Table of Contents

1.0	INTRODUCTION	1
1.1	Purpose	1
1.2	Report Organization	1
2.0	SITE DESCRIPTION AND HISTORY	3
2.1	Physical Setting	3
2.2	Topography and Surface Water Drainage	3
3.0	PRIOR ENVIRONMENTAL INVESTIGATIONS	4
3.1	2015 Phase I Environmental Assessment	4
3.2	2015 Phase II Environmental Site Assessments	4
3.3	Pre-design PCB Testing to Support Building Cleaning	5
4.0	REMEDIAL INVESTIGATION	7
4.1	Applicable Regulatory Standards	7
4.2	Scope of Work	7
4.2.1	Soil Boring Advancement and Subsurface Soil Sampling	8
4.2.2	Bedrock Monitoring Well Installation and Groundwater Sampling	8
4.2.3	Surface Soil Sampling	10
4.2.4	Soil Vapor Sampling	10
4.2.5	Equipment Decontamination	11
4.2.6	Waste handling, Storage and Disposal	11
5.0	GEOLOGY AND HYDROGEOLOGY	12
5.1	Geology	12
5.2	Bedrock Surface	12
5.3	Hydrogeology	12
6.0	ANAYLYTICAL RESULTS	14
6.1	Subsurface Soils	14
6.1.1	Volatile Organic Compounds (VOCs)	15
6.1.2	Semi-Volatile Organic Compounds (SVOCs)	15
6.1.3	Polychlorinated Biphenyls (PCBs)	15
6.1.4	Pesticides	15
6.1.5	Metals	15
6.2	Groundwater	16
6.2.1	Volatile Organic Compounds (VOCs)	16

6.2.2	Semi-volatile Organic Compounds (SVOCs).....	16
6.2.3	Polychlorinated Biphenyls (PCBs).....	16
6.2.4	Pesticides	16
6.2.5	Metals	17
6.3	Surface Soil	17
6.3.1	Semi-volatile Organic Compounds (SVOCs).....	17
6.3.2	Polychlorinated Biphenyls (PCBs).....	17
6.3.3	Pesticides	17
6.3.4	Metals	17
6.4	Soil Vapor	18
7.0	QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT	19
7.1	General.....	19
7.2	Contaminant Sources and COPCs	19
7.3	Conceptual Site Model.....	21
7.4	Exposure Assessment	22
7.4.1	Characterization of Exposure Setting	22
7.4.2	Identification of Potential Exposure Pathways	23
7.4.3	Fate and Transport in Receiving Media	23
7.4.4	Potential Migration of COPCs to Air	24
7.4.5	Potential Exposure Points.....	24
7.4.6	Potential Exposure Routes	25
7.4.7	Exposure Scenarios and Completed Exposure Pathways	25
7.5	Summary.....	26
8.0	FISH AND WILDLIFE IMPACT ANALYSIS	27
9.0	CONCLUSIONS AND RECOMMENDATIONS.....	28
9.1	Interim Remedial Measures	28
10.0	ALTERNATIVES ANALYSIS.....	30
10.1	Site Description and History	30
10.2	Physical Setting	30
10.3	Site Geology and Hydrogeology.....	30
10.4	Site Topography and Surface Water Drainage	30
10.5	Summary of Remedial Investigation	30
10.6	Remedial Investigation Conceptual Site Model	31

10.7	Qualitative Exposure Assessment.....	32
10.8	Interim Remedial Measure Number 1	33
10.9	Interim Remedial Measure Number 2	34
10.10	Post IRM Site Conceptual Model	34
10.11	Remediation Goals and Remedial Actions Objectives.....	35
11.0	ANALYSIS OF ALTERNATIVE TECHNOLOGIES.....	36
11.1	General Response Actions	36
11.2	Identification and Screening of Technologies for Soil	36
11.2.1	Containment (Site Cap/Cover).....	37
11.2.2	Excavation and Off-site Disposal/Treatment.....	37
11.2.3	In-Situ Treatment	38
11.2.4	Ex-Situ Treatment.....	40
11.3	Site Management Plan	41
11.4	Summary of Retained Technologies	41
12.0	DEVELOPMENT OF REMEDIAL ALTERNATIVES	42
12.1	Description of Alternatives.....	42
12.1.1	Alternative 1 – No Remedial Action	42
12.1.2	Alternative 2 – Excavation and Offsite Disposal of Soils to Meet Unrestricted Use SCOs, SMP	43
12.1.3	Alternative 3 – Excavation and Off-site Disposal of Soil with PCB Concentrations Greater than 10 ppm with Site Cap/Cover System.....	45
12.2	Description of Evaluation Criteria	46
12.2.1	Overall Protection of Public Health and the Environment	46
12.2.2	Compliance with Standards, Criteria, and Guidance (SCGs)	47
12.2.3	Long-Term Effectiveness and Permanence	47
12.2.4	Reduction of Toxicity, Mobility, or Volume with Treatment.....	47
12.2.5	Short-Term Effectiveness	47
12.2.6	Implementability	47
12.2.7	Cost.....	47
12.2.8	Community and State Acceptance.....	48
13.0	DETAILED ANALYSIS OF ALTERNATIVES	49
13.1	Alternative 1 – No Action	49
13.1.1	Overall Protection of Public Health and the Environment	49
13.1.2	Compliance with Standards, Criteria, and Guidance (SCGs)	49

13.1.3	Long-Term Effectiveness and Permanence	49
13.1.4	Reduction of Toxicity, Mobility, or Volume with Treatment.....	49
13.1.5	Short-Term Effectiveness	49
13.1.6	Implementability	49
13.1.7	Cost.....	49
13.2	Alternative 2 – Excavation and Offsite Disposal of Soils to Meet Unrestricted Use SCOs, SMP.....	50
13.2.1	Overall Protection of Public Health and the Environment	50
13.2.2	Compliance with Standards, Criteria, and Guidance (SCGs)	50
13.2.3	Long-Term Effectiveness and Permanence	50
13.2.4	Reduction of Toxicity, Mobility, or Volume with Treatment.....	50
13.2.5	Short-Term Effectiveness	50
13.2.6	Implementability	50
13.2.7	Cost.....	51
13.3	Alternative 3 – Excavation and Off-site Disposal of Soil with PCB Concentrations Greater than 10 ppm and Cover or Cap.....	51
13.3.1	Overall Protection of Public Health and the Environment	51
13.3.2	Compliance with Standards, Criteria, and Guidance (SCGs)	51
13.3.3	Long-Term Effectiveness and Permanence	51
13.3.4	Reduction of Toxicity, Mobility, or Volume with Treatment.....	51
13.3.5	Short-Term Effectiveness	52
13.3.6	Implementability	52
13.3.7	Cost.....	52
14.0	RECOMMENDED REMEDIAL ALTERNATIVE	53
14.1	Basis for Recommendation.....	53
14.2	Recommended Remedial Alternative Components	53
15.0	PROPOSED REMEDIAL ACTION WORK PLAN.....	55
15.1	Description of Remedy.....	55
15.2	Mobilization and Staging.....	56
15.3	Petroleum USTs and AST Removal and Closure.....	56

1.0 INTRODUCTION

LiRo Engineers, Inc. (LiRo) was retained by Buffalo Urban Development Corporation (BUDC) to complete a Remedial Investigation (RI) and Alternatives Analysis (AA) under the guidelines of the New York State Department of Environmental Conservation's (NYSDEC) Brownfield Program at the Western New York Workforce Training Center (herein referred to as the "Site"), located at 683 Northland Avenue in Buffalo, New York (Figure 1-1). The property is currently owned by 683 Northland, LLC. The RIAA is being performed under a Brownfield Cleanup Agreement (BCA) between 683 Northland, LLC and the NYSDEC. The BCA requires 683 Northland, LLC to investigate and remediate, as appropriate, potential areas of environmental concern associated with the Site. LiRo is also preparing a Remedial Action Work Plan (RAWP) for site remediation, which is being submitted in attachment to this RIAA Report.

The initial scope of work for the RI is described in the Remedial Investigation Work Plan (RIWP) (LiRo, December 2016). Field activities began in February 2017. Based on review of the preliminary RI analytical results, the scope of the investigation was expanded as described in the Work Plans for Additional Site Area Investigation and Subsurface PCB Delineation (LiRo, May 2017 and July 2017). The results of these investigations are detailed in this RI report and form the basis for the AA.

1.1 Purpose

The purpose of the RI was to characterize Site conditions, determine the nature and extent of environmental contamination, perform a qualitative risk assessment and provide data sufficient to develop an approach for Site remediation. The information reported in the RI report forms the basis of the AA. The purpose of the AA is to screen remedial technologies, assemble the technologies into remedial alternatives, evaluate the remedial alternatives against evaluation criteria, and propose a recommended remedial alternative that addresses impacts to human health and the environment following the requirements found in NYSDEC Division of Environmental Remediation (DER)-10, Technical Guidance for Site Investigation and Remediation (NYSDEC, May 2010). The RIAA was conducted to support redevelopment of the Site as the Western New York Workforce Training Center as well as for other commercial/light industrial uses.

1.2 Report Organization

This report presents the findings of the RI activities and is organized as follows:

- i. Section 1.0 – Introduction: The introduction presents an overview of the project to date.
- ii. Section 2.0 – Site Description and History: Descriptions of the Site location, physical condition, current and historic use, and results of previous investigations are presented in Section 2.0.

- iii. Section 3.0 – Prior Environmental Investigations: Prior environmental investigations are presented in Section 3.0.
- iv. Section 4.0 – Remedial Investigation: A summary of the work conducted during the RI activities is presented in Section 4.0.
- v. Section 5.0 – Geology and Hydrogeology: The characterization of Site geology and hydrogeology is presented in Section 5.0.
- vi. Section 6.0 – Analytical Results: The analytical data collected during the RI are presented and discussed in Section 6.0.
- vii. Section 7.0 – Qualitative Human Health Exposure Assessment: A qualitative assessment of the potential for exposure of humans at and in the vicinity of the Site to Site-related contaminants is presented in Section 7.0.
- viii. Section 8.0 – Fish and Wildlife Impact Analysis: The results of a Fish and Wildlife Impact Analysis are presented in Section 8.0.
- ix. Section 9.0 – Remedial Investigation Conclusions: A summary of the conclusions of the investigation is presented in Section 9.0.
- x. Section 10.0 – Alternatives Analysis: A summary of Site data, remedial action objectives, and other design elements that will be used in the remedial alternative process to develop a proposed recommended remedial alternative for Site remediation are found in Section 10.0.
- xi. Section 11.0 – Analysis of Alternative Technologies: The development of general response actions (GAOs) and screening of technologies for use at the Site are found in Section 11.0.
- xii. Section 12.0 – Development of Remedial Alternatives: The assembly of the technologies from Section 11.0 into remedial alternatives for the Site are reported in Section 12.0.
- xiii. Section 13.0 – Detailed Analysis of Alternatives: The alternatives developed in Section 12.0 are subjected to detailed evaluation following screening criteria. The evaluations are found in Section 13.0.
- xiv. Section 14.0 – Recommended Remedial Alternative: The alternative that best meets all the selection criteria is presented as the recommended remedy is presented in Section 14.0.
- xv. Section 15.0 - Proposed Remedial Action Work Plan: The proposed work plan for the alternative that best meets all the selection criteria is presented in Section 15.0.
- xvi. Section 16.0 – References: A list of reference material used in the preparation of this report is found in Section 16.0.

2.0 SITE DESCRIPTION AND HISTORY

The 683 Northland Avenue property is an approximately 8.69 acre parcel of land zoned for manufacturing. Buildings constructed between 1911 and 1983 comprise approximately 235,000 square feet (sf) or 5.4 acres (62%) of the Site. The buildings are now vacant and were most recently used for miscellaneous storage. The former Niagara Machine and Tool Co. industrial complex is located on the south side of Northland Avenue between Chelsea Place and Longview Avenue. The building complex is comprised of a four-story office area on the north side along Northland Avenue, a series of ten connecting manufacturing spaces, and a detached one-story shed located on the west side of the facility.

The building complex was developed from numerous building expansions between 1911 through 1983 (Figure 1-2). Niagara Machine and Tool primarily manufactured tools and machines for working with sheet metal, specializing in presses, punches, and rotary sheets at the Site. Operations at the plant included welding, steel fabricating, forging, and machining.

Despite being erected over several decades, building foundations, floor slabs, support columns, exterior walls, and roof framing systems throughout the various structures remain intact.

2.1 Physical Setting

The Site is located in an urban setting with parking areas along Northland Avenue, north of the Site, and commercial/industrial properties along Northland Avenue, east and west of the Site. The Site is bordered to the south by the CSX Railroad line commonly referred to as the “Belt Line”.

2.2 Topography and Surface Water Drainage

According to the United States Geological Survey (USGS) Topographic Map, Buffalo Northeast (NE) (1965), the Site lies at approximately 645 feet above Mean Sea Level (MSL). The topography is generally flat across the Site (Figure 1-1). Regionally, the ground surface slopes towards the northwest.

3.0 PRIOR ENVIRONMENTAL INVESTIGATIONS

In support of the redevelopment project, Fisher Associates (Fisher) performed a Phase I Environmental Site Assessment (Fischer, January 2015) for the Site, a Phase II Site Assessment (Fischer, September 2015), and a Supplemental Site Assessment (Fisher, January 2016). The findings of these assessments are summarized below.

3.1 2015 Phase I Environmental Assessment

Fisher completed the Phase I ESA in 2015 and identified numerous recognized environmental conditions (RECs) and environmental conditions that are of concern at 683 Northland Avenue including: oil-impacted wooden block floors; presence of aboveground and underground storage tanks (ASTs/USTs); numerous drums stored on-site; hydraulic lifts; potentially impacted pits and sumps; debris piles; transformers/electrical switch gear; lead-based paint (LBP); asbestos; and, mold.

The Phase I report also noted that there was an on-site rail spur, transformers, and electrical switch gear. Suspect LBP, asbestos-containing materials (ACM), and mold were identified throughout the buildings. The Environmental Data Resources, Inc. (EDR) report summarized by Fisher identified the following USTs/ASTs as being registered by the owner of 683 Northland Avenue; however, the ownership was common to 631 Northland Avenue at the time the tanks were registered. The registered tanks include nine USTs and three ASTs including: three 23,380-gallon #6 fuel oil, two temporarily out of service, one in service; one 10,000-gallon “other” closed in 1991; two 1,000-gallon gasoline closed/removed; one 1,000-gallon diesel closed/removed; and, two 1,800-gallon “other” converted to non-regulated use.

The Phase I report indicated that a 2005 Phase II Investigation completed by Leader Professional Services, Inc. (Leader) identified exceedances of applicable NYSDEC recommended soil cleanup objectives (presumably Technical and Administrative Guidance Memorandum (TAGM) 4046 criteria) were detected in subsurface samples and pit water samples.

Based on the Phase I findings, Fisher conducted a Phase II assessment that included subsurface soil sampling and an extensive pit sampling program at 683 Northland Avenue.

3.2 2015 Phase II Environmental Site Assessments

Fisher conducted sampling for their initial Phase II Environmental Assessment in 2015. The Phase II prepared by Fisher included results from several other buildings that were in the project study area (corridor). Data and Figures showing the sample locations discussed below were provided in the RIWP submitted by LiRo.

Soil Sampling

Fisher advanced a total of 15 soil borings at 683 Northland Avenue with 11 borings in building interior areas and four in the exterior area west of the buildings. All borings were screened for

potential contamination and Fisher collected soil samples for chemical analysis from exterior borings SB009 and SB019 as well as interior borings ASB5 and ASB8. Fisher submitted soil samples for analysis for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), Resource Conservation and Recovery Act (RCRA) Metals, and polychlorinated biphenyls (PCBs).

No VOCs were detected in the soil samples at concentrations above NYSDEC Part 375 Commercial Soil Cleanup Objectives (CSCOs). Exceedances of CSCOs were reported in the exterior borings for PCB (Aroclor 1254), metals (arsenic and barium), and SVOCs (benzo(a)pyrene). Exceedances of CSCOs were reported in the interior borings for metals (arsenic, cadmium, lead, and mercury) at ASB8 and for SVOCs (benzo(a)pyrene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene) at ASB5.

Based on the initial results, Fisher conducted supplemental sampling at 683 Northland Avenue in November 2015 and prepared a Supplemental Phase II Environmental Assessment report. The supplemental investigation included six additional interior borings each of which was sampled for VOCs, SVOCs, PCBs, and RCRA metals. Exceedances of CSCOs were identified for PCB (Aroclor 1254) at location ASB12.

Environmental Waste Sampling – Pits and Floors

Fisher collected pit liquid samples from AP1, AP2, AP3-L, AP3-S, AP4-L, AP5-L, AP6-L, AP7-L, AP8-L, AP9-L, AP10-L, AP11-L, AP-13L, AP-14L, AP15-L, AP16-S, AP17-L, AP18-L, and AP-19-L. The liquid samples were analyzed for VOCs, SVOCs, RCRA metals, Pesticides, and PCBs. VOCs detected in these liquid samples included 4-Methyl-2-pentanone, Acetone, m,p-Xylene, 1,4-Dichlorobenzene, Ethylbenzene, o-Xylene, and Tetrachloroethene. SVOCs were detected in AP6-L, AP8-L, AP11-L, and AP13-L. RCRA Metals were detected in AP2-L, AP4-L, AP5-L, AP6-L, AP7-L, AP8-L, AP9-L, AP10-L, AP11-L, AP13-L, AP14-L, AP15-L, AP17-L, AP18-L, AP19-L, ASB-L, AS2-L, and AWLTF. PCBs were detected in AS2-L, AP3-L, and AP9-L.

The supplemental investigation consisted primarily of waste characterization for pit solids including RCRA hazardous waste characteristic testing and Toxicity Characteristic Leaching Procedure (TCLP) testing. Pit solids were reported to be non-hazardous. Limited testing of pit liquids was also conducted.

3.3 Pre-design PCB Testing to Support Building Cleaning

As noted previously, the Site is to be redeveloped into a Workforce Training Center. In support of the intended re-use, LiRo began to develop comprehensive building cleaning and asbestos abatement plans. Disposal of the wood flooring that is present within the manufacturing areas of the facility was a concern and therefore, LiRo conducted additional wood block testing as a pre-design investigation. The wood block flooring is limited to the manufacturing portion of the building, but is present in nearly all manufacturing areas. The wood block flooring is installed over a concrete subfloor.

During the course of the wood block testing, LiRo identified elevated PCB concentrations in the wood block in the north-central area of the building. Based on that finding, LiRo also conducted concrete testing of the underlying concrete subfloor and subsurface soil sampling immediately below the concrete subfloor. The concrete was tested using chip samples from the top of the concrete (to a depth of approximately one inch). The results of the wood block testing, concrete testing, and sub-slab soil sampling were detailed in the Interim Remedial Measure (IRM) Work Plan submitted by LiRo (May 2017) and are summarized in Figure 3-1 of this report. Based on the testing results, wood block and the concrete subfloor surface contain PCB concentrations in excess of 50 parts per million (ppm). The sub-slab soil samples reported PCB concentrations that were all less than 1 ppm.

There is no electrical equipment in the impacted portion of the Site and the contamination is likely a result of nearly 100 years of industrial use rather than a single release incident. Based on these findings, floor removal and cleanup is being conducted (under the IRM referenced above) in accordance with the United States Environmental Protection Agency (USEPA) Toxic Substances Control Act (TSCA).

4.0 REMEDIAL INVESTIGATION

The scope of the RI was initially developed based on the findings of the previous investigations and formalized in the NYSDEC reviewed RIWP (LiRo, December 2016). LiRo implemented the plan in February 2017. After review of February 2017 analytical data, LiRo found gaps in the information required to fully characterize the Site. A Supplemental RIWP (LiRo, May 2017) to fill the gaps was reviewed by NYSDEC and the supplemental plan implemented by LiRo in June 2017. The primary objective of this RI and supplemental RI was to gather the data necessary to complete the characterization of chemical presence in soil, groundwater, and other potentially affected media in order to identify and evaluate necessary and appropriate remedial alternatives.

4.1 Applicable Regulatory Standards

The current regulatory standards applicable to evaluating and characterizing the soil and groundwater quality at the Site are:

- i. 6 NYCRR Part 375 Environmental Remediation Programs Restricted Use Soil Cleanup Objectives for Protection of Public Health – Commercial Use for the evaluation of on-Site soils.
- ii. 40 CFR 761.61(a)(4) USEPA PCB remediation waste, self-implementing on-site cleanup and disposal of PCB remediation waste, cleanup levels.
- iii. Water Quality Standards for Toxic and Other Deleterious Substances, 6 NYCRR, Part 703.5 for the evaluation of bedrock groundwater.
- iv. Technical and Operational Guidance Standards (TOGS) 1.1.1, Ambient Water Quality Standards and Guidance Values dated October 22, 1993 (reissued June 1998).

The current criteria for evaluating soil vapor are the decision matrices (May 2017) contained in the New York State Department of Health's (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York dated October 2006.

Collectively, these are referred to as Standards and Guidance Values (SGVs) for the project.

