water Body (Name/Distance)	Buffalo River (adjacent)
Exterior Conditions/Improvements	Gravel paving, concrete paving, railroad spur

Information relative to the on-site building is provided below.

Building Summary

Building Number	Building 1
Square Footage (approximate)	46,900 square feet (per municipal information)
Building Identification/Use	Vacant/historic paper cutting and bailing operation
No. of Stories	Two
Basement Present?	Crawlspace
Roof Type	Flat and peaked
Building Envelope	Wood and brick
Building Siding	Corrugated Metal
Heating System	Natural-gas fired forced hot air and ceiling mounted units
Building Construction Date	1892 (per municipal information)
Utilities Provided	Municipal sanitary sewer, public water, electric and
	natural-gas

4.1 Site Reconnaissance

Mr. Joseph S. Mecca of RJS completed a site reconnaissance of the Site on November 9, 2011. He was accompanied by Mr. Nick Nemeti, the Vice President for Great Lakes Paper Fibers Corp. and Key Site Manager. Mr. Nemeti has been associated with the Site for approximately 33 years. Mr. Robert Zuchlewski of FFZ Holdings, LLC, the potential purchaser, was also present at the time of the site reconnaissance.

The purpose of this reconnaissance was to identify visual evidence of conditions that may pose an environmental concern to the Site. The majority of readily accessible areas were visually assessed at the time of the site reconnaissance. Stored materials and dense vegetation hindered observations at the time of the site reconnaissance. Additionally, the middle, southern and crawlspace portions of the existing building were inaccessible due to unsafe conditions (i.e., dilapidated portions of the building, unsafe wooden floor, etc.). The following table summarizes the site observations. Where appropriate, additional details are provided.

Item	Quantity/General	Comments
Item	Description	Odminonts
On-site Operations	Vacant	The Site is located in an industrial area; the Site structure was vacant at the time of the site reconnaissance. The Site contact indicated that the paper bailing and cutting operation (Historic Great Lakes Paper Fibers Corp.) ceased when the building was condemned in October 2011. The site contact indicated that the on-site paper operation was a dry process, no chemicals were used to treat the paper.
Storage Tanks	None	No ASTs or evidence of an UST (i.e., vent pipe, fill port, etc.) were observed on-site at the time of the reconnaissance.
Propane Tanks	Several	Propane tanks, historically associated with on-site forklifts, were observed on-site.
Hazardous or Regulated Materials	Lubricating Fluids, General Cleaning and Maintenance Materials	Hazardous/regulated materials, including hydraulic oil, lubricating oil, anti-freeze, gear oil and solvents, were observed on-site. These materials are stored in 55-gallon drums and containers of five-gallons or less. According to the site contact, these materials were used in the past to maintain the bobcats, forklifts, and paper bailing and cutting machines. No concerns (staining, odors, etc.) were noted proximate to these materials. General cleaning/maintenance materials are also stored
		and utilized on-site.
Solid, Hazardous or Regulated Wastes	General/Solid Wastes	No wastes are currently generated on-site. Wastes historically generated on-site included paper wastes (cuttings, etc.) were historically generated on-site. Reportedly, paper products were historically bailed and shipped off-site to paper rendering facilities for recycling and reuse.
Miscellaneous Debris	Miscellaneous Debris	Miscellaneous debris including paper, plastic, etc. was observed on the eastern portion of the Site. No staining or evidence of release was noted proximate to the debris at the time of the site reconnaissance.
Staining/Spillage	Stained Soil	Stained soils were observed proximate to the dumpsters and propane storage area south of the on-site building. The staining was not noted to be extensive. Apparent water staining, likely a result of a leaking roof/dilapidated portions of the building, was noted to wood floor areas in the on-site building.
Stressed/Dead Vegetation	None	
Wastewaters	Municipal Sanitary Sewer	The Site is connected to the municipal sanitary sewer system.
Water Supply	Public Water	The Site utilizes public water.
Odors	Moldy/ Musty	Mold/musty odors were noted in the building.
Unidentified Substance Containers	None	
Heating/Cooling	Forced Hot Air and Ceiling Mounted Units	A natural-gas fired forced hot air unit and two ceiling mounted natural-gas fired units were observed on-site.
Drains and Sumps	None	No floor drains, storm drains or sumps were observed on-site.
Pits, Ponds and Lagoons	None	

Item	Quantity/General Description	Comments
Evidence of Previous	None	
Intrusive		
Investigation		
Septic System	None	As detailed above, the Site is connected to the municipal sewer system.
Air Emissions	None	
Suspect PCBs	Transformers	Three utility-owned pad mounted transformers were noted on the east adjacent parcel. No staining or evidence of release was noted proximate to these transformers.
Suspect ACMs	Throughout Building	Based on the age of the existing building, the potential for ACMs exists. Suspect ACMs were noted to include plaster, 12"x12" and 9"x9" floor tile, 2'x4' ceiling tiles, and the tar coating on the metal siding. Additionally, ACMs could be present in the roofing materials.
Suspect Lead-Based	Potential Exists	Based on the age of the structure, the potential for
Paint		lead-based paint exists. Peeling/chipping paint was noted on the wood structural members of the building at the time of the site reconnaissance.
Suspect Lead Pipes and Soldering	Potential Exists	Based on the age of the structure, the potential for lead pipes and soldering exists.
Suspect Mold	Potential Exists	While no obvious evidence of mold growth was observed, due to the dilapidated nature of the building, the potential for mold growth exists.
Miscellaneous Equipment	Bailing and Cutting Equipment	One paper bailing machine and one paper cutting machine were observed in the accessible portion of the building. Such had sub-floor components used to catch scrap paper. Additional machinery is reportedly present on-site in the condemned portions of the building, according to the site contact. Black staining was noted on the machinery but not to ground surfaces proximate to the equipment.
Railroad Spur	Eastern Portion of Site	Railroad tracks were observed along the eastern building exterior. Such were reportedly used to bring railroad cars on-site to load with paper bales. No concerns (staining, odors, etc.) were observed proximate to the railroad tracks.

4.2 Adjacent Site Uses

Adjacent site uses are as follows.

Direction	Current Use	Apparent/Reported Past Use	Comments/Concerns
North	NYSDEC Canoe Launch	Industrial/Commercial	Industrial operations could result in
	and Fishing Access		impacts to the environment.
South	Bison City Rod and Gun	Industrial/Commercial	Property reportedly includes a
	Club		sub-grade gun range.
East	Vacant	Railroad Tracks	Railroad tracks could result in impacts
			to the environment.
West	Buffalo River	Same	None

4.3 Site Photographs

RJS photographically documented site conditions observed during the site reconnaissance. Select relevant photographs are included in the appendix of this report.

4.4 Summary of Observations of Potential Concern

The following potential environmental concerns were identified at the Site.

- The Site is located in an industrial area.
- Historic on-site operations reportedly included repair/maintenance of on-site bobcats, forklifts, and paper bailing and cutting machines.
- Hazardous/regulated materials (antifreeze, hydraulic oil, solvents for degreasing, etc.) and miscellaneous equipment remain on-site. Black staining was noted on the equipment within the building, but not to ground surfaces proximate to the equipment.
- Stained soils were observed proximate to dumpsters and a propane storage area located south of the on-site building. The staining was not noted to be extensive.
- Miscellaneous debris (paper, plastic, etc.) was noted on-site. No staining or evidence of release was noted proximate to the debris at the time of the site reconnaissance.
- A railroad spur was observed to run north-south along the eastern portion of the Site. No concerns (staining, odors, etc.) were noted along the railroad spur.
- Damaged plaster was observed on-site. Based on the age of the existing building, this material may contain asbestos.
- Peeling/chipping paint was observed on the wood structural members of the building. Based on the age of the existing building, this paint may contain lead.
- While no obvious evidence of mold growth was observed, due to the dilapidated nature of the building, the potential for mold growth exists. As demolition of the building is proposed, this is not considered a significant concern.
- The south adjacent property reportedly includes a sub-grade gun range. Lead impacts are often associated with gun ranges.

5.0 SITE HISTORY AND USE

RJS reviewed readily available standard historical sources and obtained the following information regarding the historic use of the Site.

5.1 Site History Provided by Site Contact

According to the site contact, the existing structure was utilized by Great Lakes Paper Fibers Corp. (a "process scrap paper" operation) prior to being vacated. Demolition of the existing building is reportedly proposed. The site contact is unaware of USTs in connection with the Site.

5.2 Historic Aerial Photographs

Historic aerial photographs included the following observations. Copies of available photographs are included in the appendix of this report.

			Adjacent Property Use
1	927, 1959, 1966,	The Site appears to be developed with	North - Industrial/commercial
1	978, 1983, 1985,	one industrial structure, likely the	South - Industrial/commercial
	2006 and 2008	existing structure. Railroad tracks also	East - Railroad tracks
		appear on-site.	West - Buffalo River

No environmental concerns such as exterior hazardous material storage/disposal areas were identified through the review of the aerial photographs. Note that visual observations of the Site were limited due to the poor quality of some of the aerial photographs.

Source: EDR Aerial Photo Decade Package, dated November 7, 2011.

5.3 Historic Maps / Directories

Sanborn Maps

Sanborn Maps were ordered by RJS through EDR for historical information relative to the Site and surrounding area. The following table summarizes the information obtained from those maps. Copies of the maps are included in the appendix of this report.

Source: EDR Certified Sanborn Map Report, dated November 7, 2011.

Fire Insurance Map Summary

Year	Property Uses	Adjacent Property Use
1889	Only north and south portions of the	
	Site are covered by this map. The	
		East - Railroad tracks, residential
	freight depot and flour warehouse.	and not covered
1000	Railroad tracks appear on-site.	West - Buffalo River

City Directories

RJS reviewed readily available historic city directories available at the Buffalo and Erie County Public Library on November 17, 2011. The following table summarizes the information obtained from that review.

City Directory Summary

Year	Site Description
1935	The Site - Seaboard Great Lakes Corp., Buffalo Waterfront Corp, Erie and St. Lawrence Corp., Erie Railroad Corp., Voltz Feed
	Adjacent/Nearby Properties - Residential, Livingston Filling Station, Smeich Restaurant, Grocery
1940	The Site - Buffalo Merchandise Warehouse
	Adjacent/Nearby Properties - Residential, Livingston Filling Station, Smeich Restaurant, Residential
1946	The Site - Buffalo Merchandise Warehouse Adjacent/Nearby Properties - Residential, Livingston Filling Station, Smeich
	Restaurant, Residential, Grocery
1950	The Site - Buffalo Merchandise Warehouse
	Adjacent/Nearby Properties - Ekleberry Restaurant, Smeich Restaurant, Residential, Residential
1955	The Site - Harding Fredrick Feed Mill
	Adjacent/Nearby Properties - Manufacturers Storage, Livingston Fuel Oil, Bills Diner Restaurant, Residential, Residential
1961	The Site - Great Lakes Paper Stock, Inc.
	Adjacent/Nearby Properties - Bills Diner Restaurant, Residential, Residential, Residential, Pyle Aduie Transport Inc, Youngstown Cartage Co.
1965	The Site - Great Lakes Paper Stock, Inc.
	Adjacent/Nearby Properties - Johnson Irving Trucking, Honeyland Restaurant, Residential
1970	The Site - Great Lakes Paper Fibers Corp.
	Adjacent/Nearby Properties - Butchs Restaurant, Petroleum Sales & Service Inc, Youngstown Cortage Co., Cleveland Truck Lines, Residential, Residential
1975	The Site - Great Lakes Paper Fibers Corp.
	Adjacent/Nearby Properties - Petroleum Sales & Service Inc, J&B Truck Repair Shop, Residential
1980	The Site - Great Lakes Paper Fibers Corp.
	Adjacent/Nearby Properties - Petroleum Sales & Service Inc, J&B Truck Repair Shop, Laidlaw Transit Bus Line, Residential
1985	The Site - Great Lakes Paper Fibers Corp.
	Adjacent/Nearby Properties - Petroleum Sales & Service Inc, J&B Truck Repair Shop, Residential
1990	The Site - Great Lakes Paper Fibers Corp.
	Adjacent/Nearby Properties - Petroleum Sales & Service Inc, J&B Truck Repair Shop, Laidlaw Transit Bus Line, Residential

Year	Site Description

2007	The Site - Great Lakes Paper Fibers Corp.			
	Adjacent/Nearby Properties - BWC Transportation Petroleum Sales & Service Inc, Bison City Rod & Gun			

Historic Topographic Maps

Due to the nature of the Site and other historical records reviewed, only a topographic map obtained through trails.com was reviewed (see below for additional information).

