DEPARTMENT OF FIRE

City of Buffalo

INTER DEPARTMENTAL CORRESPONDENCE

TO Chief Joseph Haynes

Fire Prevention Bureau

FROM Engine 10

DATE 8-27-79

SUBJECT 189 Hanson St.

DEAR SIR:

Please notify Building Division that a 2½ story framed building at 189 Hanson St. formerly occupied by Roberts Tavern is vacant and in an unsatisfactory, open condition.

There are no exposures but it poses a dangerous condition to Fire Dept. personnel if involved in a fire.

It is recommended that it be demolished.

(confirming phone call to Chief Haynes)

189 Hanson

CITY OF BUFFALO
DEPT. OF FIRE
'79 AUG 28 PM 12:23
ROOM 2401

RESPECTFULLY,

Lt. John Hauseath

Engine 10 - 3rd Plt.

189 GANSON ST.

CITY OF BUFFALO
INTER DEPARTMENTAL CORRESPONDENCE

To: Joseph M. Baudo, Director
Division of Housing and Building Inspections

Date: August 30, 1979

Subject: 189 Ganson Street

From: Bureau of Fire Prevention
Department of Fire

The above-noted location, a 2½-story vacant frame building, was reported to this office by the fire company officer to be in a vandalized, open condition.

He stated that there are no exposures, but it poses a dangerous condition to Fire Department personnel if a fire were to occur. He recommended demolition.

This is being referred to you for whatever action you deem necessary.

Sincerely,

Joseph E. Hynes, Chief
BUREAU OF FIRE PREVENTION
Department of Fire

Re: Removal & Disposal
of Underground Tank

Gentlemen:

Please be advised that the Elmwood Tank & Piping Corporation has been awarded the contract to clean, gas free and legally dispose of the following underground tank and its contents, as per D.E.C. Regulations, at the listed location:

LOCATION: Downing Container Service
191 Ganson Street
Buffalo, New York

SIZE: 1-4,000 Gallon Steel Tank

We are proceeding with the removal of the aforementioned underground tank on November 24, 1987 in accordance with your verbal approval of our telephone conversation of November 18, 1987.

If you require further information, please do not hesitate to contact us.

Very truly yours,

ELMWOOD TANK & PIPING CORP.

RE: 191 Ganson Street

Dear Mr. Ruch:

As a result of a Fire Department inspection at your facility, the following recommendations should be implemented:

(1) Outside storage tanks (waste, oil and kerosene) to be bunkered and protected by bollards.

(2) Oxygen, propane and acetylene tanks to be stored outside on pads chained and bollard or chain link fenced protected.

Property is protected by Wells Fargo Security System.

Protective bollards will be done by December of 86.

Sincerely yours,

RE: 191 Ganson Street

Dear Mr. Ruch:

As a result of a Fire Department inspection at your facility, the following recommendations should be implemented:

1. Portable fire extinguisher locations should be marked with iridescent or luminous letters for easy identification.

2. The outdoor kerosene storage tank on the east wall should have protective posts around it. This would obviate any vehicular damage to the tank.

Henry Eckert, the maintenance manager, alluded to the plan to have the acetylene, oxygen and propane stored outside within thirty (30) days from this inspection date.

The office and cafeteria areas are all protected by a heat detection system wired into Wells Fargo Alarm Service Inc.

The balance of your facility conformed to all existing codes and standards.

Sincerely yours,

Edward C DeYoung

RE: 191 Ganson Street

Dear Mr. Ruch:

In response to a Fire Department inspection at your facility, the following recommendations should be implemented:

1. The acetylene, oxygen, and propane stored and chained against the non-combustible wall should have a protective guard-rail to deter potential mechanical damage.

2. Portable fire extinguishers should be updated and locations marked with iridescent or luminous letters for easy identification.

3. There should be protective posts around the outdoor kerosene storage tank. This would obviate any vehicular damage to the tank.

The office and cafeteria areas are all protected by a heat detection system wired into Wells Fargo Alarm Service Inc., 856-4120.

The balance of your facility conformed to all existing codes and standards.

Re: Dump Permit

Gentlemen:

Upon due application and approval of concerned parties, permission is hereby granted to dump stone and clay only on Ganson Street in the slip located in the American Ship Building Yard, for the purpose of filling said land to grade. A condition of this permit being that the top of slope is to be a minimum of 30 feet from existing caisson gate in slip.

This permit is subject to immediate revocation for any infraction of Chapter IV, Section 29 (Dumps) and Chapter VII, Section 179 (Open Fires) of the City Ordinances and will not bar prosecution for any and all violations of any and all City Ordinances.

Re: Safeguarding Underground Tank
191 Ganson Street, Buffalo, N. Y.

Dear Sir:

We have for acknowledgment your letter of May 8, 1963 in regard to the above matter.

Upon contacting Mr. Davidson at the Buffalo Plant, it was disclosed that Mr. Davidson performed the work of safeguarding and no licensed contractor was engaged for this service.

In our letter of April 23, 1963 which stated that the services of a contractor licensed according to Buffalo Flammable Liquid Ordinance, Chapter XXIX, Article II, Section 26, was to perform the safeguarding procedures.

It is also necessary for a member of this Bureau to witness the safeguarding procedures on all tanks in the City of Buffalo.

Mr. Davidson's attempt to perform the safeguarding without our knowledge has put him in a position where he is in violation of the aforementioned Chapter XXIX.

It is now imperative you contact a licensed contractor in the City of Buffalo to see if the work of safeguarding has been performed properly.

Please advise this Bureau when you have selected a contractor, supplying his name, address, and date when work is to be accomplished.

If you have any further questions regarding this matter, please contact Inspector J. E. Skalski, Bureau of Fire Prevention, 2301 City Hall, Buffalo, New York.

Very truly yours

Re: Underground Tank & Dispensing Pump
191 Ganson Street, Buffalo, N. Y.

Gentlemen:

A recent inspection of the above premises by the Bureau of Fire Prevention has disclosed there is an out-of-use underground tank and dispensing pump.

You are hereby notified the tank must be safeguarded.

Enclosed is an excerpt of Sections 98 and 99 of Chapter 29, Buffalo Flammable Liquid Ordinance for your information pertaining to your particular situation and the necessary measures to be taken.

If you foresee no further use of the tank in the future, it would be advisable to follow the procedure underlined in Section 99 paragraph (c)

A contractor licensed according to Buffalo Flammable Liquid Ordinance, Chapter XXIX, Article II, Section 26 must perform the safeguarding procedures aforementioned.

Please advise this Bureau of your intentions for the above location at your earliest convenience.

If you have any further questions regarding this matter, please contact Inspector J. E. Skalski, Bureau of Fire Prevention, 2301 City Hall, Buffalo, New York.

Very truly yours

191 Ganson St

47. At the request of Dr. Stellbrecht - Comm. Ship Build Co. checked the Punch Ship Bldg for the installation of 2 Fuel Oil Furnaces on the 2nd floor. when they plan to to equip a wood work shop.

Plans call for the installation of Two - Mor-Flo Fuel Oil Burning Warm Air Furnaces - to be used with a fan system for air distribution. The supply tank effect 750 gal. was to be placed on the roof of the one story section of the bldg - this I explained would not be accepted. Advised them to place tank in the yard near a fence and pump the Oil to a small reservoir tank - 25 or 30 gal, on the roof.

Feb. 3-47 Fuel oil Furnaces installed - 2 tanks placed in yard. and oil pumped to a reservoir tank on the roof. Fuel line to the Furnaces is run around the outside of the bldg to the front of furnace location before entering bldg. Both Storage tanks and reservoir tank are properly vented - and the overflow from the reservoir tank is returned to the storage tanks - Installation OK J.O.B. Installation work by Joe Diebold.

RE: 191 Ganson Street

191 Ganson

Dear Mr. Ruch:

In response to a Fire Department inspection at your facility, the following recommendations should be implemented:

1. The acetylene, oxygen, and propane stored and chained against the non-combustible wall should have a protective guard-rail to deter potential mechanical damage.

2. Portable fire extinguishers should be updated and locations marked with iridescent or luminous letters for easy identification.

3. There should be protective posts around the outdoor kerosene storage tank. This would obviate any vehicular damage to the tank.

The office and cafeteria areas are all protected by a heat detection system wired into Wells Fargo Alarm Service Inc., 856-4120.

The balance of your facility conformed to all existing codes and standards.

Sincerely yours,

Edward C. DeYoung

RE: 191 Ganson Street

Dear Mr. Ruch:

As a result of a Fire Department inspection at your facility, the following recommendations should be implemented:

(1) Outside storage tanks (waste oil and kerosene to be bunkered and protected by bollards.

(2) Oxygen, propane and acetylene tanks to be stored outside on pads chained and bollard or chain link fence protected.

Property is protected by Wells Fargo Security System.

GEORGE W. BURNETT, INC.

145 GANSON STREET • BUFFALO, NEW YORK 14203 • (716) 856-8300 • FAX (716) 856-0760

June 14, 1995

City of Buffalo
Room 301
City Hall
Buffalo, NY 14202

Subject: Permit for diesel fuel storage
145 Ganson St, Buffalo, NY 14203

George W. Burnett, Inc. is a trucking company that operates as a common carrier of goods in intrastate, as well as interstate commerce.

A permit is hereby requested for the installation of a 10,000 gallon diesel fuel storage tank at 145 Ganson Street, Buffalo, New York. This diesel fuel facility will be used to fuel company owned vehicles only.

The tank will be a totally portable, above ground storage tank, measuring 8' x 26'8", with a dike that provides 110% secondary containment yielding an overall dimension of 35' x 10'10" x 4'. A drawing and specification sheet is provided for your convenience.

The tank and dike will be located at least 50 feet from any structure located on the property at 145 Ganson Street. A drawing of the property and proposed tank location is also provided for your convenience.

This state of the art tank will provide the utmost in confidence and security for spill containment. We have given great consideration with respect to minimizing the hazards of any releases from this tank.

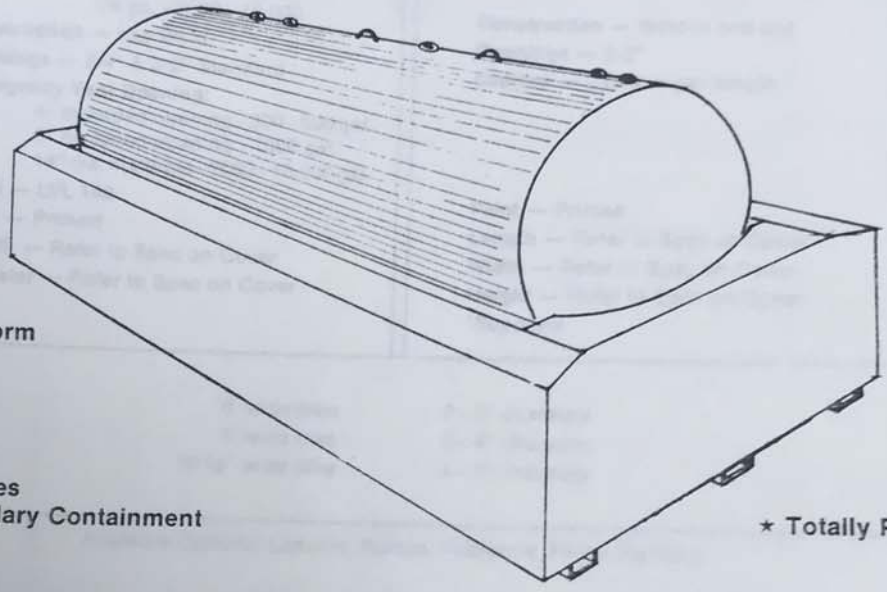
145 Ganson

189 Ganson

The tank will be located away from buildings and vehicular traffic, and will be located on level ground.

Lancaster Tank & Steel Products, Inc. has insured that all hoses, piping, fittings, couplings, containment surfaces, pumps, valves and control instrumentation is guaranteed to meet all EPA, as well as state and local regulations and enforceable codes for a fuel storage facility.

Be advised that we are a 24 hour operation with personnel on the premises at all times that are trained in emergency response to spills. Our management has developed a knowledge and sensitivity to the importance and urgency to a discharge cleanup and removal plan.



Yours truly,
GEORGE W. BURNETT, INC.

Eric J. Bauer
Vice President

RECORDS CUSTODIAN

- TO THE APPLICANT:

—Records Provided

☐ The reproduction costs for the records provided are $ _____

☐ Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided: _____)

—Records Not Available

☐ Records cannot be found after diligent search

☐ The Department is not the custodian for records indicated

—Records Denied

I hereby certify that access to the records—or part of the records—circled above has been denied to the applicant for the reason(s) checked below:

☐ Specifically exempt by other statute

☐ Unwarranted invasion of personal privacy

☐ Would impair present or imminent contract awards or collective bargaining negotations

☐ Are examination questions or answers

☐ Are inter-agency or intra-agency materials that are not:
- statistical or factual tabulations or data
- instructions to staff that affect the public
- final agency policy or determinations; or
- external audits, including but not limited to audits performed by the comptroller and the federal government

☐ Would endanger the life or safety of any person

☐ Are compiled for law enforcement purposes and which, if disclosed would:
- interfere with law enforcement investigations or judicial proceedings
- deprive a person of the right to a fair trial or impartial adjudication
- identify a confidential source or disclose confidential information relating to a criminal investigation, or
- reveal criminal investigative techniques or procedures, except routine techniques and procedures

☐ Are computer access codes

☐ Are trade secrets

We have reviewed the analytical results for the excavation samples from the above-referenced site. The results exceed our soil guidance values. However, since the results were low levels, we will not require any further work at this time. The site will have a status of "inactive".

Your cooperation is appreciated. If you have any questions, please call Mr. Robert Crossen of this office at (716) 851-7220.

Sincerely,

Salvatore A. Calandra

Re: Remedial Investigations WMNY - Ganson Street Property

Dear Mr. Crossen:

Enclosed with this letter is a copy of the Soil and Sediment Remediation Report that has been generated as part of an environmental assessment that was perform at the former Waste Management of New York, Inc. hauling division property on Ganson Street in Buffalo, N.Y. The enclosed remediation report represents the completion of remedial activities regarding the removal of petroleum impacted soils and sediments as part of a purchase and sale agreement, where WMNY was selling the Ganson Street property to another party.

The remedial reports documents the results of the remedial effort that was performed in accordance with the April 6, 1995, Remedial Action Plan Soil Investigation Report. All areas where chemical constituents had been identified were removed and identified as clean by AFI personnel. The results of composite samples taken from the excavation and removal areas show that the areas of interest were cleaned up to background levels or lower for all chemical constituents.

Please feel free to contact me at our Fairport, NY, location, indicated below, should you have any questions or comments regarding this matter. Thank-you.

Sincerely,

John A. Minichiello

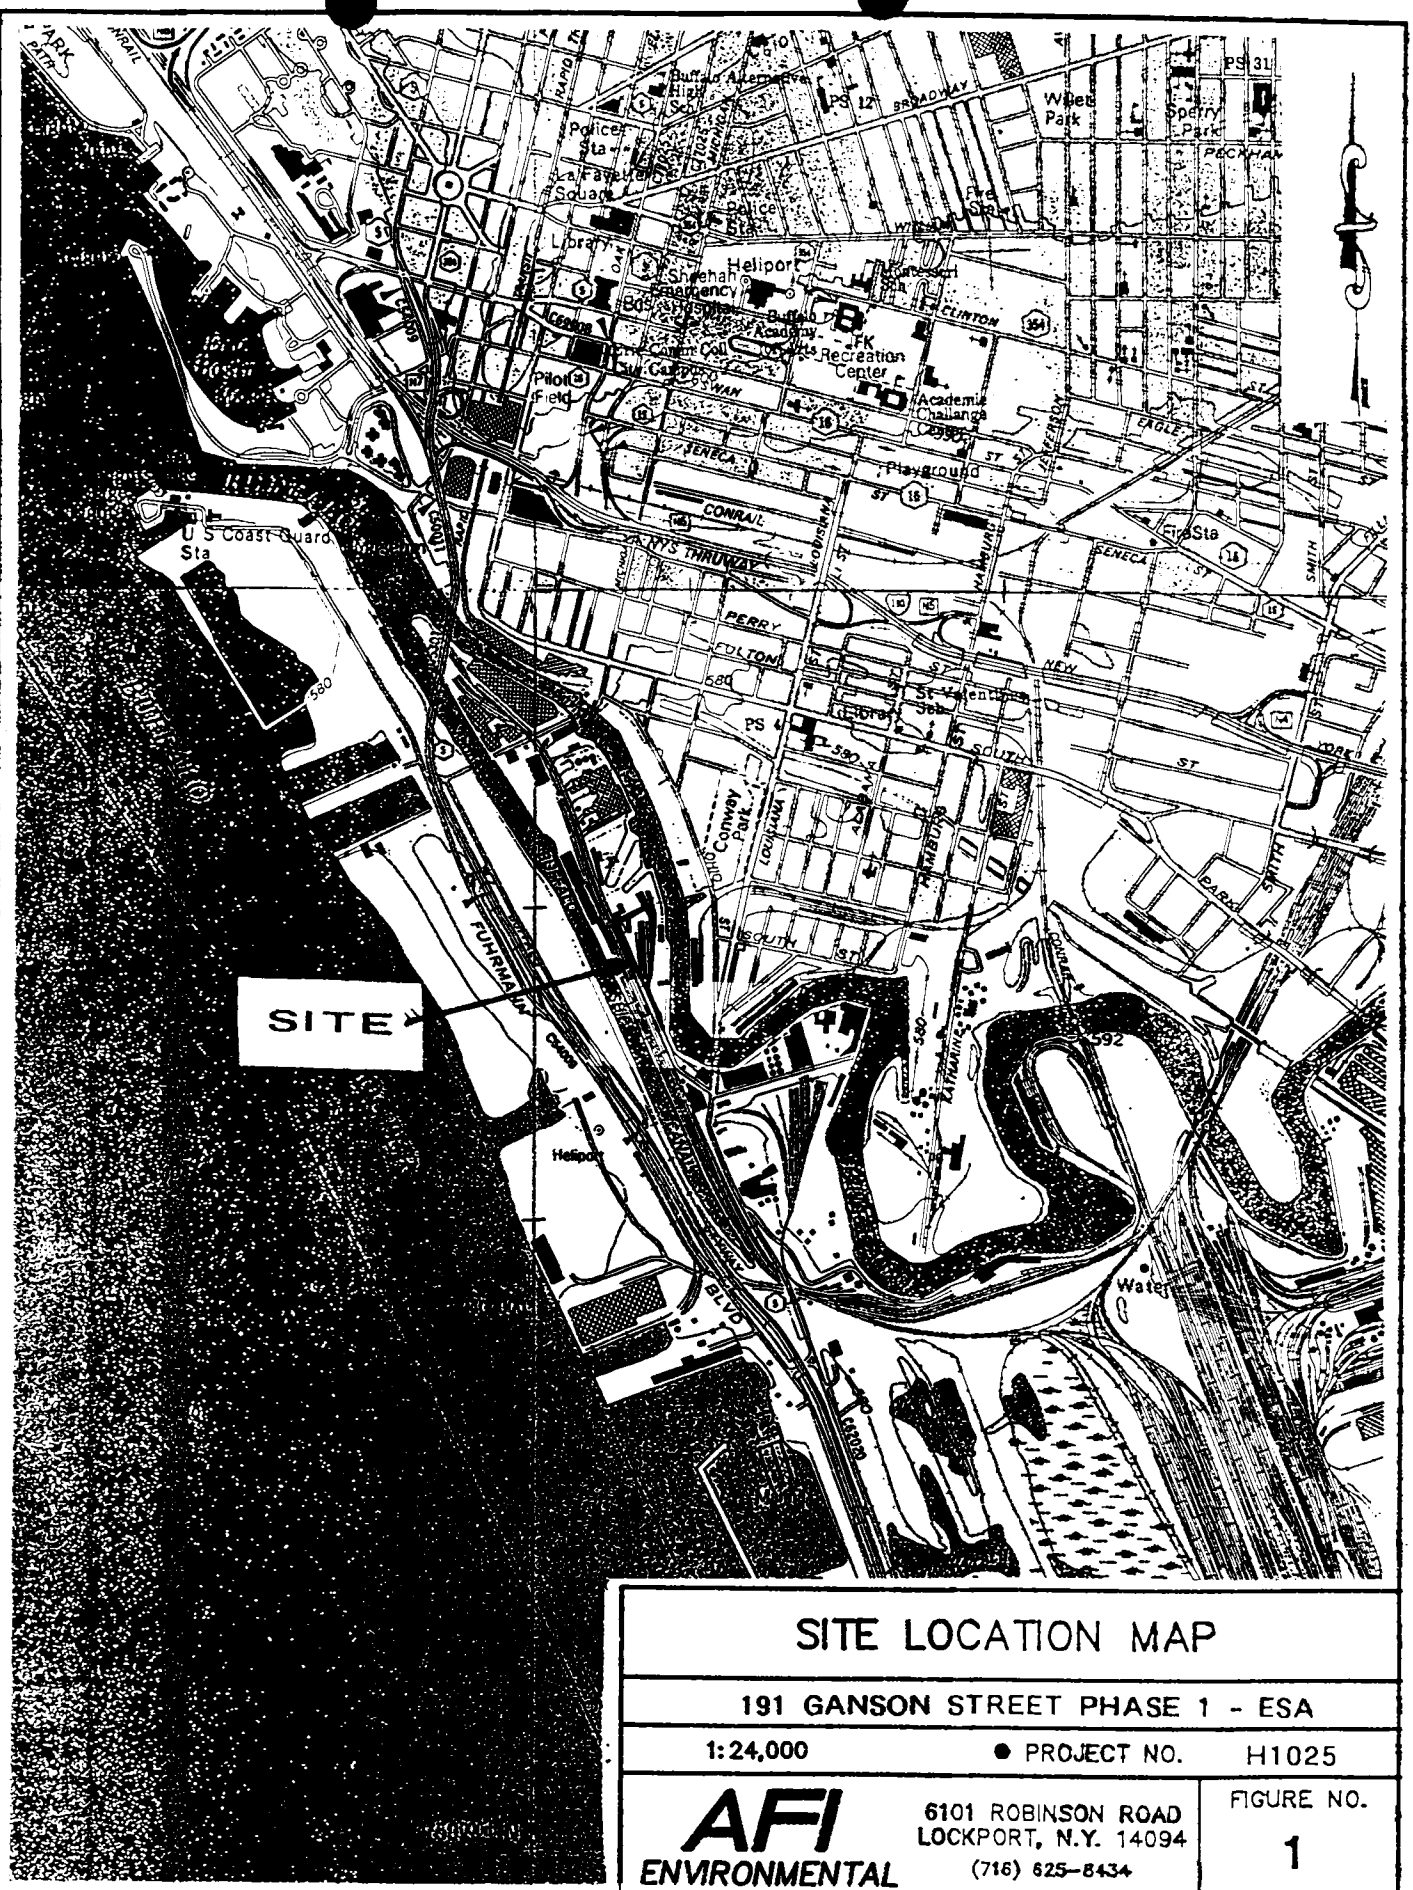
1.0 INTRODUCTION

1.1 BACKGROUND

AFI Environmental has prepared this *Soil and Sediment Remediation Report* on behalf of Waste Management of New York as documentation of their cleanup activities at 191 Ganson Street; prior to their move to 70 North Gates and subsequent occupation of the facilities by new tenants and/or owners. This report addresses petroleum impacted soil and sediment contamination encountered at the Downing Container Facility; located at 191 Ganson Street, Buffalo, New York (See figure #1 for site location map). This facility was the storage yard and repair shop for Waste Management of New York's Downing Container Division garbage pickup, rolloff and rental operations. This *Soil and Sediment Remediaton Report* (SSRR) was prepared as the final step of a three part process that included Environmental Assessment, Remedial Soil Investigation/ Delineation, and Cleanup.

1.2 PURPOSE AND OBJECTIVES

Waste Management of New York Inc. (WMNY), retained AFI Environmental to document the Soil and Sediment Remediation activities conducted by Environmental Products and Services, Inc. (EPS), Waste Managements's cleanup contractor at their 191 Ganson Street Facility.



This report has been developed for the private use of Waste Management of New York Inc., but all discussed activities were conducted under the observation of NYSDEC Spill Control personnel.

1.3 SCOPE OF WORK

The Soil and Sediment Remediation Activities conducted at 191 Ganson Street were consistent with the site specific recommendations made by AFI Environmental in their report entitled **"REMEDIAL ACTION PLAN SOIL INVESTIGATION REPORT"** dated April 6, 1995. These recommendations included:
(See figure #2 for site map).

- Removal of a 10' by 10' by 18" area of soil where chemical constituents were identified in the area of previously removed Underground Storage Tank (UST).

- Excavation of Study Area # 3, a 25' by 25' by 18" area located in the vicinity of the rolloff staging area where toluene contaminated soils were staged awaiting NYSDEC approval for disposal.

FIGURE NO. 1

- o Excavation of stained areas of the parking lot near the fuel islands and near the overnight truck parking area and other areas where visible.

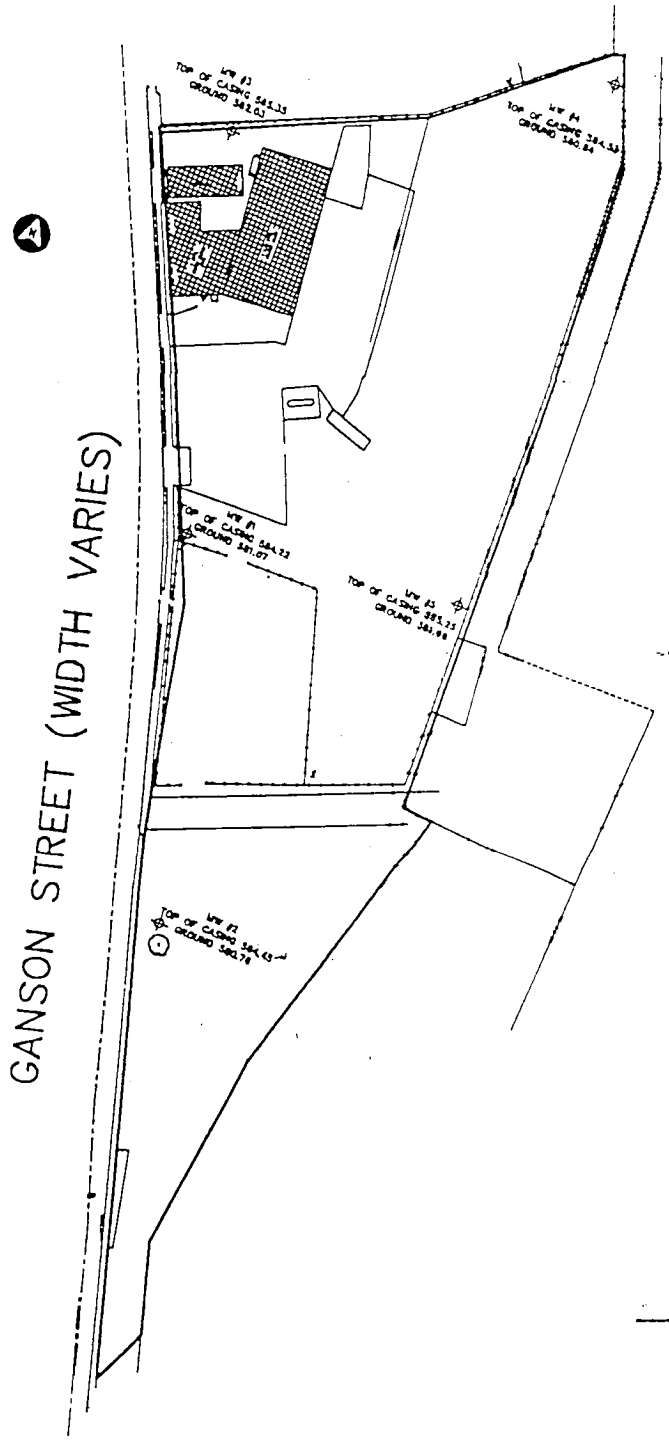
- o Sediment removal and cleaning of the Storm water drains.