4.2 Scope of Work

A RIWP was prepared and submitted for NYSDEC review and acceptance (LiRo, January 2016). Field activities for the initial phase of the RIWP were completed between February and April 2017. A review of analytical data identified data gaps required for characterization of the Site. A Supplemental RIWP was prepared and submitted for review and acceptance by NYSDEC (LiRo, May 2017). The supplemental field investigation was performed in June 2017. In addition, LiRo completed PCB-impacted soil delineation sampling in August 2017 at the request of NYSDEC

and in support of IRM #2 at the Site planned for utilities installation in the western parking lot area of the Site.

Investigation activities included soil boring advancement, collection of subsurface soil samples, collection of surface soil samples, monitoring well installation, collection of groundwater samples, and collection of sub-slab and subsurface soil vapor samples.

4.2.1 Soil Boring Advancement and Subsurface Soil Sampling

During Site investigations, 41 soil borings and six monitoring well borings were installed and sampled at various locations across the Site to better define the nature and extent of soil contamination based on the previous investigations. The locations of the soil borings and monitoring wells were biased toward contaminant sources or to areas to delineate the extent of contamination where historical samples exceeded the CSCOs. The soil boring and monitoring well locations are shown on Figure 4-1.

Sampling depths and analytical parameters were specific to the location of the soil borings and monitoring wells. Table 4-1 presents a soil sample collection summary, which identifies the boring/well location, depth of sample collection, photoionization detector (PID) readings, analyses performed, and whether there were associated Quality Assurance/Quality Control (QA/QC) samples.

Soil samples from soil boring locations were collected using 4-foot long, 2-inch diameter Macro Core stainless steel samplers equipped with polyvinyl chloride (PVC) liners. Soil samples from monitoring well boring locations were collected using 2-foot long, 2-inch diameter split-spoons. Soil from each boring was classified and examined for visual evidence (i.e., staining, discoloration) and any olfactory indications (i.e., odors) of contamination. Continuous soil samples were collected from each of the borings at 2-foot or 4-foot intervals. Soil boring logs are presented in Appendix A.

Upon sample retrieval, the soils were examined for visual evidence (i.e., staining, discoloration) and any olfactory indications (i.e., odors) of contamination. In addition, a PID was used to screen the soil for VOC vapors. Where PID or visual/olfactory evidence of contamination was observed while drilling, the affected sample was collected for VOC analysis. The composite samples were biased toward zones where fill material and/or any field evidence of contamination was observed.

4.2.2 Bedrock Monitoring Well Installation and Groundwater Sampling

Six bedrock monitoring wells were installed as part of the investigation. One monitoring well was installed in the northeast portion of the property (up-gradient), two monitoring wells were installed within the building, and three monitoring wells were installed in the southwest portion of the Site (presumed down-gradient). Groundwater was not encountered in the unconsolidated overburden materials. The locations of the monitoring wells are shown on Figure 4-1.

Monitoring Well Construction

Bedrock monitoring wells were installed across the first water bearing zone identified in the bedrock during coring and were constructed according to the following procedure:

- 6-1/4 inch inside diameter (ID) hollow stem augers (HSA) were advanced to the top of competent bedrock;
- A 6-inch diameter rock socket was drilled 1-foot into bedrock using a tri-cone roller bit;
- A 4-inch diameter steel casing was installed to the bottom of the rock socket and grout was injected to the bottom of the casing using a tremie pipe;
- The augers were removed from the boring and grout was added to the annular space between the casing and borehole wall;
- The grout was allowed to cure for a minimum of 24 hours before any additional work was performed;
- The bedrock interval of the well was cored using an HQ size (nominal 4-inch diameter) wireline coring system.
- Coring was continued to a minimum of 3 feet below an identified water bearing interval;
- A 2-inch diameter #20 slot PVC well screen and riser piper were then installed to the bottom of the borehole;
- Graded #2 sand was installed around the well screen to a minimum depth of 3 feet above the screen and a minimum 2-foot bentonite seal was installed above the sand; and,
- Wells were completed with at-grade protective casings and concrete pads.

During bedrock coring, recirculation water was lost at each of the monitoring well locations (LW-01 through LW-06) within the upper five feet of bedrock. Loss of recirculation water during drilling can indicate the presence of waterbearing fractures. In order to confirm if a waterbearing interval had been encountered, the water level within the corehole was measured following retrieval of each segment of core. If the water level was measured to be near the drilled bottom depth (approximately 1 foot) of the corehole, it was determined that a waterbearing zone had not been encountered and coring was continued. When the water level was measured and found at a level greater than 1 foot above the bottom of the corehole (or if a rising water level was observed), it was determined that a waterbearing zone had been encountered. Well construction logs are presented in Appendix B.

Monitoring Well Development

Following installation, each well was developed to remove fine grained material generated during drilling and to optimize hydraulic connection between the well and the aquifer. Each well was developed by pumping a minimum of 5 well volumes from the well using a Waterra® inertial pump. During development, groundwater quality parameters (pH, conductivity, temperature, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity) were measured following the removal of each well volume.

Following installation and prior to development, a thin (less than 1/4-inch) layer of petroleum product was observed in monitoring well LW-03 and at the time of development, a sheen and

petroleum odor was noted at monitoring well LW-05. Following development, there was no evidence of petroleum product in either of these wells.

All purged groundwater was containerized in New York State Department of Transportation (NYSDOT) approved 55-gallon drums. Monitoring well development logs are contained in Appendix B.

Groundwater Sampling

Two rounds of groundwater sampling were performed. The first round was performed on April 5 and 6, 2017, approximately one month following installation of the monitoring wells. During a Site visit, the NYSDEC expressed concern that the groundwater samples collected in April may have been affected by residual drilling water. The second round of groundwater sampling was performed on November 14 and 15, 2017, following a sufficient amount of time to ensure that the samples were representative of the bedrock aquifer condition. A peristaltic pump and dedicated polyethylene tubing was used to eliminate potential cross contamination of samples. All monitoring wells were purged prior to sample collection in order to remove stagnant water from within the well casing. Groundwater stabilization parameters including, pH, temperature, conductivity, ORP, DO, and turbidity were monitored during purging and sampling. Two field duplicate, two matrix-spike/matrix spike duplicate (MS/MSD), and one rinsate blank sample were collected for analytical QA/QC purposes. Monitoring well purge and sample logs are presented in Appendix C.

4.2.3 Surface Soil Sampling

Surface soil samples (0 to 2 inches below vegetative cover) were collected at four locations (SFC-1 through SFC-4) within the two grass covered areas. In addition, one deeper (2 to 12 inches below vegetative cover) sample was collected from each of the two grass covered areas. Each surface soil sample was analyzed for SVOCs, Target Analyte List (TAL) metals (including cyanide), PCBs, and pesticides. The surface soil sampling locations are shown on Figure 4-1.

4.2.4 Soil Vapor Sampling

Eight sub-slab vapor and two soil vapor samples were collected at the Site. Five of the sub-slab samples were collected from within the former office/administration building area and three of the sub-slab samples were collected from within the former manufacturing area. The exterior soil vapor samples were collected outside of the building adjacent to the western margin of the former manufacturing area.

Soil vapor sampling points were installed at the locations shown on Figure 4-1 using hand tools. The sub-slab sampling points were completed as temporary points and were constructed using polyethylene tubing that extended no more than 2 inches into the sub-slab material. The sampling points were sealed to the surface with non-VOC-containing and non-shrinking modeling clay and bees wax. Soil vapor probe screens were installed to a depth of approximately 5 feet and sealed at the ground surface to prevent any inflow from ambient surface air. In order to prevent short

circuiting of ambient air into the subsurface, the soil vapor probes were sealed above the sampling zone with bentonite slurry.

Soil vapor sampling was conducted in conformance with the NYSDOH Guidance.

Sampling was performed for the duration of twenty four hours. Samples were collected in 6 liter Summa canisters that were certified clean by the laboratory and samples were analyzed by using USEPA Method TO-15. Flow rates for both purging and sampling did not exceed 0.2 liters per minute (L/min).

As part of the vapor intrusion evaluation, helium was used at the soil vapor sampling points in accordance with NYSDOH protocols to serve as a QA/QC device to verify the integrity of the soil vapor probe seal. A plastic pail was placed over the sample point to keep the helium in contact with the probe during testing. A portable helium detector was used to analyze a sample of soil vapor for the helium prior to sampling. This procedure was repeated following soil vapor sample collection. The QA/QC testing did not indicate any significant presence (>10 percent) of helium before or after sample collection at any of the sampling locations.

4.2.5 Equipment Decontamination

All drilling equipment (HSAs and bedrock coring equipment) were steam cleaned between use at each drilling location. Soil sampling equipment, including split-spoons, macro-core sampler, and stainless steel bowls, were also decontaminated prior to use and between each sample interval. A three-step decontamination procedure was followed throughout the course of the soil sampling event. The first step included an Alconox and potable water wash, followed by a potable water rinse, which was then followed with a deionized water rinse. Four equipment blank samples were collected from the soil sampling equipment to determine the effectiveness of the decontamination procedures. The oil/water interface probe was decontaminated between each use to prevent cross contamination.

4.2.6 Waste handling, Storage and Disposal

Investigation derived waste (IDW) including soil cuttings, drilling and decontamination wastewater, and monitoring well development and sampling purge water generated during the investigations, were placed directly into 55-gallon NYSDOT approved steel drums. The drums were labelled indicating their contents and stored on-site pending waste characterization. All IDW will be ultimately disposed off-site at a licensed disposal facility in accordance with applicable regulatory requirements.

5.0 GEOLOGY AND HYDROGEOLOGY

5.1 Geology

Based on the remedial investigation activities, the general stratigraphy at the Site consists of fill, underlain by a silty clay layer, over bedrock. The boring logs are found in Appendix A. Cross-section locations and cross-sections are presented on Figures 5-2 through 5-4.

The fill encountered at the Site generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood; and ranged in thickness from approximately 2 inches to 10.3 feet. In general, the fill layer beneath the building and in the northern portion of the Site was relatively thin (4 feet or less). In borings installed within the building and in the northern portion of the Site, the fill contained less anthropogenic material. The fill thickness increases significantly and the silty clay layer thickness decreases in the southern and southwestern portion of the Site.

The native soils underlying the fill generally consist of brown/tan silty clay. With the exception of one location, SB-27 (where fill was present all the way to bedrock), the silty clay layer separates the fill from the bedrock. As noted above, the silty clay layer is relatively thin in the southwestern portion of the Site.

Bedrock cores were collected and logged at six bedrock monitoring well locations. These cores indicate a light to dark gray cherty limestone (the Onondaga Limestone). The limestone is massive and moderately fractured or broken at the top of the formation.

5.2 Bedrock Surface

Based on field observations and the measured depth to the top of bedrock at soil boring and monitoring well locations, the average depth to bedrock is 8.6 feet below grade (ftbg). The depth to bedrock increases from north to south as shown on Figure 5-1. A top of bedrock surface contour map (Figure 5-1) was prepared based on the field measurements. A review of Figure 5-1 indicates that the top of bedrock surface beneath the Site dips similar to the gentle regional dip, which is to the south with a gradient of approximately 25 feet per mile. The bedrock is not flat, but tends to undulate, with localized mounds and depressions. These features could influence local groundwater flow in the overburden and shallow bedrock.

5.3 Hydrogeology

Groundwater is first encountered at the Site within the bedrock. The average depth to groundwater is approximately 10 ftbg across the Site based on water level measurements collected in April and November 2017 (Tables 5-1 and 5-2). Waterbearing fractures were typically not encountered at depths less than 18.5 ftbg indicating that the bedrock groundwater encountered in the monitoring wells is confined or semi-confined.

In April 2017, the groundwater flow direction was generally to the southwest at a gradient of 0.0045 foot per foot in the bedrock as depicted on Figure 5-5.

In November 2017, the groundwater flow direction was generally to the southeast at a gradient of 0.0167 foot per foot in the bedrock as depicted on Figure 5-6.

6.0 ANALYTICAL RESULTS

Laboratory analyses were performed by Con-Test Analytical Laboratory (Con-Test) of East Longmeadow, Massachusetts, a NYSDOH approved laboratory (No. 10899), York Analytical Laboratories, Inc. (York) of Stratford, Connecticut, a NYSDOH approved laboratory (No. 10854), and Chemtech of Mountainside, New Jersey, a NYSDOH approved laboratory (No. 11376). The following analytical methods (USEPA methods) were used for analyses:

- VOCs – SW-846-8260C
- VOCs (soil vapor) – USEPA TO-15
- SVOCs – SW-846-8270D
- PCBs – SW-846-8082A
- Pesticides – SW-846-8081B
- Metals – SW-846-6010
- Cyanide – SW-846-9014
- TCLP Extraction – SW-846-1311
- SPLP Extraction – SW-846-1312

Contamination and cross-contamination were minimized to the extent possible by the use of disposable or dedicated equipment for the collection of soil, groundwater, and vapor samples. Standard chain-of-custody (COC) procedures were utilized to track the possession of all samples from the time of collection to receipt at the analytical laboratory. All analyses were performed using the standard preservation procedures and required holding times.

Laboratory supplied trip blanks accompanied each sample shipment containing samples for VOC analysis. Field duplicate samples, rinsate blank samples, and MS/MSD samples were collected at a frequency of one each for every 20 investigative samples collected.

The following subsections present a discussion of the analytical results for each media sampled. Laboratory analytical reports are contained electronically in Appendix D.

The laboratory data was subjected to a third party review by Vali-Data of WNY, LLC (Vali-Data). The Data Usability Summary Report (DUSR) was prepared in compliance with NYSDEC Analytical Services Protocols and USEPA National Functional Guidelines. The laboratory data were found to be usable as qualified. The DUSRs are provided electronically in Appendix E.

6.1 Subsurface Soils

Subsurface soil samples were collected from 41 boring locations and six monitoring well locations installed at various locations across the Site.

New York State has promulgated SCOs in 6 NYCRR Part 375, effective December 14, 2006. The subsurface soils analytical results were compared in the Tables included in this report to the Part 375 Unrestricted Use SCOs (USCOs) and the Part 375 CSCOs.

6.1.1 Volatile Organic Compounds (VOCs)

Table 6-1 presents a summary of VOC analytical results in subsurface soils. Laboratory analytical results indicate that while some VOC compounds are present in subsurface soils at detectable levels, only one VOC was found at a concentration exceeding the CSCOs (m,p-xylene at location LB-40 as shown on Figure 6-1).

6.1.2 Semi-Volatile Organic Compounds (SVOCs)

Table 6-2 presents a summary of SVOC analytical results in subsurface soils. Laboratory analytical results indicate that seven SVOC compounds were found in exceedance of the CSCOs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene.

CSCO exceedances were identified in 23 samples. The majority of the exceedances were identified in the western exterior portion of the Site. Figure 6-2 shows the locations and depths where SVOC samples reported concentrations of SVOCs exceeding the CSCOs.

6.1.3 Polychlorinated Biphenyls (PCBs)

Table 6-3 presents a summary of PCB analytical results in subsurface soils. Laboratory analytical results indicate that three PCB compounds were found in exceedance of the CSCO including Aroclor-1242, Aroclor-1254, and Aroclor-1260. CSCO exceedances were identified in 44 samples. All of the locations where exceedances were identified are located in the western exterior portion of the Site (Figure 6-3). The total PCB concentrations of the exceeding locations ranged from 1.2 milligram / kilogram (mg/kg) to 210 mg/kg. The highest concentration, 210 mg/kg, was detected in the deeper fill soil at LB-07.

6.1.4 Pesticides

Table 6-4 presents a summary of the pesticides analytical results in subsurface soils. Laboratory analytical results indicate that while some pesticide compounds are present in subsurface soils at detectable levels, no pesticides were found at concentrations exceeding the CSCOs.

6.1.5 Metals

Table 6-5 presents a summary of the RCRA metals analytical results in subsurface soils and Table 6-6 presents a summary of the TAL metals analytical results in subsurface soils.

Laboratory analytical results indicate that five metals were found in exceedance of the CSCOs including arsenic, barium, copper, lead, and manganese. CSCO exceedances were identified in 18 samples. With the exception of one boring location within the Site building, all locations that had exceedances are located in the western exterior portion of the Site.

Figure 6-4 identifies the locations and depths where metals samples reported concentrations of metals exceeding the CSCOs.

Four locations (LB-21, LB-22, LB-23, and LW-05) were installed in the vicinity of historic sample location ASB-08 in order to delineate metals exceedances that were identified during the 2015 Phase II ESI. One CSCO exceedance was detected in one of these borings, arsenic at LB-21. In addition to the analysis for RCRA metals, these samples were also analyzed for leachable metals using both TCLP and Synthetic Precipitation Leaching Procedure (SPLP). Table 6-7 presents the results of the TCLP analysis and Table 6-8 presents the results of the SPLP analysis. Results of these analyses were compared to 6 NYCRR Part 371 hazardous waste criteria. The TCLP and SPLP results did not report metals concentrations above the criteria.

6.2 Groundwater

Groundwater analytical results were compared to the NYS Ambient Water Quality Standards and Guidance Values (AWQSGVs) found in the Division of Water Technical Operations Guidance Series 1.1.1 (TOGS 1.1.1). Groundwater sample locations are shown on Figure 4-1.

6.2.1 Volatile Organic Compounds (VOCs)

No VOCs were detected above TOGS 1.1.1 AWQSGVs in any of the groundwater samples collected. Table 6-9 presents a summary of groundwater VOC analytical results.

6.2.2 Semi-volatile Organic Compounds (SVOCs)

No SVOCs were detected at concentrations above TOGS 1.1.1 AWQSGVs in any of the groundwater samples collected. Table 6-10 presents a summary of groundwater SVOC analytical results.

6.2.3 Polychlorinated Biphenyls (PCBs)

No PCBs were detected at concentrations above TOGS 1.1.1 AWQSGVs in any of the groundwater samples collected. Table 6-11 presents a summary of groundwater PCB analytical results.

6.2.4 Pesticides

No pesticides were detected at concentrations above TOGS 1.1.1 AWQSGVs in any of the groundwater samples collected. Table 6-12 presents a summary of groundwater pesticides analytical results.

6.2.5 Metals

Laboratory analytical results indicate that four metals were found in exceedance of AWQSGVs including iron, magnesium, manganese, and sodium.

Table 6-13 presents a summary of groundwater metals analytical results and Figure 6-5 identifies the locations where metals groundwater samples were collected and provides the concentrations of metals exceeding the AWQSGVs.

6.3 Surface Soil

6.3.1 Semi-volatile Organic Compounds (SVOCs)

Table 6-14 presents a summary of the surface soils SVOC analytical results. Laboratory analytical results indicate that four SVOC compounds were found in exceedance of the CSCOs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and dibenz(a,h)anthracene.

Figure 6-2 identifies the locations where SVOC surface soil samples were collected and provides the concentrations of SVOCs exceeding the CSCOs.

6.3.2 Polychlorinated Biphenyls (PCBs)

Table 6-15 presents a summary of the surface soils PCB analytical results. Laboratory analytical results indicate that one PCB, Aroclor-1254, was present at two locations at detectable concentrations (SFC-3 and SFC-4 from 0 to 2 inches below vegetative cover). No PCBs were detected at concentrations exceeding CSCOs.

6.3.3 Pesticides

Laboratory analytical results indicate that pesticides were not detected in any of the surface soil samples collected. Table 6-16 presents a summary of the surface soils pesticides analytical results.

6.3.4 Metals

Table 6-17 presents a summary of the surface soils metals analytical results. Laboratory analytical results indicate that one metal was found in exceedance of the CSCOs including arsenic.

Arsenic was reported above its CSCO of 16 mg/kg at two surface soil locations. Figure 6-4 identifies the locations and depths where surface soils were collected and provides the concentrations of metals exceeding the CSCOs.

6.4 Soil Vapor

NYSDEC has not promulgated soil vapor standards, but the NYSDOH has established exposure guidelines, Air Guidance Values (AGVs), for indoor air quality. As a screening tool, the soil vapor analytical results were compared to contaminant-specific values listed in the decision matrices (updated May 2017) published in the NYSDOH Soil Vapor Intrusion Guidance Document.

The laboratory analytical results indicate that concentrations of VOCs were present in each of the soil vapor samples collected. Trichloroethylene was detected in six sub-slab samples (SS-1, SS-2, SV-02, SS-3, SV-03, and SS-7) at concentrations exceeding the indoor air AGV. Trichloroethylene was reported at concentrations greater than 60 (a threshold indicating “mitigation” in the NYSDOH decision matrix) at three closely spaced locations within the 4-story office/administration area (SV-02, SV-03 and SS-3) and at a single location SS-7 in the manufacturing space proximal to the 4-story office/administration area.

Tetrachloroethylene was detected in one subsurface soil vapor sample (SS-6) at a concentration exceeding the indoor air AGV.

Table 6-18 presents a summary of the soil vapor analytical results.

7.0 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT

7.1 General

A qualitative human health exposure assessment (QHHEA) for the Western New York Workforce Training Center Site has been performed in accordance with the requirements of NYSDEC DER-10 Appendix 3B (NYSDEC May 2010) and is presented in the following subsections.

The objective of the QHHEA is to evaluate the presence of completed or potential exposure pathways in order to determine if Site contamination poses an existing or potential hazard to current or future Site users. The QHHEA will identify the potential for human exposures, if any, associated with chemical constituents detected in soil, groundwater, and air at the Site. The QHHEA will address potential on-site and hypothetical off-site receptors for current use, future site construction during redevelopment, and future use scenarios. The anticipated future use of the Site is for a training center and for light industrial and commercial purposes.

