Certification

I, Thomas H. Forbes, certify that I am currently a NYS registered professional engineer and that this May 2021 Remedial Investigation/Interim Remedial Measures/Alternatives Analysis (RI/IRM/AA) Work Plan for the 293 Grote Street Site was prepared in accordance with applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10).

1.0 INTRODUCTION

This document presents the proposed scope of work and implementation procedures for completion of a Remedial Investigation/Interim Remedial Measures/Alternatives Analysis (RI/IRM/AA) at the 293 Grote Street Site (Site) located at 293 Grote Street, Buffalo, New York 14207 (see Figures 1 and 2).

The Applicant, MCG Real Estate Holdings, LLC, acting as a Volunteer, has elected to pursue investigation, cleanup, and redevelopment of the Site under the New York State Brownfield Cleanup Program (BCP), and has submitted a BCP Application to the New York State Department of Environmental Conservation (NYSDEC) in conjunction with this work plan. The Applicant intends to redevelop the Site with residential apartments. The proposed use of the Site as residential will be consistent with the local zoning plan (Buffalo Green Code). The proposed redevelopment would be considered restricted-residential under 6NYCRR Part 375. The RI/IRM/AA will be completed by Benchmark Environmental Engineering & Science, PLLC (Benchmark) on behalf of MCG Real Estate Holdings, LLC. The work will be completed in general accordance with NYSDEC DER-10 guidelines (Ref. 1).

1.1 Background

The Site is a ±0.746-acre parcel addressed at 293 Grote Street, Buffalo, Erie County, New York, and is subject to this Work Plan. The Site is currently vacant and consists of a 2-story, approximately ±17,500 square foot brick building with exterior courtyard and an approximate 0.3-acre gravel parking lot to the west.

The past uses of the Site have included residential, auto repair, a meter manufacturer, and machine shop. The most recent use was Buerk Tool & Machine which went out of business in 2019.

An out-of-service 5,000-gallon UST, reportedly installed around 1957 for fuel oil storage, is present in the courtyard area of the Site. Evidence of a petroleum release was identified during Phase II activities and Spill Number 2007182 was assigned to the Site. Additionally, polychlorinated biphenyls (PCBs) and metals contamination were identified in the courtyard and likely associated with historic machine shop usage. Fill materials were identified in the gravel parking lot west of the Site in the vicinity of former residential dwellings in that area. Impacted fill materials containing semi-volatile organic compounds

(SVOCs) and metals are present and may be associated with fill material import after the buildings were demolished. SVOCs, PCBs, and metals were detected at concentrations exceeding 6 NYCRR Part 375 Unrestricted Soil Cleanup Objectives (USCOs), Restricted-Residential SCOs (RRSCOs), Commercial SCOs (CSCOs), and Industrial SCOs (ISCOs) (Ref. 2). Details of the previous investigation are presented in Section 2.8 below.

1.2 Project Objectives

For sites entering the Brownfield Cleanup Program (BCP) at the point of investigation, NYSDEC requires completion of a RI/AA. However, due to the timing of the project schedule, an IRM component has been included in this work plan to address known contamination and associated impacts that may be further identified during the RI. The primary objectives of the RI/AA are to:

- Collect additional on-Site media samples, under appropriate quality assurance/quality control criteria, to better delineate the nature and extent of contamination; and determine if contamination has and/or has potential to migrate off-site;
- Assess the groundwater flow direction and groundwater quality conditions at the Site;
- Determine if the concentrations of constituents of concern in soil, groundwater, and/or soil gas pose potential unacceptable risks via on-site and off-site qualitative exposure assessment in accordance with DER-10 Appendix 3b; and,
- Provide the data needed to evaluate potential remedial measures and determine appropriate actions to address potential risks.

As part of the RI/IRM/AA process, sampling data will be used to evaluate whether remedial alternatives can meet the objectives. The intended uses of these data dictate the confidence levels. Two (2) data confidence levels will be employed in the RI/IRM: screening level data and definitive level data. In general, screening level confidence will apply to field measurements, including photoionization detector (PID) measurements, groundwater elevation measurements, and field analyses (i.e., pH, temperature, dissolved oxygen (DO), oxygen reduction potential (ORP) specific conductivity, and turbidity). Definitive level confidence will apply to samples for chemical analysis. The applicability of these levels of data will be further specified in the Quality Assurance Project Plan (QAPP) discussed in Section 5.0. Sampling and analytical acceptance and performance criteria such

as precision, accuracy, representativeness, comparability, completeness, and sensitivity, are defined in the QAPP.

An IRM will be completed to immediately address known environmental impacts at the Site and those identified during the RI. An IRM will quickly mitigate risks to public health and the environment. In general, IRM activities may include excavation of impacted soil/fill; removal of above or underground storage tanks, if identified, along with any associated impacted soil/fill; and, off-Site disposal of impacted soil/fill. This Work Plan presents the scope of anticipated IRM activities based on current information and may be modified, subject to NYSDEC approval, immediately after the RI fieldwork is completed.

The Volunteer's intent is for the planned IRM to substantially constitute the final remedy for those areas of the Site, and as such will strive to achieve 6NYCRR Part 375 RRSCOs. The final remedial objectives for the Site will be presented in the Alternatives Analysis Report (AAR) based on the findings of the RI and IRM(s).

Details of anticipated IRM activities are included in Section 4.0.

1.3 Project Organization and Responsibilities

Benchmark will manage the brownfield cleanup on behalf of the Volunteer, MCG Real Estate Holdings, LLC. The NYSDEC Division of Environmental Remediation (Region 9), in consultation with the New York State Department of Health (NYSDOH) shall review and comment on the reports and submittals that will be provided per DER-10 requirements.

Benchmark personnel as well as proposed subcontractors for this project are listed below. Appendix A includes resumes for Benchmark's project personnel. Once subcontract agreements are in place and a field schedule determined, information for subcontractors will be available for NYSDEC review.

The table below presents the planned project team.

Company	Role	Name	Contact Information

2.0 SITE DESCRIPTION

2.1 General

The Site is a ±0.746-acre parcel located in the City of Buffalo, Erie County, New York (see Figures 1 and 2). The Site is currently vacant and consists of a 2-story, approximately ±17,500 square foot brick building with exterior courtyard and an approximate 0.3-acre gravel parking lot to the west.

The Site is bordered by Grote Street and commercial properties to the north, residential properties to the south, and commercial properties to the east and west.

According to the City of Buffalo Green Code Land Use Plan zoning assigned to the Site and the adjacent properties to the north, east and west is N-1S: Secondary Center defined as mixed-use mid-rise development clusters defined by large-footprint structures.

2.2 Site Topography and Drainage

The Site is generally flat lying and has an elevation between 590 and 600 feet above mean sea level based on USGS topographic mapping of the area. The area of the Site not covered by the building is covered with concrete, gravel, and some vegetated areas.

The Scajaquada Creek is located approximately 0.4 miles south of the Site and flows into the Niagara River located approximately 1.5 miles west of the Site. Precipitation (i.e., rain or snow melt) generally moves radially from the Site via overland flow, ponds, or infiltrates into the subsurface.

2.3 Geology and Hydrogeology

2.3.1 Overburden and Bedrock

The United States Department of Agriculture (USDA) Natural Resources Conservation Service soil survey map of Erie County (Ref. 3) describes the general soil type at the Site as Urban Land (Ud). Urban land is indicative of level to gently sloping land with at least 40 percent of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment.

The previous investigation identified the Site geology as concrete, gravel, or urban fill material over 1 to 4 feet of urban fill overlying native lean clay. The thickness of the fill materials was observed to be about 1 to 2 feet beneath the building, about 4 feet in the

courtyard area, and about 3.5 feet in the parking lot area located west of the building. The urban fill is described as black fines intermingled with gray clay and man-made constituents including brick, cinders, and ash.

Native clay soils were encountered below the fill material at the Site to depths of 20 fbgs. Bedrock underlying the Site is identified as the Camillus Shale of the Upper Silurian period (Ref. 4). Bedrock was not encountered during the previous investigation.

2.3.2 Hydrogeology

The Site is located within the Lake Erie-Niagara River major drainage basin, which is typified by little topographic relief, except in the immediate vicinity of major drainage ways. In the Erie-Niagara Basin, the major areas of groundwater are within coarser overburden deposits, limestone, and shale bedrock. Groundwater flow in the area of the Site is likely westerly, towards the Niagara River, which is located west and flows to the north. Local groundwater flow is likely influenced by subsurface features, such as utilities, and localized subgrade development conditions. Localized on-Site groundwater flow will be investigated during the RI, if encountered in overburden soil.

2.4 Population and Land Use

The Site is located in a developed mixed-use area with primarily residential, commercial, and industrial use in the City of Buffalo. The City of Buffalo, encompassing 40.38 square miles, has a population of 261,310 (Ref. 5). The Site is located within Census Tract 55 and is located within a Type AB En-Zone pursuant to Tax Law § 21(b)(6).

2.5 Utilities and Groundwater Use

The Site has access to major public and private utilities, including potable water (Buffalo Water Authority), sanitary and storm sewers (Buffalo Sewer Authority), electric (National Grid), and natural gas (National Fuel Gas).

Groundwater at the Site is assigned Class "GA" by 6NYCRR Part 701.15. Currently, there are no deed restrictions on the use of groundwater at the Site; however, the City of Buffalo does not allow the use of groundwater within the City limit and there are no groundwater supply wells on the property. Regionally, groundwater in the area has not been developed for industrial, agriculture, or public supply purposes. Municipal potable water service is provided on-site and to areas surrounding the Site.

2.6 Wetlands and Floodplains

There are no State or Federal wetlands or floodplains located on or proximate to the Site.

2.7 Previous Investigations

A summary of the previous investigation that occurred at the Site is presented below and included in Appendix B.

2.7.1 October 2020 – Interior Assessment of Floors and Walls for PCBs

Benchmark completed an interior assessment of the floors and walls of the building at 293 Grote Street for polychlorinated biphenyls (PCBs) based on its previous use as a machine shop. The mailing address for the previous occupant, Buerk Tool, was listed as 315 Grote Street. During the Phase I Environmental Site Assessment (Phase I), discussed below, it was identified that the actual parcel address is 293 Grote Street.

Buerk Tool was a former machine shop that had been in operation since 1919 and utilized various lathes, grinders, bore mill, etc. that used cutting oils in their operations. Evidence of the oil use can be seen throughout the building. Oil dispensers, 55-gallon drums, 5-gallon buckets, along with heavy staining on the concrete floor throughout were observed within the building during our August 19th site visit.

The 1st floor of the former machine shop areas is concrete, and the 2nd floor of the building is primarily wood. The walls of the building are primarily painted brick, concrete block and clay tile and the interior column supports of the building are wood beams, of which the majority are painted. Office areas, restrooms, and storage areas (2nd floor) were not included as part of the assessment.

The interior PCB assessment consisted of the collection of eleven (11) concrete floor samples, nine (9) wood floor samples, and ten (10) wipe samples from the walls and columns. Figures 3 and 4 show the approximately locations of the samples collected. Benchmark personnel made visual observations of the floor and wall areas prior to collecting the samples, with bias towards oil-stained areas. The concrete floor samples were collected using an electric hammer drill and 1-inch diameter drill bit to drill approximately 3-inches into the concrete slab. The concrete fines generated from the drilling were placed in laboratory-provided jars. The wood floor samples from the 2nd floor were collected using an electric drill and 1-inch diameter core barrel to core into the wood floor. The wood cores

collected from each location were further processed to approximately ¼-inch or less in the field and placed in the laboratory-provided jars.

The results of the analytical samples collected and analyzed as part of the interior assessment are summarized on attached Figure 3 (1st floor samples) and Figure 4 (2nd floor samples). The concrete, wood, and wipe sample results were compared to the United State Environmental Protection Agency's (USEPA) thresholds for high occupancy (as the proposed reuse of the building is residential which falls under the high occupancy category). The wood and concrete sample results were compared to the USEPA's threshold for high occupancy of 1 milligram per kilogram (mg/kg) per 40 CFR § 761.61 (a)(4)(i)(A). The analytical results of the wipe samples were reported by the laboratory as microgram-absolute (ug/Abs), with results being representative of a 100 centimeters square (cm-sq.) wipe sampling area; therefore, samples results are ug/100 cm-sq. The wall and column sample results were compared to the USEPA's threshold for high occupancy of ≤10 ug/100 cm-sq per 40 CFR § 761.61 (a)(4)(ii).

Concrete Floor Samples

PCBs were detected in ten (10) of the eleven (11) concrete samples above method detection limits. One (1) sample location, CON-4, had concentration of 1.87 mg/kg which is above the high occupancy threshold of 1 mg/kg (see Figure 3). The concentrations of the other concrete sample results were either non-detect or less than 1 mg/kg.

Wood Floor Samples

PCBs were detected in the nine (9) wood samples above method detection limits. Three (3) sample locations, WOOD-5, WOOD-6, and WOOD-7 had concentration of 1.15 mg/kg, 6.58 mg/kg, and 5.14 mg/kg, respectively, above the high occupancy threshold of 1 mg/kg (see Figure 4). The PCB concentrations of the other six (6) samples were less the 1 mg/kg.

Wall and Column Wipe Samples

PCBs were detected in nine (9) of the ten (10) wipe samples above method detection limits collect from the walls and columns on the 1st and 2nd floors. The concentrations of the wipe samples were below the 10 ug/cm2 threshold for high occupancy areas for non-porous surfaces (see Figures 3 and 4).

2.7.2 October 2020 – Phase I Environmental Site Assessment (Benchmark)

Benchmark completed a Phase I Environmental Site Assessment (Phase I) on the 293 Grote Street property. Benchmark identified the following Recognized Environmental Conditions (REC):

- Historic operations (i.e., machine shop, factories, manufacturing, and automotive repair) along with the presence of remaining equipment, a floor drain, a sump, a catch basin, trenches, oil-filled voids of unknown nature, and the historic use and generation of hazardous/regulated materials (as evidenced by the RCRA Generator regulatory listing) are considered RECs as subsurface conditions are unknown.
- The black staining noted on the concrete floor throughout the Site is considered a REC due to its significant nature with visual impacts to ground surfaces and the potential for sub-slab impacts.
- Remaining electrical equipment is considered a REC due to the potential for PCBs.
- The suspect UST-related vent/fill pipes noted during Benchmark's site reconnaissance and the 5,000-gallon fuel oil tank identified in municipal records (it is unknown to Benchmark whether the suspect UST noted during Benchmark's site visit is related to the tank identified in municipal records) are considered RECs as sufficient tank closure documentation is unavailable.
- Interior floor sampling conducted identified PCBs in the concrete (1st floor) and wood (2nd floors) floors at concentrations above the USEPA high-occupancy threshold (1 mg/kg) for PCBs that should be address prior to building reuse.
- The "closed" and "inactive" spill incidents identified for adjacent/nearby properties are considered historical RECs (HRECs) and as such have been addressed to the satisfaction of the NYSDEC.
- No Controlled RECs (CRECs) were identified.

2.7.3 November 2020 – Phase II Environmental Investigation (Benchmark)

Benchmark completed a Phase II Environmental Investigation (Phase II) on the 293 Grote Street property. The Phase II activities consisted of 15 soil borings (SBs), five (5) test pits (TPs), thirteen (13) subsurface soil samples for laboratory analysis, which included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, and PCBs. The SBs were advanced using a track-mounted direct push drill rig to assess subsurface soil/fill conditions beneath the building, in the vicinity of the UST in the exterior courtyard, and gravel parking lot west of the building. The test pits were completed with a mini-excavator and were completed in the gravel parking lot and courtyard/UST area.

The Phase II investigation locations and summary of analytical results are shown on Figure 5. Findings of the Phase II are summarized below:

- Fill materials were generally encountered in the upper 1 to 4 fbgs and consisted of black fines intermingled with gray clay and man-made constituents (brick, cinders, ash, metal cuttings, etc.). The fill material thickness was observed to be about 1 to 2 feet beneath the building (SB-1 through SB-9, and SB-13), about 2 feet (TP-4) to 4 fbgs in the courtyard area near the UST (SB-10 through SB-12) and varied from about 1 foot to 6 feet in the parking lot area west of the building (SB-14, SB-15, TP-1, TP-2, and TP-3). Native clay soils were encountered below the fill material. Saturated subsurface soils (i.e., evidence of groundwater) were not encountered during the Phase II activities.

- During the completion of TP-5, Benchmark exposed the south end of the UST down to a depth of approximately 10 fbgs. The UST has approximate dimensions of 7 feet in diameter and 18 feet in length (approximately a 5,000-gallon tank). Along the south end of the UST, at the bottom of the excavation, a small amount of perched water was encountered in the bedding material around the UST. Petroleum odors, elevated PID readings (approximately 30 to 80 ppm), and evidence of product (globules of product on the water at the bottom of excavation at south end of the of the UST) were noted. Due to these findings, NYSDEC was notified, and Spill No. 2007182 was assigned to the Site.

- The tank contained a mixture of residual product and water, which measured to be approximately 1 foot thick at the bottom of the UST (approximately 400 gallons). A sample of the residual product was collected and sent to the laboratory for characterization analysis via NYSDOH 310.13, TCL VOCs, RCRA 8 metals, PCBs, and ignitibility. The results indicated that the product was a medium weight petroleum hydrocarbon as diesel fuel and the contents are acceptable for non-hazardous reclamation. We note that No. 2 fuel oil and diesel have similar characteristics, and an Assessors record reviewed during the previous ESA indicated a 5,000-gallon fuel oil tank was present at the Site in at least 1957.

- SVOCs were detected above their respective RRSCOs, CSCOs, and/or respective ISCOs at six (6) sample locations: SB-7 (0.3 to 2 ft), SB-11 (0 to 3.5 ft), TP-1 (1 to 2 ft), TP-2 (2.5 to 4 ft), TP-4 (0.5 to 2 ft) and TP-5 (3 to 3.5 ft). The sample from SB-7 was representative of the fill material present beneath the western portion of the building. The samples from SB-11 and TP-4 were representative of the fill material present in the exterior courtyard. The sample from TP-5 was from the south end of the UST and samples from TP-1 and TP-2 were from the fill material present beneath the gravel parking lot in the western portion of the Site.

- Metals (arsenic, cadmium, chromium, lead and mercury) were detected above their respective RRSCOs, CSCOs and/or ISCOs at TP-4 (0.5 to 2 ft).
- PCBs were detected above their respective CSCO at SB-11 (0 to 3.5 ft) and their respective ISCO at TP-4 (0.5 to 2 ft) and TP-5 (3 to 3.5 ft)

In addition to the contamination identified above, the 5,000-gallon UST, its contents and petroleum contamination around the UST will need to be removed and properly disposed to address NYSDEC Spill Number 2007182.

Phase II subsurface field observations are included in Table 1. Test pit locations and analytical results are included on Figure 5 and Table 2.

2.8 Primary Constituents of Potential Concern

Based on findings to date, and discussions with the NYSDEC the Primary Constituents of Potential Concern (COPCs) presented by media are:

- ***Soil/Fill:*** SVOCs (PAHs), PCBs, and select metals.

3.0 REMEDIAL INVESTIGATION SCOPE OF WORK

The RI scope of work is focused on defining the nature and extent of contamination within the Site, identifying the source(s) of contamination, defining chemical constituent migration pathways, qualitatively assessing human health and ecological risks (if necessary), and obtaining data of sufficient quantity and quality to perform the remedial alternatives analysis.

Field team personnel will collect environmental samples in accordance with the rationale and protocols described in the QAPP in Section 5. USEPA and NYSDEC approved sample collection and handling techniques will be used. Samples for chemical analysis will be analyzed in accordance with USEPA SW-846 (Ref. 6) methodology with an equivalent Category B deliverable package to meet the definitive-level data requirements. Analytical results will be evaluated by a third-party data validation expert in accordance with provisions described in the QAPP. Data submittals will be provided to the NYSDEC in accordance with the most current electronic data deliverables (EDD) protocols.

Table 3 outlines the planned sampling and analytical program. As discussed in Section 2.7, compounds and analytes detected in the previous Phase II Environmental Investigation are those found on Tables Part 375-6.8(a) and (b) and are the focus of the RI.

Figure 5 presents the previous investigation locations that were completed at the Site and used to develop the RI scope of work. The proposed RI sample locations are presented on Figure 6. The investigation approach, which is described below, has been developed under the assumption that the Site is expected to be remediated under a Track 4 Restricted Residential approach.

3.1 Pre-Investigation Activities

3.1.1 Site Inspection/Walkover/Kick-off Meeting

Prior to Site work, a Site inspection/walkover will be completed to mark out proposed locations of intrusive testing as required for utility clearance and potentially locate existing site features (i.e., building foundation and footers), if visible, which may hinder the proposed investigation locations.

A Site "kick-off" meeting will also be held to orient field team members and subcontractors with the Site and to familiarize Benchmark personnel and our subcontractor personnel with Site background, scope of work, potential dangers, health and safety

requirements, emergency contingencies and other field procedures. NYSDEC staff are welcome to attend and will be notified at least seven (7) days in advance of the meeting.

3.1.2 Utility Clearance

Prior to any intrusive activities, Dig Safely New York (Call 811 or similar) will be contacted by the site contractor a minimum of three (3) business days in advance of the work and informed of the intent to perform intrusive work at the Site.

3.1.3 Health and Safety

It is anticipated that the RI work to be completed will be done at level D personal protection. Should health and safety monitoring during field activities indicate a threat to field personnel or warrant an upgrade beyond level C protection, work will stop, and Site conditions will be re-evaluated by NYSDEC, NYSDOH and Benchmark. See Section 6.0 and Appendix E for additional information on Health and Safety.

3.2 Soil/Fill Investigation

A soil/fill investigation will be completed at select locations across the Site to assess whether additional impacts exist beyond the limits of known historic contamination. Figure 5 depicts the previous Phase II soil/fill investigation locations. The previous investigation identified PAHs, PCBs, and metals as COCs in the soil/fill at the Site. Figure 6 depicts the proposed RI investigation locations.

3.2.1 Surface Soil/Fill Investigation

The surface soil/fill investigation will consist of two (2) surface and two (2) near-surface soil/fill samples from the area of the Site, south of the building, which is proposed to remain greenspace. Other areas of the Site are either covered by the building footprint, will required remediation to a depth greater than 2 feet, based on previous investigations, or are proposed to be covered with hardscape (i.e., parking lot).

The surface soil/fill samples will be collected from the upper 4-inches of soil/fill present below the vegetative cover in that area. The near-surface soil/fill samples will be collected from below the surface soil/fill samples from a depth of 4-inches to 2 fbgs using a stainless-steel hand auger. The locations of the surface and near-surface samples are

identified on Figure 6. However, locations may be modified, based upon field observations, with NYSDEC consultation and approval.

3.2.2 Subsurface Soil/Fill Investigation

The subsurface soil/fill investigation will consist of 13 interior and one (1) exterior soil borings, three (3) monitoring wells (one (1) interior and two (2) exterior), and eight (8) exterior test pits advanced across the Site to allow for visual, olfactory, and PID assessment of subsurface conditions and to obtain representative soil/fill samples for chemical characterization. The locations of the soil borings and test pits have been tentatively identified on Figure 6. However, locations may be modified, or additional locations added based upon field observations in consultation with NYSDEC and their approval.

Eight (8) test pits (to be designated TP-6 through TP-13) will be completed using a track-mounted excavator capable of retrieving soil samples from the ground surface to a maximum depth of 15 feet, or until equipment refusal, whichever is shallower. The test pit dimensions will be approximately 2 feet wide by 6 feet long.

The 13 interior and one (1) exterior soil borings (SB-16 through SB-29) will be completed using a track-mounted direct-push drill rig due to interior access limitations. Soil borings will be advanced to a maximum depth of 15 feet, or until equipment refusal, whichever is shallower.

Three (3) monitoring well soil borings (MW-1 through MW-3) will be completed using a traditional hollow stem auger (HSA) drill rig. Soil borings for the monitoring wells will be advanced at least 5 feet into the upper water bearing zone, estimated to be greater than 25 fbgs. Two (2) locations (MW-1 and MW-2) will be completed in the parking lot west of the building and the third location (MW-3) will be completed within the garage addition area east of the building.

Soil/fill samples retrieved from the soil borings and test pits will be field screened for the presence of volatile organics using a calibrated PID with a 10.6 eV lamp, as a procedure for ensuring the health and safety of personnel at the Site, and to identify potential impacts in soil/fill samples for laboratory analysis. Upon reaching the completion depth of each location, field visual/olfactory and PID results will be reviewed. If significant field evidence of impact is encountered, test pits may be expanded, or supplemental step-back locations will be completed in an attempt to delineate the extent of the impacts.

Soil/fill samples will be collected at 2-foot intervals for classification. The soil/fill retrieved from the soil borings and test pits will be examined by a qualified Benchmark personnel for characterization by visual observation in accordance with ASTM Method D2488, Standard Practice for Description and Identification of Soils (Visual-Manual Procedure). Field personnel will create a field log and collect photograph documentation from the investigation locations. Soil/fill will be inspected for impacts via visual and olfactory observations, and field screened for total volatile organics using a PID equipped with a 10.6 eV lamp as a procedure for ensuring the health and safety of personnel and to identify potentially impacted soil/fill samples for laboratory analysis. The sample interval identified as the most impacted (i.e., greatest PID scan result and/or evidence of visual or olfactory impacts) will be selected for analysis. If differentiable impacts are noted within a particular soil boring or test pit, additional samples may be collected from more than one depth interval to characterize the impacts in that location. If the impacts are ubiquitous from grade to final depth or no impacts were identified at a particular location, the sample interval will be selected based on the discretion of the field personnel and in consultation with the NYSDEC.

Soil/fill removed from the test pit investigation locations shall be returned to the to the location in the general order that it was excavated/removed. Cuttings from monitoring well installation will be managed as further discussed below.

3.2.3 Soil/Fill Sample Analysis

Table 3 summarizes the proposed sample collection and analytical program. The soil/fill samples will be collected to supplement existing Site data and to identify additional impacted areas (i.e., greatest PID scan result and/or evidence of visual/olfactory impacts).

Soil/fill samples are proposed to be collected from the fill material present across the Site to further characterize the fill material. soil/fill volumes that will be removed in their entirety as part of the planned IRM. SVOCs, metals and PCBs have been identified as the compounds of concern based on the previous investigation and will be the focus of the delineation sampling/post-excavation sampling unless other parameters are identified as a concern during the RI.

Soil/fill samples will be collected at the surface, test pit, and/or soil boring locations and analyzed for compounds and analytes identified on the NYSDEC Part 375-6.8 SCO tables. The sample analysis will include USEPA Target Compound List (TCL) VOCs,

SVOCs, PCBs, pesticides, herbicides, and Target Analyte List (TAL) metals, as well as 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS). Soil samples to be analyzed for 1,4-dioxane and PFAS will be collected and analyzed in accordance with the Department's current sampling protocols (see Table 4 for analytical methods).

En-core samplers will be used to collect RI VOC soil samples as described in Method 5035. VOC samples will be transferred directly into the appropriate sample containers (e.g., encore sampler, unless soil matrix is too coarse and does not allow for the use of encore). Remaining samples selected for laboratory analysis will be composited to be representative of the soil/fill collected using dedicated stainless steel sampling tools. The samples will be placed in pre-cleaned laboratory provided sample bottles, cooled to 4ºC in the field, and transported under chain-of-custody command to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified analytical laboratory. If additional differentiable impacts are noted during the investigation, additional sample locations will be discussed with NYSDEC.

As an IRM is proposed to be completed as part of this work plan, waste characterization samples will also be collected for analysis during the test pit activities for landfill waste characterization requirements.

3.3 Groundwater Investigation

The groundwater investigation will include the installation of three (3) overburden monitoring wells that will allow for the assessment of the first water bearing zone below the Site for flow and quality information. Monitoring well installation, well development, and groundwater sample collection details are discussed in the following sections.

3.3.1 Monitoring Well Installation

Three (3) groundwater monitoring wells will be installed into the overburden to investigate groundwater flow and quality. The monitoring well locations are shown on Figure 6. Borings will be advanced using a traditional hollow stem auger (HSA) drill rig at least 5 feet into the upper water bearing zone. The depth of groundwater is estimated to be greater than 20 fbgs.

Following drilling activities, the bedrock monitoring wells will be constructed of 2-inch I.D. flush-joint Schedule 40 PVC solid riser and a minimum 5-foot flush joint, machine slotted screen (0.010-inch slot size). The screen length will be determined in the field based

on Site conditions and discussions with NYSDEC but assumed not to exceed 10 feet in length. A silica sand filter pack (size #0) will be installed from the base of the well to the top of the screen to isolate the bedrock groundwater from any potential perched overburden groundwater. A bentonite chip seal will then be installed and allowed to hydrate sufficiently to mitigate the potential for down-hole grout contamination and seal off any potential perched overburden groundwater. A cement and bentonite grout mixture will be installed via pressure tremie pipe injection to fill the remaining annulus to approximately 1 foot below ground surface. The newly installed bedrock monitoring wells will be completed with a lockable J-plug and keyed alike locks and a steel protective casing.

Drill cuttings will be spread on the ground in the vicinity of the monitoring well location from which it was generated unless gross contamination (i.e., visible product) is encountered, in which case they will be placed in sealed NYSDOT-approved drums and labeled for subsequent characterization and disposal, if necessary.

Non-dedicated drilling tools and equipment will be decontaminated between boring locations using potable tap water and a phosphate-free detergent (e.g., Alconox).

3.3.2 Well Development

After installation, but not within 24 hours, newly installed monitoring wells will be developed in accordance with Benchmark and NYSDEC protocols. Development of the monitoring wells will be accomplished with dedicated disposable polyethylene bailers via surge and purge methodology. Field parameters including pH, temperature, turbidity, DO, ORP, and specific conductance will be measured periodically (i.e., every well volume or as necessary) during development. Field measurements will continue until they become relatively stable. Stability will be defined as variation between measurements of approximately 10 percent or less with no overall upward or downward trend in the measurements. A minimum of three (3) well volumes will be evacuated from each monitoring well. Development water from the monitoring wells will be containerized and the analytical results from the groundwater sampling will be used to assist in determining the proper discharge requirements. If light non-aqueous phase liquid (LNAPL), dense non-aqueous phase liquid (DNAPL), odors, or sheen are encountered during well development, water will be containerized in NYSDOT-approved drums and labeled per monitoring well location. Based on the RI groundwater analytical results it will be determined, in

consultation with the NYSDEC, if the containerized development water is acceptable for surface discharge or requires subsequent on-site treatment and/or off-site disposal.

3.3.3 Groundwater Sample Collection

Sampling will be performed as soon as practical after purging provided the well has recovered sufficiently to sample or within 24 hours after evacuation if the well recharges slowly. Prior to monitoring well purging or sample collection, static water levels will be measured and recorded from the monitoring wells to facilitate the preparation of an isopotential map.

Following water level measurement, field personnel will purge and sample monitoring wells using a submersible pump with dedicated pump tubing following low-flow/minimal drawdown purge and sample collection procedures. In the event of pump failure or the saturated unit does not permit the proper implementation of low-flow sampling, a dedicated polyethylene bailer will be used to purge and sample the well. Prior to sample collection via low-flow methodology, groundwater will be evacuated from each well at a low-flow rate (typically less than 0.1 L/min) while maintaining a generally consistent water level. Field measurements for pH, temperature, turbidity, DO, ORP, specific conductance and water level, as well as visual and olfactory field observations will be periodically recorded and monitored for stabilization. Low-flow purging will be considered complete when pH, specific conductivity, DO, ORP, and temperature stabilize and when turbidity measurements fall below 50 Nephelometric Turbidity Units (NTU), or become stable above 50 NTU regardless of volume purged. Purging via disposable bailer, if necessary, will be considered complete following the removal of three (3) well volumes and field parameter stabilization or to dryness, whichever occurs first. In general, stability is defined as variation between field measurements of 10 percent or less and no overall upward or downward trend in the measurements.

Groundwater sampling methods will conform with protocols acceptable for the collection of the per- and polyfluoroalkyl substances (PFAS) in accordance with the NYSDEC's January 2021 Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) (Ref. 7) and Benchmark-TurnKey's *(PFAS Groundwater/Surface Water Sample Collection Procedures)* Field Operating Procedure (FOP; see Appendix E). Sampling personnel will wear nitrile gloves while handling empty sample containers, filling sample containers, sealing sample containers, and placement into sample coolers. Clean nitrile

gloves be worn while handling sample containers, during the groundwater sampling, and sealing/placement of samples into the laboratory supplied cooler. Sample collection methods that will be implemented during the RI include:

- **Submersible Pump with Dedicated Pump Tubing**
  Monitoring wells will be purged and sampled using a non-dedicated plastic submersible pump and dedicated HDPE or PVC tubing following low-flow (minimal drawdown) purge and sample collection procedures, as described above. Non-dedicated pumps will require decontamination prior to use at each well location and the collection of an equipment blank.
- **Disposable Bailer**
  If low flow is not feasible (e.g., due to depth to groundwater), wells of any depth (up to 100 fbgs) may be purged and sampled using a disposable HDPE or PVC bailer via direct grab. In general, a bottom filling dedicated bailer is attached to a length of dedicated hollow-braid polypropylene rope and lowered into the well smoothly and slowly as not to agitate the groundwater or damage the well. Purging continues until a predetermined volume of water has been removed (typically three well volumes) or to dryness. Measurements for pH, temperature, specific conductance, DO, ORP, and turbidity are recorded following removal of each well volume. The well is purged until the readings for indicator parameters stabilize or the well is purged to dryness.

Prior to and immediately following collection of groundwater samples, field measurements for pH, specific conductance, temperature, DO, ORP, turbidity, and water level as well as visual and olfactory field observations will be recorded. Groundwater samples will be placed in pre-cleaned, pre-preserved laboratory provided sample bottles, cooled to 4°C in the field, and transported under chain-of-custody command to a NYSDOH-approved laboratory for analysis.

3.3.4 Groundwater Sample Analyses

Table 3 summarizes the proposed groundwater sampling program. Samples will be collected from the three (3) monitoring wells and the analysis will include compounds and analytes identified on the NYSDEC Part 375-6.8 SCO tables. The three (3) groundwater samples will be analyzed for TCL VOCs, TCL SVOCs, TAL metals, PCBs, pesticides, herbicides, 1,4-dioxane, and PFAS. Groundwater samples will be collected and analyzed in accordance with USEPA SW 846 methodology with equivalent NYSDEC Category B deliverables to allow for independent third-party data usability assessment. If field turbidity

measurements exceed 50 NTU at the time of sample collection, samples for metals analysis will be filtered at the laboratory and analyzed for dissolved (filtered) fractions. Samples collected for 1,4-dioxane will be analyzed via USEPA Method 8270 Selective Ion Monitoring (SIM) mode and samples collected for PFAS analysis will be analyzed via a modified USEPA Method 537 to achieve reporting limits of 2 nanograms per liter (ng/L) (see Table 4).

3.3.5 Groundwater Flow Evaluation

In order to determine the groundwater flow direction and develop a groundwater isopotential map, two (2) rounds of groundwater level measurements will be collected from four (4) monitoring wells after the wells are developed and sampled.

3.4 Soil Vapor Intrusion Investigation

To evaluate the potential for soil vapor intrusion (SVI) into the existing building, SVI sampling will be completed. Three (3) paired sample locations are proposed for building (see Figure 6). At each SVI sample location, one (1) sub-slab vapor (SSV) sample and one (1) ambient indoor air (IA) sample will be collected. One (1) ambient outdoor air sample (OA) for purposes of background will also be collected from an upwind location for each day SVI sampling is completed, anticipated to be completed in 1 day.

The sampling will be completed in general conformance with the New York State Department of Health (NYSDOH) Soil Vapor Intrusion Guidance (October 2006, Ref. 13) and Benchmark-TurnKey's *Ambient Air/Subslab Vapor Sampling* Field Operating Procedure (FOP; see Appendix E). The SVI samples will be collected and sent to a NYSDOH ELAP-approved laboratory for VOC analysis via USEPA Method TO-15.

3.4.1 *Sub-Slab Vapor Pre-Sample Assessment*

Prior to completing the SVI sampling, a pre-sampling inspection will be performed within the building to identify and minimize conditions that may interfere with the proposed testing. The inspection will evaluate the type of structure, floor layout, chemical and product contents of the building, and physical conditions of the building. This information, along with information on sources of potential indoor air contamination, will be identified on a building inventory form. If products are identified that may interfere with the SVI sampling, these contents may require removal at least 48-hours prior to completing the sampling.

3.4.2 *Sub-Slab Vapor Sample Collection*

At each SVI sampling location, Benchmark personnel will drill a ½-inch diameter hole through the concrete slab using a hand-held hammer drill. Sub-slab vapor samples will be collected in the following manner:

- The sub-slab vapor sample tubing will be sealed to the surface with permagum grout, melted beeswax, putty, or other non-VOC containing and non-shrinking products for temporary installation;
- The integrity of the surface seal of the sub-slab sampling point will be assessed using tracer gas (e.g. helium) per the FOP;
- Purge approximately one to three volumes (i.e., the volume of the sample tube) prior to collecting the samples to ensure samples collected are representative;
- Sub-slab vapor sample canisters will be equipped with an 8-hour regulator to allow the sample to be collected over an approximate 24-hour period; and,
- Samples will be collected into laboratory provided sampling canisters and regulators (e.g., Summa® canisters) and analyzed by EPA Method TO-15.

Holes in the concrete slab will be filled and sealed after completion of the sampling event.

3.4.3 *Indoor Air and Outdoor Air Sample Locations*

Concurrent with the SSV samples, IA and Outdoor samples will be collected. Indoor ambient air samples will be collected adjacent to each sub-slab vapor location. One (1) Outdoor Air sample will also be collected from an outdoor upwind location of the facility, as determined on the day of sub-slab vapor sampling field activities. Indoor and outdoor air sample canisters will also be equipped with a 24-hour regulator to allow the sample to be collected over the same approximate 24-hour period as the sub-slab vapor samples.

3.5 Field Specific Quality Assurance/Quality Control Sampling

In addition to the soil/fill and groundwater samples described above, field-specific quality assurance/quality control (QA/QC) samples will be collected and analyzed to ensure the reliability of the generated data as described in the QAPP (see Section 4.0) and to support the required third-party data usability assessment effort. Site-specific QA/QC

samples will include matrix spikes, matrix spike duplicates, blind duplicates, trip blanks, and equipment blanks.

3.6 Decontamination & Investigation-Derived Waste Management

Every attempt will be made to use dedicated sampling equipment during the RI; however, if non-dedicated equipment is required and/or used, the equipment will be decontaminated, at a minimum, with a non-phosphate detergent (i.e., Alconox®) and potable water mixture, rinsed with distilled water, and air-dried before each use in accordance with Benchmark's field operating procedures (FOPs) presented in Appendix C. Decontaminated sampling equipment will be kept in a clean environment prior to sample collection.

RI generated drilling spoils, groundwater, decontamination rinse water, or other Investigative-Derived Waste (IDW) will be containerized. The analytical results from the RI will be used to assist in determining the proper disposal or discharge requirements. IDW exhibiting gross contamination will be placed in sealed containers (e.g., NYSDOT approved drums) and labeled for subsequent characterization and disposal. Generated IDW drums will be labeled alpha-numerically with regard to contents, origin, and date of generation. Drums will be securely staged on-site. Field personnel will coordinate the on-site handling and temporary storage of IDW drums, including transportation, characterization sampling, and off-site disposal arrangements.

During the test pit activities, soil generated will be placed adjacent to the excavation until the test pit is complete. The soils will be returned to the excavation from which it was removed, unless signs of gross contamination are observed. Soil/fill exhibiting signs of gross contamination will be placed on polyethylene sheeting and staged on-site for further evaluation.

Discarded personal protective equipment (PPE) (ie., latex gloves, Tyvex, paper towels, etc.) and disposable sampling equipment (i.e., bailers or stainless-steel spoons) will be placed in sealed plastic garbage bags and disposed of as municipal solid waste.

3.7 Site Mapping & Survey

A Site map showing sample points and relevant Site features will be developed during the field investigation. Benchmark personnel will employ a handheld GPS unit to identify the locations of the test pits, and soil borings/monitoring wells relative to State planar grid

coordinates. Monitoring well elevations will be measured by Benchmark's surveyor. An isopotential map showing the general direction of groundwater flow will be prepared based on water level measurements relative to USGS vertical datum.

3.8 Documentation

Investigation field activities will be documented in a Project Field Book and/or handheld Rugged Reader® PDA. This logbook/PDA will provide a record of activities conducted at the Site. Entries will be signed and dated at the end of each day of fieldwork (or as produced) by the Field Team Leader. Field notes will include, at a minimum, the: date and time of all entries, names of personnel on site, weather conditions (temperature, precipitation, etc.), location of activity, and description of activity. Sampling activities will be logged and photographed as necessary to document the activities at the Site. Progress photographs from a set location will be collected to document development activities and intrusive construction activities. Field personnel will, at a minimum, complete the following standard field forms (see Appendix D):

- Chain of Custody Form (per selected laboratory)
- Equipment Calibration Log
- Field Activity Daily Log (FADLs)
- Field Borehole/Monitoring Well Log
- Groundwater Field Form
- Investigative-Derived Waste Container Log (if necessary)
- Photographic Log
- Real-Time Air Monitoring Log
- Tailgate Safety Meeting Form
- Test Pit Excavation Log
- Problem Identification Report (as necessary)
- Corrective Measures Report

4.0 INTERIM REMEDIAL MEASURES

IRMs will be completed to address known environmental concerns and to expedite the remedial activities and overall project schedule. This Work Plan includes planned IRM activities based on current information and may be modified, subject to NYSDEC approval. The planned IRMs includes the following tasks (see Figure 7):

- Excavation of impacted soil/fill identified in the courtyard of the building.
- Removal of concrete slab on the 1st floor of the building due to the presence of the PCB in the concrete and significant staining throughout the 1st floor of the building.
- Removal of the 5,000-gallon UST and appurtenant piping located in the courtyard, and excavation of the impacted soils/material surrounding the tank.
- Removal of SVOC, metals and PCB-impacted soil/fill identified in the vicinity of TP-4 in the courtyard area.
- Collection of post-excavation confirmatory samples.

The IRMs aim to achieve a Track 4 Restricted Residential Use cleanup; however, the final remedy for the Site will be determined in the Alternatives Analysis Report (AAR) for the project.

4.1 Utility Clearance

Prior to any intrusive activities, Dig Safely New York (Call 811) will be contacted by the site contractor a minimum of three (3) business days in advance of the work and informed of the intent to perform excavation work at the Site. If underground utilities are present on the property and are anticipated to interfere with intrusive activities, the Applicant and the NYSDEC will be contacted to discuss mitigating measures. The location of identified subgrade utilities will be recorded and included on base drawings as part of the RI-IRM-AAR.

4.2 Waste Characterization

Waste characterization samples will be collected in accordance with the disposal and/or recycling facilities requirements. Pre-characterization of the soil/fill and concrete will allow for direct loading and off-site transportation at the time of the impacted soil

removal. Based on the results of the waste characterization sampling, impacted soil will be managed according to all federal, state and local waste disposal regulations. Based on known Site conditions, we anticipate impacted soil and concrete will be managed as a non-hazardous waste. The waste characterization samples will be collected during the RI investigation.