5.4 Municipal Records

RJS reviewed records available for the Site at the City of Buffalo municipal offices. Specifically, records available at the Assessor's office, Building Department and Fire Prevention Office were reviewed. The following summarizes those records.

- The Site, SBL No. 122.14-1-1, measures approximately 2.2 acres.
- The Site is currently owned by Great Lakes Paper Fibers Corp.
- No past owners were identified for the Site.
- The existing building measures 46,900 square feet and was built in 1892.
- General permits were on file for the Site.
- The Site is supplied with natural-gas, electric, municipal sanitary sewer and public water.

RJS was not permitted to interview the City of Buffalo Building or Fire Inspector's.

5.5 Previous Studies

No previous studies were provided or readily identified during the course of this study.

5.6 Summary of Historic Uses

The existing structure, constructed in 1892, has mainly been utilized for warehousing purposes prior to being vacated in 2011. A portion of the existing building was also identified as being utilized as a bakery feed mill in at least 1950. The most recent occupant, Great Lakes Paper Fibers Corp., was a bailed paper warehouse operation. Operations associated with Great Lakes Paper Fibers Corp. also included paper cutting and maintenance of on-site equipment (forklifts, cutting machines, etc.). Previous site occupants historically included Erie Railroad Flour Warehouse, Erie Railroad Exchange - Lake and Transfer Warehouse, Great Lakes Paper Stock, Inc., Seaboard Great Lakes, Buffalo Waterfront Corp., and Erie Railroad Corp.

Railroad tracks are currently and have historically been located on-site.

Commercial and industrial uses were identified in connection with adjacent/nearby properties.

6.0 PHYSICAL AND HYDROGEOLOGIC SETTING

RJS reviewed a recent topographic map obtained through trails.com; the Site is included on the Buffalo Southeast Quadrangle and appears to be developed with one structure (likely the existing building). Railroad tracks also appear on the eastern portion of the Site. The topographic map also indicates that the Site is located approximately 575 feet above mean sea level. Groundwater flow would be anticipated to the west, toward the Buffalo River. However, localized subsurface variations and man-made structures can modify flow directions, a site-specific study would be required to confirm groundwater flow direction.

7.0 RECORDS REVIEW

7.1 Database

EDR was contracted to provide federal and state environmental regulatory information consistent with ASTM E1527-05. The results of that review are summarized below. Refer to the database report for complete acronym definitions.

Map Findings Summary

Database	Radii	Site	Significant Listings Within the Search Radii
	Searched (mi.)	Listings	
NPL	1	0	
DELISTED NPL	1	0	
CERCLIS	0.5	0	
CERCLIS-NFRAP	0.5	0	
CORRACTS	1	0	Two listings were identified in the search radii. Both
			listings are located over one-half mile from the Site, thus reducing this concern.
RCRA-TSDF	0.5	0	
RCRA-LQG	0.25	0	No adjacent listings were identified.
RCRA-SQG	0.25	0	No adjacent listings were identified.
RCRA-CESQG	0.25	0	No adjacent listings were identified.
US ENG CONTROLS	0.5	0	
US INST CONTROL	0.5	0	No adjacent listings were identified.
US BROWNFIELDS	0.5	0	
RCRA-NonGen	0.25	0	No adjacent listings were identified.
NY MANIFEST	0.25	0	No adjacent listings were identified.
NY SWRCY	0.5	1	The Site is included in the SWRCY database under Great Lakes Paper Fibers Corp. The listing references "recyclables handling and recovery facilities" and an authorization date of 1994. It is also listed as an active registration.
NY CBS AST	0.25	0	An additional listing was identified in the search radii. Such is located over one-quarter mile from the Site, thus reducing this concern. No adjacent listings were identified.
NY LTANKS	0.5	0	The listings identified in the search radii are classified
			as either "inactive" or "closed" by the NYSDEC.

Database	Radii Searched (mi.)	Site Listings	Significant Listings Within the Search Radii
NY SPILLS	0.125	3	The Site was identified in the Spills database. Summaries of the spill incidents are provided below.
			-Spill No. 9310273 (Brown Foam Buffalo River), dated November 10, 1993, involved a grain or unknown petroleum release to the Buffalo River. The spill is classified as "closed" by the NYSDECSpill No. 9309692 (Brown Foamy Sheen), dated November 10, 1993, was identified. This spill is reportedly a duplicate of Spill No. 9310273, which was previously detailedSpill No. 0104509 (NIMO - Great Lakes), dated July 26, 2001, involved a transformer oil release due to a traffic accident. The spill is classified as "closed" by the NYSDEC.
			An adjacent property, addressed at 511 Ohio Street (In Buffalo River), is listed in the spills database. Spill No. 0303582, dated July 6, 2003, involved a paint release into the Buffalo River. The spill is classified as "closed" by the NYSDEC. An additional spill (No. 9711622) identified in connection with this property involved a traffic accident and is classified as "closed" by the NYSDEC.
			The remaining spills identified in the search radii are classified as either "inactive" or "closed" by the NYSDEC.
			Five listings were identified in the Orphan Summary for the adjacent property identified as the Ohio Street Boat Launch. Summaries of the spills are provided below.
			-Spill 8702666, dated July 2, 1987, involved a sheen on the Buffalo River and is classified as "closed" by the NYSDECSpill No. 0503309, dated June 18, 2005, involved a sheen in the Buffalo River and is classified as "inactive" by the NYSDECSpill No. 0909321, dated November 19, 2009, involved abandoned drums and is classified as "inactive" by the NYSDECSpill No. 1002364, dated June 1, 2010, involved a report of petroleum/sheen on the Buffalo River and is classified as "inactive" by the NYSDECSpill No. 1105076, dated July 30, 2011, involved 55-gallon drums found at the boat launch and is classified as "inactive" by the NYSDEC.
ERNS	TP	2	The Site is included in the ERNS database under Canal Near 441 Ohio Street. This listing, dated 1993, involved a light brown and foamy sheen. This listing may be associated with the on-site spill, dated 1993, detailed above.
			An additional listing was identified for the Site under Erie Canal 441 Ohio Street. The listing, dated 1994, apparently involved a plastic 55-gallon drum that was found in the water.

Database	Radii Searched	Site Listings	Significant Listings Within the Search Radii
	(mi.)		
NY VCP	0.5	0	One listing was identified in the search radii. Such is located over one-quarter mile from the Site, thus reducing this concern.
NY SWF/LF	0.5	0	The closest listing was identified approximately 630 feet from the Site under Wargo Enterprises. This property was identified as a registered construction and demolition debris processing facility. The remaining listings were identified over one-quarter mile from the Site, thus reducing this concern.
NY AST	0.25	0	No adjacent listings were identified.
NY SWTIRE	0.5	0	One listing was identified in the search radii. Such is located over one-quarter mile from the Site, thus reducing this concern.
NY UST	0.25	0	No adjacent listings were identified.
NY BROWNFIELDS	0.5	0	One listing was identified in the search radii. Such is located over one-quarter mile from the Site, thus reducing this concern.
NY SHWS	1	0	One listing was identified in the search radii. Such is located over one-half mile from the Site, thus reducing this concern.
NY INST CONTROL	0.5	0	No adjacent listings were identified.
NY CBS	0.25	0	No adjacent listings were identified.
INDIAN LUST	0.5	0	
INDIAN UST	0.25	0	
INDIAN VCP	0.5	0	
INDIAN ODI	0.5	0	
INDIAN RESERV	1	0	

The Site was listed in the SWRCY database under Great Lakes Paper Fibers Corp. This listing is reportedly due to recyclables (paper) handling and recovery. "Closed" spills were also identified in connection with the Site. Lastly, the Site is included in the ERNS database. None of these suggest an on-going concern on-site.

While numerous database listings were identified in connection with adjacent/nearby properties, none of the listings suggested environmental concern at the Site.

7.2 Enforcement Actions/Permitted Activities/Institutional Controls

RJS has not been made aware of nor has discovered evidence of enforcement actions, institutional controls or environmentally permitted activities associated with the Site.

7.3 Interviews/User Provided Information

No title records were provided to RJS by the User, Mr. Robert Zuchlewski of FFZ Holdings, LLC, the potential buyer.

RJS interviewed Mr. Zuchlewski, the User of this report, as defined by 40 CFR 312. The following information was provided.

Issue/Question	Response
Do you have any knowledge of environmental	No.
liens or use limitations such as land use	
restrictions or institutional controls for the site?	
Do you have any specialized knowledge or	No.
experience related to the site or nearby properties	
that would be material in identifying a potential	
environmental issue?	
Are you aware of any commonly known	No.
information suggesting an environmental concern	
on-site (include information regarding the	
presence or likely presence of contamination	
on-site)?	
What is the reason for completing this study?	We are purchasing the property.
Type of property transaction (sale, purchase,	Purchase.
refinance, etc.), if any?	
If applicable, is the purchase price significantly	Purchase price is below assessed value due to
below the anticipated market price for no apparent	structural collapse and resulting City of Buffalo
reason?	condemnation.
Are you aware of any pending, threatened, or past	No.
litigation relevant to hazardous substances or	
petroleum products in, on, or from the property? If	
yes, please explain.	
Are you aware of any pending, threatened, or past	No.
administrative proceedings relevant to hazardous	
substances or petroleum products in, on or from	
the property? If yes, please explain.	
Are you aware of any notices from any	No.
governmental entity regarding any possible	
violation of environmental laws or possible liability	
relating to hazardous substances or petroleum	
products?	

Current Owner/Operators/Site Occupants/Site Manager

The Key Site Manager and Vice President of Great Lakes Paper Fibers Corp., Mr. Nick Nemeti, is not aware of pending, threatened or past litigation, administrative proceedings or any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. The Key Site Manager indicated the following:

- Hazardous/regulated materials including antifreeze, hydraulic oil and motor oil were historically transferred off-site by Safety Kleen.
- The building has been subject to water intrusion due to a "burst" sprinkler pipe and roof damage.

Local Government Officials

As indicated above, RJS was not permitted to interview the City of Buffalo Building or Fire Inspectors.

A FOIL was submitted to the NYSDEC on November 18, 2011. All departments have yet to respond to the FOIL. Should records not yet reviewed by RJS identify environmental concerns, which have yet to be identified for the Site, an addendum to this report will be issued.

Former Owner/Operators

Former site owners/operators were not interviewed as part of this study.

7.4 Summary of Regulatory/User Provided Information

The Site is located in a commercial and industrial area that has had numerous releases to the environment. However, none of the listings specifically suggest an on-site concern.

8.0 RADON AND VAPOR ENCROACHMENT CONDITIONS

8.1 Radon

Research in the area of the Site suggests an average basement radon concentration of greater than four pCi/L relative to Erie County, New York. However, based on the commercial/industrial nature of the Site, radon should not be a concern.

Source: EDR Database Report

8.2 Vapor Encroachment Conditions

This assessment included review of the regulatory database discussed above in relation to section 8.3 of the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. If soil or groundwater is contaminated with a volatile compound (that is, something that can escape from water or soil to air, such as gasoline and solvents), that contaminant can migrate through the soil and end up in the air inside of buildings, especially within basement areas. The ASTM standard named this a VEC. Soil vapors do not necessarily migrate along groundwater flow paths. Vapors can move up hydraulic gradients and can extend beyond a groundwater plume. Over the last few years, there has been a significant number of sites where vapor intrusion has been discovered. The state and federal environmental regulators have "reopened" numerous spill and waste sites in order to assess whether this issue needs to be assessed and/or addressed.

While the Site is located in an industrial area, none of the information obtained/reviewed as part of this assessment suggested the potential for a VEC at the Site.

9.0 WETLANDS AND FLOOD ZONES

The EDR database report includes general information relative to wetlands and flood zones. A federal wetland area, identified proximate to the Buffalo River, was identified on the western portion of the Site. The Site is not located in a flood zone.

10.0 LIMITATIONS

This report was completed in accordance with the contract terms and the scope of service agreed to by RJS' client. It is also subject to the limitations detailed in ASTM Standard E1527-05. The principles defined within ASTM E1527-05, and followed within this study, include the following.

- This practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property.
- All appropriate inquiry does not mean an exhaustive assessment of a clean property. One of the
 purposes of this practice is to identify a balance between limiting costs/time and the reduction of
 uncertainty about unknown conditions.
- The level of inquiry is variable and depends on the type of property, risk level of the user and information developed in the course of the inquiry.
- Subsequent environmental assessments should not be used as standards to evaluate the appropriateness of prior inquiries based on hindsight, new information or new techniques.

11.0 USER RESPONSIBILITIES

It should be noted that the due diligence does not merely include this study. The following information is the responsibility of the user and not of the environmental professional.