The QHHEA consists of five elements to document exposure pathways (listed below). An exposure pathway is complete when all five elements are documented; a potential exposure pathways exists when one or more of the elements is not documented.

- Identified contaminant sources, affected media, and chemicals of potential concern (COPCs) from site-specific data collected during site investigations;
- Identified contaminant release and transport mechanisms (e.g., vaporization, migration, etc.);
- Identified points of exposure for current and future site use (e.g., on-site soil, potable wells, etc.);
- Identified exposure routes (i.e., inhalation, ingestion, dermal contact); and,
- Identified potential on-site and off-site receptor population(s).

Following the identification and documentation of the exposure pathways, the QHHEA will recommend the need for mitigation and/or remedial measures to reduce potential exposures.

No off-site exposure pathways exist as the City of Buffalo does not permit groundwater use. No COPCs in soil vapor have been reported for off-site migration and the potential for COPCs in soil to migrate off-site has been mitigated by vegetative cover, pavement or building slabs. Off-site migration of soils during construction will be prevented by implementation of dust monitoring and control requirements.

7.2 Contaminant Sources and COPCs

Site investigation data indicate the historic use of PCB containing materials possibly related with quenching and cutting oils within the building released contaminants to the wood block and flooring. An area of oily soil contaminated with PCBs, heavy petroleum constituents (i.e., polycyclic aromatic hydrocarbons [PAHs]), VOCs (xylene in one sample), and metals was evident

in the southwestern Site area. There is no record of electrical equipment use or storage in this area. Phase I reports indicate that former USTs may have been present in this portion of the Site and residual oil was observed in soil in this portion of the Site. Residual affected media is soil. COPCs for soil were identified based on exceedances of CSCOs discussed in Section 6.0 of this report.

The maximum detected concentrations of the contaminants exceeding CSCOs in subsurface soil and locations are tabulated below:

<i>Contaminant</i>	<i>6 NYCRR Part 375-6.8(b): Commercial SCO (mg/kg)</i>	<i>Max. Detected Conc. (mg/kg)</i>	<i>Sample</i>
Xylene (mixed)	500	802	LB-40 5.5-6.5
Benzo(a)anthracene	5.6	130	LB-13-COMP1-0-4
Benzo(a)pyrene	1	110	LB-13-COMP1-0-4
Benzo(b)fluoranthene	5.6	120	LB-13-COMP1-0-4
Benzo(k)fluoranthene	56	62.2	LB-30-COMP2
Chrysene	56	120	LB-13-COMP1-0-4
Dibenz(a,h)anthracene	0.56	21	LB-13-COMP1-0-4
Indeno(1,2,3-cd)pyrene	5.6	51	LB-13-COMP1-0-4
PCBs (total)	1	210	LB-07-COMP2-4-9.7
Arsenic	16	30	LB-21-COMP1-0-4
Barium	400	2,200	LB-09-COMP2-4-10.7
Copper	270	479	LB-30-COMP2
Lead	1,000	3,100	LB-03-COMP1-0-4
Manganese	10,000	29,000	LB-15-COMP1-0-4

The maximum detected concentrations of the contaminants exceeding CSCOs in surface soil and locations are tabulated below:

<i>Contaminant</i>	<i>6 NYCRR Part 375-6.8(b): Commercial SCO (mg/kg)</i>	<i>Max. Detected Conc. (mg/kg)</i>	<i>Sample</i>
Benzo(a)anthracene	5.6	10.7	SFC-3-Surface
Benzo(a)pyrene	1	9.55	SFC-3-Surface
Benzo(b)fluoranthene	5.6	7.41	SFC-3-Surface
Dibenz(a,h)anthracene	0.33	1.89	SFC-3-Surface
Arsenic	16	24.4	SFC-2-Surface

In addition to the soil contamination noted above, trichloroethylene was detected in sub-slab vapor in three samples from the 4-story office/administration area of the Site and one sample from the former manufacturing area of the Site at concentrations, which suggest a potential concern for vapor intrusion. Trichloroethylene was reported at concentrations of 260 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) in sample SS-3, 64 $\mu\text{g}/\text{m}^3$ in sample SS-7, 146 $\mu\text{g}/\text{m}^3$ in sample SV-02, and 101

$\mu\text{g}/\text{m}^3$ in sample SV-03. It is not clear if there are on-site sources for this contaminant as chlorinated solvents were not detected in soil or groundwater during the RI and previous sampling of waste and pits at the site reported only relatively low levels of chlorinated solvent compounds.

No analytes detected in on-site groundwater samples indicate any off-site migration of organic chemicals (VOCs, SVOCs, Pesticides, and PCBs). Inorganic analytes Iron, Manganese, and Sodium were detected above AGWQSGVs but are considered naturally occurring ions. Based upon this analysis, groundwater contamination for organic compounds does not exist and inorganic is naturally occurring, therefore no groundwater COPCs for off-site receptors are found. Additionally no soil vapor from groundwater off gassing is possible as no organic compounds were detected in on-site groundwater samples. Oil was observed in bedrock, during construction activities, in a localized area located southwest of the building.

7.3 Conceptual Site Model

In order to evaluate the significance of the impacted media at the Site, the potential pathways by which individuals may come in contact with these media must be determined. The combination of factors (chemical source, media of concern, release mechanisms, and potential receptors) that could produce a complete exposure pathway and lead to human uptake of chemicals is assessed in what is defined as the Conceptual Site Model (CSM).

Based on current land use and the anticipated future land use of the Site, the following potential receptors may be exposed to on-site media:

- Site Trainee (future)
- Site Visitor (current/future)
- Industrial Worker (current/future)
- Construction Worker (current/future)

Impacted media at the Site include surface soil and subsurface soil. Soil vapor (air) is also considered an impacted medium due to the reported concentration of trichloroethylene at SS-3. Groundwater beneath the Site is not currently used as a potable drinking water source and RI data do not indicate any Site related dissolved phase groundwater impacts. However, during IRM Number 2, oil was observed on groundwater seeping from shallow bedrock in the southwestern portion of the Site. The oil was identified through laboratory testing as hydraulic oil and PCBs were detected in the oil at a concentration of 15 parts per million. Based on this observation, five test pits were advanced to the south and west to delineate the extent of the area where oil was present. The oil was found to be limited to a shallow fracture zone in the bedrock within a relatively small area in the southwestern portion of the Site. Oil may be present on site in this localized area as free phase (oil only), absorbed in or mixed with a soil matrix, or as an emulsion in disturbed groundwater

Based on RI data, ingestion, dermal contact, and inhalation are the potential routes of exposure. All of these factors are evaluated in the CSM.

In addition, off-Site receptors may be exposed to soil contaminants that may have the potential to migrate off Site (air blow transport of surface soil or disturbed subsurface soil as dust). Groundwater and Soil Vapor COPCs do not exist as discussed on Section 7.2.. Potential off-site receptors include the following:

- Adult Resident (current/future)
- Child Resident (current/future)
- Area Visitor (current/future)
- Industrial worker (current/future)
- Construction Worker (future)

However, the wind borne transport pathway is incomplete due to the following:

1. Nature of the surface soil COPCs (PAHs are not highly volatile and would only be transported as particulates),
2. Limited area of surface soil contamination, surface soil areas are currently paved or vegetated surface soil areas,
3. The Site Management Plan (SMP) will contain measures to mitigate dust/particulate transport during construction or subsurface utility activities, and

7.4 Exposure Assessment

Exposure is defined as the contact of a receptor (i.e., person) with a chemical or physical agent. The exposure assessment is an estimate of the magnitude, frequency, and duration of the exposure for each potential exposure route. An exposure assessment provides a systematic analysis of the potential exposure mechanisms by which a receptor may be exposed to chemical or physical agents at or originating from a study area. The objectives of an exposure assessment are as follows:

1. Characterization of exposure setting
2. Identification of potential exposure pathways
3. Quantification of the exposure

The QHHEA addresses the first two objectives.

7.4.1 Characterization of Exposure Setting

As part of the assessment process, potential exposure pathways are determined through an evaluation of the physical setting of the Site and the potentially exposed populations. The consideration of Site-specific factors related to the land usage is important in the development of realistic exposure scenarios and quantification of risks and hazards. The current and future potential land uses that are reasonably expected for the Site determine which populations may potentially be exposed. The Site land uses are discussed below.

Current Land Use

The Site is currently undergoing cleaning and redevelopment. The current potentially exposed population includes Site construction workers and persons who may visit the Site.

The Site is bounded with parking areas along Northland Avenue north of the Site and commercial/industrial properties along Northland Avenue to the east and west of the site. The Site is bordered to the south by the New York Central Railroad.

Future Land Use

The Site is currently being redeveloped for use as a training facility in the northern portion of the building and for commercial/light industrial use in the southern portion of the building. It is reasonable to assume that the Site will remain in use for these purposes for the foreseeable future. Future maintenance or construction activities on the Site may necessitate some below-grade excavation. The future potentially exposed populations include Site (industrial) workers, trainees, construction/utility workers, and persons who may visit the Site.

7.4.2 Identification of Potential Exposure Pathways

As described in DER-10, Appendix 3B (NYSDEC, May 2010), an exposure pathway describes the means by which an individual may be exposed to contaminants originating from a site. An exposure pathway is complete (i.e., it could result in receptor contacting a COPC) if the following elements are present:

1. A source or release from a source (e.g., COPCs released to soil due to historical releases during plant operations).
2. A probable environmental migration route of a Site-related COPC (e.g., leaching or partitioning from one medium to another).
3. An exposure point where a receptor may come in contact with a Site-related COPC (e.g., surface and subsurface soil).
4. A route by which a Site-related COPC may enter a potential receptor's body (e.g., ingestion, dermal contact, or inhalation).
5. A receptor population that is potentially exposed.

If any of these elements are not present, the exposure pathway is considered incomplete and does not contribute to the total exposure from the Site. The first element, a source or release from a source, is satisfied at the Site, as previously indicated in Section 7.2. The remaining elements are described in the following sections.

7.4.3 Fate and Transport in Receiving Media

Many complex factors control the partitioning of a COPC in the environment, thus measured concentrations only represent Site conditions at a discrete point in time. An understanding of the general fate and transport characteristics of the COPCs is important when predicting future

exposure, linking sources with currently contaminated media, and identifying potentially complete exposure pathways to Site media. Therefore, the fate and transport analysis conducted at this stage of the exposure assessment is not intended to provide a quantitative evaluation of media-specific COPC concentrations; it is meant to identify media that are likely to receive Site-related COPCs.

The concentration and distribution of COPCs in the environment are constantly subject to change due to dispersal by wind and water, and chemical and biological degradation by microorganisms. Once released to the environment, COPCs can partition between air, water, sediment, soil, and biota, and be subsequently subjected to one or more of the following processes:

1. Transportation (e.g., convection by wind and water).
2. Physical transformation (e.g., volatilization, precipitation).
3. Chemical transformation (e.g., photolysis, hydrolysis, oxidation, reduction).
4. Biological transformation (e.g., biodegradation, metabolization by plants or animals).
5. Accumulation in one or more media.

Several transport mechanisms, such as advection and dispersion, are controlled primarily by the physical characteristics of the Site, and thus are essentially the same for all COPCs. However, other transport and transformation processes, such as volatilization, sorption, and biodegradation, depend on certain physical and chemical properties and, therefore, vary for each COPC.

The following section provides a fate and transport evaluation to determine the relative significance of the release sources and mechanisms.

7.4.4 Potential Migration of COPCs to Air

During ground intrusive activity, such as excavating soil for utility trenching or general construction, volatile COPCs could volatilize into ambient air and be inhaled by a construction/utility worker. Also, COPCs that adhere to soil particles may become suspended in the air column and could also be inhaled by the construction/utility worker. COPCs present in the surface soil can volatilize or adhere to soil particles and could be inhaled. Potential on-Site receptors would include a trainee, an industrial worker, and a site visitor.

Surface soil COPCs are PAH compounds commonly found in urban environments. Migration of these organic compounds would primarily occur via air born dust particles during construction. All future construction will be performed with measures in place to mitigate the generation of dust during construction activities.

The COPC present in sub-slab vapor can migrate into the building through vapor intrusion. There are no COPCs present for off-site soil vapor.

7.4.5 Potential Exposure Points

After contaminated or potentially contaminated media have been identified, the exposure points are determined by identifying whether or not the potentially exposed population can contact these media.

Exposure pathways for COPCs present in undisturbed soils are potentially complete, where the soils are not under pavement. For construction/utility workers, exposure pathways to COPCs in soils or to oil in groundwater are potentially complete.

The indoor air exposure pathway for COPCs present in sub-slab vapor is potentially complete.

7.4.6 Potential Exposure Routes

Potential exposure routes are identified by:

- i) determining the COPC sources and receiving media;
- ii) analyzing the movement of the COPC from the source; and,
- iii) determining the possible exposure points.

Humans can be exposed to a variety of contaminated media, including soil, groundwater, surface water, sediment, air, and biota that has contact with other contaminated media. Based on the physical conditions of the Site, potential exposure routes associated with soil include incidental ingestion, direct dermal contact, and inhalation (airborne particulate and/or vapors).

7.4.7 Exposure Scenarios and Completed Exposure Pathways

Based on an understanding of the components of an exposure pathway and the current/future conditions of the Site, potential human exposure pathways were identified in the assessment. The potential human populations considered relevant to the assessment include the following:

1. Trainees
2. Construction/Industrial workers involved in general construction activities or utility excavations
3. Site visitors

Based on these assumptions and the results of the media-specific screening presented above, the identified exposure scenarios and pathways are summarized in the CSM shown in Table 7-1.

The CSM presents a summary of the exposure media, exposure pathways, exposure routes, and exposed receptors considered in the assessment. The following media and potential human exposures (i.e., complete pathways) have been identified:

1. On-Site Surface Soil – Current/Future Condition:
 - Dermal contact with surface soil by trainees, construction/industrial workers, and site visitors

- Incidental ingestion of surface soil by trainees, construction/industrial workers, and site visitors
 - Inhalation of airborne particulates originating from surface soil by trainees, construction/industrial workers, and site visitors
2. On-Site Subsurface Soil or Oil in Soil – Current/Future Condition:
 - Inhalation of vapors in indoor air originating from subsurface soil or oil by construction/industrial workers, and trainees
 3. On-Site Subsurface Soil or Oil in Soil – Future Condition:
 - Dermal contact with soil or oil in soil by construction workers
 - Incidental ingestion of soil or oil in soil by construction workers
 - Inhalation of airborne particulates originating from soil or oil in soil by construction workers
 - Inhalation of vapors from oil in soil by construction workers
 4. On-Site Subsurface Oil on Groundwater – Current/Future Condition:
 - Dermal contact with oil on groundwater by construction workers
 - Incidental ingestion of oil on groundwater by construction workers
 - Inhalation of airborne oil/water droplets originating from oil on groundwater by construction workers
 - Inhalation of vapors from oil on groundwater by construction workers
 5. On-Site Soil Vapor – Current/Future Condition:
 - Inhalation of volatile vapors in indoor air originating from sub-slab vapor by trainees, construction/industrial workers and visitors

There are no complete off-site exposure pathways under current or future conditions for surface soil, subsurface soils, groundwater or oil on groundwater.

7.5 Summary

As discussed in the preceding sections, the qualitative exposure assessment identified media and potential human exposure to soil (through dermal contact, incidental ingestion, and inhalation of particulates) and to soil vapor through (inhalation of vapors in indoor air). The potentially exposed receptors include trainees, workers (industrial and construction/utility workers), visitors, and persons that may trespass onto the Site.

The qualitative exposure assessment did not identify any complete exposure pathways to off-site receptors for current or future Site scenarios.

8.0 FISH AND WILDLIFE IMPACT ANALYSIS

As part of the RI, LiRo completed a limited evaluation of Fish and Wildlife Impact. The objective of a Fish and Wildlife Impact Analysis is to identify fish and wildlife resources that presently exist and that existed before contamination introduction at the Site, and to provide information for the design of a remedial investigation. Due to dense urbanization and lack of natural habitats surrounding the Site, it can be concluded that there is no impact to fish and wildlife on or near the Site.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the RI and the QHHEA, the following conclusions are made:

1. Fill material ranges in thickness across the Site from less than one foot to over 10 feet. The fill thickness increases north to south, with a relatively thin fill layer in the northern portion of the Site and beneath the building. The fill materials typically comprised soil, brick, glass, and slag with more anthropogenic material and oil residuals in the fill material in the parking area in the southwestern portion of the Site. The fill material is generally underlain by fine-grained soils, specifically, clay with silt. The fine-grained soil layer thins in the areas where the fill layer was thickest. Bedrock was identified at depths of up to approximately 12.5 ftbg. The depth to bedrock increases from north to south across the Site.
2. Analyte concentrations in surface soils (i.e., 0 to 2 inches below vegetative cover) samples identified the presence of SVOCs, PCBs, and metals at concentrations exceeding the CSCOs.
3. Analyte concentrations in subsurface soil samples identified the presence of VOCs (one location), SVOCs, PCBs, and metals at concentrations exceeding the CSCOs.
4. Groundwater was present within monitoring wells that were installed within the upper bedrock below the Site. The depth to groundwater varied from 9.0 to 11.37 ftbg. Water level data indicates that the groundwater hydraulic gradient in the bedrock is to the southwest.
5. Analytical data for groundwater samples identified the presence of metals at concentrations exceeding the NYSDEC AWQSGVs for class GA groundwater; however, the metals in exceedance (iron, magnesium, manganese, and sodium) do not appear to be related to Site impacts and are more likely representative of a background condition. During IRM Number 2, oil was observed in groundwater seeping from shallow bedrock in the southwestern portion of the Site. Supplemental test pit investigation was conducted to determine the extent of the area where oil is present.
6. Analytical data for sub-slab soil vapor samples identified the presence of trichloroethylene at concentrations that have the potential to cause vapor intrusion impacts for indoor air inhalation. The trichloroethylene concentrations are limited to the four-story administration section and the adjacent manufacturing area.
7. The qualitative exposure assessment identified media and potential human exposure to soil through dermal contact, incidental ingestion, and inhalation of particulate and vapors. The potentially exposed on-site receptors include trainees, workers (industrial workers and construction/utility workers), and persons that may visit the Site. Potential human exposure can be addressed using remedial or other methods to eliminate exposure pathways and/or provide worker protection. Site groundwater is not used for potable supply.

9.1 Interim Remedial Measures

The results of the RI identified the presence of VOCs, SVOCs, PCBs, and metals in the on-site surface and subsurface soils.

Based on these findings and work that was required to prepare the buildings for re-use (i.e., wood block floor removal/disposal, PCB-contaminated concrete removal/disposal, building pit cleaning, utilities removal/installation, etc.) LiRo submitted IRM Work Plans that are being implemented in conjunction with building preparation/abatement and utilities installation. These IRMs include measures to remove and dispose of any contaminated soils or oil encountered within the utility corridors during early phase Site redevelopment activities.

The IRMs are not expected to be the final remedy for the Site. Alternatives for the final Site remedy to address contamination in areas outside of the utility corridor limits are detailed in the AA portion of this report.

10.0 ALTERNATIVES ANALYSIS

The purpose of the AA is to provide a recommended remedial action or actions for the Site to address impacts to human health and the environment following the requirements found in NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation (NYSDEC, May 2010).

10.1 Site Description and History

Site description and history are found in Section 2.0 of this report

10.2 Physical Setting

Physical Setting is reported in Section 2.1 of this report.

10.3 Site Geology and Hydrogeology

The Site Geology and Hydrogeology are found in Section 5.0 of this report.

10.4 Site Topography and Surface Water Drainage

Site topography and surface water drainage are summarized in Section 2.2 of this report.

10.5 Summary of Remedial Investigation

The results of the RI are presented in Section 6.0 of this report. The nature and extent of chemical impacts to soil, groundwater, and soil vapors were determined in the RI. A list of COPCs was developed by comparing the detected concentrations of VOCs, SVOCs, PCB, Pesticides, and metals for each media to appropriate SGVs. The SGVs utilized are summarized in Section 4.1. The media evaluated included surface soils, subsurface soils, groundwater, and soil vapor. The results for each media are summarized below.

Surface Soil

COPCs for surface soil were determined by comparison of the laboratory data to CSCOs and the ingestion, dermal contact, and inhalation exposure pathways from the QHHEA. The RI reported four SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and dibenzo(a,h)anthracene) and one TAL metal (arsenic), as COPCs for Site surface soils. Soil data distribution and evaluation to NYSDEC Part 375 CSCOs are illustrated on Figures 10-1 through 10-4.

Subsurface Soil

COPCs for sub-surface soil were determined by comparison of the laboratory data to CSCOs and the ingestion, dermal contact, and inhalation exposure pathways from the QHHEA. The RI reported one VOC, seven SVOCs, three PCBs, and five TAL metals as COPCs for Site subsurface

soils. The COPCs include m&p-xylene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)-fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, Aroclor-1242, Aroclor-1254, Aroclor-1260, arsenic, barium, copper, lead, and manganese. Soil data distribution and evaluation to NYSDEC Part 375 SCOs are illustrated on Figures 10-5 through 10-14.