- o Backfilling and compacting of all excavated areas with #2 crusher run stone.

- o Sampling excavated areas to demonstrate all contaminates have been removed.

- o Sampling excavated soils for waste characterization and disposal services purposes.

2.0 REMEDIAL PROGRAM



2.1 OVERVIEW

The Remedial program implemented at the facility located at 191 Ganson Street consisted of the excavation, removal and off-site disposal of impacted soils from the following areas (See Figure #3): the vicinity of the previously removed UST, near the North property line; from the roll-off staging area, near the East fence line, from the overnight truck parking area, near the gas fueling island; and contaminated sediment from the storm water sewer. This approach was utilized due to the relatively small volume of chemically impacted soil/sediment occurring at the site. All remedial activities were performed by Environmental Products and Services, Inc., a qualified and experienced remedial contractor, under the supervision of an AFI Environmental Engineer. In addition, New York State DEC Spill Control Personnel observed excavation and disposal activities. The procedures and equipment utilized were selected to minimize any potential for cross contamination, while maximizing the effectiveness of the clean-up effort. The following subsections provide a detailed description of the remedial measures implemented at the WMNY Site.

2.2 SOIL REMEDIATION

2.2.1 SOIL EXCAVATION NEAR THE PREVIOUSLY REMOVED UST (NORTH PROPERTY LINE)

Gravel and soil were excavated from a 10' by 10' by 18" area in the vicinity of the previously removed UST location (See figure #3). The excavation was accomplished using a backhoe and front end payloader operated by EPS personnel. The original excavation was enlarged by an additional 10' by 10' by 18" when petroleum stained material was identified by the AFI field engineer on the Eastern wall of the excavation. Similarly the depth of the excavation was increased to 30" when stained soils were evident on the floor of

the 18" excavated area. The excavation continued horizontally and vertically until no visual evidence of petroleum impacted soils were observed. All scrapings were placed in poly-lined roll-off containers. Transport and disposal was in accordance with section 2.4. The reclamation of the excavation was in accordance with 2.5.

2.2.2 SOIL EXCAVATION IN THE VICINITY OF THE ROLL-OFF STAGING AREA (EAST PROPERTY LINE)

Gravel and soil were excavated from a 25' by 25' by 18" area in the vicinity of the roll-off staging area (See figure #3). The excavation was accomplished using a backhoe and front end payloader operated by EPS personnel. The original excavation was increased when petroleum stained material was identified by the AFI field engineer on the floor of the excavation. The depth of the excavation was increased to 36" when stained soils were evident on the floor of the 18" excavated area. Examination of the base of the excavation showed the fill material to be placed around a historic railroad hid with wooden cross ties and a wooden floor or foundation. The detenation of the wooden floor stained the soils black. This foundation layer continued in all directions for a thickness of approximately 4" - 5". To verify the contact of this fill layer one analytical sample was collected. The excavation continued to the depth and width where minimal evidence of impacted soils was observed. All scrapings were placed in poly-lined roll-off containers. Transport and disposal was in accordance with section 2.4. The reclamation of the excavation was in accordance with 2.5.

2.2.3 SOIL EXCAVATION IN THE VICINITY OF THE OVERNIGHT TRUCK PARKING AREA AND FUEL ISLANDS.

Gravel soil in this section of the parking lot was excavated to a depth of 6" by a width of 15' and the length of 125' on both the East and West sides of the overnight truck parking area and fuel island. The excavation was completed by EPS Personnel using the front bucket of a payloader and scraping the surface to a depth of 6". A visual check of the excavation was made by AFI Personnel, after the excavation, to verify that all signs of staining had been removed. All scrapings were places in poly-lined roll-off containers. Transport and disposal was in accordance with section 2.4. The reclamation of the excavation was in accordance with 2.5.

2.2.4 SPOT CLEAN UP

Gravel soil in the parking lot displaying visual signs of staining was excavated using a backhoe and placed into a poly-lined roll-off container. Excavation was to a depth and lateral extent large enough to remove all visual signs of staining.

The transport and disposal of stained soil excavated from these

areas was in accordance with section 2.4. The reclamation of the excavation was in accordance with section 2.5.

Following the completion of the measures outlined above, all areas excavated were filled with number 2 crusher run stone, compacted and leveled.

2.2.5 REMOVAL OF DRILLING CUTTINGS FROM PREVIOUSLY INSTALLED WELLS

Three (3) 55 gallon drums containing auger cuttings collected during the installation of the monitoring wells installed on site were disposed of by EPS Personnel. The drums were off-loaded into the Poly-lined roll-off containers, crushed flat, and disposed of with the soils.

2.3 SEDIMENT REMEDIATION

2.3.1 STORM SEWER SEDIMENT

Storm sewer remediation was conducted by the above contractor at later date. This was due to the need, by WMNY to obtain approval, from the Buffalo Sewer Authority, for disposal of the discharge material; prior to discharge into the Buffalo Sewer System. Sediment was removed from four (4) Storm Water inlets by using a vacuum line attached to a 3,000 gallon vacuum truck. Flushing of the sewer line was accomplished using a high pressure, water lancing system. The vacuum truck was operational during the sewer flushing procedure to capture the wash water. After flushing, the sediment accumulated at each inlet basin was manually removed and captured by the vacuum truck. All sediment and wash water was disposed of at the Buffalo Sewer Authority under proper disposal permits. AFI field engineers inspected the clearing activity after the activities had been completed.

2.4 TRANSPORT AND TREATMENT/DISPOSAL OF SOLID AND LIQUID WASTES

Impacted soil and sediment generated during the remedial program were placed in poly lined roll-off containers prior to removal from the site. This material was transported by Waste Management, a permitted hauler, to High Acres Landfill, a non-hazardous waste landfill, which was authorized to receive petroleum impacted soils. Analytical data from the chemical profiling of impacted soils collected prior to the remedial activities was utilized for waste characterization purposes. Analysis of soil collected during excavation is presented in Appendix A. This information was utilized by Waste Management personnel to complete Form 47-19-7, *Application for Treatment or Disposal of an Industrial Waste Stream* contained in Appendix B. All soils were disposed at the High Acres Landfill in Fairport, New York.

Wash water generated during the Storm Water cleaning, and collected by the vacuum truck, was transported under the appropriate permits to Buffalo Sewer Authority for treatment and/disposal. Sediment contained within the vacuum truck were removed and disposed at a permitted facility. Records documenting the transport and proper disposal of all solid and liquid waste were retained by Waste Management personnel and are not part of this report.

2.5 EXCAVATION RECLAMATION

2.5.1 BACKFILLING AND COMPACTION

EPS Personel backfilled each excavated area with clean #2 crusher run stone, then compacted the area by repeated running over the stone with a payloader. Final shaping was conducted by scraping the surface level. Photographs of the facility clean up activity are presented in Appendix C and Analytical Results are present in Appendix A.

2.5.2 BLACKTOPPING

Blacktop areas stained from the chronic overnight leaking of oil and grease from Packer and Roll-off Trucks, were scraped and resurfaced with a 1" top coat of fresh black top. (Photographs see Appendix C).

3.0 ANALYTICAL TESTING

3.1 SAMPLE LOCATIONS

Two (2) types of media were sampled during the course of the investigation performed by AFI Environmental, and can be classified as either soil or gravel. A total of five (5) soil samples were collected. The locations from which these samples were obtained are depicted on Figure 4.

3.2 SAMPLING TECHNIQUES

Two (2) sampling techniques were utilized to collect soil and sediment samples on June 29, 1995, and are described in the following subsections. All samples were collected by an AFI Environmental field engineer and were placed in precleaned laboratory sample bottles, which were labeled with the sample number, date and time of collection, sampler's initials, and the analyses requested.

3.2.1 GRAB SAMPLES

With the exception of the impacted soil samples collected from the location where UST was previously removed, the Roll-off staging area excavation sampling, and the sampling from the excavation near the truck staging area, the remaining soil samples were collected as grab samples. Grab samples were collected using a coated steel trowel that was decontaminated via a detergent wash and deionized water rinse prior to the collection of each sample. Grab soil samples were collected at the base of the excavation conducted in the vicinity of the Roll-off staging area.

3.2.2 HOMOGINIZED COMPOSITE SAMPLES

Homogenized composite samples were assembled to characterize background soil quality and to chemically profile the quality of soils remaining within the excavated areas once the visual evidence of impacted soils had been excavated. Homogenized Composite samples were also collected as a means of profiling soils for waste characterization purposes.

3.3 SAMPLING LOCATIONS

3.3.1 SAMPLING IN THE AREA OF THE PREVIOUSLY REMOVED UST

The sample from the site of the previously removed UST, identified as sample #3 was assembled from samples collected from five (5) points situated at the eastern, western, nothern, southern and bottom margin of the excavated area. Soil from each of these points was collected, placed on a poly sheet, and mixed to obtain a homogenous composite sample. (See figure #4 for sample location and Appendix A for results).

3.3.2 SAMPLING THE EXCAVATION IN THE VICINITY OF THE ROLL-OFF STAGING AREA

The sample from the site of the Roll-off staging area, sample #1 was assembled from samples collected from five (5) points situated at the eastern, western, southern, and north walls as well as the floor of the excavation. Soil from each of these points was collected, placed on poly sheet, and mixed to obtain a homogenous composite sample.

3.3.3 SAMPLING THE SUB-BASE OF THE ROLL-OFF STAGING AREA EXCAVATION

The sample from the Sub-base of the roll-off staging area excavation was collected as a grab sample from the area demonstrating signs of high carbon/wood content (black).

3.3.4 SAMPLING THE EXCAVATION IN THE VICINITY OF THE OVERNIGHT TRUCK PARKING AREA

The sample from the site of the overnight truck parking area, sample #5, was assembled from samples collected from five (5) points situated at the eastern, western, southern, and north walls as well as the floor of the excavation. Soil from each of these points was collected, placed on poly sheet, and mixed to obtain a homogenous composite sample.

3.3.5 WASTE CHARACTERIZATION

The sampling collected for Waste Characterization verification was collected as a composite sample; randomly selected from the spoils pile of excavated material, prior to being loaded into the roll-off container. The composite was made up from 3 distint sub-samples.

3.4 ANALYTICAL TESTING

All soil and sediment samples were transported under proper chain of custody records to Lozier Labs of Rochester immediately following collection on June 29, 1995. All samples underwent testing for waste characterization/PCBS, TCLP Stars 8021, and TCLP Stars 8270. These analytical methods were selected based upon results from earlier investigations at the project site.

The Lozier laboratory report containing the analytical results, QA/QC data, and chain of custody records is presented in Appendix A. These analytical results are discussed in the following paragraphs:

3.5 SOIL SAMPLES

3.5.1 ANALYTICAL RESULTS FROM THE FORMER SITE OF UST

Analytical results for Sample #3 collected as a composite sample from the sides and base of the former UST excavation are presented in Appendix A. As presented these results show that all values for PCB's except PCB-1260 are below quantifiable limits. PCB-1260 was detected at .27 mg/kg. Benzene and Tolumene were detected at 6.9 ug/1 and 1.6 ug/1 respectfully. All Poly Nuclear Aromatic Hydrocarbons identified in EPA method 8270 were below quantifiable limits.

3.5.2 ANALYTICAL RESULTS FROM THE ROLL-OFF STAGING AREA

Analytical results for Sample #1 collected as a composite sample from the sides and base of the roll-off staging area are presented in Appendix A. As presented these results show that all values for

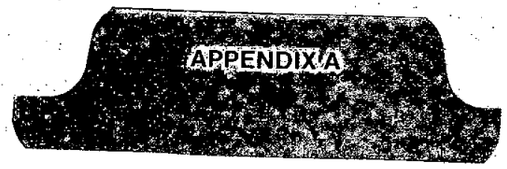
PCB's except PCB-1260 are below quantifiable limits. PCB-1260 was detected at .18 mg/kg. All Poly Nuclear Aromatic Hydrocarbon identified in EPA method 8270 and volatiles identified in EPA Method 8021 were below quantifiable limits.

3.5.3 ANALYTICAL RESULTS FROM BASE OF ROLL-OFF STAGING AREA

Analytical results for Sample #2 collected from the base of the roll-off staging area as a grab sample are presented in Appendix A. As presented these results show that all values for PCB's were below quantifiable limits. Benzene and Toluene were detected at 9.5 ug/1 and 5.0 ug/1 respectfully. All Poly Nuclear Aromatic Hydrocarbon identified in EPA method 8270 were below quantifiable limits.

3.5.4 ANALYTICAL RESULTS FROM TRUCK STAGING AREA

Analytical results for Sample #5 collected as a composite sample from the sides and base of the excavation near the truck staging area are presented in Appendix A. As presented these results show that all values for PCBare below quantifiable limits. All Poly Nuclear Aromatic Hydro Carbon identified in EPA method 8270 and all volatiles identified in 8021 TCLP Extraction were below quantifiable limits.



3.5.5 ANALYTICAL RESULTS FOR WASTE CHARACTERIZATION

As presented in Appendix A, results of Sample #4 analysis indicate that all parameters identified in EPA Method 8270, EPA Method 8021, and EPA Method 608 were below quantifiable limits, except for Toluene at 2.0 ug/L.

4.0 SUMMARY

The evaluation of analytical data resulting from the modified Phase II investigation and supplemental remedial investigation, at 191 Ganson Street, identified some chemical constituents within the soils and sediment from isolated areas across the site and within the storm water drainage system. The data from on site groundwater monitoring wells did not show any signs of chemical contamination of the Groundwater leaving or entering the site.

All areas where chemical constituents were identified in the soils were removed by EPS Personnel and verified as clean by visual inspection by AFI Personnel. The result of composite samples collected after clean-up activities show that all areas excavated were cleaned up to background levels or lower for all chemical constituents. A photographic record of clean-up procedure and site reclamation is presented in Appendix C.

APPENDIX B

GENERATOR'S WASTE PROFILE SHEET

PLEASE PRINT IN INK OR TYPE

Waste Profile Sheet Code: WMNA 326826

This form is to be used to comply with the requirements of a waste agreement.

INSTRUCTIONS FOR COMPLETING THIS FORM ARE ATTACHED

(Shaded Areas For Contractor Use Only)

Decision Expiration Date: 12 / 1 / 95

Contractor Sales Rep#: Hanalca

Service Agr. Renewal Date: / /

A. WASTE GENERATOR INFORMATION

1. Generator Name: Waste Management of N.Y. - Bfle
2. SIC Code:
3. Facility Address (site of waste generation): 421 Ganson St
4. Generator City, State/Province: Buffalo, NY
5. Zip/Postal Code: 14203
6. Generator USEPA/Federal ID #:
7. State/Province ID #:
8. Technical Contact: Tim Eich
9. Phone: (716) 852 - 6121

B. WASTE STREAM INFORMATION (See Instructions)

1. Name of Waste: Contaminated Soil
2. Process Generating Waste: excavation of truck parking area
3. Annual Amount/Units: 50 cubic yards
4. Type A ☒ (2) Type B ☐
5. Special Handling Instructions/Supplemental Information:
6. Incidental Waste Types and Amounts: None Known

C. TRANSPORTATION INFORMATION

1. Method of Shipment: ☐ Bulk Liquid ☐ Bulk Sludge ☒ Bulk Solid ☐ Drum/Box ☐ Other
2. Supplemental Shipping Information:
3. Is a DOT hazardous material? ☒ No ☐ Yes (If yes, complete 4, 5 & 6) 4. Hazard Class/ID #: NA
5. Reportable Quantity/Units (lb/kg): 0 6. Shipping Name: NA

D. TECHNICAL MANAGER DECISION (Check One) ☒ APPROVED ☐ DISAPPROVED ☐ Check if additional information is attached

If Disapproved, Explain:

If Approved, Continue.

1. Management Method(s): CO DISPOSAL OR USE AS DAILY COVER SOIL IN ACCORDANCE WITH PART 360 PERMIT.
2. Precautions, Conditions, or Limitations on Approval: ENSURE COPY OF SERVICE AGREEMENT IS ON FILE
3. For Type A Wastes, Laboratory Analysis of a Representative Sample Was: ☐ Waived ☒ Attached
   If waived, explain why:
4. List Non-WMI Facility that is Approved to Manage this Waste: Date:

Tech. Mgr. Signature: John A. Minchhand Name (Print): John A. Minchhand Date: 06/22/95

E. MANAGEMENT FACILITY INFORMATION / DECISION

1. Proposed Management Facility: High Acres Landfill
2. Proposed Intermediate Transfer Facility: 3. Transporter: Waste Management - Buffalo
4. Management Facility Gen. Mgr. Decision (Check One) ☒ APPROVED ☐ DISAPPROVED

If Disapproved, Explain:

If Approved, List Precautions, Conditions, or Limitations on Approval:

General Mgr. Signature: Joanne Ragusa Name (Print): Joanne Ragusa Date: 6/22/95

Turn Page and Complete Side 2 (If Type B Special Waste, only complete Part J of Side 2)

GENERATOR'S WASTE PROFILE SHEET

PLEASE PRINT IN INK OR TYPE

F. PHYSICAL CHARACTERISTICS OF WASTE (See instructions)

1. Color	2. Does the waste have a strong incidental odor?	3. Physical State @ 70 F/21 C.	4. Layers	5. Specific Gravity	6. Free Liquids:
Brown	☒ No ☐ Yes: If so describe:	☐ Solid ☐ Semi-Solid ☐ Liquid ☐ Powder ☐ Other:	☐ Multi-layered ☐ Bi-layered ☒ Single Phased	Range	☐ Yes ☒ No Volume: %

7. pH: ☐ ≤2 ☐ > 2-4 ☐ 4-7 ☐ [illegible] ☐ 7-10 ☐ 10- <12.5 ☐ ≥12.5 ☐ Range ☐ NA

8. Flash Point: ☐ None ☐ <140°F/60°C ☐ 140 - 199°F/60 - 93°C ☐ ≥200°F/93°C ☐ Closed Cup ☐ Open Cup

G. CHEMICAL COMPOSITION

	RANGE (MIN-MAX)
Soil Matrix	- %
	- %
	- %
	- %
	- %
	- %
	- %
	- %
	- %
Total	%

2. Does the waste contain any of the following? (provide concentration if known)

	NO	or	LESS THAN	or	ACTUAL
PCBs	☐		☒ < 50 ppm		____ ppm
Cyanides	☐		☐ < 30 ppm		____ ppm
Sulfides	☐		☐ < 500 ppm		____ ppm

Please note: Unless analytical results are attached, the chemical composition identification should include, at a minimum, Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium, Silver, Pesticides, Herbicides, and any other TCLP constituents that may be present in the waste. The total composition must be greater than or equal to 100%. (.0001% = 1 ppm or 1 mg/l)

3. Indicate method used to determine composition (if provided): ☒ TCLP ☐ Total ☐ Other: ____

H. SAMPLING SOURCE (e.g., Drum, Lagoon, Pit, Pond, Tank, Vat) ____

REPRESENTATIVE SAMPLE CERTIFICATION

1. Print Sampler's Name: [illegible] 2. Sample Date: ____

3. Sampler's Title: ____

4. Sampler's Employer if other than Generator: ____

The sampler's signature certifies that any sample submitted is representative of the waste described above pursuant to 40 CFR 261.20(c) or equivalent rules.

5. Sampler's Signature: ____

J. GENERATOR CERTIFICATION

By signing this profile sheet, the Generator certifies:

1. This waste is not a "Hazardous Waste" as defined by USEPA or Canadian Federal regulation and/or the state/province.
2. This waste does not contain regulated radioactive materials or regulated concentrations of PCB's (Polychlorinated Biphenyls).
3. The unshaded portions of this sheet and the attachments contain true and accurate descriptions of the waste material. All relevant information regarding known or suspected hazards in the possession of the Generator has been disclosed.
4. The Generator has read and understands the Contractor's Definition of Special Waste included in Part B.5. of the attached instructions form. All types and amounts of special wastes provided in incidental amounts have been identified in section B.6. of this form.
5. The analytical data presented herein or attached hereto were derived from testing a representative sample taken in accordance with 40 CFR 261.20(c) or equivalent rules.
6. If any changes occur in the character of the waste, the Generator shall notify the Contractor prior to providing the waste to the Contractor.

7. Signature X: [signature] 8. Title: [illegible]

9. Name (Type or Print) X: [illegible] 10. Date X: [illegible]

Dear John,

In accordance with the last paragraph in section IV item 44 of the High Acres Western Expansion Landfill operating permit, please find the attached disposal approval for:

Generator: WM - Buffalo

Waste Stream: cont. soil

Hauler: WM - Buffalo

One Time Disposal:____ Initial Profile: ✓ Recertification:____

Please feel free to contact me should you have any questions.

Sincerely,

Joanne Raguso

Re: Remedial Investigations WMNY - Ganson Street Property

SYNOPSIS ?

Dear Mr. Crossen:

Enclosed with this letter are copies of the Phase II and Phase III (Remedial Soil Investigation) reports that have been generated as part of an environmental assessment being perform at the Waste Management of New York, Inc. hauling division property on Ganson Street in Buffalo, N.Y.. Also included with the two reports is a copy of the work plan for the Phase III investigation. As I mentioned during our recent telephone conversation, the environmental assessment was performed as part of a purchase and sale agreement, where WMNY was selling the Ganson Street property to another party.

As the result of the various phases of the environmental assessment, it has been noted that there are localized areas of impacted soil as the result of fueling spills and leakage from parked vehicles. The impacted areas are nothave ed in the attached Phase III report. When you review the Phase II report you will note that five shallow overburden monitoring wells been installed and that groundwater samples have been obtained and analyzed with no impacts observed. In addition several soil and sediment samples were obtained and the results of these samples prompted the Phase III investigation.

The Phase III investigation contains recommendations for soil removal and additional testing to document that the impacted soils have been removed. We would like to be able to initiate the soil removal and additional testing as soon as possible, since the hauling division will be required to vacate the property to the new owner by mid June 1995.

Your timely review of these reports is very much appreciated. Please feel free to contact me, should you have any questions or comments regarding this matter. Thank-you.

Sincerely,

John A. Minichiello

RE: Remedial Soil Investigation Report
Downing Container Services - 191 Ganson St., Buffalo NY
AFI Project # h1025.1

Dear Mr. Minichiello:

Please find enclosed three copies of the Ganson Street Remedial Action Soil Investigation Report for the Downing Container Services 191 Ganson Street, Buffalo, New York location. One Copy is within scope of the original budget, and two copies provided for the New York State DEC are out-of-scope of the original budget.

If you need a change order for the two extra reports please let us know. Should you have any questions, please don't hesitate to call me at (716) 283-7645.

Sincerely,

AFI ENVIRONMENTAL

William L. Heitzenrater

APPENDIX B

1.0 INTRODUCTION

1.1 BACKGROUND

AFI Environmental has prepared this **Remedial Soil Investigation Report (RSIP)** on behalf of Waste Management of New York, Inc. This RSIP is intended to address petroleum impacted soil and sediment encountered at the Downing Container Facility located at 191 Ganson Street, Buffalo, New York (Figure 1). This facility is the storage yard and repair shop for Waste Management of New York's Downing Container Division's garbage pickup, roll-off and rental operation. This RSIP was prepared to address potential areas of environmental concern (AECs) identified in a Phase I Investigation conducted on October 1994 and a modified Phase II Investigation completed on December 1994. The ESA and subsequent Phase II Investigation resulted in the detection of low level organic, inorganic, and PCB constituents in soil and sediment samples collected at the Ganson Street site. The areas of the site in which constituents were indicated include the following (refer to Figure 3).

The chemical analysis of sediment samples collected from within the storm sewer staging areas and gas islands indicated the presence of semi-volatile organic compounds (SVOC), PCBs metals at concentrations which exceed NYSDEC guidance levels. Potential sources which may have individually or collectively resulted in the impact to sediment and soil samples include petroleum based fluids utilized for facility operations; runoff of liquids from the garbage trucks or roll off boxes and fluid leakage from parked trucks and automobiles. Potential pathways of releases from these sources to the storm water control system include; runoff received by the storm sewer from the exterior roll off and truck staging area or fueling islands; and runoff from the parking area captured by the storm sewer.

1.2 PURPOSE AND OBJECTIVES

Waste Management of New York, Inc. retained AFI Environmental to further investigate the areal extent and composition of impact constituents in an attempt, to identify the cost to mitigate existing soil/sediment contamination at their 191 Ganson Street Waste management facility.

This RSIP has been developed for the private use of Waste Management, but in accordance with NYSDEC guidance memorandum.

This report presents the results of previous investigations conducted at the project site; outlines the scope of the Remedial Investigative program, identified the equipment and procedures utilized, and discusses results of the current investigation. This information is presented to identify the extent of soil and sediment contamination and support AFI's recommendation for

remediation/disposal options.

1.3 SCOPE OF WORK

The Remedial Soil Investigation conducted at the Ganson Street facility was consistent with the site specific sampling plan approved by Waste Management. The purpose of the investigation was to characterize the aerial extent of chemical constituents identified in the soils, through establishment of a grid sampling system in each of the three (3) areas identified as: areas of potential concern (AECs); during the previously completed Environmental Phase I and Modified Phase II Investigations. The scope of work consisted of the following remedial objectives:

- o Identification Of Three (3) General Investigative Areas.
- o Establishment Of A Sampling Grid At Each Area.
- o Selection And Implementation Of Soil Sample Collection Techniques.
- o Sample Composite Homogenization Techniques.
- o Development Of A Site Specific And Health And Safety Plan.
- o Data Presentation And Fecommendation For Delineation Of The Area Of Eexcavation And Disposal.

