## 1.0 INTRODUCTION

### 1.1 Background

TurnKey Environmental Restoration, LLC (TurnKey) conducted a Limited Phase II Environmental Investigation on behalf of Elmwood Crossing, LLC, at 188 West Utica Street, City of Buffalo, Erie County, New York, (see Figures 1 and 2).

Historic records indicate that commercial operations including multiple automotive repair operations, an automotive parts manufacturing company, city electric garage, and multiple underground storage tanks (USTs) were identified across the Site. The Site is utilized as a parking lot. Surrounding properties include residential and commercial uses.

The purpose of this investigation was to assess subsurface conditions related to the historic use of the Site.

### 1.2 Site Description

The Site is located in a highly developed mixed use commercial and residential area of the City of Buffalo, New York. The subject Site, addressed as 188 West Utica Street is a 1.2 acre vacant parking lot. Most recently the site was used as parking for the former Women's and Children's hospital. Surrounding properties include residential and commercial use.

### 1.3 Previous Study

A Phase I Environmental Site Assessment was completed by Stohl Environmental for the larger 188-204 West Utica Street property, which included this Site. The following recognized environmental conditions ((RECs) were identified for the 188 West Utica parcel, including:

- Historic operations including automotive repair facilities, automotive parts manufacturing, and the City electric garage.
- Municipal records indicate that three (3) USTs were closed in place on-Site. Records also indicate a former pump island and tank vents were located on Site.
- The former buildings and historic uses indicate likely disposal of fill material on the Site.

## 2.0 SOIL/FILL INVESTIGATION

This Limited Phase II Site Investigation included completion of a subsurface soil boring investigation to assess potential environmental impacts from the previous use of the Site.

### 2.1 Soil Boring Investigation

On January 25, 2018, TurnKey's drilling subcontractor, Trec Environmental, Inc. (Trec) mobilized a direct-push drill rig to the Site. A total of 10 soil borings, identified as SB-1 through SB-10, were advanced in areas of suspected RECs to a target depth of 12-16 feet below ground surface (fbgs). Investigation locations are presented on Figure 2.

The soil borings were advanced using 1.5-inch diameter samplers that are 4-feet in length. Continuous four foot sample cores were retrieved from the boring locations in clear PVC sleeves to allow for field characterization of the subsurface lithology and collection of soil samples by TurnKey's Environmental Scientist. Retrieved soil-fill from each boring was screened using a photoionization detector (PID) and visual and/or olfactory observations were noted. Findings of the investigation are described below.

### 2.2 Laboratory Analysis

Soil/fill samples were collected using dedicated stainless steel sampling tools. Representative soil samples were placed in pre-cleaned laboratory provided sample bottles, cooled to 4°C in the field, and transported under chain-of-custody command to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified analytical laboratory.

Representative soil/fill samples were collected and selectively analyzed for NYSDEC CP-51 plus Target Compound List (TCL) volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), and Resource Conservation and Recovery Act (RCRA) metals. Laboratory analytical results are presented below.

### 3.0 INVESTIGATION FINDINGS

Table 1 presents a summary of the field findings for the soil boring investigation. Tables 2 summarizes the soil/fill sample results. For comparison purposes, Tables 2 present the representative soil cleanup objectives (SCOs) for each of the detected parameters as published in 6 NYCRR Part 375 Soil Cleanup Objectives dated May 2010. Laboratory analytical data package is provided electronically in Appendix A.

#### 3.1 Qualitative Soil Screening

Shallow fill, collectively including brick, block, concrete, glass, wood, cinders, coal, and ash (fill) was identified in all 10 of the soil boring (SB) locations across the Site. The presence of fill materials was primarily identified in the upper 0-4 ft, with the deepest fill identified to 12 fbs. Table 1 summarizes the soil boring findings.

Odors were noted in seven (7) SB locations, and PID readings ranged between 0 and 3 ppm, likely related to historic USTs and fuel pumps noted on-Site.

Shallow water was encountered at only one location, at a depth of approximately 4 fbs. No water samples were collected as part of this investigation.