Groundwater

The RI reported four TAL metals, including iron, magnesium, manganese, and sodium, at concentrations exceeding AWQSGVs in Site groundwater. Because these metals do not appear to be related to Site contamination and groundwater is not used as a drinking source, they are not considered to be COPCs for groundwater. During IRM Number 2, oil was observed in groundwater seeping from shallow bedrock in the southwestern portion of the Site. Supplemental test pit investigation was conducted to determine the extent of the area where oil is present. The oil was limited to a relatively small area in the southwestern portion of the Site (Figure 10-15).

Soil Vapor

The RI reported trichloroethylene in four sub-slab vapor samples (three from the area of the four-story office/administration building and one from the adjoining portion of the manufacturing area) at concentrations that indicate the potential to cause vapor intrusion impacts for indoor air inhalation.

10.6 Remedial Investigation Conceptual Site Model

In order to evaluate the significance of the impacted media at the Site, the potential pathways by which individuals may come into contact with these media must be determined. The combination of factors (chemical source, media of concern, release mechanisms, and potential receptors) that could produce a complete exposure pathway and result in human uptake of chemicals is assessed in what is defined as the CSM.

Based on current land use (commercial) and the anticipated future land use (commercial) of the Site, the following potential receptors, may be exposed to on-site media:

- Site Trainee (current/future)
- Site Visitor (current/future)
- Industrial/Commercial Worker (current/future)
- Construction Worker (current/future)

Impacted media at the Site include surface soil, subsurface soil, groundwater (oil) and sub-slab vapor. Ingestion, dermal contact, and inhalation are the potential routes of exposure. All of these factors are evaluated in the CSM. Groundwater beneath the Site is not currently used as a potable drinking water source. The potable water for the Site and the surrounding area is currently supplied by a municipal source and this is expected to continue.

In addition, off-site receptors may be exposed to contaminants that have migrated. Impacted media includes surface soil and subsurface soil that could migrate in the form of dust and vapors. Potential receptors include the following:

- Adult resident (current)
- Child resident (current)
- Area Visitor (current)
- Industrial Worker (current)

10.7 Qualitative Exposure Assessment

Section 7.0 of this report provides details on the QHHEA. The elements used for the AA are summarized below.

The following media and potential human exposures (i.e., complete pathways) have been identified:

1. On-Site Surface Soil – Current/Future Condition:
 - Dermal contact with surface soil by trainees, construction/industrial workers, and site visitors
 - Incidental ingestion of surface soil by trainees, construction/industrial workers, and site visitors
 - Inhalation of airborne particulates originating from surface soil by trainees, construction/industrial workers, and site visitors
2. On-Site Subsurface Soil or Oil in Soil – Current/Future Condition:
 - Inhalation of vapors in indoor air originating from subsurface soil or oil by construction/industrial workers, and trainees
3. On-Site Subsurface Soil or Oil in Soil – Future Condition:
 - Dermal contact with soil or oil in soil by construction workers
 - Incidental ingestion of soil or oil in soil by construction workers
 - Inhalation of airborne particulates originating from soil or oil in soil by construction workers
 - Inhalation of vapors from oil in soil by construction workers
4. On-Site Subsurface Oil on Groundwater – Current/Future Condition:
 - Dermal contact with oil on groundwater by construction workers
 - Incidental ingestion of oil on groundwater by construction workers
 - Inhalation of airborne oil/water droplets originating from oil on groundwater by construction workers
 - Inhalation of vapors from oil on groundwater by construction workers
5. On-Site Soil Vapor – Current/Future Condition:
 - Inhalation of volatile vapors in indoor air originating from sub-slab vapor by trainees, construction/industrial workers and visitors

The qualitative exposure assessment identified on site media and potential human exposure to soil or oil (through dermal contact, incidental ingestion, and inhalation of particulates and vapors), and sub-slab vapor (through inhalation of vapors). The potentially exposed on site receptors include trainees, workers (industrial and construction/utility workers), visitors and persons that may trespass onto the Site. No complete exposure pathways were identified for hypothetical off-site receptors.

10.8 Interim Remedial Measure Number 1

An IRM entitled “*Building Abatement/Environmental Cleanup and Petroleum Storage Tank Removals*” is currently underway for the former manufacturing facility/building located at 683 Northland Avenue. This IRM is being performed following the NYSDEC approved IRM Work Plan (LiRo, 2017) and USEPA approved Application for Self-Implementing On-Site Cleanup of PCBs (LiRo, 2017). The IRM work plan was modified with NYSDEC approval to no longer include removal of USTs.

In general, the IRM requires the following NYSDEC regulated components:

- removal and disposal of contaminated wood floors;
- removal and off-site disposal of PCB-contaminated concrete floor; and,
- environmental cleanup of the entire 683 Northland Avenue facility including material contained in pits, sumps, and trenches;

PCB cleanup will meet the USEPA High Occupancy Standard and any portion of the building with PCB concentrations greater than 1 ppm and less than or equal to 10 ppm will either be removed or will have a six inch thick concrete or asphalt cap and a deed restriction applied to them.

Upon completion of the IRM a Closure Report for NYSDEC review and approval will be completed. The IRM Closure Report will document the results of all sampling and analysis performed during the IRM, the physical condition, chemical conditions, and potential risks to human health and the environment that exist in the facility after completion of the IRM.

The current condition of the building has been the subject of multiple studies/investigations and the findings were summarized in the IRM Work Plans (LiRo, 2017). In general, these studies/investigations, while reporting concentrations of VOCs, SVOCs, metals, and PCBs above CSCOs in subsurface soils did not indicate a significant migration of industrial chemicals/wastes to the subsurface soils or groundwater. Impacted (asbestos, PCB, lead contaminated) surface materials were identified in the walls, floors, and ceilings of the facility.

After completion of the IRM, the facility will meet NYSDEC and USEPA remediation requirements for the protection of human health and the environment by removal or abatement of contaminants or construction of a barrier/cap over any remaining contamination. Any contamination (COPCs with concentrations above NYSDEC CSCOs) that remain below the cap will be subject to environmental easements and site management plans (SMPs). Additionally, as

a preventive measure and to address the qualitative risk assessment identified soil vapor COPCs, sub-slab depressurization infrastructures and vapor barriers will be installed within portions of the building to mitigate potential soil vapor emissions into the building if required. As the IRM implementation has not been completed at the time of this report the AA assumes that the IRM has been successful and the contaminated areas associated with the building will not require further remedial actions.

10.9 Interim Remedial Measure Number 2

An IRM entitled “*Focused Excavation for the Removal and Installation of Utilities and Storm Water Detention System*”, is currently underway for the former manufacturing facility/building located at 683 Northland Avenue. This IRM is being performed following the NYSDEC approved IRM Work Plan (LiRo, 2017). In conjunction with IRM Number 2, oily water is being removed from excavations (when free oil is encountered) for offsite disposal.

10.10 Post IRM Site Conceptual Model

After completion of IRM Number 1, any PCB-soil contamination inside of the facility at 683 Northland Avenue will either be removed or have a USEPA –TSCA compliant barrier/cap constructed. A few areas of soil contaminated with SVOCs and/or metals will remain below the floor slab, however, the building floor will serve as a suitable barrier to prevent exposure to residual soil contamination. Sub-slab depressurization infrastructures and vapor barriers will also be installed in the office portion of the building and areas of the manufacturing portion of the building to mitigate potential soil vapor intrusion if required.

As part of IRM Number 2, contaminated soils will be removed from areas where new Site utilities are to be installed. The soil will be disposed of off-site.

Surface and subsurface soil contamination may remain outside of the facility with VOC, SVOC, PCB, and TAL metal concentrations greater than Unrestricted Use SCOs and greater than CSCOs. In addition, there will be regulated petroleum storage tanks which must be closed/removed (along with any associated impacted soil) will remain. Groundwater and sub-slab vapor will not be affected by either of the IRMs.

The current and future use of the Site will be commercial/light industrial. Therefore, any remedial actions will need to protect human health and the environment. This could be accomplished by removing all soil exceeding CSCOs or by installing engineering controls such as a vapor intrusion mitigation system, cover, or cap and implementing a Site Management Plan.

Figures 10-1 to 10-14 illustrate the distribution of Site contaminants by depth and SCOs for soils less than 4 ftbg and greater than 4 ftbg.

Groundwater contamination across most of the Site is limited to metals that are naturally occurring and may be indicative of background concentrations. Hydraulic oil was found trapped in a shallow

bedrock fracture in the southwestern portion of the Site. Potable water is supplied by the local municipality and there is no significant use of groundwater from the shallow bedrock aquifer. Provisions will be included in the Site Management Plan for monitoring of the oil/groundwater in the southwestern portion of the Site and downgradient of the impacted area.

10.11 Remediation Goals and Remedial Actions Objectives

The remedial action goal for the Site is to eliminate or mitigate all significant threats to human health and the environment, to the extent practicable, caused by contaminants present due to former Site activities. In order to meet this goal, remedial action objectives (RAOs) were established to protect human health and the environment, provide the basis for selecting appropriate technologies, and to develop remedial alternatives. RAOs are based on contaminated media (soil and groundwater), SGVs, and the results of the QHHEA.

The RAOs for soil are to:

- Eliminate or reduce to the extent practicable Site contamination sources that exceed NYSDEC Part 375 CSCOs for the current and future use of the Site as a commercial property.
- Eliminate or reduce the potential for exposure to contaminated Site soil.
- Eliminate or reduce the potential for contaminated soil transport via surface water.

The RAOs for indoor air/vapor are to:

- Prevent or mitigate the potential for exposure to fugitive dust.
- Mitigate soil vapor intrusion to building interiors.

The RAOs for oil encountered on groundwater in bedrock during implementation of IRM#2 are to:

- Eliminate or reduce to the extent practicable Site contamination sources that exceed NYSDEC Part 375 CSCOs for the current and future use of the Site as a commercial property.
- Eliminate or reduce the potential for exposure to contaminated Site soil or groundwater commingled with oil.
- Eliminate or reduce the potential for contaminated oil in soil or oil on groundwater transport via construction activities.

11.0 ANALYSIS OF ALTERNATIVE TECHNOLOGIES

11.1 General Response Actions

General response actions are broad categories of remedial actions capable of satisfying the RAOs for the Site. Some response actions are sufficiently broad to be able to satisfy all RAOs to SGVs for the Site as a whole. Other response actions must be combined to satisfy RAOs for all impacted media. Remedial technologies were evaluated according to the general response actions of no action, containment, source removal, and treatment. A brief description of the general response actions are as follows:

- **No Action** – A No Action alternative was evaluated as part of the process as a baseline alternative. No action would be implemented to address residual soil or sub-slab vapor and long-term sampling and analysis would be conducted.
- **Containment** – Containment measures are those remedial actions whose purpose is to contain and/or isolate contaminants on the Site. These measures provide protection to human health and the environment by reducing exposure or migration of contaminants, but do not treat or remove the contamination.
- **Excavation** – Excavation of contaminated soil is a remedial action whose purpose is to remove contaminants from the Site. Combined with off-site treatment and/or disposal in an appropriate facility, source removal provides protection to human health and the environment by reducing exposure or migration of contaminants.
- **Ex-Situ Treatment** – Ex-Situ Treatment of contaminated media is a remedial action whose purpose is to reduce the toxicity, mobility, or volume (TMV) of contaminants by directly altering, isolating, or destroying those contaminants through either chemical, physical, or thermal methods. Remaining contamination (residual) would no longer pose an unacceptable health risk.
- **In-Situ Treatment** – In-Situ Treatment of contaminated media is a remedial action whose purpose is to reduce the TMV of contaminants by directly altering, isolating, or destroying those contaminants through either chemical, physical, or thermal methods in place. Remaining contamination (residual) would no longer pose an unacceptable health risk.

11.2 Identification and Screening of Technologies for Soil

This section identifies and provides a screening of remedial technologies for contaminated soil at the Site in a two-step approach. In the first step, potentially applicable remedial technologies that meet the RAOs are identified. In the second step, technologies are screened with respect to their relative effectiveness, technical implementability, and cost for this Site. This evaluation is based on the Site characterization, which includes the types and concentrations of contaminants, and geology and hydrogeology of the area. Table 11-1 provides a summary of the remedial technology identification and screening process.

11.2.1 Containment (Site Cap/Cover)

A newly-constructed cap/cover system over the areas of the Site outside of buildings and repair and maintenance of existing building roofs, gutters and downspouts will reduce infiltration from precipitation. A cap/cover and repair of existing building floors would prevent the potential for exposure to contaminated soil and fugitive dust. Construction of a soil vapor barrier as part of the building floor repair would mitigate potential soil vapor intrusion. Containment will meet the requirements of the proposed future use of the Site as a commercial property.

Effectiveness: Construction of a new Site cap/cover system would prevent the potential for exposure to contaminated soil and fugitive dust to nearby residents and limit precipitation infiltration to the subsurface. Cap technologies have been utilized at numerous remediation projects.

Implementability: A new cap/cover covering areas of contaminated surface and subsurface soil would not be difficult to construct.

Cost: The relative cost of a cap/cover as compared to other remedial technologies would be low.

Conclusion: A cap/cover can be an effective and implementable technology. It is retained for consideration for the Site as it would meet RAOs and is consistent with the future use of the Site.

11.2.2 Excavation and Off-site Disposal/Treatment

Excavating contaminated soil is a proven and reliable technology for contaminant removal. Contaminated soil would be excavated by conventional equipment and transported off-site either to an appropriate treatment facility, or to a permitted disposal facility. Excavated soil would be subject to soil and waste characterization testing to identify whether it would require disposal in an appropriate landfill, or need transportation to a treatment (e.g., thermal desorption) facility.

Effectiveness: Excavation of contaminated soil and off-site disposal would be effective in removing the source of contamination and meeting the RAOs for soil and air.

Implementability: This technology is widely used for remediation and would be implementable at the Site.

Cost: The cost of excavating contaminated soil to an appropriate depth using proper health and safety measures, and disposing the contaminated material off-site is considered to be relatively moderate to high.

Conclusion: Excavation and off-site disposal of contaminated soil can be an effective and implementable technology. It is retained as it would meet RAOs and is consistent with the future use of the Site.

11.2.3 In-Situ Treatment

In situ treatment technologies include biological and thermal processes designed to destroy the contaminants, chemical/physical processes designed to increase the mobilization of contaminants, and stabilization/solidification processes that reduce the mobility of the contaminants.

In-situ Biological Treatment

Naturally occurring microorganisms in the soil promote the breakdown and detoxification of organic contaminants. In-situ biological treatment such as bioremediation may enhance that process in soil and groundwater. Water enhanced with nutrients, oxygen, and other amendments is delivered to contaminated soil to enhance biological degradation of target contaminants. An infiltration gallery or injection wells can be utilized for the saturated and unsaturated zones.

Effectiveness: Bioremediation has not been proven to be effective on metals contamination and is most effective on VOCs and short chain organic molecules. Its effectiveness on longer chain organics, such as PAHs and PCBs, is limited. Bioremediation would require a long time period to effectively remediate Site soils.

Implementability: Implementation of an effective injection system would be difficult given the non-contiguous contamination areas and the nature of the fill material.

Cost: The cost is considered to be moderate to high depending on the operation period.

Conclusion: Biological treatment is not retained.

In-situ Thermal Treatment

In-situ thermal treatment methods employ heat to increase the mobilization of contaminants via volatilization and viscosity reduction. Available methods include heating by the addition of steam and/or hot water, electrical resistance, and radio frequency. However, high temperature thermal treatment (e.g., incineration) would be required to effectively remediate for PCBs.

Effectiveness: Under favorable conditions, in-situ thermal treatment technologies can remediate contaminants to below clean-up criteria. High temperatures would be necessary to remediate PCBs.

Implementability: The technology is implementable at the Site assuming that adequate power sources are available. Off-gasses may have to be collected.

Cost: The cost is estimated to be high due to power requirements to generate high temperatures.

Conclusion: In-situ thermal treatment is not retained due to the high temperatures and energy requirements for PCB contamination.

In-situ Chemical Treatment

In-situ chemical treatment processes such as chemical oxidation or soil flushing with surfactants have been used to remediate contaminated soil and groundwater. Chemicals and amendments are introduced into the subsurface through a series of injection wells appropriately spaced across the site to maximize contact between contaminants and injected materials. Introduced materials either destroy the organic contaminants or convert them to non-toxic compounds.

Effectiveness: Chemical treatment has been not been proven to be effective on metals and is most effective on VOCs. Its use on SVOCs and PCB contamination limited.

Implementability: Implementation of an effective injection system would be difficult given the non-contiguous contamination areas and the nature of the fill material.

Cost: The cost is considered to be moderate to high depending on the operation period.

Conclusion: Chemical treatment is not retained.

In-situ Solidification

In-situ solidification (ISS) introduces solidifying agents, such as cement, slag or kiln dust, or other proprietary reagents into subsurface soil to immobilize contaminants. Contaminants are immobilized primarily by binding the contaminants in a soil-cement mix and encapsulating contaminated soil with an impermeable coating. If desired, a subsurface monolith can also be developed which would create a low permeability mass, reducing groundwater flow through the soil. However, this may preclude future construction at the Site. While the overall mass of contaminants is not reduced, contaminant mobility through fugitive dust and the dissolution of contaminants to groundwater is prevented.

Effectiveness: Solidification is effective on a wide range of contaminants including organics and metals. This technology would be effective in reducing source and exposure pathways and the mobility of all Site-related contaminants in soil; however, subsurface PCB concentrations would not be reduced.

Implementability: ISS can either be conducted through auguring the subsurface or by below-ground mixing utilizing a backhoe bucket. Auguring the subsurface while introducing solidification materials would create a monolith comprised of a series of overlapping columns of solidified material. ISS utilizing a backhoe would result in smaller and more manageable particle sizes, and be more amenable to the proposed future use of the Site.

An increase in the volume of the mixture will occur and require appropriate Site grading and potentially some off-site disposal of swell material if on-site re-use is not feasible.

Cost: The cost is considered to be moderate to high depending on the operation period and the amount of swell material which must be disposed off-site if an on-site re-use is not feasible.

Conclusion: In situ solidification is not retained.

11.2.4 Ex-Situ Treatment

Utilizing this method, contaminated soil is excavated by conventional equipment, treated on-site above ground, and then replaced on the Site if a Site re-use is identified, or disposed of off-site if on-site re-use is not feasible. Typical ex-situ treatment technologies are land farming and thermal treatment.

Ex-Situ Land Farming

Effectiveness: Land farming methods reduce contamination in soil by spreading the excavated soil on the land surface and applying additives to increase the natural attenuation process (oxidation, biological activity, ultra violet sunlight, volatilization). The soils are contained and any leachate/surface water is collected and treated. The soil is usually turned over using mechanical means. This treatment method is effective for most organic compounds and has been used to chelate metals.

Implementability: Excavation and Ex-Situ treatment through land farming would require multiple handlings of contaminated soil, first through excavation, secondly through turning the soil over, and thirdly through on-site backfilling. This multi-staged approach would require a longer implementation time and additional measures to mitigate potential impacts to nearby receptors.

Cost: The relative cost of this technology is anticipated to be moderate.

Summary: Ex-Situ Land Farming is not retained

Ex-Situ Thermal Treatment

Effectiveness: Thermal treatment methods employ heat to increase the mobilization of contaminants via volatilization and viscosity reduction or to incinerate contaminants. The soil is usually excavated and transported to a thermal treatment unit that uses an electric or gas-fired rotary kiln or fire box to heat the soils, with collection and treatment of the off gases. The treated soils would then be tested and placed back in the excavation. However, intermediate (thermal desorption) or high temperature (incineration) thermal treatment would be required to effectively remediate for PCBs. Thermal treatment would have limited effect on metals contamination.

Implementability: Excavation and Ex-Situ treatment through thermal treatment would require multiple handling of contaminated soil, first through excavation and secondly through treatment. The treated/remediated soil would then be handled a third time to backfill the excavation. This multi-staged approach would require a longer implementation time and additional measures to mitigate potential impacts to nearby receptors.

Cost: The relative cost of this technology is anticipated to be high.

Summary: Ex-Situ Thermal Treatment is not retained.

11.3 Site Management Plan

An SMP will identify the institutional controls and engineering controls (IC/EC) including vapor intrusion controls. The SMP may require vapor mitigation system monitoring at regular intervals. The SMP will also include provisions for monitoring groundwater in and downgradient of the southwestern portion of the Site. Further, the SMP will identify excavation protocols, in particular, procedures for soil characterization, handling, and health and safety measures to be undertaken during future on-site excavation activities for construction purposes to mitigate potential exposures to contaminated soil and identify the need for vapor intrusion monitoring and mitigation per NYSDOH air guidance for future structures.

Effectiveness: An SMP is an effective technology to mitigate potential human health exposures for current and future use scenarios.

Implementability: An SMP requiring long-term monitoring, and identifying necessary health and safety measures for future construction and soil vapor intrusion mitigation due to residual contamination would be implementable at the Site.

Cost: The SMP would pose a relatively low cost as it would be consistent with the proposed future use of the Site.

Summary: An SMP will be retained for use at the Site.

11.4 Summary of Retained Technologies

The following remedial technologies have been retained for use in the development of alternatives for the Site.

- No Action
- Site Management Plan (SMP)
- Excavation with Offsite Disposal
- Site Cap/Cover

12.0 DEVELOPMENT OF REMEDIAL ALTERNATIVES

This section combines the remedial technologies considered feasible for soil and groundwater into a list of remedial alternatives for the Site as a whole. The following remedial alternatives have been developed for the Site. They are described in detailed and evaluated in the following sections.