2.0 SITE DESCRIPTION

Figure 1 graphically depicts the property location on Ganson street south of the intersection with Michigan Avenue in the City of Buffalo, Erie County, New York, which is included on the Buffalo SE NY - 7.5 minute quadrangle of the United States Geological Survey (USGS). The site is approximately 4.78 acre in size and contains one office building, one repair/maintenance garage, one detached office trailer, and gravel driveways and parking areas. The site is generally flat with a very slight slope to the east towards the Buffalo River. As shown on Figure 1, the elevation of the property is approximately 580 feet above mean sea level. Site drainage is accomplished by means of uncontrolled overland flow from the stone driveway and parking area to the east, and a series of four catch basins located in the north central portion of the site. These catch basins discharge to the Buffalo Sewer Authority combined stormwater/sanitary sewer system.

The site is currently owned by Downing Container Service, Inc. Figure 2 illustrates the current site plan. The property is bounded by Ganson Street to the west, Integrated Waste Systems, Inc. to the north, Roy Track, Inc. to the east, and General Portland, Inc. to the south and east. All the surrounding

properties are industrial in nature.

Current zoning maps were not available for the site, however, based on the nature of the businesses in the area, it is presumed that the site and surrounding properties are zoned heavy industrial. The site is serviced by municipal water and a combined sanitary/storm sewer system. Other utilities included natural gas from National Fuel and Electric from Niagara Mohawk. The gas is routed to the main building through underground pipes from Ganson Street. Electric is delivered through overhead lines from Ganson Street.

According to the *Soil Survey of Erie County, New York,* the project site is characterized as having urban soils (Ud). This indicates that 80 percent or more of the soil surface is covered by asphalt, concrete, buildings, or other impervious structure. These areas are mostly nearly level to gently sloping.

Groundwater was encountered at the site in each of the monitoring wells. Static water levels measured in the monitoring wells ranged from 2.88 to 8.02 feet below ground surface. Regional groundwater flow direction, inferred from topographic maps, is generally towards the northwest and northeast to the discharge area represented by the Buffalo Ship Canal and the Buffalo River respectively. Local variations in groundwater flow, however, may occur in the site vicinity.

The Federal Emergency Management Association (FEMA) Flood Insurance rate Map (Panel No. 360230 0020) was consulted to determine the flooding potential of this site. It was determined that the site is not located within the one-hundred year of five hundred year flood plains of any waterway, with the exception of the extreme southern tip of the property (<10 percent), which slightly impinges on the five hundred year floodplain of the Buffalo River.

3.0 PREVIOUS STUDIES

3.1 PHASE I ENVIRONMENTAL ASSESSMENT

AFI Environmental performed a Phase I Environmental Assessment (ESA) of the project site in September, 1993. This ESA was conducted in accordance with the procedures outlined in American Society for Testing and Materials (ASTM) Practice E1527-93. As a result, the following items were disclosed:

- There is one RCRIS-TS (Treatment, Storage and Disposal) facility located within 1.0 mile radius of the site. This facility has numerous violations associated with ignitable wastes, heavy metals, and chlorinated solvents.

- The waste hauling operation occupying the subject property was identified as a RCRIS-LG large quantity generator of the following waste types:
  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).
- Additionally, one other RCRIS-LG large quantity generator is located within 0.25 mile radius of the site. This site generates the following waste types:
  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).
  - a solid waste that exhibits the characteristic of corrosivity, but is not listed as a hazardous waste (D002).
- One RCRIS-SG small quantity generator is located within 0.25 mile radius of the site. This site generates the following waste types:
  - spent non-halogenated solvents (F003,F005); and
  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).
- The site itself is a listed petroleum bulk storage facility. Additionally, two (2) petroleum bulk storage tank sites are located within a 0.25 mile radius of the subject property:
- There are three (3) LST (Leaking Storage Tanks) sites located with 0.5 radius of the subject property.

3.2 PHASE I CONCLUSIONS

In accordance with the conclusions drawn in the Phase I ESA Report, the property owner (Waste Management of New York Inc.), in consultation with AFI Environmental, elected to implement a Phase II investigation to examine the subsurface and groundwater of the subject property. The purpose of the investigation was to determine the presence or absence of environmental impacts on the site.

3.3 MODIFIED PHASE II INVESTIGATION

The Phase II subsurface investigation was performed during the period of October 23 to November 2, 1994 with supplemental soil

sampling conducted on December 6, 1994. This investigation was conducted in accordance with the investigation plan developed by AFI Environmental. The final report was issued in December 1994.

3.3.1 MODIFIED PHASE II SOIL BORINGS

Ten (10) soil borings were installed manually using a three (3) inch bucket auger. Soil samples obtained from the bucket auger, from a depth of 0.5' to 1.0', were immediately placed in properly labeled sample containers sealed with tin foil and a screw on cap for screening as described in section 4.3.2. Each soil boring was abandoned following the completion of auguring/sampling activities by backfilling with auger cuttings from the respective borehole.

3.3.2 MODIFIED PHASE II SEDIMENT SAMPLES

Three (3) sediment samples were collected from each of the three onsite catch basins. The samples were collected using a shovel to remove some material from the bottom of the catch basin. Each sediment sample obtained from the catch basins were immediately placed in properly labeled sample containers sealed with tin foil and a screw on cap for screening. Excess material collected from the catch basins was returned to the bottom of the catch basins.

3.3.3 MODIFIED PHASE II SAMPLE COLLECTION/SCREENING AND ANALYSIS TECHNIQUES

The sample collection/screening and analysis program implemented at the project site involved the collection of one (1) groundwater sample from each monitoring well; as well as the field screening of soil and sediment samples to enable the selection of two (2) soil samples from the ten (10) soil borings and one (1) sediment sample for chemical analysis. All sample collection and screening measures were performed in accordance with accepted protocols by an experienced AFI Environmental Geologist. All samples were placed in appropriately labeled sample containers for transport under proper chain of custody record to Lozier Laboratories for chemical analysis.

3.3.4 MODIFIED PHASE II SOIL INVESTIGATION

Soil samples obtained from split-spoons were screened for total organic vapors (TOVs) utilizing an HNU PID after equilibrating at room temperature for one (1) hour. After removing the screw on cap, the foil seal of the sample container was pierced with the probe of the PID, and a measurement was recorded. PID measurements were zero for all split spoon samples collected during monitoring well installation and ranged from 0ppm to 0.7 ppm for the ten (10) soil and three (3) sediment samples.

monitoring well installation and ranged from 0ppm to 0.7 ppm for the ten (10) soil and three (3) sediment samples.

Two (2) samples of the ten (10) soil borings and one (1) sediment sample from the three (3) drainage inlets were selected for chemical analysis based upon the results of field screening. The three (3) soil/sediment samples with the highest measured TOV concentration were placed in a laboratory precleaned and properly labeled sample containers and placed on ice in a cooler for transport under proper chain of custody records to Lozier Laboratories. All soil samples underwent testing in accordance with EPA SW-3846 Method 8240 for VOCs, TCL SEMI-VOCs by method 8270, TCL Pesticides/PCBs by Method 8080, RCRA Metals by Method 6010/7000s, and Cyanide by Method 9012.

3.3.5 MODIFIED PHASE II SOIL RESULTS

Analytical results from the two (2) soil samples and one (1) sediment sample collected from the project site have indicated the presence of a number of volatile organic compounds (VOCs) and semi volatile organic compounds (SEMIVOCs) commonly associated with petroleum constituents, possible from fuel oil. Further, PCB-1260 was detected at all locations sampled and analyzed, with the highest concentration at location #9 (see figure #3).

Based upon the location from which soil samples containing significant concentrations of VOCs and SEMIVOCs were collected; one can assume that impacts to the soil near the former UST location (location #10 and the fueling/container staging area (location #11) has occurred as the results of minor spillage or leaks. This assumption is consistent with the field screening data.

3.3.6 MODIFIED PHASE II GROUNDWATER RESULTS

The chemical analysis of groundwater samples collected from the overburden monitoring wells installed on the site, did not indicate the presence of petroleum constituents in exceedance of NYSDEC guidance values. Based on a comparison with applicable guidance valued established by the NYSDEC STARS Memo #1 and NYSDEC TAGM dated January 24, 1994, it appears that none of the constituents encountered in the soil/sediments have entered the groundwater at any of the areas monitored. Further, it appears that constituents originating from areas off-site are not migrating on-site via the groundwater flow system and that the onsite constituents are not migrating offsite via the groundwater system.

3.4 MODIFIED PHASE II CONCLUSIONS/RECOMMENDATIONS

AFI Environmental collected a total of three (3) soil/sediment and five (5) groundwater samples from the project site for analysis pursuant to NYSDEC Petroleum-Contaminated Soil Guidance Policy. The resulting analytical data was assessed to determine if

petroleum impacted soil was present and to characterize groundwater quality. In general, impacted soil was encountered in varying degrees in the areas sampled. Due to the analytical testing method utilized to SCAN soils no determination was made as to whether contamination encountered exceeded NYSDEC guidance values. It was suggested that some of the particular constituents levels could exceed the NYSDEC STARS limits, but this is unknown because TCLP analysis was not performed. The area of the former UST (sample location #10) demonstrated higher levels for VOCs and SEMIVOCS, than the truck fueling/waste container staging area (sample location #11). However, the sludge/sediment sample (sample location #14) collected from the surface water runoff collection inlet was highest of all, especially for Acetone and Toluene (39,000 and 62,400 ppb respectfully). PCB-1260. A recommendation for TCLP analysis of the suspect area was made.

4.0 REMEDIAL INVESTIGATION

The Remedial Investigation conducted by AFI Environmental involved the collection and analysis of a series of (5) soil subsamples from three (3) distinct areas of concern; the area near the previously excavated UST (Area #1), the northeast roll off staging area (Area #2), and the area near the gas islands and storm sewer inlet (Area #3). These areas were identified during Modified Phase II Investigation as areas of environmental concern (AEC) and they are identified in figure #4. Each area of concern was divided into two (2) study areas and each study area was subjected to five (5) randomly selected subsamples. The subsampling and analysis program was developed to:

- Evaluate chemical constituent concentrations with respect to regulatory levels using TCLP Extraction Protocol; and
- Chemically profile potentially impacted soils and determine rough quantities requiring disposal at appropriately permitted facilities.

4.1 SAMPLING TECHNIQUES

Five (5) randomly selected soil subsamples were collected by an AFI Environmental field representative from each study area. Subsamples were collected at each location by scooping soil from the tailings of a hand auger at a depth of 6" to 18" using a precleaned stainless steel sampling spoon. The soil from each of the five (5) subsamples was placed in a precleaned stainless steel five (5) gallon bucket, and homogenized. A representative subsample was collected from the homogenized soil, in each study area, and placed in precleaned, sample bottle, labeled with the sample number, date and time of collection, sampler's initials, and the analysis requested and transported to Lozier Labs of Rochester under proper chain of custody.

4.1.1 Homogenized Composite Samples

Homogenized composite samples were assembled to characterize background soil quality and to chemically profile soils contained within the area showing previous evidence of contamination. Five (5) discrete subsamples were homogenized into one (1) sample for each study area.

4.1.2 STATISTICAL SAMPLING GRID

Each area of concern was divided into two (2) components or study areas. One component representing the "near-field" area, and a second component representing the "far-field" area. The "near-field" component consisted of a 25' x 25' area of soil "near" the Modified Phase II Investigation sample locations. The second component or "far-field" area consisted of a larger 125' x 125' square area concentric to the "near-field" study area. Both study areas were divided using a standard grid pattern into 36 intersections. The 36 intersection of the "near-field" were created by 5' spacing while the 36 intersections of the "far-field" area were created by 25'spacing. Five (5) locations were randomly selected for soil subsampling inside each study area and one (1) homogenized composite sample was assembled and sent for analysis from each area. This resulted in a total of five (5) samples being sent to Lozier Labs for analysis. (No "near-field" subsample was collected from the storm sewer and gas island area due to the concrete pad and pavement encountered).

4.2 ANALYTICAL TESTING

All soil samples were immediately transported under proper chain of custody records to Lozier Laboratories, Rochester, New York. All samples underwent testing for the Toxicity Characteristic Leaching Procedure (TCLP) STARS Volatiles 1311(8021), and semi-volatile organic compounds (SOCs) in accordance with EPA SW-846 Method 1-311/8220. These analytical methods were selected based upon discussion with Waste Management of New York personnel and due to the types of contaminants identified during earlier investigations at the project site.

5.0 RESULTS

Appendix A includes the results for all analysis conducted on the homogenized composite samples for the three (3) Study Areas. Only one (1) sample (PT #3) from the "near-field" study area #2 (see figure #4) exceeded the New york state Dec Guidance values as presented by the NYSDEC S.T.A.R.S. Program Analtical Test. This exceedance was noted for the chemical Parameter of Napthalene at location #2 where the presented value equalled 18ppb (adjusting for the 5 to 1 dilution equates to 90ppb). All other tested parometer were listed as non-detects or below the detection levels as presented by Lozier Labs.

6.0 CONCLUSIONS

According to SPOTS No. 14 (May 15, 1991) "...if the field analysis does not indicate any contamination at the site, and laboratory analysis of a minimum amount of sampling of soil/water taken from around the tank and piping confirms no contamination at the sample locations, it is reasonable to assume that no contamination exists at the site.

(However) If this minimum sampling does show contamination, then the Department (DEC) must be notified of this contamination and additional laboratory analysis must be conducted."

Since, AFI has already conducted additional analysis and the results from all but one area showed no contamination (utilizing a five (5) to one (1) dilution); it is reasonable to assume that chemical constituents in the soils are limited to the original sampling areas, and the one study area where chemical constituents exceeded guidance values.

AFI RECOMMENDATION

Generally a Phase III Site Assessment; or Exposure Assessment is conducted, at this point, to predict possible migration pathways or routes; and to identify areas where chemical constituents released into the soil may impact public health or the environment.

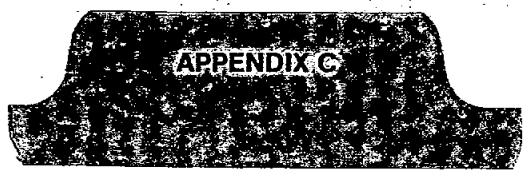
Phase III procedures generally include mapping the distribution of contamination, and predicting the pathways for exposure. The factors considered during a Phase III study include the volume released (which we do not know, but we assume to be minimal); the absorption capacity of the soil (which is medium to high); the relative ability of the soils to allow water movement (which is low); rate and direction of groundwater movement (known to be slight); and all processes that dilute concentration and limit the area of the contaminated zones (see Phase I and Modified Phase II reports).

However, the lack of detectable levels of the chemical constituents in the onsite monitoring wells; taken in consideration with the lack of detection of chemical constituents in all but one of the suspect areas during the most recent extended sampling; would allow one to conclude that TCLP contamination was limited to the one area demonstrating exceedance of the guidance values and the limited areas near each of the original modified Phase II sampling locations.

As such, AFI recommends that all areas where original contamination was documented during the modified Phase II Investigation be excavated and removed in a 10' x 10' area to a depth of 18". The excavation should be closed with #2 crusher run and/or fill and compacted for immediate use.

Study Area #3 should be excavated to 18", or refusal, throughout entire 25' x 25' boundary and replaced with clean and packed #2 crusher run stone. In addition, any stained areas near the truck parking, or roll off staging area, and fueling islands should be removed and filled with clean #2 crusher run stone and packed. All concrete should be steamed washed and the storm sewer inlets should be thoroughly cleaned with a VAC-Truck and steam washed after sediment removal.

All excavated soils should be staged in plastic lined roll off containers and a representative soil sample collected for waste profiling procedures.



AFI further recommends that additional composite samples be taken from the side walls and bottom of each excavated areas as well as from 1' to 2' beneath the excavation and run for TCLP. This data should be evaluated to assure that all chemical constituents have been removed.

A total of four (4) additional samples would be collected one (1) from each study area and one (1) from the staged soils to document the clean up.

AFI recommends removal of all visually stained soils in each of the study areas to a depth of 18".

All removed and/or contaminated soils should be properly disposed of at a legally permitted facility.

AFI also recommends that a copy of the final closure report be submitted to the DEC as a token of good faith and request there comments once the final samples have been tested and the site is documented to be clean so that they have record of the cleanup.

East Rochester, New York 14445

RE: Remedial Soil Investigation **FINAL/REVISED DRAFT PLAN**
Downing Container Services- 191 Ganson St., Buffalo, NY
AFI Project No. H1025.1

Dear Mr. Minichiello:

Enclosed, please find the revised draft copy of the Ganson Street Remedial Action Plan. This is in response to your review and mark ups. We are ready to begin as soon as the snow is off the study area or sooner if you desire to have the snow scraped.

Please advise.

Should you have any questions or comments please don't hesitate to call me at the Lockport office.

Sincerely,

AFI ENVIRONMENTAL,

William L. Heizenrater

1.0 INTRODUCTION

1.1 BACKGROUND

AFI Environmental has prepared this *Remedial Action Plan* (RAP) on behalf of Waste Management of New York, Inc. This RAP is intended to address petroleum impacted soil and sediment encountered at the Downing Container Facility located at 191 Ganson Street, Buffalo, New York (Figure 1). This facility is the storage yard and repair shop for Waste Management of New York's Downing Container Division's garbage pickup , roll-off and rental operation. This RAP was prepared to address potential areas of environmental concern (AECs) identified in a Phase I Investigation conducted on October 1994 and a modified Phase II Investigation completed on December 1994. The ESA and subsequent Phase II Investigation resulted in the detection of low level organic, inorganic, and PCB constituents in soil and sediment samples collected at the Ganson Street site. The areas of the site in which constituents were indicated include the following (refer to Figure 2).

The chemical analysis of sediment samples collected from within the storm sewer staging areas and gas islands indicated the presence of semi-volatile organic compounds (SVOC), PCBs metals at concentrations which may exceed NYSDEC guidance levels. Potential sources which may have individually or collectively resulted in the impact to sediment and soil samples include petroleum based fluids utilized for facility operations; runoff of liquids from the garbage trucks or roll off boxes and fluid leakage from parked trucks and automobiles. Potential pathways of releases from these sources to the storm water control system include; runoff received by the storm sewer from the exterior rolloff and truck staging area or fueling islands; and runoff from the parking area captured by the storm sewer.

1.2 PURPOSE AND OBJECTIVES

Waste Management of New York, Inc. has retained AFI Environmental to investigate further the areal extent and composition of impacts in an attempt to identify the cost to mitigate existing soil/sediment contamination at their 191 Ganson Street Waste Management facility. This RAP has been developed for the private use of Waste Management, but in accordance with NYSDEC guidance memorandum. This plan presents the results of previous investigations at the project site; and outlines the scope of the proposed remedial investigative program, and the equipment and procedures to be utilized to evaluate the areal extent of soil and sedimentary contamination to determine the cost of remediation/disposal.

1.3 SCOPE OF WORK

The remedial program proposed for implementation at the Ganson Street facility consists development of a site specific sampling plan in an attempt to characterize the aerial extent of chemical constituents identified in the soils, through establishment of a grid sampling system in

each of the three (3) areas identified as: areas of potential concern (AECs); during the recently completed Environmental Phase I and Modified Phase 2 Investigations. The scope of work required to accomplish these remedial objectives includes the following:

- o Identify three (3) general Investigative areas.
- o Establish a Sampling Grid at each area.
- o Identify Soil Sample Collection techniques.
- o Identify Sample Composite Homogenization techniques.
- o Provide a site specific and Health and Safety Plan.

2.0 SITE DESCRIPTION

Figure 1 graphically depicts the property location on Ganson Street south of the intersection with Michigan Avenue in the City of Buffalo, Erie County, New York, which is included on the Buffalo SE NY - 7.5 minute quadrangle of the United States Geological Survey (USGS). The site is approximately 4.78 acre in size and contains one office building, one repair/maintenance garage, one detached office trailer, and gravel driveways and parking areas. The site is generally flat with a very slight slope to the east towards the Buffalo River. As shown on Figure 1, the elevation of the property is approximately 580 feet above mean sea level. Site drainage is accomplished by means of uncontrolled overland flow from the stone driveway and parking area to the east, and a series of four catch basins located in the north central portion of the site. These catch basins discharge to the Buffalo Sewer Authority combined stormwater/sanitary sewer system.

The site is currently owned by Downing container Service, Inc. Figure 2 illustrates the current site plan. The property is bounded by Ganson Street to the west, Integrated Waste Systems, Inc. to the north, Roy Track, Inc. to the east, and General Portland, Inc. to the south and east. All the surrounding properties are industrial in nature.

Current zoning maps were not available for the site, however, based on the nature of the businesses in the area, it is presumed that the site and surrounding properties are zoned heavy industrial. The site is serviced by municipal water and a combined sanitary/storm sewer system. Other utilities included natural gas from National Fuel and electric from Niagara Mohawk. The gas is routed to the main building through underground pipes from Ganson Street. Electric is delivered through overhead lines from Ganson Street.

According to the *Soil Survey of Erie County, New York*, the project site is characterized as having urban soils (Ud). This indicates that 80 percent or more of the soil surface is covered by asphalt, concrete, buildings,or other impervious structure. These areas are mostly nearly level to gently sloping.

Groundwater was encountered at the site in each of the monitoring wells. Static water levels measured in the monitoring wells ranged from 2.88 to 8.02 feet below ground surface. Regional groundwater flow direction, inferred from topographic maps, is generally towards the northwest and northeast to the discharge area represented by the Buffalo Ship Canal and the Buffalo River respectively. Local variations in groundwater flow, however, may occur in the site vicinity.

The Federal Emergency Management Association (FEMA) Flood Insurance rate Map (Panel No. 360230 0020) was consulted to determine the flooding potential of this site. It was determined that the site is not located within the one-hundred year or five hundred year flood plains of any waterway, with the exception of the extreme southern tip of the property (< 10 percent), which slightly impinges on the five hundred year floodplain of the Buffalo River.

3.0 PREVIOUS STUDIES

3.1 PHASE I ENVIRONMENTAL ASSESSMENT

AFI Environmental performed a Phase I Environmental Assessment (ESA) of the project site in September, 1993. This ESA was conducted in accordance with the procedures outlined in American Society for Testing and materials (ASTM) Practice E1527-93. As a result, the following items were disclosed:

- o There is one RCRIS-TS (Treatment, Storage and Disposal) facility located within 1.0 mile radius of the site. This facility has numerous violations associated with ignitable wastes, heavy metals, and chlorinated solvents.

- o The waste hauling operation occupying the subject property was identified as a RCRIS-LG large quantity generator of the following waste types:

  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).

- o Additionally, one other RCRIS-LG large quantity generator is located within 0.25 mile radius of the site. This site generates the following waste types:

  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).
  - a solid waste that exhibits the characteristic of corrosivity, but is not listed as a hazardous waste (D002).

- One RCRIS-SG small quantity generator is located within 0.25 mile radius of the site. This site generates the following waste types:

  - spent non-halogenated solvents (F003,F005); and
  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).

- The site itself is a listed petroleum bulk storage facility. Additionally, two petroleum bulk storage tank sites are located within a 0.25 mile radius of the subject property:

- There are three LST (Leaking Storage Tanks) sites located within 0.5 radius of the subject property.

3.2 PHASE I CONCLUSIONS

In accordance with the conclusions drawn in the Phase I ESA Report, the property owner (Waste Management of New York Inc.), in consultation with AFI Environmental, elected to implement a Phase II investigation to examine the subsurface and groundwater of the subject property. The purpose of the investigation was to determine the presence or absence of environmental impacts on the site.

3.3 MODIFIED PHASE II INVESTIGATION

The Phase II subsurface investigation was performed during the period of October 23 to November 2, 1994 with supplemental soil sampling conducted on December 6, 1994. This investigation was conducted in accordance with the investigation plan developed by AFI Environmental. The final report was issued in December 1994.

3.3.1 SOIL BORINGS

Ten (10) soil borings were installed manually using a three (3) inch bucket auger. Soil samples obtained from the bucket auger, from a depth of 0.5' to 1.0', were immediately placed in properly labeled sample containers sealed with tin foil and a screw on cap for screening as described in section 4.3.2. Each soil boring was abandoned following the completion of auguring/sampling activities by backfilling with auger cuttings from the respective borehole.

3.3.2 SEDIMENT SAMPLES

Three (3) sediment samples were collected from each of the three onsite catch basins. The samples were collected using a shovel to remove some material from the bottom of the catch basin. Each sediment sample obtained from the catch basins were immediately placed in properly labeled sample containers sealed with tin foil and a screw on cap for screening. Excess material collected from the catch basins was returned to the bottom of the catch basins.

3.3.3 SAMPLE COLLECTION/SCREENING AND ANALYSIS

The sample collection/screening and analysis program implemented at the project site involved the collection of one (1) groundwater sample from each monitoring well; as well as the field screening of soil and sediment samples to enable the selection of two (2) soil samples from the ten (10) soil borings and one (1) sediment sample for chemical analysis. All sample collection and screening measures were performed in accordance with accepted protocols by an experienced AFI Environmental Geologist. All samples were place in appropriately labeled sample containers for transport under proper chain of custody record to Lozier Laboratories for chemical analysis.

3.3.4 SOIL

Soil samples obtained from split-spoons were screened for total organic vapors (TOVs) utilizing an HNu PID after equilibrating at room temperature for one (1) hour. After removing the screw on cap, the foil seal of the sample container was pierced with the probe of the PID, and a measurement was recorded. PID measurements were zero for all split spoon samples collected during monitoring well installation and ranged from 0ppm to 0.7 ppm for the ten (10) soil and three (3) sediment samples.

Two (2) samples of the ten (10) soil borings and one (1) sediment sample from the three (3) drainage inlets were selected for chemical analysis based upon the results of field screening. The three (3) soil/sediment samples with the highest measured TOV concentration were placed in a laboratory precleaned and properly labeled sample containers and placed on ice in a cooler for transport under proper chain of custody records to Lozier Laboratories. All soil samples underwent testing in accordance with EPA SW-846 Method 8240 for VOCs, TCL Semi-VOCs by method 8270, TCL Pesticides/PCBs by Method 8080, RCRA Metals by Method 6010/7000s, and Cyanide by Method 9012.

3.3.5 SOIL RESULTS

Analytical results from the two (2) soil samples and one (1) sediment sample collected from the project site have indicated the presence of a number of volatile organic compounds (VOCs) and semi volatile organic compounds (SEMIVOCs) commonly associated with petroleum constituents, possibly from fuel oil. Further, PCB-1260 was detected at all locations sampled and analyzed, with the highest concentration at location #9.