- Searches for environmental cleanup liens against the Site that are filed or recorded under any federal, tribal, state or local law, as required by 40 CFR section 312.25.
- Assessments of any specialized knowledge or experience on the part of the landowner, as required by 40 CFR section 312.28.
- An assessment of the relationship of the purchase price to the fair market value of the Site, if the property was not contaminated, as required by 40 CFR 312.29.
- An assessment of commonly known or reasonably ascertainable information about the Site, as required by 40 CFR section 312.30.

In addition, there are other requirements within 40 CFR 312 of the user post-purchase.

- Acquired the property after all disposal of hazardous substances has ceased and not liable for or did not contribute to such releases.
- Provide all legally required notices with respect to the discovery or release of any hazardous substances.
- Comply with and do not impede the effectiveness of land use restrictions or institutional controls.
- Exercise appropriate care and reasonable steps to stop continuing or prevent future releases.
- Provide full cooperation, assistance, and access to authorized personnel conducting response actions or natural resource restoration.
- Comply with CERCLA information requests and administrative subpoenas.

Failure to identify a release, land use restrictions, or institutional controls does not release a property owner from continuing obligations.

Such should be reviewed with counsel.

12.0 USER PROTECTIONS

Under CERCLA, persons may be held strictly liable for releases or threatened release of hazardous substances at properties they owned or operated at the time of release. This rule means that a potentially responsible party may be liable for contamination based solely on property ownership without regard to fault. AAI, which is an outgrowth of the 2002 Small Business Liability Relief and Revitalization Act (also known as the Brownfields Amendments), provides the following expanded CERCLA landowner liability protections:

- 1) Bona Fide Prospective Purchaser for the first time, a purchaser may knowingly acquire contaminated property while limiting future CERCLA liability.
- 2) Contiguous Property Owner also a new defense category which provides protection from CERCLA liability for contamination caused by a neighbor's actions.
- 3) Innocent Landowner this pre-existing defense provides CERCLA protection to those who, after performance of appropriate due diligence, find at a later date that they have unknowingly acquired contaminated property.

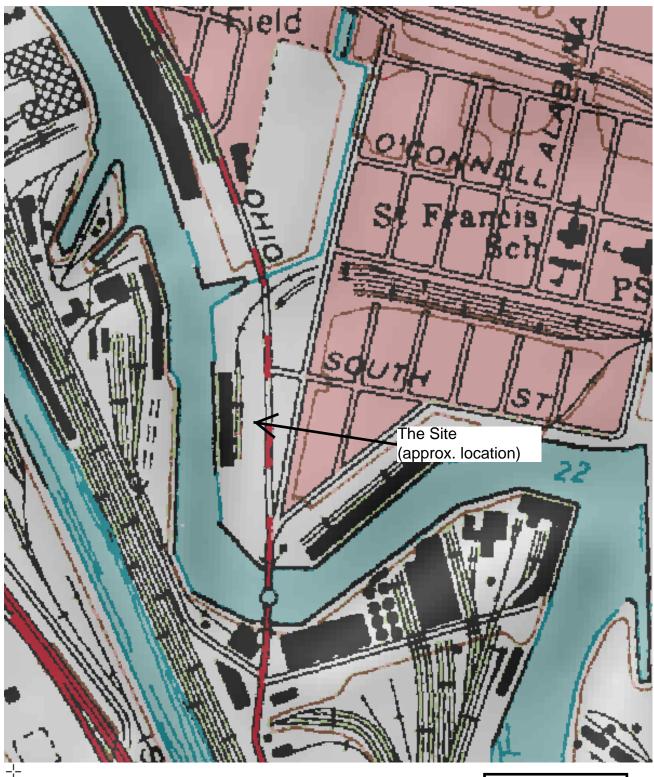

A property owner can meet one of the requirements for the aforementioned CERCLA landowner liability protections by performing AAI prior to the purchase of a property.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/09/2011 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAFETY-KLEEN CORP	FOOT OF KATHERINE ST	SE 1/2 - 1 (0.546 mi.)	56	368
189 TONAWANDA ST CORP	51 PERRY ST	NNW 1/2 - 1 (0.792 mi.)	58	410

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
BUFFALO CITY OF - OHIO STREET	547 OHIO ST	S 0 - 1/8 (0.077 mi.)	C11	25

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 2

RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

PILLSBURY CO THE	250 GANSON ST	WNW 1/8 - 1/4 (0.178 mi.)	27	81

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 09/27/2011 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 07/11/2011 has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 09/27/2011 has revealed that there are 15 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 14 HIST LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 10/04/2011 has revealed that there are 4 UST

sites within approximately 0.25 miles of the target property.

CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 CBS AST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 09/27/2011 has revealed that there are 6 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there

are 4 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there are 9 RCRA-NonGen sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

FG" 5/31/01 FG SITE INSPECTION. MET MARK JUDD WHO WILL BE PURCHASING THE PROPERTY. HE SAID HE IS EXCAVATING TO TRY TO LOCATE A FORMER 14000 GALLON UST WHICH HAD BEEN IDENTIFIED AS PART OF A PHASE I COMPLETED ON THE PROPERTY. HE WILL BE EXCAVATING FOR ANOTHER POTENTIAL UST ON THE PROPERTY AS WELL. HE SAID ONTARIO SPECIALTY WILL BE RESPONSIBLE FOR THE REMEDIATION OF THE PETROLEUM CONTAMINATION DISCOVERED. THEY HAVEN'T FOUND ANY UST'S BUT DID LOCATE AN AREA OF PETROLEUM CONTAMINATED SOIL. SPOKE TO DANIELLE MCNAMARA WITH OSC. SHE WILL PROVIDE A COPY OF THE PHASE I. OSC WILL DISPOSE OF THE SOIL AT MODERN. THEY WILL COLLECT EXCAVATION SAMPLES AND PROVIDE DISPOSAL RECEIPTS. SHE SAID THE EXCAVATION WILL BE COMPLETED TODAY AND NO UST'S WERE LOCATED. 6/5/01 FG SPOKE TO JOHN BLACK WHO IS WORKING FOR THE PURCHASER, MARK JUDD. HE WILL SEND ME THE OWNER INFORMATION AND A COPY OF THE PHASE I COMPLETED. 6/14/01 FG DAVE DENK, MARTY DOSTER, MARK JUDD AND JOHN SCHENNE ALL MET REGARDING THIS SITE. MARK JUDD DID SOME TEST PITTING ON THE PROPERTY AND COLLECTED SOIL SAMPLES. SEVERAL OF THE TEST PITS ARE ABOVE TAGM LEVELS AND WOULD REQUIRE REMEDIATION. MR. JUDD WAS PLANNING ON EXCAVATING A FORMER SLIP ON THE PROPERTY. HE WOULD BE REQUIRED TO DISPOSE OF THAT MATERIAL BECAUSE IT IS OVER STARS. THE OTHER AREAS WOULD ALSO REQUIRE REMEDIATION. MARTY DOSTER DISCUSSED VOLUNTARY CLEANUPS AND BROWNFIELDS FOR THE SITE. MR. JUDD WILL CONSIDER ALL HIS OPTIONS AND GET BACK TO THIS OFFICE. THE CURRENT OWNER IS 201 GANSON ST INC. MR JUDD IS A POTENTIAL PURCHASER. HE WILL SUBMIT THE PHASE I & II COMPLETED FOR THIS SITE WITHIN THE NEXT SEVERAL WEEKS FOR REVIEW. 7/12/01 CALLED JOHN BLACK 703-709-6500 AND LEFT A MESSAGE FOR HIM TO RETURN THE CALL. CALLED DANIELLE MCNAMARA WITH OSC WHO SAID TO CALL JOHN BLACK. SHE SAID NOTHING HAS BEEN DONE ON THE SITE. SHE HAS THE LANDFILL APPROVAL AND IS WAITING FOR JOHN BLACK TO TELL HER WHAT TO DO. I REQUESTED THAT SHE TELL JOHN BLACK TO CALL ME AND TO GET ME THE PHASE I &II. SHE SAID BUFFALO INDUSTRIAL DIVING IS STILL BUYING THE PROPERTY. SHE DOES NOT KNOW THE ADDRESS OF THE OWNER OF THE PROPERTY. THE OWNER IS 201 GANSON ST, INC. CALLED MARK JUDD AND LEFT A MESSAGE FOR HIM TO CALL. 7/12/01 MARK JUDD CALLED AND SAID THAT HE WILL PROVIDE THE PHASE I & II COMPLETED FOR THE SITE. HE NEEDS TO HAVE THE NYSDEC EVALUATION OF WHAT WOULD BE REQUIRED BASED ON THESE REPORTS. WE AGREED THAT WE WOULD NEED TO MEET AGAIN WITH ALL INVOLVED PARTIES. MR. JUDD SAID HE HAS A CONTRACT TO PURCHASE THE PROPERTY AND COULD NOT AFFORD TO STAY IN BUSINESS IF WE REQUIRE REMEDIATION IN AREAS THAT HE WASN'T PLANNING ON REMOVING FOR THE SLIP. 11/05/01: FG SENT LETTER TO ONTARIO SPECIALTY REQUESTING THAT THEY COMPLETE SITE WORK OR SIGN A

RIGHT-OF-ENTRY TO ALLOW NYSDEC TO COMPLETE SITE WORK BY 11/26/01. 12/11/01: MF FOR FG LETTER TO RP REQUESTING EXCAVATION SAMPLING RESULTS, SOIL DISPOSAL RECEIPTS & A WORK PLAN FOR ADDITIONAL REMEDIATION BY 1/9/02. 01/04/02: MF FOR FG DAVID FLYNN ATTY FOR OSC SUBMITTED 12/17/01 LETTER INDICATING HE WILL PROVIDE THE DISPOSAL RECEIPTS & EXCAVATION SAMPLE RESULTS SHORTLY. THE LETTER ALSO STATED THAT NO FURTHER WORK WOULD BE NECESSARY AT THE DRY DOCK AREAS. DEC RESPONDED INDICATING TEST PITS SHOWED LUBE OIL PRESENT IN ALL BUT 2 TEST PITS, TP-10 & 11 HAVE EXCEEDANCES FOR TAGM LEVELS. REMEDIATION REQUESTED, PROPOSAL DUE 2/7/02. 03/07/02: MF FOR FG MEETING HELD AT DEC OFFICE WITH DAVE FLYNN, JIM WILLIAMS, JOHN BLACK, JACK AVERSA, PJB & FG. CONCLUSION WAS THAT JIM WILLIAMS WILL PROVIDE EXCAVATION SAMPLE RESULTS. THEY WILL NOTIFY THIS OFFICE WHEN THEY WILL DO THE SAMPLING SO WE CAN BE ON SITE. THEY WILL PROVIDE INFORMATION FROM THE PHASE 2 THAT WILL INCLUDE A DESCRIPTION OF THE SAMPLING THAT WAS COMPLETED. NYSDEC WILL THAN MAKE A DECISION ON THE NEED FOR REMEDIATION. THE DISPOSAL RECEIPTS FOR THE EXCAVATION COMPLETED IN THE FORMER UST AREA HAVE BEEN PROVIDED. 04/17/02 RMC/SITE. 1130AM, NO NEW EXCAVATION NOTED, BLACKTOP NEAR BUILDING ADJACENT THE FENCE HAS BEEN REMOVED, NO ONE ON SITE. 04/17/02 RMC/SITE. 4PM, MET MARK JUDD, BUFFALO INDUSTRIAL. THEY ARE THE PROSPECTIVE BUYERS. EXCAVATION DUG AND BACKFILLED. HE DID NOTICE WATER AND PETROLEUM ODORS. RMC TO RETURN TOM, AT 1130 AM TO INSPECT THE EXCAVATION, 04/18/02 RMC/SITE. 1130AM MET JOHN YENSAN, OSC THE OWNERS OF THE PROPERTY. HE TOOK THE MACHINE TO ANOTHER JOB WITH OUT OPENING THE EXCAVATION FOR INSPECTION. HE STATED THAT HE TOOK SAMPLES AND PICTURES, HE ALSO NOTED SLIGHT PETROLEUM ODORS. 05/31/02 RMC/JOHN YENSAN, OSC/SITE. TEST PIT DUG 10 FOOT DIAMETER, 8 FEET DEEP. SLIGHT SHEEN ON THE WATER. NO ELEVATED PID READINGS FROM SOIL EXCAVATED. DISCOLORED BACKFILL MATERIAL THRU THE ENTIRE DEPTH. OSC TOOK 5 SAMPLES FOR 8021/8270, STARS. 1/14/03 PJB INDICATED THAT OSC WAS WILLING TO COMPLETE ADDITIONAL GROUNDWATER WELLS ON SITE LAST FALL BUT HE HAS NOT HEARD FROM THEM AND THEY HAVE NOT COMPLETED THE SITE WORK YET. PJB WILL CONTACT OSC AND DAVID FLYNN AGAIN. 3/18/03 FG SITE INSPECTION. MET GREG FLIK WITH EMPIRE GEO SERVICES (SJB). HE SAID HE COMPLETED ONE WELL AND FOUND NO CONTAMINATION. THE OTHER ONE HAD SOME CRESOTE BUT NO SHEENING OR OIL. THE WELLS WILL BE SAMPLED AND WATER ELEVATIONS TAKEN LATER IN THE WEEK. 4/17/03 RECEIVED THE REPORT OF THE FINDINGS FROM THE INSTALLATION OF TWO WELLS AND SAMPLING OF ALL SITE WELLS. GROUNDWATER RESULTS SLIGHTLY EXCEED GROUNDWATER STANDARDS AT MW1, MW4 AND MW7. DUE TO THE REPORTED PRESENCE OF PETROLEUM IN THE SUBSURFACE SOILS AND THE EXCEEDANCE OF TAGM LEVELS AT THOSE LOCATIONS, THE SITE WILL BE MADE INACTIVE. AN INACTIVE LETTER HAS BEEN SENT OUT.