4.3 Removal of Contaminated Soils/Fill

Planned IRM removal activities aim to address SVOC, metals and PCB contamination identified in the courtyard area (see Figure 7). Impacted soil/fill will be excavated and transported off-site to a licensed facility for disposal. IRM excavation activities will be overseen by a Benchmark professional. A PID and visual/olfactory observations will be used to screen impacted soil/fill and assist in guiding removal activities. Lateral and vertical excavation will continue, as described above, until contaminated soil/fill is removed and Part 375 SCOs are met. Excavation extents will be based on results of IRM delineation assessment, BCP Site boundary, or when NYSDEC agrees that no further excavation is required or feasible. Appropriate disposal application(s) will be prepared for disposal facility review and approval. Waste facility approvals will be received prior to removal activities to allow for direct loading and/or limit the time period that temporary storage container(s) are on-Site. All disposal activities will be in accordance with applicable local, state, and federal waste disposal regulations.

4.4 PCB-Impacted Concrete Removal

PCBs were identified in the concrete slab throughout the 1st floor of the building and significant oil-staining is present throughout the 1st floor of the building. To address the PCB and oil-staining concerns, the entire concrete floor of the building will be removed and replaced with a new concrete floor.

Appropriate disposal application(s) will be prepared for disposal facility review and approval. Waste facility approvals will be received prior to removal activities to allow for direct loading and/or limit the time period that temporary storage container(s) are on-Site. All disposal activities will be in accordance with applicable local, state and federal waste disposal regulations.

PCBs identified in the wood flooring on the 2nd floor above the USEPAs high-occupancy threshold in addition to staining that will need to be addressed. The wood floors

on the entire 2nd floor will be sanded to remove evidence of staining. Floor cuttings from the sanding will be containerized for proper off-site disposal. Upon completion of the sanding, PCB wipe samples will be collected from twelve (12) locations on the 2nd floor which totals approximately 12,000 square feet. One (1) sample will be collected for every 1,000 sq feet from in grid pattern across the 2nd floor.

Wipe samples will be collected using dedicated and disposal templates (10-centimers by 10-centimeters) using sorbent gauze pads saturated with hexane prepared by the laboratory in dedicated sample bottles. Samples will be collected according to Benchmark's Wipe Sample Collection Procedures (see Appendix C). The samples will be transported under chain-of-custody command to a NYSDOH ELAP-certified analytical laboratory. Samples will be extracted via EPA Method 3540 and analyzed for TCL PCBs via EPA Method 8082 (see Table 4).

PCB wipe sample results ≤10 ug/100 cm-sq will be deemed acceptable for residential use. If the wipe sample results are >10 ug/100 cm-sq, areas associated with the sample location re-sanded, removed, or an alternative cleanup method proposed. The wood floors will be finished with polyurethane sealant.

Other regulated building materials (i.e., universal wastes, asbestos containing materials, etc.) will be abated per the USEPAs, NYS Department of Labor, NYSDOHs requirements prior to use.

4.5 UST/Residual Contents and Impacted Soil/Fill Removal

An out-of-service 5,000-gallon UST is present in the courtyard area of the building (see Figure 7). It is estimated that approximately 400-gallons of residual product and water are present within the UST, which will also need to be removed and properly managed. The tank will be uncovered to allow proper handling of the residual contents. A properly licensed vacuum truck operator will be employed to remove the contents of the tanks and clean the interior of the tank. The tanks contents and residual cleaning materials will be properly characterized and disposed of off-site at a licensed disposal or recycling facility.

Once tank contents are removed, the UST will be removed from the ground, cleaned of residual contents (interior) and soil (exterior) and transported off-site for disposal or recycled as scrap. Any appurtenant piping will be removed during tank excavation and handled in a similar manner.

During the previous investigations, a small amount of residual product and olfactory evidence of impacted soil/fill were observed around the UST on the southern end. Impacted soil/fill materials will be excavated and transported off-site to a licensed facility for disposal. UST and impacted soil excavation activities will be overseen by a Benchmark professional. A PID and visual/olfactory observations will be used to screen impacted soil/fill and assist in guiding removal activities. Lateral and vertical excavation will continue, as described above, until contaminated soil/fill is removed and Part 375 SCOs are met. Excavation extents will be based on results of IRM delineation assessment, BCP Site boundary, or when NYSDEC agrees that no further excavation is required or feasible. Appropriate disposal application(s) will be prepared for disposal facility review and approval. Waste facility approvals will be received prior to removal activities to allow for direct loading and/or limit the time period that temporary storage container(s) are on-Site. All disposal activities will be in accordance with applicable local, state and federal waste disposal regulations.

4.6 Excavation Confirmation Sampling

Post excavation confirmatory samples will be collected from the excavated areas, with bias toward material exhibiting evidence of visual and olfactory contamination, if remaining. Post-excavation confirmatory sample locations from the excavated areas will include samples from excavation sidewalls and bottom in accordance with DER-10. A minimum of one (1) sample per 30 linear feet of sidewall and one (1) sample for each 900 square feet of excavation bottom will be collected in accordance with DER-10.

Samples from the excavations will be analyzed for constituents of concern (e.g., TCL plus CP-51 list VOCs in the UST/petroleum-impacted area; TCL SVOC, TAL metals, and PCBs in other impacted areas), in accordance with USEPA Methodology with an equivalent Category B deliverables package to facilitate data evaluation by a third-party validation expert. Expedited turnaround times may be requested for the analytical results to minimize the time that the excavation(s) remains open. Additional analytical parameters may be analyzed from post-excavation confirmatory samples, based on the results of the RI and consultation with the Department.

4.7 Groundwater Management

If encountered, water removed from excavations and surface water run-in to excavations during the impacted soil removal will be handled on-site prior to discharge to the municipal sewer. In general, water removed from excavations will be stored/settled in a portable storage tank, and if deemed necessary, will be pumped through a bag or cartridge filter prior to treatment using granular activated carbon (GAC). Following completion of excavation work, settled solids remaining in the tank and spent filter bags will be properly disposed of off-site.

If the accumulated waters require treatment, the spent GAC will be characterized and regenerated off-site, or disposed at a permitted disposal facility in accordance with applicable federal and state regulations. The storage tank will be decontaminated via pressure washing. Benchmark or the Site owner will coordinate with the City of Buffalo to obtain any necessary temporary sewer discharge permits.

4.8 Excavation Backfill

NYSDEC will be provided notice once excavation activities are complete and prior to backfilling, to allow for inspection.

Materials brought to the Site for use during redevelopment will be sampled and/or imported in accordance with DER-10 requirements for a RRSCO cleanup scenario and will require NYSDEC approval prior to importing to the Site. The imported materials will be placed in accordance with redevelopment requirements to achieve design grades necessary to facility redevelopment activities (e.g., geotechnical requirements). The chemical criteria for import of backfill material to the Site can be found in 6NYCRR Part 375 and will be the lesser of the Restricted Residential SCOs or the Protection of Groundwater SCOs. Backfill will comply with DER-10 guidance.

5.0 QUALITY ASSURANCE PROJECT PLAN

A Quality Assurance Project Plan (QAPP) has been prepared in support of the RI activities. The QAPP dictates implementation of the investigation tasks delineated in this Work Plan. A Sampling and Analysis Plan (SAP) identifying methods for sample collection, decontamination, handling, and shipping, is provided below.

The QAPP will assure the accuracy and precision of data collection during the Site characterization and data interpretation periods. The QAPP identifies procedures for sample collection to mitigate the potential for cross-contamination, as well as analytical requirements necessary to allow for independent data validation. The QAPP has been prepared in accordance with USEPA's Requirements for Quality Assurance Project Plans for Environmental Data Operations (Ref. 8); the EPA Region II CERCLA Quality Assurance Manual (Ref. 9), and NYSDEC's DER-10 Technical Guidance for Site Investigation and Remediation).

5.1 Scope of the QAPP

This QAPP was prepared to provide quality assurance (QA) guidelines to be implemented during the RI activities. This document may be modified for subsequent phases of investigative work, as necessary. The QAPP provides:

- A means to communicate to the persons executing the various activities exactly what is to be done, by whom, and when.
- A culmination to the planning process that ensures that the program includes provisions for obtaining quality data (e.g., suitable methods of field operations).
- A historical record that documents the investigation in terms of the methods used, calibration standards, and frequencies planned, and auditing planned.
- A document that can be used by the Project Manager's and QA Officer to assess if the activities planned are being implemented and their importance for accomplishing the goal of quality data.
- A plan to document and track project data and results.
- Detailed descriptions of the data documentation materials and procedures, project files, and tabular and graphical reports.

The QAPP is primarily concerned with the QA/QC aspects of the procedures involved in the collection, preservation, packaging, and transportation of samples; field

testing; record keeping; data management; chain-of-custody procedures; laboratory analyses; and other necessary matters to assure that the RI/AA activities, once completed, will yield data whose integrity can be defended.

QA refers to the conduct of planned and systematic actions necessary to perform satisfactorily task-specific activities and to provide information and data confidence as a result of such activities. The QA for task-specific activities includes the development of procedures, auditing, monitoring, and surveillance of the performance.

QC refers to the activity performed to determine if the work activities conform to the requirements. This includes activities such as inspections of the work activities in the field (e.g., verification that the items and materials installed conform to applicable codes and design specifications).

5.2 QAPP Organization and Responsibility

The principal organizations involved in verifying achievement of data collection goals for the 293 Grote Street Site include: NYSDEC; NYSDOH; MCG Real Estate Holdings, LLC (Volunteer Applicant); Benchmark (Volunteers' Engineering and Environmental Consultant); drilling subcontractor(s); test pit subcontractor; independent environmental laboratory; and independent third-party data validator. Roles, responsibilities, and required qualifications of these organizations are discussed in the following subsections. Resumes are included in Appendix A.

5.2.1 NYSDEC and NYSDOH

The NYSDEC, in conjunction with the NYSDOH, will review the RI Work Plan and supporting documents for completeness and conformance with applicable BCP regulations, guidance and policy and will make a decision to accept or reject these documents based on this review. The NYSDEC also has the responsibility and authority to review and approve QA documentation collected during brownfield cleanup construction and to confirm that the QA Plan was followed.

5.2.2 Volunteers

MCG Real Estate Holdings, LLC ("Volunteer") will be responsible for complying with the QA requirements as specified herein and for monitoring and controlling the quality of the Brownfield cleanup construction either directly or through their designated developer

and/or environmental consultant. The Volunteer will also have the authority to select Remedial Action Contractor(s) to assist them in fulfilling these responsibilities. The designated Project Manager is responsible for implementing the project and has the authority to commit the resources necessary to meet project objectives and requirements.

5.2.3 Benchmark Environmental Engineering & Science, PLLC

Benchmark Environmental Engineering & Science, PLLC (Benchmark) is the prime engineering and scientific consultants, respectively, on this project and are responsible for the implementation of the RI Work Plan, including, but not limited to, field operations, laboratory testing, data management, data analysis, and reporting. Any one member of Benchmark's staff may fill more than one of the identified project positions (e.g., field team leader and site safety and health officer). The various quality assurances, field, laboratory, and management responsibilities of key project personnel are defined below.

- *Project Officer (PO):* *Thomas H. Forbes, P.E.*

  The PO has the responsibility for ensuring conformance with the BCP program requirements. The PO will report directly to the Volunteer and the NYSDEC/NYSDOH Project Coordinators and is responsible for project oversight. The PO will:

  - Define project objectives, oversee detailed work plan development and project schedule.
  - Acquire and apply technical and corporate resources as needed to assure performance within budget and schedule constraints.
  - Review the work performed on the project to assure its quality, responsiveness, and timeliness.
  - Certify deliverables before their submission to NYSDEC.

- *Project Manager (PM):* *Christopher Boron, P.G.*

  The PM has the responsibility for ensuring that the project meets the Work Plan objectives. The PM will report directly to the Volunteer and the NYSDEC/NYSDOH Project Coordinators and is responsible for technical and project oversight. The PM will:

- Define project objectives and develop a detailed work plan schedule.
- Establish project policy and procedures to address the specific needs of the project as a whole, as well as the objectives of each task.
- Develop and meet ongoing project and/or task staffing requirements, including mechanisms to review and evaluate each task product.
- Review the work performed on each task to assure its quality, responsiveness, and timeliness.
- Review and analyze overall task performance with respect to planned requirements and authorizations.
- Review all deliverables before their submission to NYSDEC.
- Develop and meet ongoing project and/or task staffing requirements, including mechanisms to review and evaluate each task product.
- Ultimately be responsible for the preparation and quality of interim and final reports.
- Represent the project team at meetings.

- *FTL/SSHO:* *Thomas Behrendt, P.G.*

The Field Team Leader (FTL) has the responsibility for implementation of specific project tasks identified at the Site and is responsible for the supervision of project field personnel, subconsultants, and subcontractors. The FTL reports directly to the Project Manager. The FTL will:

- Define daily work activities.
- Orient field staff concerning the project's special considerations.
- Monitor and direct subcontractor personnel.
- Review the work performed on each task to ensure its quality, responsiveness, and timeliness.
- Assure that field activities, including sample collection and handling, are carried out in accordance with this QAPP.

For this project the FTL will also serve as the Site Safety and Health Officer (SSHO). As such, he is responsible for implementing the procedures and required components of the Site Health and Safety Plan (HASP), determining

levels of protection needed during field tasks, controlling site entry/exit, briefing the field team and subcontractors on site-specific health and safety issues, and all other responsibilities as identified in the HASP.

5.3 Quality Assurance (QA) Responsibilities

The QA Officer will have direct access to corporate executive staff as necessary, to resolve any QA dispute, and is responsible for auditing the implementation of the QA program in conformance with the demands of specific investigations and Benchmark policies, and NYSDEC requirements.

The QA Officer has sufficient authority to stop work on the investigation as deemed necessary in the event of serious QA issues.

- *Project QA Officer:* *Lori Riker, P.E.*

  Specific function and duties include:
  - Performing QA audits on various phases of the field operations
  - Reviewing and approving QA plans and procedures
  - Providing QA technical assistance to project staff
  - Reporting on the adequacy, status, and effectiveness of the QA program on a regular basis to the Project Manager for technical operations
  - Responsible for assuring third party data review of sample results from the analytical laboratory

5.4 Field Responsibilities

Benchmark field staff for this project is drawn from a pool of qualified resources. The Project Manager will use staff to gather and analyze data, and to prepare various task reports and support materials. The designated technical team members are experienced professionals who possess the degree of specialization and technical competence required to effectively and efficiently perform the required work.

5.5 Quality Assurance Objectives for Measurement Data

The overall objectives and criteria for assuring quality for this effort are discussed below. This QAPP addresses how the acquisition and handling of samples and the review and reporting of data will be documented. The objectives of this QAPP are to address the following:

- The procedures to be used to collect, preserve, package, and transport groundwater samples.
- Field data collection
- Record keeping
- Data management
- Chain-of-custody procedures
- Precision, accuracy, completeness, representativeness, decision rules, comparability, and level of quality control effort conformance for sample analysis and data management by the laboratory under EPA analytical methods.

5.6 Level of QC Effort for Sample Parameters

Field blank, method blank, trip blank, field duplicate, laboratory duplicate, laboratory control, standard reference materials (SRM) and matrix spike samples will be analyzed to assess the quality of the data resulting from the field sampling and analytical programs. QC samples are discussed below.

- Field and trip blanks consisting of distilled water will be submitted to the analytical laboratories to provide the means to assess the quality of the data resulting from the field sampling program. Field (equipment) blank samples are analyzed to check for procedural chemical constituents at the facility that may cause sample contamination. Trip blanks are used to assess the potential for contamination of samples due to contaminant migration during sample shipment and storage.
- Method blank samples are generated within the laboratory and used to assess contamination resulting from laboratory procedures.
- Duplicate samples are analyzed to check for sampling and analytical reproducibility.
- MS/MSD and MS/Duplicate samples provide information about the effect of the sample matrix on the digestion and measurement methodology. Depending on site-specific circumstances, one MS/MSD or MS/Duplicate should be collected for every 20 or fewer investigative samples to be analyzed for organic and inorganic chemicals of a given matrix (see Table 3).

The general level of QC effort will consist of one field (blind) duplicate and one field blank (when non-dedicated equipment is used) for every 20 or fewer investigative samples of a given matrix. Additional sample volume will also be provided to the laboratory to allow one (1) site-specific MS/MSD or MS/Duplicate for every 20 or fewer investigative samples of a given matrix. One (1) trip blank consisting of distilled, deionized water will be included along with each sample delivery group of aqueous VOC samples.

5.7 Sampling and Analysis Plan

The selection and rationale for the RI sampling program is discussed in Section 3.0 of this RI/AA Work Plan. Methods and protocol to be used to collect environmental samples (i.e., soil/fill and groundwater) for this investigation are described in the Benchmark FOPs (see Appendix C).

Table 3 summarizes the number and types of environmental samples to be collected. Table 4 summarizes the sample parameter lists, method, holding times, preservation, and sample container requirements. The sampling program and related sampling activities are discussed below. To the extent allowed by existing physical conditions at the Site, sample collection efforts will adhere to the specific methods presented herein. If alternative sampling locations or procedures are implemented in response to facility specific constraints, each will be selected on the basis of meeting data objectives. Such alternatives will be approved by NYSDEC before implementation and subsequently documented for inclusion in the project file.

5.7.1 Custody Procedures

Sample custody is controlled and maintained through the chain-of-custody procedures. Chain of custody is the means by which the possession and handling of samples will be tracked from the source (field) to their final disposition (laboratory). A sample is considered to be in a person's custody if it is in the person's possession or it is in the person's view after being in his or her possession or it was in that person's possession and that person has locked it in a vehicle or room. Sample containers will be cleaned and preserved at the laboratory before shipment to the Site. The following sections describe procedures for maintaining sample custody from the time samples are collected to the time they are received by the analytical laboratory. Appendix C includes the FOPs for Sampling, Labeling, Storage, and Shipment.

5.7.2 Sample Storage

Samples are stored in secure limited-access areas. Walk-in coolers or refrigerators are maintained at 4°C ± 2°C, or as required by the applicable regulatory program. The temperatures of the refrigerated storage areas are monitored and recorded a minimum of once per day. Deviations of temperature from the applicable range require corrective action, including moving samples to another storage location if necessary.

5.7.3 Sample Custody

Sample custody is defined by this document as when any of the following occur:

- It is in someone's actual possession.
- It is in someone's view after being in his or her physical possession.
- It was in someone's possession and then locked, sealed, or secured in a manner that prevents unsuspected tampering.
- It is placed in a designated and secured area.

Samples are removed from storage areas by the sample custodian or analysts and transported to secure laboratory areas for analysis. Access to the laboratory and sample storage areas is restricted to laboratory personnel and escorted visitors only; all areas of the laboratory are therefore considered secure. If required by the applicable regulatory program, internal chain-of-custody is documented in a log by the person moving the samples between laboratory and storage areas.

Laboratory documentation used to establish chain of custody (COC) and sample identification may include the following:

- Field COC forms or other paperwork that arrives with the sample.
- The laboratory COC.
- Sample labels or tags are attached to each sample container.
- Sample custody seals.
- Sample preparation logs (i.e., extraction and digestion information) recorded in hardbound laboratory books that are filled out in legible handwriting and signed and dated by the chemist.
- Sample analysis logs (e.g., metals, GC/MS, etc.) information recorded in hardbound laboratory books that are filled out in legible handwriting and signed and dated by the chemist.

- Sample storage log (same as the laboratory COC).
- Sample disposition log, which documents sample disposal by a contracted waste disposal company.

5.7.4 Sample Tracking

The samples are maintained in the appropriate coolers prior to and after analysis. The analysts remove and return their samples as needed. Samples that require internal COC are relinquished to the analysts by the sample custodians. The analyst and sample custodian must sign the original COC relinquishing custody of the samples from the sample custodian to the analyst. When the samples are returned, the analyst will sign the original COC returning sample custody to the sample custodian. Sample extracts are relinquished to the instrumentation analysts by the preparatory analysts. Each preparation department tracks internal COC through their logbooks/spreadsheets.

Any change in the sample during the time of custody will be noted on the COC (e.g., sample breakage or depletion).

5.7.5 Split Sampling

During the RI, the NYSDEC may split any soil/fill or groundwater samples at the NYSDEC's expense. Benchmark personnel will cooperate with the NYSDEC to facilitate split sampling, as requested.

5.8 Calibration Procedures and Frequency

This section describes the calibration procedures and the frequency at which these procedures will be performed for both field and laboratory instruments.

5.8.1 Field Instrument Calibration

Quantitative field data to be obtained during groundwater sampling include pH, turbidity, specific conductance, temperature, and depth to groundwater. Quantitative water level measurements will be obtained with an electronic sounder or steel tape, which require no calibration. Quantitative field data to be obtained during soil sampling include screening for the presence of volatile organic constituents using a PID.

Appendix C includes FOPs that describe the field instruments used to monitor for these parameters and the calibration methods, standards, and frequency requirements for

each instrument. Calibration results will be recorded on the appropriate field forms and in the Project Field Book.

5.9 Analytical Procedures

Samples collected during this investigation field sampling activities will be analyzed by a NYSDOH approved laboratory.

5.9.1 Field Analytical Procedures

Field procedures for collecting and preserving groundwater and soil samples are described in the FOPs located in Appendix C. Table 5 summarizes the FOPs included in Appendix C. As indicated, soil/fill samples for VOC analysis will be collected using EnCore® samplers per recent NYSDOH requirements for VOC analytical method certification.

5.10 Data Usability Evaluation

Data usability evaluation procedures shall be performed for both field and laboratory operations as described below.

5.10.1 Procedures Used to Evaluate Field Data Usability

Procedures to validate field data for this project will be facilitated by adherence to the FOPs in Appendix C. The performance of field activities, calibration checks on field instruments at the beginning of each day of use, manual checks of field calculations, checking for transcription errors and review of field logbooks is the responsibility of the Field Team Leader.

5.10.2 Procedures Used to Evaluate Laboratory Data Usability

Data evaluation will be performed by the third-party data validator using the most current methods and quality control criteria from the USEPA's Contract Laboratory Program (CLP) *National Functional Guidelines for Organic Data Review* (Ref. 10), and Contract Laboratory Program*, National Functional Guidelines for Inorganic Data Review* (Ref. 11). The data review guidance will be used only to the extent that it is applicable to the SW-846 methods; SW-846 methodologies will be followed primarily and given preference over CLP when differences occur. Also, results of blanks, surrogate spikes, MS/MSDs, and laboratory control samples will be reviewed/evaluated by the data validator. Sample analytical data for

each sample matrix shall be evaluated. The third-party data validation expert will also evaluate the overall completeness of the data package. Completeness checks will be administered on the data to determine whether deliverables specified in this QAPP are present. The reviewer will determine whether required items are present and request copies of missing deliverables.

6.0 INVESTIGATION SUPPORT DOCUMENTS

6.1 Health and Safety Protocols

Benchmark has prepared a Site-Specific Health and Safety Plan (HASP) for use by Benchmark employees in accordance with 40 CFR 300.150 of the NCP and 29 CFR 1910.120. The HASP, provided in Appendix E, includes the following site-specific information:

- A hazard assessment
- Training requirements
- Definition of exclusion, contaminant reduction, and other work zones
- Monitoring procedures for site operations
- Safety procedures
- Personal protective clothing and equipment requirements for various field operations
- Disposal and decontamination procedures

The HASP also includes a contingency plan that addresses potential site-specific emergencies, and a Community Air Monitoring Plan that describes required particulate and vapor monitoring to protect the neighboring community during intrusive site investigation and remediation activities.

Health and safety activities will be monitored throughout the field investigation by the SSHO. The HASP will be subject to revision as necessary, based on new information that is discovered during the field investigation and/or remedial activities.

6.1.1 Community Air Monitoring

Real-time community air monitoring will be performed during ground intrusive RI activities at the Site. A CAMP is included within Benchmark's HASP (see Appendix E). Particulate and VOC monitoring will be performed along the downwind perimeter of the work area during subgrade excavation, grading, and soil handling activities in accordance with this plan. The CAMP is consistent with the requirements for community air monitoring at remediation sites as established by the NYSDOH and NYSDEC. Accordingly, it follows procedures and practices outlined under NYSDEC's DER-10;

specifically, NYSDOH's Generic Community Air Monitoring Plan and Fugitive Dust and Particulate Monitoring included in Appendix E.

6.2 Citizen Participation Activities

NYSDEC will coordinate and lead community relations throughout the course of the project. Benchmark will support NYSDEC's community relations activities, as necessary. A Citizen Participation Plan will be prepared by Benchmark and submitted to NYSDEC under separate cover upon acceptance into the BCP and execution of the Brownfield Cleanup Agreement. The Citizen Participation Plan will follow NYSDEC's Citizen Participation Plans template for Brownfield Cleanup Program sites entering the BCP at the point of site investigation per NYSDEC DER-23 (Ref. 12).

7.0 REPORTING AND SCHEDULE

Upon completion of the RI fieldwork, a comprehensive Remedial Investigation/Interim Remedial Measures/Alternatives Analysis (RI/IRM/AA) Report will be completed as described below.

7.1 Remedial Investigation Reporting

The RI section of the RI/IRM/AA Report will include the following information and documentation, consistent with the NYSDEC's DER-10.

- Introduction and background.
- A description of the Site and the investigation areas.
- A description of the field procedures and methods used during the RI.
- A discussion of the nature and rationale for any significant variances from the scope of work described in this RI Work Plan.
- The data obtained during the RI and historical data considered by Benchmark to be of useable quality. This will include geochemical data, field measurements, etc.
- Comparative criteria that may be used to calculate cleanup levels during the alternatives analysis process, such as NYSDEC Soil Cleanup Objectives (SCOs) and other pertinent regulatory standards or criteria.
- A discussion of contaminant fate and transport. This will provide a description of the hydrologic parameters of the Site, and an evaluation of the lateral and vertical movement of groundwater.
- Conclusions regarding the extent and character of environmental impact in the media being investigated.
- The conclusions of the qualitative exposure assessment for both human health and/or fish and wildlife resources (performed in accordance with DER-10 3.3(c)(4), including any recommendations for more detailed assessments, if applicable.
- Supporting materials for RI data. These will include boring logs, monitoring well construction diagrams, laboratory analytical reports, and similar information.

In addition, a Data Usability Summary Report (DUSR) will be prepared, with appropriate data qualifiers added to the results. The DUSR will follow NYSDEC format per the May 2010 DER-10 guidance. The DUSR and any necessary qualifications to the data will be appended to the RI report.

Benchmark will provide submittals to the NYSDEC in accordance with EDD requirements.

7.2 Interim Remedial Measures Reporting

Benchmark staff will be on-site to document IRM activities. Such documentation will include, at minimum, daily reports of IRM activities, community air monitoring results, photographs, and corrective measures report, if necessary.

A summary of the IRM activities will be included in the RI/IRM/AAR submitted to the NYSDEC, with full details of the IRM activities included in the Final Engineering Report (FER). At a minimum, the IRM section of the report will include:

- A Site or area planimetric map showing the parcel remediated;
- A map showing the lateral limits of excavation(s);
- Summaries of unit quantities, including: volume of soil/fill excavated; disposition of excavated soil/fill and collected ground/surface water; volume/type/source of backfill; and volume of ground/surface water pumped and treated;
- Planimetric map showing location of all post-excavation confirmatory and other sampling locations with sample identification labels/codes;
- Tabular comparison of verification and other sample analytical results to SCOs. An explanation shall be provided for all results exceeding acceptance criteria; and
- Text describing that the excavation activities were performed in accordance with this Work Plan.

7.3 Alternatives Analysis Report

An alternatives analysis report (AAR) will be completed to provide a forum for evaluating and selecting a recommended remedial approach. Based on the findings of the RI, a list of remedial action objectives (RAOs) will be developed with the requirement for the selected remedial measures to be protective of human health and the environment under the proposed future use scenario. Proposed SCOs for the property will also be presented based on the proposed future use of the Site. SCOs will be based on published standards, criteria, and guidance (SCGs) and other NYSDEC and NYSDOH accepted values.

Based on the RAOs and SCOs, volumes and areas of media potentially requiring additional remediation will be calculated. General response actions will then be delineated to address each of the Site problem areas. These general response actions will form the foundation for the development and screening of applicable remedial alternatives against the following criteria as described in 6NYCRR 375-1.10:

- Overall Protection of Public Health and the Environment
- Compliance with Standards, Criteria, & Guidance (SCGs)
- Long-Term Effectiveness & Permanence
- Reduction of Toxicity, Mobility, or Volume of Contamination through Treatment
- Short-Term Impacts & Effectiveness
- Implementability
- Cost-Effectiveness
- Land Use

In addition, the criteria of community acceptance will be considered based on public comments on the AAR and proposed remedial actions. Following the screening of alternatives, a comparative analysis will be performed against the above criteria. The comparative analysis will allow for better understanding of the relative advantages and disadvantages of each of the alternatives and will facilitate identification of a recommended remedial approach.

7.4 Project Schedule

Figure 8 presents an estimated project schedule for the RI and major environmental tasks to be performed.

Notes:
1. Only those parameters detected at a minimum of one sample location are presented in this table; all other compounds were reported as non-detect.
2. Values per 6NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs), Table 375-6.8(a).
3. Values per 6NYCRR Part 375 Restricted Residential Use Soil Cleanup Objectives (SCOs), Table 375-6.8(b).
4. Sample results were reported by the laboratory in ug/kg and converted to mg/kg for comparisons to SCOs.

Definitions:
ND = Parameter not detected above laboratory detection limit.
"--" = No value available for the parameter, or the parameter was not analyzed for.
J = Estimated value; result is less than the sample quantitation limit but greater than zero.

BOLD	= Exceeds USCOs
BOLD	= Exceeds RRSCOs
BOLD	= Exceeds CSCOs
BOLD	= Exceeds ISCOs

Notes:

1. Analyses will be performed via USEPA SW-846 methodology with equivalent Category B deliverables package.
2. Additional VOC samples may be collected if field screening results indicate potential contamination (e.g., elevated PID readings above 5 ppm).
3. 1,4-dioxane analysis in soil/fill samples will be completed in conjunction with EPA Method 8270 analysis for TCL SVOCs.
   Groundwater analysis for 1,4-dioxane will be completed via a separatye analysis via EPA 8270 Selective Ion Method (SIM).
4. Blind duplicate and MS/MSD samples will be collected at a frequency of 1 per 20 samples/media collected.
5. GW field parameters including: pH, specific conductance, temperature, DO, ORP, and turbidity will be collected and recorded.
6. Trip blanks will be submitted to the laboratory each day aqueous volatile organic samples are collected.
7 . VOC sample analysis of the SVI samples will be completed using EPA Method TO-15.

Acronyms:

TCL = Target Compound List
VOCs = volatile organic compounds
SVOCs = semi-volatile organic compounds
TAL = Target Analyte List
PCBs = Polychlorinated Biphenyls
PFAS = Per- and polyfluoroalkyl Substances
QA/QC = quality control/quality assurance sample
MS = matrix spike
MSD = matrix spike duplicate
OA = outdoor air

Member - American Institute of Chemical Engineers

SUMMARY OF EXPERIENCE

Mr. Forbes has 31 years of environmental engineering experience, with a particular focus on hazardous waste and brownfield site investigation and remediation; petroleum-impacted site remediation; due diligence for environmentally-impaired properties; groundwater and industrial wastewater treatment; and environmental regulatory compliance. Investigations and cleanups Mr. Forbes has directed have included well over 200 sites contaminated with a wide range of materials, including PCBs, heavy metals, petroleum, chlorinated solvents, PCBs, cyanide, and radioactive isotopes. He has evaluated and successfully implemented on a conventional and design-build basis cost-saving and innovative treatment technologies (e.g. in-situ and ex-situ physical-chemical, thermal, and biological treatment) as well as removal and containment methods for remediation.

REPRESENTATIVE DETAILED EXPERIENCE

June 1998 to Present: Benchmark Environmental Engineering & Science, PLLC

- Served as Principal Engineer for decommissioning of several PCB transformers, capacitors and drained dielectric fluids remaining at a portion of the former Bethlehem Steel Site in Lackawanna, NY, including development of a testing plan and disposal coordination.

- Presently negotiating a self-implementing work plan to address remediation of a large decorative concrete pond and piping coated with PCB paint materials and caulk at a Western NY manufacturing facility.

- Lead engineer for decommissioning of metal pickling equipment and buildings at the former Al-Tech Specialty Steel Site in Dunkirk, NY. The work involved decontamination and removal of equipment, media and sediments impacted by PCBs, chromium and other contaminants under NYSDEC enforcement.

- Assisted the City of Buffalo in development of a decontamination program for a portion of a municipal storage garage impacted by leaking PCB-containing electrical equipment.

- Project Officer for monitoring and remedial measures during redevelopment of the Riverbend Site in Buffalo, NY for a new solar panel manufacturing operation. Developed a technologically-enhanced naturally occurring radioactive material (TENORM) reuse work plan and variance application, which was the first ever employed in NY State. The plan was accepted by NY State, saving tens of millions in disposal costs.

- Assisted a confidential Fortune 500 company prepare technical arguments to support a reduced settlement contribution against a multi-million-dollar landfill remediation project in Baltimore, MD. Worked with Client's legal counsel to identify de minimis nature of historic contributions to heavy metal and other landfill contaminants based upon forensic information, timelines, nature of past operations and other data.

- Assisted western NY client's legal counsel prepare legal defense related to a multi-PRP suit by Orange County Water District, Fullerton, CA for primary drinking water aquifer contamination by chlorinated solvents and emergent organic contaminants. Prepared technical opinion concerning defendant's contributions to aquifer impact; served as technical consultant during mediation and settlement discussions; prepared expert report and led arguments on behalf of defendant to support a reduction in remedy cost contribution.

- Value engineered supplemental remedial measures planned at a NY State Superfund landfill site to support a reduced NY State cost reimbursement claim against Keywell, LLC. Assisted client's legal counsel in the preparation of technical documents to show that the measures were excessive and not associated with client's contributions to landfill contamination.

- Served as Project Manager representing multiple potential responsible party (PRP)-led remedial construction activities to address heavy metals, ammonia and chlorinated solvent impacts at the Peter Cooper Landfill National Priority List (NPL) site in Gowanda, NY. Responsible for oversight and coordination of RI/FS planning and implementation activities, lead technical contact with USEPA, and remedial measures design and construction. Achieved final closeout status in 2011.

- Served as project manager and supervising contractor for design-build remedial activities at the Markhams National Priority List (NPL) site in Dayton, NY. Successfully implemented remedial measures leading to USEPA-designated Preliminary Site Closeout status in October 2008 and delisting in 2009.

- Currently serving as Project Manager for remediation of spill area soils associated with the Lehigh Valley Railroad Derailment National Priority List (NPL) Site in LeRoy, NY. Developed and implemented a USEPA-approved comprehensive remedial design to address chlorinated solvents in site soils via insitu soil vapor extraction. Remedial work is underway.

- Designed and administered implementation of remedial measures to address lead contamination at a community park on Bristol & Emslie Streets in Buffalo, NY. Work involved impacted soil removal, soil replacement, and playground equipment rehabilitation/restoration.

- Served as Project Officer for NYSDEC Brownfield Cleanup Program (BCP) investigation and remediation of the former Millard Fillmore Gates Circle hospital complex in Buffalo, NY.

- Project officer for NYSDEC BCP investigation and cleanup of 154 South Ogden Street in concert with construction of the South Buffalo Charter School.

- Assisted western NY client's legal counsel prepare legal defense related to a multi-PRP suit by Orange County Water District, Fullerton, CA for primary drinking water aquifer contamination by chlorinated solvents and emergent organic contaminants. Prepared technical opinion concerning defendant's contributions to aquifer impact; served as technical consultant during mediation and settlement discussions; prepared expert report and led arguments on behalf of defendant to support a reduction in remedy cost contribution.

- Value engineered supplemental remedial measures planned at a NY State Superfund landfill site to support a reduced NY State cost reimbursement claim against Keywell, LLC. Assisted client's legal counsel in the preparation of technical documents to show that the measures were excessive and not associated with client's contributions to landfill contamination.

- Assisted confidential client's legal counsel negotiate a consent decree with New Mexico Environment Department related to cleanup of chlorinated solvent releases to the fractured bedrock aquifer from a former manufacturing operation in Albuquerque, NM. Currently serving as joint Project Manager for ongoing in-situ bioremediation and monitoring program.

- Project Officer for monitoring and remedial measures during redevelopment of the Riverbend Site in Buffalo, NY for a new solar panel manufacturing operation. Secured a variance for onsite reuse of over 40,000 cubic yards of slag materials impacted by low levels of technologically-enhanced naturally occurring radioactive materials (TNORM), the first of any such variance issued in NY State. Also served as Project Manager for Buffalo Niagara Riverkeeper during concurrent habitat enhancements along the Buffalo River, managing removal and remediation of petroleum impacted soils encountered within the enhancement project area.

- Currently serving as Project Manager for remedial investigation, alternatives analysis, and remedial construction to facilitate redevelopment of over 400-acres of the former Bethlehem Steel site in Lackawanna, New York under the NY State Brownfield Cleanup Program. Contaminants of concern primarily include petroleum organics in soil and groundwater and heavy metals. Successfully implemented interim and final remedial measures on multiple locations within the site, leading to redevelopment of approximately 45 acres of the property by Welded Tube USA, Inc. for use as a manufacturing facility, 26 acres by Steelwinds, LLC for use as an urban wind farm, and 23 acres by Steel Sun LLC for use as a solar power generating facility.

- Served as joint Project Manager and Project Officer for the 20-acre 154 So. Ogden St. NY State Brownfield Cleanup Program Site in Buffalo, NY. The site, which was a former disposal and fill area, was impacted by petroleum product, semi-volatile organics and metals and was remediated in 2014 for redevelopment as a

new charter school. A Certificate of Completion was issued by the NYSDEC in fall of 2014 concurrent with opening of the newly constructed elementary school building.

- Directed and managed remedial activities at 295 Maryland Street, a NY State Brownfield Cleanup Program Site impacted by petroleum and heavy metals. Successfully remediated the site for residential reuse, resulting in Certificate of Completion issuance by NYSDEC in December 2016.

- Served as Project Manager for the 500 Seneca Street NY State Brownfield Cleanup Program Site in Buffalo NY. The site was impacted by petroleum product from a former distribution operation and chlorinated solvents from an unknown historic source. Successful cleanup resulted in Certificate of Completion issuance by the NYSDEC in December 2015.

- Currently serving as Project Manager for remedial measures implementation at the Delta Sonic 7920 Niagara Falls Boulevard property in Niagara Falls, NY. Site groundwater is impacted by petroleum from a former gasoline release.

- Managed design-build cleanup of former New 7th Street Brownfield Cleanup Program Site in Buffalo, New York. The project involved design-build removal of several hundred tons of petroleum-impacted soil and fill material and preparation of related engineering reports resulting in Certificate of Completion issuance.

- Directed remedial efforts for petroleum releases at a Western New York refinery and major oil storage facility, achieving site inactivation within 3 months of the release.

- Designed a 75 gpm groundwater treatment system and served as quality assurance officer for remedial efforts at the Steelfields site (former LTV Steel/Hanna Furnace Site), Buffalo, NY. The treatment system removes petroleum-based volatile organic and semi-volatile organic compounds prior to discharge to the Buffalo Sewer Authority.

- Served as Project Manager for NY State Voluntary Cleanup efforts for chlorinated solvent cleanup at a former degreasing and electroplating facility in Rochester, NY. Designed and implemented interim remedial measures involving low-profile air stripping and final remedial measures involving dissolved hydrogen gas infusion to stimulate anaerobic bioremediation.

- Served as Project Manager for remedial investigation/feasibility study and design-build cleanup activities related to solvent releases from a former paint and specialty coatings manufacturing facility in Buffalo, NY. Contaminants of concern included both chlorinated and non-chlorinated solvents as well as heavy metals. Successful remedial measures implementation led to site delisting in 2013.

- Project manager for RI/FS, remedial design and remedial construction at the Sycamore Village Site, a 4-acre NY State Environmental Restoration Program (ERP) site in Buffalo, NY. Responsible for all technical and administrative aspects of the project, involving removal of over 18,000 cubic yards of soil from an impacted residential neighborhood and site restoration.

- Led design-build construction of a 5 MGD capacity cooling water pH adjustment system for PVS Chemical Corporation. The project included design of feed forward pH control system, adjustment tank and mixer construction, process and chemical feed piping modifications to neutralize sulfuric acid discharges. Successfully implemented startup and demonstration testing.

- Served as project manager for design-build cleanup of the Urbana Landfill Site, a Class 2 Hazardous Waste Landfill Site. The innovative and cost-efficient approach includes: enhanced soil and synthetic cover over portions of the site; limited waste relocation and steep slope regrading; soil vapor extraction of chlorinated VOCs in source areas; a downgradient perimeter groundwater extraction well system; groundwater remediation utilizing advanced oxidation treatment to destroy chlorinated organics in groundwater; and adjacent stream bank erosion protection.

- Served as Project Manager for numerous NY State petroleum spill site remediation projects, achieving no further action status or closure on all.

June 1988 to June 1998 Malcolm Pirnie, Inc.

- Assisted the City of Buffalo Department of Community Development in implementing an emergency PCB-contaminated soil removal effort from a residential neighborhood in Buffalo, NY. Responsibilities included coordination of hazmat excavation contractor and secure landfill, preparation of an emergency excavation and confirmatory sampling plan, and oversight of community air monitoring during the removal work.

- Performed a Feasibility Study and prepared an Engineering Design Report for remediation of PCB-contaminated soils and sediments at the Columbus McKinnon Corporation, Tonawanda, New York. Responsibilities included detailed evaluation of several remedial processes, completion of design calculations and remedial cost estimates, and preparation of a final report for submission to NYSDEC.

- Assisted in performance of a Feasibility Study for the West Valley Nuclear Demonstration Site. The Feasibility Study evaluated alternatives for remediation of groundwater contaminated with radioactive isotopes from a former containment area release.

- Assisted in the design and performed start-up of a groundwater remediation system for Moog, Inc., an aerospace parts manufacturer. The project, performed on a design-build basis, involved preparation of design plans, securing contractor bids for construction, and start-up of the remediation system, which incorporates filtration and air stripping to remove chlorinated volatile organic contaminants from groundwater.

- Designed and implemented groundwater monitoring well decommissioning procedures for the Love Canal site, Niagara Falls NY. The project was performed on behalf of NYSDEC and included abandoning of monitoring wells no longer used in the Love Canal landfill or in adjoining neighborhoods. Procedures developed for this project were subsequently adopted as NY State standards.

- Designed and successfully implemented an innovative groundwater treatment system for the Mercury Aircraft, Inc. Class 2 hazardous waste site in Dresden, New York. Responsibilities included preparation of design plans and specifications for an advanced oxidation process and low profile air stripper to treat chlorinated organics in groundwater pumped from a fractured bedrock aquifer, construction oversight and treatment system start-up.