- Alternative 1 -** No Remedial Action.
- Alternative 2 –** Excavation and Off-site Disposal of All Soils Greater than NYSDEC Part 375 Unrestricted Use SCOs with Vapor Mitigation and SMP.
- Alternative 3 –** Excavation and Off-site Disposal of Soil with PCB Concentrations Greater than 10 ppm, Site Cover or Cap, Vapor Mitigation and SMP for Soils, Groundwater and Soil Vapor.

The technologies evaluated and retained in Section 11.4, are assembled into remedial alternative for the Site and then each alternative is evaluated against NYSDEC criteria and each other.

12.1 Description of Alternatives

12.1.1 Alternative 1 – No Remedial Action

No Remedial Action and SMP is an Alternative that recognizes the remediation of the Site completed by the IRMs and requires a deed restriction on property use and a SMP. This alternative maintains engineering controls and includes institutional controls, in the form of an SMP, necessary to protect public health and the environment from contamination remaining at the Site after the IRMs.

Size and Configuration

A deed restriction would be prepared by the owner and registered with the recorder of deeds.

The SMP would be prepared by a professional engineer and include:

- environmental easements restricting the use and redevelopment of the Site;
- controls and procedures necessary for soil characterization, handling, and health and safety measures, to manage residual risks present at the Site including those related to contaminated soils that may be excavated from the Site during future construction activities;
- an evaluation of the potential need for vapor intrusion monitoring and mitigation per NYSDOH air guidance for future structures developed on the Site;
- installation of a shallow bedrock monitoring well network in the southwestern portion of the Site to ensure that oil/contaminants are not migrating off-Site in groundwater;
- maintaining deed restrictions for groundwater use restrictions as a source of potable water, and;

- The cost estimate is presented in Table 12-1.

Time for Remediation

The restrictions and controls of the SMP would continue indefinitely.

Spatial Requirements

There would be no spatial requirements for this alternative.

Options for Disposal

There would be no substantial disposal requirements for this alternative. Disposal of materials collected during sampling and analysis would be minimal.

Permit Requirements

There would be no permits required for this alternative.

Limitations

Restrictions within the SMP in the absence of remediation would restrict future development at 683 Northland Avenue.

Impacts on Fish and Wildlife Resources

This alternative would not have an impact on fish and wildlife resources.

12.1.2 Alternative 2 – Excavation and Offsite Disposal of Soils to Meet Unrestricted Use SCOs, SMP

Alternative 2 includes removal and disposal of five (5) USTs and one (1) AST, excavation of all accessible soil with concentrations exceeding the Unrestricted Use SCO with vapor mitigation and SMP. The potential remediation area is shown on Figure 12-1. An estimated 41,850 tons of soil would be excavated and transported off-site for disposal. Contaminated soil would be disposed of off-site at permitted facilities. Verification samples would be collected from the bottom and sidewalls of the excavations to confirm Unrestricted Use SCOs have been achieved. For building interior areas, only limited excavations are presumed. It is possible that the endpoint samples will not meet Unrestricted Use SCOs and incrementally expanding interior excavation areas will not be feasible due to the new construction. Excavated soil would be subject to waste characterization testing prior to off-site disposal.

Size and Configuration

A deed restriction would be prepared by the owner and registered with the recorder of deeds and an SMP would be developed, these are common elements with Alternative 1. The components of the SMP are detailed in Section 12.1.1.

Additional elements of Alternative 2 include:

- Excavation and off-site disposal of up to 41,850 tons of contaminated soil;

- Trench Box or shoring during excavation may be required;
- All work will be performed within one construction season during non-winter months and within standard 8-hour work days, 5 days per week (22 days per month);
- Additional fencing or Site security will not be required during remediation;
- Air monitoring will be performed during excavation and personal protection equipment (PPE) levels may need to be upgraded based on action levels indicated within the Health and Safety Plan (HASP). For costing purposes, it is assumed that all work will be performed using Level D PPE;
- It is assumed that minimal dewatering will be necessary. Water encountered during excavation, decontamination water, and any other water potentially contaminated will be collected and transported off-site for disposal;
- Verification sampling will be conducted;
- PCB-contaminated soils will be properly disposed of under 6 NYCRR Part 371 and the Toxic Substances Control Act (TSCA);
- A Vapor Mitigation system will be installed in the office/administration portion of the building;
- Site restoration includes backfilling, as necessary, with off-site clean fill;
- Pavement or Topsoil and seed will be placed for erosion control; and,
- The cost estimate is presented in Table 12-2.

Time for Remediation

Construction is estimated to be completed in approximately 3 months. The restrictions and controls of the SMP would continue indefinitely.

Spatial Requirements

Adequate space is available on-site for construction equipment and necessary stockpiling.

Options for Disposal

Excavated soil would be characterized and disposed of off-site at a facility permitted to receive the waste. PCB-contaminated soils will be disposed of off-site under USEPA TSCA requirements.

Permit Requirements

Permit requirements for off-site transportation and disposal would have to be met.

Limitations

Substantial truck traffic on neighborhood roadways would have to be coordinated with the local community.

Impacts on Fish and Wildlife Resources

This alternative would not have an impact on fish and wildlife resources.

12.1.3 Alternative 3 – Excavation and Off-site Disposal of Soil with PCB Concentrations Greater than 10 ppm with Site Cap/Cover System

Alternative 3 includes removal and disposal of five (5) USTs and one (1) AST, excavation of soils with PCB concentrations greater than 10 ppm to meet NYSDEC Commissioner’s Policy-51 (CP-51) requirements, with a USEPA TSCA cap/cover system over remaining soils with CSCO exceedances (including PCB concentrations greater than 1 ppm but less than 10 ppm). This alternative has an environmental easement and SMP for soils and soil vapor. Figure 12-2 identifies the area to be remediated (excavated). All areas of the Site that are not excavated to meet CSCOs will be capped or covered with pavement, building floor slabs, or a clean soil cover that is a minimum of 1-foot thick. Clean cover soil or fill will meet the requirements for the identified Site use (commercial) as set forth in 6 NYCRR Part 375-6.7(d).

An estimated 4,275 tons of soils, with PCB concentrations greater than 10 ppm, would be excavated and transported off-site for disposal. Contaminated soil would be disposed of off-site at permitted facilities. Verification samples would be collected from the bottom and sidewalls of the excavation to confirm PCB concentrations less than 10 ppm have been achieved. Excavated soil would be subject to waste characterization testing prior to off-site disposal.

A TSCA soil cover or TSCA asphalt cover would be constructed over any areas where soil concentrations of PCBs are greater than 1 ppm and less than 10 ppm. Areas where other contaminants (i.e., SVOCs, or metals) are present at concentrations greater than CSCOs will be covered by the building floor, paved or covered with a minimum 1-foot thick layer of clean fill.

Size and Configuration

An environmental easement would be prepared by the owner and submitted to NYSDEC and a SMP would be developed, these are common elements with Alternative 1. The components of the SMP are detailed in Section 12.1.1.

Additional elements of Alternative 3 include:

- Excavation and off-site disposal of approximately 4,275 tons of contaminated soil;
- All work will be performed within one construction season during non-winter months and within standard 8-hour work days, 5 days per week (22 days per month);
- Additional fencing or site security will not be required during remediation;
- Air monitoring will be performed during excavation and PPE levels may need to be upgraded based on action levels indicated within the HASP. For costing purposes, it is assumed that all work will be performed using Level D PPE;
- It is assumed that minimal dewatering will be necessary. Water encountered during excavation, decontamination water, and any other water potentially contaminated will be collected and transported off-site for disposal;
- Verification sampling will be conducted;
- PCB-contaminated soils will be properly disposed under 6 NYSDEC Part 371 and TSCA;
- A Vapor Mitigation system will be installed in the office/administration portion of the building;

- Site restoration includes backfilling of excavation areas with off-site soil;
- The surface in areas where residual PCB contamination in excess of 1 ppm will be covered with a TSCA cap. Areas where other contaminants (i.e., SVOCs, or metals) are present at concentrations greater than CSCOs will be covered by the building floor, paved or covered with a minimum 1-foot thick layer of clean fill; and,
- The cost estimate is presented in Table 12-3.

Time for Remediation

Construction is estimated to be completed in less than four months. The restrictions and controls of the SMP would continue indefinitely.

Spatial Requirements

Adequate space is available on-site for construction equipment and necessary stockpiling.

Options for Disposal

Excavated soil would be characterized prior to acceptance as on-site backfill or disposed of off-site as appropriate. PCB-contaminated soil would be disposed of in accordance with TSCA requirements. SVOC and metals-contaminated soil would be disposed off-site at a permitted facility following appropriate characterization testing.

Permit Requirements

Permit requirements for off-site transportation and disposal would have to be met.

Limitations

Substantial truck traffic on neighborhood roadways would have to be coordinated with the local community.

Impacts on Fish and Wildlife Resources

This alternative would not have an impact on fish and wildlife resources.

12.2 Description of Evaluation Criteria

Each of the alternatives is subjected to a detailed evaluation with respect to the criteria outlined in NYSDEC DER-10 and described below. This evaluation aids in the selection process for remedial actions in New York State.

12.2.1 Overall Protection of Public Health and the Environment

This criterion is an assessment of whether the alternative meets requirements that are protective of human health and the environment. The overall assessment is based on a composite of factors assessed under other evaluation criteria, particularly long-term effectiveness and performance, short-term effectiveness, and compliance with SCOs. This evaluation focuses on how a specific alternative achieves protection over time and how Site risks are reduced. The analysis includes how the source of contamination is to be eliminated, reduced, or controlled.

12.2.2 Compliance with Standards, Criteria, and Guidance (SCGs)

This criterion determines whether or not each alternative complies with applicable environmental laws, and SCGs pertaining to the chemicals detected in contaminated media, the location of the Site, and relating to proposed technologies. A discussion is included on any necessary waivers.

12.2.3 Long-Term Effectiveness and Permanence

This criterion addresses the performance of a remedial action in terms of its permanence and the quantity/nature of waste or residuals remaining at the Site after implementation. An evaluation is made on the extent and effectiveness of controls required to manage residuals remaining at the Site and the operation and maintenance systems necessary for the remedy to remain effective. The factors that are evaluated include permanence of the remedial alternative, magnitude of the remaining risk, adequacy of controls used to manage residual contamination, and the reliability of controls used to manage residual contamination.

12.2.4 Reduction of Toxicity, Mobility, or Volume with Treatment

This criterion assesses the remedial alternative's use of technologies that permanently and significantly reduce TMV of the contamination as their principal element. Preference is given to remedies that permanently and significantly reduce the TMV of the wastes at the Site.

12.2.5 Short-Term Effectiveness

This criterion assesses the effects of the alternative during the construction and implementation phase with respect to the effect on human health and the environment. The factors that are assessed include protection of the workers and the community during remedial action, environmental impacts that result from the remedial action, and the time required until the RAOs are achieved.

12.2.6 Implementability

This criterion addresses the technical and administrative feasibility of implementing the alternative and the availability of various services and materials required during implementation. The evaluation includes the feasibility of construction and operation, the reliability of the technology, the ease of undertaking additional remedial action, monitoring considerations, activities needed to coordinate with regulatory agencies, availability of adequate equipment, services and materials, off-site treatment, and storage and disposal services.

12.2.7 Cost

Operations, maintenance and monitoring (OM&M) costs are estimated for each alternative and presented on a present worth basis based on a 5% discount rate. Cost estimates for the remedial alternatives are summarized on Tables 12-1 through 12-3.

12.2.8 Community and State Acceptance

Concerns of the State and the Community will be addressed separately in accordance with the public participation program developed for this Site.

13.0 DETAILED ANALYSIS OF ALTERNATIVES

13.1 Alternative 1 – No Action

13.1.1 Overall Protection of Public Health and the Environment

Alternative 1 is not protective of human health or the environment except through deed and Site use restrictions. Under the future commercial use of the Site scenario, Alternative 1 does not protect human health and the environment.

13.1.2 Compliance with Standards, Criteria, and Guidance (SCGs)

Alternative 1 does not comply with the SCGs (SCOs) developed for the Site.

13.1.3 Long-Term Effectiveness and Permanence

Alternative 1 is not an effective or permanent remedy for the contaminants present at the Site. Residual contamination would exist at current concentrations and levels. The SMP would include substantial IC/ECs to protect human health and the environment and would preclude future use of the Site.

13.1.4 Reduction of Toxicity, Mobility, or Volume with Treatment

Alternative 1 does not reduce the TMV of contaminants present at the Site, except by natural attenuation processes.

13.1.5 Short-Term Effectiveness

Alternative 1 poses the fewest short term impacts to workers and the community from construction activities. RAOs will not be met with Alternative 1.

13.1.6 Implementability

Alternative 1 would be the most implementable due to the lack of construction activities included.

13.1.7 Cost

The cost of the development of the SMP and the Deed Restriction/Environmental Easement are estimated to be \$20,000 and are reported on Table 12-1.

13.2 Alternative 2 – Excavation and Offsite Disposal of Soils to Meet Unrestricted Use SCOs, SMP

13.2.1 Overall Protection of Public Health and the Environment

Alternative 2 is protective of human health and the environment and would meet presumptively meet SCOs for soil at the Site with potential limitations within the building footprint. An SMP would be implemented for the vapor mitigation system (and any sub-slab residual soil contamination) to be protective of human health.

13.2.2 Compliance with Standards, Criteria, and Guidance (SCGs)

Soil SCOs would be met at the Site following excavation and off-site disposal of soil exceeding Unrestricted Use SCOs.

13.2.3 Long-Term Effectiveness and Permanence

Excavating contaminated soil would be effective for COPCs, and permanent in the long term. Additional remedial measures would not be required for soils at the Site. A vapor mitigation system would be required for an indefinite period.

13.2.4 Reduction of Toxicity, Mobility, or Volume with Treatment

Excavation and off-site disposal of contaminated soil would reduce the volume of contaminants at the Site. The vapor mitigation system would prevent vapor intrusion and contaminated soil vapor impacts to indoor air.

13.2.5 Short-Term Effectiveness

Excavation of the large volume of contaminated soil would pose short-term impacts on workers, the nearby community, and the environment. Health and safety measures such as air monitoring, dust control, and erosion control would be necessary during construction to mitigate any impacts. Truck traffic would have to be coordinated due to the large number required for off-site disposal of non-reused material. The RAOs for soil to eliminate or reduce Site contamination and potential for exposure would be met upon completion of excavation activities.

13.2.6 Implementability

Excavation with off-site disposal is a widely-used, conventional remedial technology. Equipment and trained personnel should be readily available. Excavated material will be classified as hazardous or non-hazardous and transported and disposed in accordance with applicable regulatory

requirements. Adequate health and safety measures must be undertaken for the proposed remediation that will occur adjacent to a residential neighborhood.

13.2.7 Cost

The cost of excavation and off-site disposal of material exceeding Unrestricted Use criteria, as well as the cost of the development of the SMP is estimated to be \$5,267,899. The costs are summarized on Table 12-2.

13.3 Alternative 3 – Excavation and Off-site Disposal of Soil with PCB Concentrations Greater than 10 ppm and Cover or Cap

13.3.1 Overall Protection of Public Health and the Environment

Alternative 3 is protective of human health and the environment. Site soil with PCB concentrations exceeding 10 ppm would be excavated and disposed off-site. A TSCA cover (soil, concrete or asphalt) would be applied in any area where residual PCB concentrations exceed 1 ppm and a clean cover or pavement (concrete or asphalt) would be used as a cover in all other portions of the Site where there are CSCO exceedances to ensure that any soil with CSCO exceedances is not exposed. An SMP would be implemented for the vapor mitigation system and for the Site cover system to be protective of human health.

13.3.2 Compliance with Standards, Criteria, and Guidance (SCGs)

Soil would not comply with the 6 NYCRR Part 375 CSCOs, however, NYSDEC CP-51 Soil Cleanup Guidance Policy states that an acceptable presumptive remedy for soil may include a soil cleanup level for PCBs of 1 ppm (the applicable SCO) in the surface soils and 10 ppm in subsurface soil provided that a Track 4 cleanup is being implemented, site use restrictions are placed and ecological resources are not impacted. In addition soil containing PAHs at concentrations greater than 500 ppm and/or exhibiting visual or olfactory indicators of gross contamination may not remain on Site under a cover system. Alternative 3 will comply with the presumptive remedy of subsurface soil cleanup to 10 ppm and the total PAH concentration less than 500 ppm. .

13.3.3 Long-Term Effectiveness and Permanence

Excavating contaminated soil and construction of a cap/cover system would be effective for the COPCs, and permanent in the long term. A vapor mitigation system would be required for an indefinite period. Additional remedial measures would not be required at the Site as long as the soil cap/cover and Site management and site use restrictions detailed in the SMP were enforced.

13.3.4 Reduction of Toxicity, Mobility, or Volume with Treatment

Excavation and off-site disposal of contaminated soil would reduce the volume of contaminants at the Site. Mobility of the soil contaminants remaining at the Site through fugitive dust will be mitigated by the cap/cover system.

13.3.5 Short-Term Effectiveness

Excavation of contaminated soil would pose short-term impacts on workers, the nearby community, and the environment. Health and safety measures such as air monitoring, dust control, and erosion control would be necessary during construction to mitigate any impacts. Truck traffic would have to be coordinated due to the large number required for off-site disposal of non-reused material. The RAOs for Soil - to eliminate or reduce Site contamination and potential for exposure - would be met upon completion of excavation activities and construction of a cap/cover system.

13.3.6 Implementability

Excavation with off-site disposal is a widely-used, conventional remedial technology. Equipment and trained personnel should be readily available. Excavated material will be classified as hazardous or non-hazardous and transported and disposed of in accordance with 6 NYCRR Part 371 and TSCA. Adequate health and safety measures must be undertaken for the proposed remediation that will occur adjacent to a residential neighborhood.

13.3.7 Cost

The cost of the excavation and cap/cover system, as well as the cost of the development of the SMP is estimated to be \$2,405,730 and are summarized on Table 12-3.

14.0 RECOMMENDED REMEDIAL ALTERNATIVE

Alternatives were developed and evaluated for remediation at the 683 Northland Avenue Site. The evaluation of alternatives was conducted using the remedial RAOs and SGVs identified for the Site to provide source and exposure pathway eliminations. Soil remediation areas and volumes were calculated to meet Unrestricted Use SCOs and CSCOs.

14.1 Basis for Recommendation

Alternative 1, the No Action Alternative was rejected because it does not provide protection to human health and the environment, does not meet SGVs, and does not satisfy RAOs. Alternative 2 was rejected because of the longer time to implement, greater cost when compared to Alternative 3, and concern that the Unrestricted Use SCOs may not be feasible to achieve beneath the existing building floor. Alternative 3 is consistent with the current and future use of the Site as commercial.

Alternatives 2 and 3 would be protective of human health and the environment and meet RAOs for the Site. These alternatives would be implementable and require health and safety measures to protect workers and the community during remediation.

Both Alternative 2 and Alternative 3 include off-site disposal of excavated soil at a nearby facility thereby meeting soil RAOs and reducing the volume of contaminants. Alternative 2 would result in the least amount of residual contamination, but is also the longest to implement, the most intrusive and costly. Alternative 3 also would significantly reduce the amount of residual contamination, would meet NYSDEC Part 375 Track 4 cleanup provisions, and is consistent with the current and future use of the Site.

Alternative 3 would result in the most cost effective and feasible way to reduce the contamination to reasonable levels at the Site, with only small amounts of residual soil contamination remaining. The impacts of the residual soil contamination is mitigated by a cap/cover system.

Based on the evaluation, Alternative 3 – Excavation and Off-site Disposal of PCB contaminated soils above 10 ppm, with a cap/cover system, vapor mitigation system and SMP, is the recommended remedy for the Site. Alternative 3 is protective of human health and the environment and would result in the most cost effective and feasible way to reduce the contamination in soils to levels that comply with NYSDEC Part 375 Track 4 and CP-51 presumptive remedy requirements at the Site, with relatively small amounts of residual contamination. By including the cap/cover system, a vapor mitigation system and SMP, Alternative 3 meets RAOs for soil and indoor air/soil vapor at the Site.

14.2 Recommended Remedial Alternative Components

The components of the recommended remedy include:

- A SMP will identify the IC/ECs including restrictions on the use of the property, management of soils, maintenance of the cap/cover system, and maintenance of the vapor mitigation system. The SMP will also include provisions for monitoring groundwater in and downgradient of the southwestern portion of the Site. Further, the SMP will identify excavation protocols, in particular, procedures for soil characterization, handling, and health and safety measures to be undertaken during future on-site excavation activities for construction purposes to mitigate potential exposures to contaminated groundwater, as well as residual soil contamination and potential soil vapor.
- Approximately 4,275 tons of contaminated soil will be excavated from the areas identified on Figure 12-2.
- Vapor mitigation system sub-slab depressurization infrastructure will be installed beneath the 4-story office/administration building and the adjoining manufacturing space area to the south.
- Supplemental investigation of shallow bedrock will be conducted to evaluate the extent of oil contamination discovered during IRM Number 2 and to determine if there are any dissolved phase groundwater impacts associated with the oil.
- To ensure compliance with the NYSDEC Track 4 requirements a cap/cover system should be applied over any areas that exceed CSCOs at the Site. The cap/cover may be comprised of certified clean soil, asphalt, and/or concrete. Soil cover will be used only in areas where landscaping is planned and those areas will be planted for erosion control.