DEC Remarks: 5/31/01 FG SITE INSPECTION. MET MARK JUDD WHO WILL BE PURCHASING THE

PROPERTY. HE SAID HE IS EXCAVATING TO TRY TO LOCATE A FORMER 14000 GALLON UST WHICH HAD BEEN IDENTIFIED AS PART OF A PHASE I COMPLETED ON THE PROPERTY. HE WILL BE EXCAVATING FOR ANOTHER POTENTIAL UST ON THE PROPERTY AS WELL. HE SAID ONTARIO SPECIALTY WILL BE RESPONSIBLE FOR THE REMEDIATION OF THE PETROLEUM CONTAMINATION DISCOVERED. THEY HAVEN T FOUND ANY UST S BUT DID LOCATE AN AREA OF PETROLEUM CONTAMINATED SOIL. SPOKE TO DANIELLE MCNAMARA WITH OSC. SHE WILL PROVIDE A COPY OF THE PHASE I. OSC WILL DISPOSE OF THE SOIL AT MODERN. THEY WILL COLLECT EXCAVATION SAMPLES AND PROVIDE DISPOSAL RECEIPTS. SHE SAID THE EXCAVATION WILL BE COMPLETED TODAY AND NO UST S WERE LOCATED. 6/5/01 FG SPOKE TO JOHN BLACK WHO IS WORKING FOR THE PURCHASER, MARK JUDD. HE WILL SEND ME THE OWNER INFORMATION AND A COPY OF THE PHASE I COMPLETED. DAVE DENK, MARTY DOSTER, MARK JUDD AND JOHN SCHENNE ALL MET REGARDING THIS SITE. MARK JUDD DID SOME TEST PITTING ON THE PROPERTY AND COLLECTED SOIL SAMPLES. SEVERAL OF THE TEST PITS ARE ABOVE TAGM LEVELS AND WOULD REQUIRE REMEDIATION. MR. JUDD WAS PLANNING ON EXCAVATING A FORMER SLIP ON THE PROPERTY. HE WOULD BE REQUIRED TO DISPOSE OF THAT MATERIAL BECAUSE IT IS OVER STARS. THE OTHER AREAS WOULD ALSO REQUIRE REMEDIATION. MARTY DOSTER DISCUSSED VOLUNTARY CLEANUPS AND BROWNFIELDS FOR THE SITE. MR. JUDD WILL CONSIDER ALL HIS OPTIONS AND GET BACK TO THIS OFFICE. THE CURRENT OWNER IS 201 GANSON ST INC. MR JUDD IS A POTENTIAL PURCHASER. HE WILL SUBMIT THE PHASE I II COMPLETED FOR THIS SITE WITHIN THE NEXT SEVERAL WEEKS FOR REVIEW. 7/12/01 CALLED JOHN BLACK 703-709-6500 AND LEFT A MESSAGE FOR HIM TO RETURN THE CALL. CALLED DANIELLE MCNAMARA WITH OSC WHO SAID TO CALL JOHN BLACK. SHE SAID NOTHING HAS BEEN DONE ON THE SITE. SHE HAS THE LANDFILL APPROVAL AND IS WAITING FOR JOHN BLACK TO TELL HER WHAT TO DO. I REQUESTED THAT SHE TELL JOHN BLACK TO CALL ME AND TO GET ME THE PHASE I II. SHE SAID BUFFALO INDUSTRIAL DIVING IS STILL BUYING THE PROPERTY. SHE DOES NOT KNOW THE ADDRESS OF THE OWNER OF THE PROPERTY. THE OWNER IS 201 GANSON ST, INC. CALLED MARK JUDD AND LEFT A MESSAGEFOR HIM TO CALL. 7/12/01 MARK JUDD CALLED AND SAID THAT HE WILL PROVIDE THE PHASE I II COMPLETED FOR THE SITE. HE NEEDS TO HAVE THE NYSDEC EVALUATION OF WHAT WOULD BE REQUIRED BASED ON THESE REPORTS. WE AGREED THAT WE WOULD NEED TO MEET AGAIN WITH ALL INVOLVED PARTIES. MR. JUDD SAID HE HAS A CONTRACT TO PURCHASE THE PROPERTY AND COULD NOT AFFORD TO STAY IN

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CON AGRA FLOUR MILLING CO (Continued)

1000216644

EDR ID Number

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport. and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 03/23/10: MF BID PACKAGE TO NW, MATRIX & RUSSO. 03/26/10: MF BIBS ALL RETURNED, LOWEST RUSSO. T/C ERIC RUSSO, THEY WILL BE ABLE TO START

3/31/10 WHEN UTILITIES MARKED OUT. 03/31/10: MF S/V/RUSSO, MIKE BEAVER/LCS, ADAM ZEBROWSKI/PAT, NATIONAL VAC. ADVANCING 39-40 BORINGS BASED ON BID. BORINGS TO 16', WATER APPX 12', THIS IS LOT BEHIND

FUELING AREA WHERE UST'S MAY HAVE BEEN. NAT FUEL MARKED OUT MED PRESSURE NATURAL GAS LINE. 4/16/10 FG RECEIVED THE ANALYTICAL DATA COLLECTED ON 3/31/10 FROM BH1 8-10, BH10 0-2, BH11 4-8, BH12 8-12, BH13 4-8. THE RESULTS ARE FOR TOTAL 8260'S AND 8270'S PPB: 8270: BH1 800, BH10 17000, BH11 3610, BH13 ND 8260: BH1 ND, BH10 1817, BH11 30200, BH13 526 4/21/10 UPSTATE SUBMITTED THE ANALYTICAL DATA COLLECTED ON 4/1/10 FROM BH12 0-2, BH18 0-4, BH19 2-4, BH21 6-8, BH23

COLLECTED ON 4/1/10 FROM BH12 0-2, BH18 0-4, BH19 2-4, BH21 6-8, BH23 6-8, BH24 2-4, BH25 0-4, BH26 8-10, BH27 8-10, BH28 6-8, BH29 10-12, BH30 8-12, BH31 8-10, BH34 6-8, BH37 0-4, BH38 6-8, BH40 8-10, BH41 4-8, BH42 2-4. THE RESULTS ARE FOR TOTAL 8260'S AND 8270'S PPB: 8270: BH15 21,000, BH42 17030000, BH41 851000, BH40 30000, BH38 22600, BH37 2700, BH34 130, BH31 64600, BH30 1280, BH29 70, BH28 17000, BH27 90,

BH26 60, BH25 7350, BH24 186000, BH23 1070, BH21 1900, BH19 207000, BH18 59000, 8260: BH15 2300, BH42 1800, BH41 2900, BH40 ND, BH38 ND, BH37 31700, BH34 400, BH31 2900, BH30 ND, BH29 ND, BH28 4100, BH27 14400, BH26 ND, BH25 2020, BH24 6000, BH23 ND, BH21 7610, BH19 27000, BH18 23110 A REPORT OF FINDINGS IS EXPECTED FROM LCS. 5/7/10 LCS

SUBMITTED THE PHASE II ENVIRONMENTAL SITE ASSESSMENT FOR 300 OHIO ST. 41 BORINGS WERE ADVANCED. BH36 WAS NOT COMPLETED DUE TO ITS PROXIMITY TO TWO NATURAL GAS UTILITY LINES. A TOTAL OF 197 SOIL SAMPLES WERE COLLECTED FOR GEOLOGIC DESCRIPTION. FILL MATERIAL CONSISTING OF ASPHALT, BRICK, GRAVEL, CLAY, SAND AND SILT WAS NOTED WITHIN ALL OF THE TEST BORINGS WITH THE EXCEPTION OF BH26, BH31 AND BH40 THROUGH BH42 TO A MAXIMUM DEPTH OF APPROX 8 FBGS. GENERALLY, THE NATIVE SOILS ENCOUNTERED CONSISTED OF VARYING MIXTURES OF GRAVEL, SAND, SILT AND CLAY TO THE BOTTOM OF THE TEST BORINGS. APPARENT GW WAS APPROX 4 & 12

FTBGS. EQUIPMENT REFUSAL WAS ENCOUNTERED WITHIN TEST BORING BH7 AT APPROX 8 FTBGS. THE CAUSE OF THE EQUIPMENT REFUSAL COULD NOT BE DETERMINED. PID MEASUREMENTS WERE ABOVE TOTAL AMBIENT AIR BACKGROUND VOC MEASUREMENTS IN 184 OF THE 197 SOIL SAMPLES COLLECTED. THESE ELEVATED CONCENTRATIONS RANGED FROM .1 PPM TO 1897 PPM. PETROLEUM TYPE ODORS WERE DETECTED IN SOIL SAMPLES COLLECTED FROM TEST BORINGS BH1, BH12, BH15, BH18, BH19, BH23 THROUGH BH29, BH31, BH37,

BH38 AND BH41 BETWEEN APPROX THE GROUND SURFACE AND 16 FTBGS.
PETROLEUM TYPE STAINING WAS OBSERVED IN SOIL SAMPLES COLLECTED FROM
TEST BORINGS BH38 AND BH41 BTW APPROX 4 AND 8 FTBGS. IN LCS'
EXPERIENCE, THE PID MEASUREMENTS AND FIELD OBSERVATIONS SUGGEST VOC
IMPACT LOCATED WEST SOUTH AND EAST OF THE SUBJECT STRUCTURE. BASED ON

THE ANALYTICAL RESULTS, ANALYTES WERE DETECTED AT CONCENTRATIONS ABOVE TAGM RSCO IN SOIL SAMPLES COLLECTED FROM WEST, SOUTH AND EAST