Based upon the location from which soil samples containing significant concentrations of VOCs and SEMIVOCs were collected; one can assume that impacts to the soil near the former UST location (location #10) and the fueling/container staging area (location #11) has occurred as the results of minor spillage or leaks. This assumption is consistent with the field screening data.

3.3.6 GROUNDWATER

The chemical analysis of groundwater samples collected from the overburden monitoring wells installed on the site, did not indicate the presence of petroleum constituents in exceedance of NYSDEC guidance values. Based on a comparison with applicable guidance valued established by the NYSDEC STARS Memo #1 and NYSDEC TAGM dated January 24, 1994, it appears that none of the constituents encountered in the soil/sediments have entered the groundwater at any of the areas monitored. Further, it appears that constituents originating from areas off-site are not migrating on-site via the groundwater flow system and that the onsite constituents are not migrating offsite via the groundwater system.

3.4 PHASE II CONCLUSIONS/RECOMMENDATIONS

AFI Environmental collected a total of three (3) soil/sediment and five (5) groundwater samples from the project site for analysis pursuant to NYSDEC Petroleum-Contaminated Soil Guidance Policy. The resulting analytical data was assessed to determine if petroleum impacted soil was present and to characterize groundwater quality. In general, impacted soil was encountered in varying degrees in the areas sampled. In this case we don't know that the values exceed the NYSDEC requirements because of the analytical method selected for analysis. It is possible that some of the particular constituents levels could exceed the NYSDEC STARS limits, but this is unknown because TCLP analysis was not performed. The area of the former UST (sample location #10) demonstrated higher levels for VOCs and SEMIVOCs, than the truck fueling/waste container staging area (sample location #11). However, the sludge/sediment sample (sample location #14) collected from the surface water runoff collection inlet was highest of all, especially for Acetone and Toluene (39,000 and 62,400 ppb respectfully). PCB-1260,

4.0 REMEDIAL INVESTIGATION

The investigation proposal by AFI Environmental involves the collection and analysis of a series of soil and sediment samples from three distinct areas; the storm sewer, the UST area, and northeast rolloff staging area. This sampling and analysis program was developed to:

- o To evaluate constituent concentrations with respect to regulatory levels using TCLP Extraction Protocol; and

- o Chemically profile potentially impacted soils and determine rough quantities for disposal at an appropriately permitted facility.

4.1 SAMPLING TECHNIQUES

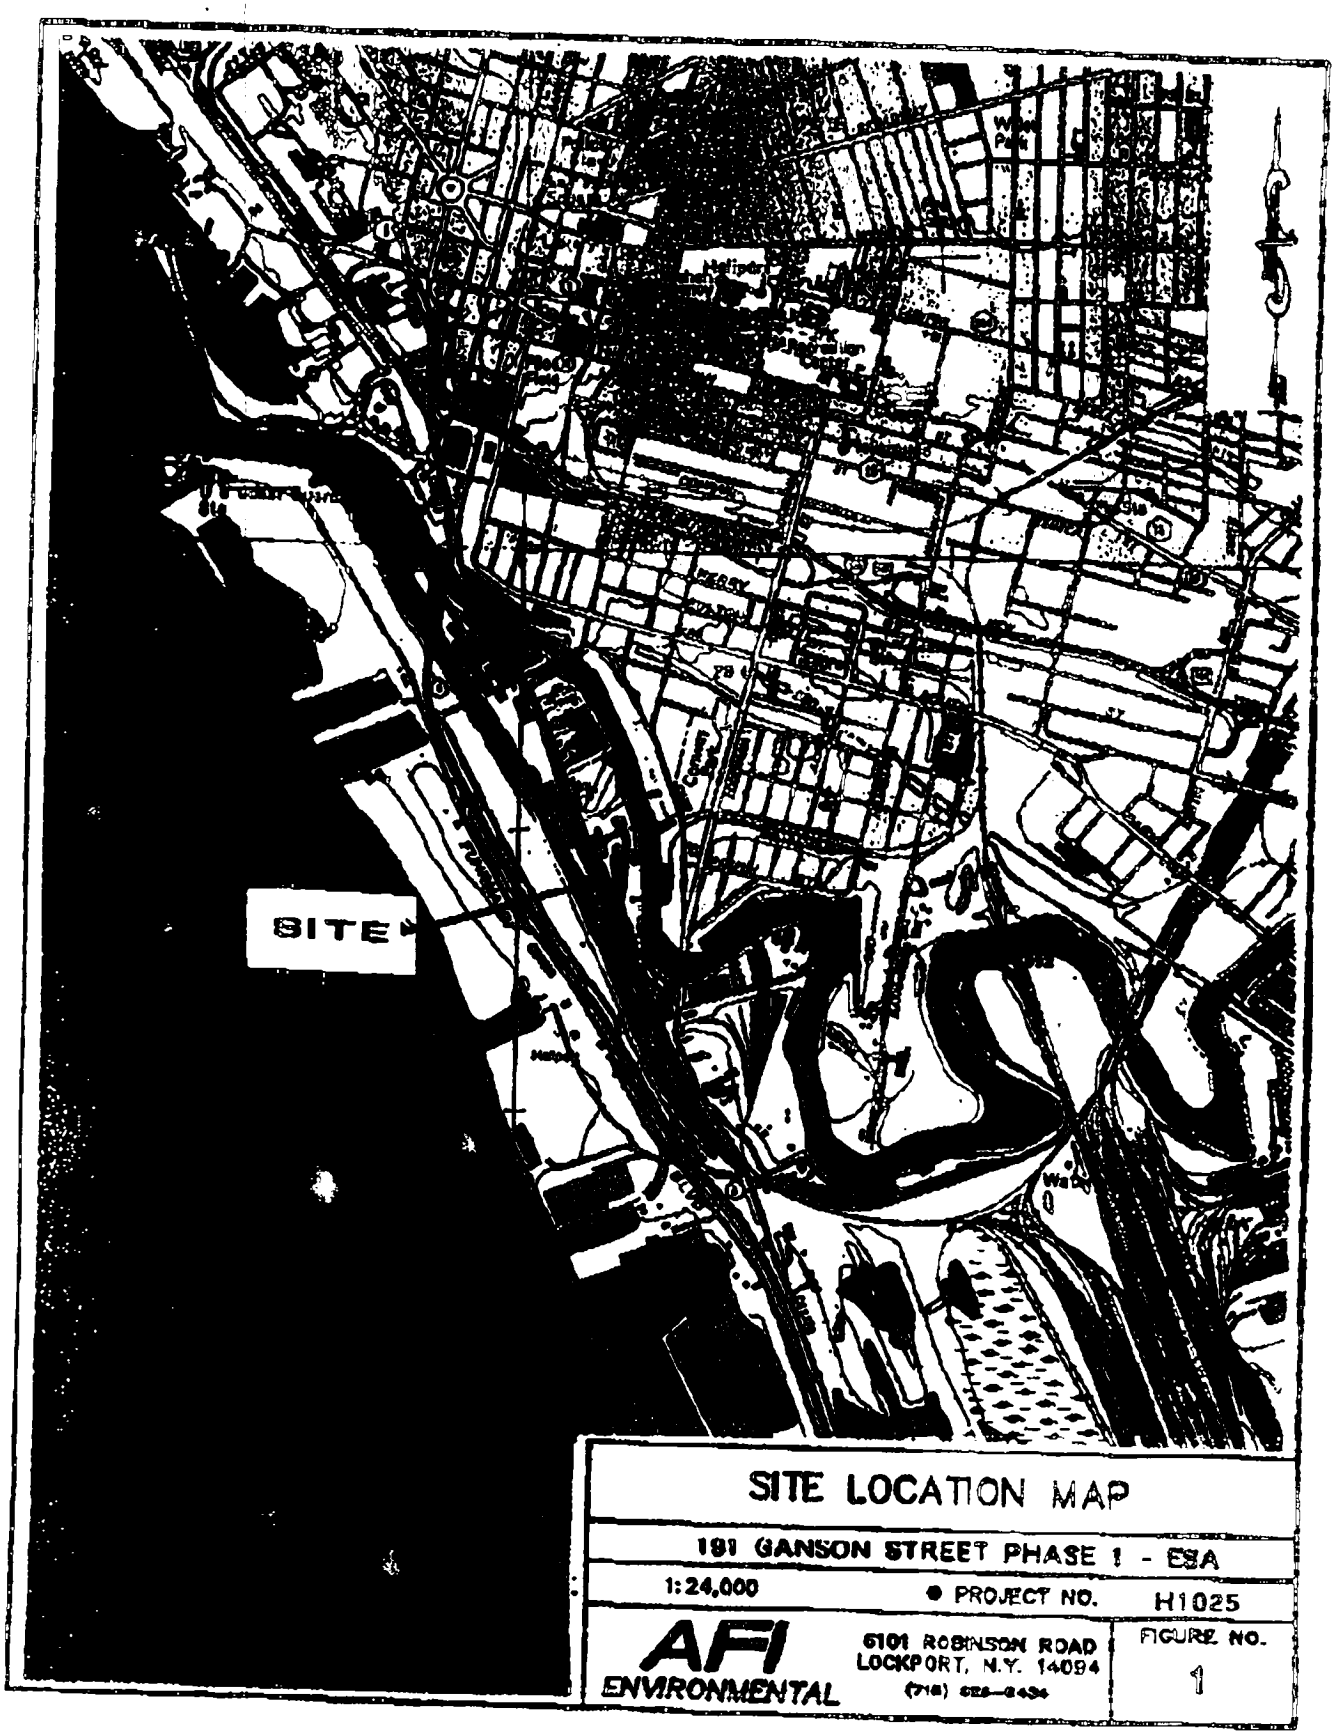
The proposed sampling techniques for soil sample collecting is described in the following subsections. All samples will be collected by an AFI Environmental field scientist and placed

in precleaned laboratory sample bottles, which will be labeled with the sample number, date and time of collection, sampler's initials, and the analysis requested.

4.1.1 Homogenized Composite Samples

Homogenized composite samples will be assembled to characterize background soil quality and to chemically profile soils contained within the area showing previous evidence of contamination.

4.1.2 STATISTICAL SAMPLING GRID



Each are to be investigated will be sectioned off into a statistical sampling grid consisting of two (2) components. The grids will be broken into near field and far field sections. The near field section will consist of the section within a square box whose length is 25 feet centered in the area of the original sampling location. The far field section will consist of a larger square box concentric to the first box, whose length is 125 feet. The near field section will be divided in a grid pattern where the intersections of the x and y axis are on 5 foot intervals, thereby creating 36 intersections. The far field zone will be divided into a grid pattern where the intersections of the x and y axis are on 25 foot intervals thereby creating a grid pattern with again 36 intersections. Five (5) subsamples will be randomly collected from each section and homogenized into a composite sample from each section with a total of two (2) samples from each area to be analyzed for TCLP Stars Volatiles and TCLP Stars Base Neutrals. These will result in a total of six (6) samples plus, field duplicate to be sent to Lozier Labs for analysis.

4.2 ANALYTICAL TESTING

All soil and sediment samples will be transported under proper chain of custody records to Lozier Laboratories, Rochester, New York, immediately following collection. All samples will undergo testing for the Toxicity Characteristic Leaching Procedure (TCLP) STARS Volatiles 1311(8021), and semi-volatile organic compounds (SOCs) in accordance with EPA SW-846 Method 1-311/8220. These analytical methods were selected based upon discussion with Waste Management of New York personnel and due to the types of contaminants identified as a result of earlier investigations of the project site. In addition to internal laboratory quality assurance/quality control (QA/QC) procedures, one (1) field duplicate will be analyzed.

5.0 CONCLUSIONS

Comparisons of the analytical data with applicable regulatory standards and/or guidance values will indicate the toxicity characteristics with respect to constituents analyzed. The data will be adjusted to correct for the dilution factor and compared to the applicable regulatory standards to determine if disposal is warranted and to estimate the rough quantities of disposal.

RE: GANSON STREET (REVISED) PHASE 11 ENVIRONMENTAL INVESTIGATION.
AFI Project #h1025

Dear John:

Enclosed, please find the **REVISED** copy of the Environmental Phase 11 Investigation for Ganson Street, Buffalo, NY. I have incorporated your comments of 12/23/94 into the text where appropriate. In respect to the final comment of your fax, dated December 23, 1994 "... where did you obtain the values for allowable soil concentrations in Table 2?" The values presented are from the NYSDEC TAGM dated January 24, 1994 #HWG94-4046. (copy enclosed). The table has been edited to include this reference. This document also discusses the 100 factor.

Also, please find a copy of our invoice for the above referenced project.

Please review, and call me if you have any further questions or comments.

I will be in my Lockport office until Friday the 30 of December, However, I will e on vacation the week of January 1-8 1995.

Have a great and prosperous NEW YEAR.

Sincerely,

AFI ENVIRONMENTAL

William L. Heitzenrater

1.0 INTRODUCTION

AFI Environmental was retained by Waste Management to conduct a Phase II Investigation of the property located at 191 Ganson Street in Buffalo, New York. This property was the subject of a Phase I Environmental Site Assessment (ESA), performed by AFI Environmental (AFI), which identified several potential areas of environmental concerns (AEC's). Further investigation was conducted to assess the potential environmental impacts that may have occurred or were related to the AEC's. Specifically, AFI identified several AEC's which include, but may not be limited to, the following:

- Numerous petroleum stained areas both in the garage areas and the staging/parking areas;
- Soils in and around the area of the former gasoline underground storage tank (UST) were never sampled and analyzed to confirm that no leakage had occurred from the UST.
- The fill materials utilized to backfill the dry docks north of the site, have been shown to contain elevated levels of VOCs, PCBs and metals. Additionally, groundwater in this area has also been shown to contain elevated levels of acetone, methylene chloride and metals.
- Potential impacts on the site from contaminants in the Buffalo River.
- Potential impacts on the site due to contaminants released on the adjacent properties.
- Potential discharges, including petroleum products and other vehicle operational and maintenance products, into the combined sanitary/storm sewers on site.
- Historical uses of the property for industrial purposes.
- Potential impact to the soils and stormwater sewers in and around the staging areas from leakage of leachate from trucks and roll-offs during routine operations.

The Phase II investigation of the project site was conducted to assess whether the identified AEC's have resulted in environmental impacts on the site and to characterize groundwater beneath the site. The field aspects of this investigation involved the drilling of test borings, the installation of monitoring wells and the collection of soil and groundwater samples. Soil and groundwater samples obtained during this field program were submitted for chemical analyses to enable an evaluation of site conditions relative to regulatory policy. AFI has prepared this *Phase II Investigation Report* to summarize the field investigation; present the results of the chemical analysis of soil and groundwater samples; evaluate the analytical data

Printed on recycled paper to help protect the environment

with respect to applicable regulatory standards and/or guidance values; and to identify potential sources of contamination. No attempt was made to determine the actual boundaries of contamination, if found.

2.0 SITE DESCRIPTION

Figure 1 graphically depicts the property location on Ganson Street south of the intersection with Michigan Avenue in the City of Buffalo, Erie County, New York, which is included on the Buffalo SE NY - 7.5 minute quadrangle of the United States Geological Survey (USGS). The site is approximately 4.78 acre in size and contains one office building, one repair/maintenance garage, one detached office trailer, and gravel driveways and parking areas. The site is generally flat with a very slight slope to the east towards the Buffalo River. As shown on Figure 1, the elevation of the property is approximately 580 feet above mean sea level. Site drainage is accomplished by means of uncontrolled overland flow from the stone driveway and parking area to the east, and a series of four catch basins located in the north central portion of the site. These catch basins discharge to the Buffalo Sewer Authority combined stormwater/sanitary sewer system.

The site is currently owned by Downing Container Service, Inc. Figure 2 illustrates the current site plan. The property is bounded by Ganson Street to the west, Integrated Waste Systems, Inc. to the north, Roy Track, Inc. to the east, and General Portland, Inc. to the south and east. All the surrounding properties are industrial in nature.

Current zoning maps were not available for the site, however, based on the nature of the businesses in the area, it is presumed that the site and surrounding properties are zoned heavy industrial. The site is serviced by municipal water and a combined sanitary/storm sewer system. Other utilities include natural gas from National Fuel and electric from Niagara Mohawk. The gas is routed to the main building through underground pipes from Ganson Street. Electric is delivered through overhead lines from Ganson Street.

According to the *Soil Survey of Erie County, New York*, the project site is characterized as having urban soils (Ud). This indicates that 80 percent or more of the soil surface is covered by asphalt, concrete, buildings, or other impervious structures. These areas are mostly nearly level to gently sloping.

Groundwater was encountered at the site in each of the monitoring wells. Static water levels measured in the monitoring wells ranged from 2.88 to 8.02 feet below ground surface. Regional groundwater flow direction, inferred from topographic maps, is generally towards the northwest and northeast to the discharge area represented by the Buffalo Ship Canal and the Buffalo River respectively. Local variations in groundwater flow, however, may occur in the site vicinity.

No. 360230 0020) was consulted to determine the flooding potential of this site. It was determined that the site is not located within the one-hundred year or five hundred year flood plains of any waterway, with the exception of the extreme southern tip of the property (< 10 percent), which slightly impinges on the five hundred year floodplain of the Buffalo River

3.0 PREVIOUS STUDIES

3.1 PHASE I ENVIRONMENTAL ASSESSMENT

AFI Environmental performed a Phase I Environmental Assessment (ESA) of the project site in September, 1993. This ESA was conducted in accordance with the procedures outlined in American Society for Testing and Materials (ASTM) Practice E1527-93. As a result, the following items were disclosed:

- o There is one RCRIS-TS (Treatment, Storage and Disposal) facility located within 1.0 mile radius of the site. This facility has numerous violations associated with ignitable wastes, heavy metals, and chlorinated solvents.

- o The waste hauling operation occupying the subject property was identified as a RCRIS-LG large quantity generator of the following waste types:

  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).

- o Additionally, one other RCRIS-LG large quantity generator is located within 0.25 mile radius of the site. This site generates the following waste types:

  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).
  - a solid waste that exhibits the characteristic of corrosivity, but is not listed as a hazardous waste (D002).

- o One RCRIS-SG small quantity generator is located within 0.25 mile radius of the site. This site generates the following waste types:

  - spent non-halogenated solvents (F003, F005); and
  - a solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste (D001).

- o The site itself is a listed petroleum bulk storage facility. Additionally, two petroleum bulk storage tank sites are located within a 0.25 mile radius of the subject property:

Printed on recycled paper to help protect the environment

- o There are three LST (Leaking Storage Tanks) sites located within 0.5 mile radius of the subject property.

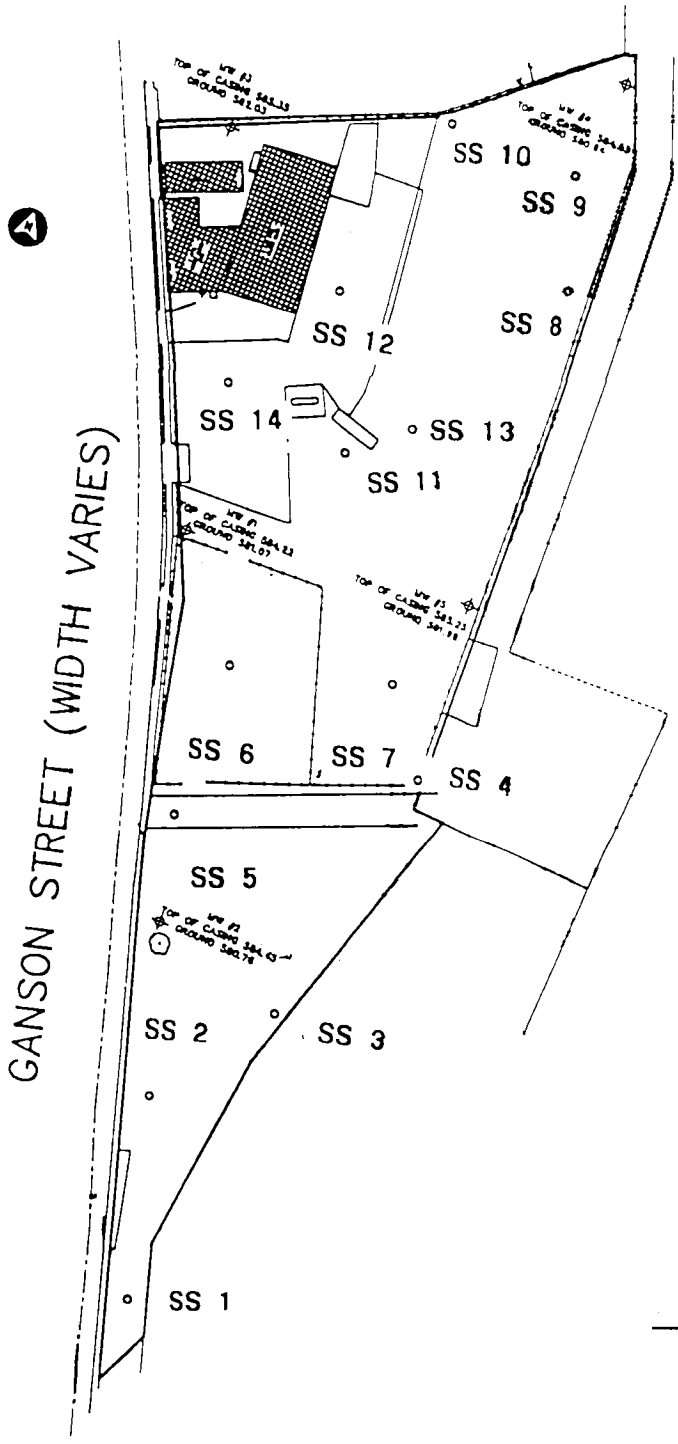
3.2 PHASE I CONCLUSIONS

In accordance with the conclusions drawn in the Phase I ESA Report, the property owner (Waste Management of New York), in consultation with AFI Environmental, elected to implement a Phase II investigation to examine the subsurface of the subject property. The purpose of the investigation was to determine the presence or absence of contamination on the site.

4.0 METHODS OF INVESTIGATION

The Phase II subsurface investigation was performed during the period of October 23 to November 2, 1994 with supplemental soil sampling conducted on December 6, 1994. This investigation was conducted in accordance with the investigation plan developed by AFI Environmental.

4.1 DRILLING, SOIL SAMPLING AND WELL INSTALLATION



Drilling, soil sampling and well installation procedures employed during this investigation as outlined in the following sections, are consistent with the collection of high quality data for hydrogeologic studies, and were selected based upon the collective experience of AFI Environmental staff and the drilling contractor, Advanced Drilling Investigations (ADI) of Niagara Falls, New York. All field work was directly supervised and documented by a qualified AFI Environmental Geologist, and the methods utilized were intended to minimize the potential for cross contamination. Five (5) groundwater monitoring wells and ten (10) soil borings were completed, and three (3) sediment samples collected at the site, the locations of which are depicted by Figure 3.

4.1.1 GROUNDWATER MONITORING WELLS

Overburden consisted of clayey silt, fine sand, silty sand, silty clay, and silty fine sand that was saturated at approximately 4-7 feet below ground surface. No odor or visual evidence of contamination was noted during drilling operations. The following paragraphs summarize the drilling, installation and design of these wells.

The installation of the wells was performed using a Mobile B-57 Drill Rig to advance 4 1/2" ID hollow-stem augers through unconsolidated geologic materials to a depth of approximately seventeen (17) feet. Soil samples were obtained continuously throughout the total depth of the boring using 2" OD split-barrel samplers in accordance with ASTM-D1586 procedures for Standard Penetration Test (SPT). Auger drilling proceeded with a steel plug inserted at the bottom of the auger stem to prevent material from entering the hollow stem and

to ensure accurate split-spoon sampling. The split-spoon sampler used was two (2) feet in length, unpainted, and equipped with a functional ball-check valve above the sample tube. The bottom of the sampling tube was equipped with a removable plastic "basket" retainer. The split-spoon was advanced through unconsolidated geologic materials at and below the bottom of the augers with a standard 140-pound hammer falling freely 30 inches. Blow counts were recorded for each six inches of penetration. Split-spoon samples were logged using the Unified Soil Classification System (USCS). Representative samples obtained from each split spoon were placed in appropriately labeled sample containers and immediately sealed with aluminum foil and screw on-cap. Field screening of soil samples obtained from split-spoons was conducted in accordance with the procedures outlined in Section 4.3.2.

Accurate test boring logs were prepared to document overburden stratigraphy and characteristics, depth to water, and all pertinent drilling observations.

Monitoring wells were installed immediately after auguring of the bore holes. The wells were constructed of two (2) inch diameter schedule 40, threaded, flush joint, PVC riser pipe and 10-slot PVC well screen. The screen was ten (10) feet in length, and fitted with threaded bottom plugs. The well screens were installed from approximately 7 feet below to 17 feet below the ground surface. A sand pack was gradually introduced to fill the annular space between the screen and the borehole wall. The sand pack extended from the bottom of the borehole to approximately one half (1/2) foot above the top of the screen. The sand pack consisted of washed, graded, silica sand with an average grain size and grain size distribution such that it was compatible with the screen slot size of 0.01 inches. A two (2) foot thick bentonite pellet seal was placed above the sand pack, and a cement/bentonite grout slurry extended from the top of the bentonite pellet seal to within one (1) foot of the surface. The well was completed by installing a six (6) inch steel casing with a stickup of approximately three (3) feet, with a locking cap. The grout was allowed to set up for 48 hours prior to well development. The well completion diagrams were prepared to document well construction details and material specifications and are included in Appendix A.

4.1.2 SOIL BORINGS

Ten (10) soil borings were installed manually using a three (3) inch bucket auger. Soil samples obtained from the bucket auger, from a depth of 0.5' to 1.0', were immediately placed in properly labeled sample containers sealed with tin foil and a screw on cap for screening as described in section 4.3.2. Each soil boring was abandoned following the completion of auguring/sampling activities by backfilling with auger cuttings from the respective borehole.

4.1.3 SEDIMENT SAMPLES

Three (3) sediment samples were collected from each of the three onsite catch basins. The samples were collected using a shovel to remove some material from the bottom of the catch basin. Each sediment sample obtained from the catch basins were immediately placed in properly labeled sample containers sealed with tin foil and a screw on cap for screening as

Printed on recycled paper
to help protect the environment

described in section 4.3.2. Excess material collected from the catch basins was returned to the bottom of the catch basins.

4.2 WELL DEVELOPMENT

The following well development procedures were employed 48 hours after completion of the groundwater monitoring wells. This allowed the cement/bentonite grout sufficient time to set-up and enabled the wells to equilibrate. Prior to evacuation procedures the water level within the wells was measured with an audible signal, water level indicator to facilitate calculation of the volume of water within the well. Water was then evacuated from the wells using a decontaminated, plastic bailer. Well development continued until a minimum turbidity was achieved. All water withdrawn from the monitoring wells was properly contained within labeled, DOT approved 55 gallon drums to await proper disposal.