#### 3.2 Soil Analytical Results

Eight (8) SB locations were selected for laboratory analysis (see Table 2). Elevated polycyclic aromatic hydrocarbons (PAHs) exceeding 6NYCRR Part 375 Residential Use Soil Cleanup Objectives (SCOs) were detected in five (5) of the six (6) samples, including three (3) locations exceeding the Industrial Use SCOS. It should be noted that shallow fill was detected in all 10 SB locations across the Site. Total PAHs exceeding 100 ppm were detected at SB-4.

Elevated metals exceeding Residential Use SCOS were detected in three (3) of the six (6) sample locations analyzed for RCRA metals, including arsenic, lead, and mercury, with exceedance of Commercial Use SCOS for lead and arsenic.

In total, exceedances of the Residential Use SCOS were detected in 5 of 8 sample locations.

## 4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of this Limited Phase II Environmental Investigation at the Site, TurnKey offers the following conclusions and recommendations:

- Fill material, including brick, block, concrete, glass, cinders, coal, and ash, was detected in all 10 investigation locations across the site. Fill was primarily identified in the upper 0-4 fbs.
- Odors were noted in seven (7) SB locations, likely related to historic USTs and fuel pumps noted on-Site.
- Historic municipal records indicate three (3) USTs were closed in place on-Site.
- Elevated PAHs were detected exceeding Residential Use SCOs in 5 of 6 sample locations analyzed for PAHs, with several detections exceeding Industrial Use SCOs. Total PAHs exceeding 100 ppm were detected at SB-4.
- Elevated metals, including arsenic, lead and mercury, were detected exceeding Residential Use SCOs, with several detections exceeding Commercial and Industrial Use SCOs.
- Based on the widespread presence of shallow soil-fill across the site, with multiple exceedances of the Residential, Commercial and Industrial Use SCOs, excavated fill material would need to be handled as a potential solid waste, in accordance with all local, state and federal soil-fill regulations.
- Based on the findings of this investigation and the planned redevelopment of the Site for residential use, additional Site investigation and remediation appears warranted. Based on the environmental impacts noted during this investigation, the Site may be eligible for the New York Brownfield Cleanup Program.

## 5.0 LIMITATIONS

This report has been prepared for the exclusive use of Elmwood Crossing, LLC. The contents of this report are limited to information available at the time of the site investigation activities and to data referenced herein, and assume all referenced historic information sources to be true and accurate. The findings herein may be relied upon only at the discretion of Elmwood Crossing, LLC. Use of or reliance on this report or its findings by any other person or entity is prohibited without written permission of TurnKey Environmental Restoration, LLC.

**Notes:**

- Only those parameters detected at a minimum of one sample location are presented in this table; other compounds were reported as non-detect.
- Values per 6NYCRR Part 375 Unrestricted Soil Cleanup Objectives (SCOs).
- Sample results were reported by the laboratory in ug/kg and converted to mg/kg for comparisons to SCOs.

**Definitions:**

ND = Parameter not detected above laboratory detection limit.

-- = No value available for the parameter; Parameter not analysed for.

J = Estimated value; result is less than the sample quantitation limit but greater than zero.