EDR ID Number

OF THE SUBJECT STRUCTURE. ANALYTES WERE NOT DETECTED AT CONCENTRATIONS ABOVE TAGM RSCO'S IN SOIL SAMPLES COLLECTED FROM TEST BORINGS BH15, BH23, BH28, BH29 AND BH40. BASED ON THE FIELD OBSERVATIONS (I.E. ELEVATED PID READINGS, ODORS, STAINING) ANALYTES MAY BE PRESENT IN SOIL SAMPLES COLLECTED FROM THOSE TEST BORINGS; HOWEVER, WERE NOT DETECTED DUE TO ELEVATED LABORATORY METHOD DETECTION LIMITS. CONTAMINATED SOIL AND GW SHOULD BE REMEDIATED IN ACCORDANCE WITH THE REQUIREMENTS OF NYSDEC. NON COMPLIANT UST SYSTEMS SHOULD BE PROPERLY ABANDONED - CLOSED IN PLACE OR EXCAVATED AND REMOVED. 7/26/10 RUSSO, LCS, NATIONAL VAC ON SITE TO CONDUCT ADDITIONAL SUBSURFACE BORINGS ON THE SITE TO DELINEATE THE CONTAMINATION DISCOVERED DURING THE FIRST SUBSURFACE INVESTIGATION. IT IS A CONTINUATION OF THE WORK. NATIONAL VAC IS ON SITE WITH 1 PICK UP TRUCK AND ONE PERSON TO DETERMINE THE CONTENTS OF THE EXISTING USTS. RUSSO AND LCS HAVE BID THE JOB PER DAY AND ARE DRILLING AND DOCUMENTING THE BORINGS AND WILL PROVIDE A REPORT OF FINDINGS. FG ON SITE INSPECTING THE WORK, 7/27/10 RUSSO, LCS, NATIONAL VAC ON SITE TO COMPLETE THE SUBSURFACE INVESTIGATIONS. SAME CREW ON SITE TO COMPLETE THE DELINEATION. 8/27/10 RUSSO SUBMITTED THE LCS 8/25/10 SUPPLEMENTAL PHASE II ENVIRONMENTAL SITE ASSESSMENT LIMITED AND FOCUSED SUBSURFACE SOIL & INVESTIGATION COMPLETED FOR THE SITE. AN ADDITIONAL 24 SOIL BORINGS WERE COMPLETED WITH 22 SOIL SAMPLES SUBMITTED FOR ANALYSIS. THE RESULTS FOR TOTAL STARS LIST VOC'S IN PPB ARE: BH43 18. BH44 ND. BH45 20700, BH46 ND, BH47 ND, BH48 ND, BH50 ND, BH51 1297, BH52 103000, BH53 250900, BH54 636000, BH55 21700, BH56 756, BH58 255600, BH59 ND, BH60 ND, BH61 3800, BH62 4870, BH63 16830, BH64 620, BH65 ND, BH66 ND. THE RESULTS FOR TOTAL STARS LIST SVOC'S IN PPB ARE: BH43 ND, BH44 17200, BH45 73200, BH46 ND, BH47 10000, BH48 21700, BH50 ND, BH51 ND, BH52 82400, BH53 1400, BH54 ND, BH55 5900, BH56 ND, BH58 13000, BH59 ND, BH60 ND, BH61 ND, BH62 27700, BH63 94000, BH64 21800, BH65 ND, BH66 ND. THE DETECTION LIMITS ON THE ANALYTICAL WERE HIGH WITH A LAB NOTE INDICATING THAT THERE WAS MATRIX INTERFERENCE WITH NO OTHER EXPLANATION. 9/8/10 JOHN LUTTINGER WITH AMEC ON SITE TO COMPLETE THE GPR SURVEY OF THE PROPERTY. THEY WON THE BID SUBMITTED TO THREE PARTIES. THEY WILL PROVIDE A REPORT OF FINDINGS ONCE THEY INTERPRET THE DATA COLLECTED. NATIONAL VAC HAD ONE EMPLOYEE ON SITE WITH A PICK UP TRUCK. 10/3/10 AMEC SUBMITTED THE GEOPHYSICAL SURVEY RESULTS FOR THIS SITE. THE REPORT OVERLAYED A PREVIOUS MAP OF KNOWN TANK LOCATIONS WITH THE GEOPHYSICAL RESULTS. 9 ADDITIONAL LOCATIONS WERE IDENTIFIED AS POSSIBLY HAVING THE PRESENCE OF UST'S ABOVE AND BEYOND THOSE LOCATIONS ALREADY KNOWN TO HAVE UST'S. A COPY OF THE REPORT WAS GIVEN TO MS. TERRI MUCHA, ESQ AND SHE WAS TO PROVIDE IT TO THE OWNER'S ATTORNEY. PETRO USA WILL DECIDE BY FEBRUARY 2011 IF THEY WILL DO THE REMEDIAL WORK NECESSARY OR IF THEY WILL ALLOW THE DEPARTMENT TO COMPLETE THE WORK. 12/14/2010 - GPS: MTG TODAY WITH RICHARD MOORE (ATTORNEY) AND RICK FRAPPA (AMEC CONSULTANTING) REGARDING REMEDIATION OF SITE. FRAPPA PRESENTED PROPOSAL TO CLEAN-UP SITE TO MEET 375 GUIDELEINES WITH TANK PULL, LIMITED EXCAVATION, COVER SYSTEM AND USE RESTRICTIONS. I CLARIFIED THAT THIS ONLY PERTAINED TO BCP PROGRAM AND NOT NAV LAW REQUIREMENTS. NAV LAW REQUIRED PRERELEASE CONDITIONS BE OBTAINED. DISCUSSED REMEDIAL OPTIONS UNDER BCP VS. NAV LAW. PROBLEM WITH BCP IS THAT CORP. TRUSTEES HAVE NO POTENTIAL DEVELOPER TOI TAKE ADVANTAGE OF TAX CREDIT. EST. TANK PULL COSTS AT \$50-\$80K. THEY THEN SUGGESTED THAT THEY BE ALLOWED TO PULL TANKS AND LEAVE CONTAINATION IN PLACE TO BE ADDRESSED AT A LATER DATE, AGAIN ADVISED THAT THIS WAS NOT POSSIBLE. AGREED THEY WOULD REVEIW OPTIONS WITH TRUSTEES AND RESPOND BACK TO

Program: BCP Site Code: 451883

Site Description: Site Location: The 300 Ohio Street site is located in an

urban/industrial area and consists of eleven (11) adjoining tax parcels in the City of Buffalo. The site is bound by Ohio Street and Chicago Street to the west and southwest; Mackinaw Street to the north; and the City of Buffalo-Conway Park to the east. Site Features: The main site features include a truck terminal, restaurant/office building, five pump islands with product

dispensers, and a machine factory building. A majority of the site is paved. Grass covered areas are present in the northwest quadrant of the site. Current Zoning/Uses: The site is currently inactive, and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, industrial, residential, railroad right-of-way, vacant parcels, and parkland. The nearest residential development is less than 0.2 miles to the east and southwest, and less then 0.4 miles to the north. Historical Uses: Until the late 1990s the site was used as an auto/truck filling and maintenance station, dating back to 1925. The northern portion of the site on Chicago and Mackinaw Street (E& B Machinery and Central Manufacturing), operated a machine shop, trucking terminal and coffin and cooperage manufacturing operations. Prior uses that appear to have led to site comtamination include at least 15 underground storage tanks (USTs), and use of solvents and oils associated with auto/truck repair activities. A 2010 Limited Phase II Site Assessment

revealed evidence of significant subsurface contamination related to the former operation of a petroleum filling station & amp; fuel distribution operation. Site Geology/Hydrogeology: The geology of the site is generally 0-8 ft of fill materials consisting of sand and gravel with varying amounts of asphalt, brick, gravel, clay, sand and silt underlain by silty sandy clay grading into a brown silty clay

unit.

Env Problem: Information submitted with the BCP application regarding the

> environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the

conditions at the site are currently under review and will be revised

as additional information becomes available.

Hazardous Waste Summary:

Waste code: F002

THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, Waste name:

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code:

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

Direction Distance

EDR ID Number Elevation Site Database(s) **EPA ID Number**

HENKEL CORPORATION (Continued)

1000354294

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Updated By: SRHEIGEL Site Code: 56884

Site Description: The Sovereign Specialty Chemical (Sovereign) VCP Site is a 1.26 acre

area that is part of a 6.3-acre active industrial facility (SBL:

122.18-2-2) located at 710 Ohio Street in Buffalo. The site and plant

is located in a highly industrialized corridor of the City of Buffalo, and is zoned industrial. The site is less than 500' east of a ship canal which connects the Buffalo Outer Harbor and approximately 600' west of the Buffalo Piver. The site is bounded

approximately 600' west of the Buffalo River. The site is bounded on the east by CSX railroad tracks, on the west by Ohio St., on the south by the manufacturing portion of the facility, and on the north by Rigidized Metals Corp., a metal processing facility. The Sovereign

industrial facilities were initially constructed in 1924 and

underwent several updates and modifications through the years. An above ground tank farm was constructed in the mid-1960s to store bulk chemicals used in manufacturing of paints and adhesives. The VCP site consists of the footprint of a former tank farm area and partially encompasses a portion of the industrial facility property. Spills and leakages from the tank farm area appear to have lead to on-site contamination. The site subject to the VCP agreement is currently being managed as single operable unit. Operable Unit 1 (OU1) is the on-site source area. The Sovereign site is currently owned and

operated by the Henkel Corporation. The VCP agreement was signed by Sovereign Specialty Chemicals, Inc. which was formerly known as the Pierce & Stevens Corp. The facility was also owned by Sherwin Williams Corp. for a period of time. A plant wide Phase 1 and Phase 2 ESA was performed in 1996. The ESAs revealed impacts to soil and groundwater from volatile and semi-volatile organic compounds. A focused soil investigation performed in 1997 revealed elevated levels of several chemicals including Toluene, Methyl Ethyl Ketone, and Xylene. A Remedial Action Workplan was submitted and implemented in 1999 which consisted of excavation of contaminated soil from the former tank farm area. An additional groundwater investigation in 2001 revealed three VOC "hot spots". These "hot spots" were identified as Areas A, B and C during the remediation phase. An offsite investigation of abutting properties (CSX railroad and Rigidized Metals) was completed in 2002. The results of this investigation revealed exceedances for several VOCs

in soil and groundwater at both abutting properties. A Tank Farm Interim Remedial Measure Plan was undertaken to upgrade Sovereign s tank farm to comply with the standards for new or substantially modified hazardous substance storage facilities under the Chemical Bulk Storage (CBS) regulations. The work was performed as an Interim Remedial Measure under a negotiated consent order and consisted of removal of the existing tank farm, construct a new tank farm to standards in the CBS regulations, excavation of contaminated soil, submitting a workplan for site investigation for the balance of the tank farm area, completing a site investigation, and preparing and implementing, as needed, a Remedial Action Plan (RAP) required for the balance of the tank farm. The tank farm upgrade and initial removal action was completed in 1999. A RAP for the balance of the tank farm area was submitted in 2002. Target cleanup action levels in the RAP were in accordance with site specific levels in DEC TAGM 4046. The RAP was implemented in two phases. The first phase of the RAP for remediation of VOC contamination at the site was implemented in 2003 by removing the VOC contaminated soil (source material) from Areas B and C. Some residual contamination was situated along an excavation wall adjacent to Area C. The excavation areas were backfilled with clean soil. Groundwater collection and extraction sumps were installed in Areas B and C to collect and treat residual VOCs in groundwater in these areas. Area A was not excavated because of the presence of a nitrogen tank and piping. The second phase of the RAP was implemented in 2004. A high vacuum extraction (HVE) system was installed along the west wall of the Area C excavation in a location where some residual contamination was present and in Area A. The HVE system is the sole form of remediation for Area A. The HVE system extracts VOC vapors in the soil vadose zone in the contaminated areas and the extracted vapors are treated to remove the VOCs before release. The HVE system includes a groundwater treatment component to treat VOC contaminated groundwater from Areas B and C, and groundwater extracted from the HVE system in Area A. Treated groundwater is discharged to a Buffalo Sewer Authority sanitary sewer. The HVE and groundwater treatment systems have been operating and monitored from 2004 to present. The DEC issued a Covenant-Not-to-Sue letter in February 2010.

Env Problem:

Based upon investigations to date prior to remediation, the primary contaminants of concern at the site include VOCs (Toluene, Methyl Ethyl Ketone, Xylene, Cyclohexane, Methylcyclohexane, and Toluene). The site contains 6 to 8 feet of industrial fill (slag, cinders, ash, stone and demolition debris). The fill may be the source of low levels of several SVOCs. The fill is underlain with native soil consisting of silty clay. The depth to the local limestone bedrock was not confirmed. Groundwater is relatively shallow at the site (5 to 7 feet below ground surface). The groundwater gradient is relatively flat. Flow direction is generally toward the west toward Lake Erie. Some variability in the groundwater flow direction has been observed and may be due to local influences from the Buffalo River. VOC contaminated soil and groundwater was primarily found in the location of the former tank farm area in three distinct areas identified as Area A, B and C. Only marginal offsite VOC groundwater contamination was detected. The CSX railroad property along the eastern property boundary showed exceedances for methylene chloride in soil and 1,1,1 trichloroethane, 1,1-dichloroethane, and chloroethane in groundwater. The Rigidized Metals property along the northern property boundary showed exceedances for for methylene

S110043660

EDR ID Number

chloride and acetone in soil, and benzene, ethylebenzene, toluene, and total xylenes in groundwater. There is no evidence the contaminated groundwater at the site is impacting the Buffalo River. The western most monitoring well on the site does not indicate any groundwater impacts. Remediation of VOC contamination at the site was implemented through the removal of the VOC contaminant source material (soil) from Areas B and C in 2003. A vapor extraction/groundwater collection treatment system was installed at the site in 2004. Remaining VOC residuals at the site are addressed through vapor extraction from Area A, vapor extraction of residual VOCs along Area C, and groundwater collection and treatment of groundwater from sumps in Areas B and C, and from ground water from Area A vapor extraction. Annual conditions and monitoring reports were submitted for operating periods from 2006 through 2008. The results of the sampling and evaluation to assess the effectiveness of the remedial measures reveals that there is has been a reduction in residual VOCs in soil and groundwater at the site. Area A meets established cleanup goals for soil. Levels of several VOCs (Cyclohexane, Methylcyclohexane, and Toluene) still remain above the site specific cleanup action goals for soil in Area C. Also in Area C, trace levels of Cloroethane (7 to 17 ppb) are slightly above the groundwater quality standard for this chemical compound of 5 ppb. More information regarding the site can be found in the documents placed in the Site Document Repository.