4.3 SAMPLE COLLECTION/SCREENING AND ANALYSIS

The sample collection/screening and analysis program implemented at the project site involved the collection of one (1) groundwater sample from each monitoring well; as well as the field screening of soil and sediment samples to enable the selection of two (2) soil samples from the ten (10) soil borings and one (1) sediment sample for chemical analyses. All sample collection and screening measures were performed in accordance with accepted protocols by an experienced AFI Environmental Geologist. All samples were placed in appropriately labeled sample containers for transport under proper chain of custody records to Lozier Laboratories for chemical analyses. The following sections outline sample collection and screening procedures, and identify the analytical methods employed to chemically characterize the groundwater and soil samples.

4.3.1 GROUNDWATER

After well development, the monitoring wells were allowed to equilibrate for 24 hours. The static water level within the monitoring wells were measured using an audible signal water level indicator. After calculating the volume of water contained within each well, purging was initiated. Purging was accomplished using decontaminated plastic bailers. Well purging continued until at least 3 well volumes were removed or a minimum of turbidity was obtained. All water withdrawn from the monitoring wells was properly contained within labeled, DOT approved 55 gallon drums to await proper disposal.

Groundwater sampling was performed within 24 hours after purging. The monitoring wells were sampled using decontaminated plastic bailers. The samples were placed in laboratory precleaned and prelabeled containers, appropriate preservatives were added, and the samples were placed on ice in a cooler for transport to Lozier Laboratories under proper chain of custody records. Five (5) groundwater samples underwent testing in accordance with EPA SW-846 3rd edition.

Printed on recycled paper
to help protect the environment.

4.3.2 SOIL

Soil samples obtained from split-spoons were screened for total organic vapors (TOVs) utilizing an HNu PID after equilibrating at room temperature for one (1) hour. After removing the screw on cap, the foil seal of the sample container was pierced with the probe of the PID, and a measurement was recorded. A summary of field screening results for VOCs is contained in Table #1. PID measurements were zero for all split spoon samples collected during monitoring well installation and ranged from 0 ppm to 0.7 ppm for the ten (10) soil and (3) three sediment samples.

Two (2) samples from the ten (10) soil borings and one (1) sediment sample from the three (3) drainage inlets were selected for chemical analysis based upon the results of field screening. The three (3) soil/sediment samples with the highest measured TOV concentration were placed in a laboratory precleaned and properly labeled sample containers and placed on ice in a cooler for transport under proper chain of custody records to Lozier Laboratories. All soil samples underwent testing in accordance with EPA SW-846 Method 8240 for VOCs, TCL Semi-VOCs by Method 8270, TCL Pesticides/PCBs by Method 8080, RCRA Metals by Method 6010/7000s , and Cyanide by Method 9012.

4.4 DECONTAMINATION

All drilling equipment such as augers, bits and sampling equipment which came in contact with subsurface materials was decontaminated via steam cleaning before and after drilling activities at each borehole. Equipment decontamination consisted of the removal of all soils with a high pressure, low volume, steam and detergent wash. Split-spoon decontamination was performed between samples and consisted of a detergent wash and potable water rinse.

The AFI geologist supervising the field investigation ensured that all equipment was properly decontaminated prior to use at the site, between each borehole, and before leaving the site.

4.5 CONTAINMENT OF WASTES

Drill cuttings from the installation of the monitoring wells were transferred into labeled DOT-approved 55 gallon drums to await proper disposal. Similarly, all decontamination fluids and liquids withdrawn from the groundwater monitoring wells during development, purging and sampling activities were contained within labeled DOT-approved 55 gallon drums to await proper disposal by the client.

5.0 ANALYTICAL RESULTS

5.1 SOIL

Printed on recycled paper
to help protect the environment

The Lozier laboratory report containing the analytical results for the soil samples analyzed via EPA SW-846 Method(s) 8240, 8270, 8080, 6010/7000 and 9012 are presented in Appendix C. This report also contains the case narrative, laboratory quality assurance/quality control (QA/QC) data, and chain of custody records. An initial review of the data indicated that the holding times for the 8080 Pesticides/PCBs and the TCL Semi-VOCs 8270 soil samples were exceeded prior to analysis. These samples were destroyed and resampled on December 6, 1994. All data reported within this report was analyzed within the required holding times, laboratory blanks were free of contamination, and all QC data were acceptable. These data are summarized and discussed in Section 6.0.

5.2 GROUNDWATER

The results of the chemical analysis of the five (5) groundwater samples collected from the onsite monitoring wells are presented in Appendix D. Additionally, the case narrative, laboratory QA/QC data and chain of custody records for these samples are presented therein. All groundwater samples were analyzed within the required holding times, surrogate standard recoveries were within acceptable limits (except for the low acid recoveries due to matrix interference on method 8270 for samples 1,3,4,5 and sample 6 for method 8080), and laboratory blanks were free of contamination. Section 6.0 contains a summary and evaluation of these groundwater data.

6.0 CONTAMINATION ASSESSMENT

An evaluation of the data resulting from the chemical analysis of soil and groundwater samples collected from the project site, including data from previous studies, was performed with respect to the following:

- o Type of Contamination
- o Potential Sources of Contamination
- o Compliance with Applicable Regulatory Guidelines

The succeeding subsections provide an assessment of the subsurface conditions at the project site, based upon available data, and provide the foundation for the recommendations concerning further investigation and/or remediation of the site discussed in Section 8.0.

6.1 SOIL

Analytical results from the two (2) soil samples and one (1) sediment sample collected from the project site have indicated the presence of a number of volatile organic compounds (VOCs) and semi volatile organic compounds (SEMIVOCs) commonly associated with petroleum contstituents, possibly from fuel oil. Table 2 presents a summary of these results in a comparative format which includes the guidance values for each parameter as specified in the NYSDEC publication: *Spill Technology and Remediation Series (STARS) Memo #1 and/or*

Printed on recycled paper
to help protect the environment

NYSDEC Soil Cleanup Objectives and Cleanup levels TAGM (January 24, 1994). As illustrated by Table #2, and discussed within the laboratory case narrative, all sediment samples were diluted, prior to analysis, due to the presence of a brown viscous petroleum hydrocarbon within the sample extract. The dilution of the sample raised the detection limits far above the NYSDEC guidance values by several orders of magnitude. Further, PCB-1260 was detected at all locations sampled and analyzed, with the highest concentration at location # 9.

Based upon the location from which soil samples containing significant concentrations of VOCs and SEMIVOCs were collected; one can assume that impacts to the soil near the former UST location (location #10) and the fueling/container staging area (location #11) has occurred as the results of minor spillage or leaks. This assumption is consistent with the field screening data presented in Table #1. A further review of the same table reveals that not all samples locations exhibited VOC's. This may indicate that the impacts from the petroleum releases to the soil is limited. This assumption is supported by the lack of VOC's during the screening of the split spoon samples and the lack of any VOCs in the groundwater samples collected from the site. Therefore one could assume that not all areas of the site are contaminated with petroleum constituents.

6.2 GROUNDWATER

The chemical analysis of groundwater samples collected from the overburden monitoring wells installed on the site, did not indicate the presence of petroleum constituents in exceedance of NYSDEC guidance values. These data are summarized in Table #3. Based on a comparison with applicable guidance values established by the NYSDEC STARS Memo #1 and NYSDEC TAGM dated January 24, 1994, it appears that none of the contaminants encountered in the soil/sediments have entered the groundwater at any of the areas monitored. Further, it appears that contaminants originating from areas off-site are not migrating on-site via the groundwater flow system and that onsite contaminants are not migrating offsite via the groundwater system.

7.0 CONCLUSIONS

AFI Environmental collected a total of three (3) soil/sediment and five (5) groundwater samples from the project site for analysis pursuant to NYSDEC Petroleum-Contaminated Soil Guidance Policy. The resulting analytical data was assessed to determine if contaminated soil was present and to characterize groundwater quality. In general, contaminated soil was encountered in varying degrees in the areas sampled. In this case we don't know that the values exceed the NYSDEC requirements because of the analytical method selected for analysis. It isa possible that some of the particular constituent levels could exceed the NYSDEC STARS limits, but this is unknown because TVLP analysis was not performed. The area of the former UST (sample location #10) demonstrated higher levels for VOCs and SEMIVOCs, than the truck fueling/waste container staging area (sample location #11). However, the sludge/sediment sample (sample location # 14) collected from the surface water runoff collection inlet was highest of all, especially for Acetone and Toluene (39,000 and 62,400 ppb respectfully). PCB-1260,

Printed on recycled paper to help protect the environment.

normally of low mobility, was detected in all samples, with the highest value recorded in the staging/refueling area. PCBs may be resulting from fill brought on-site prior to Downing Container's existence, or it maybe a result of current activity and made mobil via the liquid petroleum fraction in the soils.

Groundwater samples collected from the five (5) overburden monitoring wells were clean. No contravention of NYSDEC guidance values for drinking water standards, in the areas monitored, has occurred. The placement of the monitoring wells near the periphery of the site indicates that no contaminants are entering or leaving the site via the groundwater flow system of the overburden, in the areas monitored.

8.0 RECOMMENDATIONS

Based upon the analytical data generated during the course of this investigation and a review of NYSDEC Petroleum-Contaminated Soil Guidance Policy, AFI Environmental recommends that a more extensive soil/sediment investigation be conducted. The objective of this program, would be to determine the concentrations, distribution (horizontal and vertical) and source of petroleum and PCB-1260 constituents in the soil. Once the boundaries, source and extent of the constituents, are defined, a corrective action program could be implemented. This would allow remediation of the site soils to within levels that are protective of human health and the environment.

However, recognizing that the site is located in a highly industrialized area and that the site is not currently leaching constituents into the groundwater or offsite via groundwater, a combination of testing, soil remediation, and paving with asphalt, concrete, or other impermeable semi-permanent material may warrant consideration.

The ultimate selection of the remedial method should be based upon further soil investigation and a number of parameters, including but not limited to effectiveness, potential impacts to human health and the environment, cost, and compatibility with the current commercial nature of the site. AFI also recommends that the NYSDEC be consulted regarding acceptable clean-up levels at the site, as well as the means by which these objectives will be achieved; once additional data has been collected and reviewed.

* NYSDEC Guidance Values from Jan 24, 1994 TAGM-Determination of Soil Cleanup Objectives and Cleanup Levels. HWR94-4046.

Allowable soil concentrations may be increased by a factor of 100 if the contamination is in the unsaturated zone above the water table. The value of 100 for correction is consistent with the logic used by EPA in its Dilution Attenuation Factor (DAF) approach for EP Toxicity and TCLP. (reference TAGM HWR94-4046).

Soil cleanup objectives are obtained by multiplying the allowable soil concentration by the correction factor.

CASE NARRATIVE
FOR LOZIER LABORATORY REPORT 94116329

PROBLEM TYPE:

H - HOLDING TIME	D - DILUTION
T - TUNE	I - INTERNAL STANDARDS
S - SURROGATES	M - MS/MSD/MSB
B - BLANKS	X - _____
C - CALIBRATION	Y - _____
D - DUPLICATES	Z - _____

PROBLEM	SAMPLE	ANALYST'S COMMENTS
D	1,2,3	The sample extracts were dark brown and viscous. The presence of petroleum hydrocarbons in the analysis precludes lower reporting levels.

Re: Removal & Disposal
of Underground Tank

Gentlemen:

Please be advised that the Elmwood Tank & Piping Corporation has been awarded the contract to clean, gas free and legally dispose of the following underground tank and its contents, as per D.E.C. Regulations, at the listed location:

LOCATION: Downing Container Service
191 Ganson Street
Buffalo, New York

SIZE: 1-4,000 Gallon Steel Tank

We are proceeding with the removal of the aforementioned underground tank on November 24, 1987 in accordance with your verbal approval of our telephone conversation of November 18, 1987.

If you require further information, please do not hesitate to contact us.

Very truly yours,

ELMWOOD TANK & PIPING CORP.

QUESTIONNAIRES

BENCHMARK ENVIRONMENTAL ENGINEERING & SCIENCE, PLLC

Phase I Environmental Site Assessment
User Questionnaire

SITE NAME: 145 Ganson Street Site
ADDRESS: 145 Ganson Street, Buffalo, NY

1.) Are you aware of any environmental cleanup liens against the Site that have been filed or recorded in a registry under federal, tribal, state or local law?

☒ No ☐ Yes Explain: _____

2.) Are you aware of any engineering controls, land use restrictions or institutional controls that are in place and/or that have been filed or recorded in a registry under federal, tribal, state or local law?

☒ No ☐ Yes Explain: _____

3.) As the User of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☒ No ☐ Yes Explain: _____

4.) Does the purchase price being paid for this property reasonably reflect fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐ No ☒ Yes If No, Explain: _____

5.) Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as User,

a. Do you know the past use of the property?
☐ No ☐ Yes Explain: _____
b. Do you know of specific chemicals that are present or once were present at the property?
☐ No ☐ Yes Explain: _____
c. Do you know of spills or other chemical releases that have taken place at the property?
☐ No ☐ Yes Explain: _____
d. Do you know of any environmental cleanup activities that have taken place at the property?
☐ No ☐ Yes Explain: _____

6.) As the User of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

☒ No ☐ Yes Explain: _____

CERTIFICATION OF RESPONSES

I, Douglas Swift, the user of the Phase I ESA being completed for this Site, do hereby attest and certify that to the best of my knowledge, the answers and information provided in this questionnaire, are true and accurate. I have not willfully withheld information that may be pertinent to the questions contained herein and have not distorted or misrepresented the facts regarding the content of this questionnaire.

BENCHMARK ENVIRONMENTAL ENGINEERING & SCIENCE, PLLC

Phase I Environmental Site Assessment
Environmental Questionnaire

1) Site Information

Site Name: 145 Ganson Street Site

Address: 145 Ganson Street, Buffalo, NY

Business Owner/Operator: Eric Bauer

Title: President Years in Position: 25

2) Size & Nature of Operation

Number of Buildings: 2 Total Sq. Ft.: Approx 12k Property Size (acres): Approx 7 Acres

Description of Operations: Trucking & Transportation

Current Tenants: Self

What is the intended use of the subject property and/or structures located on the subject property?
Storage & Maintenance

3) What are the past uses/occupants of this facility/property & dates of occupancy?

1) We have occupied since March 1978
2)
3)

4) Utilities

Floor Drains:	Yes	Discharge Point:	Buffalo City Sewer
Sump Pumps:	None	Discharge Point:	
Storm Drains:	Yes	Discharge Point:	Buffalo City Sewer
Other:			
On-site utilities:			

When was subject property connected to municipal sewer, if currently connected?

5) List and describe the stormwater and wastewater discharges from the facility, including the sources, discharge points, and receiving waters or facility.

6) What is the nature of the wastes generated on-site (including hazardous/ regulated wastes, the disposal methods and waste disposal vendors)?

Used motor oil from our own fleet. Burned in a approved waste oil furnace for heating.

How is it stored on-site? AST

Who collects the waste? Self

7) Has the refuse service ever refuse to collect the waste?

☒ No ☐ Yes Explain:

8) Have there ever been any complaints or notices of violations about your facility?

☒ No ☐ Yes Nature:

9) What type of HVAC (Heating, Ventilation & Air Conditioning) system does this facility have (ex; natural gas, electric, heating oil, propane, etc. /forced air, radiant, HVAC, etc.)?

Natural Gas

10) Was this facility ever heated with oil?

☐ No ☒ Yes When? Currently. Used oil is burned as a secondary source of heat in an approved waste oil furnace.

Method of Storage:

11) Was this facility ever a car repair shop, paint shop, or gas station?

☒ No ☐ Yes When?

Owner:

12) Are there any aboveground or underground storage tanks?

☐ No ☒ Yes

Tank ID#: 1

☐ UST ☒ AST Capacity: 10000 Product: Diesel Fuel-On Road

Location:

Notable Information:

Tank ID#:

☐ UST ☐ AST Capacity: Product:

Location:

Notable Information:

Tank ID#:

☐ UST ☐ AST Capacity: Product:

Location:

Notable Information:

Do the tanks comply with December 1998 EPA requirements (including overfill protection, monitoring systems, cathodic protection/double walled tank & piping, etc.)?

☐ No ☒ Yes

When were the tanks leak tested?

Are the tanks registered? Yes

Leak detection devices in place? ☐ No ☐ Yes Type of system? NA

Monitoring reports available? ☐ No ☐ Yes Please supply reports.

13) Were there ever, to your knowledge, any underground or aboveground tanks located on-site previously?

☐ No ☒ Yes When?

Are closure reports available? ☐ No ☒ Yes

14) What type of chemicals are used in the operations (attach list)?
List hazardous waste/material storage locations:

15) List the environmental or safety reports to be submitted to regulatory agencies, the frequency of such reports, and the agencies to which they are submitted.
NYS DEC PBS Certificate 5years

16) Do you have any federal, state, or local permits for the following?

SPDES:	☒ No	☐ Yes	ID #:
RCRA:	☒ No	☐ Yes	ID #:
EPA ID:	☒ No	☐ Yes	ID #:
Title V Air Emissions:	☒ No	☐ Yes	ID #:

17) Have you ever transported Hazardous waste from this site?
☒ No ☐ Yes manifests available? ☐ No ☐ Yes

18) Are PCBs or PCB-containing equipment present on the subject property, including light ballasts or other equipment?
☒ No ☐ Yes

Location:	Type of Equipment:
Location:	Type of Equipment:
Location:	Type of Equipment:

19) Are there any transformers located on-site?
☒ No ☐ Yes Are they utility owned? ☐ No ☐ Yes Utility Company or owner:

20) Do you treat or dispose of any waste materials on-site including incineration, neutralization, or landfilling?
☒ No ☐ Yes Type:

21) Do you store any hazardous/regulated wastes on-site for transfer to a disposal facility?
☒ No ☐ Yes Waste recipient: Permit #:

22) Have you ever been the subject of an enforcement action by any federal, date, or local agency regarding environmental issues?
☒ No ☐ Yes Nature of action:

23) Have there ever been any spills, unpermitted discharges, or releases of hazardous or contaminated materials at or near this facility?
☒ No ☐ Yes Nature of release:

24) Are there any stained, stressed or dead vegetation surfaces on-site?
☒ No ☐ Yes Suspected cause:

25) Are you presently under any federal, state, or local consent orders, decrees or causes of action?
☒ No ☐ Yes Are they pending? ☐ No ☐ Yes

26) Have you ever allowed or permitted any other entity to dump, store, dispose, transport, bury, incinerate, or landfill any materials at the site?

☒ No ☐ Yes Who? When?

27) Does anyone other than your operations utilize this site presently?

☒ No ☐ Yes Who?

Nature of their operations:

28) Have you ever experienced any problems from odors, drainage, storage practices, or operations from your neighbors?

☒ No ☐ Yes Nature of the problem:

Actions taken to correct the problem:

29) Are you aware of any environmental liens on the property?

☒ No ☐ Yes Nature:

30) Was there ever a septic tank, leach field injection well, or dry well located on the property?

☐ No ☐ Yes When?

31) Are there, or were there ever any water wells located on-site?

☒ No ☐ Yes When?

32) Are there any dry cleaning operations conducted on-site?

☒ No ☐ Yes How long has dry cleaning been conducted on-site?

What is the current generation of machine used on-site?

How old is the current machine?

Was there a previous machine used on-site?

33) Is there currently any X-ray developing or film developing conducted on-site?

☒ No ☐ Yes Is there a silver recovery system in use? ☐ No ☐ Yes

34) Do you have any specialized knowledge that would provide information regarding previous ownership or uses of the property that may be material to identifying recognized environmental conditions regarding the site?

☒ No ☐ Yes Nature:

35) What are the past and present uses of the properties adjacent to you (please include dates of occupancy)?

Direction	Current Use/ Occupant	Past Use/Occupants
North	Presently vacant	
South	Lafarge Corp. Silo storage	
East	Buffalo River	
West	Ganson St	

36) Are there any pending, threatened or past litigation relevant to hazardous substances or petroleum products in, on or from the subject property?

☒ No ☐ Yes Nature:

37) Are there any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the subject property?

☒ No ☐ Yes Nature:

38) Are there any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products related to this site?

☒ No ☐ Yes Nature:

CERTIFICATION OF RESPONSES

I, Eric Bauer, the owner/operator and/or responsible person for this facility, do hereby attest and certify that to the best of my knowledge, the answers and information provided in this questionnaire, are true and accurate. I have not willfully withheld information that may be pertinent to the questions contained herein and have not distorted or misrepresented the facts regarding the content of this questionnaire.

1.0 INTRODUCTION

1.1 Background and Site Description

Benchmark Environmental Engineering & Science, PLLC (Benchmark) performed a Phase II Environmental Investigation on behalf of SpotOne, LLC at 145 Ganson Street (aka 127 Buffalo River and 189-191 Ganson Street) in the City of Buffalo, Erie County, New York (Site).

The Site is located in a highly developed industrial area of the City of Buffalo (see Figure 1). The Site is supplied with municipal sanitary sewer, electric, natural-gas and public water.

As shown on Figure 2, two structures are present on the Site. Building 1 is a truck maintenance garage, truck washing station, and office. The original western portion of Building 2 is vacant and an addition to the east is a storage area for truck parts, empty drums, and old vehicles.

The Site, consisting of three parcels totaling approximately seven-acres, is defined in the table below:

Parcel Address	Size (acres)	Tax ID No.	Current Use
127 Buffalo River	2.2	122.13-4-2	Truck maintenance and office (Building 1)
189 Ganson Street	4.05	122.13-4-1.11	Parking lot
191 Ganson Street	0.75	122.09-2-4	Storage garage (Building 2)

As further detailed below, Benchmark completed a Phase I Environmental Site Assessment (ESA) for the Site.

1.2 Previous Study

Benchmark completed a Phase I ESA for the Site dated November 2018. The following provides a summary of historic Site uses identified through Benchmark's review of historic sources including Sanborn maps, city directories, regulatory documents and municipal records.

Approximate Years	Reported or Suspected Use	Owner/Occupant
At least 1889 through current	Current operations include truck maintenance, a truck washing station, office space and storage for truck parts, empty drums, and old vehicles. Historic operations included a mix of industrial, commercial, and residential uses. Sanborn maps indicate various structures and operations throughout these years including lumber sheds, iron ore yards, machine shops, tin shops, railroads, commercial buildings, and restaurants. Various railroad tracks also appeared on-Site. In addition, trucking, container, and transportation, and construction companies were on-Site. Previous studies indicate that Site was historically used as a storage yard and repair shop for Waste Management of New York's Downing Container Division garbage pickup, roll off and rental operations. Multiple residential structures were formerly present along Ganson Street. Municipal records and regulatory records indicate installation of at least 14 underground storage tanks (USTs) between 1949 and 1980, and removal of at least eight USTs between 1986 and 1988. The exact locations of several USTs were not identified in historical records. The number of tanks installed versus the number of tanks removed does not correspond which is not uncommon for a Site such as this. Various regulatory listings were identified for the Site including inactive/closed spill incidents, Resource Conservation and Recovery Act (RCRA), Petroleum Bulk Storage (PBS), etc.	Current owner: George W. Burnett Inc. Past owners/occupants include J. Lloyd, Earl Roberts, American Shipbuilding Co., Buffalo Dry Dock Co., Great Lakes Transit Corp., Earl Roberts, Waste Management/Downing Container Service Inc., N&K Cartage Co. Inc., Lake Erie Transportation Co. Inc., Roy Track Inc., and Carlson Truck Service.

Benchmark's assessment revealed the following RECs in connection with the Site:

- The long history of commercial and industrial operations (i.e., machine shops, tin shops, iron ore yards, railroads, shipbuilding companies, trucking companies with repair, and construction companies) with numerous USTs and various regulatory listings. In addition, the Site was historically used as a storage yard and repair shop for Waste Management of New York's Downing Container Division garbage pickup, roll off and rental operations.
- Concrete reportedly associated with former USTs/pump island areas were observed by Benchmark during the site visit as was black staining.

- The oil/water separator is considered a REC as the integrity of the oil/water separator is unknown.
- The unknown pipe identified protruding from the ground in the northeastern corner of Building 1 is considered a REC as the exact nature of the pipe is unknown and could not be verified by the Site contact.
- The numerous 55-gallon drums/barrels located in Building 2 are considered RECs as Benchmark could not verify the contents of the drums/barrels.
- It is possible that impacted fill material from unknown sources was brought to the property to use as backfill across the Site including a former boat slip area and former structure areas.

In consideration of the RECs detailed above, this Phase II was completed to further assess subsurface soil/fill and groundwater conditions at the Site.

2.0 SITE INVESTIGATION ACTIVITIES

2.1 Soil Boring Investigation

On January 24, 2019 and January 25, 2019, Benchmark's subcontractor, TREC Environmental, Inc. (TREC), mobilized a 6620DT Geoprobe direct-push drill rig equipped with a two-inch diameter, 48-inch long macro-core sampler to the Site to assess subsurface conditions on exterior portions of the Site. As shown on Figure 2, 21 soil borings designated as SB-1 through SB-21 were completed at the Site. The soil borings were advanced to depths ranging between 8 feet below ground surface (fbgs) and 16 fbgs.

The physical characteristics of all soil borings were classified using the ASTM D2488 Visual-Manual Procedure Description. Soil/fill from each soil boring was screened via headspace screening using a MiniRae 2000 Photoionization Detector (PID). Visual and/or olfactory observations, if any, were noted. All field observations, including lithology, depths, PID scan results, etc., at each investigation location are summarized on the soil boring logs included in Appendix A. Photographs taken during the work are included in Appendix B.

A total of twelve soil/fill samples were selected for laboratory analysis for Target Compound List (TCL) plus Commissioners Policy-51 (CP-51) volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), Resource Conservation and Recovery Act (RCRA) metals, and/or polychlorinated biphenyls (PCBs). The soil samples collected as part of the investigation were transported under chain-of custody command for analysis to TestAmerica Laboratories, Inc. (TestAmerica) in Amherst, New York. Samples were collected in laboratory provided sample jars and cooled to 4 C° prior to transport.

2.2 Groundwater Sampling

Four soil borings, SB-1W, SB-8W, and SB-13W, and SB20W, were converted into temporary one-inch diameter monitoring wells. The temporary wells were installed using one-inch diameter Schedule 40 PVC well screen and riser. Groundwater grab samples were collected from the temporary wells using a dedicated and disposable 0.5" polyethylene bailer subsequent to purging a minimum of three well volumes from each well. The temporary wells were manually decommissioned (pulled) following groundwater sampling activities. The resulting open annulus was backfilled with Site soils.