15.0 PROPOSED REMEDIAL ACTION WORK PLAN

15.1 Description of Remedy

The proposed remedy is Alternative 3: Excavation and Off-Site Disposal (with cover/cap, vapor mitigation and SMP). Alternative 3 includes removal and disposal of five (5) USTs and one (1) AST, excavation of soils with PCB concentrations greater than 10 ppm to meet USEPA TSCA requirements, and excavation of soils with total PAH concentrations greater than 500 ppm and/or any soils exhibiting visual or olfactory indicators of gross contamination to meet NYSDEC applicable standards, criteria and guidance. The remaining soils with CSCO exceedances will have a cap/cover system installed. . This alternative has a deed restriction and SMP for soils, groundwater, oil, and soil vapor. Figure 12-2 identifies the two areas to be excavated. All portions of the Site that are not excavated to meet CSCOs will be capped or covered with pavement, building floor slabs, or a clean soil cover that is a minimum of 1-foot thick.

An estimated 4,275 tons of soil, with PCB concentrations greater than 10 ppm, would be excavated and transported off-site for disposal. This soil volume includes soils with total PAHs greater than 500 ppm. Contaminated soil would be disposed of off-site at permitted facilities. Verification samples would be collected from the bottom and sidewalls of the excavations to confirm PCB concentrations less than 10 ppm have been achieved. Excavated soil would also be subject to waste characterization testing prior to off-site disposal.

As shown on Figure 12-2, there are two separate excavation areas. Each excavation will be excavated until the underlying native silty clay unit is encountered (or top of bedrock if silty clay is not present). The silty clay is estimated to be present at approximately 8 feet below grade. Deeper excavation may be required if verification samples do not meet the PCB cleanup objective.

A TSCA soil cover or TSCA asphalt cover would be constructed over any areas where soil concentrations of PCBs are greater than 1 ppm and less than 10 ppm. Areas where other contaminants (i.e., SVOCs, or metals) are present at concentrations greater than CSCOs, will be covered by the building floor, paved or covered with a minimum 1-foot thick layer of clean fill.

New paved parking lot/access way and landscape areas will be constructed west of the building and at the northeastern portion of the building. Landscape areas will be covered with a minimum 1-foot thick layer of clean fill. Existing asphalt pavement is to remain in the southwestern and southern portions of the Site.

A Soil Vapor Mitigation System infrastructure would be installed in the 4-story office/administration building and the manufacturing area immediately to the south. Additional sub-slab vapor testing will be conducted after the building has a functioning HVAC system to confirm the extents of the affected area that will require mitigation. Based on current data, the vapor mitigation system will likely consist of a sub-slab depressurization system and installation of a vapor barrier on new concrete floors or floor leveling concrete slabs.

Shallow bedrock monitoring wells would be installed in the southwestern portion of site to

determine if there are any impacts to dissolved phase groundwater and to monitoring for potential off-site contaminant migration. A plan for the shallow bedrock monitoring well network and monitoring requirements will be incorporated into the SMP.

15.2 Mobilization and Staging

A small office or office trailer would be set up in a clean area for on-site personnel. It is anticipated that all work will be performed within one construction season and within standard 8-hour work days, five days per week (22 days per month). The excavation and backfilling activities are anticipated to be completed in one month. Paving and Site cover (landscaping) will be completed within a two-month period.

A soil staging/stockpile area will be constructed to prevent the spread of any contamination to surrounding uncontaminated soils and surfaces. The staging area will have bermed sides and be lined with a minimum 20-mil high-density polyethylene (HDPE) watertight liner. Within the bermed area, there will be a sump or similar feature to allow the removal of any liquids that may accumulate within the staging area. Staged materials will be covered with a minimum of 20-mil HDPE cover to prevent contaminated runoff, wind blowing, or dust generation.

A decontamination pad will be set up in a central area near the excavations. The decontamination pad will provide for cleaning equipment used for excavation prior to leaving the Site. Decontamination water will be collected in a sump and pumped to a storage/settling tank. Fluids would be removed from the storage/settling tank and transported off-site for disposal.

Dust monitoring will be conducted and dust control measures (e.g., wetting of dry surfaces in the work areas) would be implemented to prevent off-site migration of contaminated airborne particulates.

Real-time community air monitoring will be performed during soil excavation activities at the Site. Community air monitoring will be performed in accordance with “New York State Department of Health (NYSDOH) Generic Community Air Monitoring Plan,” dated June 20, 2000. Particulate and VOC monitoring will be performed along the upwind and downward perimeter of the work area during excavation and soil handling activities in accordance with this plan.

Additional fencing and site security are not anticipated for this remedial work.

15.3 Petroleum USTs and AST Removal and Closure

The USTs and AST will be closed-removed in accordance with the following regulations:

- 6 NYCRR Part 612 Registration of Bulk Storage Facilities
- 6 NYCRR Part 613 Handling and Storage of Petroleum
- 6 NYCRR Part 614 Standards for New and Substantially Modified Petroleum Storage Facilities

- NYSDEC Memo #1 NYSDEC Spill Technology and Remediation Series (STARS) Memo #1: Petroleum-Contaminated Soil Guidance Policy
- NYSDEC Guidance NYSDEC Spill Prevention Operations Technology Series (SPOTS) No. 14: Document Site Assessments at Bulk Storage Facilities

The procedures for closing the tanks shall include, but not be limited to the following:

1. Remove all product that can be pumped out.
2. Drain and flush piping into the tanks.
3. Remove remaining liquid from the tanks.
4. All exposed piping, gauge lines, and dispensers, with the exception of the vent lines, shall be removed and disposed of. The remaining pipes shall be capped.
5. The tank storage systems, including all tanks and piping, shall be purged of flammable vapors.
6. The interior of the tanks shall be cleaned with absorbent pads or other approved methods.
7. The tanks shall be rendered useless by cutting or drilling and removed and disposed of in accordance with API RP 1604.

All tanks shall be completely decontaminated prior to removal from the Site. The Contractor shall transport and dispose of the tanks in accordance with all applicable City of Buffalo, State and Federal regulations.

Any observably contaminated soil will be over-excavated from the area adjacent to the USTs. Excavated soil will be characterized and disposed of at a facility permitted to accept the waste.

If no groundwater in the excavation, then discrete center line confirmation soil samples will be collected from the bottom of the excavation as follows:

- A) at a frequency equal to the total length of the tank in feet divided by five (minimum of one sample);
- B) samples are to be spaced equidistantly;
- C) the outermost samples obtained should be greater than 2.5 feet from each respective end of the tank;
- D) if the total length of a tank in feet is not evenly divisible by five, one additional sample should be obtained for any fraction remaining; and,
- E) a minimum of one groundwater sample(s), using a DER approved technique, must be taken within 25 feet hydraulically down gradient from the tanks that are not colocated if the product stored is gasoline and groundwater is within 20 feet of the surface or otherwise requested by DER.
- F) Discrete side wall sample around each tank excavation will be collected at a frequency of one sample from each sidewall for every 30 linear feet of sidewall

Bedrock conditions will be visually monitored for any evidence of oil migration from the USTs to bedrock. Samples collected for analysis shall be analyzed for VOCs, SVOCs, PCBs and metals.

If groundwater is present in the excavation then discrete center line soil samples from the bottom of the excavation are required as follows:

- A) at a frequency equal to the total length of the tank in feet divided by five (minimum of one sample);
- B) samples are to be spaced equidistantly;
- C) the outermost samples obtained should be greater than 2.5 feet from each respective end of the tank;
- D) if the total length of a tank in feet is not evenly divisible by five, one additional sample should be obtained for any fraction remaining; and
- E) a minimum of one groundwater sample(s), using a DER approved technique, must be taken within 25 feet hydraulically down gradient from the tanks that are not colocated if the product stored is gasoline and groundwater is within 20 feet of the surface or otherwise requested by DER.
- F) Discrete side wall sample around each tank excavation will be collected at a frequency of one sample from each sidewall for every 30 linear feet of sidewall

In the event that excavations extend downward to the bedrock surface, excavation bottom samples will not be collected. Samples collected for analysis shall be analyzed for VOCs, SVOCs, PCBs and metals.

15.4 Soil Excavation, Off-Site Disposal and Confirmatory Sampling

Excavation & Off-site Disposal: All excavation would be carried out with an excavator large enough to reach required depth at the Site (up to approximately 11 feet in the western excavation area). The walls of the excavation would be adequately shored, sloped or stepped to prevent cave-ins and washouts, and to allow access for excavators. The excavated contaminated soils would be either stockpiled or directly loaded in to dump trucks for off-site disposal. If direct loading is used, soil will be pre-characterized in-place for disposal facility requirements. Trucks would be lined and covered during transport to the disposal facility. Soil from stockpile(s) will be characterized using the testing frequency specified in Table 5.4(e)10 of NYSDEC DER-10. Once characterized, the staged soils will be removed and transported to a disposal facility permitted to receive the waste.

All excavated fill and soil from within the two excavation areas shall be considered, at minimum, non-hazardous contaminated soil and disposed of off-site as PCB remediation waste at a permitted landfill or disposal facility.

Post-excavation Sampling: Non UST excavation sidewall and bottom samples will be collected from the smaller excavation (west of the sewer line) at a frequency of one sample every 30 linear feet for sidewall and one bottom sample every 900 square feet of bottom area. In the larger excavation, east of the sewer line, sidewall samples will be collected at the same frequency. However, since the excavation will be advanced to bedrock, no bottom samples will be collected.

All confirmatory soil samples will be analyzed for CSOCs including PCBs, VOCs, SVOCs, and metals. The Remedial Investigation Quality Assurance Project Plan will be used to establish QA/QC procedures for the post-excavation sampling and analysis.

15.5 Excavation Water Disposal

The RI indicated that the Site overburden was relatively dry; however, perched water may be present depending on the precipitation levels around the time of the work. If an oil water mixture infiltrates any excavation or if dewatering is required, excavation water would be pumped into a storage/holding tank. Water/oil within the storage/holding tank would be removed and properly disposed of off-site.

15.6 Backfilling

Confirmatory Sample results will be compared to CSCOs and submitted to NYSDEC for concurrence prior to backfilling. The excavations will be backfilled with environmentally clean imported backfill materials meeting the requirements of 6NYCRR Part 375-6.7(d) for commercial use or with on-site soil that is excavated to meet grading requirements and which meets commercial SCOs or site-specific action levels. All imported or site-derived fill material will be tested using the testing frequency specified in Table 5.4(e)10 of NYSDEC DER-10. LiRo will submit a NYSDEC Request to Import/Reuse Fill or Soil form for all materials used to backfill the excavations.

15.7 Site Cap/Cover System

A TSCA soil cover or TSCA asphalt cover would be constructed over any areas where soil concentrations of PCBs are greater than 1 ppm and less than 10 ppm. Areas where other contaminants (i.e., SVOCs, or metals) are present at concentrations greater than CSCOs will be covered by building floor, paved or covered with a demarcation layer and a minimum of 1-foot thick layer of clean fill. Newly constructed hardscaped areas will include a demarcation layer, an appropriate clean fill subbase and asphalt/concrete surface layer.

Clean fill or clean soil for cover is required to meet the requirements for the identified site use (commercial) as set forth in 6 NYCRR Part 375-6.7(d). The Site Cap/Cover system will be constructed in conjunction with the property redevelopment.

New paved parking lot/driveways and landscape areas will be constructed west of the building and along the northeastern portion of the building. A site cover system plan is provided in Appendix G. Landscape areas will be covered with a minimum 1-foot thick layer of clean fill. Only a small area of existing pavement will remain south of the building. Soil data south of the building reported no SVOCs above SCLs. Construction details for any new/existing paving or landscaping that will serve as final site cover will conform to local approved building permits for the site, be certified and included in the Final Engineering Report to NYSDEC.

15.8 Soil Vapor Mitigation System

A Soil Vapor Mitigation System would be installed in the office/administration portion of the building. Based on the single RI sub-slab vapor point that indicated a potential trichloroethylene concern, additional pre-design sub-slab vapor testing is proposed to determine the size of the affected area and to confirm the RI sample result. This testing will be completed in conjunction with a full soil vapor assessment to be conducted after the building is closed to the atmosphere. Based on current data, the vapor mitigation system in the office-administration building and northern portions of the manufacturing area will likely consist of a sub-slab depressurization system.

The results of the full soil vapor intrusion assessment will be used to determine which portions of the building will require an active sub-slab depressurization system.

15.9 Health and Safety

Temporary controls will be employed for protection against off-site migration of soil and safety hazards during the remedial work. The work will be performed by workers who are trained and certified as required for specific tasks. The subsurface soil abatement/soil remediation Contractor shall be required to develop a written Health and Safety Plan (HASP) that will comply with all applicable federal and state regulations protecting human health and the environment from the hazards posed by activities during this Site remediation.

15.10 Community Air Monitoring Plan

Real-time community air monitoring will be performed during soil excavation activities at the Site. Community air monitoring will be performed in accordance with “New York State Department of Health Generic Community Air Monitoring Plan,” dated June 20, 2000. Particulate and VOC monitoring will be performed along the upwind and downward perimeter of the work area during subgrade excavation and soil handling activities in accordance with this plan.

15.10.1 Soil Vapor Monitoring

During subsurface soil excavation, LiRo’s Environmental Technician will perform vapor monitoring using a daily calibrated PID. Volatile organic compounds (VOCs) will be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis. Upwind concentrations will be measured at the start of each workday and periodically thereafter to establish background conditions, particularly if wind direction changes. The equipment will be capable of calculating 15-minute running average concentrations. If total organic vapor levels at the perimeter downwind location exceed the perimeter upwind location by 5 parts per million (ppm), a Vapor Emission Response Plan will be implemented. A sample Vapor Emissions Response Plan, which includes dust suppression techniques, is included as Appendix F.

15.10.2 Particulate Monitoring

Particulates will be monitored upwind and downwind at points 25 feet from the perimeter of the work area during the soil excavation and soil load-out activities using a TSI 8520 DustTrack particulate monitor or equivalent. The instrument shall provide real-time monitoring and will be configured to measure particulate matter less than 10 micrometers in size (PM-10). The instrument will be programmed to integrate readings over a period of 15 minutes for comparison to the airborne particulate action level. If the difference between the measured upwind and downwind concentrations is greater than or equal to 100 ug/m³ all work activities must be stopped and dust suppression methods employed. Work may resume only after the measured upwind/downwind difference has been reduced to less than 150 ug/m³.

15.11 Quality Assurance Project Plan

All analytical testing will be performed by a laboratory that is a participant in the NYSDOH Environmental Laboratory Accreditation Program. Any soil sampling performed by LiRo for the subsurface soil excavation work will follow the QAPP submitted in the “Remedial Investigation Work Plan” submitted by LiRo and approved by NYSDEC on December 22, 2016.

15.12 Monitoring and Reporting

A LiRo Environmental Scientist will be on-site on a full-time basis under the supervision of a Professional Engineer to document the remedial activities and to provide any required air monitoring and soil sampling. Documentation will include at a minimum, daily reports of remedial activities, air monitoring results, photographs, and sketches. In addition, the horizontal and vertical extent of all excavations must be surveyed to document the extent of remedial excavation. These extents will be shown on a figure that is stamped by a professional engineer licensed to practice in New York State.

Standard daily reporting procedures will include preparation of a daily report, and when appropriate, problem identification and corrective measures report. Information that may be included on the daily report form includes:

- Approximate sampling locations (sketches) and sample designations.
- Processes and locations of activities under way.
- Equipment and personnel working in the area, including subcontractors.
- Approximate volume and description of materials removed (i.e., hazardous and non-hazardous materials soil).
- Number and type of truckloads of materials removed from the Site.

The completed reports will be submitted to the NYSDEC as part of the Final Engineering Report. Photo documentation of the remedial activities will be prepared by the Environmental Scientist throughout the duration of the project as necessary to convey typical work activities and whenever

changed conditions or unexpected circumstances are encountered. LiRo will provide remedial oversight to evaluate the on-going adequacy of the RAWP and to ensure that all activities are conducted in accordance with this Work Plan.

15.13 Schedule

The following schedule is anticipated for the remedial action:

- | | |
|---------------------------------|------------------|
| ➤ Contractor Submittals | January 2018 |
| ➤ Site Excavation/Backfill Work | May – June 2018 |
| ➤ Site Cover/Cap Work | June – July 2018 |
| ➤ Final Engineering Report | October 2018 |

15.14 Institutional Controls

Institutional controls (IC) would be established as required for the final remedy since this Site is anticipated to be cleaned up to NYSDEC Part 375 Track 4 restricted commercial use standards. The institutional controls would restrict activities on the Site and protect current and future users from exposure to the residual environmental contamination at the Site. The following would be part of the IC:

- An environmental easement as per NYSDEC requirements in DER-10
- Limitations on site use based on the proposed remedial action

15.15 Site Management Plan

A Site Management Plan (SMP), with associated vapor mitigation system monitoring and soils management, would be prepared in accordance with DER-10 after the completion of the remedial field work. The SMP would include the activities listed below that are necessary for the proper and effective management of the institutional controls and to monitor the effectiveness of the implemented remedy.

- Environmental easements restricting the use and re-development of the Site for either commercial or industrial uses..
- Institutional and engineering control (IEC): Restrictions on site use would be described in detail in the IEC plan along with steps necessary for its implementation and periodic certification.
- Control measures and procedures necessary for soil characterization, handling, and health and safety measures to manage residual risks present at the Site including those related to contaminated soils that may be excavated from the Site during future construction activities.
- An evaluation of the vapor intrusion monitoring and mitigation per NYSDOH air guidance.
- Installation and monitoring requirements for a shallow bedrock groundwater monitoring well network in the southwestern portion of the Site.
- Routine maintenance of Site Cap/Cover system.

- Corrective Measures: Procedures for corrective measures such as repairs to erosion of the soil cover or damages to the asphalt/concrete surfaces.
- Reporting: The results of all inspections, corrective actions and monitoring would be reported in the Periodic Review Report (PRR) for the Site.

Notes:

ug/m³ - Micrograms per cubic meter

NC - No Criteria

ND - Non Detect

B - Analyte found in the associated blank

J = Estimated concentration

D = Diluted

1 = NYSDOH Vapor Intrusion Guidance Document Decision Matrix A applies to these compounds

2 = NYSDOH Vapor Intrusion Guidance Document Decision Matrix B applies to these compounds

Bold = Value exceeds NYSDOH AGV

Bold = Value indicates "mitigation" based on Decision Matrix

- Soil Vapor/Indoor Air Matrix A

- Soil Vapor/Indoor Air Matrix B

**Table 7-1
Selection Of Exposure Pathway Scenarios
Western New York Workforce Training Center (C915301)
Remedial Investigation**

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	On-Site/ Off-Site	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Soil (0 to 2 ft bgs)	Surface Soil	Direct Contact	Site Visitor	Adult	Ingestion Dermal Inhalation of Particulates	On-Site	Potential exposure to contaminated surface soil while at the Site.
			Direct Contact	Construction or Industrial Worker	Adult	Ingestion Dermal Inhalation of Particulates	On-Site	Potential exposure to contaminated surface soil while working at the Site.
		Ambient Air	Direct Contact	Site Visitor	Adult	Inhalation of Vapors	On-Site	Potential exposure to VOCs in ambient air while at the Site.
			Direct Contact	Construction or Industrial	Adult	Inhalation of Vapors	On-Site	Potential exposure to VOCs in ambient air while working at the Site.
	Soils (0 to 12 ft bgs)	Indoor Air	Direct Contact	Construction or Industrial	Adult	Inhalation of Vapors	On-Site	Potential exposure to VOCs in indoor air while working at the Site.
	Oil	Subsurface	Direct Contact	Construction or Industrial Worker	Adult	Ingestion Dermal Inhalation of Droplets	On-Site	Potential exposure to contaminated subsurface oil while working belowground at the Site.
	Groundwater	Indoor Air	Direct Contact		Adult	Inhalation of Vapors	On-Site	Potential exposure to VOCs in indoor air while working at the Site.
Future	Soils (0 to 12 ft bgs)	Soil	Direct Contact	Construction or Industrial Worker	Adult	Ingestion Dermal Inhalation of Particulates	On-Site	Potential exposure to contaminated soil during ground intrusive activities at the Site.
		Ambient Air	Direct Contact	Construction or Industrial Worker	Adult	Inhalation of Vapors	On-Site	Potential exposure to VOCs in ambient air during ground intrusive activities at the Site.
	Oil	Subsurface	Direct Contact	Construction or Industrial Worker	Adult	Ingestion Dermal Inhalation of Droplets	On-Site	Potential exposure to contaminated subsurface oil while working belowground at the Site.
	Groundwater	Groundwater	Direct Contact	Construction or Industrial Worker	Adult	Ingestion Dermal	On-Site	Potential exposure to groundwater during ground intrusive activities at the Site.
		Ambient Air	Direct Contact	Construction or Industrial Worker	Adult	Inhalation of Vapors	On-Site	Potential exposure to groundwater during ground intrusive activities at the Site.