- Prepared an environmental monitoring plan for remediation of PCB-contaminated sediments in the St. Lawrence River along the General Motors, Inc. Powertrain Division facility in Massena, New York.

- Assisted in the performance of a Feasibility Study for remediation of volatile organic, PCB and heavy metal-contaminated soils and ground water at the Rochester Fire Academy, Rochester, New York.

CHRISTOPHER Z. BORON
SENIOR PROJECT MANAGER

EDUCATION
Bachelors of Science (Geology) 1995; State University of New York, College at Fredonia

REGISTRATION AND AFFILIATIONS
Certified Professional Geologist #11624, American Institute of Professional Geologists, 2013
Professional Geoscientist #692, Louisiana Board of Professional Geoscientists, 2016
Hazardous Waste Safety Training (OSHA) – 1999
Annual Hazardous Waste Safety Refresher Training (OSHA) - 2000-Present

SUMMARY OF EXPERIENCE
Mr. Boron has 20 years of experience in the environmental field on a variety of projects involving environmental assessment/due diligence, site investigation and remediation within various regulatory programs. His experience includes Phase I and II Environmental Site Assessments (ESAs) for property transaction due diligence following ASTM 1597-13 and USEPA All Appropriate Inquiry (AAI); vapor intrusion investigations of industrial, commercial and residential structures following New York State Department of Health (NYSDOH) guidance for evaluating soil vapor intrusion into buildings; all aspects of remedial investigations, feasibility studies/alternatives analysis and site remediation under NYSDEC Inactive Hazardous Waste Site (Superfund) Program, Voluntary Cleanup Program, New York State Brownfield Cleanup Program and Environmental Restoration Program; all aspects of investigation and remediation involving petroleum spill sites regulated by the New York State Department of Environmental Conservation (NYSDEC) Petroleum Spills Division; solid waste facility construction management and construction quality assurance monitoring and testing following the NYSDEC Division of Solid Waste regulations.

REPRESENTATIVE PROJECT EXPERIENCE

July 2014 to Present: **TurnKey Environmental Restoration, LLC**

- **Environmental Oversight, Voluntary Cleanup Program Project, RiverBend Site, Buffalo, New York.** Approximately 87-acres of the RiverBend Voluntary Cleanup Program (VCP) Site has undergone redevelopment for the construction of a 1.2 million square foot manufacturing facility. The Site was historically owned and operated by two steel manufacturing companies from 1906 until the late 1980s. The Site was remediated under the NYSDEC VCP in 2007 to remove contamination source area materials and address groundwater contamination. Part of the remedial strategy was the development and implementation of a Site Management Plan (SMP) to manage soil/fill and contamination encountered redevelopment activities to protect both human health and the environment.

  TurnKey worked on the project for 26 months (August 2015 to September 2017). Responsibilities included: oversight of subsurface activities to assess soil/fill for potential impacts, on-site reuse or off-site disposal; verify import materials used for construction of the cover system (engineering control) were suitable for use; assistance with interior water damage/mold related issues during building construction; stormwater pollution prevention plan (SWPPP) inspections and reporting; implementation of the

community air monitoring program (CAMP); observation the cover system installation; and assistance with management of technology enhanced naturally occurring radioactive material (TENORM) that was encountered, as discussed below.

During the subsurface redevelopment activities, slag (a byproduct of iron and steel manufacturing) containing low-levels of TENORM were encountered. The radionuclide of concern was Radium-226 and to a lesser extent Radium-228. Upon completion of the subsurface activities, 34,000 cubic yards of slag-containing fill material with TENORM was generated based on the gamma radiation field screening activities that were implemented with concurrence from NYSDEC. NYSDEC regulation 6NYCRR Part 380) does not allow land disposal of radiological material. Due to the financial implications associated with the disposal of TENORM out-of-state (estimated to be greater than $15 million), NYSDEC allowed a Part 380 Variance Request and TENORM Reuse Work Plan to be prepared to allow on-site reuse of the material a fill material to achieve project design grades. A Residual Radiation (RESRAD) model Radiological Impact Assessment (RIA) were completed as part of the Variance Request.

A 10-acre area within Area I was identified for TENORM reuse in accordance with the NYSDEC-approved work plan. The TENORM material was placed in 6-inch lifts, evaluated for the gamma radiation via field screening, and sampled to prove conformance with the Part 380 Variance (Radium-226 concentrations cannot exceed 15 picocuries per gram). The area was covered with a minimum of 1-foot crushed stone cover system, which was demonstrated to provide adequate protection through field screening evaluation and reassessment of the RESRAD/RIA with data collected during the reuse project. Approximately 9,260 tons of TENORM material was identified as unacceptable for reuse and properly dispose in an out of out-of-state landfill facility. My role as project manager included oversight of the technical field staff involved with the redevelopment activities and implementation of the SMP, NYSDEC-issued Variance, and TENORM Reuse Work Plan. A revised SMP was prepared to address the TENORM identified at the Site as well as a Construction Completion Report (CCR) documenting the various activities conducted during the 26 months of oversight. This was the first Variance Request and TENORM Reuse Work Plan approved by NYSDEC in the New York State.

1176 South Park Site 3, Brownfield Cleanup Program Project, Buffalo, New York. The 9-acre Site was formerly owned by LTV Corp./Republic Steel and used for pig-iron storage and No. 6 fuel oil storage via two, 5.5 million gallon ASTs. The fuel oil was used for the blast furnaces located on the LTV Corp./Republic Street facility, south of the Site, across South Park Avenue. The ASTs were removed in 1981 and subject to a partial cleanup. The property was entered into BCP in 2016 to investigate, remediate and redevelop the Site. My role is project manager and I have been responsible for preparation and implementation of the Remedial Investigation and Interim Remedial Measures Work Plans, oversight of technical field staff, implementation of the RI and IRM, and preparation of the RI/IRM/AA Report.

The Site is being cleaned up to a restricted-commercial use which will involve completion of IRMs to address sources of contamination, preparation of an environmental easement restricting site usage and SMP, and installation of a cover system to prevent exposure to remaining contamination. Remedial action to date involved excavation of 500 tons of impacted soil (PCB, SVOC, and petroleum impacted soil). Additional remedial actions are scheduled for 2018. Redevelopment activities to date include construction of a 9,000 square foot, commercial/retail building which opened in November 2017, construction of a site road, installation of subsurface stormwater drainage system, and installation of a

portion of the final engineered cover system. Redevelopment activities are expected to continue for the next 5 years.

- **Former Trico Building, Brownfield Cleanup Program Project, Buffalo, New York.** A developer has purchased an approximate 2.1 acre property containing a 617,000 square foot manufacturing building that was formerly used for windshield wiper manufacturing in the City of Buffalo. The property was entered into BCP in 2013 to investigate, remediate and redevelop the Site. My role is project manager and I have been responsible for implementation of the Remedial Investigation Work Plans, oversight of technical field staff, preparation of the RI/AA Report, Remedial Action Work Plan (RAWP) and Preliminary Active Depressurization System Design Report.

  The RAWP has been approved by NYSDEC and the remedial action will involve the installation of sub-slab depressurization system to address 60,000 square feet of the building footprint across 5 interconnected buildings, injection of groundwater amendments to further aid in the breakdown of chlorinated-VOCs present in the groundwater, removal of hydraulic lifts and the associated petroleum impacted soils, treatment and discharge of approximately 150,000 gallons of water present in a sub-basement, and management of impacted soil/fill generated during redevelopment (building foundation alterations). The remedial action are schedule to begin in 2018.

- **Hotel Redevelopment Site, Inactive Hazardous Waste Program, Corning New York.** A developer purchased a vacant hotel on a 1.35 acres Site in downtown Corning, which was demolished to construct a new hotel. During redevelopment, fill material deemed unsuitable for construction of the hotel was identified. This fill materials (ash, slag, glass cullet, refractory brick) was associated with glass manufacturing waste that have been identified throughout the City of Corning as it has historically been used as fill material.

  This fill material containing glass waste was inadvertently excavated from the Site and taken to eight (8) off-site properties for reuse. Subsequent testing at the Site determined that the fill material contained hazardous levels of metals and elevated SVOCs and could not be used as fill material. NYSDEC, though an Order on Consent, required the extent of on-site fill material investigated and materials taken off-site would require excavation and landfill disposal. My responsibilities as project manager included: preparation and implementation of the on-site Site Investigation Work Plan; oversight of field staff and subcontractors; preparation of the Site Investigation/Alternatives Analysis (SI/AA) Report; preparation and implementation of the On-Site and Off-Site IRM Work Plans; preparation of the on-site SMP and Final Engineering Report (FER); implementation and documentation of the SMP activities during redevelopment activities, and preparation of the Off-site CCRs documenting remediation of the 8 off-site properties (e.g., excavation/removal/landfill disposal of over 5,000 tons fill material contain glass manufacturing waste). The NYSDEC Consent Order for the Site has been terminated. Hotel construction activities are expected to continue for the next 6-12 months.

- **Due Diligence Portfolio, Multi-National Quick Service Restaurant, Rochester Area, New York.** A private equity firm is looking to acquire a series of quick service restaurants and further expand into the Rochester area market. The due diligence work included the completion of Phase I ESAs and Property Condition Assessments (PCAs). To date, this due diligence work has included 12 Phase I ESAs, 22 PCAs, 1 Phase II ESA, and 1 soil vapor intrusion assessment. As the project manager, my

responsibilities included project coordination with selling entity, purchaser, individual restaurant owners/lessees; management of the work, including oversight and technical review.

- **NYSDEC Petroleum Spill Project Cleanup, Former Gasoline Station, Williamsville, New York.** A local optometrist was looking to purchase a commercial building from the current owner/franchise from which he currently leased. During the due diligence period (Phase I and II ESAs), it was identified that a former gasoline station occupied the Site in the 1950s and 60s and that petroleum contamination was present in the vicinity of the former pump islands. TurnKey delineated the extent of the petroleum contamination and prepared a remedial action work plan that was approved by the owner and NYSDEC. Approximately 600 tons of petroleum impacted soil was removed from the Site. Confirmation sampling indicated that the extent of contamination was removed with the exception of northern end which extended in the public right-of-way where underground utilities were location. The excavation was backfilled and work area repaved. The Site received an inactive status from NYSDEC. As Project Manager, my responsibilities included preparation of the remedial action work plan, budget, remedial contractor bid documentation, preparation of subcontract agreements, waste profile preparation, management of TurnKey staff and remedial contractors during remedial implementation, and closure report preparation.

- **Brownfield Cleanup Program Project, Former Millard Fillmore Gates Hospital, City of Buffalo, New York.** A local development group has taken ownership of the former Millard Fillmore Gates Hospital for redevelopment. The property was entered into Brownfield Cleanup Program (BCP) to investigate, remediate, and redevelop the 6.9-acre Site located in the City of Buffalo. The property is was formerly operated as a commercial/medical facility with 13 interconnecting buildings covering most of the Site. My role is project manager responsible for implementation of the Remedial Investigation Work Plan, preparation of the Remedial Investigation/Alternatives Analysis (RI/AA) Report, implementation of remedial actions, preparation of the Site Management Plan (SMP) and Final Engineering Report (FER), implementation and documentation of the SMP activities during redevelopment activities.

  The project involved assessing Site geology; assessing Site hydrogeology; evaluating the areal and vertical extent of contamination; evaluating transport mechanisms; assessing the source(s) of contamination and impact to soil and groundwater, completing a qualitative risk assessment; identifying SCGs, identifying proposed cleanup goals and remedial objectives for contaminants of concern at the Site; developing remedial alternatives; implementing the remedial strategy and documenting post-remedial Site conditions. The Site was cleaned up to restricted-residential use.

  Remedial action involved excavation of over 3,000 tons of impacted soil (SVOC, mercury and No. 6 fuel oil impacts) and groundwater management/treatment during excavation activities. I prepared the NYSDEC-approved Final Engineering Report (FER) and the Site received a Certificate of Completion (COC). The project is under redevelopment and subject to the NYSDEC-approved SMP, which I prepared. Redevelopment activities have included a 5-story assisted living facility, construction of two roads, and installation of a portion of the final engineered cover system. Redevelopment activities are expected to continue for the next 5 to 10 years.

September 1998 to July 2014: **GZA GeoEnvironmental of New York**

- **Brownfield Cleanup Program Project, Central Park Plaza, City of Buffalo, New York**. A local developer obtained access to complete a Phase I and II ESA at the dilapidated Central Park Plaza, a vacant 27 acre commercial facility on the east side of the City of Buffalo. Contaminants identified during the investigation allowed the property to be accepted in to the BCP. Once in the BCP, a RI was complete under approved work plans which identified extensive backfilling of the former Buffalo Cement Co. Ltd. quarry which operated from 1877 to 1948. The Central Park Plaza was constructed in 1958 and in operation until 2011. The Remedial Investigation/Alternative Analysis report, along with the Remedial Action Work Plan (RAWP) were completed and submitted to NYSDEC for review in June 2014. As Project Manager, I was responsible for the oversight of the Phase I/II ESA, BCP application, preparation of the BCP work plans, oversight of the RI activities and preparation of the RI/AA Report and RAWP.

- **Environmental Restoration Project, Batavia Iron & Metal, City of Batavia, New York.** This project involved vacant industrial property previously used to reclaim iron, metal and wire materials. As Project Manager, responsibilities included negotiating the scope of work, developing the work plan, budget preparation, on-Site and off-Site soil and groundwater sampling, IRM implementation and data analysis. A Site Investigation and Remedial Alternatives Report (SI/RAR) was prepared and approved by NYSDEC in June 2012. Due to the significant volume of contaminated soil present (over 4,000 tons of PCB and metal impacted soil), the City of Batavia opted not to foreclose and take ownership. The Proposed Remedial Action Plan (PRAP) was released in February 2013. The Record of Decision (ROD) was in released in Summer 2013 and the site was transferred in the NYSDEC Superfund Program.

- **NYSDEC Superfund & Brownfield Cleanup Programs, Confidential Automotive Components Manufacturer, Lockport, New York.** Assisted an automotive parts manufacturing facility with various environmental issues at their facility for the over 15 years. Responsibilities have included:

    - Completing a Remedial Investigation and Feasibility Study (RI/FS) for a trichloroethylene (TCE) and tetrachloroethene (PCE) plume migrating in bedrock groundwater from a former AST spill. The RI/FS Reports were approved by NYSDEC, a Record of Decision (ROD) has been issued and the remedial alternative selected based on the FS is Monitored Natural Attenuation (MNA). The Record of Decision was issued by NYSDEC in March 2005 identifying monitored natural attenuation as the groundwater remedy. The MNA groundwater sampling has been conducted annually since 2005. The Site Management Plan (September 2011) and Final Engineering Report (March 2012) were approved by NYSDEC and the Certificate of Completion was issued in March 2012.

    - Application and acceptance of three individual sites of the 342 acre facility into the NYSDEC Brownfield Cleanup Program in February 2010. These sites have been investigated under NYSDEC approved work plans to assess contaminated media (soil, groundwater and indoor air) and develop remedial strategies to address the various impacted media. Based on the RI findings these three sites are currently being combined into one BCP Site. Chlorinated solvent groundwater contamination has been identified beneath and connecting the three sites.

    - Conducted a site-wide investigation of the storm sewer system to evaluate for chlorinated solvent groundwater contamination infiltration. The investigation involved: the review of existing plant

drawings, collecting storm sewer structure measurements, completing video inspections and reviewing existing storm sewer videos, and storm water sampling during low-flow and high-flow events. Areas of contaminated groundwater infiltration were identified and recommendations were made to the NYSDEC for repair, with their concurrence.

- Managed the assessment of former manufacturing and warehouse building being converted to use as vendor/supplier park. An environmental assessment identified chlorinated solvents (primarily PCE and TCE) in soil, groundwater and air samples that required remediation. After delineating the extent of soil contamination and completing a pilot-study, a soil vapor extraction and sub-slab depressurization systems (SVE/SSDS) was put into operation to remediate the soil within an approximate 14,000 square foot area and mitigate exposure to vapor intrusion from the impacted soil and groundwater. The building has been repurposed for use as a vendor/supplier park.

- Completion and management of annual groundwater sampling and compliance reporting for their NYSDEC Major Oil Storage Facility permit.

- Conducted a soil vapor intrusion assessment prior to the transmittal of a site building to another entity/tenant. The SVI work was completed to determine if the nearby TCE groundwater plume was impacting indoor air of the building for sale. The SVI assessment determined the nearby groundwater plume was not impacting indoor air or sub-slab vapors that required mitigation.

- **NYSDEC Brownfield Cleanup Program, Peters Dry Cleaners, Lockport, New York**. Peter's Dry Cleaning was located in a residential neighborhood in the City of Lockport. The property was contaminated from historic dry cleaning operations conducted at the site. A Phase II ESA was conducted on the property to determine the extent of contamination in the overburden soils and groundwater. An IRM was undertaken to remove an abandoned UST and associated petroleum contamination. Tetrachloroethene (PCE) contaminated soil was also encountered during the IRM, which changed the IRM waste profile. Peter's Dry Cleaning entered into the Brownfield Cleanup Program (BCP) in February 2007. NYSDEC Approved work plans were prepared that included the installation of bedrock groundwater monitoring wells, soil probes to delineation off-site soil and groundwater contamination and vapor intrusion sampling at the subject property and adjoining residential structures. The Site Investigation/Remedial Alternative Report was prepared and submitted to NYSDEC. The property owner opted to leave the BCP program and allow NYSDEC take on the responsibility of remediation, which will be completed under the NYS Superfund Program. My responsibilities as project manager included the oversight of the remedial investigation, remedial alternative evaluation/analysis and report preparation.

- **NYSDEC Order on Consent, Remedial Investigation & Feasibility Study, Confidential Client, Dunkirk, New York –** During a building expansion for the installation of a new rotoforge press, and under the guidance of the Site Management Plan, polychlorinated biphenyls (PCBs) were detected in soil and free product was encountered. Under an Order on Consent with the NYSDEC, an RI, IRM and FS were initiated. The IRM entailed the excavation and removal of approximately 6,000 tons of PCB-impacted soil at hazardous levels. The RI/IRM/FS Report has been approved by NYSDEC. A Site Management Plan was developed and approved to ensure institutional and engineering controls are

monitored and maintained. My responsibilities as project manager included the oversight of the remedial investigation, preparation of the RI/FS report and SMP.

- **NYSDEC Spills Program, Contract to Closure, Remedial Activities, Commercial Facility, Rochester, New York.** Soil and groundwater at two adjacent properties have been contaminated with petroleum from former gasoline stations which occupied the properties as far back as the early 1950's. The client wanted to develop the Site for commercial use as a credit union. Site activities included soil and groundwater sampling investigations, building demolition, preparation of NYSDEC approved work plan to remediate the soil and groundwater, removed soil impacted with free product, performed in-situ chemical oxidation injections to remediate Site groundwater to achieve NYSDEC inactive status. My responsibilities included performing the Site investigations, work plan and budget preparation, remedial implementation of the chemical injections, confirmatory sampling and closure report preparation. The Site received an "inactive" status from NYSDEC and a Credit Union facility had been constructed.

- **Voluntary Cleanup - Commercial Facility, Hamburg, New York**. Responsible for investigation at multi-unit commercial facility with identified chlorinated solvent contamination from a former dry cleaner in one of the units. Tetrachloroethene (PCE) was identified in soil and groundwater samples at the facility at concentrations exceeding NYSDEC regulatory standards. A source area, likely a former drum storage area, was identified outside the building in the shallow soil in the alleyway. Shallow and deep groundwater samples identified shallow groundwater contamination, but a clay confining layer appeared to limit the depth of the contamination. An IRM was completed which included soil removal and disposal and the installation of sub-slab vapor mitigation system to prevent contaminated vapor intrusion into the building.

- **NYSDEC Superfund Standby Contract, Remedial Investigation, Grove Cleaners, Hewlett, New York.** Groundwater at a former dry cleaners site was contaminated with chlorinated solvents. As part of a Remedial Investigation performed a comprehensive gas chromatograph field screening of subsurface soils and groundwater samples to delineate the source of contamination during the on-site characterization studies and collected groundwater samples during off-Site characterization. Responsible for conducting an existing monitoring well assessment, groundwater sampling and interpretation of the hydrogeologic and analytical data for the RI report preparation. This work was completed in accordance with NYSDEC approved site- specific work plans under the NYSDEC Superfund Program.

- **NYSDEC Superfund Standby Contract, Preliminary Site Assessment, Crusher Road Site, Bedford, New York**. Site groundwater was previously found to be contaminated with PCE from an unknown source. Responsible for field investigations which identified that the source of the PCE was unauthorized disposal at the former town dump, which is currently utilized as the town highway department. Field screening with a portable gas chromatograph of subsurface soil and groundwater samples helped delineate the source of contamination during the on and off-site characterization studies.

NATHAN T. MUNLEY
PROJECT MANAGER / SENIOR PROJECT SCIENTIST

EDUCATION

Masters of Science (Biology) 2004; State University of New York, Binghamton University

Bachelors of Science (Health Science) 1995; State University of New York, College at Cortland

Masters of Science (Engineering Science) (Currently Enrolled); State University of New York, University at Buffalo - Department of Environmental Engineering and Science.

Graduate coursework in: Stream Bank Restoration and Design, Biological Treatment Systems, Physiochemical Unit Processes, Aquatic Chemistry, Hazardous Waste Management, Hydrologic Engineering, Geographic Information Systems (GIS), and Computer Aided Design (CAD)

REGISTRATION AND AFFILIATIONS

Certified OSHA 40-Hour Hazardous Waste Site Training
Annual 8-Hour OSHA Refresher
Member – Society of Wetland Scientists

SUMMARY OF EXPERIENCE

Mr. Munley has over 10 years of experience in the environmental field ranging from conducting environmental research to consulting on environmental science and engineering projects. Environmental consulting projects that Mr. Munley has completed include a wide range of environmental site assessment, investigation, and remediation assignments including: Phase I & II Environmental Site Assessments (ESAs); Brownfield Cleanup Program investigation and cleanup; soil and groundwater treatment design projects, wetland mitigation permitting and design; and hazardous waste site remediation projects. Prior to joining TurnKey, Mr. Munley was a researcher conducting laboratory and field based experiments investigated lake acidification and non-point source pollution degradation of wetlands. Mr. Munley has particular interests into the environmental site assessment, investigation, remedial design, and redevelopment of former industrial sites (Brownfields).

REPRESENTATIVE EXPERIENCE

June 2005 to Present: TurnKey Environmental Restoration, LLC

- Completed a large 10-acre multi-parcel Phase I ESA for a wind turbine project located within a highly contaminated urban Site listed on the NYS Inactive Hazardous Waste Site list. Project tasks included a review of historic technical reports, and soil and groundwater investigation documents to determine potential impacts of the known contamination related to the proposed wind farm redevelopment. Coordination with multiple regulatory agencies, owner/operators and legal representatives were imperative for the successful outcome of the project. In addition to the Phase I ESA, a wetland assessment was completed to determine potential wetland issues related to the project.

- Recently completed site assessment and remediation of gasoline service station and car wash establishment. Completed Phase I and II Environmental Site Assessment (ESAs); preparation of application and approved admittance to the NYSDEC Brownfield Cleanup Program (BCP), preparation and completion of BCP required investigation and remedial work plans, and preparation of BCP required Final Engineering Report and Site Management Plan, for successful issuance of the Certificate of Completion (COC) for the owner.

- Currently conducting a Phase I/Phase II site investigation at a former gasoline service station and oil change facility located in Kenmore, NY. The project involves the completion of a Phase I ESA to assess potential historic concerns based on the former use of the property, and subsequent Phase II site investigation to further define the recognized environmental conditions identified in the Phase I ESA.

- Currently managing an US Army Corps of Engineers (USACE) and NYSDEC Joint Application Permit and Wetland Mitigation project located in Hammondsport, NY. The not-for-profit museum requires additional educational display space. The museum expansion project will infringe upon a USACE jurisdictional wetland. The 0.5-acre wetland disturbance will be off-set by a 1.6-acre mitigation wetland. Significant coordination and management between the museum, regulatory agencies, land owners, and local government was required during the application process. Construction is scheduled to begin Spring 2011.

- Recently served as Project Scientist for a 22-acre Brownfield Cleanup Program Site cleanup encompassing 10 adjoining parcels in Niagara Falls, NY. The BCP project included preparation of the BCP Application, as well as the Remedial Investigation (RI), Interim Remedial Measures (IRM), and Alternatives Analysis (AAR) Work Plan. The RI involved collecting over 100 surface, subsurface soil and sediment samples; installing and sampling groundwater monitoring wells. IRMs include excavation of chromium-impacted, arsenic-impacted and SVOC-impacted soil in several areas of the Site, drum and tank removal, catch basin and sump cleaning, smoke stack deposits remediation, and hazardous and non-hazardous chemical waste removal. The Certificate of completion was received in 2010.

- Responsible for all aspects of Phase I Environmental Site Assessment completion for over 100 properties in New York State.

SUMMARY OF EXPERIENCE

Ms. Riker has 24 years of environmental and civil engineering experience that has focused on industrial regulatory compliance assistance; Phase I environmental site assessments; remedial investigations and alternative analyses under various state and federal cleanup programs; detailed wastewater and industrial process design; and construction administration. Ms. Riker's regulatory compliance experience consists of petroleum bulk storage (PBS) and chemical bulk storage (CBS) auditing and the associated spill prevention reporting; Emergency Planning and Community Right-to-Know Act (EPCRA) Tier II and Toxic Release Inventory (Form R) reporting; Title V air permitting (Title V, State facility, minor facility registrations), compliance reporting, and emission statement preparation; storm water permitting, reporting, Storm Water Pollution Prevention Plans (SWPPPs), and Best Management Practices (BMP) Plans; industrial wastewater design and pretreatment permitting; and hazardous waste auditing, annual reporting, and reduction plans.

REPRESENTATIVE PROJECT EXPERIENCE

May 2003 to Present	**Benchmark Environmental Engineering & Science, PLLC**
Nov 1997 to May 2002	**Malcolm Pirnie, Inc.**
Feb 1995 to Oct 1997	**ENVIRON Corporation**

- Currently serving as environmental consultant for two western NY pharmaceutical manufacturers. Providing on-going wastewater compliance assistance; and developed and updated Spill Prevention Control and Countermeasure (SPCC) Plans and air emissions permits. Presently assisting with wastewater treatment plant expansion, including sequencing batch reactors and UV disinfection, and NYSDEC State Pollutant Discharge Elimination System (SPDES) permit modifications for increased flow and new cooling tower water treatment chemicals.
- Currently serving as adjunct environmental compliance specialist for a company that designs and builds vacuum and heat transfer equipment. Environmental regulatory auditing, sampling, inspecting, reporting, and training services include: EPCRA Tier II and Form R; NYSDEC Multi-Sector General Permit (MSGP) for Storm Water Discharges Associated with Industrial Activity and the associated SWPPP; PBS and SPCC Plan; hazardous waste management; and air permitting.
- Providing/managing on-going environmental compliance assistance to scrap metal recycling facilities in NY and PA including: permitting, sampling, inspection, and reporting requirements under the MSGP for Storm Water Associated with Industrial Activity and SPDES Permits; PBS inspections and preparing SPCC Plans; EPCRA Tier II reporting; preparing landfill disposal application; preparing Water Treatment Chemical notifications; hazardous waste annual reporting; and air permitting modifications, compliance reporting, and annual emission statement preparation.

- Assisted with permitting and design of facilities for storage and handling compressed gas in accordance with the NYS Fire Code, and prepared Emergency Action Plans, Fire Prevention Plans, and Hazardous Materials Management Plans required of NFPA 55.
- Currently serving as a third-party environmental consultant to Delta Sonic Car Wash Systems, Inc. for its NY, PA, and IL gasoline stations and lube oil shops. Performed environmental compliance audits focusing on NYSDEC PBS regulations, and prepared SPCC Plans and an overall BMP Plan.
- Providing/managing on-going environmental compliance assistance to industrial facilities including air permit applications and modifications; storm water permitting, BMP Plan/SWPPP preparation, compliance monitoring, and DMR preparation; water withdrawal and sewer metering reports; PBS registration, SPCC Plan preparation, and tank inspection; and annual hazardous waste reporting.
- Provided environmental compliance assistance to NOCO Energy Corp. for its major petroleum distribution terminal and warehouse in Tonawanda, NY and multiple retail gasoline stations in NY and VT. Specific projects include: storm water permitting and preparation of a SWPPP; preparation of SPCC Plans and a Spill Prevention Report (SPR); Title V air permitting assistance and emission statement preparation; EPCRA Form R reporting; review of and recommendations for updating the USCG Facility Response Plan; and permitting and conceptual design for upgrades to a PBS warehouse facility.
- Served as the environmental compliance manager for a porcelain insulator manufacturing facility and completed regulatory reporting requirements including TP550 forms, Form R reports, Tier II reports, hazardous waste reports, storm water permitting, and DMRs.
- Assisted in performing environmental regulatory compliance audits for numerous active industrial facilities. Responsibilities included researching and interpreting applicable environmental regulations and preparing reports to summarize the findings and prioritize corrective measures.
- Assisted with environmental regulatory compliance audits at Gibraltar Steel's New York facilities, and coordinated audits at Gibraltar Steel's other facilities nationwide. The audits covered major existing environmental regulatory programs, as well as applicable local or state regulations and potential upcoming regulatory requirements.
- Prepared PBS and CBS applications for tank registration under NYSDEC's bulk storage programs and prepared the associated SPCC Plans and SPRs for industrial facilities.
- Assisted in preparing an SPCC Plan for General Electric Company's Tonawanda facility. Work included review of numerous federal and state regulations pertaining to PCB-contaminated oil and waste.

Re: Interior Assessment of Floors and Walls for PCB
Former Buerk Tool
315 Grote Street, Buffalo, NY (Site)

Dear Mr. Ekman:

Benchmark Environmental Engineering and Science, PLLC (Benchmark) has prepared this letter to summarize the results of the Interior Assessment of the floors and walls of the former Buerk Tool building at the above referenced Site for polychlorinated biphenyls (PCBs).

Buerk Tool was a former machine shop that had been in operation since 1919 and utilized various lathes, grinders, bore mill, etc. that used cutting oils in their operations. Evidence of the oil use can be seen throughout the building. Oil dispensers, 55-gallon drums, 5-gallon buckets, along with heavy staining were observed within the building during our August 19th site visit.

In addition to oil use, compressed air hoses and lines were observed throughout the building. PCB-containing lubricants have historically been used in air compressors and can be present on surface in the vicinity of compressed air connections from air releases when hoses or tooling are disconnected from the air lines Although recent oils used in the shop may not contain PCBs, historically PCBs were used in cutting oil and may have impacted the floors and walls..

The 1st floor of the former machine shop area is concrete and the 2nd floor of the building is primarily wood. The walls of the building are primarily painted brick, concrete block and clay tile and the interior column supports of the building are wood beams, of which the majority are painted. Office areas, restrooms, and storage areas (2nd floor) were not included as part of the assessment.

2558 Hamburg Turnpike, Suite 300 | Buffalo, NY 14218
phone: (716) 856-0599 | fax: (716) 856-0583

INTERIOR PCB ASSESSMENT

The interior PCB assessment consisted of the collection of eleven (11) concrete floor samples, nine (9) wood floor samples, and ten (10) wipe samples from the walls and columns. Figures 1 and 2 show the approximately locations of the samples collected. Benchmark personnel made visual observations of the floor and wall areas prior to collecting the samples, with bias towards oil stained areas.

The concrete floor samples were collected using an electric hammer drill and 1-inch diameter drill bit to drill approximately 3-inches into the concrete slab. The concrete fines generated from the drilling where placed in laboratory-provided jars. Ten (10) concrete floor sample were collected from the 1st floor and one (1) concrete sample was collected from the 2nd floor. The drill bit was decontaminated after each use with a wire brush, alconox and potable water wash, and potable water rinse.

The wood floor samples from the 2nd floor were collected using an electric drill and 1-inch diameter core barrel to core into the wood floor. The wood cores collected from each location were further processed to approximately ¼-inch or less in the field and placed in the laboratory-provided jars. The core barrel and utensils were decontaminated after each use with a wire brush, alconox and potable water wash, and potable water rinse.

The walls and columns in the vicinity of select air compressor connections for air hoses and tooling were assessed using wipe samples from these painted surfaces. Seven (7) wipe samples were collected from the 1st floor and three (3) were collected form the 2nd floor. The wipe samples were collected from 10-centimeter by 10-centimeter areas (100-centimeter square (cm sq)) using templates provided by the laboratory. Laboratory provided gauze pads saturated with hexane were used to wipe/collect the samples from the 100-cm sq. area.

The samples collected were placed in pre-cleaned laboratory provided sample jars, cooled to 4°C in the field, and transported under chain-of-custody to the laboratory for PCB analysis via EPA Method 8082.

Photographs of some sample locations are included as Attachment 1.

SOIL/FILL ANALYTICAL RESULTS

The results of the analytical samples collected and analyzed as part of the interior assessment are summarized on Figure 1 (1st floor samples) and Figure 2 (2nd floor samples), and the laboratory report is included as Attachment 2.

The concrete, wood, and wipe sample results were compared to the United State Environmental Protection Agency's thresholds for high occupancy (as the proposed reuse of the building is mixed residential and commercial which fall under high occupancy category.

The wood and concrete sample results were compared to the United State Environmental Protection Agency's threshold for high occupancy of 1 milligram per kilogram (mg/kg) per 40 CFR § 761.61 (a)(4)(i)(A).

The analytical results of the wipe samples were reported by the laboratory as microgram-absolute (ug/Abs), with results being representative of a 100 centimeters square (cm-sq.) wipe sampling area; therefore, samples results are ug/100 cm-sq. The wall and column sample results were compared to the United State Environmental Protection Agency's threshold for high occupancy of ≤10 ug/100 cm-sq per 40 CFR § 761.61 (a)(4)(ii).

Concrete Floor Samples

PCBs were detected in ten (10) of the eleven (11) concrete samples above method detection limits. One (1) sample location, CON-4, had concentration of 1.87 mg/kg which is above the high occupancy threshold of 1 mg/kg (see Figure 1). The concentrations of the other concrete sample results were either non-detect or less than 1 mg/kg.

Wood Floor Samples

PCBs were detected in the nine (9) wood samples above method detection limits. Three (3) sample locations, WOOD-5, WOOD-6, and WOOD-7 had concentration of 1.15 mg/kg, 6.58 mg/kg, and 5.14 mg/kg, respectively, above the high occupancy threshold of 1 mg/kg (see Figure 2). The PCB concentrations of the other six (6) samples were less the 1 mg/kg.

Wall and Column Wipe Samples

PCBs were detected in nine (9) of the ten (10) wipe samples above method detection limits collect from the walls and columns on the 1st and 2nd floors. The concentrations of the wipe samples were below the 10 ug/cm^2 threshold for high occupancy areas for non-porous surfaces.

CONCLUSIONS

The results of the Interior Assessment of the floors and walls/columns of the Site has identified the presence of PCBs. It appears that historic Site use as a machine shop, specifically the use of oils containing PCBs, have impacted the floors in the building. The areas identified at concentrations above the USEPA high-occupancy threshold of 1 mg/kg for PCBs should be address prior to building reuse. Additionally, a Phase II Environmental Investigation should be completed to determine if the soil/fill and groundwater present beneath the building has been impacted due to the presence of PCBs in 1st floor concrete slab of building.

We appreciate this opportunity to work with MDG on this project. Please contact us if you have any questions or require additional information.

Sincerely,
Benchmark Environmental Engineering & Science, PLLC

Christopher Boron, P.G.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

PCBs

L2037678-01, -02, -03, -04, -05, -06, -09, and -10: The sample has elevated detection limits due to the dilution required by the sample matrix.

L2037678-03, -04, -05, -06, and -10: The surrogate recoveries are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Melissa Sturgis Melissa Sturgis

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	315 GROTE ST	**Lab Number:**	L2037678
Project Number:	B0549-020-001-001	**Report Date:**	09/17/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

Report Format: DU Report with 'J' Qualifiers

Project Name:	315 GROTE ST	**Lab Number:**	L2037678
Project Number:	B0549-020-001-001	**Report Date:**	09/17/20

Data Qualifiers

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
EPA TO-12 Non-methane organics
EPA 3C Fixed gases
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

1.0 EXECUTIVE SUMMARY

The following details the findings of Benchmark relative to identifying RECs for the former Buerk Tool located at 293 Grote Street (aka 315 Grote Street), Buffalo, Erie County, New York (Site).

1.1 General Information

Benchmark has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E 1527-13 and the protocols required by the Client. This section summarizes the findings of the environmental professional relative to the Site. The reader is encouraged to read the entire report.

1.2 Site Description

The Site is located in a highly developed commercial and residential area of the City of Buffalo (see Figure 1). As shown on Figure 2, one commercial structure is present on the Site. The existing building is currently vacant and formerly operated as a machine shop.

The Site consists of one parcel totaling approximately 0.75-acres and is supplied with municipal sanitary sewer, electric, natural-gas and public water. Information relative to the specific parcel subject to this assessment, as provided by the City of Buffalo municipal offices, is provided below:

Number	Street	Tax ID No.	Current Owner	Current Use
293	Grote Street (aka 315 Grote Street)*	89.21-1-1	315 Grote Street LLC	Vacant

*The mailing address for the property is 315 Grote Street.

1.3 Data Gaps

The following data gaps[1] were identified in completion of this inquiry.

Type of Data Gap	Details of Data Gap	Sources Consulted	Significance
Historical Information	Historical information for the Site was not available at five-year intervals.	City directories, aerial photographs, Sanborn maps, topographic maps, and municipal information.	This data gap did not significantly limit Benchmark's ability to provide an opinion on RECs related to the Site.
Abstract of Title	The abstract of title was not available for review at the time of report preparation.	Current property owner (i.e., user of this report).	This data gap did not significantly limit Benchmark's ability to provide an opinion on RECs related to the Site.
Site Reconnaissance	Benchmark was unaccompanied at the time of the Site visit thus property boundaries were approximated.	Site reconnaissance	This data gap did not significantly limit Benchmark's ability to provide an opinion on RECs related to the Site.

1.4 Environmental Report Summary

1.4.1 Summary of Site Reconnaissance Potential Concerns

The following potential environmental concerns were identified at the time of the Site reconnaissance:

- Benchmark is aware that the existing building formerly operated as a machine shop prior to being vacated.
- Benchmark is also aware based on previous Site walkovers prior to this assessment that hazardous/regulated materials (i.e., metal cutting oil, metal shavings, lubricating oil, coolant, and equipment cleaners) were formerly stored within the existing building. Based on the history of the Site, hazardous/regulated wastes were likely generated in connection with historic operations.
- Various equipment remains at the Site including belt driven motors, oil dispensers, a condensate tank, and air compressors with lines and hoses.

[1] A data gap is defined by 40 CFR 312.10 as "a lack of or inability to obtain information required by the standards and practices" of preparation of this document "despite good faith efforts by the environmental professional" or others to gather such information.

- A suspect vent pipe and a fill port for an UST were observed beneath a landscaped area on the northern end of the building's courtyard along Grote Street. We note that it is possible, but unknown, whether this suspect UST is associated with a 5,000-gallon fuel oil tank identified on-Site in at least 1957 as per municipal records.
- Significant black staining was observed on concrete (first floor) and wood (second floor) surfaces throughout the building proximate to former leaking drum and bucket storage areas, metal cutting oil dispensers, compressed air hoses and lines, condensate tank, overhead belt driven motors, and miscellaneous former work areas.
- Additional staining addressed with an absorbent/Speedy Dry, was also observed on concrete floor surfaces within the first floor of the existing building.
- Oil-filled core holes of unknown nature were observed within the concrete floor adjacent to two steel plate covered trenches and in the vicinity of a catch basin on the first floor. It is possible that the oil-filled core holes and trenches are associated with historic machinery; however, this could not be confirmed.
- A floor drain was observed in the boiler room and a catch basin was observed in the center of the existing building, south of the courtyard area. Based on the urban location of the Site, the floor drain and catch basin are believed to discharge into the municipal sanitary sewer system.
- A trench was observed on the concrete floor along the eastern and southern walls of the eastern portion of the building; the discharge point of the trench is unknown; however, based on the urban location of the Site, the trench may discharge into the municipal sanitary sewer system.
- A sump noted in the boiler room likely discharges into the storm sewer system.
- Potential PCB-containing electrical equipment and a transformer were observed on the second floor of the building at the time of the site reconnaissance.
- Based on the urban location of the Site, as buildings were formerly present on-Site, fill materials from unknown nature may be present on-Site.
- The Site is located in a mixed-use residential, commercial, and industrial area.

1.4.2 Summary of Historic Uses

Approximate Years	Reported or Suspected Use	Owner/Occupant
At least 1894 to prior to 1922	Residential and vacant land.	Unknown
At least 1922 to prior to 1960	Mixed-use residential, commercial, and industrial. Commercial/industrial operations included manufacturing of meters, factories, machine shop, upholstery construction, a restaurant, and offices.	Thomas Banas; Stanley Zembel; Martin Duda; John Macuda; Upholstered Construction Corp.; Andrew Kawa; Michael Boguslawski; Mann Kgllogg & Co Inc.; Lawrence Penksa; John Nowocien; Robert E.

		Williams & Sons Co Inc.; Visco Meter Corp.; Buerk Tool Works; Mary Kolano; Joseph W. Badner; Chester Koziel; Joseph W. Badner; John Koziel;
At least 1960 to prior to 1970	Automotive repair, factory, machine shop, and meter manufacturing. A residence is also identified on-Site.	Anntonette Sobizak; Henry C. Luczak; Lu Transmission Motor Repair; Visco Meter Corp.; Buerk Tool & Machine Corp.
At least 1970 through 2017	Machine shop, factory, meter manufacturing,	Visco Meter Corp.; Buerk Tool & Machine Corp.; Greater Buffalo Press; Benjamin C. Buerk, Linda B. Matt
At least 2017 through present	Vacant	The current owner is 315 Grote Street LLC.

The City of Buffalo's Assessors Archive Property Record Card for the Site, dated 1957, indicates one 5,000-gallon fuel oil tank is located on Site; however, no further information regarding the nature of the tank (above or underground), its location or installation date is available. [Benchmark is unsure is this tank record is related to the suspect UST observed during Benchmark's site reconnaissance.]

1.4.3 Summary of Previous Studies

Benchmark performed interior sampling for PCBs of the concrete floors, wood floors, and walls/columns of the building as part of an initial due diligence effort at the Site. Eleven concrete samples were collected from the concrete on the 1st and 2nd floors, nine wood samples were collected from the 2nd floor, and ten wipe samples (seven from the 1st floor and three from the 2nd floor) were collected from walls and columns. Sampling was biased to areas of observed staining.

PCBs were detected in ten of the eleven concrete samples above method detection limits. One of the 1st floor sample locations, CON-4, had concentration of 1.87 mg/kg, which is above the USEPAs high-occupancy threshold of 1 mg/kg. The other detected concentrations of PCBs were less than 1 mg/kg.