Health Problem: The remedial activities completed at the site have mitigated the

potential for exposure.

The tank farm upgrade and initial removal action was completed in 1999. A RAP for the balance of the tank farm area was submitted in 2002. Target cleanup action levels in the RAP were in accordance with site specific levels in DEC TAGM 4046. The RAP was implemented in two phases. The first phase of the RAP for remediation of VOC contamination at the site was implemented in 2003 by removing the VOC contaminated soil (source material) from Areas B and C. Some residual contamination was situated along an excavation wall adjacent to Area C. The excavation areas were backfilled with clean soil. Groundwater collection and extraction sumps were installed in Areas B and C to collect and treat residual VOCs in groundwater in these areas. Area A was not excavated because of the presence of a nitrogen tank and piping. The second phase of the RAP was implemented in 2004. A high vacuum extraction (HVE) system was installed along the west wall of the Area C excavation in a location where some residual contamination was present and in Area

A. The HVE system is the sole form of remediation for Area A. The HVE system extracts VOC vapors in the soil vadose zone in the contaminated areas and the extracted vapors are treated to remove the VOCs before release. The HVE system includes a groundwater treatment component to treat VOC contaminated groundwater from Areas B and C, and groundwater extracted from the HVE system in Area A. Treated groundwater is discharged to a Buffalo Sewer Authority sanitary sewer. The HVE and groundwater treatment systems have been operating and monitored from 2004 to present. The DEC issued a Covenant-Not-to-Sue letter in February 2010.

Env Problem:

Based upon investigations to date prior to remediation, the primary contaminants of concern at the site include VOCs (Toluene, Methyl Ethyl Ketone, Xylene, Cyclohexane, Methylcyclohexane, and Toluene). The site contains 6 to 8 feet of industrial fill (slag, cinders, ash, stone and demolition debris). The fill may be the source of low levels of several SVOCs. The fill is underlain with native soil consisting of silty clay. The depth to the local limestone bedrock was not confirmed. Groundwater is relatively shallow at the site (5 to 7 feet below ground surface). The groundwater gradient is relatively flat. Flow direction is generally toward the west toward Lake Erie. Some variability in the groundwater flow direction has been observed and may be due to local influences from the Buffalo River, VOC contaminated soil and groundwater was primarily found in the location of the former tank farm area in three distinct areas identified as Area A, B and C. Only marginal offsite VOC groundwater contamination was detected. The CSX railroad property along the eastern property boundary showed exceedances for methylene chloride in soil and 1,1,1 trichloroethane, 1,1-dichloroethane, and chloroethane in groundwater. The Rigidized Metals property along the northern property boundary showed exceedances for for methylene chloride and acetone in soil, and benzene, ethylebenzene, toluene, and total xylenes in groundwater. There is no evidence the contaminated groundwater at the site is impacting the Buffalo River. The western most monitoring well on the site does not indicate any groundwater impacts. Remediation of VOC contamination at the site was implemented through the removal of the VOC contaminant source material (soil) from Areas B and C in 2003. A vapor extraction/groundwater collection treatment system was installed at the site in 2004. Remaining VOC residuals at the site are addressed through vapor extraction from Area A, vapor extraction of residual VOCs along Area C, and groundwater collection and treatment of groundwater from sumps in Areas B and C, and from ground water from Area A vapor extraction. Annual conditions and monitoring reports were submitted for operating periods from 2006 through 2008. The results of the sampling and evaluation to assess the effectiveness of the remedial measures reveals that there is has been a reduction in residual VOCs in soil and groundwater at the site. Area A meets established cleanup goals for soil. Levels of several VOCs (Cyclohexane, Methylcyclohexane, and Toluene) still remain above the site specific cleanup action goals for soil in Area C. Also in Area C, trace levels of Cloroethane (7 to 17 ppb) are slightly above the groundwater quality standard for this chemical compound of 5 ppb. More information regarding the site can be found in the documents placed in the Site Document Repository.

Health Problem:

The remedial activities completed at the site have mitigated the potential for exposure.

Site Description: The Sovereign Specialty Chemical (Sovereign) VCP Site is a 1.26 acre

area that is part of a 6.3-acre active industrial facility (SBL:

122.18-2-2) located at 710 Ohio Street in Buffalo. The site and plant

is located in a highly industrialized corridor of the City of Buffalo, and is zoned industrial. The site is less than 500' east of a ship canal which connects the Buffalo Outer Harbor and approximately 600' west of the Buffalo River. The site is bounded on the east by CSX railroad tracks, on the west by Ohio St., on the south by the manufacturing portion of the facility, and on the north

the east by CSX railroad tracks, on the west by Ohio St., on the south by the manufacturing portion of the facility, and on the north by Rigidized Metals Corp., a metal processing facility. The Sovereign industrial facilities were initially constructed in 1924 and underwent several updates and modifications through the years. An above ground tank farm was constructed in the mid-1960s to store but the mid-1960s to store but

above ground tank farm was constructed in the mid-1960s to store bulk chemicals used in manufacturing of paints and adhesives. The VCP site consists of the footprint of a former tank farm area and partially encompasses a portion of the industrial facility property. Spills and leakages from the tank farm area appear to have lead to on-site contamination. The site subject to the VCP agreement is currently being managed as single operable unit. Operable Unit 1 (OU1) is the on-site source area. The Sovereign site is currently owned and operated by the Henkel Corporation. The VCP agreement was signed by Sovereign Specialty Chemicals, Inc. which was formerly known as the Pierce & Stevens Corp. The facility was also owned by Sherwin Williams Corp. for a period of time. A plant wide Phase 1 and Phase 2 ESA was performed in 1996. The ESAs revealed impacts to soil and groundwater from volatile and semi-volatile organic compounds. A focused soil investigation performed in 1997 revealed elevated levels of several chemicals including Toluene, Methyl Ethyl Ketone, and Xylene. A Remedial Action Workplan was submitted and implemented in 1999 which consisted of excavation of contaminated soil from the former tank farm area. An additional groundwater investigation in 2001 revealed three VOC "hot spots". These "hot spots" were identified as Areas A, B and C during the remediation phase. An offsite investigation of abutting properties (CSX railroad and Rigidized Metals) was completed in 2002. The results of this investigation revealed exceedances for several VOCs in soil and groundwater at both abutting properties. A Tank Farm Interim Remedial Measure Plan was undertaken to upgrade Sovereign s tank farm to comply with the standards for new or substantially modified hazardous substance storage facilities under the Chemical Bulk Storage (CBS) regulations. The work was performed as an Interim Remedial Measure under a negotiated consent order and consisted of removal of the existing tank farm, construct a new tank farm to standards in the CBS regulations, excavation of contaminated soil, submitting a workplan for site investigation for the balance of the

tank farm area, completing a site investigation, and preparing and implementing, as needed, a Remedial Action Plan (RAP) required for the balance of the tank farm. The tank farm upgrade and initial

the RAP was implemented in 2004. A high vacuum extraction (HVE) system was installed along the west wall of the Area C excavation in a location where some residual contamination was present and in Area A. The HVE system is the sole form of remediation for Area A. The HVE system extracts VOC vapors in the soil vadose zone in the contaminated areas and the extracted vapors are treated to remove the VOCs before release. The HVE system includes a groundwater treatment component to treat VOC contaminated groundwater from Areas B and C, and groundwater extracted from the HVE system in Area A. Treated groundwater is discharged to a Buffalo Sewer Authority sanitary sewer. The HVE and groundwater treatment systems have been operating and monitored from 2004 to present. The DEC issued a Covenant-Not-to-Sue letter in February 2010.

Env Problem:

Based upon investigations to date prior to remediation, the primary contaminants of concern at the site include VOCs (Toluene, Methyl Ethyl Ketone, Xylene, Cyclohexane, Methylcyclohexane, and Toluene). The site contains 6 to 8 feet of industrial fill (slag, cinders, ash, stone and demolition debris). The fill may be the source of low levels of several SVOCs. The fill is underlain with native soil consisting of silty clay. The depth to the local limestone bedrock was not confirmed. Groundwater is relatively shallow at the site (5 to 7 feet below ground surface). The groundwater gradient is relatively flat. Flow direction is generally toward the west toward Lake Erie. Some variability in the groundwater flow direction has been observed and may be due to local influences from the Buffalo River. VOC contaminated soil and groundwater was primarily found in the location of the former tank farm area in three distinct areas identified as Area A, B and C. Only marginal offsite VOC groundwater contamination was detected. The CSX railroad property along the eastern property boundary showed exceedances for methylene chloride in soil and 1,1,1 trichloroethane, 1,1-dichloroethane, and chloroethane in groundwater. The Rigidized Metals property along the northern property boundary showed exceedances for for methylene chloride and acetone in soil, and benzene, ethylebenzene, toluene, and total xylenes in groundwater. There is no evidence the contaminated groundwater at the site is impacting the Buffalo River. The western most monitoring well on the site does not indicate any groundwater impacts. Remediation of VOC contamination at the site was implemented through the removal of the VOC contaminant source material (soil) from Areas B and C in 2003. A vapor extraction/groundwater collection treatment system was installed at the site in 2004. Remaining VOC residuals at the site are addressed through vapor extraction from Area A, vapor extraction of residual VOCs along Area C, and groundwater collection and treatment of groundwater from sumps in Areas B and C, and from ground water from Area A vapor extraction. Annual conditions and monitoring reports were submitted for operating periods from 2006 through 2008. The results of the sampling and evaluation to assess the effectiveness of the remedial measures reveals that there is has been a reduction in residual VOCs in soil and groundwater at the site. Area A meets established cleanup goals for soil. Levels of several VOCs (Cyclohexane, Methylcyclohexane, and Toluene) still remain above the site specific cleanup action goals for soil in Area C. Also in Area C, trace levels of Cloroethane (7 to 17 ppb) are slightly above the groundwater quality standard for this chemical compound of 5 ppb. More information regarding the site can be found in the documents placed in the Site Document Repository.

Dt record added: 10/21/2010 11:49:45 AM Dt rec updated: 10/21/2010 11:50:54 AM

Updated By: SRHEIGEL Site Code: 56884

Site Description: The Sovereign Specialty Chemical (Sovereign) VCP Site is a 1.26 acre

area that is part of a 6.3-acre active industrial facility (SBL: 122.18-2-2) located at 710 Ohio Street in Buffalo. The site and plant

is located in a highly industrialized corridor of the City of Buffalo, and is zoned industrial. The site is less than 500' east of a ship canal which connects the Buffalo Outer Harbor and approximately 600' west of the Buffalo River. The site is bounded on the east by CSX railroad tracks, on the west by Ohio St., on the south by the manufacturing portion of the facility, and on the north by Rigidized Metals Corp., a metal processing facility. The Sovereign

industrial facilities were initially constructed in 1924 and underwent several updates and modifications through the years. An above ground tank farm was constructed in the mid-1960s to store bulk chemicals used in manufacturing of paints and adhesives. The VCP site consists of the footprint of a former tank farm area and partially encompasses a portion of the industrial facility property. Spills and leakages from the tank farm area appear to have lead to on-site contamination. The site subject to the VCP agreement is currently being managed as single operable unit. Operable Unit 1 (OU1) is the on-site source area. The Sovereign site is currently owned and operated by the Henkel Corporation. The VCP agreement was signed by Sovereign Specialty Chemicals, Inc. which was formerly known as the Pierce & Stevens Corp. The facility was also owned by Sherwin Williams Corp. for a period of time. A plant wide Phase 1 and Phase 2 ESA was performed in 1996. The ESAs revealed impacts to soil and groundwater from volatile and semi-volatile organic compounds. A focused soil investigation performed in 1997 revealed elevated levels of several chemicals including Toluene, Methyl Ethyl Ketone, and Xylene. A Remedial Action Workplan was submitted and implemented in 1999 which consisted of excavation of contaminated soil from the former tank farm area. An additional groundwater investigation in 2001 revealed three VOC "hot spots". These "hot spots" were identified as Areas A, B and C during the remediation phase. An offsite investigation of abutting properties (CSX railroad and Rigidized Metals) was completed in 2002. The results of this investigation revealed exceedances for several VOCs in soil and groundwater at both abutting properties. A Tank Farm Interim Remedial Measure Plan was undertaken to upgrade Sovereign s tank farm to comply with the standards for new or substantially modified hazardous substance storage facilities under the Chemical Bulk Storage (CBS) regulations. The work was performed as an Interim Remedial Measure under a negotiated consent order and consisted of

removal of the existing tank farm, construct a new tank farm to standards in the CBS regulations, excavation of contaminated soil, submitting a workplan for site investigation for the balance of the

tank farm area, completing a site investigation, and preparing and implementing, as needed, a Remedial Action Plan (RAP) required for the balance of the tank farm. The tank farm upgrade and initial removal action was completed in 1999. A RAP for the balance of the tank farm area was submitted in 2002. Target cleanup action levels in the RAP were in accordance with site specific levels in DEC TAGM 4046. The RAP was implemented in two phases. The first phase of the RAP for remediation of VOC contamination at the site was implemented in 2003 by removing the VOC contaminated soil (source material) from Areas B and C. Some residual contamination was situated along an excavation wall adjacent to Area C. The excavation areas were backfilled with clean soil. Groundwater collection and extraction sumps were installed in Areas B and C to collect and treat residual VOCs in groundwater in these areas. Area A was not excavated because of the presence of a nitrogen tank and piping. The second phase of the RAP was implemented in 2004. A high vacuum extraction (HVE) system was installed along the west wall of the Area C excavation in a location where some residual contamination was present and in Area A. The HVE system is the sole form of remediation for Area A. The HVE system extracts VOC vapors in the soil vadose zone in the contaminated areas and the extracted vapors are treated to remove the VOCs before release. The HVE system includes a groundwater treatment component to treat VOC contaminated groundwater from Areas B and C. and groundwater extracted from the HVE system in Area A. Treated groundwater is discharged to a Buffalo Sewer Authority sanitary sewer. The HVE and groundwater treatment systems have been operating and monitored from 2004 to present. The DEC issued a Covenant-Not-to-Sue letter in February 2010.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