Table 11-1

**General Response Actions and Remedial Technology Screening
Western New York Workforce Training Center (C915310)
Remedial Investigation**

General Response Actions for Soil and Air/Soil Vapor	Remedial Technologies	Description	Screening Comments
Containment	Cap/Cover	Newly-constructed soil cover or asphalt/concrete cap. Building plant floor may include vapor barrier Use of existing concrete slabs as caps	Applicable, Retained.
Source Removal	Soil Excavation with Offsite Disposal/ Treatment	Excavate contaminated soil and transport offsite for disposal/treatment.	Applicable, Retained.
Treatment	In Situ Biological Treatment	Microorganisms, oxygen, and/or nutrients added to subsurface to reduce the toxicity of contaminants in soil.	Not proven for Metals, limited for SVOCs and PCB. Not retained.
	In Situ Thermal Treatment	Various processes use heat to increase contaminant mobilization via volatilization and viscosity reduction. Off-gases may be collected and treated. Groundwater control may be needed to retain heat during treatment.	High temperatures required for PCB removal and has high energy requirements. Not retained.
	In Situ Solidification	Using large augers or other injection/mixing technology, contaminated soil is mixed in situ with binders isolating and immobilizing contaminants. All subsurface infrastructures would have to be removed.	Contaminant mass not reduced. Presences and future use of existing building limits implementation. Not retained.
	In Situ Chemical Treatment	Various processes using chemicals to destroy organic contaminants or convert them to non-toxic compounds by introducing chemicals to the subsurface through infiltration.	Not applicable for PCBs. Not retained.
	Ex Situ Treatment Land Framing	Excavate contaminated soil, treat onsite using land spreading and application of amendments. Then use treated soil as backfill material on site	Multiple handling of soil and increase exposure of public during implementation. Not retained.
	Ex-Situ Thermal Treatment	See In-Situ Thermal Treatment.	See In-Situ Thermal Treatment. Not retained.

DRILLING SUMMARY		MONITORING WELL CONSTRUCTION LOG	
Geologist: Kris Charney		<p>The diagram shows a cross-section of a monitoring well. At the top, the ground surface is at 644.91 feet AMSL. A concrete pad is at the surface. Below it is a 14.5-foot long Schedule 40 PVC casing with a 2-inch diameter. A bentonite seal is located between 5.5 and 10 feet depth. A 6-inch steel rock socket is set 1 foot into the bedrock. A 6-1/4 inch borehole is drilled through the overburden to the top of the bedrock. An HQ 4-inch bedrock corehole is also shown. A No. 2 sand zone is between 10 and 24.5 feet depth. A rollerbit is used to secure the rock socket. A Schedule 40 PVC No. 2 screen with a 2-inch diameter and 10-foot length is installed. The bottom of the well is at 24.5 feet depth.</p>

Comments: Petroleum odor and slight sheen. Sampled at 11:20.

WELL DEVELOPMENT LOG

LiRo Engineers, Inc.

Project Title: 683 Northland Ave. Remedial Investigation Well Number: **LW-06**
 Site Name: 683 Northland Ave. Date: 11/14/2017
 Staff: Andrew Koons

A). Total casing and screen length in feet:	35.80	Well ID	Volume (gal/ft)
		1"	0.04
B). Water level below top of casing in feet:	16.16	2"	0.17
		3"	0.38
C). Number of feet standing water [A-B]:	19.64	4"	0.66
		5"	1.04
D). Volume of water/foot of casing (gal.):	0.17	6"	1.50
		8"	2.60
E). Volume of water in casing (gal. [Cx D]):	3.3388		
F). Volume of water to remove (gal.) [Ex 5]:	10.0164		
G). Volume of water actually removed (gal.):	10.00		

PURGE DATA

Time	Temperature (°C)	pH (SU)	ORP (mV)	Conductivity (ms/cm)	Turbidity (NTU)	Dissolved Oxygen (mg/L)	Salinity	Appearance
14:01	12.38	7.70	-85	0.745	0.0	4.93	NR	clear
14:33	12.35	7.48	-98	0.736	0.0	3.75	NR	clear
14:37	12.97	7.49	-102	0.736	0.0	3.57	NR	clear
14:41	13.09	7.47	-103	0.728	0.0	3.21	NR	clear

Comments: Sulfur odor. Sampled at 14:45. MS/MSD collected.

APPENDIX D
LABORATORY REPORTS

February 22, 2017

Jon Williams
LiRo Engineers, Inc.
690 Delaware Avenue
Buffalo, NY 14209-2202

Project Location: 683 Northland
Client Job Number:
Project Number: 20170105 - Northland Ave., Buffalo, NY
Laboratory Work Order Number: 17B0503

Enclosed are results of analyses for samples received by the laboratory on February 11, 2017. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Aaron L. Benoit", with a horizontal line extending to the right from the end of the signature.

Aaron L. Benoit
Project Manager

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332
SW-846 6010C-D

Qualifications:**L-07**

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Lead**

B170631-BS1, B170631-BSD1

MS-19

Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.

Analyte & Samples(s) Qualified:**Barium**

B170760-MS1, B170760-MSD1

Chromium

B170760-MS1

Lead

B170760-MS1, B170760-MSD1

R-02

Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.

Analyte & Samples(s) Qualified:**Barium**

17B0503-18[LB-12-Comp 2-4-9], B170760-DUP1

Cadmium

17B0503-18[LB-12-Comp 2-4-9], B170760-DUP1

Lead

17B0503-18[LB-12-Comp 2-4-9], B170760-DUP1

SW-846 7471B

Qualifications:**R-02**

Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.

Analyte & Samples(s) Qualified:**Mercury**

17B0503-18[LB-12-Comp 2-4-9], B170739-DUP1

SW-846 8081B

Qualifications:**DL-03**

Elevated reporting limit due to matrix.

Analyte & Samples(s) Qualified:

17B0503-12[LB-08-Comp 2-4-10.2]

DL-04

Elevated reporting limit due to high concentration of an interfering analyte(s).

Analyte & Samples(s) Qualified:

17B0503-16[LB-11-Comp 1-0-4], 17B0503-26[LB-02-Comp 2-4-9.2], 17B0503-51[LB-28-Comp 2-4-11]

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Naphthalene

B170743-BS1, B170743-BSD1

SW-846 8270D

Qualifications:

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**Benzoic Acid**

17B0503-01[LB-14-Comp 1-0-4], 17B0503-02[LB-15-Comp 1-0-4], 17B0503-03[LB-14-Comp 2-4-10.5], 17B0503-04[LB-15-Comp 2-4-8.5], 17B0503-05[LB-18-Comp 1-0-4], 17B0503-06[LB-26-Comp 1-0-4], 17B0503-07[LB-26-Comp 2-4-7.8], 17B0503-08[LB-27-Comp 1-0-4], 17B0503-09[LB-27-Comp 2-4-10.3], 17B0503-10[LB-28-Comp 1-0-4], 17B0503-11[LB-08-Comp 1-0-4], 17B0503-12[LB-08-Comp 2-4-10.2], 17B0503-13[LB-09-Comp 1-0-4], 17B0503-14[LB-09-Comp 2-4-10.7], 17B0503-15[LB-11-Comp 2-4-9], 17B0503-16[LB-11-Comp 1-0-4], 17B0503-17[LB-12-Comp 1-0-4], 17B0503-18[LB-12-Comp 2-4-9], 17B0503-19[LB-13-Comp 1-0-4], B170411-BLK1, B170411-BS1, B170411-BSD1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Benzidine**

B170675-BSD1

MS-09

Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:**2,4,5-Trichlorophenol**

SW-846 6010C/D SW-846 6020A/B

For NC, Metals methods SW-846 6010D and SW-846 6020B are followed, and for all other states methods SW-846 6010C and SW-846 6020A are followed.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit
DL	Method Detection Limit
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
DL-03	Elevated reporting limit due to matrix.
DL-04	Elevated reporting limit due to high concentration of an interfering analyte(s).
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
MS-09	Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
MS-19	Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-08	pH of sample (pH 5) is outside of method specified preservation criteria.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
R-02	Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
RL-12	Elevated reporting limit due to matrix interference.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.
S-03	Surrogate recovery outside of control limits due to suspected sample matrix interference.
S-07	One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.
S-19	Surrogate recovery is outside of control limits, matrix interference suspected. Reanalysis yielded similar surrogate non-conformance.
V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
V-17	Internal standard area <50% of associated calibration standard internal standard area. Reanalysis yielded similar internal standard non-conformance.
V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Sample Receipt Checklist

CLIENT NAME: Liro Engineers RECEIVED BY: RLF DATE: 2/11/17

- 1) Was the chain(s) of custody relinquished and signed? Yes No No COC Incl.
- 2) Does the chain agree with the samples? Yes No
 If not, explain:
- 3) Are all the samples in good condition? Yes No
 If not, explain:

4) How were the samples received:
 On Ice Direct from Sampling Ambient In Cooler(s) (2 coolers)
 Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A
 Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.9/3.4 #2

- 5) Are there Dissolved samples for the lab to filter? Yes No
 Who was notified _____ Date _____ Time _____
- 6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No
 Who was notified _____ Date _____ Time _____

7) Location where samples are stored:  Permission to subcontract samples? Yes No
 (Walk-in clients only) if not already approved
 Client Signature: _____

- 8) Do all samples have the proper Acid pH: Yes No N/A
- 9) Do all samples have the proper Base pH: Yes No N/A
- 10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes N/A

Containers received at Con-Test

Any False statement will be brought to the attention of Client

Question	Answer (True/False)	Comment
	T/F/NA	
1) The cooler's custody seal, if present, is intact.	NA	
2) The cooler or samples do not appear to have been compromised or tampered with.	T	
3) Samples were received on ice.	T	
4) Cooler Temperature is acceptable.	T	
5) Cooler Temperature is recorded.	T	
6) COC is filled out in ink and legible.	T	
7) COC is filled out with all pertinent information.	T	
8) Field Sampler's name present on COC.	T	
9) There are no discrepancies between the sample IDs on the container and the COC.	T	
10) Samples are received within Holding Time.	T	
11) Sample containers have legible labels.	T	
12) Containers are not broken or leaking.	T	
13) Air Cassettes are not broken/open.	NA	
14) Sample collection date/times are provided.	T	
15) Appropriate sample containers are used.	T	
16) Proper collection media used.	T	
17) No headspace sample bottles are completely filled.	T	
18) There is sufficient volume for all requested analyses, including any requested MS/MSDs.	T	
19) Trip blanks provided if applicable.	T	
20) VOA sample vials do not have head space or bubble is <6mm (1/4") in diameter.	T	
21) Samples do not require splitting or compositing.	T

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332
SW-846 6010C-D

Qualifications:**L-07**

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Beryllium**

B170898-BS1, B170898-BSD1

MS-11

Matrix spike recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:**Potassium**

B170898-MS1

MS-19

Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.

Analyte & Samples(s) Qualified:**Aluminum**

B170898-MS1

Lead

17B0591-07[LB-21-Comp1-0-4'], B170898-MS1

Magnesium

B170898-MS1

Manganese

B170898-MS1

R-02

Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.

Analyte & Samples(s) Qualified:**Antimony**

B170898-DUP1

SW-846 8081B

Qualifications:**P-02**

Sample RPD between primary and confirmatory analysis exceeded 40%. Per EPA method 8000, the lower value was reported due to obvious chromatographic interference on the column with the higher result.

Analyte & Samples(s) Qualified:**4,4'-DDE**

17B0591-02[LB-17-Comp1-1-3'], 17B0591-05[LB-24-Comp1-1-3']

4,4'-DDT

17B0591-05[LB-24-Comp1-1-3']

Dieldrin

17B0591-01[LB-16-Comp1-0-2'], 17B0591-05[LB-24-Comp1-1-3']

SW-846 8260C

Qualifications:**L-02**

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:**1,2,3-Trichlorobenzene**

B170743-BS1, B170743-BSD1

Bromochloromethane

B170605-BS1, B170605-BSD1

Methyl Acetate

B170605-BS1, B170605-BSD1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Carbon Disulfide**

B170743-BS1

trans-1,2-Dichloroethylene

B170605-BSD1

PR-03

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], 17B0591-06[LB-19-Comp2-5.4-7'], 17B0591-08[LB22-VOC1-4-6']

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], 17B0591-06[LB-19-Comp2-5.4-7'], 17B0591-08[LB22-VOC1-4-6']

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:**Bromomethane**

17B0591-11[Trip Blank], B170743-BLK1, B170743-BS1, B170743-BSD1

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**Methyl tert-Butyl Ether (MTBE)**

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], 17B0591-06[LB-19-Comp2-5.4-7'], 17B0591-08[LB22-VOC1-4-6'], B170605-BLK1, B170605-BS1, B170605-BSD1

tert-Butyl Alcohol (TBA)

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], 17B0591-06[LB-19-Comp2-5.4-7'], 17B0591-08[LB22-VOC1-4-6'], 17B0591-11[Trip Blank], B170605-BLK1, B170605-BS1, B170605-BSD1, B170743-BLK1, B170743-BS1, B170743-BSD1

V-20

Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**1,2,3-Trichlorobenzene**

B170743-BS1, B170743-BSD1

1,3,5-Trichlorobenzene

B170743-BS1, B170743-BSD1

2-Hexanone (MBK)

B170605-BS1, B170605-BSD1

Acetone

B170605-BS1, B170605-BSD1

Bromochloromethane

B170605-BS1, B170605-BSD1

Chloromethane

B170605-BS1, B170605-BSD1

Methyl Acetate

B170605-BS1, B170605-BSD1

Naphthalene

B170743-BS1, B170743-BSD1

SW-846 8270D

Qualifications:

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Benzidine**

B170578-BS1

V-04

Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.

Analyte & Samples(s) Qualified:**Benzidine**

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], 17B0591-06[LB-19-Comp2-5.4-7'], B170578-BLK1, B170578-BS1, B170578-BSD1

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**2,4-Dinitrophenol**

17B0591-06[LB-19-Comp2-5.4-7']

4,6-Dinitro-2-methylphenol

17B0591-06[LB-19-Comp2-5.4-7']

Aniline

17B0591-06[LB-19-Comp2-5.4-7']

Benzidine

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], 17B0591-06[LB-19-Comp2-5.4-7'], B170578-BLK1, B170578-BS1, B170578-BSD1

Benzo(g,h,i)perylene

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], B170578-BLK1, B170578-BS1, B170578-BSD1

Benzo(k)fluoranthene

17B0591-06[LB-19-Comp2-5.4-7']

Dibenz(a,h)anthracene

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], B170578-BLK1, B170578-BS1, B170578-BSD1

Hexachlorobenzene

17B0591-06[LB-19-Comp2-5.4-7']

Indeno(1,2,3-cd)pyrene

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], B170578-BLK1, B170578-BS1, B170578-BSD1

V-16

Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.

Analyte & Samples(s) Qualified:**Pentachloronitrobenzene**

17B0591-01[LB-16-Comp1-0-2'], 17B0591-02[LB-17-Comp1-1-3'], 17B0591-03[LB-19-Comp1-0-5.4'], 17B0591-04[LB-20-Comp1-0-4'], 17B0591-05[LB-24-Comp1-1-3'], 17B0591-06[LB-19-Comp2-5.4-7'], B170578-BLK1, B170578-BS1, B170578-BSD1

SW-846 6010C/D SW-846 6020A/B

For NC, Metals methods SW-846 6010D and SW-846 6020B are followed, and for all other states methods SW-846 6010C and SW-846 6020A are followed.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

- * QC result is outside of established limits.
 - † Wide recovery limits established for difficult compound.
 - ‡ Wide RPD limits established for difficult compound.
 - # Data exceeded client recommended or regulatory level
 - ND Not Detected
 - RL Reporting Limit
 - DL Method Detection Limit
 - MCL Maximum Contaminant Level
- Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
- No results have been blank subtracted unless specified in the case narrative section.
- J Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
 - L-02 Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
 - L-07 Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
 - MS-11 Matrix spike recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
 - MS-19 Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.
 - P-02 Sample RPD between primary and confirmatory analysis exceeded 40%. Per EPA method 8000, the lower value was reported due to obvious chromatographic interference on the column with the higher result.
 - PR-03 Sample preserved in the laboratory, not in the field as required by the method.
 - PR-15 According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
 - R-02 Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.
 - R-05 Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
 - V-04 Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
 - V-05 Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
 - V-16 Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
 - V-20 Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Sample Receipt Checklist

CLIENT NAME: Libo Engineers RECEIVED BY: ESB DATE: 2/15/17

- 1) Was the chain(s) of custody relinquished and signed? Yes No No COC Incl.
- 2) Does the chain agree with the samples? Yes No
 If not, explain: See Comment
- 3) Are all the samples in good condition? Yes No
 If not, explain:

4) How were the samples received:
 On Ice Direct from Sampling Ambient In Cooler(s)
 Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A
 Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.2°C #4

- 5) Are there Dissolved samples for the lab to filter? Yes No
 Who was notified _____ Date _____ Time _____
- 6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No
 Who was notified _____ Date _____ Time _____

7) Location where samples are stored:  Permission to subcontract samples? Yes No
 (Walk-in clients only) if not already approved
 Client Signature: _____

- 8) Do all samples have the proper Acid pH: Yes No N/A
- 9) Do all samples have the proper Base pH: Yes No N/A
- 10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes N/A

Containers received at Con-Test

1 Liter Plastic		2 oz amber/clear jar	
500 mL Plastic		Plastic Bag / Ziploc	
250 mL plastic		SOC Kit	
40 mL Vial - type listed below	2	Perchlorate Kit	
Colisure / bacteria bottle		Flashpoint bottle	
Dissolved Oxygen bottle		Other glass jar	
Encore		Other	

Sample LB-24-Compi-1-3' has an 8oz container that has a sample ID of LB-24-comp2-1-3'. I could tell it goes with sample LB-24-Compi-1-3' because the times match.

40 mL vials: # HCl _____ # Methanol _____ Time and Date Frozen: _____
 # Bisulfate _____ # DI Water _____
 # Thiosulfate _____ Unpreserved 2

Any False statement will be brought to the attention of Client

<u>Question</u>	<u>Answer (True/False)</u>		<u>Comment</u>
	T	F/NA	
1) The cooler's custody seal, if present, is intact.		NA	
2) The cooler or samples do not appear to have been compromised or tampered with.	T		
3) Samples were received on ice.	T		
4) Cooler Temperature is acceptable.	T		
5) Cooler Temperature is recorded.	T		
6) COC is filled out in ink and legible.	T		
7) COC is filled out with all pertinent information.	T		
8) Field Sampler's name present on COC.	T		
9) There are no discrepancies between the sample IDs on the container and the COC.	F		See comment
10) Samples are received within Holding Time.	T		
11) Sample containers have legible labels.	T		
12) Containers are not broken or leaking.	T		
13) Air Cassettes are not broken/open.		NA	
14) Sample collection date/times are provided.	T		
15) Appropriate sample containers are used.	T		
16) Proper collection media used.	T		
17) No headspace sample bottles are completely filled.	T		
18) There is sufficient volume for all requested analyses, including any requested MS/MSDs.	T		
19) Trip blanks provided if applicable.	T		
20) VOA sample vials do not have head space or bubble is <6mm (1/4") in diameter.	T		
21) Samples do not require splitting or compositing.	T

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332
SW-846 6010C-D

Qualifications:

MS-12

Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:**Zinc**

B171205-MS1, B171205-MSD1

MS-19

Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.

Analyte & Samples(s) Qualified:**Aluminum**

B171205-MS1, B171205-MSD1

Calcium

B171205-MS1, B171205-MSD1

Iron

B171205-MS1, B171205-MSD1

Magnesium

B171205-MS1, B171205-MSD1

Manganese

B171205-MS1, B171205-MSD1

MS-22

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Analyte & Samples(s) Qualified:**Antimony**

B171205-MS1, B171205-MSD1

Barium

B171459-MS2

Sodium

B171205-MS1, B171205-MSD1

MS-23

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is outside of the method specified criteria. Reduced precision anticipated for any reported result for this compound.

Analyte & Samples(s) Qualified:**Lead**

B171459-MS2

R-02

Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.

Analyte & Samples(s) Qualified:**Copper**

B171205-DUP1

Lead

17B0761-01RE1[LW-01-Comp2-4-10.2], B171459-MSD2

Zinc

B171205-DUP1

R-04

Duplicate relative percent difference (RPD) is a less useful indicator of sample precision for sample results that are <5 times the reporting limit (RL).

Analyte & Samples(s) Qualified:**Cadmium**

17B0761-01[LW-01-Comp2-4-10.2], B171205-DUP1

SW-846 8081B

Qualifications:

DL-03

Elevated reporting limit due to matrix.

Analyte & Samples(s) Qualified:

17B0761-10[LW-04-Comp1-0-4.10']

SW-846 8082A

Qualifications:**MS-21**

Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.

Analyte & Samples(s) Qualified:**Aroclor-1016 [2C]**

B170789-MSD1

Aroclor-1260

B170789-MS1, B170789-MSD1

Aroclor-1260 [2C]

B170789-MS1, B170789-MSD1

S-01

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:**Decachlorobiphenyl**

17B0761-04[LW-01-Comp1-0-4'], 17B0761-05[LW-02-Comp2-4-9.8']

Decachlorobiphenyl [2C]

17B0761-04[LW-01-Comp1-0-4'], 17B0761-05[LW-02-Comp2-4-9.8']

Tetrachloro-m-xylene

17B0761-04[LW-01-Comp1-0-4'], 17B0761-05[LW-02-Comp2-4-9.8']

Tetrachloro-m-xylene [2C]

17B0761-04[LW-01-Comp1-0-4'], 17B0761-05[LW-02-Comp2-4-9.8']

SW-846 8260C

Qualifications:**B-01**

Methylene chloride is a common laboratory contaminant.