PCBs were detected in nine wood samples from the 2nd floor above method detection limits. Three (3) sample location, WOOD-5, WOOD-6, and WOOD-7 had concentration of 1.15 mg/kg, 6.58 mg/kg, and 5.14 mg/kg, respective, which is above the USEPAs high-occupancy threshold of 1mg/kg. The PCB concentrations of the other six (6) samples were less the 1 mg/kg.

PCBs were detected in nine of the ten wipe samples above method detection limits collect from the walls and columns on the 1st and 2nd floors. The concentrations of the wipe samples were below 10 ug/cm^2 which is the threshold for high occupancy areas.

Therefore, it appears that historic Site use as a machine shop, specifically the use of oils containing PCBs, have impacted the floors in the building. The areas identified at concentrations above the USEPA high-occupancy threshold (1 mg/kg) for PCBs should be address prior to building reuse.

1.4.4 Regulatory Information

Site Listings

Site Database Listings	Address/Name	Summary
EDR Historic Auto	293 Grote Street/Lu Transmissions Motor Repair	The Site is identified as a historic automotive repair shop, Lu Transmissions Motor Repair, in at least 1960.
RCRA Non-Generator, FINDS, ECHO	315 Grote Street/Buerk Tool & Machine Corp.	Buerk Tool and Machine Corp is listed as a RCRA Non-Generator of Hazardous Waste associated with former machine shop operations in addition to being included in the FINDs and ECHO databases. Buerk Tool and Machine Corp was identified as a Large Quantity Generator in at least 1980. Wastes such as quenching bath residues from oil baths from metal heat treating operations which use cyanide in the process are listed as being shipped off-site. The following NAICS codes and descriptions were identified: NAICS Code: 333514 - Special die and tool, die set, jig, and fixture manufacturing NAICS Code: 333515 - Cutting tool and machine tool accessory manufacturing.

Adjacent Property Listings

Adjacent Database Listings	Address/Name	Summary
RCRA-SQG, NY AST, NY Spills, PADS, FINDS, ECHO	302 Grote Street/Waste Stream Technology	This adjacent property is listed as a RCRA Small Quantity Generator of Hazardous Waste in addition to being included in the PADS, FINDs and ECHO databases under Waste Stream Technology. This adjacent property is a registered AST facility (Site ID: 9-508527) with four 8,500-gallon lube oil

		ASTs listed as "closed – in place." The ASTs are listed as being closed – in place on January 12, 2012. Spill No. 1010746, dated January 19, 2011, involved an oil release from equipment failure of a boiler gasket. The spill was addressed and classified as "inactive" by the NYSDEC on May 2, 2011.
NJ Manifest, NY Manifest, NY UST	302 Grote Street/Weatherpanel Inc	This adjacent property is listed in the NJ Manifest and NY Manifest databases under Weatherpanel Inc. This adjacent property is a registered UST facility (Site ID: 9-508527) with one #6 fuel oil UST listed as "temporarily out of service."
NY UST, NY Spills	316 Grote Street	This adjacent property is a registered UST facility (Site ID: 9-601365) with one 10,000-gallon UST listed as "unregulated/closed." The UST is listed as being closed-removed on March 21, 2013. Spill No. 1216049, dated March 4, 2013, involved impacts proximate to a former 10,000-gallon fuel oil UST during excavation. The spill was addressed and classified as "inactive" by the NYSDEC on April 15, 2013.
NY Spills	325 Grote Street	Spill No. 0175563, dated March 27, 2002, involved petroleum soil impacts encountered during fire hydrant replacement. The spill was addressed and classified as "closed" by the NYSDEC on June 12, 2002. Spill No. 0204652, dated August 2, 2002, involved a complaint of a tar-like odor. The source was identified as roof work on a nearby building and the NYSDEC reclassified the spill as "inactive" on August 2, 2002.

1.4.5 Other Findings

Historic on-Site operations with the use of hazardous/regulated materials represent a potential VEC. Further testing would be required to assess whether a VEC exists at the Site.

1.4.6 Interviews/Questionnaires

The current property owner completed Benchmark's Environmental Questionnaire and identified the Site as being used as a machine shop prior to being vacated.

The City of Buffalo Building Inspector would not provide an interview.

1.5 Report Findings

Where applicable for the Site, the following is a list of RECs, CRECs, HRECs, and de minimis conditions. Non-scope considerations are also provided.

RECs

Per ASTM E1527, a REC is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Benchmark's investigation revealed the following RECs in connection with the Site:

- Historic operations (i.e., machine shop, factories, manufacturing, and automotive repair) along with the presence of remaining equipment, a floor drain, a sump, a catch basin, trenches, oil-filled voids of unknown nature, and the historic use and generation of hazardous/regulated materials (as evidenced by the RCRA Generator regulatory listing) are considered RECs as subsurface conditions are unknown.
- The black staining noted at the Site is considered a REC due to its significant nature with visual impacts to ground surfaces and the potential for sub-slab impacts.
- Remaining electrical equipment is considered a REC due to the potential for PCBs.
- The suspect UST-related vent/fill pipes noted during Benchmark's site reconnaissance and the 5,000-gallon fuel oil tank identified in municipal records (it is unknown to Benchmark whether the suspect UST noted during Benchmark's site visit is related to the tank identified in municipal records) are considered RECs as sufficient tank closure documentation is unavailable.
- Interior floor sampling conducted identified PCBs in the concrete (1st floor) and wood (2nd floors) floors at concentrations above the USEPA high-occupancy threshold (1 mg/kg) for PCBs that should be address prior to building reuse.

Controlled RECs

Per ASTM E1527, a CREC is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the

implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Benchmark's ESA did not reveal CRECs for the Site.

Historic RECs

Per ASTM E1527, a HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). For example, a spill that has been remediated to the satisfaction of the appropriate regulators would be considered a HREC.

Benchmark's investigation revealed the following HRECs for the Site:

- The "closed" and "inactive" spill incidents identified for adjacent/nearby properties are considered HRECs as such have been addressed to the satisfaction of the NYSDEC.

De-minimis Conditions

In accordance with ASTM E-1527, de-minimis conditions are conditions that generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de-minimis conditions are neither RECs nor CRECs.

Benchmark's ESA did not reveal de-minimis conditions for the Site.

Non-Scope Considerations

Per ASTM E1527-13, non-scope considerations are described as ancillary observations during performance of the on-site investigation. Non-scope considerations are not considered RECs under ASTM E1527, but may represent health or environmental issues impacting the Site and/or property value.

Benchmark's investigation identified the following non-scope considerations:

- Based on the age of the existing building, the potential for suspect ACMs and lead exists. Asbestos and/or lead, if present, should be properly handled as part of future renovation/demolition activities.
- No visual evidence of mold was noted at the time of the Site reconnaissance.
- No wetland or flood zone areas were identified on-site or adjacent to the Site.
- Research in the area of the Site completed by the New York State Department of Health - Bureau of Environmental Radiation Protection (Radon) suggests an average basement radon concentration of 1.14 pCi/L in the area of the Site, which is below the USEPA action level of 4.0 pCi/L. As such, radon is not anticipated to be a concern.

1.6 Opinion

Due to the RECs detailed above, Benchmark recommends completion of a Phase II Environmental Investigation to assess environmental conditions at the Site in interior and exterior areas; as of the date of this report, Benchmark has been contracted to perform a Phase II Environmental Investigation at the Site. Regardless of the results of the Phase II, the suspect UST should be removed in accordance with applicable local, state, and federal regulations. Benchmark also notes the following:

- The staining noted throughout the building should be cleaned and any impacted materials should be segregated and properly disposed of off-Site.
- Any equipment/materials (i.e., compressor systems, overhead belt driven motors, oil dispensers, etc.) remaining on-Site that are not intended for future use should be removed and properly disposed of off-site.
- As with any property, if impacted soil, fill, groundwater, or other materials are encountered during future Site work/excavation, such should be properly handled in accordance with applicable local, state and, federal regulations.
- Interior floor sampling conducted identified PCBs in the concrete (1st floor) and wood (2nd floors) floors at concentrations above the USEPA high-occupancy threshold (1 mg/kg) for PCBs that should be address prior to building reuse.

2.0 INTRODUCTION

2.1 Purpose

The primary purpose of this assessment was to provide McGuire Development Company with sufficient information about the potential environmental risks associated with the Site.

A secondary purpose of this study was to document the inquiry of the environmental professional for all appropriate inquiries for the Site. Specifically, this document is intended to provide the "all appropriate inquiries" for the purposes of CERCLA Section 101(35)(B). Such is applicable to persons seeking to qualify for: (i) the innocent landowner defense pursuant to CERCLA Sections 101(35) and 107(b)(3); (ii) the bona fide prospective purchaser liability protection pursuant to CERCLA Sections 101(40) and 107(r); and (iii) the contiguous property owner liability protection pursuant to CERCLA Section 107(q). This report was not intended as part of the Site characterization and assessment with use of a grant awarded under CERCLA Section 104(k)(2)(B). More specifically, the scope is intended to identify conditions indicative of releases or threatened releases of hazardous substances in, on, or at the Site.

2.2 Scope of Work

The scope of work is intended to identify RECs at the Site, including the following tasks:

A) Review of information provided by the User of this Report regarding commonly known or reasonably available information about the Site.
B) Interviews with past and present owners, operators, and occupants (if available).
C) Review of historical sources of information documenting the Site's use.
D) Review of Federal, State, tribal and local government records.
E) A visual inspection of the Site and adjoining properties (to the extent possible).
F) Preparation of this written report.

2.3 Significant Assumptions

No significant assumptions were made during completion of this study other than as identified Section 2.4.

2.4 Limitations and Exceptions

2.4.1 Limitations

To the extent of our knowledge, the information contained in this Report is true and accurate. Benchmark personnel have exercised due diligence in the compilation of the information contained herein appropriate to environmental professionals engaged in investigations of this nature. Benchmark makes no guarantees regarding the accuracy of information gained from other sources.

This Phase I ESA is based on current and historical information reviewed by Benchmark and their Site inspection. This Report is not to be considered an environmental audit of the Site or a complete environmental investigation of the Site. Further, the purpose of this assessment is not to proclaim a property is devoid of environmental impact but rather to identify RECs, as defined above.

This Phase I ESA makes no warranties nor implies any liability regarding:

1. Site specific practices and/or disposal methods of the past or future owners.
2. Adjacent property owners, their environmental practices and/or impact of such properties and practices on the subject property other than observed from the subject property.
3. Unreported spills.
4. Practices, waste disposal, environmental concerns and/or modifications to waste site indexes after the date on this Report.
5. Site groundwater or soil conditions.
6. Accuracy or completeness of information supplied to Benchmark by others.
7. Environmental conditions in areas not practically or safely accessible.
8. Accuracy of previous studies (if any) provided to Benchmark.

This Report is also subject to any and all limitations defined within ASTM E1527-13. This includes, but is not limited to, the limitation that this Report is intended to identify environmental conditions at a specific time and is only valid for a period of six months from the date of issuance.

The principles defined within ASTM E1527-13, and followed within this study, include the following.

- This practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property.
- All appropriate inquiry does not mean an exhaustive assessment of a clean property. One of the purposes of this practice is to identify a balance between limiting costs/time and the reduction of uncertainty about unknown conditions.
- The level of inquiry is variable and depends on the type of property, risk level of the user and information developed in the course of the inquiry.
- Subsequent environmental assessments should not be used as standards to evaluate the appropriateness of prior inquiries based on hindsight, new information or new techniques.

2.4.2 User Responsibilities

The following information is the responsibility of the user and not of the environmental professional. This information may be provided by the user to the environmental professional for use in the final opinion of the all appropriate inquiry. If the information is not provided by the user, the environmental professional's ability to render such an opinion may be hindered and identified as a data gap.

- Searches for environmental cleanup liens against the subject property that are filed or recorded under any Federal, State, tribal, or local law, as required by 40 CFR Section 312.25.
- Assessments of any specialized knowledge or experience on the part of the landowner, as required by 40 CFR Section 312.28.
- An assessment of the relationship of the purchase price to the fair market value of the subject property, if the property was not contaminated, as required by 40 CFR Section 312.29.
- An assessment of commonly known or reasonably ascertainable information about the subject property, as required by 40 CFR Section 312.30.

2.4.3 User Protections

Persons claiming the liability protections under CERCLA must meet the statutory requirements of one of the following landowner liability protections. [It should be noted that the user must also satisfy certain continuing obligations outside the scope of this Phase I Environmental Assessment, as required by CERCLA].

- The innocent landowner defense pursuant to CERCLA Sections 101(35) and 107(b)(3).
- The bona fide prospective purchaser liability protection pursuant to CERCLA Sections 101(40) and 107(r).
- The contiguous property owner liability protection pursuant to CERCLA Section 107(q).

2.5 Deviations

There were no deviations from the ASTM 1527-13 standard during the completion of this study except that a regulatory file review was not completed. Specifically, while a NYSDEC file review would typically be required under the ASTM standard for Site and adjacent property regulatory listings, such was not completed by Benchmark as: regulatory listings were not identified; completion of the file review was not anticipated to provide new or significant information; or records were not considered reasonably ascertainable in the timeframe of the report deliverable.

2.6 Special Terms and Conditions

The work was completed in accordance with Benchmark's proposal and associated terms and conditions dated September 22, 2020.

2.7 Reliance, Certification, and Declaration

This report was prepared for the exclusive use of McGuire Development Company, their respective affiliates and subsidiaries, and all successors and assigns thereof. Any other use, or using this Report in a fashion in which it was not intended, is at the sole risk of the user. Reliance may only be granted upon written consent and is subject to those same terms and conditions as expressed in Benchmark's proposal dated September 22, 2020.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Site. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

3.0 SITE/VICINITY DESCRIPTION

3.1 Location and Legal Description

The Site is located in the City of Buffalo and consists of one individual tax parcel legally described as Parcel No. 89.21-1-1.

3.2 Activity/Use Limitations

Benchmark is not aware of any institutional controls or activity/use limitations imposed against the referenced Site.

3.3 Site and Vicinity Description

The Site is located in a highly developed commercial and residential area of the City of Buffalo (see Figure 1). As shown on Figure 2, one commercial structure is present on the Site. The existing building is currently vacant and formerly operated as a machine shop since 1919.

The Site consists of one parcel totaling approximately 0.75-acres and is supplied with municipal sanitary sewer, electric, natural-gas and public water. The Site is further described in the table below:

General Site Information	
Site Addresses	293 Grote Street (aka 315 Grote Street)
Municipality, County, State	Buffalo, Erie County, New York
Current Site Use	Vacant
Fronting Streets	Grote Street
Site Size	Approx. 0.75-acres (per municipal information)
Site Topography	Generally, level at grade
General Site Elevation (feet above mean sea level)	Approx. 600
Nearest Water Body	Scajaquada Creek located approx. 0.32 miles south of the Site
Improvements	One brick structure, gravel parking area, concrete areas, and, to a lesser extent, landscaped areas.

3.4 Current Use of Property

The Site, as further described below, is currently unoccupied.

Number	Street	Tax ID No.	Current Owner	Current Use
293	Grote Street (aka 315 Grote Street)*	89.21-1-1	315 Grote Street LLC	Vacant

*The mailing address for the Site is 315 Grote Street.

3.5 Description of Structures and Other Improvements

On-Site Building and Improvements Summary	
Building Number	Existing Building
Square Footage (approximate)	17,469 (per municipal information)
Building Identification/Use	Vacant historic machine shop
No. of Stories	2
Basement	None
Roof Type	Flat
Building Envelope	Concrete block
Building Siding	Brick
Heating System	Natural gas-powered radiant heaters and radiator/boiler heaters
Building Construction Date	1925 (per municipal information)
Utilities Provided	Natural-gas, public water, municipal sanitary sewer and electric

3.6 Adjoining Property Information

The adjacent properties were visually inspected from the Site at the time of the Site reconnaissance. The surrounding property uses include the following:

Direction	Current Use	Apparent Past Use	Comments/Concerns
North	Weatherpanel Inc. & The Houk Lofts	Commercial/Manufacture	None
South:	Residential	Residential	
East:	Progressive Roofing Inc	Commercial	
West:	Elwood Fire Protection - Warehouse	Commercial/Warehouse	

4.0 USER PROVIDED INFORMATION

As required under 40 CFR 312, those seeking liability protection under CERCLA, for which this Report is prepared, must provide the environmental professional certain information and documentation. Benchmark requested information from Mr. David Van Derau Jr. of McGuire Development Group, representing the User, with responses to that inquiry as follows:

4.1 Environmental Liens

According to Mr. Van Derau, there are no environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state, or local law.

4.2 Activity Use Limitations

According to Mr. Van Derau, there are no engineering controls, land use restrictions or institutional controls in place, filed or recorded under federal, tribal, state, or local law.

4.3 Specialized knowledge or experience

Mr. Van Derau does not have specialized knowledge or experience related to the Site or nearby properties.

4.4 Purchase Price

Mr. Van Derau indicated that the purchase price being paid for the property reasonably reflects the fair market value of the property.

4.5 Commonly Known or Reasonably Ascertainable Information

Mr. Van Derau is aware that the past use of the property was a machine shop but not aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases at the Site.

4.6 Obvious Indicators

Mr. Van Derau indicated that the presence of oil staining from historic operations point to the presence or likely presence of contamination at the property.

Appendix I includes the completed user questionnaire.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

Federal and state environmental regulatory information provided by Environmental EDR was reviewed at the radii defined in 40 CFR 312.26 (see Appendix A). Any sites unplottable by EDR were also reviewed, to the extent practical based on the site name and address, to assess whether they are also present within their appropriate radii. Any relevant listings such as those for the Site or any adjacent sites are included in the following table. Refer to Appendix A for complete acronym definitions.

Site Listings

Site Database Listings	Address/Name	Summary
EDR Historic Auto	293 Grote Street/Lu Transmissions Motor Repair	The Site is identified as a historic automotive repair shop, Lu Transmissions Motor Repair, in at least 1960.
RCRA Non-Generator, FINDS, ECHO	315 Grote Street/Buerk Tool & Machine Corp.	Buerk Tool and Machine Corp is listed as a RCRA Non-Generator of Hazardous Waste associated with former machine shop operations in addition to being included in the FINDs and ECHO databases. Buerk Tool and Machine Corp was identified as a Large Quantity Generator in at least 1980. Wastes such as quenching bath residues from oil baths from metal heat treating operations which use cyanide in the process are listed as being shipped off-site. The following NAICS codes and descriptions were identified: NAICS Code: 333514 - Special die and tool, die set, jig, and fixture manufacturing NAICS Code: 333515 - Cutting tool and machine tool accessory manufacturing.

Adjacent Property Listings

Adjacent Database Listings	Address/Name	Summary
RCRA-SQG, NY AST, NY Spills, PADS, FINDS, ECHO	302 Grote Street/Waste Stream Technology	This adjacent property is listed as a RCRA Small Quantity Generator of Hazardous Waste in addition to being included in the PADS, FINDs and ECHO databases under Waste Stream Technology. This adjacent property is a registered AST facility (Site ID: 9-508527) with four 8,500-gallon lube oil

		ASTs listed as "closed – in place." The ASTs are listed as being closed – in place on January 12, 2012. Spill No. 1010746, dated January 19, 2011, involved an oil release from equipment failure of a boiler gasket. The spill was addressed and classified as "inactive" by the NYSDEC on May 2, 2011.
NJ Manifest, NY Manifest, NY UST	302 Grote Street/Weatherpanel Inc	This adjacent property is listed in the NJ Manifest and NY Manifest databases under Weatherpanel Inc. This adjacent property is a registered UST facility (Site ID: 9-508527) with one #6 fuel oil UST listed as "temporarily out of service."
NY UST, NY Spills	316 Grote Street	This adjacent property is a registered UST facility (Site ID: 9-601365) with one 10,000-gallon UST listed as "unregulated/closed." The UST is listed as being closed-removed on March 21, 2013. Spill No. 1216049, dated March 4, 2013, involved impacts proximate to a former 10,000-gallon fuel oil UST during excavation. The spill was addressed and classified as "inactive" by the NYSDEC on April 15, 2013.
NY Spills	325 Grote Street	Spill No. 0175563, dated March 27, 2002, involved petroleum soil impacts encountered during fire hydrant replacement. The spill was addressed and classified as "closed" by the NYSDEC on June 12, 2002. Spill No. 0204652, dated August 2, 2002, involved a complaint of a tar-like odor. The source was identified as roof work on a nearby building and the NYSDEC reclassified the spill as "inactive" on August 2, 2002.

Nearby Properties

Additional regulatory listings were identified for nearby properties. Brief summaries of the relevant listings are provided in the table below.

Nearby Database Listings	Address/Name	Summary
EDR Hist Auto	155 Marion Street – Phil's Auto Service 1630 Elmwood Avenue – Eugene Dooley Auto Repair 600 Amherst Street – John Steumer Filling Station	These nearby properties are listed in the EDR Historical Auto database.

	1602 Elmwood Avenue – Joe's Service Center 19 Elmhurt Place – Collision Service Auto Repair 1601 Elmwood Avenue – Dicks NYE Park Service	
EDR Hist Cleaner	1654 Elmwood Avenue – Good Cleaners 1630 Elmwood Avenue – Wash M White Laundromat 646 Amherst Street – McManus Rug Cleaning 1611 Elmwood Avenue – Thorough Cleaners 1596 Elmwood Avenue – NYE Park Cleaners 1711 Elmwood Avenue – Compressed Air Rung Cleaning 17 Bridgeman Street – Anthony Rapczewski	These nearby properties are listed in the EDR Historical Cleaner database.
NY Brownfield	1695, 1721, & 1723 Elmwood Avenue – Pierce Arrow 255 Great Arrow Way – Former Pierce Arrow Manufacturing Site	Remediation is complete at BCP Site C915308. Residual contamination is being managed under a Site Management Plan. The Brownfield Cleanup Agreement was terminated as of 7/3/09. The site does not pose a significant threat to the environment.
NY Spills and LTANKS	Several properties	The remaining spill incidents identified within the search radii for nearby properties are classified as "inactive" or "closed" by the NYSDEC.
Numerous Database Listings	Various properties	The numerous remaining regulatory listings were reviewed by Benchmark and none of the information suggested a specific environmental concern at the Site; see below for additional information.

In addition to the nearby properties listed above, several additional sites located proximate to the Site are listed on one or more environmental databases. However, based on Benchmark's review, each of these additional sites falls in one or more of the following categories:

- It is listed on databases that indicate a potential for, but not an actual documented current or historical release (e.g., RCRA small quantity generator or large quantity generator; registered chemical bulk storage or petroleum bulk storage sites). As such, these sites are not considered to pose a REC at the Site due to absence of a documented release.

- It is located greater than one-eighth mile from the Site, and is not considered a REC based on the distance from the Site.
- It is present at a location that is not expected to pose potential for impact on the Site due to topography and likely groundwater flow direction, and is not considered a REC based on unlikelihood for impacts associated with migration of contaminants onto the Site.

The discussion included above regarding adjacent and surrounding properties is based on information supplied to Benchmark as well as observations of nearby properties at the time of the Site reconnaissance. Further study would be required to positively confirm whether the Site has been impacted by nearby properties. It is also important to note that the environmental history and status of nearby properties, real or perceived, can affect the valuation of the target property.

5.2 Additional Environmental Record Sources

To augment the information provided by EDR, a FOIA request was forwarded to the NYSDEC on September 24, 2020 for information concerning the Site (see Appendix B). The information obtained from the FOIA response appeared generally consistent with the Site regulatory listings summarized above. Information provided by the NYSDEC revealed that Buerk Tool & Machine Corp. was a generator of hazardous waste from 1988 through 1993, with no violations.

Benchmark also completed a search on the NYSDEC website, including the DECinfo Locator, of readily available records for the Site, including an Environmental Site Database Search for spills, remedial sites, and bulk storage facilities. A search of the USEPA Envirofacts website was also completed. No records involving the Site were identified.

5.3 Physical Setting Sources

Figure 1 shows the Site on a 2016 USGS Buffalo Quadrangle Topographic Map. The Site is located in a highly developed residential and commercial area. Due to extensive development in the area of the Site, individual structures are not shown on the map. The Site is located approximately 600 feet above mean sea level.

Groundwater flow is likely to the south toward the Scajaquada Creek. Local groundwater flow, however, may be influenced by subsurface features, such as excavations, utilities, and localized fill-conditions.

5.4 Historical Use

The historical use of the Site has been researched through review of previous studies, historic Sanborn maps, historic aerial photographs, municipal records, historic topographic maps, and/or other reasonably obtainable documents. The following sections summarize Benchmark's research.

5.4.1 Historic Aerial Photographs

Historical aerial photographs serve to reveal former topography, buildings, structures, and man-made works such as canals, lagoons and railroads that may have been altered or may no longer be in existence. Historical aerial photographs were obtained for additional historical information relative to the Site and surrounding area. Appendix C includes copies of the aerial photographs provided by EDR. Visual observations were limited on some aerial photographs due to poor quality.

YEAR	OBSERVATIONS
1938-2017	
Site	Developed with the existing building in its current configuration. Former buildings appear on the western portion of the Site from at least 1938 through at least 1951.
North	Commercial/Manufacturing
South	Residential
East	Commercial/Residential
West	Commercial/Residential and railroad tracks

5.4.2 Historical Sanborn Maps

Sanborn maps serve to reveal former buildings, building uses, and man-made works such as canals, lagoons and railroads that may have been altered or may no longer be in existence. Historic addresses identified for the Site were identified as 293 to 315 Grote Street. We note that the Site is not covered on the Sanborn map dated 1900. The following table summarizes the maps. Appendix D includes copies of the Sanborn Maps provided by EDR.

YEAR	OBSERVATIONS
1916	
Site	Developed with two former residential dwellings on the western portion of the Site (parcels 293 & 299 Grote Street). The remaining property is vacant land.
North	Machine shop, manufacturing of wire wheels, storage
South	Residential, iron junk yard,
East	Residential/Vacant land
West	Lumber yard, shingle company with railroad tracks beyond.
1950	
Site	Developed with the existing building (303-315 Grote Street) with operations including manufacturing of meters, factories, and offices. Former buildings including one residential dwelling (293 Grote Street), and a restaurant (295 Grote Street) are identified on the western portion of the Site.
North	Paper warehouse, printing, reconditioning of bags and burlap
South	Residential/Vacant land
East	Storage
West	Concrete/coal yard with railroad tracks beyond.
1981-1986	
Site	The existing building is used for manufacturing of meters, a machine shop, a factory, and offices.
North	Paper warehouse, printing, reconditioning of bags and burlap
South	Pipe supply and residential
East	Contractor yard
West	Vacant, pipe supply warehouse, railroad tracks, and residential

5.4.3 Historical City Directories

Historic city directories, dated between 1925 and 2017, were reviewed (generally in five-year intervals) through an EDR database search for additional information regarding the Site. Appendix E includes a copy of the abstract report.

Year	Listing(s)
1925	295 Grote Street – Thomas Banas; Stanley Zembel; Martin Duda; John Macuda 303 Grote Street – Upholstered Construction Corp
1930	293 Grote Street – Andrew Kawa 295 Grote Street – Michael Boguslawski 303 Grote Street – Vacant 311-315 Grote Street – 311 15 Mann Kgllogg & Co Inc
1935	293 Grote Street – Lawrence Penksa; John Nowocien 295 Grote Street – Vacant 303-309 Grote Street – Robert E. Williams & Sons Co Inc 311-315 Grote Street – Visco Meter Corp. 315 Grote Street – Buerk Tool Works
1940	293 Grote Street – Lawrence Penksa; John Nowocien, Jr. 295 Grote Street – Mary Kolano

	303-309 Grote Street – Robert E. Williams & Sons Co Inc 311-315 Grote Street – Visco Meter Corp. 315 Grote Street – Buerk Tool Works
1946	293 Grote Street – Lawrence Penksa; John Nowocien, Jr. 295 Grote Street – Vacant store; Joseph W. Badner 303-309 Grote Street – Robert E. Williams & Sons Co Inc 311-315 Grote Street – Visco Meter Corp. 315 Grote Street – Buerk Tool Works
1950	293 Grote Street – Lawrence Penksa 295 Grote Street – Chester Koziel; Joseph W. Badner; John Koziel 303-309 Grote Street – Robert E. Williams & Sons Co Inc 311-315 Grote Street – Visco Meter Corp. 315 Grote Street – Buerk Tool Works
1955	293 Grote Street – Vacant 295 Grote Street – Chester Koziel; John Koziel; Edmund Koziel 311-315 Grote Street – Visco Meter Corp. 315 Grote Street – Buerk Tool Works
1960	293 Grote Street – Anntonette Sobizak; Henry C. Luczak; Lu Transmission Motor Repair 315 Grote Street – Visco Meter Corp.; Buerk Tool & Machine Corp.
1964	293 Grote Street – Anntonette Sobizak; Henry C. Luczak 315 Grote Street – Visco Meter Corp.; Buerk Tool & Machine Corp.
1970	293 Grote Street – Greater Buffalo Press 315 Grote Street – Visco Meter Corp.; Buerk Tool & Machine Corp.
1975	293 Grote Street – Greater Buffalo Press 315 Grote Street – Vacant; Buerk Tool & Machine Corp
1980	293 Grote Street – Buerk Tool & Machine Corp. 315 Grote Street – Greater Buffalo Press; Buerk Tool & Machine Corp
1985	293 Grote Street – Buerk Tool & Machine Corp. 315 Grote Street – Greater Buffalo Press; Buerk Tool & Machine Corp
1992	293 Grote Street – Buerk Tool & Machine Corp. 315 Grote Street – Vacant; Buerk Tool & Machine Corp
1994	315 Grote Street – Benjamin C. Buerk; Buerk Tool & Machine Corp
1999	315 Grote Street – Buerk Tool & Machine Corp
2008	315 Grote Street – Buerk Tool & Machine Corp
2009	315 Grote Street – Buerk Tool
2014	315 Grote Street – Buerk Tool
2017	315 Grote Street – Buerk Tool

5.4.4 Historical Topographic Maps

Historical topographic maps were reviewed for additional information regarding the Site. Appendix F includes copies of the maps.

YEAR	OBSERVATIONS
1894, 1901	
Site	Developed with presumed former buildings.
1946	
Site	Due to extensive development in the area of the Site, individual structures are not shown.
1948	
Site	Unmapped.
1950	

Site	The Site appears to be developed with the presumed existing commercial/ manufacturing building and former buildings on the western portion of the Site.
1965-2013	
Site	Due to extensive development in the area of the Site, individual structures are not shown.

5.4.5 Municipal Records

Records readily available at the City of Buffalo municipal offices (Assessor, Building and Fire Departments) as well as records available online from the Erie County GIS were reviewed for additional information relative to the Site. Benchmark also researched historic addresses identified for the Site through review of Sanborn maps. Note that a FOIL was submitted to the City of Buffalo as required to access their records. The following summarizes municipal records provided to Benchmark at the time of this assessment; copies of the pertinent records are included in Appendix G.

- The Site, Tax ID No. 89.21-1-1, measures approximately 0.75-acres and is currently owned by 315 Grote Street LLC.
- Past owners were identified as Buerk Tool & Machine Corp., Benjamin C. Buerk, John Koziel, Ottilie Heyda, Richard K. Buerk, Linda B. Matt, Robert E. Williams, and 315 Grote Street LLC.
- The existing building, constructed in 1925, measures 17,469 square feet.
- The Site is supplied with and has access to natural-gas, municipal sanitary sewer, public water and electric.
- The City of Buffalo's Assessors Archive Property Record Card for the Site, dated 1957, indicates one 5,000-gallon fuel oil tank is located on Site; however, no further information regarding the nature of the tank (above or underground), its location or installation date is available.
- Building permits on file for the Site indicate additions to a factory in 1922, 1923, 1933, and 1942. A factory was enlarged in 1933 and 1966.
- A municipal review performed on September 30, 2020 indicates that there are no records on file in connection with fuel storage tanks, fire violations, or property maintenance/code violations.

The City of Buffalo Building Inspector would not provide Benchmark with an interview relative to the Site.

5.4.6 Site History Provided by Site Contact

The site contact indicated that the existing building was used as a machine shop prior to being vacated.

Section 7.1 includes additional information provided by the Site contact.

5.4.7 Abstract of Title

Abstract of Title information was not provided to Benchmark.

5.4.8 Previous Assessments

Benchmark performed interior sampling for PCBs of the concrete floors, wood floors, and walls/columns of the building as part of an initial due diligence effort at the Site. Eleven concrete samples were collected from the concrete on the 1st and 2nd floors , nine wood samples were collected from the 2nd floor, and ten wipe samples (seven from the 1st floor and three from the 2nd floor) were collected from walls and columns. Sampling was biased to areas of observed staining. Figures 3 and 4 identify the approximate location of the floor and wall/column samples collected from the 1st and 2nd floor, respectively, and provide the PCB sample results for the sample locations.

PCBs were detected in ten of the eleven concrete samples above method detection limits. One of the 1st floor sample locations, CON-4, had concentration of 1.87 mg/kg, which is above the USEPAs high-occupancy threshold of 1mg/kg. The other detected concentrations of PCBs were less than 1 mg/kg.

PCBs were detected in nine wood samples from the 2nd floor above method detection limits. Three (3) sample location, WOOD-5, WOOD-6, and WOOD-7 had concentration of 1.15 mg/kg, 6.58 mg/kg, and 5.14 mg/kg, respective, which is above the USEPAs high-occupancy threshold of 1mg/kg. The PCB concentrations of the other six (6) samples were less the 1 mg/kg.

PCBs were detected in nine of the ten wipe samples above method detection limits collect from the walls and columns on the 1st and 2nd floors. The concentrations of the wipe samples were below 10 ug/cm2 which is the threshold for high occupancy areas.

Therefore, it appears that historic Site use as a machine shop, specifically the use of oils containing PCBs, have impacted the floors in the building. The areas identified at concentrations above the USEPA high-occupancy threshold (1 mg/kg) for PCBs that should

be address prior to building reuse. Additionally, a Phase II Environmental Investigation of should be completed to determine if the soil/fill and groundwater present beneath the building has been impacted due to the presence of PCBs in 1st floor concrete slab of building.

5.4.9 Summary of Historic Uses

Approximate Years	Reported or Suspected Use	Owner/Occupant
At least 1894 to prior to 1922	Residential and vacant land.	Unknown
At least 1922 to prior to 1960	Mixed-use residential, commercial, and industrial. Commercial/industrial operations included manufacturing of meters, factories, machine shop, upholstery construction, a restaurant, and offices.	Thomas Banas; Stanley Zembel; Martin Duda; John Macuda; Upholstered Construction Corp.; Andrew Kawa; Michael Boguslawski; Mann Kgllogg & Co Inc.; Lawrence Penksa; John Nowocien; Robert E. Williams & Sons Co Inc.; Visco Meter Corp.; Buerk Tool Works; Mary Kolano; Joseph W. Badner; Chester Koziel; Joseph W. Badner; John Koziel;
At least 1960 to prior to 1970	Automotive repair, factory, machine shop, and meter manufacturing. A residence is also identified on-Site.	Anntonette Sobizak; Henry C. Luczak; Lu Transmission Motor Repair; Visco Meter Corp.; Buerk Tool & Machine Corp.
At least 1970 through 2017	Machine shop, factory, meter manufacturing,	Visco Meter Corp.; Buerk Tool & Machine Corp.; Greater Buffalo Press; Benjamin C. Buerk, Linda B. Matt
At least 2017 through present	Vacant	The current owner is 315 Grote Street LLC.

5.5 Environmental Liens

Benchmark is not aware of any formal environmental liens, enforcement action, civil, judicial, or administrative enforcement cases in connection with the Site.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

A visual review of the Site was completed to document Site conditions and identify potential RECs.

6.2 General Site Setting

Ms. Caroline Bukowski of Benchmark performed Site reconnaissance on October 6, 2020.

Appendix H includes photographs taken during Site reconnaissance.

6.3 Site Visit Findings

6.3.1 Current On-Site Operations

One structure is present on the Site. The existing building is currently vacant, and formerly operated as a machine shop.

6.3.2 Storage Tanks

A suspect vent pipe and fill port for an UST were observed beneath a landscaped area on the northern end of the building's courtyard along Grote Street. We note that it is possible, but unknown, whether this suspect UST is associated with the 5,000-gallon fuel oil tank identified on-Site in at least 1957 as per municipal records.

No ASTs were observed at the time of the Site reconnaissance.

6.3.3 Hazardous or Regulated Materials

No hazardous or regulated materials were observed during the Site reconnaissance as the existing building is vacant. However, based on the history of the Site, hazardous/regulated materials were likely used as part of historic machine shop operations. During the site reconnaissance, significant black staining was observed throughout the building, see Section 6.3.13.

It should be noted that during a Site walkover prior to this Phase I assessment, Benchmark previously identified multiple leaking 55-gallon drums and 5-gallon buckets throughout the building that have since been removed. Contents of the former 55-gallon drums and 5-gallon buckets reportedly included, but are not limited to, metal cutting oil, metal shavings, lubricating oil, coolant, and equipment cleaners.

6.3.4 Solid, Hazardous or Regulated Wastes

No solid waste from commercial use is generated on-Site at this time. City of Buffalo solid waste bins are stored within the existing building.

No hazardous/regulated wastes are generated on-Site at this time. However, based on the history of the Site, hazardous/regulated wastes were likely generated in connection with historic machine shop operations.

6.3.5 Overhead Belt Driven Motors

Overhead belt driven motors with drip pans were observed on the second floor in the eastern portion of the existing building.

6.3.6 Oil Dispensers

Metal cutting oil dispensers were observed on the first floor in the southwestern portion of the existing building.

6.3.7 Air Compressors

Compressed air hoses and lines were observed throughout the building on support columns and walls.

6.3.8 Condensate Tank

A condensate tank was observed in the boiler room. It is unknown if the condensate tank was formerly associated with the boiler.

6.3.9 Miscellaneous Debris/Stored Materials

Powder fire suppression systems were observed throughout the building.

6.3.10 Fill

Benchmark observed no visible evidence of fill activity at the time of the Site reconnaissance. However, based on the presence of former buildings and the urban location of the Site, fill materials from unknown nature are likely present on-Site.

6.3.11 Suspected Former Building Foundation

None observed.

6.3.12 Area of Concrete Repair

An area of concrete floor repairs was observed on the first floor in the western portion of the existing building.

6.3.13 Staining/Spillage and Pools of Liquid

Significant black staining was observed on concrete (first floor) and wood (second floor) surfaces throughout the building proximate to former leaking drum and bucket storage areas, metal cutting oil dispensers, compressed air hoses and lines, condensate tank, overhead belt driven motors, and miscellaneous former work areas.

Additional staining addressed with an absorbent/Speedy Dry, was also observed on concrete floor surfaces within the first floor of the existing building.

Oil-filled core holes of unknown nature were observed within the concrete floor adjacent to two steel plate covered trenches and in the vicinity of a catch basin on the first floor. It is possible that the oil-filled core holes and trench are associated with historic machinery; however, this could not be confirmed.

A blue powder material was observed on the concrete floor in the garage addition area.

6.3.14 Stressed and/or Dead Vegetation

None observed.

6.3.15 Odors

None noted.

6.3.16 Unidentified Substance Containers

None observed.

6.3.17 Heating/Cooling

Multiple overhead natural gas-powered radiant heaters and radiator/boiler heaters were located throughout the existing structure. A natural gas-powered floor heating unit is located on the second floor. One electric powered central air conditioning unit is located outside within the courtyard area.

6.3.18 Wastewaters

The Site is currently connected to the municipal sanitary sewer system.

6.3.19 Potable Water Supply/Wells

The Site is serviced by the municipal water supply.

6.3.20 Drains and Sumps

A floor drain was observed in the boiler room and a catch basin was observed in the center of the existing building, south of the courtyard area. Based on the urban location of the Site, the floor drain and catch basin are believed to discharge into the municipal sanitary sewer system.

A sump was noted in the boiler room. The sump is likely to discharge into the storm sewer system.

A trench was observed on the concrete floor along the eastern and southern walls of the eastern portion of the building; the discharge point of the trench is unknown; however, based on the urban location of the Site, the trench may discharge into the municipal sanitary sewer system.

6.3.21 Air Emissions

No process exhaust systems were noted on-site at the time of the Site inspection.

6.3.22 Pits, Ponds and Lagoons

None observed.

6.3.23 Septic System

None observed.

6.3.24 PCBs

Transformer and electrical equipment, which could contain PCBs, were observed on the second floor of the building at the time of the site reconnaissance. It should be noted that historically PCBs were used in cutting oil due to its stability when subject to high heat. In addition to oil use, compressed air hoses and lines were observed throughout the building and Benchmark is aware that PCB-containing lubricants have historically been used in air compressors due to the lubricant's high flash point.

As discussed in Section 5.4.8 and Section 6.3.25, Benchmark conducted an assessment of the floors and walls/columns inside the building for PCBs which were detected on these surfaces.

6.3.25 Previous Intrusive Work

Evidence of Benchmark's previous interior assessment were observed (e.g., concrete drill holes, cores of the wood floor, and wall/columns wipe sample locations). Benchmark was also in the process of completing a concurrent Phase II Environmental Investigation at the time of this assessment.

6.3.26 Adjacent Property Use

Adjacent properties are currently utilized for residential, commercial, and industrial purposes, including manufacturing, contracting, and warehouse operations, and residential dwellings and lofts. No concerns (staining, odors, obvious spills, etc.) were noted on-Site in connection with current adjacent operations.

6.4 Summary of Site Reconnaissance Potential Concerns

The following potential environmental concerns were identified at the time of the Site reconnaissance:

- Benchmark is aware that the existing building formerly operated as a machine shop prior to being vacated.
- Benchmark is also aware based on previous Site walkovers prior to this assessment that hazardous/regulated materials (i.e., metal cutting oil, metal shavings, lubricating oil, coolant, and equipment cleaners) were formerly stored within the existing building. Based on the history of the Site, hazardous/regulated wastes were likely generated in connection with historic machine shop operations.
- Various equipment remains at the Site including belt driven motors, oil dispensers, a condensate tank, and air compressors with lines and hoses.
- A suspect vent pipe and fill port for an UST were observed beneath a landscaped area on the northern end of the building's courtyard along Grote Street. We note that it is possible, but unknown, whether this suspect UST is associated with the 5,000-gallon fuel oil tank identified on-Site in at least 1957 as per municipal records.
- Significant black staining was observed on concrete (first floor) and wood (second floor) surfaces throughout the building proximate to former leaking drum and bucket storage areas, metal cutting oil dispensers, compressed air hoses and lines, condensate tank, overhead belt driven motors, and miscellaneous former work areas.
- Additional staining addressed with an absorbent/Speedy Dry, was also observed on concrete floor surfaces within the first floor of the existing building.
- Oil-filled core holes of unknown nature were observed within the concrete floor adjacent to two steel plate covered trenches and in the vicinity of a catch basin on the first floor. It is possible that the oil-filled core holes and trench are associated with historic machinery; however, this could not be confirmed.
- A floor drain was observed in the boiler room and a catch basin was observed in the center of the existing building, south of the courtyard area. Based on the urban location of the Site, the floor drain and catch basin are believed to discharge into the municipal sanitary sewer system.
- A sump noted in the boiler room likely discharges into the storm sewer system.
- A trench was observed on the concrete floor along the eastern and southern walls of the eastern portion of the building; the discharge point of the trench is unknown; however, based on the urban location of the Site, the trench may discharge into the municipal sanitary sewer system.