12/10/98: JDC LEFT MESSAGE FOR LINDA GRIMMER, TO DETERMINE STATUS. 12/11/98: DEC Remarks:

> JDC TELECON WITH LINDA GRIMMER, TANK WILL BE CLOSED IN PLACE DUE TO LOCATION OF NATURAL GAS LINE AND BUILDING. 7000 GALLONS OF CONTAMINATED WATER WERE REMOVED. 100 GALLONSOF 6 OIL REMOVED FOR DISPOSAL. CONTAMINATED SOILS REMOVED FROM THE TOP AND AROUND THE TANK FOR DISPOSAL. POST SAMPLES HAVE BEEN COLLECTED FROM SIDE AND BOTTOM OF TANK WALLS. TURNAROUND TIME IS TWO WEEKS, AT THAT TIME WILL DETERMINE IF FURTHER WORKIS REQUIRED. 12/30/98: JDC RECEIVED AND REVIEWED POST TEST RESULTS AND FOUND SATISFACTORY. WILL INSPECT SITE BEFORE TANK IS CLOSED IN PLACE. 12/30/98: JDC ON SITE AND FOUND NO OIL CONTAMINATION IN THE EXCAVATION AT THE TANK TOP, TANK LINE CUT AND WILL BE CAPPED. WILL MAKE FINAL INSPECTION WHEN WORK IS COMPLETE. 07/22/99: MJS TAKE OVER FILE. JDC NO LONGER WITH NYSDEC. MJS REVIEWED FILE. SAMPLE RESULTS NOT IN FILE. 07/22/99: MJS TELECON WITH LINDA GRIMMER AT EPS. SHE STATED THAT PROJECT IS COMPLETE, TANK CLOSED IN PLACE, SAMPLES OBTAINED AND WASTE DISPOSED. SHE WILL FAX APPLICABLE INFORMATION. MJS RECEIVED FAX FROM LINDA GRIMMER. SAMPLE RESULTS MEET STANDARDS. CONTAMINATED WATER DISPOSED AT EPS IN SYRACUSE AND NINE TONS SOIL DISPOSED AT LAKEVIEW

LANDFILL, NO FURTHER ACTION REQUIRED, MJS CLOSE FILE.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

Direction Distance

Elevation Site Database(s) EPA ID Number

AIRCO INDUSTRIAL GASES (Continued)

1000176419

EDR ID Number

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

SIDEWALL SAMPLE RESULT (8270)CAME BACK SLIGHTLY ABOVE TAGMS. THEY WANT A CLEAN CLOSURE SO THEY WILL REMOVE SOIL AND RESAMPLE FOR THE SVOC'S. THE SOIL WENT TO THE TONAWANDA LANDFILL (ENSOL). 08/30/06 JFO CALL TO ADAM H. HE WILL FORWARD THE RESULTS AND THE RECEIPTS. 10/26/06 JFO CALL TO ADAM. LEFT A MESSAGE ON HIS VMAIL. NEED RECEIPTS AND RESULTS OF RESAMPLING. 12/07/06 JFO CALL TO ADAM H. HE SAID THE SOIL WAS CLEAN AND IT WENT OUT AS CLEAN. HE USED THE PID TO DETERMINE THE SOIL WAS CLEAN. I CALLED ENSOL AND SPOKE WITH NICK MORREALE, HE WILL FIND OUT WHERE THE SOIL WENT AND GET BACK TO ME. I ALSO CALLED BILL MOSS WITH THE BOARD OF ED. HE WAS NOT IN, I LEFT A MESSAGE ON

HIS V-MAIL. 02/21/07 JFO RECEIVED THE CLOSURE REPORT AND AN

EXPLANATION FROM ADAM HARRIS. INCLUDED ARE THE DISPOSAL RECEIPTS FOR THE TANK BOTTOMS, THE PID READINGS FROM THE SOILS THAT WERE REMOVED AND THE SECOND SOUTH WALL SAMPLE RESULT FOR 8270. ALL COMPOUNDS ARE

BELOW DETECTION. THE SOILS THAT WERE REMOVED WERE FREE OF

CONTAMINATION AND WERE USED AS INTERIM COVER AT TONAWANDA LANDFILL.

NO FURTHER ACTION REQUIRED. CLOSED

Remarks: SAMPLE RESULTS FROM A TANK PULL INDICATE CONTAMINATION.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: The Radio Tower Area is located near Lake Erie and the Buffalo Outer

> Harbor, in the southeast corner of a larger, 212-acre parcel of waterfront land owned by the Niagara Frontier Transportation Authority (NFTA). The majority of the NFTA's Buffalo Outer Harbor property is reclaimed land, created primarily with sediments dredged from the harbor shipping channels over a 100-year period ending in the mid 1960s. The southern end of the NFTA property is occupied by the NFTA's port terminal facilities, consisting of two warehouses and large, paved parking areas. The Radio Tower Area is situated near the northern edge of the terminal parking area. The remainder of the NFTA property to the north of the site is vacant land. The ongoing environmental restoration project known as the Greenbelt (Site #B00149) is located along the harbor shoreline approximately 1000 feet northwest of the the Radio Tower Area. Fuhrmann Boulevard and NY State Route 5 are located several hundred feet to the east of the

> Radio Tower Area, along the eastern border of the NFTA property. A 1998 Remedial Investigation conducted by NYSDEC found that the most significantly contaminated portion of the NFTA Outer Harbor property was located near a radio tower at the southern end of the property.

Records indicated that hazardous waste from a local chemical dye

EDR ID Number

manufacturer were disposed in this portion of the property; concentrations of nitrobenzene found in the soils here exceeded TCLP hazardous waste thresholds. The site originally included a 6-acre parcel referred to as the Radio Tower Area. A Record of Decision (ROD) for the Radio Tower Area was issued in 1999, calling for the ex-situ bioremediation of the nitrobenzene-contaminated soils. In 2001, the responsible party completed a pilot study of an in-situ chemical oxidation treatment of soils as an alternative to the ROD. An Explanation of Significant Difference to the ROD was issued in 2003, accepting the in-situ chemical oxidation remedy for the Radio Tower Area. A design investigation was initiated in late 2002 to further delineate the area of soil requiring treatment. The boundaries of the site, the area subject to deed restrictions and long term management, were later redefined to encompass sample locations where the residual subsurface soil/fill concentrations of nitrobenzene exceeded 1 mg/kg, an area measuring approximately 0.9 acres. Remedial action was initiated in 2003 and consisted of two rounds of in situ chemical oxidation treatments using potassium permanganate. Additional treatability studies were conducted and a stabilizing mixture of Portland cement and activated carbon was determined to be effective in reducing the leachability of the remaining nitrobenzene. In-situ stabilization activities were completed in 2003. The addition of the cement and activated carbon created a mound of treated soils approximately 7 feet above the surrounding ground surface. The final site restoration activities, completed in 2004, consisted of the excavation of the mounded, excess treated/stabilized soils to ground surface and transport of that excavated material to the nearby Alltift Landfill site (#915054). Here the material was used to stabilize similarly contaminated sediments and soils, in conjunction with an ongoing NYSDEC-approved site remediation. Approximately 1680 cubic yards of treated, stabilized soil was taken to the Alltift landfill site. The treated soils remaining at the Radio Tower Area were covered with two feet of clean fill and topsoil over a demarcation layer of geotextile fabric. Deed restrictions were filed in 2005 limiting the site to industrial or commercial usage. A Site Management Plan was put in place requiring annual inspection and maintenance of the soil cover. Remediation at the site is complete. Prior to remediation, the primary contaminant of concern at the site was nitrobenzene in the soil. The completed remedial action has treated and stabilized the soils and is not having an impact on groundwater quality. Groundwater samples were also obtained from a number of wells located throughout the Buffalo Outer Harbor property. Groundwater sample results from areas outside the RTA contained low levels of metals and some wells exhibited low levels of SVOC compounds above the Class GA groundwater standards. Due to the limited migration of groundwater contamination and the low permeability of the fill material, the chemical loading to the Lake is minimal. Sampling of the surface waters of Lake Erie concluded that there are no present impacts to water quality from the Buffalo Outer Harbor property. More information regarding the site can be found in the Final Engineering Report dated 2005. Drinking contaminated water is not expected because the area is served by a public water supply system. The contaminated soil in the vicinity of the Radio Tower has been remediated. In the event of

development outside the Radio Tower Area, the State recommends that

the developer and municipal authorities ensure elimination of exposure routes that would be created by increased land use.

Site Description: The Radio Tower Area is located near Lake Erie and the Buffalo Outer

Harbor, in the southeast corner of a larger, 212-acre parcel of waterfront land owned by the Niagara Frontier Transportation Authority (NFTA). The majority of the NFTA's Buffalo Outer Harbor property is reclaimed land, created primarily with sediments dredged from the harbor shipping channels over a 100-year period ending in the mid 1960s. The southern end of the NFTA property is occupied by the NFTA's port terminal facilities, consisting of two warehouses and large, paved parking areas. The Radio Tower Area is situated near the northern edge of the terminal parking area. The remainder of the NFTA property to the north of the site is vacant land. The ongoing environmental restoration project known as the Greenbelt (Site #B00149) is located along the harbor shoreline approximately 1000 feet northwest of the the Radio Tower Area. Fuhrmann Boulevard and NY State Route 5 are located several hundred feet to the east of the Radio Tower Area, along the eastern border of the NFTA property. A 1998 Remedial Investigation conducted by NYSDEC found that the most significantly contaminated portion of the NFTA Outer Harbor property was located near a radio tower at the southern end of the property. Records indicated that hazardous waste from a local chemical dye manufacturer were disposed in this portion of the property; concentrations of nitrobenzene found in the soils here exceeded TCLP hazardous waste thresholds. The site originally included a 6-acre parcel referred to as the Radio Tower Area. A Record of Decision (ROD) for the Radio Tower Area was issued in 1999, calling for the ex-situ bioremediation of the nitrobenzene-contaminated soils. In 2001, the responsible party completed a pilot study of an in-situ chemical oxidation treatment of soils as an alternative to the ROD. An Explanation of Significant Difference to the ROD was issued in 2003, accepting the in-situ chemical oxidation remedy for the Radio Tower Area. A design investigation was initiated in late 2002 to further delineate the area of soil requiring treatment. The boundaries of the site, the area subject to deed restrictions and long term management, were later redefined to encompass sample locations where the residual subsurface soil/fill concentrations of nitrobenzene exceeded 1 mg/kg, an area measuring approximately 0.9 acres. Remedial action was initiated in 2003 and consisted of two rounds of in situ chemical oxidation treatments using potassium permanganate. Additional treatability studies were conducted and a stabilizing mixture of Portland cement and activated carbon was determined to be effective in reducing the leachability of the remaining nitrobenzene. In-situ stabilization activities were completed in 2003. The addition of the cement and activated carbon

EDR ID Number

created a mound of treated soils approximately 7 feet above the surrounding ground surface. The final site restoration activities, completed in 2004, consisted of the excavation of the mounded, excess treated/stabilized soils to ground surface and transport of that excavated material to the nearby Alltift Landfill site (#915054). Here the material was used to stabilize similarly contaminated sediments and soils, in conjunction with an ongoing NYSDEC-approved site remediation. Approximately 1680 cubic yards of treated, stabilized soil was taken to the Alltift landfill site. The treated soils remaining at the Radio Tower Area were covered with two feet of clean fill and topsoil over a demarcation layer of geotextile fabric.

soils remaining at the Radio Tower Area were covered with two feet clean fill and topsoil over a demarcation layer of geotextile fabric. Deed restrictions were filed in 2005 limiting the site to industrial or commercial usage. A Site Management Plan was put in place requiring annual inspection and maintenance of the soil cover. Remediation at the site is complete. Prior to remediation, the

primary contaminant of concern at the site was nitrobenzene in the soil. The completed remedial action has treated and stabilized the soils and is not having an impact on groundwater quality. Groundwater samples were also obtained from a number of wells located throughout the Buffalo Outer Harbor property. Groundwater sample results from areas outside the RTA contained low levels of metals and some wells exhibited low levels of SVOC compounds above the Class GA groundwater standards. Due to the limited migration of groundwater contamination and the low permeability of the fill material, the chemical loading to the Lake is minimal. Sampling of the surface waters of Lake Erie concluded that there are no present impacts to water quality from the Buffalo Outer Harbor property. More information regarding the site

can be found in the Final Engineering Report dated 2005.