Additionally, two existing two-inch diameter monitoring wells previously installed by others (designated by Benchmark as MW-1 and MW-2) located in the central portion of the Site, were sampled by Benchmark utilizing a 1.5" polyethylene bailer. Existing monitoring wells on the northwest (MW-3) northeast (MW-4) portions of the Site could not be sampled as the wells are damaged.

Six groundwater samples were placed in pre-cleaned laboratory provided sample bottles, cooled to 4 °C in the field, and transported under chain-of-custody to TestAmerica for analysis of TCL plus CP-51 VOCs.

3.0 INVESTIGATION FINDINGS

3.1 Site Geology/Hydrogeology

The overburden geology observed during the soil boring investigation is generally described as non-native black fill materials at depths ranging between 2 fbgs and 10 fbgs overlying native soils consisting of sandy lean clay and/or fine sand to a depth of at least 16 fbgs (see the Soil Boring Logs provided in Appendix A). Fill materials encountered during this investigation consisted of gravel with sand and/or black granular material mixed with cinders, brick, concrete, and/or glass.

Groundwater was encountered during the drilling work at all soil boring investigation locations at depths ranging from near surface at 3 fbgs in the northernmost boring locations and between approximately 5 fbgs to 8 fbgs in the remainder of the Site. Groundwater levels measured in the two existing wells and four temporary wells prior to sampling ranged between 1.5 fbgs and 6.3 fbgs.

Groundwater flow is likely to the east or west toward the Buffalo River. Local groundwater flow, however, may be influenced by subsurface features, such as excavations, utilities, and localized fill-conditions.

3.2 Field Observations

Soil samples from the soil boring investigation were observed and scanned via headspace screening for volatile organics using a PID. A description of the field observations during the soil boring investigations are presented below:

Investigation Location ID	Environmental Concern Assessed	Highest PID reading (parts per million, ppm) and depth (fbgs)	Other Observations
SB-1	Former USTs and/or pump islands	0	Fill to 9 fbgs.
SB-2		72.2 ppm, 5.5-8 fbgs	Black staining, visible oily product within soil, petroleum-like odor, fill to 10 fbgs
SB-3		0	Fill to 5 fbgs.
SB-4		0	Fill to 4 fbgs.
SB-5		0	Fill to 2 fbgs.
SB-6		0	Fill to 5 fbgs.

Investigation Location ID	Environmental Concern Assessed	Highest PID reading (parts per million, ppm) and depth (fbgs)	Other Observations
SB-7	Former USTs and tin/pipe shop building	0	Fill to 4.5 fbgs.
SB-8	Former USTs and/or pump islands	45.7 ppm, 2-4 fbgs	Black staining, petroleum-like odors, sheen on water in sleeve, fill to 4 fbgs.
SB-9		0	Minimal return
SB-10		13.2 ppm, 4 fbgs	Black staining, petroleum-like odors, sheen on water in sleeve, fill to 5 fbgs.
SB-11		24.9 ppm, 8 fbgs	Black staining, petroleum-like odors, fill to 8 fbgs.
SB-12		0	Fill to 4 fbgs.
SB-13	Former roll-off storage area	0	Fill to 6 fbgs.
SB-14	Former boat dock/slip areas ang general site conditions	0	Fill to 6 fbgs.
SB-15		0	Fill to 5 fbgs.
SB-16	Delineation of field impacts noted at SB-2.	0	Fill to 5 fbgs.
SB-17		35.3 ppm, 5-7 fbgs	Black staining, petroleum-like odors, fill to 7.5 fbgs.
SB-18		0	Fill to 9 fbgs.
SB-19		0	Fill to 4 fbgs.
SB-20	Existing oil/water separator and pipe of unknown nature	0	Fill to 5.5 fbgs
SB-21	Former sheet metal shop building	0	Fill to 3 fbgs.

3.3 NYSDEC Spill Incident

Due to the field evidence of petroleum impacts (i.e., oily product) observed at SB-2 (127 Buffalo River parcel), as required by law, the New York State Department of Environmental Conservation (NYSDEC) was notified and Spill No. 1810799 was assigned to the 127 Buffalo River parcel. Ms. Francine Gallego of the Region 9 office is reportedly the NYSDEC Spill Engineer assigned to the spill incident.

3.4 Soil Analytical Results

Table 1 presents a summary of the laboratory analytical results. For comparative purposes, Table 1 includes CP-51 Soil Cleanup Levels (SCLs), 6NYCRR Part 375 Unrestricted Soil Cleanup Objectives (USCOs), Commercial SCOs (CSCOs), and Industrial SCOs (ISCOs). Appendix C contains a copy of the laboratory analytical data package.

PAHs were identified at concentrations exceeding CP-51 SCLs, USCOs, CSCOs and/or ISCOs in five soil/fill samples collected across the Site at SB-7, SB-8, SB-13, SB-14 and SB-21.

Metals were identified at concentrations exceeding USCOs, CSCOs and/or ISCOs in eight soil/fill samples collected across the Site at SB-7, SB-8, SB-10, SB-13, SB-14, SB-15, SB-20 and SB-21. CSCO and/or ISCO exceedances were identified at SB-7 (arsenic at 22 mg/kg), SB-8 (barium at 500 mg/kg and lead at 1,550 mg/kg), SB-13 (arsenic at 20.9 mg/kg), SB-14 (arsenic at 23.4 mg/kg), SB-15 (mercury at 12.6 mg/kg), SB-20 (arsenic at 20.3 mg/kg and lead at 1,030 mg/kg), and SB-21 (arsenic at 16.6 mg/kg).

PCBs were not identified at a concentration above laboratory detection limits in the soil/fill samples collected across the Site.

VOCs were either not detected at concentrations above laboratory detection limits or concentrations were below CP-51 SCLs and USCOs. In the case of SB-2 where field evidence of petroleum impact was identified, this suggests weathered petroleum.

A summary of impacts at the Site is provided as Figure 3.

3.5 Groundwater Analytical Results

Groundwater sample results are summarized on Table 3 with comparison to Class GA Groundwater Quality Standards (GWQS) per NYSDEC Technical and Operational Guidance Series (TOGS 1.1.1). A copy of the complete laboratory analytical data package is included in Appendix C.

As indicated on Table 3, VOC concentrations in all six groundwater samples collected across the Site were either not detected above laboratory detection limits or concentrations were significantly below their respective Class GA GWQS.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the Phase II Environmental Investigation at the Site, Benchmark offers the following conclusions and recommendations:

- The seven-acre Site has a long commercial and industrial history with operations including machine shops, tin shops, iron ore yards, railroads, storage yard and repair shop for a disposal facility, shipbuilding companies, trucking companies with repair/washing, and construction companies. In addition, numerous USTs and a boat slip that was backfilled with fill materials from unknown origins were identified in connection with the Site.
- Field evidence of petroleum impact (i.e., oily product, staining, odors and elevated PID readings) was noted in a former UST/pump island area at SB-2 and a proximate southern boring (SB-17) on the 127 Buffalo River parcel.
- Due to the field evidence of petroleum impacts, as required by law, the NYSDEC was notified and Spill No. 1810799 was assigned to the 127 Buffalo River parcel. Francine Gallego is reportedly the NYSDEC Spill Engineer assigned to the spill incident.
- The highest PID reading identified during the work (72.2 ppm) was noted at SB-2. Additional elevated PID readings were identified across the Site at SB-8 (45.7 ppm), SB-10 (13.2 ppm), SB-11 (24.9 ppm) and SB-17 (35.3 ppm) with odors noted. A sheen on water was noted at SB-8 and SB-10.
- Fill material mainly consisting of gravel with sand and/or black granular material mixed with cinders, brick, concrete, and/or glass was noted across the Site at depths ranging between 2 and 10 fbgs.
- Analytical results indicate the presence of fill materials impacted by PAHs and metals across the Site with concentrations exceeding 6NYCRR Part 375 USCOs, CSCOs and ISCOs. To a lesser extent, based on laboratory results and/or field observations, weathered petroleum impacts are present in a former tank/pump island area on the southern portion of the Site at SB-2 and SB-17 on the 127 Buffalo River Parcel. Field observations also indicate a sheen on groundwater on the northern portion of the Site (191 Ganson Street) at SB-8 and SB-10.
- VOC concentrations in groundwater samples were either not detected above laboratory detection limits or were at concentrations below GWQS.
- We understand the property is being considered for redevelopment. Based on the findings detailed above, the Site is a potential candidate for the New York Brownfield Cleanup Program (BCP). Regardless of whether the BCP is pursued, the NYSDEC will require that Spill No. 1810799 be properly addressed by the property owner. Further, impacted fill present on-Site will require exposure control, remediation and/or proper soil management either prior to or during the redevelopment project.

Notes:
1. Only those parameters detected at a minimum of one sample location are presented in this table; other compounds were reported as non-detect.
2. Values per NYSDEC CP-51 Soil Cleanup Levels (SCLs) for gasoline impacted sites.
3. Values per NYSDEC Part 375 Soil Cleanup Objectives (SCOs).
4. Sample results were reported by the laboratory in ug/kg and converted to mg/kg for comparisons to SCOs.

Definitions:
ND = Parameter not detected above laboratory detection limit.
"--" = No value available for the parameter; Parameter not analyzed for.
J = Estimated value; result is less than the sample quantitation limit but greater than zero.
F2 = MS/MSD RPD exceeds control limits
B = Compound was found in the blank and sample.
vs = Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L.

Bold	= Result exceeds Unrestricted Use SCOs and/or CP-51 SCL.
Bold	= Result exceeds Commercial Use SCOs.
Bold	= Result exceeds Industrial use SCOs.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Benchmark Env. Eng. & Science, PLLC
Project/Site: Benchmark - 145 Ganson St.

TestAmerica Job ID: 480-148426-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.
B	Compound was found in the blank and sample.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 1/29/2019 11:52 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 480-457158 recovered above the upper control limit for Carbon tetrachloride and Chloromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: SB-2 (6-8) (480-148426-1), SB-11 (6-8) (480-148426-6) and SB-17 (6-8) (480-148426-11).

Method(s) 8260C: The laboratory control sample (LCS) for preparation batch 480-457155 and analytical batch 480-457158 recovered outside control limits for the following analyte: Bromoform. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported. The following samples are impacted: SB-2 (6-8) (480-148426-1), SB-11 (6-8) (480-148426-6) and SB-17 (6-8) (480-148426-11).

Method(s) 8260C: The following samples were analyzed using medium level soil analysis and diluted due to the nature of the sample matrix: SB-17 (6-8) (480-148426-11), (480-148426-B-11-B MS) and (480-148426-B-11-C MSD). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: The following samples were analyzed using medium level soil analysis due to the nature of the sample matrix: SB-2 (6-8) (480-148426-1) and SB-11 (6-8) (480-148426-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method(s) 8270D: The following samples were diluted due to color and appearance: SB-2 (6-8) (480-148426-1), SB-7 (2.5-4.5) (480-148426-3), SB-8 (2-4) (480-148426-4), SB-13 (2-4) (480-148426-7), SB-14 (2-4) (480-148426-8), SB-15 (2-5) (480-148426-9), SB-20 (3-6) (480-148426-12) and SB-21 (2-4) (480-148426-13). Elevated reporting limits (RL) are provided.

Method(s) 8270D: The following sample was diluted due to the abundance of target analytes: SB-21 (2-4) (480-148426-13). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method(s) 8270D: The following sample required a dilution due to the nature of the sample matrix: SB-21 (2-4) (480-148426-13). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method(s) 8082A: The continuing calibration verification (CCV) associated with batch 480-457195 recovered above the upper control limit for PCB-1248. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: SB-2 (6-8) (480-148426-1), SB-4 (2-4) (480-148426-2), SB-14 (2-4) (480-148426-8), SB-15 (2-5) (480-148426-9) and SB-17 (6-8) (480-148426-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The serial dilution (480-148426-B-5-B SD ^5) associated with batch 480-457502, exhibited a result outside the quality control limits for Total Chromium. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Job ID: 480-148426-1 (Continued)

Laboratory: TestAmerica Buffalo (Continued)

Method(s) 6010C: The recovery of post spike, (480-148426-B-5-B PDS), associated with batch 480-457502, exhibited a result outside quality control limits for Total Barium. However, the serial dilution (SD) of this sample was compliant, therefore no corrective action was necessary.

Method(s) 6010C: The following samples were diluted due to the presence of Total Iron which interferes with Silver, Cadmium, and Lead: SB-14 (2-4) (480-148426-8) and SB-20 (3-6) (480-148426-12). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Benchmark Env. Eng. & Science, PLLC
Project/Site: Benchmark - 145 Ganson St.

TestAmerica Job ID: 480-148426-1

Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	10026	03-31-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Method Summary

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other ____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☒ Disposal by Lab ☐ Archive for ____ Months

Special Instructions/QC Requirements & Comments:

#1214

Custody Seals Intact: ☐ Yes ☐ No | Custody Seal No.: | Cooler Temp. (°C): Obs'd: ____ Corr'd: ____ | Therm ID No.: ____

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	BENCHMARK
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative
480-148428-1

Comments
No additional comments.

Receipt
The samples were received on 1/29/2019 10:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.3º C.

GC/MS VOA
Method(s) 8260C: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: SB-8W (480-148428-2). The sample was analyzed within 7 days per EPA recommendation.

Method(s) 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: SB-2W (480-148428-1), (480-148428-B-1 MS) and (480-148428-B-1 MSD). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

480-148428 Chain of Custody

Sample Identification	Sample Date	Sample Time	Sample Type (C=Comp, G=Grab)	Matrix	# of Cont.	Filtered Sample (Y/N)	Perform MS / MSD (Y/N)	TCL CP+SI VOCs	Sample Specific Notes:
SB-2W	1/25/19	1603	G	AQUA	2			X	LOW VOLUME
SB-8W		1509			2			X	LOW VOLUME
SB-13W		1612			2			X	LOW VOLUME
SB-20W		1551			2			X	LOW VOLUME
MW-1		1531			3			X	
MW-2		1543			2			X	LOW VOLUME

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other ____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☒ Disposal by Lab ☐ Archive for ____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No | Custody Seal No.: | Cooler Temp. (°C): Obs'd: ____ Corr'd: ____ Therm ID No.: ____

Client: Benchmark Env. Eng. & Science, PLLC

Job Number: 480-148428-1

Login Number: 148428

List Source: TestAmerica Buffalo

List Number: 1

Creator: Stopa, Erik S

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	BENCHMARK
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

GROUNDWATER DEVELOPMENT FORM

WELL I.D. MW-01

Project Name: 145 Ganson Street - Remedial Investigation
Project No.: 2223573
Location: 145 Ganson Street, Buffalo, NY
Development By: A. Koons
Date: 9/14/2022
Weather: 75°F, partly cloudy

PURGE VOLUME CALCULATION

Well Diameter: 2" -Inch
Static Water Level: ?? -Feet
Depth of Well: ?? -Feet
Single Well Volume: ?? -Gallons

PURGE & SAMPLING METHOD

☐ Bailer - Type:
☑ Pump - Type: Peri-Pump
Sampling Device:
Pump Rate: 0.2-0.15 gpm

FIELD PARAMETER MEASUREMENTS

Time	Gallons Purged	pH	Temp (oC)	Conductivity (mS/cm)	Turbidity (NTU)	Oxidation-Reduction Potential (eV)	Dissolved Oxygen (mg/L)	Comments
9:00	0	8.56	19.98	0.812	>1000	112	4.11	very turbid
9:12	2.50	8.29	19.62	0.785	>1000	47	5.26	very turbid
9:24	5.00	8.12	18.92	0.815	296	12	7.36	slightly turbid
9:38	7.50	7.71	18.23	0.851	>1000	1	6.92	very turbid
9:55	10.00	8.00	17.96	0.857	48.2	35	7.10	clear

Total 10.50 Gallons Purged Purge Start Time: 9:00 Purge End Time: 10:00

OBSERVATIONS:

Bailer lodged in well, could not obtain water level or well depth
Slowed pumping rate @ 7.5 gals
Well going dry after 10.5 gals

Well Volume (1" well) = 0.0408-gal/ft.	Well Volume (4" well) = 0.65-gal/ft.
Well Volume (2" well) = 0.163-gal/ft.

GROUNDWATER COLLECTION AND SAMPLE LOG

WELL I.D.: MW-1

Project Name: 145 Ganson Street
Location: Buffalo, NY
Project No.: #2223573
Sampled By: Andy Janik
Date: 9/21/22
Weather: Clear, ~65

PURGE VOLUME CALCULATION

Well Diameter: Two-inch
Depth of Well: ~15'
Static Water Level: ~6'
One Well Volume: ~1.25 gal.

PURGE AND SAMPLING METHOD

☐ Bailer – Type: N/A
Sampling Device: N/A
☒ Pump – Type: Peristaltic Pump
Pump Rate: ~0.3 gpm

FIELD PARAMETER MEASUREMENT

Time	Gallons Purged	pH	Temp (ºC)	Conductivity (mS/cm)	DO (mg/L)	Turbidity (NTU)	Comments
1140	0-1	8.20	24.66	0.799	0.58	8.1	
	1-2	7.73	23.05	0.770	0.0	0.5	
	2-3	7.62	21.72	0.795	0.27	15.8	
1230	3-4	7.43	22.32	0.799	0.12	14.9	Sample Taken

Total 4 Gallons Purged

Purge Time Start: 1140
Purge Time End: 1230

WELL SAMPLING

Sample I.D.: MW-1
No. of Containers: -
Sample Time: 1230
Sample Preservation: -

Sampled For:
☐ VOCs - 8260B TCL + NYSDEC STARS
☐ SVOCs - 8270C NYSDEC STARS Only
☐ VOCs - 8260B NYSDEC STARS
☐ Total RCRA Metals
☐ PCBs
☐ Other:

OBSERVATIONS

Notes: Analyzed for: 8270D and 8260C

Recharge Behavior: ☐ Fast ☒ Moderate ☐ Slow ☐ Purged Dry

Definitions/Glossary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201357-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS VOA TICs

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

LCMS

Qualifier	Qualifier Description
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-201357-1

Laboratory: Eurofins Buffalo

Narrative

Job Narrative
480-201357-1

Comments
No additional comments.

Receipt
The samples were received on 9/7/2022 4:05 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.2º C.

GC/MS VOA
Method 8260C: The method blank for preparation batch 480-640752 contained Toluene above the reporting limit (RL). None of the samples associated with this method blank contained the target compound above the reporting limit; therefore, re-extraction and/or re-analysis of samples were not performed. The associated samples are: SB-22 (7-10`) (480-201357-1), SB-26 (8-10`) (480-201357-3) and SB-29 (9-12`) (480-201357-6).

Method 8260C: Internal standard and surrogate responses for the following samples were outside control limits: SB-27 (2.5-5.5`) (480-201357-4) and DUP-1 (480-201357-7). The sample(s) were re-extracted and/or re-analyzed and responses were outside control limits.

Method 8260C: The following sample was analyzed using medium level soil analysis and diluted due to the nature of the sample matrix: SB-25 (4-6`) (480-201357-2). Elevated reporting limits (RLs) are provided.

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641153 recovered outside acceptance criteria, low biased, for 2-Butanone (MEK), 2-Hexanone, Vinyl chloride, Chloromethane, and 4-Methyl-2-pentanone (MIBK) . A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The associated sample is impacted: SB-25 (4-6`) (480-201357-2).

Method 8260C: The laboratory control sample (LCS) for preparation batch 480-641032 and analytical batch 480-641153 recovered outside control limits for the following analytes: trans-1,3-Dichloropropene and Methylene Chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The associated sample is impacted: SB-25 (4-6`) (480-201357-2).

Method 8260C: The laboratory control sample (LCS) for preparation batch 480-641032 and analytical batch 480-641153 recovered outside control limits for the following analyte(s): 4-Methyl-2-pentanone (MIBK). 4-Methyl-2-pentanone (MIBK) has been identified as a poor performing analyte when analyzed using this method; therefore,re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified. The associated sample is impacted: SB-25 (4-6`) (480-201357-2).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641153 recovered above the upper control limit for Chlorodibromomethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SB-25 (4-6`) (480-201357-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following sample was diluted due to viscosity: SB-29 (9-12`) (480-201357-6). Elevated reporting limits (RL) are provided.

Method 8270D: The following sample was diluted due to color and appearance: DUP-1 (480-201357-7). Elevated reporting limits (RL) are provided.

Method 8270D: The following sample required a dilution due to the nature of the sample matrix: SB-29 (9-12`) (480-201357-6). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Job ID: 480-201357-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The following samples were diluted due to the nature of the sample matrix: SB-25 (4-6`) (480-201357-2) and SB-29 (9-12`) (480-201357-6). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The laboratory control sample (LCS) for preparation batch 480-641258 and analytical batch 480-641296 recovered outside control limits for the following analytes: Endrin aldehyde. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8081B: The method blank for preparation batch 480-641258 contained Endrin aldehyde above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8081B: The %RPD between the primary and confirmation column exceeded 40% for Methoxychlor for the following sample: SB-29 (9-12`) (480-201357-6). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010C: The serial dilution and post spike (480-201357-A-4-B PDS) and (480-201357-A-4-B SD ^5), associated with batch 480-640693, exceeded the quality control limits for Total Aluminum, Barium, Chromium, Iron, Magnesium, Manganese, Vanadium, and Zinc. Sample matrix is suspected, therefore, no corrective action was necessary.

Method 6010C: The serial dilution (480-201357-A-4-B SD ^5) associated with batch 480-640986, exhibited results outside the quality control limits for Total Beryllium, Calcium, Copper, and Potassium. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Method 6010C: The recovery of post spike, (480-201357-A-4-B PDS), associated with batch 480-640986, exhibited a result outside quality control limits for Total Sodium. However, the serial dilution (SD) of this sample was compliant, therefore no corrective action was necessary.

Method 6010C: The following sample was diluted due to the presence of Total Calcium which interferes with Copper: SB-22 (7-10`) (480-201357-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS
Method 537 (Modified): The recovery for the labeled isotope(s): M2-8:2 FTS in the following sample: SB-22 (7-10`) (480-201357-1) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

Method 537 (Modified): The recovery for the labeled isotope(s) M2-8:2 FTS and M2-6:2 FTS in the following sample: SB-25 (4-6`) (480-201357-2) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3550C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: SB-25 (4-6`) (480-201357-2) and SB-29 (9-12`) (480-201357-6).

Method 8151A: The following sample: SB-26 (8-10`) (480-201357-3) was decanted prior to preparation.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201357-1

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201357-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8151A	8151A	Solid	Picloram
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	FREEZE TIME 9-8-22 10:00
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	LABELLA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201432-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-201432-1

Laboratory: Eurofins Buffalo

Narrative

Job Narrative
480-201432-1

Comments
No additional comments.

Receipt
The samples were received on 9/8/2022 3:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8º C.

GC/MS VOA
Method 8260C: Internal standard and surrogate responses were outside of acceptance limits for the following sample: SB-31 (14-15`) (480-201432-4). The sample(s) shows evidence of matrix interference.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-641138 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The following sample was diluted due to the nature of the sample matrix: SB-30 (5-8) (480-201432-3). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The laboratory control sample (LCS) for preparation batch 480-641258 and analytical batch 480-641296 recovered outside control limits for the following analytes: Endrin aldehyde. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8081B: The method blank for preparation batch 480-641258 contained Endrin aldehyde above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8081B: The %RPD between the primary and confirmation column exceeded 40% for Methoxychlor for the following sample: SB-30 (5-8) (480-201432-3). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 3550C: The following sample: SB-30 (5-8) (480-201432-3) was decanted prior to preparation.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201432-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8151A	8151A	Solid	Picloram
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC.

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing Northeast, LLC Buffalo and its client. All questions regarding this report should be directed to the Eurofins Environment Testing Northeast, LLC Buffalo Project Manager or designee who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
H	Sample was prepped or analyzed beyond the specified holding time
H3	Sample was received and analyzed past holding time.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

GC/MS VOA TICs

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
H3	Sample was received and analyzed past holding time.
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

LCMS

Qualifier	Qualifier Description
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits

Qualifiers (Continued)

Metals (Continued)

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-202112-1

Laboratory: Eurofins Buffalo

Narrative

Job Narrative
480-202112-1

Revision
This report has been revised to correct the sample ID on sample 9.

Receipt
The samples were received on 9/28/2022 2:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 18.0º C.

Receipt Exceptions
Insufficient sample volume was provided for the following sample(s) for the 8260 analysis: The lab did not receive TCORE vials for the requested 8260 testing. Method was added and placed ON HOLD pending CLIENT/ PM resolution: . TP-11 4-5' (480-202112-15), TP-9 3-4 (480-202112-18), TP-9 3-4 (480-202112-18[MS]), TP-9 3-4 (480-202112-18[MSD]) and TP-2 2-3' (480-202112-24).

GC/MS VOA
Method 8260C: The following sample was preserved via freezing on 9/28/2022 at 16:30: TP-22 2-3' (480-202112-3) . This is outside the 48 hour time frame required by the method.

Method 8260C: Internal standard and surrogate responses for the following samples were outside control limits: TP-9 3-4 (480-202112-18), TP-9 3-4 (480-202112-18[MS]) and TP-9 3-4 (480-202112-18[MSD]). The parent sample, matrix spike, and matrix spike duplicate confirmed responses outside control limits.

Method 8260C: The following sample was preserved via freezing on 9/28/2022 at 16:30: TP-24 3-5' (480-202112-1) . This is outside the 48 hour time frame required by the method.

Method 8260C: Internal standard and/or surrogate responses for the following sample were outside control limits: TP-18 4-5' (480-202112-7), DUP-1 (480-202112-8), TP-11 4-5' (480-202112-15), TP-2 2-3' (480-202112-24), (480-202112-B-24-C MS) and (480-202112-B-24-D MSD). The samples were re-analyzed and responses were outside control limits.

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-643625 recovered above the upper control limit for Chloromethane, Cyclohexane and Vinyl chloride. The sample(s) associated with this CCV were non-detects above the reporting limit for the affected analytes; therefore, the data have been reported. The associated samples are impacted: TP-24 3-5' (480-202112-1), TP-18 4-5' (480-202112-7), DUP-1 (480-202112-8), TP-11 4-5' (480-202112-15) and TP-2 2-3' (480-202112-24).