- Potential PCB-containing electrical equipment and a transformer were observed on the second floor of the building at the time of the site reconnaissance.
- Based on the urban location of the Site, as buildings were formerly present on-Site, fill materials from unknown nature may be present on-Site.
- The Site is located in a mixed-use residential, commercial, and industrial area.

7.0 INTERVIEWS

7.1 Site Owner

An Environmental Questionnaire requesting information on any known environmental hazards or impacts at the Site was completed by the current property owner, Mr. Linda Buerk Matt. Appendix I includes the completed questionnaire. The following summarizes the information provided by Ms. Matt:

- Prior to being vacated, the Site was used as a machine shop beginning in approximately 1919.
- Numerous questions were answered with "unknown" responses.

7.2 Municipal Interview

As indicated above, the city of Buffalo Building Inspectors would not provide interviews relative to the Site.

7.3 Former Site Owner/Operator

Former owners/operators were not interviewed as part of this assessment.

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

Other environmental considerations are discussed below. Such include non-scope considerations, described under ASTM E1527-13 as ancillary conditions that are typically outside the standard Phase I scope of practice. Non-scope considerations, such as asbestos, lead, radon, wetlands, and mold, are not considered RECs under ASTM E1527-13, but may represent health or environmental issues impacting the Site and/or property value.

8.1 Asbestos

Based on the age of the existing building, the potential for asbestos exists. Suspect ACMs including, but not limited to, drywall/plaster, pipe wrap, floor tiles, and ceiling tiles were noted at the time of the site visit. Asbestos could also be present in roofing materials.

8.2 Lead Paint, Pipes and Soldering

Based on the age of the existing building, the potential for lead-based paint exists. Peeling/chipping paint was observed throughout the building.

Based on the age of the existing building, lead pipes and soldering may be present.

8.3 Radon

Research in the area of the Site completed by the New York State Department of Health - Bureau of Environmental Radiation Protection (Radon) suggests an average basement radon concentration of 1.14 pCi/L in the area of the Site, which is below the USEPA action level of 4.0 pCi/L. As such, radon is not anticipated to be a concern.

8.4 Wetlands and Flood Zones

The EDR regulatory database includes general information on wetlands and flood zones. No wetland or flood zone areas were identified on-site or adjacent to the Site.

8.5 Microbial Contamination (Mold)

No visual evidence of mold was noted at the time of the Site reconnaissance.

8.6 Vapor Encroachment Conditions

This assessment included review of the regulatory database discussed in Section 6.1 in relation to the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.

If soil or groundwater is contaminated with a volatile compound such as gasoline or solvents, that contaminant can migrate through the soil pore space and end up in the air inside of buildings, especially within basement areas. Soil vapors do not necessarily migrate along groundwater flow paths; they can also move up hydraulic gradients and can extend beyond a groundwater plume. The ASTM standard named this a VEC, which is a more recent environmental concern and there have been a significant number of sites where vapor intrusion has been discovered. The state and federal environmental regulators have "reopened" numerous spill and waste sites in order to assess whether vapor encroachment is a concern.

Historic on-Site operations with the use of hazardous/regulated materials is considered a potential VEC. If impacts are identified during the Phase II Environmental Investigation, a potential VEC exists at the Site.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 5 NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 16 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 11 NY UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/12/2020 has revealed that there are 22 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 05/13/2020 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NAV&MAR CORPS TRG CE		ENE 1/8 - 1/4 (0.194 mi.)	78	294

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites

on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States

from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

IROQUOIS GAS/WESTWOO	SCAJAQUADA CREEK, UP	SW 1/2 - 1 (0.921 mi.)	117	686
IROQUOIS GAS/WESTWOO	DART STREET	SW 1/2 - 1 (0.969 mi.)	118	686

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 7 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"03/11/13 TDJ CONTACTED PETER GORTON FOR SCHEDULE OF EXCAVATION WORK. HE WILL CONTACT OUR OFFICE WHEN WORK WILL BEGIN. 3/20/13 TDJ WORK BEGAN ON EXCAVATING TANK WHICH IS IN ALLEY BETWEEN TWO WAREHOUSES. NO.6 OIL WAS FOUND IN SOIL WHERE A FUEL LINE LED INTO BUILDING. SOIL WAS REMOVED AND STAGED ON PLASTIC. OIL WAS BEING HEATED TO TRY TO PUMP OUT FOR TANK REMOVAL. COLD WEATHER WILL SLOW PROCESS AND ALTERNATIVE REMOVAL TECHNIQUE MAY BE USED. NOCO IS SCHEDULED TO DO THE TANK PUMPING. JUSTIN IS THE TODD COMPANY SITE MANAGER AT (716)465-7970. 3/21/13 TDJ UST WAS HEATED AND NOCO BEGAN PUMPING #6 OIL OUT TO VAC TRUCK. TANK WILL BE TOTALLY EMPTIED AND CLEANED WITH CLEAN OIL BEFORE IT IS PULLED. cONFIRM. SAMPLES WILL BE COLLECTED AND ANY STAINED SOIL REMOVED WILL BE DISPOSED PROPERLY. 4/15/13 TDJ RECEIVED FINAL REPORT FOR TANK REMOVAL. ALL SOIL DISPOSAL IFORMATION AND CONFIRMATORY SAMPLING RESULTS WERE INCLUDED. ALL SAMPLES TAKEN WERE WELL BELOW CP-51 LIMITS FOR EXCAVATED SOILS. SOIL WAS ALSO DISPOSED OF PROPERLY. SITE CLEANUP WAS TO SATISFACTION OF DEC SITE MANAGER. LETTER SENT FOR NO FURTHER ACTION TO MR.MANGANO. NO FURTHER ACTION FILE CLOSED"
Remarks:	"phase I completed then a phaseII on the eastern side. Title search indicated there was a 10000 gallon tank on the western side. Test pits revealed an ust - fuel oil ust. odor present in the soils surrounding the tank along with oily soil. Will go back to pull ust out. Panamerican is working for mr. mangano. Property may be considered for brownfield with a potential developer of Rocco Termini."

DEC Memo:	"RMC NOTIFIED JIM OVERHOLDT, BSA. 1/19/11 FG SITE INSPECTION. MET JIM HYZY AND VERN COURTEMANCHE WITH WASTE STREAM. THE #5 FUEL OIL TANK VALVE FAILED AND SPILLED FUEL FOR SEVERAL HOURS. THE STATIONERY ENGINEER MR. COURTEMANCHE ESTIMATED THAT 50 GALLONS WERE SPILLED ONTO THE FLOOR AND OVER A FLOOR DRAIN THAT LEADS TO THE SANITARY SEWER. THEY ESTIMATE 2 GALLONS LOST TO THE SEWER. THEY WERE IN THE PROCESS OF CLEANING THE SPILL UP USING ABSORBENT AND THEN PLACING IN BAGS. THEY PLAN TO DISPOSE OF THE MATERIAL AT THE NOCO BIOCELL AND WILL WASH THE FLOOR DOWN WITH THEIR OWN BIODEGRADING MATERIAL. THEY WILL PROVIDE A DISPOSAL RECEIPT FOR THE DEBRIS AND WILL FIX THE VALVE. 3/21/11 FG SPOKE TO JIM HYZY WITH WASTE STREAM. HE SAID HE HAD TO ANALYZE ADDITIONAL SAMPLE FOR THE LANDFILL WHICH DELAYED THE DISPOSAL. THEY WILL PROVIDE THE DISPOSAL RECEIPT WITHIN THE NEXT TWO WEEKS. 5/2/11 DISPOSAL RECEIPTS RECEIVED. SPILL CLOSED."
Remarks:	"Boiler gasket failure. 5 oil lost. 200 gallons lost clean up underway. some in sewer system."

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RJJ 3/27/2002: RJJ AT SITE AT 1100...MEET WITH RON FRENCH,CITY OF BUFFALO WATER DEPT.#851-5719,THEY WERE REPLACING A FIRE HYDRANT IN FRONT OF 325 GROTE ST. AND OBSERVED STRONG PETROLEUM ODORS AND REMOVED ABOUT 1/2 DUMP TRUCK OF CONTAMINATED SOIL...ALSO, THE WATER IN THE EXCAVATION HAD A SHEEN ON IT...I TOLD THE RON FRENCH THAT DEC WILL HAVE TO INVESTIGATE THE PETROLEUM PROBLEM AND I WILL HIRE OUR CONTRACTOR...IN THE MEANTIME,THEY WILL BACKFILL THE EXCAVATION AND STOP WORK UNTIL WE FIND THE SOURCE/RP...HIRED NATURE'S WAY TO INVESTIGATE AND REMEDIATE... 4/3/2002: RJJ AT SITE WITH NATURE'S WAY AT 0900...THEY WILL GEO-PROBE THE AREA ALL AROUND THE FIRE HYDRANT TO SEE HOW FAR THE CONTAMINATION TRAVELED AND KEEP ME INFORMED. 4/4/2002: RECEIVED THE BORING LOG MAP AND OVM TABLE ON THE SITE...IT SHOWS THAT MOST OF THE CONTAMINATION IS WHERE THE WATER DEPT. DUG THEIR EXCAVATION AND A SMALL AMOUNT IS UNDER THE SIDEWALK...I WILL DISCUSS THIS WITH THE WATER DEPT. AND NATURE'S WAY. 4/5/2002: AFTER DISCUSSING THIS WITH BOTH BUFFALO WATER DEPT. AND NATURE'S WAY,WE WILL HAVE NATURE'S WAY EXCAVATE THE CONTAMINATED SOIL UNDER THE SIDEWALK AND THEN BUFFALO WATER WILL BACKFILL THE EXCAVATION AFTER THEY REPAIR THE FIRE HYDRANT,THEN NATURE'S WAY WILL REPAIR THE SIDEWALK. 4/19/2002: RECEIVED THE ANALYTICAL REPORT FROM NATURE'S WAY FOR THE LANDFILL CHARACTERIZATION...IT INDICATES THAT GASOLINE WAS DETECTED,AND HAD A NEGATIVE FLASHPOINT. 4/25/2002: RECEIVED A PAYMENT PACKAGE FROM LOSIER LABS FOR THE AMOUNT OF $181.13 FOR THE LANDFILL CHARACTERIZATION TESTS...AND ALSO RECEIVED A PAYMENT PACKAGE FROM NATURE'S WAY FOR THE AMOUNT OF $1,202.69 FOR THE GEO-PROBE INVESTIGATION. 5/8/2002: RJJ AT SITE AT 0900...NATURE'S WAY AND THE BUFFALO WATER DEPT.,ARE AT THE SITE EXCAVATING THE AREA AND THE CONTAMINATED SOIL...AFTER ALL THE SOIL IS REMOVED,THE WATER DEPT.

325 GROTE STREET (Continued) **S106002160**

WILL REPAIR THE FIRE HYDRANT,THEN BACKFILL...NATURE'S WAY WILL DIG TO CLEAN AND TAKE WALL/FLOOR SAMPLES,THEN RETURN TO REPAIR THE SIDEWALK...RJJ AT SITE AT 1400...THE WATER DEPT. HAS INSTALLED THE NEW FIRE HYDRANT AND NATURE'S WAY IS BACKFILLING THE EXCAVATION...THEY WILL RETURN TOMORROW TO START REBUILDING THE SIDEWALK. 5/15/2002: NATURE'S WAY HAS STARTED TO REBUILD THE SIDEWALK AND WILL CONTINUE TOMORROW. 5/16/2002: RJJ AT SITE AT 1300...NATURE'S WAY HAS POURED THE CONCRETE IN THE SIDEWALK AND WILL SPREAD ASPHALT BINDER ON THE SHOULDER. 5/28/2002: RECEIVED THE ANALYTICAL RESULTS FROM LOZIER LABS ON THE CONFIRMATORY WALL/FLOOR SAMPLES IN THE EXCAVATION...ALL THE REULTS ARE BELOW OUR 'STARS' GUIDANCE VALUES. 5/29/2002: RECEIVED A PAYMENT PACKAGE FROM NATURE'S WAY FOR THE AMOUNT OF $7,202.01 FOR ALL THE WORK AT THE SITE INCLUDING THE DISPOSAL OF THE CONTAMINATED SOIL. 6/11/2002: RECEIVED A PAYMENT PACKAGE FROM LOZIER LABS FOR THE AMOUNT OF $896.80 FOR THE CONFIRMATORY SAMPLING IN THE EXCAVATION...AFTER THIS PAPERWORK COMES BACK,I WILL BE ABLE TO CLOSE OUT THIS SPILL. 6/12/2002: ALL THE PAPERWORK IS NOW IN,AND THE SPILL HAS BEEN CLEANED UP AND PROPERLY DISPOSED OF...NO FURTHER ACTION NEEDED...SPILL CLOSED OUT. 7/10/2002: RECEIVED A PAYMENT PACKAGE FROM NATURE'S WAY FOR THE AMOUNT OF $243.45 FOR WORK WHICH WAS NOT PREVIOUS BILLED."

Remarks: "CALLER SAID THAT CITY EXCAVATED SOIL THAT MAYBE PETROLEUM CONTAMINATED. IS STAGING MAT'L ON PLASTIC AND IS COVERING. WOULD LIKE SOMEONE FROM SPILLS TO VISIT SITE AND ADVISE CITY WHAT TO DO."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"6/14/16 FG CONTACTED JOHN DUNN CASPERTHEFRIENDLY@OUTLOOK.COM ASKING FOR THE EXACT LOCATION OF THE UST. From: John Dunn [mailto:casperthefriendly@outlook.com] Sent: Tuesday, June 14, 2016 11:33 AM To: Gallego, Francine (DEC) Subject: Re: Toxic Land It is near the dumpster on west side of the alley behind the main building on Elmwood Avenue. Many of us parked back there and were concerned because it was only covered with soil for some time and the smell was quite strong. I was transfered to another location within a year, but believe the asphalt patch will be visible. Thank you. J. Dunn 6/15/16 LETTER SENT TO PIERCE ARROW HOLDING LLC 948 45TH ST, BROOKLYN NY 11219 SBL 78.77-2-6 REQUESTING A RESPONSE BY 6/29/16. 11/30/16 CHAD STANISZEWSKI, NYSDEC INDICATED THAT THIS SITE SHOULD BE ACCEPTED INTO THE BCP WITHIN THE NEXT TWO MONTHS. 4/6/17 THE SITE HAS BEEN ACCEPTED INTO THE BCP WITH SITE NUMBER C915308. NO FURTHER ACTION BY SPILLS IS NECESSARY. THE SITE IS CLOSED."
Remarks:	"To whom it may concern, November of 2011 at 1685 Elmwood Ave. in the rear of the Pierce Arrow Building in Buffalo New York a 100+ year old fuel oil tank was excavated & removed by the then Building manager Harold Birch. This was done on a Sunday and executed without a permit. The tank broke on removal, spilling an untold amount of rancid, potentially hazardous oil into hole. For several days the basement and first floor reeked of the oil, causing nausea, headaches, and watery eyes. To our knowledge this was never addressed and no clean up was ever done. The tank in question is apparently still on the grounds hidden in an adjacent building along the tracks because apparently no scrap yard would take it due to it’s toxicity. This was told to me by Mr. Birch. Pierce Arrow is slated for renovations in the months to come and will repurposed into mixed use including residential spaces. Although we left the building for fear of our health, I urge the EPA to look into this further as the health and safety of many potential tenants could be at risk when the project is completed. Thank You John Dunn"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FG 05/05/97: MNP SITE INSPECTION, MET CHARLIE BURKE OF NFG AND CHESTER N., GAS STATION OWNER. NFG'S CONTRACTOR OPENED AN EXCAVATION IN FRONT OF CHESTER N'S GAS STATION, NOTED A GASOLINE ODOR IN THE SOIL & A SHEEN ON THE WATER. THE EXCAVATION ONLY TWELVE FEET FROM GASOLINE PUMP ISLAND. A 1,000 GALLON TANK FAILED A TIGHTNESS TEST SEVERAL YEARS AGO ACCORDING TO MR. N., TANK EMPTIED, BUT NOT PERMANENTLY CLOSED. ALSO, TWO OTHER TANKS REMAIN IN SERVICE, BUT OVERDUE FOR TESTING SINCE 1/95. NO OTHER GAS STATIONS IN AREA. I ASKED MR. N. TO STOP PUMPING GAS UNTIL THE TWO TANKS IN SERVICE ARE TESTED. HE REFUSED TO STOP PUMPING GAS. HE AGREED TO CONTACT A TANK TESTER & CALL ME BACK TOMORROW. I TOLD HIM DEC CAN DO THE TESTING IF HE IS UNABLE. I ALSO TOLD HIM WE MUST FIND OUT THE SOURCE OF THE CONTAMINATION REGARDLESS OF THE TANK TESTING. I COLLECTED A SOIL SAMPLE FROM THE EXCAVATION AT 2:45 PM. CHESTER & I CHECKED THE ABANDONED TANK WITH A STICK & FOUND 13 OF WATER & 1 OF GASOLINE. I SUGGESTED WE DIG UP AROUND THE ABANDONED TANK TO CHECK FOR CONTAMINATION, OTHERWISE SOME KIND OF SUBSURFACE INVESTIGATION MUST BE DONE. 09/26/97: FG TELECON WASTE STREAM WHO ASKED FOR THE PIN & SPILL NUMBER FOR THIS SITE. SHE SAID SHE HAS HAD THE ANALYTICAL DATA AVAILABLE FOR FOUR MONTHS BUT HAS NOT RELEASED IT BECAUSE SHE DID NOT HAVE THE BILLING INFORMATION. 10/02/97: MNP RECEIVED ANALYTICAL RESULTS FROM WASTE STREAM. THE SAMPLE COLLECTED FROM THE NATIONAL FUEL GAS EXCAVATION SHOWED THE PRESENCE OF GASOLINE AND ELEVATED STARS LEVELS FOR 8021. 12/09/97: MNP SENT LETTER REQUESTING THAT MR. NIEDZIALOWSKI COMPLETE THE SITE WORK OR ALLOW NYSDEC TO DO IT WAS SENT WITH A RESPONSE DUE ON 12/17/97 01/08/98: MNP TELECON FROM MR. NIEDZIALOWSKI IN RESPONSE TO THE ROE LETTER SENT TO HIM. HE SAID THAT MPH CONSTRUCTION IS INTERESTED IN PURCHASING HIS PROPERTY. HE WILL LET ME KNOW THE PROGRESS OF THE TRANSACTION WITHIN 30 DAYS. 07/08/98:

FORMER GAS STATION (Continued) **S106722184**

FG SENT LETTER REQUESTING THAT MR. NIEDZIALOWSKI COMPLETE THE SITE WORK OR ALLOW NYSDEC TO DO IT, DUE DATE OF 7/24/98. 07/16/98: MNP TELECON FROM CHESTER N. IN RESPONSE TO THE DEC RIGHT OF ENTRY LETTER. HE SAID HE IS SELLING THE PROPERTY AND WOULD LIKE SOME ADDITIONAL TIME SO THAT HE CAN SELL THE PROPERTY. HE SAID THAT THE BUILDING AND UST'S ARE ON THE RAILROAD RIGHT OF WAY PROPERTY AND HE RECENTLY PURCHASED THE PROPERTY FROM THE RAILROAD. LAST WEEK THE RR CLEARED OFF THE PROPERTY AND REMOVED THE RAIL. HE RECENTLY, IN APRIL, HAD TO CLOSE DOWN BECAUSE OF THE CONSTRUCTION ON AMHERST. HE SAID AN ENGINEER TOOK TESTS AND SAID THE CONTAMINATION IS NOT GASOLINE BUT WOULD NOT GIVE DEC THOSE DOCUMENTS. I TOLD HIM THAT HE IS RESPONSIBLE FOR REMEDIATION ON THE SITE. HE SAID HE WILL NOT DO ANYTHING AND IS HOPING TO SELL THE PROPERTY. HE IS ASKING $110,000 AND WILL ALLOW $10,000 FOR UST REMOVAL. 12/10/98: FG SENT LETTER REQUESTING THAT MR. NIEDZIALOWSKI COMPLETE THE SITE WORK OR ALLOW NYSDEC TO DO IT, DUE DATE OF 1/8/99. 08/06/99: FG SENT LETTER REQUESTING THAT MR. NIEDZIALOWSKI COMPLETE THE SITE WORK OR ALLOW NYSDEC TO DO IT, DUE DATE OF 08/27/99. 02/15/00: FG SITE INSPECTION. THE STATION IS CLOSED. NO ACTIVITY AT THE SITE. 10/16/00: RNL FILE REVIEW FOR ISR, DID INTERIM ISR, RECOMMEND LEGAL ACTION FOR SITE ACCESS 1/24/01 FG SPOKE TO RICHARD JAGER WITH METRO 873-5404, VOICE MAIL 743-6946. HE LISTED THE PROPERTY. THEY ARE ASKING $120,000. THEY HAD AN INTERESTED PARTY BUT THEY WOULD NOT BUY IT UNTIL ALL THE ENVIRONMENTAL PROBLEMS WERE TAKEN CARE OF. MR. JAGER WAS NOT AWARE THAT THERE WAS DOCUMENTATION THAT THERE WAS CONTAMINATION IN THE GROUND. HE THOUGHT THAT THEY ONLY NEEDED TO REMOVE THE USTS. HE RECOMMENDED THAT I SPEAK WITH ELAINE PESSECOW, MR. NIEDZIALOWSKI'S DAUGHTER 446-1373 REGARDING THE NECESSARY WORK ON THE SITE. HE ALSO SAID THAT MR. NIEDZIALOWSKI'S WIFE LIVES IN TONAWANDA ON CRESTHILL 834-9035. I PHONED MS PESSECOW AND LEFT A MESSAGE TO HAVE HER RETURN THE CALL. 1/26/01 FG SPOKE TO MS. PESSECOW. SHE WAS UNAWARE OF THE SPILL AT THE SITE AND ASKED FOR A COPY OF THE FILE. SHE SAID THAT THEY WERE PLANNING ON REMOVING THE UST'S FROM THE SITE AND HAD SPOKEN TO ELMWOOD TANK, JOE SALM. I WILL SEND HER A COPY OF THE FILE. 2/2/01 ELAINE PESSECOW CALLED AND SAID SHE WILL HAVE HER MOTHER SIGN THE RIGHT OF ENTRY TO ALLOW NYSDEC TO COMPLETE THE SITE WORK. SHE SAID THERE IS NO TITLE FOR THE PROPERTY. SHE SAID THE DEED INDICATES CONRAIL WILL BE RESPONSIBLE FOR REMEDIATION. SHE SAID SHE WILL SEND A COPY OF THIS TO ME. SHE ALSO SAID THAT SIMON OIL WAS THE LAST COMPANY TO DELIVER GASOLINE TO THE STATION. 2/2/01 NOTIFIED NATURE'S WAY OF THE NEED FOR WORK ON THE SITE. THEY WILL BE ABLE TO REMOVE THE UST'S ON 2/12/01. 2/2/01 JAMES CARROLL, CHEVRON PRODUCTS COMPANY 2300 WINDY RIDGE PARKWAY, SUITE 800 SOUTH, ATLANTA, GEORGIA 30339 - PHONE 770-984-3192, FAX 770-984-4107, CALLED. I GAVE HIM THE PROPERTY ADDRESS AND TOLD HIM WE WILL SEND HIM A POTENTIALLY RESPONSIBLE PARTY LETTER. HE SAID HE WILL BEGIN SEARCHING HIS RECORDS FOR INFORMATION ON THIS SITE. 2/22/01 RECD THE SIGNED RIGHT OF ENTRY FORM AND A COPY OF THE DEED WHICH STATES THAT GRANTEE SHALL BE RESPONSIBLE AFTER THE DATE OF THIS DEED FOR ANY REMEDIATION ARISING FROM THE EXISTENCE OR PRESENCE OF ANY CONTAMINATION IN, ON OR ABOUT THE PREMISES, INCLUDING WITHOUT LIMITATION, ANY HAZARDOUS SUBSTANCES, EXCEPT AS SPECIFICALLY PROVIDED OTHERWISE IN SUBSECTION A(II) BELOW. CONRAIL WAS THE GRANTEE. 3/16/01 SPOKE TO ELAINE PESSECOW WHO SAID THAT SIMON OIL HAD THE CONTRACT TO SUPPLY FUEL FROM 1982 THROUGH 1992. SHE HAS SOME PAPERWORK THAT INDICATES THIS. AFTER 1992, THE SUPPLIER WAS REID. PRIOR TO 1982, THE PROPERTY WAS A GULF STATION, NAMED CHET'S GULF STATION. SHE REMEMBERS GOING TO A GULF PICNIC WHERE GULF GAVE HER FATHER AN AWARD FOR 25

FORMER GAS STATION (Continued) **S106722184**

YEARS OF SERVICE. SHE HAS SOME LETTERS THAT WERE HER FATHERS ASSOCIATED WITH THE BUSINESS. SHE WILL SEND A COPY TO THIS OFFICE OF ALL THAT SHE HAS. 3/16/01 I CALLED JAMES CARROLL WITH CHEVRON WHO SAID THAT HE LOCATED A GULF STATION AT THE CORNER OF ELMWOOD AND AMHERST BUT IT WAS A DIFFERENT OPERATOR. I TOLD HIM THAT THE STATION WAS A GULF STATION PRIOR TO 1982. HE SAID HE WILL GET THE INFORMATION THAT HE COLLECTED TO ME. 3/23/01 MARSHALL WILLIAMS WITH CSX CALLED AND SAID THAT THEY OWNED THE PROPERTY BUT SOLD IT IN 1976. HE HAS ASSIGNED THIS SITE TO PAUL KRZANSKI WITH THE REMEDIATION GROUP WHO WILL BE IN TOUCH WITH ME. MARSHALL'S NUMBER IS 904-633-4529. 4/6/01 HOWARD FRANK, ATTY FOR REAL ESTATE TRANSACTION, 858-8033 CALLED AND INDICATED THAT THERE IS A POTENTIAL PURCHASER FOR THE PROPERTY. HE WANTED TO KNOW THE TIME FRAME FOR REMEDIATION. I TOLD HIM I WOULD SPEAK WITH BOTH CHEVRON AND CSX AND GET BACK WITH HIM. 4/6/01 LEFT A MESSAGE FOR JAMES CARROL WITH CHEVRON TO RETURN MY CALL. 4/9/01 LEFT A MESSAGE FOR PAUL KURZANSKI 904-359-3100 WITH CSX TO RETURN MY CALL. 4/11/01 PAUL KURZANSKI WITH CSX CALLED. HE SAID HE WILL RESPOND WITHIN THE NEXT TWO WEEKS REGARDING WHETHER OR NOT THEY WILL COMPLETE THE INVESTIGATION AND REMEDIATION. 4/25/01 JAMES CARROLL WITH CHEVRON CALLED REQUESTING AN EXTENSION OF TIME TO RESPOND TO THE NYSDEC LTR REQUESTING THAT CHEVRON COMPLETE THE SITE WORK. HE IS CURRENTLY HAVING A CONSULTANT CONDUCT RESEARCH ON THE SITE. HE ALSO WANTED TO KNOW WHAT NEEDS TO BE DONE ON SITE. 5/16/01 JAMES CARROLL WITH CHEVRON CALLED AND SAID HE WILL PROVIDE HIS RESPONSE BY JUNE 15, 2001. HE HAS HIRED BBL TO COMPLETE A BACKGROUND SEARCH ON THE PROPERTY. 5/17/01 RECD A RESPONSE FROM CSX INDICATING THAT THEY ARE NOT A DISCHARGER OR A RESPONSIBLE PARTY AT THE SITE. 6/21/01 MARY NIEDZIALOWSKI CALLED ASKING ABOUT A CHEVRON RESPONSE. I TOLD HER THERE HAS BEEN NO RESPONSE YET. I CALLED JAMES CARROLL WITH CHEVRON AND LEFT A MESSAGE FOR HIM TO RETURN THE CALL. 6/26/01 RECEIVED NO CALL BACK FROM CHEVRON. SPOKE TO MARY NIEDZIALOWSKI WHO SAID IT WAS OK FOR NYSDEC TO START THE SITE WORK. 6/28/01 FG MET NATURE'S WAY ON SITE, RUSS SAVAGE AND TOM WOELFLE. NATURE'S WAY TO COMPLETE SUBSURFACE BORINGS ON SITE TODAY TO COLLECT A SAMPLE FOR DISPOSAL PURPOSES AND TO DETERMINE THE EXTENT. THEY WILL REMOVE THE UST'S AND THE CONTAMINATION AS SOON AS THEY HAVE APPROVAL AT THE LANDFILL. THERE IS FUEL AND WATER IN THE UST'S ON SITE THAT WILL HAVE TO BE DISPOSED. 7/11/01 FG SITE INSPECTION. MET NATURE'S WAY ON SITE. PULLED ONE UST OUT OF GROUND. TWO ADDITIONAL UST'S TO BE REMOVED. CONTAMINATION IN THE UST EXCAVATION WAS PRESENT. WORK WILL CONTINUE. 7/13/01 FG SITE INSPECTION. DAN WIK, TOM WOELFLE ON SITE FOR NATURE'S WAY. CONTAMINATED SOIL FROM UST EXCAVATION BEING LOADED FOR DISPOSAL. NATIONAL FUEL ON SITE UNCOVERING THE GAS LINE ON THE PROPERTY. EXCAVATION TO CONTINUE IN FRONT OF BUILDING ON MONDAY 7/16/01. 7/16/01 DAN WIK FROM NATURE'S WAY CALLED AND SAID THAT HE DISCOVERED TWO ADDITIONAL PRODUCT LINES THAT HEAD UNDER THE BUILDING. HE BELIEVES THERE ARE ADDITIONAL TANKS UNDER THE BUILDING. HE FOUND ANOTHER PRODUCT LINE IN THE UST EXCAVATION ON THE WEST SIDE OF THE BUILDING AND BELIEVES THIS GOES TO A WASTE OIL TANK BEHIND THE BUILDING. MRS. NIEDZIALOWSKI SPOKE TO ME ALSO. SHE SAID SHE IS NOT THAT CONCERNED ABOUT THE BUILDING. SHE WANTS TO SPEAK TO HER DAUGHTER AND SON IN LAW FIRST BEFORE WE TAKE IT DOWN. SHE WANTS TO MEET ME ON SITE ON TUESDAY OR FRIDAY THIS WEEK. 7/17/01 FG SITE INSPECTION. NATURE'S WAY ON SITE. EXCAVATION COMPLETE. CONTAMINATION REMAINS AT THE FRONT ALONG THE STREET AND UNDER THE BUILDING. SAMPLES IN THE EXCAVATION HAVE BEEN COLLECTED AND WILL BE ANALYZED FOR 8021 STARS. THE EXCAVATION IS BEING BACKFILLED. MRS. NIEDZIALOWSKI WANTS TO MEET

FORMER GAS STATION (Continued) **S106722184**

ON SITE ON FRIDAY AT 2PM TO DISCUSS WHETHER OR NOT THE BUILDING NEEDS TO BE KNOCKED DOWN. NATURE'S WAY EXCAVATED BEHIND THE BUILDING TO CHECK IF THE PRODUCT LINES THEY DISCOVERED UNDER THE BUILDING LEAD THERE. THEY DID NOT FIND PRODUCT LINES OR UST'S OR CONTAMINATION. 7/20/01 FG SITE INSPECTION. MET R. SAVAGE WITH NATURE'S WAY AND THE PROPERTY OWNER, MARY NIEDZIALOWSKI AND HER DAUGHTER - ELAINE PESSECOW AND HER SON IN LAW. WE EXPLAINED THAT CONTAMINATION RUNS UNDER THE BUILDING AND IT NEEDS TO BE REMOVED. THEY CONSENTED THAT THE BUILDING BE TAKEN DOWN. WE ALSO EXPLAINED THAT CONTAMINATION RUNS INTO THE STREET AND WE WOULD HAVE TO GEOPROBE TO DETERMINE THE EXTENT. NATURE'S WAY SAID THEY COULD COMPLETE THE ASBESTOS SURVEY AND GET THE DEMOLITION PERMIT NEXT WEEK AND TAKE THE STRUCTURE DOWN AND REMOVE THE CONTAMINATION THE FOLLOWING WEEK. 7/23/01 RECD THE EXCAVATION SAMPLING RESULTS FOR 8021 STARS: BOTTOM FLOOR COMP. TOLD HER I WILL LOOK AT FILE. 10/19/01: MF T/C ELAINE PESSECOW 446-1373, DAUGHER OF RP. WANTS TO SELL PROPERTY, TOLD HER ITS OK WITH US. SHE WANTS A LETTER STATING THE AG WILL GO AFTER CHEVERON. TOLD HER WE PRESENT ALL INFO TO AG & THEY WILL DETERMINE WHO GETS INVOICED. 10/22/01: MF PROCESSED NW $17771.45 PAY PACKAGE FOR 7/27-9/11 SITE WORK. REMOVING UST, CONTAMINATED SOIL, SAMPLE ETC. 11/30/01: MF PROCESSED NW $7235.84 PAY PACKAGE FOR 10/23-11/13 SOIL & CONTAMINATED WATER DISPOSAL, REPORT

FORMER GAS STATION (Continued) **S106722184**

WRITTING, WATER DISPOSAL COST & $3493.12 FOR SOIL DISPOSAL. ALSO RECEIVED SOIL DISPOSAL DOCUMENTATION. 01/18/02: MF RETURN ELAINE PESSECOW'S T/C. LEFT MESSAGE 716-446-1373. 02/04/02: MF T/C ELAINE PESSECOW, GAVE HER SPILL UPDATE. 02/11/02: MF T/C JIM RHOADES, 874-2527 INTERESTED IN BUYING PROPERTY. WANTS TO KNOW PATICULARS OF SITE THAT I DON'T KNOW. WILL HAVE FG CONTACT HIM. 03/07/02: MF FOR FG NW SUBMITTED THE SITE REMEDIATION REPORT. IT INCLUDED ALL DISPOSAL RECEIPTS & EXCAVATION ANALYTICAL RESULTS. 5 UST'S WERE REMOVED FROM THE SITE, 3-2K GALLON UST'S, 1-5K GALLON UST & 1 WASTE OIL UST & LIFT. 1096.41 TONS OF CONTAMINATED SOIL WERE DISPOSED OAT THE WASTE MANAGEMENT CHAFFEE LANDFILL. THE WASTE OIL UST LIQUID (250 GALLONS) WERE DISPOSED AT INDUSTRIAL OIL. THE DISPOSAL ANALYTICAL SHOWED THE CONTAMINATED SOIL TO BE NON-HAZ. THE EXCAVATION ANALYTICAL RESULTS ARE ALL BELOW TAGM'S EXCEPT FOR THE SOUTHERN BOUNDRY OF THE FRONT EXCAVATION, ALONG THE AMHERST ST R-O-W WHICH EXCEEDED GUIDENCE VALUES FOR MTBE & BENZENE & THE WEST WALL OF THE WASTE OIL TANK PIT EXCAVATION, WHICH REPORTED 3 PAH'S (8270) ANALYTES. THIS SITE CAN BE MADE INACTIVE & NO FURTHER WORK WILL BE REQUIRED. 03/20/02: MF PROCESSED NW PP#5 FOR REPORT WRITING. INVOICE #01-049-6, 2/18/02 - 2/25/02, $557.40. 04/19/02: MF FOR FG 'I' LETTER TO MARY NIEDZIALOWSKI, PROPERTY OWNER. 6/28/02: JAA T/C MATT BAKUS, ARCADIS, (716) 452-7826, EXT. 17. HE WAS FOLLOWING UP FXG LETTER OF 3/27/02 RECOMMEDING RAIL AND BALLAST BE REMOVED. HOW MUCH RAIL IS INVOLVED, WHAT ARE SAMPLING REQUIRMENTS FOR BALLAST PRIOR TO REMOVAL? I WILL RESEARCH AND CALL BACK. 7/5/02: JAA T/C MARY NIEDZIALOWSKI (834-9035), RETURNING HER CALL OF JULY 1. SHE WAS UPSET ABOUT DEMAND LETTER FROM AG. SHE IS BETTER NOW, SINCE HER DAUGHTER SPOKE TO AG, AND IS SENDING DOCUMENTS SHOWING THEY ARE NOT RESPONSIBLE FOR CLEANUP. SHE WANTS TO SELL THE PROPERTY, AS SOMEONE IS INTERESTED. I SUGGESTED SHE RETAIN AN ATTORNEY, AS AG REPRESENTS STATE'S INTERESTS, AND NOT HERS. SHE CAN'T AFFORD AN ATTORNEY. SHE MAY HAVE HER DAUGHTER CALL ME. 7/5/02: JAA T/C MATT BAKUS, ARCADIS, AFTER SPEAKING TO MARK HANS. NOT SURE HOW MUCH RAIL IS INVOLVED. RAILS SHOULD BE RECYCLED, TIES AND BALLAST WOULD HAVE TO BE CHARACTERISED PRIOR TO DISPOSAL. I GAVE HIM MRS. MARY NIEDZIALOWSKI'S PH # REGARDING LENGTH OF RAIL, AND GAVE HIM MARK HANS' NAME REGARDING ADDITIONAL DISPOSAL QUESTIONS."

Remarks: "while digging trench for pipeline work,national fuel encountered gasoline on groundwater-this info per fax reg 9"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"10/05/18 TDJ SPOKE WITH AMANDA WHO STATED THAT SHE WAS COVERED WITH GASOLINE AND NOTIFIED GAS STATION OWNER. HE CLOSED ISLAND AND PLACED

SUNOCO STATION (Continued) **S122878284**

SPEEDY DRY ON ASPHALT. AMANDA FILLED AT ANOTHER ISLAND AND WAS REEKING OF GASOLINE. ANOTHER DRIVER ASKED IF SHE WAS OK AND SHE WENT TO SPEAK WITH OWNER. HE DID NOT ASSIST NOR AGREE TO REIMBURSE ANY PART OF HER LOSS OF GASOLINE PURCHASED NOR CLEANING OF HER CLOTHING. SPILL WAS NOT CALLED INTO DEC BUT WAS OF THE AMOUNT less than 5 GALLONS. WILL SPEAK WITH STATION OWNER. 10/10/18 TDJ WENT TO LOCATION WHERE I SPOKE WITH OWNER. SUPPOSEDLY AMANDA PUT PUMP INTO VEHICLE AND STEPPED AWAY TO USE CELL PHONE. PUMP WAS SET TO PUMP A PRE-PAID AMOUNT AND AS IT HIT THE FULL MARK IT KEPT PUMPING. SHE SUPPSOEDLY STEPPED INTO THE GASOLINE AND MAY HAVE SPLASHED SOME ON CLOTHING. OWNER FOUD A PROBLEM WITH PUMP WHICH WAS FIXED. HE SUPPOSEDLY OFFERED TO HAVE HER CLOTHES CLEANED AND PAY BILL. SHE SUPPOSEDLY DID NOT AGREE TO THIS AND WENT ON TO YOGA CLASS WHERE SHE WAS DENIED DUE TO SMELL. OWNER GAVE HER THEIR ATTORNET NUMBER AFTER SHE DID NOT AGREE TO TERMS OF REPIRATIONS. SMALL SPILL WAS CLEANED TO SATISFACTION OF DEC SITE MANAGER. NO FURTHER ACTION FILE CLOSED TO ELECTRONIC ONLY"

Remarks: "Caller stated that as she began to fill vehicle with gasoline it began spraying her from crack in line or leak in joint of faucet."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"03/02/05 JFO ON SITE MET WITH ECO PHELPS. THE MATERIAL HAS BEEN LEFT ON A PALLET AND SHRINK WRAPPED. THE PRODUCT IS MADE BY CHESTERTON INC IN MASS. THE PRODUCT IS NOT LEAKING. WE CHECKED A COUPLE OF COMPANIES IN THE AREA AND THEY SAID IT HAS BEEN THERE FOR A COUPLE OF MONTHS. MIKE PHELPS CONTACTED THE CHESTERTON AND THEY WILL TRY TO FIND OUT WHO THEY SOLD IT TO. 03/07/05 JFO CALLED LINDA L0NETTE OF CHESTERTON. SHE SAID ACCORDING TO THE LOT NUMBERS THE PRODUCT WAS MADE IN 1994 AND SINCE THEN SOME OF THE DISTRIBUTERS HAVE GONE OUT OF BUSINESS. SHE WILL CHECK TO SEE IF THE COMPANY WILL DISPOSE OF THE PRODUCT. SHE WILL GET BACK TO ME. 03/16/05 JFO CALL TO LINDA LORNETTE. THEY WILL MAKE ARRANGEMENTS TO PICKUP THE MATERIAL. WHEN THEY GET A DATE THEY WILL CONTACT ME. I VISITED THE SITE AND FOUND THE CONTAINERS NOT TO BE LEAKING. I COVERED THE MATERIAL WITH PLASTIC AND WRAPPED CAUTION TAPE AROUND THE CONTAINERS. 03/18/05 JFO CALL FROM LINDA LORETTE. THEY HAVE CONSULTED WITH THEIR ATTORNEY AND WILL NOT BE DISPOSING OF THE MATERIAL. THEY WILL STILL TRY TO FIND THE COMPANY THAT PURCHASED THE PRODUCT. 03/23/05 JFO HIRED OP-TECH TO DISPOSE OF THE MATERIAL. THEY WILL OVERPACK. 03/28/05 JFO ON SITE THE MATERIAL HAS BEEN OVERPACKED TO 3 DRUMS. 2 HAZ AND 1 NON-HAZ. 04/18/05 JFO REC'D PP FOR

BUFFALO PHARGO LLC (Continued) **U003316538**

OVERPACKING THE MATERIAL. $477.82. SUBMITTED TO FG. 04/28/05 JFO CALL TO LINDA SCOTT OF OP-TECH. THE 3 DRUMS HAVE BEEN DISPOSED. RECEIPTS TO FOLLOW. 06/10/05 JFO RECEIVED THE DISPOSAL RECEIPTS ALONG WITH A PAYMENT PACKAGE FOR $467.50. ENTERED PAY PACK INFORMATION ON COMPUTER AND SUBMITTED TO FG. 09/20/05 JFO REVIEWED FILE. SPILL IS COMPLETE. NO FURTHER ACTION REQUIRED. CLOSED 02/14/06: MF FINAL ISR SUBMITTED"

BUFFALO PHARGO LLC (Continued) **U003316538**

JFO 02/24/03 JFO ON SITE NO ONE AVAILABLE. THE BUILDING IS LOCKED UP. I WILL CONTACT THE OWNER BY PHONE. 2/25/03:SAC TELECON ROBIN PHARR, ATTORNEY FOR PHARGO, MS. PHARR RECEIVED JFO'S PHONE MESSAGE REGARDING THE TANK OVERFILL AND WAS RETURNING HIS CALL, SHE IS NOW THE REPRESENTATIVE FOR THE SITE SINCE IT WAS SHUTDOWN ABOUT A MONTH AGO, MS. PHARR SAID THAT THERE HAVE BEEN NO DELIVERIES FOR 2 MONTHS, HER PHONE NO. 887-9888, MS. PHARR WALKED THE SITE AND DID NOT OBSERVE ANY OIL SPILLAGE, SINCE PLANT HAS BEEN SHUT DOWN SHE SUSPECTS IT MAY BE A DISGRUNTLED FORMER EMPLOYEE, SHE SAID THE GATE IS LOCKED AND THERE IS SOMEONE AT THE SITE FOR SECURITY PURPOSES, SHE SAID THAT TO CONTACT HER IF INSPECTION IS NEEDED.A 03/11/03 JFO CALL TO MS PHARR. SHE SAID THAT BUFFALO ECONOMIC RENAISSANCE CORP (BERC) HAS TAKEN OVER THE SITE. I TRIED TO CALL BERC SEVERAL TIMES. THERE IS NO ANSWER. 05/09/03 JFO REC'D MESSAGE FROM KATHY BRENNEN INDICATING THAT THIS SITE CAN BE CLOSED. KEVIN MATHIAS OF EPA IS APPARENTLY HANDLING THIS SITE SINCE THE FIRE UNDER AN EMERGENCY PERMIT. NO FURTHER ACTION REQUIRED BY SPILLS. ALSO THERE IS ANOTHER SPILL OPENED FOR THIS SITE, SPILL #0300561. THIS SPILL IS BEING HANDLED BY MIKE FRANKS. CLOSED"

Remarks: "Dennis Young of BSA rec'd a complaint that an employee of Buffalo Belting overfilled 2-10,000 gallon #6 fuel oil storage tanks. The oil went to the floor drain. The sewers have been checked by BSA and they found no product. Note: Bflo Belting went out of business approx 3 weeks ago."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description:	Location: This site is located at 601 Amherst Street in an urban location in the City of Buffalo, Erie County, New York. The property was formerly the location of an industrial park known as Campus Industries which had one large building (380,000 sf) housing a number of commercial and industrial businesses on 17 acres. Site Features: The site is located on the south side of Amherst Street between Bush Street and Elmwood Avenue in the City of Buffalo. Property use adjacent to the site includes; residential housing (east and north), small retail and light industrial buildings (north and west), and a school (east). South of the subject property there is a park that is located on the banks of Scajaquada Creek. Current Zoning/Use(s): The 601 Amherst Street Site is currently zoned for commercial use as a

601 AMHERST STREET (Continued) **S103570877**

large retail food store. Historical Use(s): Historically the property was used for the disposal of ash and cinders from various sources as fill material. The property has been used for industrial and commercial businesses since the 1920's. In 1997 Wegmans Food Markets purchased the property and entered the State's Voluntary Cleanup Program to undertake the necessary investigation and remediation of the property. Remediation consisted of the removal of transformers containing PCB oil, three underground storage tanks (petroleum), one above ground storage tank (paint wastes), and the excavation and disposal of 345 tons of contaminated soil (solvents, ash). Deed restrictions were filed in 1997 and a final engineering report was submitted in 1997. Sampling of groundwater was conducted in 1998 - 2000. An assignable release and covenant not to sue was issued by DEC in 2001. No further action is required at this site. The site was developed as a supermarket in 1997-98. Site Geology and Hydrogeology: The site is covered with a layer of fill material ranging in thickness from five to greater than sixteen feet. The fill appears to increase in thickness from north to south. The fill composition ranges from silty soil to sand mixed with cinders and inert material such as glass and metal. The Scajaquada Creek flows southwest from the site and discharges to the Niagara River which is located approximately one mile to the west.