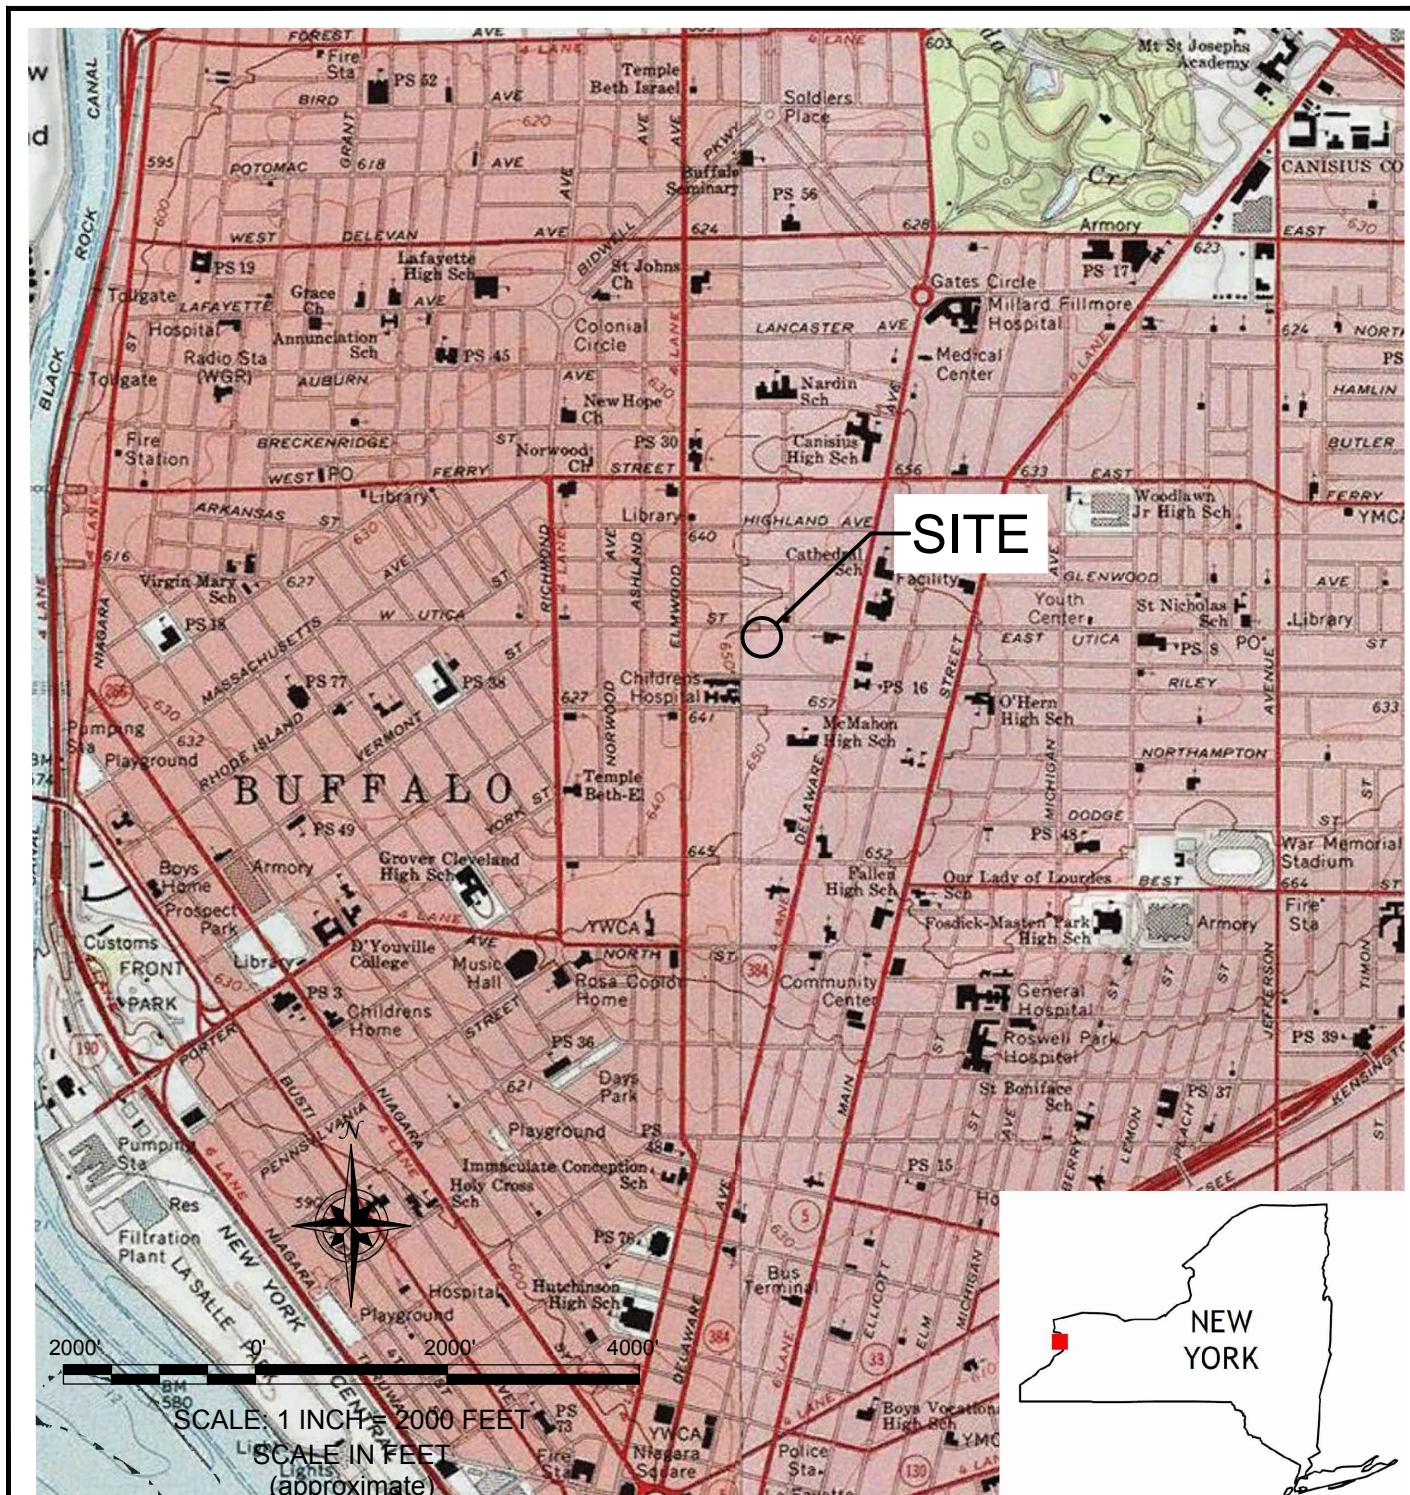

<b>Bold</b>	= Result exceeds Unrestricted Use SCOs.
<b>Bold</b>	= Result exceeds Residential Use SCOs.
<b>Bold</b>	= Result exceeds Commercial Use SCOs.
<b>Bold</b>	= Result exceeds Industrial Use SCOs.

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

#### GC/MS Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

#### GC Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
F4	MS/MSD RPD exceeds control limits due to sample size difference.

### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
E	Result exceeded calibration range.

### Glossary

#### Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

#### Narrative

#### Job Narrative 480-130646-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 1/26/2018 3:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 7.5° C.

#### GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method(s) 8270D: The following samples were diluted due to color and, viscosity: SB-7 (3"-9") (480-130646-6) and SB-8 (3"-1') (480-130646-7). Elevated reporting limits (RL) are provided.

Method(s) 8270D: The following sample required a dilution due to the nature of the sample matrix: SB-7 (3"-9") (480-130646-6). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8270D: The following samples were diluted due to color and, viscosity: SB-1 (36"-1') (480-130646-1), SB-4 (3"-1') (480-130646-3), SB-5 (3"-1') (480-130646-4) and SB-6 (9"-2') (480-130646-5). Elevated reporting limits (RL) are provided.

Method(s) 8270D: The following samples required a dilution due to the nature of the sample matrix: SB-1 (36"-1') (480-130646-1) and SB-6 (9"-2') (480-130646-5). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

Method(s) 8082A: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-397683 and analytical batch 480-397728 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because all other QC criteria are within limits. Therefore, the data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Accreditation/Certification Summary

Client: Turnkey Environmental Restoration, LLC  
Project/Site: Benchmark - 188 West Utica

TestAmerica Job ID: 480-130646-1

### Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	10026	03-31-18 *

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

\* Accreditation/Certification renewal pending - accreditation/certification considered valid.

## Method Summary

Client: Turnkey Environmental Restoration, LLC

Project/Site: Benchmark - 188 West Utica

TestAmerica Job ID: 480-130646-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL BUF
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL BUF
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	TAL BUF
6010C	Metals (ICP)	SW846	TAL BUF
7471B	Mercury (CVAA)	SW846	TAL BUF
Moisture	Fine Moisture	EPA	TAL BUF

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A