Method 8260C: Due to the high concentration of Acetone, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 480-643623 and analytical batch 480-643625 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria. The associated samples are: (480-202112-B-24-C MS) and (480-202112-B-24-D MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to color, appearance, and viscosity: TP-20 3-4' (480-202112-5), TP-17 3-4' (480-202112-9), TP-16 3-4' (480-202112-10), TP-15 3-4' (480-202112-11), TP-13 2-3' (480-202112-13), TP-12 3-4' (480-202112-14), TP-11 4-5' (480-202112-15), TP-8 4-5' (480-202112-16), TP-10 4-5' (480-202112-17), TP-9 3-4 (480-202112-18), TP-9 3-4 (480-202112-18[MS]), TP-9 3-4 (480-202112-18[MSD]), TP-7 1-2' (480-202112-19) and TP-6 2-3' (480-202112-20). Elevated reporting limits (RL) are provided.

Method 8270D: The following samples were diluted due to the nature of the sample matrix: TP-9 3-4 (480-202112-18[MS]) and TP-9 3-4 (480-202112-18[MSD]). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The following samples required a dilution due to the nature of the sample matrix: TP-20 3-4' (480-202112-5) and TP-9 3-4 (480-202112-18). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Job ID: 480-202112-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: TP-24 3-5' (480-202112-1), TP-23 2-3' (480-202112-2), TP-15 3-4' (480-202112-11), TP-12 3-4' (480-202112-14) and TP-6 2-3' (480-202112-20). These results have been reported and qualified.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-643562 recovered outside acceptance criteria, low biased, for Bis(2-ethylhexyl) phthalate, Butyl benzyl phthalate and Di-n-octyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-643562 recovered above the upper control limit for Hexachlorobutadiene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: TP-24 3-5' (480-202112-1), TP-23 2-3' (480-202112-2), TP-22 2-3' (480-202112-3), TP-21 3-4' (480-202112-4), TP-20 3-4' (480-202112-5), TP-19 4-5' (480-202112-6), TP-18 4-5' (480-202112-7), DUP-1 (480-202112-8), TP-17 3-4' (480-202112-9), TP-16 3-4' (480-202112-10), TP-15 3-4' (480-202112-11), TP-14 4-5' (480-202112-12), TP-13 2-3' (480-202112-13), TP-12 3-4' (480-202112-14), TP-11 4-5' (480-202112-15), TP-8 4-5' (480-202112-16), TP-10 4-5' (480-202112-17), TP-9 3-4 (480-202112-18), TP-7 1-2' (480-202112-19) and TP-6 2-3' (480-202112-20).

Method 8270D: The following samples were diluted due to color appearance, and viscosity: TP-5 4-5' (480-202112-21), TP-4 2-3' (480-202112-22), TP-3 2-3' (480-202112-23), TP-2 2-3' (480-202112-24) and TP-1 2-3' (480-202112-25). Elevated reporting limits (RL) are provided.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 480-643391/1-A). These results have been reported and qualified.

Method 8270D: Surrogate recovery for the following sample was outside the upper control limit: TP-22 2-3' (480-202112-3). This sample did not contain any target analytes above the reporting limit; therefore, re-extraction and/or re-analysis was not performed.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-643681 recovered above the upper control limit for 4-Chlorophenyl phenyl ether and Hexachlorobutadiene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: TP-6 2-3' (480-202112-20).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-643681 recovered outside acceptance criteria, low biased, for Butyl benzyl phthalate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The following sample was diluted to bring the concentration of target analytes within the calibration range: TP-6 2-3' (480-202112-20). Elevated reporting limits (RLs) are provided.

Method 8270D: The following sample required a dilution due to the abundance of target analytes: TP-6 2-3' (480-202112-20). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8081B: The following samples were diluted due to the nature of the sample matrix: TP-24 3-5' (480-202112-1), TP-15 3-4' (480-202112-11), TP-11 4-5' (480-202112-15), TP-9 3-4 (480-202112-18) and TP-2 2-3' (480-202112-24). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: TP-9 3-4 (480-202112-18[MS]) and TP-9 3-4 (480-202112-18[MSD]). As such, spike and surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 480-202112-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

Metals
Method 6010C: The serial dilution (480-202112-A-23-A SD) associated with batch 480-643705, exhibited results outside the quality control limits for Total Barium. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Method 6010C: The recovery of post spike, (480-202112-A-23-A PDS), associated with batch 480-643705, exhibited results outside quality control limits for Total Calcium and Iron. However, the serial dilution (SD) of this sample was compliant, therefore no corrective action was necessary.

Method 6010C: The serial dilution and post spike (480-202112-C-18-A PDS) and (480-202112-C-18-A SD), associated with batch 480-643306, exceeded the quality control limits for Total Barium and Zinc. Sample matrix is suspected, therefore, no corrective action was necessary.

Method 6010C: The serial dilution (480-202112-C-18-A SD) associated with batch 480-643712, exhibited results outside the quality control limits for Total Arsenic, Calcium, and Iron. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Method 6010C: The recovery of post spike, (480-202112-C-18-A PDS), associated with batch 480-643712, exhibited results outside quality control limits for Total Aluminum, Magnesium, and Lead. However, the serial dilution (SD) of this sample was compliant, therefore no corrective action was necessary.

Method 6010C: The following samples were diluted due to the nature of the sample matrix: TP-22 2-3' (480-202112-3) and TP-14 4-5' (480-202112-12). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 3550C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: TP-15 3-4' (480-202112-11), TP-11 4-5' (480-202112-15), TP-9 3-4 (480-202112-18), TP-9 3-4 (480-202112-18[MS]), TP-9 3-4 (480-202112-18[MSD]) and TP-2 2-3' (480-202112-24).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-202112-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8151A	8151A	Solid	Picloram
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	
Cooler Temperature is acceptable.	False	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	TCORE VIALS PUT IN FREEZER 9/28 @ 1630
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	False	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	LABELLA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	True

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

LCMS

Qualifier	Qualifier Description
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-201621-1

Laboratory: Eurofins Buffalo

Narrative

Job Narrative
480-201621-1

Comments
No additional comments.

Receipt
The samples were received on 9/14/2022 12:16 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 12.2º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-641452 recovered above the upper control limit for Isopropylbenzene, n-Butylbenzene, N-Propylbenzene, tert-Butylbenzene and Vinyl chloride. The sample(s) associated with this CCV were non-detects above the reporting limits for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SS-2 (0-2") (480-201621-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642144 recovered above the upper control limit for 2,4-Dinitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SS-1 (0-2") (480-201621-1), SS-3 (0-2") (480-201621-3) and DUP-2 (480-201621-4).

Method 8270D: The method blank for preparation batch 480-641680 contained Diethyl phthalate above the reporting limit (RL). None of the samples associated with this method blank contained the target compound above the RL; therefore, re-extraction and/or re-analysis of samples were not performed: SS-1 (0-2") (480-201621-1), SS-3 (0-2") (480-201621-3) and DUP-2 (480-201621-4).

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: SS-1 (0-2") (480-201621-1), SS-3 (0-2") (480-201621-3), SS-3 (0-2") MS (480-201621-3[MS]), SS-3 (0-2") MSD (480-201621-3[MSD]) and DUP-2 (480-201621-4). Elevated reporting limits (RL) are provided.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: DUP-2 (480-201621-4). These results have been reported and qualified.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-641680 and analytical batch 480-642144 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-641680 and analytical batch 480-642144 were diluted below the method detection limit (MDL) for 2,4-Dinitrophenol; therefore, percent recovery and RPD could not be calculated. The associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8270D: The following sample was diluted due to color, appearance, and viscosity: SS-2 (0-2") (480-201621-2). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642351 recovered above the upper control limit for 2-Nitrophenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SS-2 (0-2") (480-201621-2).

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: SS-2 (0-2") (480-201621-2). These results have been reported and qualified.

Method 8270D: The method blank for preparation batch 480-641680 contained Diethyl phthalate above the reporting limit (RL). None of

Job ID: 480-201621-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

the samples associated with this method blank contained the target compound above the reporting limit; therefore, re-extraction and/or re-analysis of samples were not performed: SS-2 (0-2") (480-201621-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8081B: The following sample was diluted due to the nature of the sample matrix: SS-2 (0-2") (480-201621-2). As such, surrogate recoveries are below the calibration range, estimated, and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The %RPD between the primary and confirmation column exceeded 40% for Methoxychlor for the following sample: SS-2 (0-2") (480-201621-2). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010C: The serial dilution and post spike (480-201621-A-3-D PDS) and (480-201621-A-3-D SD ^5), associated with batch 480-641525, exceeded the quality control limits for Aluminum, Barium, Chromium, Iron, and Zinc. Sample matrix is suspected, therefore, no corrective action was necessary.

Method 6010C: The serial dilution (480-201621-A-3-D SD ^5) associated with batch 480-641890, exhibited results outside the quality control limits for Total Beryllium, Cadmium, Cobalt, Potassium, Magnesium, Manganese, Sodium, and Vanadium. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Method 6010C: The recovery of post spike, (480-201621-A-3-D PDS), associated with batch 480-641890, exhibited results outside quality control limits for Total Lead and Antimony. However, the serial dilution (SD) of this sample was compliant, therefore no corrective action was necessary.

Method 6010C: The method blank for preparation batch 480-641524 and analytical batch 480-641879 contained Total Aluminum, Iron, and Manganese above the reporting limits (RL). Associated samples SS-1 (0-2") (480-201621-1) and SS-2 (0-2") (480-201621-2) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 6010C: The following samples were diluted due to the presence of Total Calcium which interferes with Copper: SS-3 (0-2") (480-201621-3), SS-3 (0-2") MS (480-201621-3[MS]), SS-3 (0-2") MSD (480-201621-3[MSD]), DUP-2 (480-201621-4), (480-201621-A-3-D PDS ^2) and (480-201621-A-3-D SD ^10). Elevated reporting limits (RLs) are provided.

Method 6010C: The following sample was diluted due to the presence of Total Iron which interferes with Chromium, Nickel, Manganese, Lead, and Vanadium: DUP-2 (480-201621-4). Elevated reporting limits (RLs) are provided.

Method 6010C: The following sample was diluted due to the presence of Total Manganese which interferes with Chromium and Thallium: DUP-2 (480-201621-4). Elevated reporting limits (RLs) are provided.

Method 6010C: The serial dilution (480-201621-A-3-D SD ^10) associated with batch 480-642108, exhibited results outside the quality control limits for Total Calcium and Copper. However, the post digestion spike (PDS) was compliant, therefore no corrective action was necessary.

Method 6010C: The following sample was diluted due to the presence of Total Calcium which interferes with Copper: SS-2 (0-2") (480-201621-2). Elevated reporting limits (RLs) are provided.

Method 6010C: The following sample was diluted for Total Silver due to the nature of the sample matrix: SS-1 (0-2") (480-201621-1). Elevated reporting limits (RLs) are provided.

Method 6010C: The following sample was diluted due to the presence of Total Iron which interferes with Nickel, Lead, Antimony, and Vanadium: SS-1 (0-2") (480-201621-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 480-201621-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

LCMS

Method 537 (Modified): Target analyte(s) Perfluorohexanoic acid, Perfluorooctanoic acid and Perfluorodecanoic acid were detected in the Method Blank 410-298521associated with the following sample: SS-2 (0-2") (480-201621-2). The following action was taken: This sample(s) was re-extracted outside the required holding time and target analyte(s) were not detected in the re-extracted method blank.

Method 537 (Modified): The recovery for the labeled isotope: M2-6:2 FTS in the following sample: SS-2 (0-2") (480-201621-2) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3550C: The following sample required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: SS-2 (0-2") (480-201621-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201621-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8151A	8151A	Solid	Picloram
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	Yes: Received same day of collection; chilling process has begun
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	LABELLA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Job ID: 480-201794-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
F1	MS and/or MSD recovery exceeds control limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

LCMS

Qualifier	Qualifier Description
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 9/20/2022 2:45 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 3.0º C, 3.2º C, 3.4º C, 3.7º C, 3.9º C and 4.4º C.

GC/MS VOA
Method 8260C: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for analytical batch 480-642412 recovered outside control limits for the following analyte(s): Chloroethane. Chloroethane has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified. The associated samples are impacted: MW-8 (480-201794-1), MW-6 (480-201794-2), MW-5 (480-201794-3), DUP-1 (480-201794-4) and MW-4 (480-201794-5).

Method 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: MW-8 (480-201794-1), MW-6 (480-201794-2), DUP-1 (480-201794-4) and MW-4 (480-201794-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-643076 recovered above the upper control limit for 2,2'-oxybis[1-chloropropane] and Carbazole. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-8 (480-201794-1), MW-6 (480-201794-2), MW-5 (480-201794-3), DUP-1 (480-201794-4) and MW-4 (480-201794-5).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-643076 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol, 4-Nitrophenol, Hexachlorocyclopentadiene and Pentachlorophenol. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The continuing calibration verification (CCV) analyzed in batch 480-643076 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270D: The laboratory control sample (LCS) for preparation batch 480-642869 and analytical batch 480-643076 recovered outside control limits for the following analytes: 4-Nitroaniline and Carbazole. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-642869 and analytical batch 480-643076 were outside control limits. The continuing calibration verification (CCV) and the associated laboratory control sample (LCS) recovery also had high recovery.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8151A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-642326 and analytical batch 480-642733 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8151A: Surrogate recovery for the following samples were outside control limits: MW-5 (480-201794-3[MS]) and MW-4

Job ID: 480-201794-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

(480-201794-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8081B: For method 8081, the recovery of the one surrogate in samples MW-5 (480-201794-3) exceeds quality control limits due to the sample matrix. The recovery of the secondary surrogate is within quality control criteria; no corrective action is required.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS

Method 537 (modified): The recovery for the labeled isotope(s) in the following sample: MW-6 (480-201794-2) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

Method 537 (modified): The recovery for the labeled isotope(s) in the following sample: MW-5 (480-201794-3) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported. The injection standard peak areas are outside of the QC acceptance limits in the following background sample: MW-5 (480-201794-3). The injection standard peak areas are also outside of the QC acceptance limits in the associated matrix spike and matrix spike duplicate samples.

Method 537 (modified): The recovery for the labeled isotope(s) in the following samples: DUP-1 (480-201794-4) and MW-4 (480-201794-5) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

Method 537 (modified): The recovery for the labeled isotope(s) 13C3 PFBS in the following sample: DUP-1 (480-201794-4) is outside the QC acceptance limits due to interference from sample matrix. The injection standard peak areas are outside of the QC acceptance limits in both the initial injection and the re-injection of the following samples: DUP-1 (480-201794-4). The values here are from the initial injection of the sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201794-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8151A	8151A	Water	Picloram

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins Environment Testing Northeast, LLC.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-201859-1

Laboratory: Eurofins Buffalo

Narrative

Job Narrative

Comments
No additional comments.

Receipt
The samples were received on 9/22/2022 2:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 20.6º C.

GC/MS VOA
Method 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: MW-2 (480-201859-3) and MW-3 (480-201859-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642718 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642718 recovered above the upper control limit for 2,2'-oxybis[1-chloropropane] and Carbazole. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-7 (480-201859-1), MW-1 (480-201859-2), MW-2 (480-201859-3) and MW-3 (480-201859-4).

Method 8270D: The laboratory control sample (LCS) for preparation batch 480-642501 and analytical batch 480-642718 recovered outside control limits for the following analytes: Carbazole. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported: MW-7 (480-201859-1), MW-1 (480-201859-2), MW-2 (480-201859-3) and MW-3 (480-201859-4).

Method 8270D: The method blank (MB) for preparation batch 480-642501 and analytical batch 480-642718 recovered above the reporting limit (RL) for the following analytes: Diethyl phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time in preparation batch 480-643244 and analytical batch 480-643463 and the method blank was still above the RL for this analyte. Insufficient volume remains for additional re-extraction and re-analysis, therefore both sets of data have been reported. MW-7 (480-201859-1), MW-1 (480-201859-2), MW-2 (480-201859-3) and MW-3 (480-201859-4)

Method 8270D: The method blank (MB) for preparation batch 480-642501 and analytical batch 480-642718 recovered above the reporting limit (RL) for the following analytes: Diethyl phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time in preparation batch 480-643244 and analytical batch 480-643463 and the method blank was still above the RL for this analyte. Insufficient volume remains for additional re-extraction and re-analysis, therefore both sets of data have been reported. MW-7 (480-201859-1), MW-1 (480-201859-2) and MW-2 (480-201859-3)

Method 8270D: The method blank (MB) for preparation batch 480-642501 and analytical batch 480-642718 recovered above the reporting limit (RL) for the following analytes: Diethyl phthalate. The associated sample(s) was re-prepared and/or re-analyzed outside holding time in preparation batch 480-643244 and analytical batch 480-643463 and the method blank was still above the RL for this analyte. Insufficient volume remains for additional re-extraction and re-analysis, therefore both sets of data have been reported. MW-3 (480-201859-4)

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642892 recovered above the upper control limit for bis (2-chloroisopropyl) ether and Carbazole. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: MW-3 (480-201859-4).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-642892 recovered outside acceptance criteria, low biased, for 2,4-Dinitrophenol, 4-Nitrophenol and Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Job ID: 480-201859-1 (Continued)

Laboratory: Eurofins Buffalo (Continued)

Method 8270D: The laboratory control sample (LCS) for preparation batch 480-642501 and analytical batch 480-642892 recovered outside control limits for the following analytes: Carbazole. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3510C: The following samples were re-prepared outside of preparation holding time due to contamination in the MB:MW-7 (480-201859-1), MW-1 (480-201859-2), MW-2 (480-201859-3) and MW-3 (480-201859-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

List Number: 1

Creator: Stopa, Erik S

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201630-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
480-201630-1

Comments
No additional comments.

Receipt
The samples were received on 9/13/2022 10:35 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice.

Receipt Exceptions

During the canister pressure check performed upon receipt, it was observed that the following sample was received at an elevated residual vacuum level: SV-2 (480-201630-2). The associated flow controller was evaluated upon receipt and was found to be within the acceptable flow range as compared to the original set flow rate.

During the canister pressure check performed upon receipt, it was observed that the following samples were received at an elevated residual vacuum level: SV-4 (480-201630-4) and OA-1 (480-201630-5). The associated flow controller was evaluated upon receipt and was found to be outside the acceptable flow range as compared to the original set flow rate.

Air Toxics
Method TO-15: The continuing calibration verification (CCV) associated with batch 200-183619 recovered above the upper control limit for 1,2-Dichloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SV-1 (480-201630-1), SV-2 (480-201630-2), SV-3 (480-201630-3) and SV-4 (480-201630-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job ID: 480-201630-1

Laboratory: Eurofins Burlington

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10391	04-01-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TO-15		Air	4-Ethyltoluene
TO-15		Air	4-Isopropyltoluene
TO-15		Air	Chlorodifluoromethane
TO-15		Air	Methyl Butyl Ketone (2-Hexanone)
TO-15		Air	n-Butane
TO-15		Air	n-Butylbenzene
TO-15		Air	n-Propylbenzene

8/1/22

Pre-Shipment Criteria:

The pre-shipment flow rate must be within the range specified in the set flow rate table for the sampling time requested.
The difference between initial and final pressure readings for the control gauge and the FC gauge must be zero.

6L Canister: Set Flow Rates for Various Sampling Times (mL/min)

Time	30 min	50 min	1 hour	2 hour	4 hour	6 hour	8 hour	10 hour	12 hour	16 hour	24 hour	24 hour (W)

[1] Criteria: Return Pressure should be between -1 and -10 ("Hg) with the exception of grab samples or those using 100 or 200mL/minute flow controllers. These samples must be returned at no lower than -10"Hg, but have no specific criteria otherwise.

[2] If return pressure is not within criteria, initiate Non-Conformance Memo.

[3] Record the ID of the FC used for sampling if information is provided, otherwise leave blank.

[4] Record the Flow Controller Set Flow Rate Logbook ID and Page number in which the original FC Check was recorded

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	NA: Lab does not accept radioactive samples
The cooler's custody seal, if present, is intact.	True	1951150, 1151
The cooler or samples do not appear to have been compromised or tampered with.	N/A	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

[1] Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.

[3] Difference = Final Pressure - Initial Pressure . Acceptance Criteria: (1) The difference must be less than or equal to + 0.25psi. (2) Pressure readings must be at least 24 hours apart.

If time frame was not met, the PM must authorize shipment of canister **PM Authorization** **Date:**

Summa Canister Dilution Worksheet

Client: LaBella Associates DPC
Project/Site: 145 Ganson Street

Job No.: 480-201630-1

Lab Sample ID	Canister Volume (L)	Preadjusted Pressure ("Hg)	Preadjusted Pressure (atm)	Preadjusted Volume (L)	Adjusted Pressure (psig)	Adjusted Pressure (atm)	Adjusted Volume (L)	Initial Volume (mL)	Dilution Factor	Final Dilution Factor	Pressure Gauge ID	Date	Analyst Initals
480-201630-2	6	-14.1	0.53	3.17	-2.89781	0.80	4.82		1.52	1.52	g33	09/15/22 11:02	VTP
480-201630-5	6	-14.5	0.52	3.09	-2.75046	0.81	4.88		1.58	1.58	g33	09/15/22 13:35	VTP

Formulae:

Preadjusted Volume (L) = ((Preadjusted Pressure ("Hg) + 29.92 "Hg) * Vol L) / 29.92 "Hg
Adjusted Volume (L) = ((Adjusted Pressure (psig) + 14.7 psig)* Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^5-	Linear Range Check (LRC) is outside acceptance limits, low biased.
^5+	Linear Range Check (LRC) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
480-224493-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/17/2024 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 6.9°C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-728936 recovered above the upper control limit for Chloromethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: TP-27 (2.0-3.0) (480-224493-4).

Method 8260C: The method blank for analytical batch preparation batch 480-728938 and analytical batch 480-728936 contained Methylene Chloride below the reporting limit (RL). This compound is considered a common laboratory contaminant. The associated sample(s) was not re-extracted and/or re-analyzed because the concentration of the common lab contaminant in the samples was similar to the concentration in the method blank. The following sample is impacted: TP-27 (2.0-3.0) (480-224493-4).

Method 8260C: The following sample was analyzed using medium level soil analysis and diluted due to the nature of the sample matrix: TP-27 (2.0-3.0) (480-224493-4). Elevated reporting limits (RLs) are provided.

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: TP-28 (2.0-3.0) (480-224493-5). The sample(s) was re-extracted and/or re-analyzed and ISTD response was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples: TP-25 (2.0-3.0) (480-224493-1) and TP-26 (5.0-6.0) (480-224493-3) were decanted prior to preparation.

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: TP-25 (2.0-3.0) (480-224493-1) and TP-28 (2.0-3.0) (480-224493-5). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-729241 recovered above the upper control limit for 2-Nitroaniline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: TP-25 (2.0-3.0) (480-224493-1), TP-25 (6.0-7.0) (480-224493-2), TP-26 (5.0-6.0) (480-224493-3), TP-27 (2.0-3.0) (480-224493-4) and TP-28 (2.0-3.0) (480-224493-5).

Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: Atrazine. The laboratory control sample (LCS) associated with preparation batch 480-728928 and analytical batch 480-729241 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010D: The linear range check (LRC) standard recovery associated with 480-729582 is outside the acceptance criteria for the following analytes: Silver, Aluminum, Beryllium, Chromium, Copper, Manganese, and Zinc. The concentration of these analyte(s) in the sample(s) are below the highest standard of the calibration curve; therefore, the data have been reported: TP-25 (2.0-3.0) (480-224493-1).

Job ID: 480-224493-1 (Continued) Eurofins Buffalo

Method 6010D: The linear range check (LRC) standard recovery associated with 480-729582 is outside the acceptance criteria for the following analytes: Silver, Aluminum, Beryllium, Calcium, Chromium, Copper, Manganese, and Zinc. The concentration of these analyte(s) in the sample(s) are below the highest standard of the calibration curve; therefore, the data have been reported: TP-25 (6.0-7.0) (480-224493-2).

Method 6010D: The linear range check (LRC) standard recovery associated with 480-729582 is outside the acceptance criteria for the following analytes: Silver, Aluminum, Beryllium, Chromium, Copper, Manganese, and Zinc. The concentration of these analytes are below those found in acceptable continuing calibration verifications (CCV) and/or laboratory control samples (LCS); therefore, the data have been reported: TP-26 (5.0-6.0) (480-224493-3).

Method 6010D: The linear range check (LRC) standard recovery associated with 480-729582 is outside the acceptance criteria for the following analytes: Silver, Aluminum, Beryllium, Chromium, Copper, and Zinc. The concentration of these analyte(s) in the sample(s) are below the highest standard of the calibration curve; therefore, the data have been reported: TP-27 (2.0-3.0) (480-224493-4).

Method 6010D: The linear range check (LRC) standard recovery associated with 480-729582 is outside the acceptance criteria for the following analytes: Silver, Aluminum, Beryllium, Calcium, Copper, Manganese, and Zinc. The concentration of these analyte(s) in the sample(s) are below the highest standard of the calibration curve; therefore, the data have been reported: TP-28 (2.0-3.0) (480-224493-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

RE: 145 Ganson Street
Data Usability Summary Report (DUSR); Validation of Analytical Laboratory Data Packages
Eurofins Test America SDG Nos. 480-201357-1, 480-201432-1, 480-201621-1, 480-201630-1, 480-201794-1, 480-201859-1, and 480-202112-1

Dear Mr. Koons:

Review has been completed for the data packages generated by Eurofins Test America that pertain to soil samples collected between 09/06/22 and 09/28/22 at the 145 Ganson Street site. Fourteen soil samples, a soil field duplicate, four aqueous samples, and an aqueous field duplicate were processed for TCL and 6 NYCRR Part 375 CP-51 (CP-51) volatiles, TCL semivolatiles and 1,4-dioxane, TCL pesticides, TCL Aroclor PCBs, TCL herbicides, per- and polyfluoroalkyl substances (PFAS), and TAL metals. One soil sample and a field duplicate were processed for TCL and CP-51 volatiles, TCL semivolatiles and 1,4-dioxane, and TCL metals. Twenty soil samples and a field duplicate were analyzed for TCL semivolatiles and 1,4-dioxane and TAL metals. Two samples were processed for TCL semivolatiles and 1,4-dioxane. Five samples were processed for volatiles in air. The analytical methodologies are those of the USEPA SW846, a modified USEPA method 537, and USEPA method TO-15.

The data packages submitted by the laboratory contain full deliverables for validation, and this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology. The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation/Sample Receipt
* Holding Times
* Surrogate, Isotopic Dilution, and Internal Standard Recoveries
* Method Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Blind Field Duplicate Correlations
* Laboratory Control Sample (LCS)
* Instrumental Tunes
* Initial and Continuing Calibration Standards

* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B Section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data packages.

In summary, results for the samples are usable either as reported or with minor qualification, with the exception of the following:

- The herbicide fraction result for pentachlorophenol in one sample is rejected due to an apparent matrix effect
- Numerous semivolatile Tentatively Identified Compounds (TICs) in most samples are considered external laboratory contamination and are removed as sample components.