Env Problem: Nature and Extent of Contamination: Prior to Remediation: The three underground storage tanks, nine PCB transformers and asbestos insulation were the most significant potential environmental threats. The soil sample results indicated that volatile organic compounds (VOC's) were present beneath the site. In addition to the VOC's associated with petroleum related residuals, acetone was also detected in one soil sample. The groundwater sample analysis results indicated that acetone, ethylbenzene, and m,p-xylene were present in the groundwater. Post-Remediation: Remediation of the site removed contaminants that posed a threat to the environment. Groundwater sampling has shown that the groundwater has not been impacted by the industrial operations.

Health Problem: The site has been remediated and is now the location of a Wegman's Supermarket. The area is served by the City of Buffalo public water supply. Therefore, there are no current health concerns regarding this site.

BROWNFIELDS:

Name:	PIERCE ARROW
Address:	1695, 1721 AND 1723 ELMWOOD AVENUE
City,State,Zip:	BUFFALO, NY 14207
Program:	BCP
Site Code:	533004
Acres:	2.898
HW Code:	C915308
SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	09/27/2016
Record Updated Date:	01/02/2020
Update By:	SFRADON
Site Description:	Location: The Pierce Arrow site is 2.899 acres located in an urban area in the City of Buffalo. The site is located at the intersection of Elmwood Avenue and Great Arrow Avenue, bordered to the north by the Conrail railroad tracks, and to the east by additional buildings associated with the former Pierce Arrow Manufacturing Facility. Site Features: The site is relatively flat and includes two unoccupied buildings surrounded by a small parking lot and a private driveway. The site is currently vacant. Current Zoning and Land Use: The site

PIERCE ARROW (Continued) **S118950512**

	is currently inactive and is zoned for mixed-use mid-rise development clusters defined by large-footprint structures (N-1S) consistent with the Buffalo Green Code. The surrounding parcels are currently used for a combination of residential, commercial, and light industrial uses. The nearest residential area is 500 feet to the south. Past Use of the Site: Until 1938 the site was used for administrative and manufacture/testing of automobile engines. After 1938 the site was used for tool and die manufacturing, a machine shop, dry cleaning, a garage, brazing and heat treatment operations. Prior uses that appear to have led to site contamination include automobile testing/manufacturing, aboveground and underground storage tanks used for oil and gasoline, coal storage, tool and die manufacturing, cleaning compound manufacturing, garage, brazing, heat treatment, and machine shop operations. Site Geology and Hydrogeology: The site contains 1-6 feet of urban fill underlain by native clay. Depth to groundwater is 9-18 feet below ground surface (fbgs) and groundwater flows south-southwest. A site location map is attached as Figure 1.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), and PCBs and metals including arsenic, cadmium, copper, lead, and mercury in soil. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use in the administrative building and other designated areas outside and around the two onsite buildings and commercial use in the garage building. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for contact with residual site contaminants.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

BROWNFIELDS:

Name:	FORMER PIERCE ARROW MANUFACTURING SITE
Address:	255 GREAT ARROW WAY
City,State,Zip:	BUFFALO, NY 14207
Program:	BCP
Site Code:	385897
Acres:	6.5
HW Code:	C915220
SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	08/15/2007
Record Updated Date:	02/19/2013
Update By:	MLDOSTER
Site Description:	The former Pierce Arrow Manufacturing Facility was accepted into the Brownfield Cleanup Program, effective December 11, 2007. This site is

GREAT ARROW INDUSTRIAL PARK (Continued) **1000304546**

	located in an Urban area in the City of Buffalo, Erie County. The site is approximately 1/2-mile north of Scajaquada Creek and Buffalo State College. The main features of this 6.5 acre site include two large former manufacturing buildings (Buildings A and C), an open area historically used for rail spurs and a coal storage area, and a small courtyard containing (2) USTs. The site was historically used for the manufacture of the Pierce Arrow Automobile between 1916 and 1939. Since that time the site has been utilized for warehousing, including chemical drum storage. As of 2008 the majority of the site was vacant (one area used for boat storage). Surrounding buildings immediately to the west, south and east of the site are utilized for warehousing, manufacturing and/or office space. Immediately to the north of the site lies several vacant buildings and a rail corridor. The nearest residential areas is located approximately 300 feet south of the site. Historic automobile manufacturing and various chemical warehousing operations appear to have led to site contamination. Following remediation of the site, a robust development plan was proposed to renovate existing buildings within, and adjacent, to the BCP site. The plan included the creation of student housing for Buffalo State College, residential apartments, commercial businesses and a hotel. A remedial investigation work plan was approved but never implemented due to the cancellation of the development project. The Brownfield Cleanup Agreement was terminated as of 7/3/09. The site was referred to Division of Spill Response to address existing petroleum contamination (Spill No. 0405957)
Env Problem:	Prior investigations at the site include: 1. A Phase I Environmental Site Assessment was conducted in 2004. Site reconnaissance and historic records identified multiple 'areas of potential concern' due to heavy manufacturing, chemical storage, surface staining, USTs, coal storage, rail spurs, etc. 2. A limited phase II subsurface soil investigation was completed in August 2004. The phase II investigation focused on areas of concern outlined in the phase I report. Soil samples exceeded restricted residential and commercial soil cleanup objectives for PAHs and metals. No groundwater data has been collected to date. Additional suspected contaminates include VOCs which may be impacting the soil and/or soil gas. The site does not pose a significant threat to the environment.

FINDS:
Registry ID: 110004375934

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Registry ID: 110022533677

Click Here:

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Region: 9
DER Facility ID: 295646
DEC Memo: "07/13/05 JFO ON SITE MET WITH MIKE CLANCY OF ELMWOOD TANK. THEY HAVE 1 TANK OUT OF THE GROUND. THEY REMOVED CONTAMINATED SOIL AND STAGED ON SITE. THEY WILL BE REMOVING THE OTHER TANK WHEN THIS PART OF THE HOLE IS CLEAN AND SAMPLED. THE TANKS ARE NEXT TO EACH OTHER SO THERE WILL BE ONE PIT. 07/15/05 JFO RECEIVED THE SAMPLE RESULTS FROM THE NORTH AND WEST WALLS AND THE BOTTOM. THE NORTH WALL SLIGHTLY EXCEEDS TAGMS. MORE RESULTS TO FOLLOW. 07/20/05 JFO RECEIVED THE SAMPLE RESULTS FROM THE EAST AND SOUTH WALLS AND THE OTHER BOTTOM SAMPLES. ALSO THEY REMOVED MORE SOIL FROM THE NORTH WALL AND RESAMPLED FOR A CLEAN CLOSURE. ALL SAMPLE RESULTS ARE NOW NON DETECT FOR BOTH SVOC'S AND VOC'S. NEED DISPOSAL RECEIPTS FOR CLEAN CLOSURE. 08/19/05 JFO CALL TO MIKE CLANCY FOR THE DISPOSAL RECEIPTS. HE WILL HAVE THE SECRETARY SEND THEM OUT. 08/24/05 JFO RECEIVED THE DISPOSAL RECEIPTS FOR THE CONTAMINATED SOIL. NO FURTHER ACTION REQUIRED. CLOSED"
Remarks: "DURING THE REMOVAL OF A 4000 GALLON DIESEL UST, PETROLEUM CONTAMINATION WAS FOUND. PIN HOLES FOUND ON THE BOTTOM AND SIDES. THEY WILL BE REMOVING A 2000 GALLON TANK ALSO AS PART OF THIS JOB."

Town:	Buffalo (c)
Record Added Date:	02/10/2017
Record Updated Date:	12/31/2019
Update By:	SFRADON
Site Description:	Location: The MOD-PAC Site is an approximately 20-acre site located at 1801 Elmwood Avenue in an urban area in the City of Buffalo. The site is bound by railroad tracks to the south, Elmwood Avenue to the west, and commercial/residential properties to the north and east. Site Features: The site is relatively flat and includes an occupied 500,000 square foot manufacturing facility with vacant land to the southern 1/3 of the property. Current Zoning and Land Use: The site is currently active and zoned for commercial, and industrial use. Past Uses of the Site: Until the 1950s the entire site was used for the manufacturing of automobile radiators and after the 1970s has been utilized for various manufacturing purposes including warehousing, and box and product packaging manufacture. Site Geology and Hydrogeology: The site is underlain by 2-16 feet of miscellaneous fill (soil intermixed with foundry sand, concrete, brick, slag, fly ash, metal, railroad siding, and asphalt) underlain by a silt/clay layer. Depth to groundwater is 2 to 9 feet below ground surface (fbgs) and flows to the southwest.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals (arsenic, cadmium, copper and lead) in soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.
Health Problem:	Measures are in place to address contact with residual site contaminants.

Environmental Interest/Information System:
AIR SYNTHETIC MINOR
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Control Name:	Ground Water Use Restriction
HW Code:	Not reported
Control Code:	8
Control Type:	INST
Dt record added:	12/05/2018
Dt rec updated:	02/04/2020
Updated By:	JJTEETER
Site Code:	548515
Site Description:	Location The site consists of one parcel totaling approximately 0.49 acres of land. The site is bound to the south by Chandler Street, to the west by vacant building and lot, and to the north by a railroad line and to the east by a vacant lot used for storage. The property is located within an urban area, utilized for industrial, commercial, and residential purposes. Site Features The site parcel is improved with one 43,000 square foot four story building located on the eastern portion of the site. The western portion of the site is open land with no buildings. Current Zoning and Land Use The building is vacant and inactive. 166 Chandler Street is currently zoned commercial. Past Uses of the Site The structure was originally constructed in 1907 as dairy machine manufacturer with additions to the building in 1909, 1919, 1927, and 1931. Former uses also included a grocery, Linde Air Products, Sponge Air Seat Co., and Barcalo Mfg (furniture manufacturer). Several fires occurred during the 1980s and 1990s that resulted in demolition of western portion of building. The building has been vacant for over 20 years. Site Geology and Hydrogeology Based on the soil borings completed at the site, subsurface conditions generally included approximately 3 to 11 feet of granular and cohesive fill material overlying native silt and clay which extends to approximately 76 feet below ground surface. The

166 CHANDLER STREET (Continued) **S121102077**

concrete foundation of the former demolished building appeared to be present 5 to 8 feet below grade in the western lot. The shallow regional groundwater flows in a southwesterly direction toward Scajaquada Creek located approximately 0.40 miles south.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes as the site is served by a public water supply that obtains its water from a source not affected by site contamination. The site is fenced on three sides and rail spur, on the fourth side, thus restricting public access. Interim remedial measures have reduced the potential for contact with site contaminants in soil. Volatile organic compounds in soil vapor (air spaces within the soil), may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site building is vacant, the inhalation of site-related contamination due to soil vapor intrusion does not represent a current concern. The potential exists for inhalation of site contaminants due to soil vapor intrusion for any re-occupied buildings or future on-site development. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Management Plan.
Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes as the site is served by a public water supply that obtains its water from a source not affected by site contamination. The site is fenced on three sides and rail spur, on the fourth side, thus restricting public access. Interim remedial measures have reduced the potential for contact with site contaminants in soil. Volatile organic compounds in soil vapor (air spaces within the soil), may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site building is vacant, the inhalation of site-related contamination due to soil vapor intrusion does not represent a current concern. The potential exists for inhalation of site contaminants due to soil vapor intrusion for any re-occupied buildings or future on-site development. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Updated By: JJTEETER
Site Code: 548515
Site Description: Location The site consists of one parcel totaling approximately 0.49 acres of land. The site is bound to the south by Chandler Street, to the west by vacant building and lot, and to the north by a railroad line and to the east by a vacant lot used for storage. The property is located within an urban area, utilized for industrial, commercial, and residential purposes. Site Features The site parcel is improved with one 43,000 square foot four story building located on the eastern portion of the site. The western portion of the site is open land with no buildings. Current Zoning and Land Use The building is vacant and inactive. 166 Chandler Street is currently zoned commercial. Past Uses of the Site The structure was originally constructed in 1907 as dairy machine manufacturer with additions to the building in 1909, 1919, 1927, and 1931. Former uses also included a grocery, Linde Air Products, Sponge Air Seat Co., and Barcalo Mfg (furniture manufacturer). Several fires occurred during the 1980s and 1990s that resulted in demolition of western portion of building. The building has been vacant for over 20 years. Site Geology and Hydrogeology Based on the soil borings completed at the site, subsurface conditions generally included approximately 3 to 11 feet of granular and cohesive fill material overlying native silt and clay which extends to approximately 76 feet below ground surface. The concrete foundation of the former demolished building appeared to be present 5 to 8 feet below grade in the western lot. The shallow regional groundwater flows in a southwesterly direction toward Scajaquada Creek located approximately 0.40 miles south.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes as the site is served by a public water supply that obtains its water from a source not affected by site contamination. The site is fenced on three sides and rail spur, on the fourth side, thus restricting public access. Interim remedial measures have reduced the potential for contact with site contaminants in soil. DEC Memo:	"07/13/11 TDJ 6:45AM WENT TO LOCATION WHERE FIRE IN A THREE STORY PETROLEUM PRODUCTION FACILITY WAS BEING FOUGHT. FIREFIGHTERS WERE FIGHTING IT FROM THE EXTERIOR DUE TO THE TANKS, DRUMS AND PETROLEUM PRODUCTS STORED THROUGHOUT AND HOW QUICKLY IT SPREAD. AS THE FIRE PROGRESSED TO ALL FLOORS FOAM WAS BROUGHT ONSITE FROM THE AIRPORT AND AIRFORCE BASE TO SUPPRESS THE FLAMES. A FLOW OF PETROLEUM BEGAN FLOWING ON THE WATER AND FOAM SOLUTION BEHIND THE FACILITY ON THE CSX RAIL LINE ACCESS ROAD. MIKE BETHGE OF CSX CONTACTED OP-TECH TO BRING A CREW TO CONTAIN AND REMOVE OILY WATER FROM THE RAIL LINE DURING THE FIRE. AS WATER/FOAM SOLUTION BEGAN TO FLOW DOWN CHANDLER STREET MIKE DIRECTED OP-TECH TO PLACE BOOMS AND PADS UNDER CSX CONTRACT. 1145AM FIREFIGHTERS BREAK FOR FOOD/WATER AS FIRE CONTINUES TO REKINDLE EVERY CHANCE SUPPRESSANT IS NOT ADDED. HEAVY BLACK SMOKE IN AIR. OILY WATER ON CHANDLER IS BEING CONTAINED BY PADS AND BOOMS BUT RESIDUAL IS REACHING COMBINED BUFFALO SEWER SYSTEM. WASTEWATER REPS. WERE

NIAGARA LUBRICANT (Continued) **U003318611**

CONTACTED AND STATED THEY COULD TAKE ANY MATERIAL IN FLOW. VAC TRUCK AND FRAC TANK ONSITE COLLECTING PETROLEUM ALONG CSX PROPERTY. APPROX. 3:00 PM SIDE LOADING DOCK COLLAPSED FROM FIRE DAMAGE. FIRE BURNING ON ALL FLOORS. FLOW ON STREET INCREASED WITH ADDITIONAL LADDER TRUCK WATER USE. APPROX 5:00 ROOF COLLAPSE CAUSES BRICK TO FALL ON POWER LINES CAUSING X-FORMER TO COLLAPSE TO STREET SPILLING FLUID. EXTRA PADS AROUND THAT AREA. EXPLOSIONS HEARD INSIDE FROM TANKS OR DRUMS. APPROX. 8:00PM FIRE IS STARTING TO BE CONTAINED. THREE LADDER TRUCKS ADD CONSTANT WATER TO THIRD AND SECOND FLOOR TO STOP HOT SPOTS. WATER INCREASES TO FLOW DOWN ENTIRE STREET TO FIRST SIDE STREET. PADS FLOWING WITH PRESSURE AND BEING CAUGHT IN STORM DRAINS. I BEGAN CLEARING PADS ONCE FLOW WAS DOWN TO MILITARY AVE. APPROX 11:00PM MINIMAL WATER ADDING TO BUILDING. LEFT SITE. 7/14/11 FG ON SITE WITH TDJ. FIRE IS OUT. ATF AND BUFFALO FIRE ARE IN CHARGE OF THE SCENE. SOME WALLS AND ALL WINDOWS OF THE BRICK NIAGARA LUBICANT STRUCTURE ARE DOWN. ONLY THE SUPPORTING STRUCTURE AND THE FLOORS REMAIN. OIL IS PRESENT ON THE STREETS, AND SURROUNDING THE BUILDING AND ALONG THE RAILROAD BEHIND THE BUILDING. FG SPOKE WITH MIKE BETHGE WITH CSX. HE HAS OP TECH ON SITE CONDUCTING A CLEANUP OF THE RUNOFF FROM THE FIRE ONTO THE RAILROAD RIGHT OF WAY. FG TOLD MR. BETHGE THAT HE DID NOT HAVE TO COMPLETE THIS WORK AND THE NYSDEC WOULD COMPLETE IT. HE SAID THE RAILROAD UNDERSTOOD AND WANTED TO COMPLETE THE WORK WITH THEIR CONTRACTORS. WHILE COMPLETING A WALKOVER OF THE SITE WITH TDJ, THE SOLES OF FG'S WORK BOOTS DEGRADED AND WERE COMPLETELY GONE IN AREAS BECAUSE OF THE OIL/PRODUCTS RELEASED FROM THE BUILDING AND ON THE GROUND OUTSIDE THE BUILDING. EPSVT ON SITE FOR THE INSURANCE COMPANIES. THEY WERE OBSERVING THE ACTIVITY ON SITE FOR THEIR CLIENT WHO DID NOT AUTHORIZE THEM TO COMPLETE ANY WORK. FG SPOKE TO LEON SMITH, OWNER AND OPERATOR OF NIAGARA LUBRICANTS. HE SAID HE HASN'T BEEN ALLOWED IN THE BUILDING BECAUSE THE ATF AND BUFFALO FIRE WON'T LET HIM IN. THE SITE IS STILL A CRIME SCENE. AT 2:30 PM, FG & TDJ PARTICIPATED IN AN ONSITE MTG WITH ALL PARTIES INCLUDING ATF, CSX, NYSDEC, LEON SMITH AND HIS INSURANCE COMPANY. MR. SMITH SAID HE WOULD CONDUCT THE CLEANUP AND WANTED TO PUT THE FLUIDS IN THE BASEMENT INTO THE EXISTING TANKS IN THE BASEMENT. THE INSURANCE COMPANIES SAID THEY WOULD HIRE A STRUCTURAL ENGINEER TO DETERMINE IF IT WAS SAFE TO ENTER THE BUILDING. 7/16/11 FG SITE INSPECTION WITH TDJ. MET KEITH GLENN WITH THE USEPA WHO WAS CALLED ON SCENE BY THE DEPARTMENT. THE ENTIRE AREA WAS INSPECTED. BSA OPENED MANHOLES AND PRODUCT WAS EVIDENT. FROM THE BUILDING HEADING WEST, PRODUCT WAS FOUND IN THE SEWERS AND AN ACTIVE FLOW. AT A MANHOLE UPGRADIENT, NO PRODUCT WAS PRESENT AND A SLUGGISH FLOW. FG REFERRED MR. GLENN TO CSX, LEON SMITH, BSA AND A CURRENT EMPLOYEE. THE CORNELIUS CREEK COMBINED SEWER OVERFLOW AT THE FOOT OF ONTARIO STREET WAS INSPECTED AND A SHEEN WAS PRESENT. THE SEWER ON CHANDLER IS COMBINED AND DURING A HIGH WATER EVENT FLOWS TO THE CORNELIUS CREEK CSO. 7/19/11 FG SITE INSPECTION WITH TDJ. MET KEITH GLENN WITH USEPA, LEON SMITH, OWNER, KEVIN CROSS - ATTORNEY, RANDY RAKOCZINSKI - ENGINEER BARTON & LOGUIDICE HIRED BY MR. SMITH, ARCADIS WAS ALSO ON SITE FOR CSX. MR. GLENN CONFIRMED THAT THE USEPA HAS TAKEN THE OVERSIGHT OF THE ENVIRONMENTAL REMEDIATION OVER AND WILL CONTINUE UNTIL THE WORK IS COMPLETE. BSA AGREED TO INSERT PLUG AT INTERSECTION OF BUIDING BASEMENT LINE AND STREET MAIN LINE. 7/21/11 TDJ MET CARL PELLEGRINO WITH EPA WHO TRANSFERRED LEAD TO KELLI LUCARINA. WALKED SITE WHERE BOOMS AND FENCING HAS BEEN PLACED TO COLLECT RUNNOFF AND SUPPLY SECURITY. LEAKING OF PETROLEUM CONTINUES DOWN WALLS WITH HEAT OF DAY. BUFFALO SEWER CHECKED PLUG PLACED IN LINE TO INSURE SEAL. PLUG IS WORKING AND LINE CAN NOW BE

NIAGARA LUBRICANT (Continued) **U003318611**

FLUSHED. 7/22/11 TDJ RANDY RACKOCZYNSKI OF B&L CONTACTED ME SAYING OP-TECH IS NO LONGER LEAD CONTRACTOR FOR JOB DUE TO CONFLICT OF INTEREST WITH CSX RAIL CLEANUP. NEW CONTRACTOR WILL BE IN PLACE WITHIN A DAY. 7/25/11 TDJ RANDY (B&L) WAS ONSITE WITH PARAGON, WHO ARE THE COMPANY INVOLVED NOW WITH THE CONTINUED WORK ONSITE. SEWER LINE CLEANING AND SILT FENCE INSTALLATION WAS TO BE COMPLETED. 7/26/11 TDJ RECEIVED WORK PLAN FOR THE NEXT PHASE OF THE BUILDING ENTRY AND MATERIAL REMOVAL. THE DEMOLITION PROJECT WORK PLAN WILL BE SUPPLIED BY THE CONTRACTOR PICKED FOR THE JOB. LINE WAS FLUSHED AND SILT FENCING WAS COMPETED. ALL CONTAMINATED FIREHOSE PLACED INTO ROLLOFF. STREETS CLEANED AND AFFECTED SOILS ALONG SIDE STREET SCRAPED. 8/22/11 TDJ SENT CALL OUT PIN # TO OP-TECH , KEVIN CANNON FOR STREET PAD AND BOOM REMOVAL PERFORMED BEFORE AGREEMENT WITH OWNER AND INSURANCE COMPANY WAS COMPLETE. 8/26/11 TDJ CONTACTED FEDERATED INSURANCE, ROB DOOLEY (404)242-6403 REGARDING PAYMENT OF OP-TECH FOR INITIAL CLEANUP WORK. ROB CLAIMS THAT ALL MONIES FROM THE INSURANCE COMPANY HAVE BEEN EXHAUSTED. WILL LET OP-TECH SUBMIT BILL TO ALBANY FOR PAYMENT AND PUT IN FOR REIMBURSMENT VIA THE AG'S OFFICE. ALSO SPOKE WITH RANDY AT B&L WHO STATED THAT SAFETY KLEEN HAS BEEN ONSITE TWICE TO GIVE QUOTE FOR PETROLEUM REMOVAL. WORK SHOULD BEGIN THE WEEK OF 8/29. 9/12/11 TDJ SPILL CAME ACROSS DURING NIGHT INVOLVING VANDALISM OF FRAC TANK HOLDING WASTE FROM FIRE STORED OFF SITE ON CHANDLER STREET. SPILL WAS MAINLY WATER AND WAS CONTAINED BY OP-TECH. CONTACTED LEON SMITH ABOUT HOLD UP ON DISPOSAL OF TANKS OF WATER/OIL AND CONTAMINATED SOIL. HE STATED THAT CSX IS HOLDING UP DISPOSAL OF MATERIAL TAKEN OFF OF THERE PROPERTY FOR SOME REASON. THEN CONTACTED KEITH GLENN OF EPA WHO KNEW OF THE EVENT AND HAD CONTACTED CSX WHO STATED THAT NIAGARA LUBRICANT IS BEING THE CAUSE OF THE DELAY. KEITH WILL GET INFO WITHIN A FEW DAYS ON EPA'S ABILITY TO CONTROL THE MOVEMENT OF THE MATERIAL AND THE SLOW REMOVAL OF WASTE AT BUILDING AND DEMOLITION. 09/19/11 TDJ WENT TO LOCATION WHERE OP-TECH HAS CLEANED UP AND REMOVED E-TANK CLEAN FILL AND STONE PLACED ON SPILL AREA. CSX WILL BEGIN REMOVING REMAINING ROLLOFF CONTAINERS WITH THE SOIL FROM THE RAILROAD R.O.W AREA. 9/27/11 TDJ WENT TO LOCATION WHERE APOLLO DEMOLITION HAS BEGAN REMOVAL OF SCRAP STEEL FROM LOADING DOCK AREA. CONTAMINATED SOIL, CONCRETE AND PLASTICS WERE PLACED FOR LANDFILL DISPOSAL. WATER CANNON IS ONSITE TO KEEP MATERIAL WET. ALSO HAVE AIR MONITORING EQUIPMENT IN PLACE BY B&L CONSULTANTS. 9/28/11 TDJ REMOVAL OF STEEL FROM SITE BEGAN. PILE IN LODING DOCK AREA TOTALLY SEGREGATED FOR DISPOSAL. OILY MATERIAL WILL BE LOADED INTO LINED TRUCKS. 9/29/11 TDJ BUILDING DEMOLISION BEGAN EXPOSING MIDDLE OF UPPER AND SECOND FLOOR. MANY 55-GALLON DRUMS WERE SEEN ON SECOND FLOOR. ASKED EXCAVATOR OPERATOR IF DRUMS WERE FULL WHICH HE RESPONDED YES. MATERIAL WILL MOST LIKELY END UP IN BASEMENT FOR PUMPING IF SPILLED. MACHINE BROKE DOWN STOPPING WORK FOR DAY AT 11:00. 9/30/11 TDJ REAR OF BUILDING WAS ALMOST COMPLETELY DOWN. HEAVY RAIN MOST OF DAY KEPT DUST DOWN. SOMETHING PUT INTO SCRAP DUMPSTER LEAKED APPROX. 10 GALLONS OF OIL OUT OF DUMPSTER. PADS AND BOOMS USED TO CLEAN UP. MATERIAL TAKEN OUT AND ROLL OFF CLEANED OUT. INDUSTRIAL SERVICES WILL BE IN MONDAY TO CLEAN TANKS BEFORE SCRAPING. 10/07/11 TDJ WENT TO THE DEMOLITION SITE DURIN WEEK AND WATCH FINAL SECTION OF WALLS COME DOWN TODAY. STEEL HAS BEEN TAKEN AWAY FOR SCRAP AND A PILE OF DEMOLITION MATERIAL IS ALMOST READY TO MOVE OFFSITE. MINIMAL SPILLAGE WAS OBSERVED DURING THE BUILDING COLLAPSE AND WOULD HAVE BEEN CONTAINED IN THE BASEMENT. ONCE DEMO MATERIAL IS REMOVED THE BASEMENT WILL BE PUMPED AGAIN. 10/19/11 TDJ TRUCKS BEGAN REMOVING RUBBLE FROM SITE TO MODERN LANDFILL. MISTY RAIN AND SPRAY CANNON IS KEEPING DUST

NIAGARA LUBRICANT (Continued) **U003318611**

MINIMIZED. MOST OF STEEL HAS BEEN REMOVED. ALL ROLLOFFS FROM CSX SITE WORK HAVE BEEN DISPOSED OF. 10/24/11 TDJ WAS CONTACTED BY DIANA HARE WHO STATED THAT MODERN LANDFILL HAD STOPPED LOADS BECAUSE TOTAL WEIGHT LIMIT HAD BEEN ACHEIVED FOR PROPOSAL. AN ADDITIONAL APPROX 30 TRUCK LOADS OF THE SAME MATERIAL IS LEFT ONSITE. MODERN WILL DECIDE IF ADDITIONAL ANALYSIS IS REQUIRED FOR THE REMAINING LOADS. 10/27/11 TDJ LOADS OF DEBRIS HAS STOPPED AS COMPLETION OF DEMOLITION IS ALMOST COMPLTETE. SCRAP STEEL HAS A COUPLE LOADS REMAINING. BASEMENT IS BEING SCRAPED AND POWER WASHED. LARGE PILE OF SIDE WALL AND CLEAN DEBRIS IS STAGED NEAR EDGE OF BASEMENT TO POSSIBLY BE USED TO PARTIALLY FILL BASEMENT. SAMPLES HAVE BEEN TAKEN TO ENSURE PETROLEUM IS NOT CONTAINED IN STAGED PILE. BASEMENT IS INTACT AND APEARS TO NOT HAVE LET LIQUIDS RELEASE TO UNDER THE SLAB. 11/15/11 TDJ WENT TO SITE TO SEE BASEMENT HAS BEEN FILLED AND THE SURFACE HAS BEEN LEVELED WITH LARGER STONE. E-TANKS WERE BEING TAKEN AWAY. CARL PELLEGRINO FROM EPA WILL BE ONSITE THIS WEEK TO GIVE FINAL APPROVAL FOR COMPLETION. 11/17/11 TDJ MET CARL PELLEGRINO, USEPA AND BILL DOEBLER, B&L FOR FINAL SITE WALK. CRUSHED BRICK, CONCRETE AND STONE WAS USED AS FINAL COVER FOR THE ENTIRE BUILDING AREA COVERED. ALL CONTAMINATED MATERIAL HAS BEEN DISPOSED AND METAL SCRAP REMOVED. NO SHEEN WAS OBSERVED IN THE COLLECTION POINT USED FOR SITE WATER IN THE REAR OF THE PROPERTY. RECENT HEAVY RAIN FLOWED OVER THE SITE. AWAITING DISPOSAL RECEIPTS INCLUDING CSX WORK FOR ALL OFFSITE DISPOSAL TO CLOSE SITE 04/24/12 TDJ MET CARL PELLIGRINO AND CHERYL GREEN/LIPPES ATTORNEY AT SITE TO DETERMINE IF ANY PRODUCT OR PETROLEUM WASTE WAS LEFT IF TWO BUILDINGS LEFT AT SITE. WE WALKED THROUGH BOTH AND FOUND NO STORED MATERIALS. A FEW LARGE MIXING TANKS WERE PRESENT BUT EMPTY. TALKS HAVE BEGUN FOR POSSIBLE REUSE OF SITE FOR NEW FACILITY BUT NO DETAILS HAVE BEEN PRESENTED. CARL IS GOING TO GIVE FINAL CLOSURE TO EPA INVOLVEMENT AT SITE. 05/21/12 TDJ RECEIVED DISPOSAL RECEIPT FROM SAFETY KLEEN FOR REMOVAL OF OILY WATER, OIL FROM TANKS, AND WASH WATER FROM STEAM CLEANING BASEMENT. 05/30/12 TDJ PUT ALL INFO TOGETHER AND CLOSED OUT FILE. 09/18/12 TDJ MIXUP OF SPILL NUMBERS SHOWS THE PAY PACKAGES BEING PAID THROUGH SPILL# 1104100. THE INFORMATION WAS CHANGED AND PAY PACKAGES WERE PUT BACK ONTO THIS SPILL BUT EDOCS INFO SHOWS IT STILL ON THE 1104100 #. NO FURTHER ACTION FILE CLOSED"

Remarks: "There is a ongoing fire at this location, inside there are several drums of unknown solvents. 0835- Caller reporting a spill of Lube oil to Railroad Ballest. Caller is Edward Cooke. 904-607-2099."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAC 04/09/98: MJS, RNL SITE INSPECT. MET WITH DENNIS RILEY(CHEMIST). ADVISED HIM OF COMPLAINT. FOUND OIL(APPROX 150 GALLONS TOTAL) PUDDLED ON BASEMENT FLOOR IN SEVERAL LOCATIONS. FOUND SEVERAL HUNDRED DRUMS IN BASEMENT, MANY LEAKING WITH SPEEDI DRI SPREAD AROUND THEM. MR RILEY STATED THAT MANY OF THE DRUMS ARE FROM A CLEANUP FROM THE PAST. DRUM LIDS ARE DATED 1993. ALSO FOUND HOPPERS FILLED WITH OIL AND WASTE. MJS ADVISED MR RILEY THAT THERE ARE MANY ISSUES THAT WILL HAVE TO BE DEALT WITH. HE STATED THAT WE SHOULD CONTACT TOM MCLEOD(VP) OR LEON SMITH(PRES). 8/7/01:JFO, SAC INSPECT SITE, MET W/LEON SMITH - PRESIDENT OF NIAGARA LUBRICANT, WENT INTO BASEMENT FOUND DRUMS OF PRODUCT AND HOME HEATING OIL TANKS ON THE FLOOR WHICH ARE APPARENTLY EMPTY, MR. SMITH SAID THEY FABRICATE LUBRICANTS AND THESE DRUMS ARE FILLED WITH OFF-SPEC PRODUCT IN WHICH SMALL AMOUNTS ARE MIXED INTO THE BATCHES WHEN MAKING NEW PRODUCT, THEY REUSE THE DRUMS SHELLS AND PROBABLY GO THROUGH THE OFF SPEC PRODUCT IN 4 TO 6 MONTH CYCLES, MR. SMITH SAID THE NUMBER OF DRUMS HAS BEEN REDUCED FROM A FEW YEARS AGO WHEN MOST OF THE BASEMENT WAS FILLED WITH DRUMS, THE FLOOR IS OIL STAINED AND RESIDUAL SPEEDI-DRY WAS OBSERVED ON THE FLOOR, EQUIPMENT IN THE BASEMENT HAD DRIP PANS UNDERNEATH THAT HAD PRODUCT FILLED IN THEM, MR. SMITH SAID THAT THE BUILDING WAS PART OF QUAKER STATE REFINING AT ONE TIME AND THAT THE FLOOR IS SEALED TO PREVENT SEEPAGE AND THAT THERE ARE NO FLOOR DRAINS IN THE BASEMENT PREVENTING ANY OFF-SITE MIGRATION, SAC DISCUSS SITE W/MARK HANS, DIV OF SOLID AND HAZARDOUS MATERIALS, MR. HANS WILL HAVE SOMEONE FROM HIS DVISION FOLLOW UP, NO FURTHER WORK BY SPILLS."
Remarks:	"CALLER CLAIMS THAT APPROXIMATELY 150 55 GALLON DRUMS OF MOSTLY WASTE

NIAGARA LUBRICANT (Continued) **U003318611**

OIL HAVE BEEN STORED IN BASEMENT FOR YEARS. MANY ARE LEAKING. ALSO, LEAKING ABOVE GROUND WASTER OIL TANKS. ***(FORMERLY MJS FILE)***"

Date Record Added: 11/10/2017
Date Rec Updated: 01/10/2020
Updated By: JJTEETER
Site Description: Location: The 2.35 acre site consists of two contiguous parcels (155-157 Chandler Street) in the City of Buffalo. The site is bound to the north by Chandler Street, to the west by Manton Place, to the south by Grote Street and to the east by residential properties. The property is located within a mixed industrial, commercial, and residential area. Site Features: The 155 Chandler parcel is improved with one 65,000 square foot building which surrounds a large 22,000 square foot brick and gravel courtyard. The 157 Chandler parcel is a vacant lot. The building will be developed as a business incubator to be done in cooperation with Buffalo State Collage and Start Up New York. Current Zoning and Land Use: The site properties are currently zoned light industrial and they are vacant. Past Uses of the Site: The site has been used for operations such as machining, gas manufacturing and other manufacturing since the early 1900s. The structure was originally constructed in 1907 and utilized as a factory occupied by Linde Air Products until the early 1950s. Bell Aircraft Corporation was located at the site in the early/mid 1950s. In 1958, the building was purchased by Donald Rosen and utilized for G & R Machinery (machine shop) from approximately 1959 through at least the 1990s. The property was owned by Donald Rosen from 1958 through 1990, and by Irving Rosen from 1990 through 2005. The site was purchased by Ontario Equipment Co. in 2005 and R& M Leasing, LLC in 2017. Site Geology and Hydrogeology: The overburden soils encountered at the site consist of approximately 6 inches to 4 feet of granular and cohesive fill material. Silty clay lies below the fill material. A perched groundwater condition is present at the fill/native interceptor at three to four feet below ground surface. Groundwater was not encountered within the silty clay. The shallow regional groundwater flows in a southwesterly direction toward Scajaquada Creek located approximately 0.35 miles south and toward the Niagara River located approximately 1.25 miles west of the Site.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polychlorinated biphenyls (PCBs) and lead in soil and chlorinated volatile organic compounds in sub-slab and indoor air. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use and a vapor mitigation system has been installed. Residual contamination in the soil and monitoring of the vapor mitigation system is being managed under a Site Management Plan
Health Problem: Direct contact with contaminants in the soil is unlikely because contaminated soil was excavated and disposed of off-site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (systems that ventilate/remove the air beneath the building) has been installed beneath a portion of the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. However, additional evaluations are necessary to determine if there is a potential for soil vapor intrusion within

PIERCE ARROW BUSINESS CENTER (Continued) **S120706191**

	the remaining portions of the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 535657
Site Description: Location: The 2.35 acre site consists of two contiguous parcels (155-157 Chandler Street) in the City of Buffalo. The site is bound to the north by Chandler Street, to the west by Manton Place, to the south by Grote Street and to the east by residential properties. The

PIERCE ARROW BUSINESS CENTER (Continued) **S120706191**

property is located within a mixed industrial, commercial, and residential area. Site Features: The 155 Chandler parcel is improved with one 65,000 square foot building which surrounds a large 22,000 square foot brick and gravel courtyard. The 157 Chandler parcel is a vacant lot. The building will be developed as a business incubator to be done in cooperation with Buffalo State Collage and Start Up New York. Current Zoning and Land Use: The site properties are currently zoned light industrial and they are vacant. Past Uses of the Site: The site has been used for operations such as machining, gas manufacturing and other manufacturing since the early 1900s. The structure was originally constructed in 1907 and utilized as a factory occupied by Linde Air Products until the early 1950s. Bell Aircraft Corporation was located at the site in the early/mid 1950s. In 1958, the building was purchased by Donald Rosen and utilized for G & R Machinery (machine shop) from approximately 1959 through at least the 1990s. The property was owned by Donald Rosen from 1958 through 1990, and by Irving Rosen from 1990 through 2005. The site was purchased by Ontario Equipment Co. in 2005 and R& M Leasing, LLC in 2017. Site Geology and Hydrogeology: The overburden soils encountered at the site consist of approximately 6 inches to 4 feet of granular and cohesive fill material. Silty clay lies below the fill material. A perched groundwater condition is present at the fill/native interceptor at three to four feet below ground surface. Groundwater was not encountered within the silty clay. The shallow regional groundwater flows in a southwesterly direction toward Scajaquada Creek located approximately 0.35 miles south and toward the Niagara River located approximately 1.25 miles west of the Site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polychlorinated biphenyls (PCBs) and lead in soil and chlorinated volatile organic compounds in sub-slab and indoor air. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use and a vapor mitigation system has been installed. Residual contamination in the soil and monitoring of the vapor mitigation system is being managed under a Site Management Plan

Health Problem: Direct contact with contaminants in the soil is unlikely because contaminated soil was excavated and disposed of off-site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (systems that ventilate/remove the air beneath the building) has been installed beneath a portion of the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. However, additional evaluations are necessary to determine if there is a potential for soil vapor intrusion within the remaining portions of the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (systems that ventilate/remove the air beneath the building) has been installed beneath a portion of the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. However, additional evaluations are necessary to determine if there is a potential for soil vapor intrusion within the remaining portions of the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

BROWNFIELDS:

Name:	PIERCE ARROW BUSINESS CENTER
Address:	155-157 CHANDLER STREET
City,State,Zip:	BUFFALO, NY 14207
Program:	BCP
Site Code:	535657
Acres:	2.35
HW Code:	C915312
SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	11/15/2016
Record Updated Date:	01/21/2020
Update By:	AECAPRIO
Site Description:	Location: The 2.35 acre site consists of two contiguous parcels (155-157 Chandler Street) in the City of Buffalo. The site is bound to the north by Chandler Street, to the west by Manton Place, to the south by Grote Street and to the east by residential properties. The property is located within a mixed industrial, commercial, and residential area. Site Features: The 155 Chandler parcel is improved with one 65,000 square foot building which surrounds a large 22,000 square foot brick and gravel courtyard. The 157 Chandler parcel is a vacant lot. The building will be developed as a business incubator to be done in cooperation with Buffalo State Collage and Start Up New York. Current Zoning and Land Use: The site properties are currently

PIERCE ARROW BUSINESS CENTER (Continued) **S120706191**

zoned light industrial and they are vacant. Past Uses of the Site: The site has been used for operations such as machining, gas manufacturing and other manufacturing since the early 1900s. The structure was originally constructed in 1907 and utilized as a factory occupied by Linde Air Products until the early 1950s. Bell Aircraft Corporation was located at the site in the early/mid 1950s. In 1958, the building was purchased by Donald Rosen and utilized for G & R Machinery (machine shop) from approximately 1959 through at least the 1990s. The property was owned by Donald Rosen from 1958 through 1990, and by Irving Rosen from 1990 through 2005. The site was purchased by Ontario Equipment Co. in 2005 and R& M Leasing, LLC in 2017. Site Geology and Hydrogeology: The overburden soils encountered at the site consist of approximately 6 inches to 4 feet of granular and cohesive fill material. Silty clay lies below the fill material. A perched groundwater condition is present at the fill/native interceptor at three to four feet below ground surface. Groundwater was not encountered within the silty clay. The shallow regional groundwater flows in a southwesterly direction toward Scajaquada Creek located approximately 0.35 miles south and toward the Niagara River located approximately 1.25 miles west of the Site.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polychlorinated biphenyls (PCBs) and lead in soil and chlorinated volatile organic compounds in sub-slab and indoor air. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use and a vapor mitigation system has been installed. Residual contamination in the soil and monitoring of the vapor mitigation system is being managed under a Site Management Plan
Health Problem:	Direct contact with contaminants in the soil is unlikely because contaminated soil was excavated and disposed of off-site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (systems that ventilate/remove the air beneath the building) has been installed beneath a portion of the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. However, additional evaluations are necessary to determine if there is a potential for soil vapor intrusion within the remaining portions of the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description:	Location The 157 Great Arrow Avenue site is a 4.36-acre site located in an urban area at 157 Great Arrow Ave. in the City of Buffalo, Erie County. The Site is land-locked. The site is bounded on the north by Conrail railroad property, on the east by vacant land belonging to a charter school, and on the south and west by buildings associated with the former Pierce Arrow manufacturing facility. Site Features The site is relatively flat and includes an unoccupied four-story building known as Building D of the former Pierce Arrow facility, surrounded by a paved parking lot. A raised berm of soil/fill is present along the entire northern wooded site boundary. Current Zoning and Land Use The site is zoned for commercial use and is currently vacant. The surrounding parcels are used for a combination of commercial, light industrial, and utility right-of-ways. The nearest residential area is approximately 365 feet to the south on Elmhurst Place. Past Use of the Site Until 1938 the site was used for warehousing, shipping/receiving, and machine and tin shops. Prior uses that appear to have led to site contamination include Pierce Arrow Automotive Facility general plant operations. Site Geology and Hydrogeology Beneath the weathered asphalt pavement is a 0.5- 13 foot layer of urban fill material (sand, gravel,wood, brick, glass, and ash) underlain by approximately 12 feet of brown native silty clay. Depth to groundwater ranged from 1.5 to 12 feet below ground surface (bgs). Bedrock was not encountered.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Record Added Date:	09/13/2019
Record Updated Date:	11/08/2019
Update By:	AMSERVIS
Site Description:	Location The site is located at 140 Chandler Street in the City of Buffalo, Erie County, New York and consists of one parcel totaling approximately 0.96 acres. The site is bound to the north by railroad tracks, to the south by Chandler Street, to the west by a commercial operator, and to the east by a commercial structure with multiple occupants. The property is located within an urban area, utilized for industrial, commercial, and residential purposes. Site Features Building 1 is one-story and 2,500 square feet of space while Building 2 is 3,500 square feet spread across two stories. The parcel extends northerly from Chandler Street to the railroad track right-of-way. Current Zoning and Land Use 140 Chandler Street is currently zoned D-C for Flex Commercial Past Uses of the Site Building 1 Originally constructed in 1911 by Faramel Manufacturing Company, a feed mill manufacturing company. By 1940 the building was inhabited by EJ Woodison Company, a plating manufacturing facility, occupied the building from at least 1964 to 1960. Building 2 Originally constructed in 1914 by Enterprise Oil Company, a soap and a soap and compounds of lubricating oils manufacturing company. By 1965 the building was inhabited by Quaker State Oil Refining Corporation, a plating manufacturing facility, occupied the building from at least 1965 to 1989. Since that time, various companies occupied the buildings including Cream of Peas Company, Inc., Quaker State Oil Refining Corporation, EJ Woodison Co., Quality Petroleum Products, Inc., LASCO, Inc., and Niagara Lubricants. Over fifty eight (58) known storage tanks, both located underground and aboveground, were historically located at the site since at 1933, with the most recent tank closure in 2005. The building addressed as 160-164 Chandler Street was most recently occupied by Niagara Lubricants and was destroyed by a fire in the summer of 2011. Following building demolition associated with the fire, the former building area was backfilled, and has been vacant since that time. Site Geology and Hydrogeology Based on the soil borings completed, approximately 4 to 7 feet of granular and cohesive fill material is present throughout the site. Clay and silt was encountered below the fill material and extended the full depth drilled, ranging from 8 to 12 feet below grade. Groundwater was encountered approximately 3.5 to 5 feet below grade. Based on a review of the site topographic conditions as depicted on the USGS 7.5 minute Topographic Quadrangle Map of Buffalo NW, New York, shallow regional groundwater flows is expected to flow in a southwesterly direction toward Scajaquada Creek located approximately 0.40 miles south and toward the Niagara River located approximately one mile west of the Site.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Town:	Buffalo (c)
Record Added Date:	02/04/2020
Record Updated Date:	03/27/2020
Update By:	AMSERVIS
Site Description:	Location The site is addressed as 125 Chandler Street in the City of Buffalo, Erie County, New York and consists of one approximate 0.75-acre parcel. The site is bound to the north by Chandler Street, to the east by a vacant parcel, to the south by private residences, and to the west by vacant commercial buildings and lots. The property is located within an urban area, utilized for industrial, commercial, and residential purposes. Site Features The 125 Chandler parcel is improved with one approximate 3,500-square foot single-story building located on the western portion of the site. The building was gutted, leaving only steel beams, roof and concrete pad. Historic industrial fill, as well as piles of soil/debris are in portions of the parcel. Current Zoning and Land Use The building at 125 Chandler is vacant and inactive. The parcel is currently zoned D-C for Flex Commercial. Past Uses of the Site 125 Chandler Street was originally improved in the late 1940s as a freight/truck terminal. A gasoline tank was formerly associated with the 125 Chandler, with records indicating the 2,000-gallon tank was installed in 1954. However, records from City of Buffalo Office of Fire Prevention identified the tank located west of the Site building, and on the western adjoining property. This tank was reportedly removed in 2016. 125 Chandler Street was initially identified Chandler Street Playground in 1935, and remained a playground until around 1949 when the site was developed for Direct Winter Transport Ltd. The initial building was located in southern portion of the site, and current building constructed in 1955. The southern building was removed in late 1990s. The 125 Chandler building was also used by Hanson Transport, EJ Scannell Trucking, Acme Steel Co. (storage), Eagle Mold & Mfg. Co, and Mancini auto Sales. The building has been vacant since 2016. Prior remedial measures have not been completed at the site. Hazard Evaluations Inc. completed a limited Phase II investigation in June 2017. The work included completion of 5 soil borings and collection of soil samples, which is included in Section III. Groundwater was not encountered during the 2017 investigation. Site Geology and Hydrogeology Based on the soil borings completed, approximately 3 to 8 feet of granular and cohesive fill material is present throughout the site. The fill material extended to depths of 8 feet below grade in the area of the former building on 125 Chandler Site. Silty clay was encountered below the fill material at the 5 soil boring locations, and extended the full depth drilled. Groundwater was not encountered during the subsurface investigation work.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	"8/20/13 FG SITE INSPECTION. BUFFALO FIRE DEPT ON SCENE CAPT KEVIN PETERSON 851-5333 EXT 316, 491-0357 KDPETERSON@BFDNY.ORG. BUFFALO POLICE OFFICER MIKE FARLEY ON SCENE. THREE 55 GALLON METAL DRUMS OF UNKNOWN MATERIAL WERE DUMPED AT 122 CHANDLER, BUFFALO BY UNKNOWN PERSONS. THOMAS PUSTULKA TOOK ONE OF THE DRUMS TO HIS HOUSE AT 36 MARION, BUFFALO TO USE. BUFFALO FIRE HAD OVERPACKED THE TWO DRUMS AT THE CHANDLER LOCATION BUT INDICATED THEY WERE NOT LEAKING. THE FIRE DEPT DID NOT OPEN THE DRUMS BEFORE OVERPACKING SO THE CONTENTS WERE UNKNOWN. THE FIRE DEPT REQUESTED THAT THE DEPARTMENT DISPOSE OF THE DRUMS. FG HIRED NATIONAL VAC TO DISPOSE OF THE DRUMS. ECO MARK MAZURKIEWICZ RESPONDED TO BEGIN AN INVESTIGATION INTO THE RESPONSIBLE PARTY. NO MARKINGS WERE FOUND ON THE DRUMS. WE INSPECTED THE DRUM AT 36 MARION AND FOUND IT 1/4 FULL OF STONE AND BROKEN UP CONCRETE. NO OTHER MARKINGS BESIDES THE WORK ASPHALT WRITTEN ON IT. OFFICER FARLEY SAID THAT A PERSON TOLD THE BUFFALO FIRE DEPARTMENT THAT THEY SAW A BLACK FORD PICKUP DUMPING THE DRUMS BUT NO LICENSE PLATE OR NAME WAS TAKEN. NATIONAL VAC PICKED UP THE DRUMS. 8/21/13 TIM MCINERNEY WITH NATIONAL VAC CALLED AND SAID THAT THE DRUMS CONTAINED STONE AND CONCRETE. THE OVERPACKS WILL BE RETURNED TO THE FIRE DEPARTMENT AND THE DEBRIS WILL BE DISPOSED OF. 10/11/13 THE DISPOSAL RECEIPTS HAVE BEEN PROVIDED AND THE PAYMENT PACKAGES HAVE BEEN RECEIVED. NO FURTHER ACTION IS REQUIRED. THE SITE IS CLOSED."

Region:	9
Acres:	1.3
HW Code:	915173
Record Add:	11/18/1999
Record Upd:	10/03/2007
Updated By:	MLDOSTER
Site Description:	MarCon Erectors occupies a parcel of property approximately 1.3 acres in size in a mixed residential, commercial, industrial area. The site is a triangular shaped parcel of land with a multi-storied brick, frame and block building and a concrete containment area that had two, horizontal, 10,000 gallon, above ground storage tanks (AST) in saddles and one 25,000 gallon AST which had been cut down to about 18 inches in height. Recent operations of this facility was the re-manufacture of windows. Past uses of the facility included fuel blending operations by a company affiliated with Ashland Petroleum Company (approx. 1915 - 1971) and occupation by a roofing company, B. Hoffman Roofers 1971 to 1980. The site had been abandoned when MarCon purchased the property. The cut down tank contained sludge contaminated with VOCs and PCBs. Sampling of this sludge revealed PCB contamination as high as 16,000 ppm. Sampling of the oil/water in the sludge within the cut off tank revealed PCB contamination as high as 122 ppm. Sampling directly outside of the cracks in the structure revealed PCB contamination as high as 5.8 ppm. Improper removal practices during a sludge removal effort in 1997 has resulted in a RCRA enforcement action against the owner and contractor. An interim remedial measure (IRM) to remove source contamination was completed in early 2001. An environmental assessment was conducted in 2001 to determine soil and groundwater impacts. The assessment found all PCB contamination had been removed but petroleum contamination existed both on and off-site. A ROD was issued in March 2002 detailing no further remedial action necessary for the hazardous waste (PCBs). Petroleum contamination remains and is being addressed under the State's Oil Spill Program. Since hazardous waste no longer existed at the site, it was delisted in January 2003.
Env Problem:	A removal action completed in February 2000 mitigated environmental problems that were attributable to the hazardous waste (PCBs). Petroleum impacts are being addressed under the Spills Program. Excavation of petroleum source areas are planned.
Health Problem:	An elementary school, a playground, and a residential area are near the site. All PCB-contaminated sludges and soil have been removed and disposed off-site. The remedial activities at the site have eliminated potential exposure routes. Exposures via drinking water are not expected because public water serves the area.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Assessment of Health:	An elementary school, a playground, and a residential area are near the site. Although the site is fenced, there is evidence that neighborhood children have entered the site. Trespassers may be exposed to contaminated surface soils and sludge. Exposures via

MARCON ERECTORS (Continued) **S105973177**

drinking water are not expected because public water serves the area.

Description: MarCon Erectors occupies a parcel of property approximately 1.3 acres in size in a mixed residential, commercial, industrial area. The site is a triangular shaped parcel of land with a multi-storied brick, frame and block building and a concrete containment area that has two, horizontal, 10,000 gallon, above ground storage tanks (AST) in saddles and one 25,000 gallon AST which has been cut down to about 18 inches in height. Recent operations of this facility was the re-manufacture of windows. Past uses of the facility included fuel blending operations by a company affiliated with Ashland Petroleum Company (approx. 1915 - 1971) and occupation by a roofing company, B. Hoffman Roofers 1971 to 1980. The site had been abandoned when MarCon purchased the property. The cut down tank contains sludge contaminated with VOCs and PCBs. The sludge in the cut off tank was covered with a polyethylene tarp. Sampling of this sludge revealed PCB contamination as high as 16,000 ppm. Sampling of the oil/water in the sludge within the cut off tank revealed PCB contamination as high as 122 ppm. There is evidence that the concrete containment structure has been compromised with indications of contamination on the floor and walls of thestructure. Sampling directly outside of the cracks in the structure revealed PCB contamination as high as 5.8 ppm. There is no information on soils beneath the containment area. Additionally there is no information on the groundwater downgradient of the site. Improper removal practices during a sludge removal effort in 1997 has resulted in a RCRA enforcement action against the owner and contractor.

Record Added Date: Not reported

Record Updated Date: Not reported

Env Assessment: The exposed material within the cut-down 25,000 gallon AST has the potential to fill with precipitation and overflow into a compromised concrete containment area. Directly to the south of the site is a heavily used recreation pathway. 625 feet tothe west is a play ground and an elementary school. Residential areas are directly to the north of the site. The potential for continued environmental degradation and human contact remains present as long as the site remains unremediated.

BENDERSON INTERESTED IN PURCHASING PROPERTY AND PERFORMED PHASE I & II AND FOUND SOIL CONTAMINATION. HE WILL FORWARD COPY OF PHASE II REPORT - DEC WILL RESPOND. EDWARD ILLARDO NAMED TRUSTEE IN BANKRUPCY. 04/28/97: RECEIVED COPY OF PHASE II REPORT FROM MR RUPPAR. 08/11/97: MJS REVIEW FILE. MJS TELECON TO PETER RUPPAR. HE STATED THAT AGREEMENT MADE BETWEEN BUYER(BENDERSON) AND SELLER(KITTENGER) THAT BUYER WILL TAKE RESPONSIBILITY FOR CLEANUP UPON PURCHASE ON 10/1/97. ATTORNEY FOR BENDERSON IS CRAIG SLATER(HARTER,SECREST & EMERY). 853-1616. MJS TELECON TO MR SLATER AND DISCUSSED SITE. 08/13/97: LETTER TO EDWIN ILARDO,ESQ.(TRUSTEE IN BANKRUPTCY FOR KITTENGER) STATING CLEANUP REQUIRED AND ASKED FOR RESPONSE INDICATING STATUS OF PROPERTY TRANSFER AND INTENTIONS REGARDING CLEANUP. 09/04/97: RECEIVED LETTER FROM MR ILARDO. TENTATIVE 0CT 1 CLOSING DATE. PURCHASED PRICE DECREASED TO COVER ENVIRONMENTAL CONCERNS TO BE ADDRESSED AFTER BENDERSON TAKES POSSESSION. 04/20/98: MJS REVIEW FILE. LEFT MESSAGE FOR CRAIG SLATER TO CALL REGARDING STATUS OF PROPERTY, OWNERSHIP AND CLEANUP. 07/08/98: RECEIVED LETTER FROM ANGELA DEMERLE(ATTY) STATING THAT THEY WILL HAVE WORK PLAN DRAFTED SOON AND WILL FORWARD COPY FOR REVIEW. 06/29/99: MJS REVIEW FILE. NEVER RECEIVED WORK PLAN. MJS TELECON TO ANGELA DEMERLE. SHE STATED THAT LARRY FINEBERG IS HANDLING THIS CASE AND SHE WILL NOTIFY HIM OF MY CALL. 08/18/99: RECEIVED COPY OF INVESTIGATION PROPOSAL FROM CRAIG SLATER(PREPARED BY BARRON & ASSOCIATES). 09/17/99: MJS DRAFTED LETTER TO RP APPROVING SUPPLEMENTAL PHASE II INVESTIGATION PROPOSAL. 03/29/00: MJS SITE MEETING WITH BILL HEITZENRATER(AFI). 03/30/00: RECEIVED SAMPLE RESULTS FOR WATER IN BASEMENT. ALL RESULTS NON-DETECT EXCEPT FOR TETRACHLOROETHENE AT 2.57 PPB. MJS CONTACTED R HEITZENRATER AND GAVE

KITTINGER CO (Continued) **1000413069**

VERBAL APPROVAL TO DISCHARGE. HE SPOKE WITH CRAIG SLATER AND MR SLATER WILL FORWARD REPORT GENERATED FOR SUPPLEMENTAL INVESTIGATION. 04/05/00: MJS TELECON FROM BILL HEITZENRATER. HE EXCAVATED THREE TEST PITS BY SILO AND FOUND NO TANKS, NO HITS ON PID METER. MJS TO INSPECT AREA TOMORROW A.M. 04/06/00: MJS SITE INSPECT. MET WITH MR HEITZENRATER. 04/11/00: 05/23/00: MJS TERLECON FROM CRAIG SLATER. THEY ARE STARTING EXCAVATION TODAT ON NORTH SIDE OF PROPERTY 06/19/00: MJS SITE INSPECT. MET WITH ALVIN FROM AFI. THEY ARE BACKFILLING EXCAVATION IN LIFTS AND STARTING TO EXCAVATE FURTHER FOR NORTHWEST CORNER OF NEW BUILDING(M&T BANK). THEY ARE CONTINUING TO CARBON FILTER ALL WATER COLLECTED IN BAKER TANKS. 06/20/00: MJS TELECON WITH MR HEITZENRATER. FINAL EXCAVATION CONFIRMATORY SAMPLES ARE IN: ALL PARAMETERS ON ALL SAMPLES ARE EITHER NON-DETECT OR VERY LOW-LEVEL - EXCEPT NORTH WALL BY BUILDING HAS SAME ISSUES AS BEFORE, BORINGS INSIDE BUILDING ARE PROBABLE. 7/17/02:SAC TELECON CRAIG SLATER, SAC NEVER RECEIVED A FINAL REPORT FOR THE WORK THAT WAS DONE, MR. SLATER WILL LOOK INTO THE MATTER AND SEND IN THE REPORT. 7/22/02:SAC RECEIVED PHONE MESSAGE FROM ANGELA DEMERLE - HARTER SECREST & EMERY, SHE IS ASSISTING CRAIG SLATER REGARDING THE SITE, MS. DEMERLE SPOKE TO MIKE DEPRIEST OF BENDERSON DEVELOPMENT AND THAT THERE WAS NO CO-MINGLING OF THE CONTAMINATED SOIL FROM THE KITTENGER SITE WITH SOIL FROM OTHER BENDERSON SITES, SHE IS ALSO GOING TO REVIEW THEIR FILE SO THAT THEY CAN PROVIDE A COPY OF THE FINAL REPORT TO DEC. 7/23/02:SAC SPOKE TO CRAIG SLATER, MR. SLATER SAID THEY REVIEWED THEIR FILE AND FOUND THEY NEVER RECEIVED A FINAL REPORT FOR THE SITE WORK THAT WAS DONE, THEY HAVE CONTACTED THEIR CONTRACTOR TO REQUEST ONE BE COMPLETED, THEY WILL SEND A COPY TO DEC ONCE IT HAS BEEN FINALIZED. 8/6/02:SAC TELECON CRAIG SLATER, DUE TO A FINANCIAL SQUABBLE WITH AFI MR. SLATER MAY NOT BE ABLE TO GET A REPORT FROM AFI AND MAY HAVE TO HAVE BARRON & ASSOCIATES WRITE THE REPORT, ALSO, ONLY ONE TREATMENT WAS PERFORMED ON THE 10,000 TONS OF SOIL BUT NO QUARTERLY SAMPLING WAS COMPLETED, MR. SLATER PROPOSES TO DO ADDITIONAL SAMPLING FOR STARS PARAMETERS AND THE SOIL WOULD BE LEFT ON-SITE, THEY WOULD NEED TO DO A LARGE NUMBER OF SAMPLES BASED ON THE STARS GUIDANCE, MR. SLATER WILL FOLLOW UP WITH SAC IN A FEW WEEKS. 8/22/02:RECEIVED COVER LETTER FROM CRAIG SLATER ALONG WITH SAMPLING WORKPLAN FROM BARRON & ASSOCIATES. 9/6/02:REVIEWED SAMPLING PLAN AND CRAIG SLATER COVER LETTER, BARRON & ASSOCIATES WILL SUBMIT A CLOSURE REPORT FOR THE ENTIRE SITE BASED ON WORK DONE BY AFI, BARRON & ASSOCIATES PROPOSED 20 SAMPLES BE TAKEN FOR 6,000 cuyds OF SOIL, STARS GUIDANCE RECOMMENDS 42 GRAB SAMPLES, SAC TELECON CRAIG SLATER TO DISCUSS NUMBER OF SAMPLES, SINCE STARS DOCUMENT RECOMMENDS THIS MANY SAMPLES, SAC REQUIRES 40 GRAB SAMPLES FOR THE PILE, MR. SLATER WAS AGREEABLE TO THIS MANY SAMPLES, SAC DRAFTED LETTER DOCUMENTING THAT 40 SAMPLES ARE REQUIRED TO BE TAKEN FROM THE SOIL PILE, ALSO ADDED THAT A TEST PIT LOG BE KEPT DURING THE SAMPLING AND SUBMITTED WITH THE REPORT. 9/10/02:SAC TELECON RICK CROUCH, MR. CROUCH ANTICIPATES BEING AT THE SITE ON 9/17 TO DO THE TEST PITTING BUT WILL CONTACT SAC ONCE THE SCHEDULE BECOMES FINAL. 9/25/02:RECEIVED PHONE MESSAGE YESTERDAY AND TODAY THAT TESTPITTING IS TO TAKE PLACE TODAY. 9/25/02:SAC INSPECT SITE, MET W/RICK CROUCH - TEST PITTING WAS JUST BEING COMPLETED AT THE TIME OF INSPECTION, MR. CROUCH SAID THAT NO ODORS OR STAINING WERE OBSERVED IN ANY OF THE TEST PITS, AND THAT PID METER WAS NOT REGISTERING ANY READINGS ABOVE BACKGROUND, SAC OBSERVED A COUPLE OF THE OPEN TEST PITS, NO ODORS OR STAINING OBSERVED WHILE STANDING NEXT TO THE EXCAVATIONS, MR. CROUCH HAS THE 40 SAMPLES AND WILL BE SUBMITTING THEM TO WASTE STREAM TECHNOLOGY. 10/17/02:RECEIVED

KITTINGER CO (Continued) **1000413069**

SAMPLE RESULTS FOR BIOCELL FROM RICK CROUCH . 10/23/02:RECEIVED AND REVIEWED REPORT FROM BARRON & ASSOCIATES REGARDING BIOCELL SAMPLING, COVER LETTER FROM ANGELA DEMERLE, THE RESULTS ARE BELOW TAGM 4046 AND STARS MEMO #1 GUIDANCE VALUES, ALSO SAMPLES WERE SCREENED WITH PID METER AND THE READINGS WERE 0 ppm, NO SAMPLES HAD STAINING OR ODORS, SOIL IS GOING TO BE USED ON-SITE, SAC TELECON RICK CROUCH NOTIFYING HIM BASED ON REPORT SOIL CAN BE SPREAD ON SITE. 3/6/03:SAC SPOKE TO CRAIG SLATER, HE IS FOLLOWING UP WITH RICK CROUCH REGARDING STATUS OF REPORT. 3/11/03:SAC RECEIVED PHONE MESSAGE FROM RICK CROUCH, HE WILL BE SUBMITTING REPORT BY THE END OF THIS WEEK OR THE BEGINNING OF NEXT WEEK. 5/5/03:RECEIVED REPORT FROM RICK CROUCH. 7/?/03:SAC MET W/DKK REGARDING REPORT, DISCUSSED ADDITIONAL WORK REQUIRED. 8/12/03:SAC MET W/MIKE DEPRIEST - BENDERSON, CRAIG SLATER, & RICK CROUCH, DISCUSSED ADDITONAL WORK REQUIRED, TEST PITS WILL BE DUG IN THE HYDRAULIC OIL TANK AREA TO 6 FT. AND THE PAINT SHOP ROOM TO 8 FT., THEY WILL BE FIELD SCREENED, DESCRIBED AND ANALYZED FOR STARS SEMI-VOLATILES, FOR THE GASOLINE TANK AREA MR. SLATER WILL TRY TO GET THE SAMPLE RESULTS, IF THE RESULTS CANNOT BE RETRIEVED THEN ADDITIONAL SAMPLING WILL BE REQUIRED. 10/3/03:RECEIVED WORKPLAN FOR THE ADDITIONAL WORK. 11/24/03:DRAFTED COMMENT LETTER ON WORKPLAN. 1/6/04:SAC MET W/MIKE DEPRIEST, IVAN LOZINA - BENDERSON, CRAIG SLATER, & RICK CROUCH, AREAS WERE STAKED OUT AND SAMPLE AREAS DISCUSSED, MR. CROUCH WILL SUBMIT WORKPLAN FOR THE SITE. 1/14/04:SAC TELECON MIKE DEPRIEST, MR. DEPRIEST REQUESTED WORK BE DELAYED UNTIL BETTER WEATHER, SAC WAS AGREEABLE TO THIS REQUEST. 5/6/04:SAC TELECON RICK CROUCH, GEOPROBES TO BE INSTALLED 5/10. 5/10/04:RECEIVED PHONE MESSAGE FROM RICK CROUCH, PART OF THE AREA TO BE GEOPROBE IS INACCESSIBLE DUE TO PUDDLED WATER FROM RAIN, WORK COULD TAKE PLACE LATER THIS WEEK OR BEGINNING OF NEXT WEEK. 5/27/04:SAC TELECON RICK CROUCH, MR. CROUCH INSPECTED AREA AND DUE TO RAINY WEATHER IT IS STILL UNDER WATER, HE WILL CONTINUE TO MONITOR TO SEE WHEN IT WILL DRY OUT. 8/2/04:RECEIVED PHONE MESSAGE FROM RICK CROUCH. MR. CROUCH ANTICIPATES DOING WORK LATER THIS WEEK. 8/17/04:SAC INSPECT SITE AND MET W/RICK CROUCH. MR. CROUCH HAS INSTALLED GEOPROBES IN THE AREA WHERE THE GASOLINE CONTAMINATED WAS EXCEPT FOR ONE NEAR BANK DRIVE THRU TELLER. DUE TO COMPACTION OF FILL MATERIAL THEY CANNOT BORE THROUGH VERY DEEP TO INSTALL GEOPROBES FOR CONFIRMATOY BOTTOM SAMPLES. MR. CROUCH WILL CONTACT CRAIG SLATER TO REQUEST A DRILL RIG BE BROUGHT TO THE SITE TO INSTALL THE TWO BORINGS FOR THE BOTTOM SAMPLES. MR. CROUCH WILL INSTALL THE GEOPROBES FOR THE TWO OTHER AREAS TOMORROW. PER MR. CROUCH, NO PID METER READINGS HAVE BEEN OBSERVED IN THE GEOPROBES THAT HAVE BEEN INSTALLED. 8/18/04:SAC INSPECT SITE. MET W/RICK CROUCH. MR. CROUCH INSTALLED A GEOPROBE POINT NEAR THE DRIVE THRU TELLER AREA. PER MR. CROUCH CLAY WAS OBSERVED IN THIS BORING. HE HIT REFUSAL IN THE PAINT ROOM AREA AND WILL INSTALL THE BORINGS WITH THE DRILL RIG. TWO BORINGS WERE INSTALLED AROUND THE HYDRAULIC OIL TANK. BLACK ASH WAS OBSERVED IN BOTH BORINGS. INSTALLING THE SOUTHERN BORING WAS DIFFICULT DUE TO REFUSAL FOR SEVERAL OF THE LOCATIONS ATTEMPTED. THEY EVENTUALLY WERE SUCCESSFUL FOR THE LOCATION NEAREST THE ESTIMATED LOCATION OF THE AREA. MR. CROUCH ANTICIPATES BEING OUT AT THE SITE WITH A DRILL RIG IN A COUPLE OF WEEKS. 9/24/04:SAC TELECON RICK CROUCH. MR. CROUCH ANTICIPATES HE WILL BE ON-SITE THE END OF NEXT WEEK TO COMPLETE THE BORINGS. 10/6/04:SAC inspect site and met w/Rick Crouch. Mr. Crouch is on site and has installed the 2 borings in the parking lot. Per Mr. Crouch no PID meter readings were above background and no observations of contamination. His boring extended down to the clay layer. Mr. Crouch will install the next

KITTINGER CO (Continued) **1000413069**

boring at the corner of the building on the adjacent property. 10/7/04:SAC inspect site and met w/Rick Crouch and Mike DePriest. Per Mr. DePriest boring at the corner of property was extended to 20 ft with no PID readings above background and no observations of contaminated soil. Mr. Crouch was in the process of installing borings around the location where the Paint House was. He was hitting refusal. He was able to get to 10 ft. on the one boring and to 8 ft for the other. Fill material was observed in the top depths with clay being observed near the 8 to 10 foot depth. No PID meter readings above background and no observations of contamination. 3/14/05:SAC telecon Rick Crouch. He is nearly finished with the report. He will send it to Benderson this week and based on comments will send it along next week. 3/21/05:Received phone message from Rick Crouch. The drawings for report have not been completed. They should be done by this week. He will send them to Mike DePriest and Craig Slater once they are done for their approval. 4/8/05:Received phone message from Rick Crouch. He sent draft report to Mike DePriest & Craig Slater earlier this week. He has not received any feedback from them yet. 4/15/05:SAC telecon Rick Crouch. Mr. Crouch received comments back and has finalized report. He will send it out next week. 4/18/05:Received report from Barron & Associates. 9/23/05:SAC REVIEW REPORT WITH DKK. DKK MEMO - SAMPLE RESULTS IN THE AREA OF THE GASOLINE TANK WERE BELOW STARS GUIDANCE VALUES. THE HYDRAULIC LIFT AREA EXCEEDED TAGM 4046 GUIDANCE VALUES FOR SEMI-VOLATILES BUT NO FURTHER WORK IS REQUIRED IN THIS AREA. PAINT STORAGE AREA HAD ELEVATED LEVELS OF SVOCs HOWEVER, NO FREE PRODUCT, STAINING, ODORS, AND ELEVATED PID METER READINGS, WAS OBSERVED WHICH INDICATES THE PRESENCE OF NON-NATIVE FILL. TCLP DATA INDICATED LACK OF POTENTIAL FOR MIGRATION. THEREFORE, I STATUS IS RECOMMENDED. 9/26/05: I LETTER DRAFTED."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

27 AND 37 CHANDLER STREET **N/A**
BUFFALO, NY 14207

Relative: Lower

Actual: 599 ft.

BROWNFIELDS:

Name:	CHANDLER INCUBATOR
Address:	27 AND 37 CHANDLER STREET
City,State,Zip:	BUFFALO, NY 14207
Program:	BCP
Site Code:	572576
Acres:	1.159
HW Code:	C915336
SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	07/11/2018
Record Updated Date:	12/24/2019
Update By:	KALEWAND
Site Description:	Location: The site is addressed as 27 and 37 Chandler Street in the City of Buffalo, Erie County, New York and consists of two parcels totaling approximately 1.159 acres of land. The site is bound to the north by Chandler Street, to the south by Grote Street, to the west

CHANDLER INCUBATOR (Continued) **S123159085**

by residential structures, and to the east by a manufacturing facility. The property is located within an urban area utilized for industrial, commercial, and residential purposes. Site Features: The building located at 27 Chandler Street is three-stories and 20,500 square feet of space, while 37 Chandler Street is a two-story 12,350 square foot structure. The parcels extend to Grote Street. Current Zoning and Land Use: The 27 Chandler Street property is currently vacant and inactive and was most recently used for warehousing, storage, as well as used furniture sales until 2017. 37 Chandler Street is also currently vacant and inactive and was most recently utilized as The Kennel Club for dog training, grooming, and boarding until 2017. 27 and 37 Chandler Street are currently zoned N-1S Secondary Employment Center which addressed mixed-use employment centers. Past Uses of the Site: 27 Chandler Street: Constructed in 1902 by Charles Berricks & Sons a brick manufacturing company and by 1916 the property was inhabited by the Jewett Refrigerator Co. Buffalo Davenport, a furniture manufacturing facility that occupied the property until 1960. Since that time, various companies occupied the building including Temp-Trol Windows, Inc., Gotta Rest Mattress Co. Inc. (manufacturer), Masters Pattern Co. (industrial patterns), Warren Refining & Chemical Co. (manufacturer), Byam CP Co. (paper milk container manufacturers), Acme Steel (warehouse), Atlas Steel Casting Co. (warehouse), Cople Refrigeration & Heating (service repair), Liable Colling & Heating, Inc. as well as other commercial occupants including a law office, leather merchandise sales, janitorial supplies sales, and office supply sales. Most recently, the building was used for warehousing and storage, as well as used furniture sales until 2017. 37 Chandler Street: Constructed in 1902 by the Double Truss Cornice Brake Company. The site was vacant by 1930 and remained vacant until 1935 when Viner & Sons (organ builders) occupied the building, remaining at the site until the early 1940s. Acme Steel and Malleable Iron Works and Buffalo Brake Beam Co. (railroad equipment manufacturing) occupied the property from the mid-1940s into the 1980s. The property was vacant for a few years then occupied by Corr Distributors in the mid-1980s until the mid-2000s. Commercial occupants since that time included Horsefeathers Architectural Antiques and Kennel Club (dog training, grooming, and boarding). The site has been vacant since 2017. Site Geology and Hydrogeology: The soil borings completed at the site indicate approximately 3.5 to 5 feet of granular and cohesive fill material is present throughout the site. Clay and silt were encountered below the fill material and extends to at least 20 feet below ground surface. Shallow regional groundwater is expected to flow in a southwesterly direction toward Shaquana Creek located approximately 0.48 miles south and toward the Niagara River located approximately one mile west of the site.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals (arsenic, cadmium, copper, lead, mercury, nickel, and zinc) and polycyclic aromatic hydrocarbons (PAHs). Remedial actions have successfully achieved soil cleanup objectives for unrestricted residential use. The excavations were backfilled with acceptable clean materials.

Health Problem: Remedial actions taken have eliminated the potential for contact with site related contaminants.

Site Description: This site is the former location of the Atlas Steel Castings facility. During its years of operation, typical casting production processes consisted of specialty castings of carbon and low alloy steel, with products ranging in size from one pound to seven tons. Portions of the site were reportedly used for storage and/or disposal

HARTWELL STREET LANDFILL (Continued) **S108146359**

	of production-related wastes and construction and demolition debris. In 1986 the Atlas Steel Company filed for bankruptcy and abandoned the facility, vaca ting all buildings and leaving behind numerous drums, wood patterns, transformers and other debris. In 1989 the property was purchased by Robe rt Pasquarella and Daniel Mele for back taxes from the City of Buffalo. Since the purchase, many of the onsite buildings/structures have been razed and reportedly all of the onsite debris (drums, transformers, pallets, etc.) has been removed. Investigations conducted at this site include Erie County DEP field inspections in 1979 and 1981, an EPA Site Investigation in 1986, an NYSDEC Phase I Investigation in 1986 and an NYSDEC Phase II Investigation which was completed in February, 1992. None of the inspections and investigations conducted at this site could document the disposal of hazardous waste.
Env Problem:	There are no environmental problems associated with the disposal of hazardous waste at this site.

Site Description: The Outokumpu American Brass (OAB) (formerly Anaconda Brass) site is a 71 acre industrial complex located along west side of Military Road about 1/4 mile north of Hertel Avenue. The site contains several large industrial buildings for metals processing which are surrounded by parking facilities, access roadways, plant equipment, staged materials, and several large open areas that include publicly used recerational fields. The site also has several railroad sidings. The current plant has been in continuous operation since 1907 producing copper and copper alloys. Metal processes used at this site include metal casting, hot and cold rolling, annealing, slitting, milling, pickling and finishing. The site is situated in an industrial corridor in a highly developed commercial/residential/industrial area in City of Buffalo, Erie Co. The western and northern areas are bounded by active rail lines and industrial areas. The southern property boundary along Sayre Ave. is bordered by urban residential housing. The Military Road corridor is bounded by a mix of urban residential, commercial and a public school. An area at the north end of the complex was used for disposal of process wastes including coal ash, nickel and copper bearing slag, baghouse dust, spent refractories, scrap wood, saw dust and metal oxides. A 1979 NYS Hazardous Waste Survey Report completed by OAB indicated wastes

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

generated by the facility included spent oils and previously mentioned process wastes. The survey report indicated that approximately 27,000 tons of metal slag and 21,600 tons of coal ash were disposed in the fill area at the north end of the site from 1930 to 1970. As a result, the NYSDEC placed the site on the Registry and initially identified the site as a Class 2A site, a temporary classification assigned to sites that have inadequate and/or insufficient data on health threats from the on-site wastes. In 1982, the NYSDEC, in conjunction with the US Geologic Survey conducted a limited site investigation confirming metals contamination at the site. In 1986 the NYSDEC conducted a Phase I assessment and hazard ranking of the north area fill area. In 1988 the site owner initiated a Preliminary Site Investigation (PSI) of the plant complex and found elevated levels of PCBs, cadmium, lead and arsenic in the soil at various investigation areas (A thru N) around the plant complex. In 1990, as part of a real estate transaction, OAB initiated a Remedial Investigation (RI) to characterize contaminated areas identified in the PSI and verify the absence of contamination in other areas. The investigation revealed that the waste at the north end of the site did not pose a significant threat to human health or the environment. As a result, the NYSDEC reclassified the disposal area in 1994 from a Class 2A site to a Class 3 site (the site does not pose a significant threat). In 1995, a Supplemental RI was conducted. An additional area (Area O) was investigated during the Supplemental RI. The results of the RI and Supplemental RI were used to assess human health impacts from the contaminants on the site (Human Health Risk Assessment - 1995) and evaluate remediation measures (Feasibility Study (FS)-1996). In 1999, OAB initiated additional sampling of soils near adjacent baseball fields (Area J) and Area O for arsenic. The results identified a small area with arsenic at levels above background in Area J. In 1999, OAB submitted a Remedial Action Work Plan (RAWP) for Areas A (7.16 acres), C (0.71 acres), D (1.06 acres), and M (1.11 acres). The RAWP specified covering the respective areas with an asphalt cover system and improving site security measures to minimize human and environmental exposure risks. The remedial action work was completed by 2002. The asphalt covered areas are currently used as parking areas. In addition to the above, a portion of Area C where PCBs were detected in several soil samples at concentrations greater than 1 mg/kg were removed and managed accordingly at an offsite facility. In 2004, OAB entered into a Voluntary Cleanup Program (VCP) agreement with the NYSDEC (VCP Site No. V00314), to address the arsenic contamination found in Area J (7.78 acres) adjacent to plant-owned baseball fields, and implementing overall site management and institutional controls to maintain the integrity and security of the remediated areas (Areas A, C, D and M). A remediation work plan for Area J was submitted in 2004 which included covering a 0.93 acre section of Area J with a vegetated soil cover layer and enclosing the area with security fencing. The institutional controls for the site included filing a deed restriction to restrict future use of the site and conduct periodic inspections. Area J remedial work was completed in December 2005. Following the completion of the specified remediation measures, a Remedial Action Report (RAR) documenting the remediation work at the designated areas subject to the VCP agreement was submitted for Department review. The RAR also included site management controls presented in an Operation, Maintenance and Operation (OMM) Plan and Soil Management Plan (SMP). Compliance with OMM requirements will be certified on a bi-annual basis. The

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

recording of deed restrictions for the remediated areas were filed with the Erie County Clerk in 2007. The RAR was approved in 2007. Upon meeting all obligations of the VCP agreement, The Department issued a release and covenant not to sue in 2007.

Env Problem: Localized surface soils were contaminated with cadmium, lead and arsenic. Perched groundwater is contaminated with lead as well. The perched water table and the secondary water table are separated by a 30 ft. clay layer, and do not appear to be hydraulically connected. As part of the Voluntary Cleanup Program Agreement, an asphalt cover over areas containing lead and cadmium eliminated surface water run-off of contaminants and direct contact concerns. A vegetated soil cover over arsenic contaminated soils eliminated dust potential and direct contact concerns. PCB impacted soils in a discrete area were removed from site and managed accordingly. The site does not currently pose a significant threat to the environment. A DEC approved Operation, Maintenance and Monitoring Plan and a Soil Management Plan specify routine operation, maintenance and monitoring measures for engineering controls at the site and management of soils during invasive activities in the defined remediation areas. A recorded deed restriction limits use and development of the site.

Health Problem: The site is located in a mixed industrial/residential area in the City of Buffalo. Exposures to contaminated groundwater via drinking water are not expected because the area is served with public water and there are no known private wells to exist nearby. The site is graded and partially covered with coal ash material and cinders. There are baseball fields that are used by a community recreation association on a portion of the site. Surface soils in the ball-field area contain metals at levels generally representative of background conditions. Elevated levels of metals were found in on-site subsurface soils during test pit and soil boring investigations. To prevent potential human exposures to buried contaminants, subsurface soils should not be disturbed.