Analyte & Samples(s) Qualified:**Methylene Chloride**

17B0761-09[LB-25-Comp1-0-2.4'], 17B0761-10[LW-04-Comp1-0-4.10']

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:**Carbon Disulfide**

B170824-BS1, B170824-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

Methyl Acetate

B170824-BS1, B170824-BSD1, B170829-BS1, B170829-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

trans-1,2-Dichloroethylene

B170824-BS1, B170824-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Bromochloromethane**

B170829-BSD1

Bromomethane

B170824-BS1, B171017-BS1

Cyclohexane

B170824-BS1, B171017-BS1

PR-03

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

17B0761-03[LW-01-VOC1-2-4'], 17B0761-07[LW-02-VOC1-0-2'], 17B0761-08[LW-02-VOC2-8-9.8'], 17B0761-09[LB-25-Comp1-0-2.4'],
17B0761-10[LW-04-Comp1-0-4.10']

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

17B0761-03[LW-01-VOC1-2-4'], 17B0761-07[LW-02-VOC1-0-2'], 17B0761-08[LW-02-VOC2-8-9.8'], 17B0761-09[LB-25-Comp1-0-2.4'],
17B0761-10[LW-04-Comp1-0-4.10']

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**2,2-Dichloropropane**

17B0761-03[LW-01-VOC1-2-4'], 17B0761-07[LW-02-VOC1-0-2'], 17B0761-08[LW-02-VOC2-8-9.8'], 17B0761-09[LB-25-Comp1-0-2.4'],
17B0761-10[LW-04-Comp1-0-4.10'], B170829-BLK1, B170829-BS1, B170829-BSD1

Methyl tert-Butyl Ether (MTBE)

17B0761-03[LW-01-VOC1-2-4'], 17B0761-07[LW-02-VOC1-0-2'], 17B0761-08[LW-02-VOC2-8-9.8'], 17B0761-09[LB-25-Comp1-0-2.4'],
17B0761-10[LW-04-Comp1-0-4.10'], B170829-BLK1, B170829-BS1, B170829-BSD1

tert-Butyl Alcohol (TBA)

17B0761-03[LW-01-VOC1-2-4'], 17B0761-07[LW-02-VOC1-0-2'], 17B0761-08[LW-02-VOC2-8-9.8'], 17B0761-09[LB-25-Comp1-0-2.4'],
17B0761-10[LW-04-Comp1-0-4.10'], B170829-BLK1, B170829-BS1, B170829-BSD1

V-20

Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**2-Butanone (MEK)**

B170824-BS1, B170824-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

2-Hexanone (MBK)

B170829-BS1, B170829-BSD1

4-Methyl-2-pentanone (MIBK)

B170829-BS1, B170829-BSD1

Acrylonitrile

B170824-BS1, B170824-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

Bromochloromethane

B170824-BS1, B170824-BSD1, B170829-BS1, B170829-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

Carbon Disulfide

B170824-BS1, B170824-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

Cyclohexane

B170824-BS1, B170824-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

Methyl Acetate

B170824-BS1, B170824-BSD1, B170829-BS1, B170829-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

Methylene Chloride

B170824-BS1, B170824-BSD1, B171017-BS1, B171017-BSD1, S013387-CCV1, S013389-CCV1

SW-846 8270D**Qualifications:****L-04**

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**Benzidine**

17B0761-12[LRB-01-2-16-17], B170795-BLK1, B170795-BS1, B170795-BSD1

L-07A

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.

Analyte & Samples(s) Qualified:**Benzidine**

B170805-BS1

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:**3,3-Dichlorobenzidine**

17B0761-12[LRB-01-2-16-17], B170795-BLK1, B170795-BS1, B170795-BSD1

Benzidine

17B0761-01[LW-01-Comp2-4-10.2'], 17B0761-04[LW-01-Comp1-0-4'], 17B0761-05[LW-02-Comp2-4-9.8'], 17B0761-06[LW-02-Comp1-0-4'], 17B0761-09[LB-25-Comp1-0-2.4'], 17B0761-10[LW-04-Comp1-0-4.10'], 17B0761-12[LRB-01-2-16-17], B170795-BLK1, B170795-BS1, B170795-BSD1, B170805-BLK1, B170805-BS1, B170805-BSD1

S-07

One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.

Analyte & Samples(s) Qualified:**2,4,6-Tribromophenol**

B170795-BS1, B170795-BSD1

V-04

Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.

Analyte & Samples(s) Qualified:**Benzidine**

17B0761-01[LW-01-Comp2-4-10.2'], 17B0761-04[LW-01-Comp1-0-4'], 17B0761-05[LW-02-Comp2-4-9.8'], 17B0761-06[LW-02-Comp1-0-4'], 17B0761-09[LB-25-Comp1-0-2.4'], 17B0761-10[LW-04-Comp1-0-4.10'], 17B0761-12[LRB-01-2-16-17], B170795-BLK1, B170795-BS1, B170795-BSD1, B170805-BLK1, B170805-BS1, B170805-BSD1

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**2,4-Dinitrophenol**

17B0761-12[LRB-01-2-16-17], B170795-BLK1, B170795-BS1, B170795-BSD1

Aniline

17B0761-12[LRB-01-2-16-17], B170795-BLK1, B170795-BS1, B170795-BSD1

SW-846 6010C/D SW-846 6020A/B

For NC, Metals methods SW-846 6010D and SW-846 6020B are followed, and for all other states methods SW-846 6010C and SW-846 6020A are followed.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

A handwritten signature in black ink, appearing to read "Lisa A. Worthington", is written over a light gray rectangular background.

Lisa A. Worthington
Project Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit
DL	Method Detection Limit
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
B-01	Methylene chloride is a common laboratory contaminant.
DL-03	Elevated reporting limit due to matrix.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.
MS-12	Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
MS-19	Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.
MS-21	Matrix spike and/or spike duplicate recovery bias high due to contribution of other Aroclors present in the source sample.
MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
MS-23	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is outside of the method specified criteria. Reduced precision anticipated for any reported result for this compound.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
R-02	Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.
R-04	Duplicate relative percent difference (RPD) is a less useful indicator of sample precision for sample results that are <5 times the reporting limit (RL).
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.
S-07	One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.
V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Sample Receipt Checklist

CLIENT NAME: Liro Engineers RECEIVED BY: RLF DATE: 2/18/17

1) Was the chain(s) of custody relinquished and signed? Yes No No COC Incl.
 2) Does the chain agree with the samples? Yes No
 If not, explain:

3) Are all the samples in good condition? Yes No
 If not, explain:

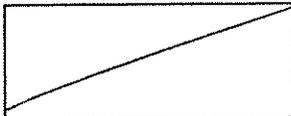

4) How were the samples received:
 On Ice Direct from Sampling Ambient In Cooler(s)

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 34°C #4

5) Are there Dissolved samples for the lab to filter? Yes No
 Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes No
 Who was notified _____ Date _____ Time _____

7) Location where samples are stored:  Permission to subcontract samples? Yes No
 (Walk-in clients only) if not already approved
 Client Signature: _____

8) Do all samples have the proper Acid pH: Yes No N/A

9) Do all samples have the proper Base pH: Yes No N/A

10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	3	16 oz amber	
500 mL Amber		8 oz amber/clear jar	8
250 mL Amber (8oz amber)		4 oz amber/clear jar	12
1 Liter Plastic	1	2 oz amber/clear jar	
500 mL Plastic	1	Plastic Bag / Ziploc	
250 mL plastic		SOC Kit	
40 mL Vial - type listed below	5	Perchlorate Kit	
Colisure / bacteria bottle		Flashpoint bottle	
Dissolved Oxygen bottle		Other glass jar	
Encore		Other	

40 mL vials: # HCl 3 # Methanol _____ Time and Date Frozen: _____
 Doc# 277 # Bisulfate _____ # DI Water 2 + trip blank waters
 Rev. 4 August 2013 # Thiosulfate _____ Unpreserved _____

 Any False statement will be brought to the attention of Client

Question	Answer (True/False)	Comment
	T/F/NA	
1) The cooler's custody seal, if present, is intact.	NA	
2) The cooler or samples do not appear to have been compromised or tampered with.	T	
3) Samples were received on ice.	T	
4) Cooler Temperature is acceptable.	T	
5) Cooler Temperature is recorded.	T	
6) COC is filled out in ink and legible.	T	
7) COC is filled out with all pertinent information.	T	
8) Field Sampler's name present on COC.	T	
9) There are no discrepancies between the sample IDs on the container and the COC.	T	
10) Samples are received within Holding Time.	T	
11) Sample containers have legible labels.	T	
12) Containers are not broken or leaking.	T	
13) Air Cassettes are not broken/open.	NA	
14) Sample collection date/times are provided.	T	
15) Appropriate sample containers are used.	T	
16) Proper collection media used.	T	
17) No headspace sample bottles are completely filled.	T	
18) There is sufficient volume for all requested analyses, including any requested MS/MSDs.	T	
19) Trip blanks provided if applicable.	T	
20) VOA sample vials do not have head space or bubble is <6mm (1/4") in diameter.	T	
21) Samples do not require splitting or compositing.	T

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

Qualifications:

MS-07

Matrix spike recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possibility of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated.

Analyte & Samples(s) Qualified:

Chromium

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171459-MS1

MS-11

Matrix spike recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

Chromium

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171459-MSD1

MS-19

Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.

Analyte & Samples(s) Qualified:

Aluminum

B171208-MS1, B171208-MSD1

Calcium

B171208-MS1, B171208-MSD1

Iron

B171208-MS1, B171208-MSD1

Magnesium

B171208-MS1, B171208-MSD1

Manganese

B171208-MS1, B171208-MSD1

MS-22

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Analyte & Samples(s) Qualified:

Barium

B171208-MS1, B171208-MSD1

Lead

17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171208-MS1, B171208-MSD1

Sodium

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171459-MS1, B171459-MSD1

Vanadium

17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171208-MS1, B171208-MSD1

Zinc

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171459-MS1, B171459-MSD1

R-02

Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.

Analyte & Samples(s) Qualified:

Chromium

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171459-DUP1

R-04

Duplicate relative percent difference (RPD) is a less useful indicator of sample precision for sample results that are <5 times the reporting limit (RL).

Analyte & Samples(s) Qualified:

Antimony

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171459-DUP1

R-06

Matrix spike duplicate RPD is outside of control limits. Reduced precision is anticipated for reported result for this compound in this sample.

Analyte & Samples(s) Qualified:

Chromium

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171459-MSD1

Qualifications:

R-02

Duplicate RPD is outside of control limits. Outlier can be attributed to sample non-homogeneity encountered during sample prep.

Analyte & Samples(s) Qualified:

Mercury

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8'], B171377-DUP1

SW-846 8081B

Qualifications:

P-01

Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. In accordance with the method, the higher result was reported.

Analyte & Samples(s) Qualified:

Hexachlorobenzene

17B0911-07RE1[LW-03-COMP1-4-8']

P-02

Sample RPD between primary and confirmatory analysis exceeded 40%. Per EPA method 8000, the lower value was reported due to obvious chromatographic interference on the column with the higher result.

Analyte & Samples(s) Qualified:

4,4'-DDT

17B0911-08RE1[LW-03/MS/MSD-COMP-4-8']

Dieldrin

17B0911-07RE1[LW-03-COMP1-4-8'], 17B0911-08RE1[LW-03/MS/MSD-COMP-4-8']

SW-846 8082A

Qualifications:

P-01

Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. In accordance with the method, the higher result was reported.

Analyte & Samples(s) Qualified:

Aroclor-1254 [2C]

17B0911-07[LW-03-COMP1-4-8']

R-06

Matrix spike duplicate RPD is outside of control limits. Reduced precision is anticipated for reported result for this compound in this sample.

Analyte & Samples(s) Qualified:

Aroclor-1016

17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171189-MS1, B171189-MSD1

Aroclor-1016 [2C]

17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171189-MS1, B171189-MSD1

SW-846 8260C

Qualifications:

E

Reported result is estimated. Value reported over verified calibration range.

Analyte & Samples(s) Qualified:

Acetone

17B0911-06[LW-06-2-4'], 17B0911-07[LW-03-COMP1-4-8']

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

1,1,2-Trichloro-1,2,2-trifluoroethane

B171392-BS1, B171392-BSD1, S013430-CCV1

Acrylonitrile

B171392-BS1, B171392-BSD1, S013430-CCV1

Bromochloromethane

B171259-BS1, B171259-BSD1

Methyl Acetate

B171259-BS1, B171259-BSD1

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Chloromethane

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], 17B0911-03[VOC Trip Blank], B171392-BLK1, B171392-BS1, B171392-BSD1, S013430-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Carbon Disulfide

B171392-BS1

Isopropylbenzene (Cumene)

B171259-BSD1

MS-09

Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

tert-Butyl Alcohol (TBA)

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171259-MS1, B171259-MSD1

MS-15

Matrix spike and matrix spike duplicate recoveries are outside of control limits. Data validation is not affected since results for this compound in this sample are "not detected", and recovery bias is on the high side.

Analyte & Samples(s) Qualified:

2-Hexanone (MBK)

B171259-MS1, B171259-MSD1

4-Methyl-2-pentanone (MIBK)

B171259-MS1, B171259-MSD1

Bromochloromethane

B171259-MS1, B171259-MSD1

Bromoform

B171259-MS1, B171259-MSD1

Methyl Acetate

B171259-MS1, B171259-MSD1

MS-24

Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.

Analyte & Samples(s) Qualified:

1,2-Dibromo-3-chloropropane (DB)

B171259-MSD1

1,4-Dioxane

B171259-MSD1

2-Butanone (MEK)

B171259-MSD1

Chlorodibromomethane

B171259-MSD1

PR-03

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

17B0911-06[LW-06-2-4], 17B0911-07[LW-03-COMP1-4-8], 17B0911-08[LW-03/MS/MSD-COMP-4-8]

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

17B0911-06[LW-06-2-4], 17B0911-07[LW-03-COMP1-4-8], 17B0911-08[LW-03/MS/MSD-COMP-4-8]

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

tert-Butyl Alcohol (TBA)

17B0911-06[LW-06-2-4], 17B0911-07[LW-03-COMP1-4-8], 17B0911-08[LW-03/MS/MSD-COMP-4-8], B171259-BLK1, B171259-BS1, B171259-BSD1, B171259-MS1, B171259-MSD1

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

2,2-Dichloropropane

17B0911-06[LW-06-2-4], 17B0911-07[LW-03-COMP1-4-8], 17B0911-08[LW-03/MS/MSD-COMP-4-8], B171259-BLK1, B171259-BS1, B171259-BSD1, B171259-MS1, B171259-MSD1, S013391-CCV1

Chloromethane

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], 17B0911-03[VOC Trip Blank], B171392-BLK1, B171392-BS1, B171392-BSD1, S013430-CCV1

Methyl tert-Butyl Ether (MTBE)

17B0911-06[LW-06-2-4], 17B0911-07[LW-03-COMP1-4-8], 17B0911-08[LW-03/MS/MSD-COMP-4-8], B171259-BLK1, B171259-BS1, B171259-BSD1, B171259-MS1, B171259-MSD1, S013391-CCV1

tert-Butyl Alcohol (TBA)

17B0911-06[LW-06-2-4], 17B0911-07[LW-03-COMP1-4-8], 17B0911-08[LW-03/MS/MSD-COMP-4-8], B171259-BLK1, B171259-BS1, B171259-BSD1, B171259-MS1, B171259-MSD1, S013391-CCV1

V-20

Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,2-Trichloro-1,2,2-trifluoroethane

B171392-BS1, B171392-BSD1, S013430-CCV1

Acrylonitrile

B171392-BS1, B171392-BSD1, S013430-CCV1

Bromochloromethane

B171259-BS1, B171259-BSD1, S013391-CCV1

Carbon Disulfide

B171392-BS1, B171392-BSD1, S013430-CCV1

Methyl Acetate

B171259-BS1, B171259-BSD1, S013391-CCV1

Methylene Chloride

B171259-BS1, B171259-BSD1, S013391-CCV1

tert-Butyl Alcohol (TBA)

B171392-BS1, B171392-BSD1, S013430-CCV1

Z-01

Acetone is a common laboratory contaminant.

Analyte & Samples(s) Qualified:

Acetone

17B0911-06[LW-06-2-4], 17B0911-07[LW-03-COMP1-4-8]

SW-846 8270D

Qualifications:

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Benzidine

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], 17B0911-05[LW-06-COMP1-0-4], 17B0911-07[LW-03-COMP1-4-8],
17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-BLK1, B171155-BS1, B171155-BSD1, B171185-BLK1, B171185-BS1, B171185-BSD1

MS-08

Matrix spike recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

2,4-Dinitrophenol

B171155-MSD1

2-Methylnaphthalene

B171155-MSD1

Benzo(g,h,i)perylene

B171155-MSD1

Naphthalene

B171155-MSD1

MS-09

Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

4-Chloroaniline

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-MS1, B171155-MSD1

Aniline

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-MS1, B171155-MSD1

Benzidine

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-MS1, B171155-MSD1

Benzoic Acid

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-MS1, B171155-MSD1

Hexachlorocyclopentadiene

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-MS1, B171155-MSD1

Pentachlorophenol

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-MS1, B171155-MSD1

Pyridine

17B0911-08[LW-03/MS/MSD-COMP-4-8], B171155-MS1, B171155-MSD1

MS-23

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is outside of the method specified criteria. Reduced precision anticipated for any reported result for this compound.

Analyte & Samples(s) Qualified:

Pyrene

B171155-MSD1

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

1,2-Dichlorobenzene

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

1,3-Dichlorobenzene

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

1,4-Dichlorobenzene

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

2,4-Dimethylphenol

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

2-Methylphenol

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

Benzidine

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

N-Nitrosodimethylamine

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

R-06

Matrix spike duplicate RPD is outside of control limits. Reduced precision is anticipated for reported result for this compound in this sample.

Analyte & Samples(s) Qualified:

Pyrene

17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171155-MS1

S-07

One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.

Analyte & Samples(s) Qualified:

2,4,6-Tribromophenol

17B0911-07[LW-03-COMP1-4-8'], 17B0911-08[LW-03/MS/MSD-COMP-4-8']

V-04

Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.

Analyte & Samples(s) Qualified:

Benzidine

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], 17B0911-05[LW-06-COMP1-0-4'], 17B0911-07[LW-03-COMP1-4-8'], 17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171155-BLK1, B171155-BS1, B171155-BSD1, B171155-MS1, B171155-MSD1, B171185-BLK1, B171185-BS1, B171185-BSD1

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Benzidine

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], 17B0911-05[LW-06-COMP1-0-4'], 17B0911-07[LW-03-COMP1-4-8'], 17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171155-BLK1, B171155-BS1, B171155-BSD1, B171155-MS1, B171155-MSD1, B171185-BLK1, B171185-BS1, B171185-BSD1

V-16

Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.

Analyte & Samples(s) Qualified:

Pentachloronitrobenzene

17B0911-05[LW-06-COMP1-0-4'], 17B0911-07[LW-03-COMP1-4-8'], 17B0911-08[LW-03/MS/MSD-COMP-4-8'], B171155-BLK1, B171155-BS1, B171155-BSD1, B171155-MS1, B171155-MSD1, B171185-BLK1, B171185-BS1, B171185-BSD1

V-20

Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

2-Methylphenol

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

3/4-Methylphenol

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

Acetophenone

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

Bis(2-chloroisopropyl)ether

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

N-Nitrosodimethylamine

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

N-Nitrosodi-n-propylamine

17B0911-01[LRB-02-2-20-17], 17B0911-02[LRB-03-2-20-17], B171185-BLK1, B171185-BS1, B171185-BSD1

SW-846 6010C/D SW-846 6020A/B

For NC, Metals methods SW-846 6010D and SW-846 6020B are followed, and for all other states methods SW-846 6010C and SW-846 6020A are followed.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

A handwritten signature in black ink, appearing to read "Lisa A. Worthington", is written over a light gray rectangular background.

Project Location: 683 Northland Ave., Buffalo, NY

Sample Description:

Work Order: 17B0911

Date Received: 2/23/2017

Field Sample #: VOC Trip Blank

Sampled: 2/21/2017 00:00

Sample ID: 17B0911-03

Sample Matrix: Trip Blank Water

Volatile Organic Compounds by GC/MS

Analyte	Results	RL	Units	Dilution	Flag/Qual	Method	Date Prepared	Date/Time Analyzed	Analyst
Acetone	ND	50	µg/L	1		SW-846 8260C	2/27/17	2/27/17 11:45	EEH
Acrylonitrile	ND	5.0	µg/L	1		SW-846 8260C	2/27/17	2/27/17 11:45	EEH

Project Location: 683 Northland Ave., Buffalo, NY

Sample Description:

Work Order: 17B0911

Date Received: 2/23/2017

Field Sample #: LW-03/MS/MSD-COMP-4-8'

Sampled: 2/20/2017 08:45

Sample ID: 17B0911-08

Sample Matrix: Soil

Sample Flags: PR-03, PR-15

Volatile Organic Compounds by GC/MS