Drinking contaminated water is not expected because the area is served by a public water supply system. The contaminated soil in the vicinity of the Radio Tower has been remediated. In the event of development outside the Radio Tower Area, the State recommends that

the developer and municipal authorities ensure elimination of exposure routes that would be created by increased land use.

Site Description: The Radio Tower Area is located near Lake Erie and the Buffalo Outer

Harbor, in the southeast corner of a larger, 212-acre parcel of waterfront land owned by the Niagara Frontier Transportation Authority (NFTA). The majority of the NFTA's Buffalo Outer Harbor property is reclaimed land, created primarily with sediments dredged from the harbor shipping channels over a 100-year period ending in the mid 1960s. The southern end of the NFTA property is occupied by the NFTA's port terminal facilities, consisting of two warehouses and large, paved parking areas. The Radio Tower Area is situated near the northern edge of the terminal parking area. The remainder of the NFTA property to the north of the site is vacant land. The ongoing environmental restoration project known as the Greenbelt (Site #B00149) is located along the harbor shoreline approximately 1000 feet northwest of the the Radio Tower Area. Fuhrmann Boulevard and NY State Route 5 are located several hundred feet to the east of the Radio Tower Area, along the eastern border of the NFTA property. A 1998 Remedial Investigation conducted by NYSDEC found that the most significantly contaminated portion of the NFTA Outer Harbor property was located near a radio tower at the southern end of the property. Records indicated that hazardous waste from a local chemical dye manufacturer were disposed in this portion of the property; concentrations of nitrobenzene found in the soils here exceeded TCLP hazardous waste thresholds. The site originally included a 6-acre parcel referred to as the Radio Tower Area. A Record of Decision (ROD) for the Radio Tower Area was issued in 1999, calling for the ex-situ bioremediation of the nitrobenzene-contaminated soils. In 2001, the responsible party completed a pilot study of an in-situ chemical oxidation treatment of soils as an alternative to the ROD. An Explanation of Significant Difference to the ROD was issued in 2003, accepting the in-situ chemical oxidation remedy for the Radio Tower Area. A design investigation was initiated in late 2002 to further delineate the area of soil requiring treatment. The boundaries of the site, the area subject to deed restrictions and long term management, were later redefined to encompass sample locations where the residual subsurface soil/fill concentrations of nitrobenzene exceeded 1 mg/kg, an area measuring approximately 0.9

acres. Remedial action was initiated in 2003 and consisted of two rounds of in situ chemical oxidation treatments using potassium permanganate. Additional treatability studies were conducted and a stabilizing mixture of Portland cement and activated carbon was determined to be effective in reducing the leachability of the remaining nitrobenzene. In-situ stabilization activities were completed in 2003. The addition of the cement and activated carbon created a mound of treated soils approximately 7 feet above the surrounding ground surface. The final site restoration activities, completed in 2004, consisted of the excavation of the mounded, excess treated/stabilized soils to ground surface and transport of that excavated material to the nearby Alltift Landfill site (#915054). Here the material was used to stabilize similarly contaminated sediments and soils, in conjunction with an ongoing NYSDEC-approved site remediation. Approximately 1680 cubic yards of treated, stabilized soil was taken to the Alltift landfill site. The treated soils remaining at the Radio Tower Area were covered with two feet of clean fill and topsoil over a demarcation layer of geotextile fabric. Deed restrictions were filed in 2005 limiting the site to industrial or commercial usage. A Site Management Plan was put in place requiring annual inspection and maintenance of the soil cover. Remediation at the site is complete. Prior to remediation, the

Env Problem:

Remediation at the site is complete. Prior to remediation, the primary contaminant of concern at the site was nitrobenzene in the soil. The completed remedial action has treated and stabilized the soils and is not having an impact on groundwater quality. Groundwater samples were also obtained from a number of wells located throughout the Buffalo Outer Harbor property. Groundwater sample results from areas outside the RTA contained low levels of metals and some wells exhibited low levels of SVOC compounds above the Class GA groundwater standards. Due to the limited migration of groundwater contamination and the low permeability of the fill material, the chemical loading to the Lake is minimal. Sampling of the surface waters of Lake Erie concluded that there are no present impacts to water quality from the Buffalo Outer Harbor property. More information regarding the site can be found in the Final Engineering Report dated 2005.

Health Problem:

Drinking contaminated water is not expected because the area is served by a public water supply system. The contaminated soil in the vicinity of the Radio Tower has been remediated. In the event of development outside the Radio Tower Area, the State recommends that the developer and municipal authorities ensure elimination of exposure routes that would be created by increased land use.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2009 Date Data Arrived at EDR: 03/01/2011 Date Made Active in Reports: 05/02/2011

Number of Days to Update: 62

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

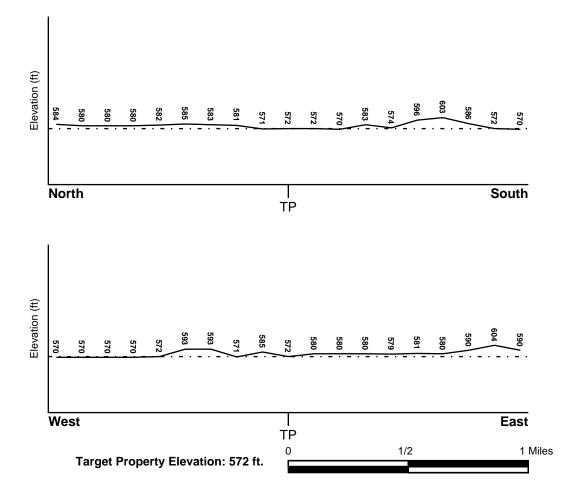

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 MAP ID
 FROM TP
 GROUNDWATER FLOW

 Not Reported
 GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

in a landscape. The following information is based on soil conservation service seemes data.			
Soil Map ID: 1			
Soil Component Name:	Urban land		
Soil Surface Texture: Hydrologic Group:	Not reported		
Soil Drainage Class: Hydric Status: Unknown			
Corrosion Potential - Uncoated Steel:	Not Reported		
Depth to Bedrock Min:	> 0 inches		
Depth to Watertable Min:	> 0 inches		
No Layer Information available.			
Soil Map ID: 2			
Soil Component Name:	Water		
Soil Surface Texture: Hydrologic Group:	Not reported		
Soil Drainage Class: Hydric Status: Unknown			
Corrosion Potential - Uncoated Steel:	Not Reported		
Depth to Bedrock Min:	> 0 inches		
Depth to Watertable Min:	> 0 inches		
No Layer Information available.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Appendix K: Personnel Qualifications

ROBERT SZUSTAKOWSKI

Mr. Szustakowski is a graduate of Syracuse University with a Masters of Science in Geology. Over the past 20 years, Mr. Szustakowski has been involved in all aspects of the management of environmental field projects on a nation-wide basis. He has managed environmental projects ranging from small corner gasoline stations to multi-million dollar industrial sites. He has been involved with permit preparation and training and developed and implemented seminars to industries related to hazardous material handling and disposal. Mr. Szustakowski has overseen numerous hydrogeologic investigations, groundwater contaminant studies and related work around solid and hazardous waste facilities.

As COO at one of the largest due diligence firms in the northeast, Mr. Szustakowski oversaw the completion of over 5,000 pre-purchase studies each year. He used his background to devise and implement lower levels of due diligence intended to reduce the cost and turn-around time of environmental studies for banks.

Mr. Szustakowski was previously the Assistant Vice President, Environmental Risk Analysis, for a multinational bank. He was responsible for developing the Environmental Risk Analysis Unit of the bank, including writing policy and assessing appropriate due diligence requirements. He designed and enforced environmental due diligence policies based on the bank's risk tolerance and regulations. Responsibilities included: pre-qualifying consultants; competitive bidding and ordering; oversight and issuance of internal reports of all environmental projects (amounting to over 600 projects per year, nation-wide); final decision making authority related to environmental risks to the bank; and, day-to-day monitoring of large environmental projects (budget tracking, internal reporting and invoice reconciliation). Major accomplishments include: review and remediating bank-owned "environmentally impaired" properties to allow for subsequent sale; completed pre-acquisition environmental due diligence on banks with multi-billion dollar mortgage portfolios and real estate holdings; and, realizing a 35% decrease in overall environmental due diligence fees by implementing appropriate levels of due diligence for projects.

Mr. Szustakowski has made numerous presentations to lenders, real estate developers and government agencies on financing environmentally impaired properties and Brownfield developments. Recently, he was invited to speak at a lawyers forum on the significance of due diligence for the banking industry.

Education: Masters of Science Degree in Geology (hydrogeochemistry concentration),

Syracuse University (1987), Syracuse, New York

Bachelors of Science degree in Geochemistry/Chemistry, State University of New

York at Fredonia (1985), Fredonia, New York

Certifications: HAZWOPER

OSHA Personnel Protection and Safety Course

OSHA Supervisory Course

ASTM Conference on Environmental Site Assessments for Property Transfer

BRYAN MAYBACK

With over seven years of experience, Bryan Mayback has been involved in various aspects of the environmental field. While with one of the largest due diligence firms in the northeast, Mr. Mayback was involved with hundreds of lender-based environmental studies on an annual basis. These studies included Phase I and Phase II environmental site assessments in Western New York and throughout the US. Mr. Mayback provided project management as well as the completion of the field work, written reports, and final report reviews.

Mr. Mayback has also provided consulting services for major petroleum companies such as ExxonMobil. During that time, Mr. Mayback was involved with large scale excavation projects (removal of up to 15,000 tons of impacted soil and treatment of over 200,000 gallons of groundwater), sensitive receptor surveys, hydrogeologic studies, impact delineation studies, and pilot testing relative to alternative remedial measures (other than soil excavation). Mr. Mayback has performed groundwater monitoring activities, including well gauging, purging (bailers and low-flow) and sampling. Through the years, Mr. Mayback has been responsible for the closure/reclassification of many NYSDEC listed spills based on results of remedial activities that he was involved with and proposed.

Education: Bachelors of Science in Earth Science (environmental concentration)

State University of New York College at Buffalo (2002)

Associates in Applied Science (graduated with high distinction), Environmental

Technology, Trocaire College, Buffalo, New York (1999)

Certifications: OSHA 40 hour Hazardous Material Handling/HAZWOPER

OSHA HAZWOPER 8-Hour Supervisor Training

ASTM Conference on Environmental Site Assessments for Property Transfer

American Red Cross: Standard First Aid and Adult CPR

New York State and EPA Certified Asbestos Air and Project Monitoring Technician

OSHA 10 Hour Construction Safety Training

JOSEPH S. MECCA

With over two years of experience, Joseph S. Mecca has been involved in many aspects of the environmental field. He has been involved in numerous asbestos project and air monitoring projects in addition to asbestos and lead-based paint inspections. Mr. Mecca is currently involved in environmental sites assessments including Transaction Screen and Phase I studies. Mr. Mecca is also involved in Phase II intrusive investigations. His projects are overseen by environmental professionals.

Mr. Mecca completed four years of Environmental Science studies at Canisius College in Buffalo, New York. During his time at Canisius College, he accumulated over 75 credit hours of science based courses (environmental toxicology, environmental health, field ecology, geology, hydrogeology, environmental analytical chemistry, etc.). Mr. Mecca also completed two internships.

Education: Bachelor of Science in Environmental Science, Canisius College, Buffalo, NY

(2009)

Certifications: New York State and EPA Certified Asbestos Air and Project Monitoring