Data completeness, accuracy, precision, representativeness, reproducibility, sensitivity, and comparability are acceptable.

Validation data qualifier definitions and client sample identifications are attached to this text. Also included in this report are the client EDDs with recommended qualifiers/edits applied in red.

Blind Field Duplicates

Blind field duplicate evaluations were performed for all analytes on MW-5 and TP-18 4-5', and for semivolatiles and metals on SS-3(0-2") and SB-27 (2.5-5.5'). Correlations for MW-5 and TP-18 4-5' fall within validation guidelines. Those for SS-3 (0-2") and SB-27 (2.5-5.5') show outlying correlations, particularly for metals; a non-homogeneous matrix is suspected. The following element results are qualified as estimated in the indicated parent sample and associated field duplicate:

- Arsenic, barium, chromium, copper, iron, lead, manganese, vanadium, zinc, and detected semivolatile analytes in SB-27(2.5-5.5'); the field duplicate shows concentrations about two- or threefold higher than the parent sample
- Aluminum, beryllium, chromium, iron, lead, manganese, nickel, potassium, sodium, and vanadium in SS-3(0-2"); variances are two- to tenfold, with concentrations higher in the parent sample for some analytes and in the field duplicate for others

Volatile Analyses by EPA 8260C

TP-11 4-5', TP-9 3-4, and TP-2 2-3'were not collected in closed system containers, and results are therefore qualified as estimated, with a possible low bias.

Due to delay in relinquish and shipping, TP-22 2-3' and TP-24 3-5' were not received by the laboratory until beyond the 48 hour holding time for freezing. Results for those two samples are therefore qualified as estimated, with a low bias.

All results for SB-27 (2.5-5.5'), DUP-1, SB-31 (14-15') are qualified as estimated due to outlying surrogate and internal standard responses, indicating matrix effects.

Results for fifteen analytes associated with outlying internal standard responses in TP-18 4-5' and DUP-1 are qualified as estimated. Detected values in those two samples are also qualified as estimated, with a high bias, due to elevated surrogate recoveries.

The following detections are considered external contamination and edited to reflect non-detection due to presence in the associated method blanks:

- Chloroform in samples reported in SDGs 480-201357-1 and 480-201621-1
- Toluene in all samples reported in SDGs 480-201357-1 except SB-25 (4-6')

Matrix spikes of TP-9 3-4 and TP-2 2-3' show outlying low recoveries in the large majority of analytes. The two samples also show multiple outlying surrogate and internal standard recoveries. Matrix effects are indicated. Results for these samples are also qualified as estimated due to collection in bulk containers.

The matrix spike evaluation performed on MW-5 shows recoveries and correlations that are within validation guidelines.

Due to outlying LCS recoveries, the following analyte results are qualified as estimated in the indicated associated samples:

Associated Samples	Analyte	Outlying % Recoveries
SB-25 (4-6')	4-methyl-2-pentanone	73
Samples reported in SDG 480-201794-1	chloroethane	58

Calibration standards show responses within validation guidelines, with the following exceptions, result for which is qualified as estimated in the indicated associated sample: vinyl chloride in SB-25 (4-6').

TICs identified as column bleed are removed from consideration as sample components.

Some of the volatile aqueous samples were processed at dilution due to foaming of the undiluted matrix.

TCL Semivolatile and 1,4-Dioxane Analyses by EPA8270E

The matrix spikes of SB-22 (7-10') and MW-5 show recoveries and correlations within validation guidelines. The matrix spikes of SS-3 (0-2") and TP-9 3-4 were performed at dilution and the recovery evaluation is therefore not applicable.

Due to presence in the associated method blanks, the following detected results are considered external contamination and edited to reflect non-detection:

- Butylbenzylphthalate in samples reported in SDGs 480-201432-1
- Diethylphthalate in samples reported in SDG 480-201621-1, 480-201794-1, 480-201794-1, and 480-202112-1

Surrogate, internal standard, and LCS recoveries are within validation guidelines. Calibration standards show responses within validation guidelines.

The majority of the method blanks show numerous TICs identified as alkanes, as well as extraction artifacts (such as solvents and aldol condensate products) that were not identified. The sample detections of those compounds are therefore considered external contamination have been removed as sample components. The sample detections of those compounds should have been flagged as "B" by the laboratory and the contamination noted in the laboratory case narrative, especially in consideration of the ongoing alkane contamination in the semivolatile extractions performed at this laboratory facility. The extraction solvent methylene chloride was reported as a sample TIC, identified as such in at least one sample, and only identified as Unknown in other samples. The extraction solvent responses, which are typically high concentrations, should have been noted by the analyst and removed as TICs.

TICs identified as column bleed are removed from consideration as sample components.

Many of the samples were processed at dilution, which results in proportionally elevated reporting limits.

Pesticides, Herbicides, and Aroclor PCB Analyses by USEPA 8081B, 8151A, and 8082A

Many of the detected pesticide results exhibit elevated dual column quantitative correlations, and are qualified to reflect the uncertainty in identification and/or quantitation. The values have been either qualified as estimated ("J"), qualified as tentative in identification and estimated in value ("NJ"), or edited to non-detection ("U"), depending on the degree of variance. In some instances, the adjusted reporting limits are elevated over the original method reporting limits. The detection of dichloroprop in TP-18 4-5' is similarly edited to reflect non-detection due to very poor dual column correlation.

Matrix spikes for pesticide, PCBs, and herbicide were performed on MW-5 and TP-9 3-4. Pentachlorophenol did not recover from the herbicide matrix spikes of MW-5. That result is therefore rejected in that parent sample. The recovery for that analyte in the semivolatile fraction matrix spikes was acceptable, and the result for pentachlorophenol from that fraction is usable, but the reporting limit is about twenty times higher than that of the herbicide fraction. The pesticide matrix spikes of TP-9 3-4 were analyzed at dilution, and therefore the recoveries are not applicable.

Due to presence in the associated method blank, the following detected results are considered external contamination and edited to reflect non-detection: 4,4'-DDD and endrin aldehyde in samples reported in SDG 480-201357-1.

An endrin aldehyde detection in MW-8 was incorrectly flagged by the laboratory as being associated with a method blank containing that analyte.

Surrogate and internal standard recoveries are compliant. Calibration standards show responses within validation guidelines. LCS recoveries are within required ranges.

Many of the sample pesticide analyses were processed at dilution, which results in proportionally elevated reporting limits.

PFAS by Modified EPA Method 537

The following detected results are qualified as being Estimated Maximum Possible Concentration (EMPC) due to outlying ion ratios:

- PFOS in MW-8
- PFBS in MW-5 and DUP-1
- PFHxA and PFBS in MW-6
- PFBS in MW-5 and DUP-1

The matrix spikes of PFAS on SB-25 (4-6'), SS-2 (0-2"), MW-5, and TP-9 3-4 show recoveries and correlations within laboratory acceptance ranges.

The method blank associated with samples reported in SDG 480-201621-1 showed detections above the reporting limit for three target analytes. The reextraction was performed beyond the allowable holding time, and also showed those detections. The original extraction results for the samples are used, with detections of PFDA, PFHxA, and PFOA in the samples considered external contamination and edited to reflect non-detection.

Isotopic dilution, internal standards, and calibration standards reponses are within validation guidelines.

Volatile Analyses by EPA TO-15

Holding times were met, internal standard responses are acceptable, and instrument tunes meet fragmentation requirements. LCSs show acceptable recoveries. Method and canister blanks show no contamination.

Canister pressures at laboratory receipt are within validation guidelines, although two of the four canisters were received with a significant amount of residual vacuum. Initial and continuing calibration standard (ICV and CCV) linearity and calibration verification responses are compliant.

TAL Metals by EPA 6010D, 7470A and 7471B

Matrix spikes and/or duplicate evaluations were performed for metals on SB-27 (2.5-5.5'), SS-3 (0-2"), TP-9 3-4, TP-3 2-3', and MW-5. Recoveries and correlations are within validation guidelines, with the following exceptions, results for which are qualified as estimated in the indicated parent sample:

Parent Sample	Element	Outlying % Recoveries	Outlying % RPD's
SB-27 (2.5-5.5')	aluminum	378,270	
	antimony	63,65	
	barium	360,249	
	calcium		39
	copper	158,128	
	lead	656,411	
	potassium	197,165	
	zinc	435,252	37
SS-3 (0-2")	antimony	40,50	
	chromium	240,305	
	copper	347,139	50
	zinc	70,223	38
	mercury	4,56	82

Parent Sample	Element	Outlying % Recoveries	Outlying % RPD's
TP-9 3-4	barium	143,139	
	lead	167,184	
	magnesium	205,13	45
	silver	59	50
	zinc	145,187	
TP-3 2-3'	aluminum	247,418	36
	barium	137,338	53
	calcium	1434,1313	
	chromium	233	42
	iron		37
	lead	159	
	magnesium	128,193	
	manganese	4300,2047	59
	vanadium	209	43

The ICP serial dilution determinations of SB-27 (2.5-5.5'), TP-9 3-4, TP-3 2-3', MW-5, and SS-3 (0-2") show correlations above validation guidelines with the following exceptions, results for which are qualified as estimated in the indicated parent sample:

.

Parent Sample	Element	% Difference
SB-27 (2.5-5.5')	aluminum	21
	barium	21
	calcium	26
	chromium	20
	iron	24
	magnesium	23
	manganese	20
	zinc	24
SS-3 (0-2")	barium	22
	beryllium	21
	cadmium	26
	calcium	21
	iron	22
	zinc	24

Calibration standard responses are compliant, and blanks show no contamination affecting sample reported results.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

Re: Geophysical Engineering Survey (GES) Report
Commercial / Industrial Property
145 Ganson Street, Buffalo, New York 14203

Dear Mr. Zebrowski;

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 145 Ganson Street, Buffalo, NY (the "Site").

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

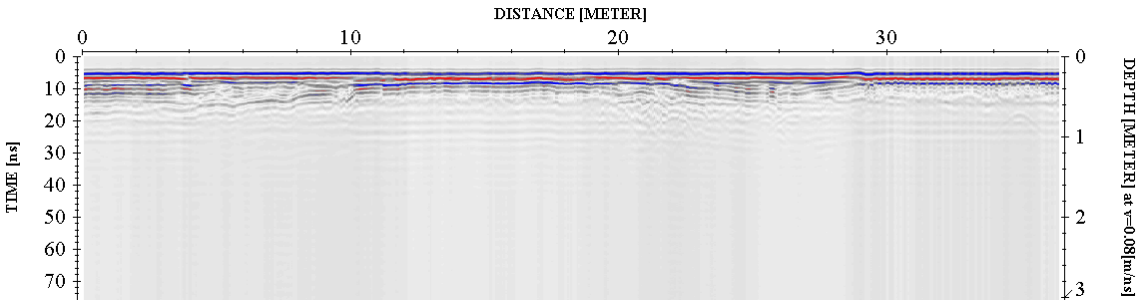
NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks and other substructures that maybe located at the project site on June 26th, 2024.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) with a shielded antenna and a Radio Detection RD7100 Electromagnetic utility locator. A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transduce via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries

where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

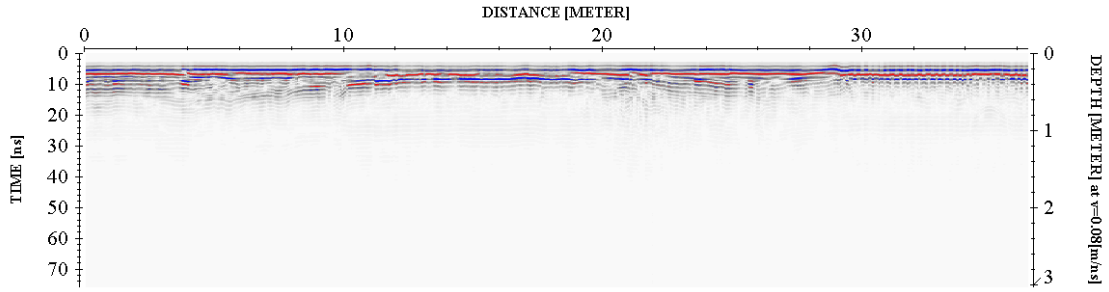
A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS



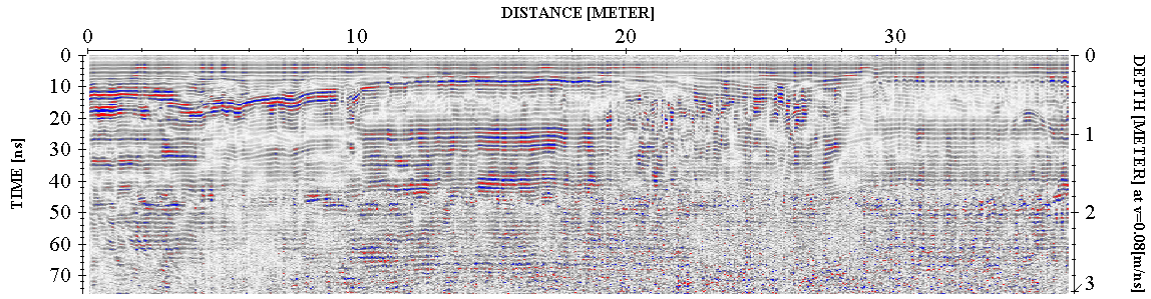
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

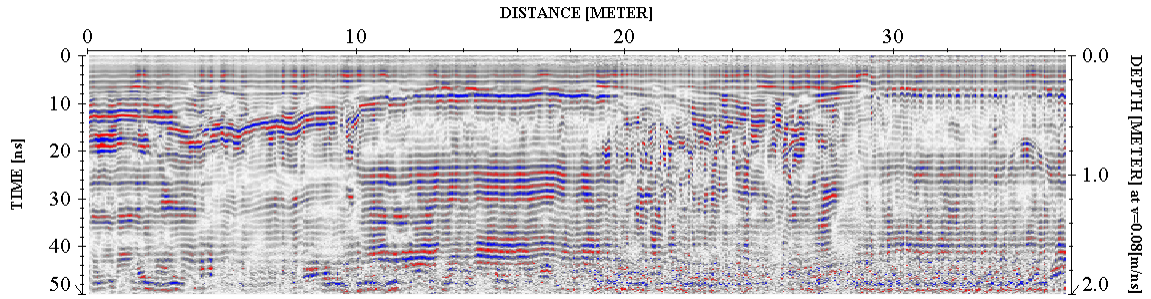


DATA PROCESSING

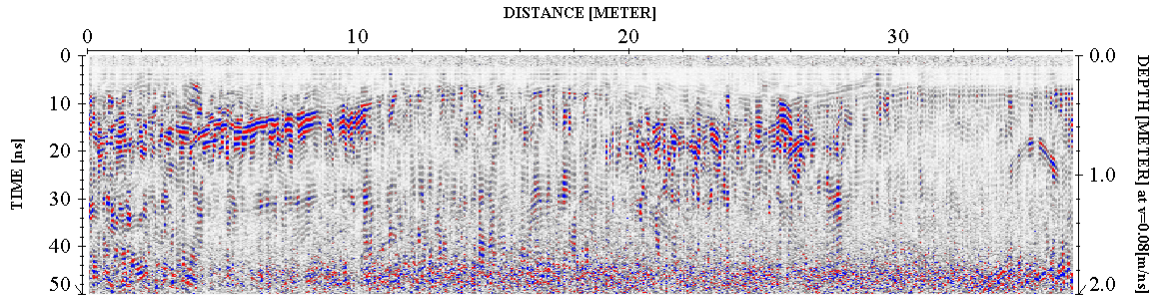
In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.



Step 1. Import Raw RAMAC data to standard processing format



Step 2. Remove instrument noise *(dewow)*



Step 3. Correct for attenuation losses *(energy decay function)*

Step 4. Remove static from bottom of profile *(time cut)*

Step 5. Mute horizontal ringing/noise *(subtracting average)*

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Sunny

Temperature: 79° F

Surface: Concrete, Asphalt, Vegetation

Geophysical Noise Level (GNL): The GNL was high at the site. The noise was a result of the site being in an urban setting environment.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

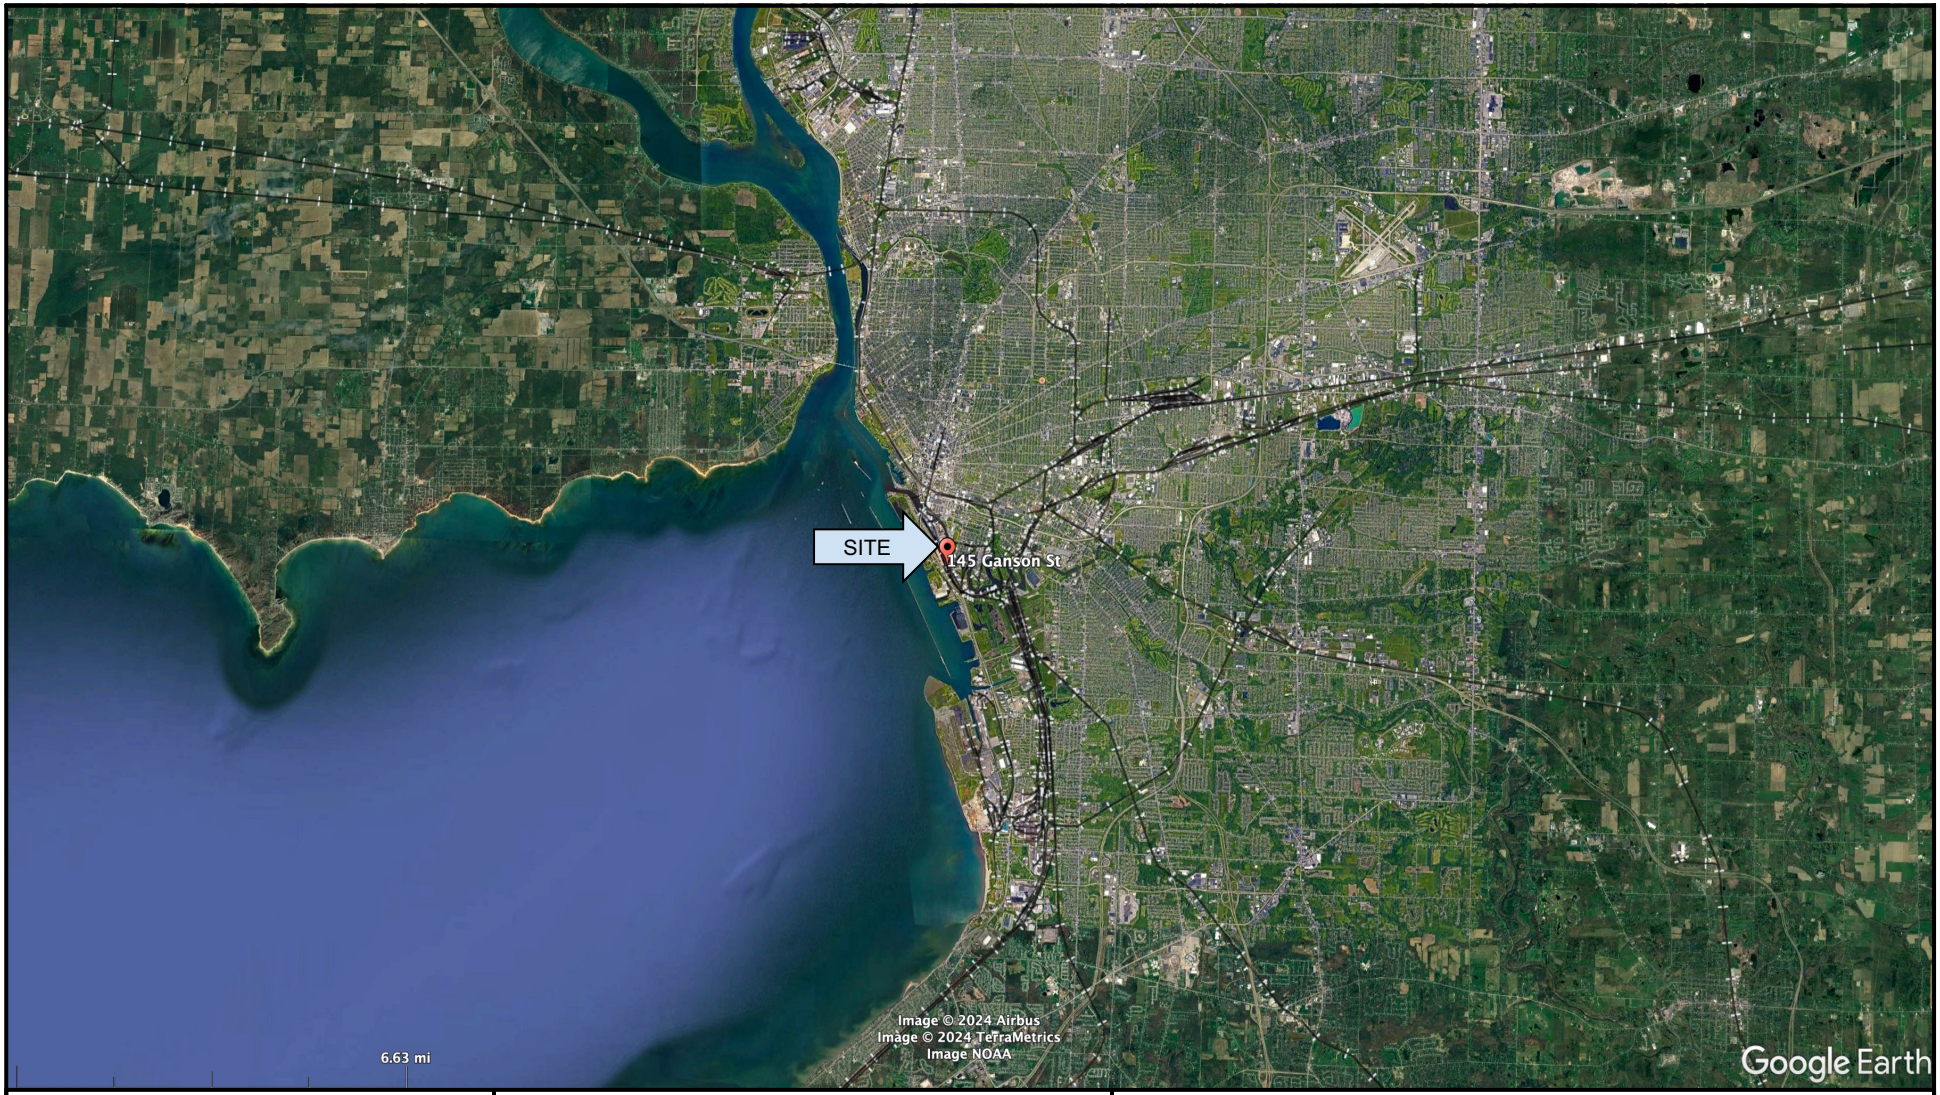
- The GES found utilities onsite (Gas, Electric, Water, sewage) The utilities were mapped and marked on the survey plan.
- Geophysical anomaly such as oil/water separator was found outside the site building and were marked onsite. This anomaly (oil/water separator) was connected to the public Sewer system located on Ganson Street.
- The GES identified a geophysical anomaly area associated with the metal pipe along the back of the site building. Further investigation of the anomaly with the GPR and EM confirmed that its connected an anomaly possibly a former oil/water separator connected with the trench drain located within the vicinity of the area. See survey map.
- The GES identified multiple Geophysical scattered anomalies and are marked onsite. These anomalies were consistent with disturbed soil and backfill. These locations are shown within the survey map.
- The GES did not identify any other major geophysical anomalies consistent with UST's during the survey.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.



Project Manager

International Great Lakes Datum of 1985

The North American Vertical Datum (NAVD) 1988 is based on orthometric height. Informally, this could be considered as a height above mean sea level. NAVD 88 is based on an adopted elevation

at Point Rimouski/Father's Point. And NAVD 88 is realized as Helmert orthometric heights, which are a good approximation to true orthometric heights. The NAVD 88 was affirmed as the official vertical datum for the United States by a notice in the Federal Register (**Vol. 58, No. 120 (/PUBS_LIB/FedRegister/FRdoc93-14922.pdf)**, page 34325) on June 24, 1993. For more information on NAVD 88, please check the **NAVD 88 report (/PUBS_LIB/NAVD88/navd88report.htm)**.

The International Great Lakes Datum (IGLD) 1985 is expressed as dynamic height. Informally, this could also be considered as a height equivalent (based on work to raise a unit mass) above mean sea level. IGLD 85 is also based on an adopted elevation at Point Rimouski/Father's Point. And, IGLD 85 is realized as mean water levels at a set of master water level stations on the Great Lakes. Due to various observational, dynamical, and steric effects, there will be slight departures between a dynamic height and an IGLD 85 height. These departures are known as hydraulic correctors, and are part of the NAVD 88/IGLD 85 datum transformation.

Hydraulic correctors are small quantities, seldom exceeding 10 cm. Because of their complex character, hydraulic correctors are rendered as data grids. And, the datum transformation process described above interpolates the hydraulic corrector for each point. The fitting process for the data grids was chosen to honor the master station values. A post-fit test that re-interpolated the hydraulic correctors at the master stations was shown to agree with less than 1 mm error. Of course, instrumental error and spatial variation of the hydraulic correctors will prevent the complete transformation from being more accurate than about a centimeter or two.

The NAVD 88/IGLD 85 datum transformation is a tool to convert coordinates between these two datums. This computation can be done interactively, or in batch mode by submitting a file of data points.

The Great Lakes are referenced to the International Great Lakes Datum of 1985 (IGLD 85) dynamic heights. The difference between IGLD 85 dynamic heights and NAVD 88 dynamic heights is known as a hydraulic corrector. An application which includes these hydraulic correctors is available for users who wish to compute IGLD 85 heights directly.

To interactively compute an IGLD 85 height for a NAVD 88 benchmark (/cgi-bin/IGLD85/IGLD85.prl)

For more information regarding the development of the hydraulic corrector model for IGLD 85, please visit **the web archive (/redirect.php?url=http://web.archive.org/web/20031211225815/http://chswww.bur.dfo.ca/danp/igld1985.html)**.

- **Interactively convert between a NAVD88 height and an IGLD 85 height. (/cgi-bin/IGLD85/IGLD85.prl)**
- **Submit batch file to convert between a NAVD88 height and an IGLD 85 height. (/cgi-bin/IGLD85/IGLD85.prl#FILE)**

Not near the Great Lakes but need to compute a dynamic height?

- **Interactively compute a Dynamic Height for a NAVD 88 benchmark. (/cgi-bin/dynamic_ht.prl)**
- **Dynamic Height Documentation (/TOOLS/DYNHT/dynamic_ht.pdf)**

Need to refer to monumented control?

- **Interactively retrieve NGS datasheets. (/datasheets/)**