Site Description: The Outokumpu American Brass (OAB) (formerly Anaconda Brass) site is a 71 acre industrial complex located along west side of Military Road about 1/4 mile north of Hertel Avenue. The site contains several large industrial buildings for metals processing which are surrounded by parking facilities, access roadways, plant equipment, staged materials, and several large open areas that include publicly used recerational fields. The site also has several railroad sidings. The current plant has been in continuous operation since 1907 producing copper and copper alloys. Metal processes used at this site include metal casting, hot and cold rolling, annealing, slitting, milling, pickling and finishing. The site is situated in an industrial corridor in a highly developed commercial/residential/industrial area in City of Buffalo, Erie Co. The western and northern areas are bounded by active rail lines and industrial areas. The southern property boundary along Sayre Ave. is bordered by urban residential housing. The Military Road corridor is bounded by a mix of urban residential, commercial and a public school. An area at the north end of the complex was used for disposal of process wastes including coal ash, nickel and copper bearing slag, baghouse dust, spent refractories, scrap wood, saw dust and metal oxides. A 1979 NYS Hazardous Waste Survey Report completed by OAB indicated wastes

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

generated by the facility included spent oils and previously mentioned process wastes. The survey report indicated that approximately 27,000 tons of metal slag and 21,600 tons of coal ash were disposed in the fill area at the north end of the site from 1930 to 1970. As a result, the NYSDEC placed the site on the Registry and initially identified the site as a Class 2A site, a temporary classification assigned to sites that have inadequate and/or insufficient data on health threats from the on-site wastes. In 1982, the NYSDEC, in conjunction with the US Geologic Survey conducted a limited site investigation confirming metals contamination at the site. In 1986 the NYSDEC conducted a Phase I assessment and hazard ranking of the north area fill area. In 1988 the site owner initiated a Preliminary Site Investigation (PSI) of the plant complex and found elevated levels of PCBs, cadmium, lead and arsenic in the soil at various investigation areas (A thru N) around the plant complex. In 1990, as part of a real estate transaction, OAB initiated a Remedial Investigation (RI) to characterize contaminated areas identified in the PSI and verify the absence of contamination in other areas. The investigation revealed that the waste at the north end of the site did not pose a significant threat to human health or the environment. As a result, the NYSDEC reclassified the disposal area in 1994 from a Class 2A site to a Class 3 site (the site does not pose a significant threat). In 1995, a Supplemental RI was conducted. An additional area (Area O) was investigated during the Supplemental RI. The results of the RI and Supplemental RI were used to assess human health impacts from the contaminants on the site (Human Health Risk Assessment - 1995) and evaluate remediation measures (Feasibility Study (FS)-1996). In 1999, OAB initiated additional sampling of soils near adjacent baseball fields (Area J) and Area O for arsenic. The results identified a small area with arsenic at levels above background in Area J. In 1999, OAB submitted a Remedial Action Work Plan (RAWP) for Areas A (7.16 acres), C (0.71 acres), D (1.06 acres), and M (1.11 acres). The RAWP specified covering the respective areas with an asphalt cover system and improving site security measures to minimize human and environmental exposure risks. The remedial action work was completed by 2002. The asphalt covered areas are currently used as parking areas. In addition to the above, a portion of Area C where PCBs were detected in several soil samples at concentrations greater than 1 mg/kg were removed and managed accordingly at an offsite facility. In 2004, OAB entered into a Voluntary Cleanup Program (VCP) agreement with the NYSDEC (VCP Site No. V00314), to address the arsenic contamination found in Area J (7.78 acres) adjacent to plant-owned baseball fields, and implementing overall site management and institutional controls to maintain the integrity and security of the remediated areas (Areas A, C, D and M). A remediation work plan for Area J was submitted in 2004 which included covering a 0.93 acre section of Area J with a vegetated soil cover layer and enclosing the area with security fencing. The institutional controls for the site included filing a deed restriction to restrict future use of the site and conduct periodic inspections. Area J remedial work was completed in December 2005. Following the completion of the specified remediation measures, a Remedial Action Report (RAR) documenting the remediation work at the designated areas subject to the VCP agreement was submitted for Department review. The RAR also included site management controls presented in an Operation, Maintenance and Operation (OMM) Plan and Soil Management Plan (SMP). Compliance with OMM requirements will be certified on a bi-annual basis. The

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

	recording of deed restrictions for the remediated areas were filed with the Erie County Clerk in 2007. The RAR was approved in 2007. Upon meeting all obligations of the VCP agreement, The Department issued a release and covenant not to sue in 2007.
Env Problem:	Localized surface soils were contaminated with cadmium, lead and arsenic. Perched groundwater is contaminated with lead as well. The perched water table and the secondary water table are separated by a 30 ft. clay layer, and do not appear to be hydraulically connected. As part of the Voluntary Cleanup Program Agreement, an asphalt cover over areas containing lead and cadmium eliminated surface water run-off of contaminants and direct contact concerns. A vegetated soil cover over arsenic contaminated soils eliminated dust potential and direct contact concerns. PCB impacted soils in a discrete area were removed from site and managed accordingly. The site does not currently pose a significant threat to the environment. Site Description: The Outokumpu American Brass (OAB) (formerly Anaconda Brass) site is a 71 acre industrial complex located along west side of Military Road about 1/4 mile north of Hertel Avenue. The site contains several large industrial buildings for metals processing which are surrounded by parking facilities, access roadways, plant equipment, staged materials, and several large open areas that include publicly used recerational fields. The site also has several railroad sidings. The current plant has been in continuous operation since 1907 producing copper and copper alloys. Metal processes used at this site include metal casting, hot and cold rolling, annealing, slitting, milling, pickling and finishing. The site is situated in an industrial corridor in a highly developed commercial/residential/industrial area in City of Buffalo, Erie Co. The western and northern areas are bounded by active rail lines and industrial areas. The southern property boundary along Sayre Ave. is bordered by urban residential housing. The Military Road corridor is bounded by a mix of urban residential, commercial and a public school. An area at the north end of the complex was used for disposal of process wastes including coal ash, nickel and copper bearing slag, baghouse dust, spent refractories, scrap wood, saw dust and metal oxides. A 1979 NYS

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

Hazardous Waste Survey Report completed by OAB indicated wastes generated by the facility included spent oils and previously mentioned process wastes. The survey report indicated that approximately 27,000 tons of metal slag and 21,600 tons of coal ash were disposed in the fill area at the north end of the site from 1930 to 1970. As a result, the NYSDEC placed the site on the Registry and initially identified the site as a Class 2A site, a temporary classification assigned to sites that have inadequate and/or insufficient data on health threats from the on-site wastes. In 1982, the NYSDEC, in conjunction with the US Geologic Survey conducted a limited site investigation confirming metals contamination at the site. In 1986 the NYSDEC conducted a Phase I assessment and hazard ranking of the north area fill area. In 1988 the site owner initiated a Preliminary Site Investigation (PSI) of the plant complex and found elevated levels of PCBs, cadmium, lead and arsenic in the soil at various investigation areas (A thru N) around the plant complex. In 1990, as part of a real estate transaction, OAB initiated a Remedial Investigation (RI) to characterize contaminated areas identified in the PSI and verify the absence of contamination in other areas. The investigation revealed that the waste at the north end of the site did not pose a significant threat to human health or the environment. As a result, the NYSDEC reclassified the disposal area in 1994 from a Class 2A site to a Class 3 site (the site does not pose a significant threat). In 1995, a Supplemental RI was conducted. An additional area (Area O) was investigated during the Supplemental RI. The results of the RI and Supplemental RI were used to assess human health impacts from the contaminants on the site (Human Health Risk Assessment - 1995) and evaluate remediation measures (Feasibility Study (FS)-1996). In 1999, OAB initiated additional sampling of soils near adjacent baseball fields (Area J) and Area O for arsenic. The results identified a small area with arsenic at levels above background in Area J. In 1999, OAB submitted a Remedial Action Work Plan (RAWP) for Areas A (7.16 acres), C (0.71 acres), D (1.06 acres), and M (1.11 acres). The RAWP specified covering the respective areas with an asphalt cover system and improving site security measures to minimize human and environmental exposure risks. The remedial action work was completed by 2002. The asphalt covered areas are currently used as parking areas. In addition to the above, a portion of Area C where PCBs were detected in several soil samples at concentrations greater than 1 mg/kg were removed and managed accordingly at an offsite facility. In 2004, OAB entered into a Voluntary Cleanup Program (VCP) agreement with the NYSDEC (VCP Site No. V00314), to address the arsenic contamination found in Area J (7.78 acres) adjacent to plant-owned baseball fields, and implementing overall site management and institutional controls to maintain the integrity and security of the remediated areas (Areas A, C, D and M). A remediation work plan for Area J was submitted in 2004 which included covering a 0.93 acre section of Area J with a vegetated soil cover layer and enclosing the area with security fencing. The institutional controls for the site included filing a deed restriction to restrict future use of the site and conduct periodic inspections. Area J remedial work was completed in December 2005. Following the completion of the specified remediation measures, a Remedial Action Report (RAR) documenting the remediation work at the designated areas subject to the VCP agreement was submitted for Department review. The RAR also included site management controls presented in an Operation, Maintenance and Operation (OMM) Plan and Soil Management Plan (SMP). Compliance with

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

OMM requirements will be certified on a bi-annual basis. The recording of deed restrictions for the remediated areas were filed with the Erie County Clerk in 2007. The RAR was approved in 2007. Upon meeting all obligations of the VCP agreement, The Department issued a release and covenant not to sue in 2007.

Env Problem: Localized surface soils were contaminated with cadmium, lead and arsenic. Perched groundwater is contaminated with lead as well. The perched water table and the secondary water table are separated by a 30 ft. clay layer, and do not appear to be hydraulically connected. As part of the Voluntary Cleanup Program Agreement, an asphalt cover over areas containing lead and cadmium eliminated surface water run-off of contaminants and direct contact concerns. A vegetated soil cover over arsenic contaminated soils eliminated dust potential and direct contact concerns. PCB impacted soils in a discrete area were removed from site and managed accordingly. The site does not currently pose a significant threat to the environment. A DEC approved Operation, Maintenance and Monitoring Plan and a Soil Management Plan specify routine operation, maintenance and monitoring measures for engineering controls at the site and management of soils during invasive activities in the defined remediation areas. A recorded deed restriction limits use and development of the site.

Health Problem: The site is located in a mixed industrial/residential area in the City of Buffalo. Exposures to contaminated groundwater via drinking water are not expected because the area is served with public water and there are no known private wells to exist nearby. The site is graded and partially covered with coal ash material and cinders. There are baseball fields that are used by a community recreation association on a portion of the site. Surface soils in the ball-field area contain metals at levels generally representative of background conditions. Elevated levels of metals were found in on-site subsurface soils during test pit and soil boring investigations. To prevent potential human exposures to buried contaminants, subsurface soils should not be disturbed.

Site Code: 58443
Site Description: The Outokumpu American Brass (OAB) (formerly Anaconda Brass) site is a 71 acre industrial complex located along west side of Military Road about 1/4 mile north of Hertel Avenue. The site contains several large industrial buildings for metals processing which are surrounded by parking facilities, access roadways, plant equipment, staged materials, and several large open areas that include publicly used recerational fields. The site also has several railroad sidings. The current plant has been in continuous operation since 1907 producing copper and copper alloys. Metal processes used at this site include metal casting, hot and cold rolling, annealing, slitting, milling, pickling and finishing. The site is situated in an industrial corridor in a highly developed commercial/residential/industrial area in City of Buffalo, Erie Co. The western and northern areas are bounded by active rail lines and industrial areas. The southern property boundary along Sayre Ave. is bordered by urban residential housing. The Military Road corridor is bounded by a mix of urban residential, commercial and a public school. An area at the north end

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

of the complex was used for disposal of process wastes including coal ash, nickel and copper bearing slag, baghouse dust, spent refractories, scrap wood, saw dust and metal oxides. A 1979 NYS Hazardous Waste Survey Report completed by OAB indicated wastes generated by the facility included spent oils and previously mentioned process wastes. The survey report indicated that approximately 27,000 tons of metal slag and 21,600 tons of coal ash were disposed in the fill area at the north end of the site from 1930 to 1970. As a result, the NYSDEC placed the site on the Registry and initially identified the site as a Class 2A site, a temporary classification assigned to sites that have inadequate and/or insufficient data on health threats from the on-site wastes. In 1982, the NYSDEC, in conjunction with the US Geologic Survey conducted a limited site investigation confirming metals contamination at the site. In 1986 the NYSDEC conducted a Phase I assessment and hazard ranking of the north area fill area. In 1988 the site owner initiated a Preliminary Site Investigation (PSI) of the plant complex and found elevated levels of PCBs, cadmium, lead and arsenic in the soil at various investigation areas (A thru N) around the plant complex. In 1990, as part of a real estate transaction, OAB initiated a Remedial Investigation (RI) to characterize contaminated areas identified in the PSI and verify the absence of contamination in other areas. The investigation revealed that the waste at the north end of the site did not pose a significant threat to human health or the environment. As a result, the NYSDEC reclassified the disposal area in 1994 from a Class 2A site to a Class 3 site (the site does not pose a significant threat). In 1995, a Supplemental RI was conducted. An additional area (Area O) was investigated during the Supplemental RI. The results of the RI and Supplemental RI were used to assess human health impacts from the contaminants on the site (Human Health Risk Assessment - 1995) and evaluate remediation measures (Feasibility Study (FS)-1996). In 1999, OAB initiated additional sampling of soils near adjacent baseball fields (Area J) and Area O for arsenic. The results identified a small area with arsenic at levels above background in Area J. In 1999, OAB submitted a Remedial Action Work Plan (RAWP) for Areas A (7.16 acres), C (0.71 acres), D (1.06 acres), and M (1.11 acres). The RAWP specified covering the respective areas with an asphalt cover system and improving site security measures to minimize human and environmental exposure risks. The remedial action work was completed by 2002. The asphalt covered areas are currently used as parking areas. In addition to the above, a portion of Area C where PCBs were detected in several soil samples at concentrations greater than 1 mg/kg were removed and managed accordingly at an offsite facility. In 2004, OAB entered into a Voluntary Cleanup Program (VCP) agreement with the NYSDEC (VCP Site No. V00314), to address the arsenic contamination found in Area J (7.78 acres) adjacent to plant-owned baseball fields, and implementing overall site management and institutional controls to maintain the integrity and security of the remediated areas (Areas A, C, D and M). A remediation work plan for Area J was submitted in 2004 which included covering a 0.93 acre section of Area J with a vegetated soil cover layer and enclosing the area with security fencing. The institutional controls for the site included filing a deed restriction to restrict future use of the site and conduct periodic inspections. Area J remedial work was completed in December 2005. Following the completion of the specified remediation measures, a Remedial Action Report (RAR) documenting the remediation work at the designated areas subject to the VCP agreement

ANACONDA COMPANY/AMERICAN BRASS (Continued) **S109416416**

was submitted for Department review. The RAR also included site management controls presented in an Operation, Maintenance and Operation (OMM) Plan and Soil Management Plan (SMP). Compliance with OMM requirements will be certified on a bi-annual basis. The recording of deed restrictions for the remediated areas were filed with the Erie County Clerk in 2007. The RAR was approved in 2007. Upon meeting all obligations of the VCP agreement, The Department issued a release and covenant not to sue in 2007.

Env Problem: Localized surface soils were contaminated with cadmium, lead and arsenic. Perched groundwater is contaminated with lead as well. The perched water table and the secondary water table are separated by a 30 ft. clay layer, and do not appear to be hydraulically connected. As part of the Voluntary Cleanup Program Agreement, an asphalt cover over areas containing lead and cadmium eliminated surface water run-off of contaminants and direct contact concerns. A vegetated soil cover over arsenic contaminated soils eliminated dust potential and direct contact concerns. PCB impacted soils in a discrete area were removed from site and managed accordingly. The site does not currently pose a significant threat to the environment. A DEC approved Operation, Maintenance and Monitoring Plan and a Soil Management Plan specify routine operation, maintenance and monitoring measures for engineering controls at the site and management of soils during invasive activities in the defined remediation areas. A recorded deed restriction limits use and development of the site.

Health Problem: The site is located in a mixed industrial/residential area in the City of Buffalo. Exposures to contaminated groundwater via drinking water are not expected because the area is served with public water and there are no known private wells to exist nearby. The site is graded and partially covered with coal ash material and cinders. There are baseball fields that are used by a community recreation association on a portion of the site. Surface soils in the ball-field area contain metals at levels generally representative of background conditions. Elevated levels of metals were found in on-site subsurface soils during test pit and soil boring investigations. To prevent potential human exposures to buried contaminants, subsurface soils should not be disturbed.

Site Description: Site Location: This approximately 3.5-acre site is located at 373 Hertel Avenue near the intersection of Hertel Avenue and Military Road in a mixed residential and commercial area. The site is bordered by railroads to the south and west, residences across Hertel Avenue to the north, and a tire sales/maintenance shop to the east. Hertel Middle School is located approximately 450 feet east of the site. Site Features: The site consists of approx. 2,500 square feet warehouse building, parking lot and one entrance driveway. The surface of the site is primarily occupied by the concrete slab for the current and former warehouse buildings. The southern portion of

MORGAN MATERIALS (AKA HERTEL WAREHOUSE) (Continued) **S102403028**

the site has a paved access road to the loading docks in the rear of the warehouse. A majority of the site structures are in disrepair. The remainder of the site is undeveloped. Current Zoning and Land Use: The site is currently zoned for commercial use and is currently used as a commercial warehouse. Past Use of the Site: Since 1963, Morgan Materials, a broker of off-specification and discontinued chemicals, used the warehouse at this property to store chemicals for purpose of resale. In 1997, at the request of NYSDEC, EPA evaluated the site and removed approx. 20,000 drums from the warehouse. In July 2003, a fire destroyed much of the warehouse and cleanup activities removed all fire-related debris down to the floor slab on the main part of the warehouse. The site contamination appears to be due to spillage from the warehouse operations and fire. Site Geology and Hydrogeology: The overburden consists of sand and gravels fill from 10 to 24 feet below ground surface. Sand and gravel layer thickens towards southeast. This is underlain by red silty clay layer. Perched water table exists in sand and gravel materials. Groundwater flow is to the south and southeast.

Env Problem: Site Investigations: During 1999 investigation by Roy F. Weston for EPA, soil samples showed elevated levels of VOCs [16,000 ug/kg acetone at GP-17; 2,700 ug/kg trichloroethene (TCE) at GP-7; 1,400 ug/kg TCE at GP-10; 4,800 ug/kg tetrachloroethene (PCE) at GP-10; 31,000 ug/kg PCE at GP-12; 1,300 ug/kg tetrachloroethane at GP-7]. Soil samples also revealed the presence of wide spread contamination due to moderate levels of metals and PAHs. In 2000, Waste Resource Associates performed an investigation for Morgan Materials in the loading deck area. NYSDEC split soil sample showed 61 ppm PCE. A supplemental investigation by Malcolm Pirnie for Morgan Materials in 2001 also showed up to 88 ppm PCE in unsaturated fill . The investigation also showed 67 ppm VOCs {33 ppm- PCE, 5.8 ppm- TCE, 2.4 ppm - vinyl chloride, 26 ppm- acetone} in groundwater. Groundwater sampling by AFI for Morgan Materials in 2012 showed 22,200 ppb -cis DCE, 1,520 ppb - PCE, 1,220 ppb - TCE, and 4,450 ppb - vinyl chloride in MW-3. Site Characterization by AFI for Morgan Materials in 2013 included installation of two new on-site monitoring wells (MW-8, MW-9)and two off-site wells (MW-11, MW-12), excavation of 8 test pits, sampling of sewer bedding material at two locations, and collection of three on-site surface soil samples. Surface Soil: Manganese and some individual PAHs exceeded commercial SCOs (Mn-32,000 ppm, SCO -10,000 ppm; benzo(a)pyrene (3.3 ppm, SCO 1.0 ppm). Sub-Surface Soil: Several individual PAHs such as benzo(a)pyrene (23.0 ppm, SCO 1.0 ppm), benzo(a)anthracene (24.0 ppm, SCO-5.6 ppm), and benzo(b)fluoranthene (37.0 ppm, SCO-5.6 ppm) exceeded the commercial SCOs. Concentrations of total PAHs were below 500 ppm. Among the metals barium (454 ppm, SCO-400 ppm), copper (390 ppm, SCO-270 ppm), and manganese (32,000 ppm, SCO-10,000 ppm) exceeded commercial SCOs. The PCBs (3.4 ppm, SCO- 1.0 ppm) exceeded commercial SCOs at one location. Sewer bedding sample did not exceed commercial SCOs for VOCs. On-Site Groundwater: The highest levels of chlorinated VOCs were found in MW-7 [(1,1-dichloroethene - 46 ppb (GW Std-5ppb); cis-DCE 35,000 ppb (GW-Std.-5 ppb); PCE -4,900 ppb (GW Std.-5 ppb); TCE -1,600 ppb (GW Std.- 5 ppb); vinyl chloride 4,100 ppb (GW Std.-2 ppb)] and highest levels of PAHs were found in MW-6 [benzo(a)anthracene-4.2 ppb (GW Std.-0.002 ppb); benzo(b)fluoranthene 6.5 ppb (GW Std.- 0.002 ppb); benzo(k)fluoranthene 2.1 ppb (GW Std.-0.002 ppb); chrysene -4.5 ppb (GW Std. 0.002 ppb); indeno (1,2,3-cd)pyrene 2.7 ppb (GW Std. 0.002 ppb). Among the metals only

MORGAN MATERIALS (AKA HERTEL WAREHOUSE) (Continued) **S102403028**

iron and manganese exceeded the groundwater standards. Off-Site Groundwater: One of the downgradient monitoring wells (MW-11) in the junk yard property showed chlorinated VOCs (1,1-dichloroethene - 40 ppb, cis-DCE -13,000 ppb; PCE- 600 ppb; TCE- 980 ppb; vinyl chloride 340 ppb).

Health Problem: The site is not completely fenced and persons who enter the site could contact contaminants in the soil by walking on the soil, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the on-site building. The potential exists for migration of site-related contaminants to impact indoor air of off-site buildings.

City,State,Zip:	BUFFALO, NY 14207
Program:	BCP
Site Code:	514262
Acres:	3.51
HW Code:	C915210
SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	09/28/2015
Record Updated Date:	02/17/2016
Update By:	BXANDERS
Site Description:	Site Location: This approximately 3.5-acre site is located at 373 Hertel Avenue (aka 357 Hertel Avenue), 0.1 mile southeast of the intersection of Hertel Avenue and Military Road. Site Features: The site consists of a warehouse building, parking lot and one entrance driveway. The surface of the site is primarily occupied by the

MORGAN MATERIALS (AKA HERTEL WAREHOUSE) (Continued) **S102403028**

concrete pad for the current and former warehouse buildings. The southern portion of the site has a paved access road to the loading docks in the rear of the warehouse. The remainder of the site is undeveloped. Current Zoning/Use(s): The site is currently zoned for Commercial use and is currently used as a commercial warehouse. Historical Use(s): Since 1963, Morgan Materials, a broker of off-specification and discontinued chemicals, used the warehouse at this property to store chemicals for purpose of resale. In 1997, at the request of NYSDEC, EPA evaluated the site and removed approx. 20,000 drums from the warehouse. In July 2003, a fire destroyed much of the warehouse and cleanup activities removed all fire-related debris down to the floor slab on the main part of the warehouse. The site contamination appears to be due to spillage from the warehouse operations and fire. Site Geology and Hydrogeology: Bedrock is predominantly limestone, dolomite and shale. Thick veneers of stratified till have been deposited by glacial meltwater which also formed lakes at the ice margins where silts and clays accumulated. Erie County is covered by such lake sediments. The general soil type at the Site is described as Urban Land (Ud). This is indicative of the level to gently sloping land with at least 40 percent of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. The soil consists of fill materials extending to depths of approximately four (4) feet below grade (ftbg) in the northwestern portion of the site to approximately 13 ftbg in the southeastern portion of the site. The fill materials include gravel, sand, silty clay and clay. The fill material is underlain by a native stiff silt and clay. The uppermost groundwater bearing unit appears to be situated at or near the interface between the soil and a natural clay layer at approximately 11 ftbg. Groundwater flow is to the southwest toward Scajaquada Creek.

Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Updated By: SFRADON
Site Description: Location: The Iroquois Gas/Westwood Pharmaceuticals Terrestrial Site (915141A) encompasses approximately 8.8 acres at 100 Forest Avenue in the City of Buffalo, Erie County. The site is bordered by a City of Buffalo impound lot to the north, Dart Street and a mix of industrial and residential properties to the east, Bradley Street and a mix of vacant industrial and residential properties to the south, and Scajaquada Creek and industrial properties to the west. Scajaquada Creek has been impacted by site contaminants, and is listed as the NFG - Iroquois Gas/Westwood Pharmaceuticals Riparian Site (915141B). Site Features: The topography of the site and the surrounding area is relatively flat, but slopes steeply toward Scajaquada Creek to the west. Most surface water runoff is toward on-site drainage ditches and storm sewers, although some surface water flows directly to Scajaquada Creek during precipitation events. Current Use and Zoning: The site is zoned for industrial use and is currently leased to a trucking firm. Surrounding properties include a mix of commercial, light and heavy industrial, and residential parcels. Past Use of the Site: The site operated as a manufactured gas plant from approximately 1897 through 1955. Iroquois Gas (now National Fuel Gas) owned and operated the plant from 1925 through 1955, and continued to store gas on site until 1972. Iroquois Gas removed and/or demolished some of the on-site structures in 1968, and buried waste materials such as heavy tars, sludges, coal, coke, and demolition debris. In 1972, Westwood Pharmaceutical (now Bristol-Myers Squibb Company, Inc.) purchased the property and demolished the remaining on-site structures. A 100,000 square foot warehouse (Building 6; Figure 2) was constructed on the southern portion of the site. In 1985, a second 100,000 square foot warehouse (Building 9; Figure 2) was constructed immediately north of Building 6. During the 1985 construction phase, soil and groundwater contaminated with polynuclear aromatic hydrocarbons (PAHs), benzene, toluene, ethylbenzene and xylene (BTEX) were encountered. Between 1986 and 1988, several monitoring wells were installed and groundwater samples were analyzed. Based upon these results, the Department listed the site in the Registry of Inactive Hazardous Waste Disposal Sites in 1989. Remedial History: A Remedial Investigation/Feasibility Study (RI/FS) was completed in 1993 by Westwood Pharmaceuticals to define the nature and extent of contamination resulting from historic site activities, and to provide potential remedial alternatives for the site. In March 1994 a Record of Decision (ROD) was issued by the Department for both the terrestrial and riparian portions of the site. The remedy for the terrestrial portion of the site consisted of (1) the installation of a clay cap to contain the source area contaminants; (2) the installation of a sheet pile wall along Scajaquada Creek; (3) the installation of groundwater/NAPL extraction wells for gradient control; (5) groundwater and NAPL treatment; and (6) long-term groundwater monitoring and maintenance of the extraction and treatment systems. Site Remediation: In 1995 a Consent Decree was issued by Federal Court that required Westwood to implement the approved remedy for the terrestrial portion of the

IROQUOIS GAS/WESTWOOD PHARM. TERRESTRIAL (Continued) **S118950587**

site. The remediation began in 1996 and was completed in 1997. The sheet pile wall was installed by National Fuel Gas in 1996. The groundwater extraction and treatment system became operational in 1997 and has operated continuously since that time. Site Management: Long-term operation, maintenance and monitoring (Site Management) of the site remedial systems are on-going. Site Management activities include inspections, system maintenance, hydraulic monitoring and groundwater quality monitoring. Periodic Review Reports are submitted to the NYSDEC semi-annually, with an Institutional Control/Engineering Control certification submitted annually. As a result of these submittals, it was determined that the remedy is not performing as designed. The Department required that the RP initiate a Corrective Measures study to evaluate the current remedial system and propose alternatives. The results of this study were approved via the Department's issuance of a Explanation of Significant Differance on November 7, 2014. The Company prepared a design for the construction of an interceptor trench system to replace the existing collection well system on site. Installation of the interceptor trench began in May 2017 and was completed in June 2017. The system has been operating since that time. Site Geology and Hydrogeology: The geology of the site includes 4 to 32 feet of fill material consisting of silt, clay, gravel, ash, slag, clinker, construction debris, bricks and wood chips, overlying native soil consisting of impermeable silty clay. Depth to groundwater in the fill material is variable, ranging from 3 to 19 feet below ground surface. Groundwater in this zone flows west toward Scajaquada Creek.

Env Problem: Installation of a groundwater/non-aqueous phase liquid (NAPL) collection and treatment system, along with a sheet pile wall adjacent to Scajaquada Creek and capping of the site, was designed to prevent the off-site migration of contaminated groundwater and NAPL from the site to the creek. In September 2011, National Fuel Gas notified the Department that NAPL was seeping through a lift hole in the sheet pile wall along the creek. The lift hole was subsequently patched with hydraulic cement. Follow-up inspections of the sheet pile wall revealed that groundwater flows through other lift holes during wet weather conditions. These seeps have been sampled and found to contain elevated concentrations of benzene, ethylbenzene, isopropylbenzene, toluene and total xylenes. The presence of seeps in the sheet pile wall indicates that during wet weather conditions the groundwater extraction system does not capture all contaminated groundwater as it moves toward Scajaquada Creek. An interceptor trench was constructed at the site in 2017 and has been operating effectively since that time.

Health Problem: Exposures via drinking water are not expected because homes in the area are served by public water and no known private wells exist in the immediate area. The entire site has been capped or paved and on-site access is restricted by fencing and 24-hour security which eliminates the potential for direct contact exposures to on-site contaminants.

Assessment of Health:	A NYSDEC preliminary investigation documented contamination of subsurface soils in the fill area, surface soils in the oil spill area, and surface water and sediments in Scajaquada Creek. Contaminants detected include polycyclic aromatic hydrocarbons, PCBs, phenolics, volatile organics and heavy metals. A petition to delist approximately a 3 acre portion of the site for the construction of a store and associated parking lot was submitted to NYSDEC and approved. A soil removal action was completed in the oil spill area thereby removing the potential for direct contact with contaminants in the surface soils. The area along the north bank of the Scajaquada Creek has been proposed for a public walkway/bicycle path. Sampling of this area for PCBs has not shown any health concern.
Description:	The site was used to dispose foundry sand, slag, lubricants, hydraulic oil, paper and wood. The sediment samples taken from the Scajaquada Creek adjacent to the site during July of 1982 did not show any contamination. Inspections by DEC during 1985 indicated spills of waste oil at the site. About 100 barrels containing oil were stored on the ground and many of them were leaking. Later, Pratt & Letchworth removed all the barrels from the site. A Phase I Investigation was completed in 1987. A Phase II Investigation for this site was completed in 1989. A Consent Order (CO) for an Interim Remedial Measure (IRM) / Site Investigation was signed in August 1992. The area contaminated with PCBs was excavated and the contaminated soils were disposed off site in early 1994. The current owners have placed a new fill cover over most of the site. The Site Investigation was completed in 1993 and the report was submitted in January of 1995. The PCB contaminated area has been cleaned up below the selected clean up level of 1 ppm. The site investigation outside of the IRM area did not show PCBs above the clean up levels. No known

PRATT & LETCHWORTH (Continued) **S108061182**

hazardous wastes remain on site. A "No Further Action" Record of Decision (ROD) was signed in early 1995.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

East Map:	5937939 BUFFALO NE, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

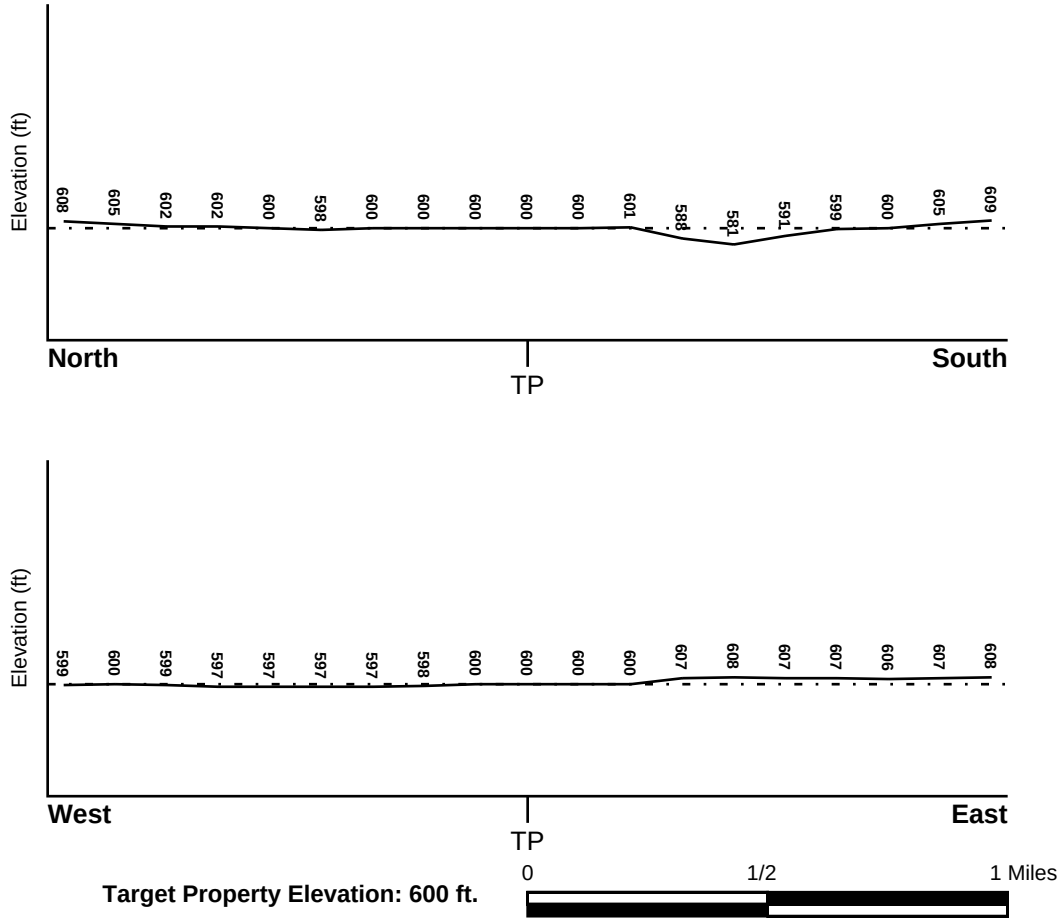
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36029C0185G	FEMA FIRM Flood data

3602300015B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BUFFALO NW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
6	1/2 - 1 Mile East	E
1G	1/2 - 1 Mile East	E

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Contact E-Mail: cbukowski@benchmarkees.com

Dear Caroline:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 9/24/2020 and given the reference number FOIL #**W073043-092420** for tracking purposes. You may expect the Department's response to your request no later than **10/23/2020**.

Record Requested: **We are performing a Phase I Environmental Site Assessment and would like any and all files from the various Departments for the following property: Former Buerk Tool 293 Grote Street (AKA 315 Grote Street) SBL: 89.21-1-1 Buffalo, New York, 14207**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Please note that due to the COVID-19 outbreak, DEC may be experiencing staffing shortages and some records custodians may be working remotely. This may result in a delayed response time to your FOIL request. We appreciate your understanding and cooperation.

Region 9 - Buffalo

P: 716 851-7220 | F:

www.dec.ny.gov

Dear Caroline,

There is currently no NYSDEC-regulated freshwater wetland within or adjacent to the 293 Grote Street, Buffalo, NY parcel. Therefore, the Region 9 Bureau of Wildlife has no freshwater wetland files or records for the property. We recommend contacting the U.S. Army Corps of Engineers at 716-879-4330 regarding the potential for federally-regulated wetlands.

New York State Department of Environmental Conservation
270 Michigan Avenue, Buffalo, New York, 14203-2999

Thomas C. Jorling
Commissioner

April 23, 1993

Mr. Richard Buerk
President
Buerk Tool & Machine Corporation
315 Grote Street
Buffalo, NY 14207-2498

Dear Mr. Buerk:

Hazardous Waste Compliance
Inspection Date: January 20, 1993
Location of Handler: Same as Above

EPA I.D. Number: NYD002109692

Your submittal in response to the warning letter dated January 28, 1993, has been deemed satisfactory. This matter can now be considered concluded and the enforcement action resolved.

Please be advised that your facility is under the continuing obligation to comply with all the applicable State and Federal regulations regarding the management of hazardous waste. If your facility should be found in violation of the regulations in the future, you may be subject to escalated enforcement action, including monetary penalties.

Please note that this letter in no way addresses any liability you may have for any regulatory fees and hazardous waste special assessment fees.

Your cooperation has been appreciated.

Sincerely,

Richard J. Baker (sz)

Buffalo, NY 14207-2498

RE: Hazardous Waste Compliance Inspection Date: January 20, 1993
Location of Handler: Same as Above

EPA Identification Number: NYD002109692

Dear Mr. Buerk:

In order to determine compliance with the New York State Hazardous Waste Regulations, the New York State Department of Environmental Conservation conducted an inspection of your facility on the above referenced date.

As a result of that inspection, review of documentation submitted by your facility to this Department, and applying the New York State Hazardous Waste Regulations, we believe that your facility is operating as an exempt generator of hazardous waste.

6NYCRR Part 372.1(e)(1)(vii) excludes a conditionally exempt generator who generates less than 100 kg of hazardous waste during a calendar month and stores less than 100 kg of hazardous wastes from full regulation if the following requirements are met:

- the generator makes a determination of the hazardous nature of the waste.

You have not met this requirement and, therefore, are in violation of 6NYCRR Part 372.1(e)(1)(vii).

Printed on Recycled Paper

Please confirm in writing within 30 days of the date of this letter, that the above referenced violations have been corrected and include supporting documentation as appropriate. You MUST include your EPA Identification Number on all correspondence. This confirmation should be addressed to:

Mr. Frank Shattuck, P.E.
Regional Hazardous Substances Regulation Engineer
New York State Department of Environmental Conservation

TITLE: ENVIRONMENTAL ENGINEER I

NAME: ___

TITLE: ___

REPORT PREPARED BY: Raymond J. Fisher DATE: Mon 1/25/93

REPORT APPROVED BY: Richard J. Fisher DATE: 25 Jan 93

C. The handler notified EPA as a:

— generator —

Has EPA or DEC officially modified the handlers status? If so, attach correspondence.

— NO —

D. If the facility is a treatment, storage or disposal facility, have they: — NOT APPLICABLE —

NA Submitted a Part A application.

NA Should the Part A be modified by the Company? If so, explain.

— NA —

NA Been granted a Part B permit.*

NA Submitted a Part 373 permit application.

NA Been granted a Part 373 permit or operating under SAPA with a Part 360 permit.*

If so, when does it expire: ———

*Complete Appendix M - indicate compliance status with permit conditions.

2. Exemptions — NA —

A. Generator Exemptions

(1) NA Not a regulated handler.

(2) NA Samples collected for testing. 372.1(e)(5).

(3) NA Residues of hazardous waste in empty containers. 372.1(e)(6).

(4) NA A hazardous waste which is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, or in a manufacturing process unit or an associated non-waste treatment manufacturing unit is not

subject to regulation until it exits the unit in which it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than 90 days after the unit ceases to be operated for manufacturing, or for storage or transportation of product or raw materials. 372.1(e)(7).

B. TSD Exemptions — NOT APPLICABLE —

1. TSD exemptions

(a) NA Recycling of Hazardous Wastes: 373-1.1(d)(1)(viii). Parts 373-2.2(c), 372.4(b), 372.4(d)(1) must be complied with (Storage of wastes prior to recycling is not exempt under this subparagraph.) In addition:

- This exemption does not apply to commercial facilities which recycle listed hazardous wastes or hazardous waste sludges received from off-site or burn these wastes for energy recovery;
- Commercial facilities that reclaim precious metals from hazardous wastes do qualify;
- This exemption does not apply to boiler and industrial furnaces that burn hazardous wastes for energy recovery if the waste stream has a heat value of less than 8,000 BTU/lb.
- Mobile or transportable commercial facilities which operate on the generator's site, if a containment area which meets the requirements of subdivision 373-2.9(f) is provided for the reclaiming facility and any associated temporary container holding or storage area.

(b) NA The storage of the following hazardous wastes is exempt from permitting provided that Part 374 of this Title is complied with: 373-1.1(d)(1)(vii).

- hazardous wastes that are recycled in a manner constituting disposal;
- hazardous waste burned for energy recovery in boilers and industrial furnaces that are not regulated under section 373-2.15 or 373-3.15 of this Part. This exemption is not available if the hazardous waste stream has individual hazardous waste components with little or no heat value (less than 8,000 BTU/lb);

- hazardous waste from which precious metals (as defined in section 374.6 of this Title) are being reclaimed; and

- spent lead acid batteries that are being reclaimed by battery crackers or secondary lead smelters.

(c) NA Totally enclosed treatment facility - 373-1.1(d)(1)(xi).

(d) NA Elementary neutralization units or wastewater treatment units other than units located at commercial facilities. Units utilized only to neutralize or treat hazardous waste from recycling characteristic hazardous wastes or for precious metal recovery at commercial facilities are exempt. 373-1.1(d)(1)(xii) (Complete Appendix Q).

(e) NA Storage of hazardous waste generated and stored on-site for 90 days or less and 8,800 gallons or less is stored in containers or 20,000 gallons or less is stored in tanks. 373-1.1(d)(1)(iii).

(f) NA Storage of liquid hazardous waste over the designated sole source aquifers provided the waste is stored less than 90 days and 8,800 gallons or less is stored in containers or 20,000 gallons or less is stored in tanks. 373-1.1(d)(1)(iv).

(g) NA The on-site treatment of hazardous waste, by the generator, in the same tanks or containers used for accumulation and storage is exempt provided the generator complies with 6NYCRR Part 373-1.1(d)(1)(iii) and (iv). 373-1.1(d)(1)(ix).

(h) NA Storage and treatment of hazardous waste on-site of generation if generates less than 100 kilograms and stores less than 1,000 kilograms of hazardous waste in each calendar month and not generate or store acute hazardous waste as described in 373-1.1(d)(1)(b). 373-1.1(d)(1)(v).

(i) NA Accumulation areas. Complete Part II: 3A. 373-1.1(d)(1)(xiv).

(j) NA Storage of manifested shipments of hazardous waste in containers or vehicles by a transporter at its own transfer facility for 5 days or less. Complete Appendix B. 373-1.1(d)(1)(xv).

3. Hazardous Waste Special Assessment Fees - Article 27-0923 ECL

Is the company aware that a Quarterly Hazardous Waste Special Assessment Return (Form TP 550) is required for any quarter in which hazardous waste is generated and disposed of in any quantity and method that would produce an assessment of at least $27 for that quarter?* Yes X No ___

* The review of Form TP 550 or the failure to submit a form when required will be the subject of a separate action by the Department.

4. Status Identification:

A. NA Transporter - complete Appendix B

B. Generator Status Identification

CAT. #1 CESQG →

1. X Category 1 - Conditionally Exempt Generator - generates less than 100 kg/mo and stores less than 100 kg. - 372.1(e)(1)(vii)(a) Complete Part II, 1A.

2. ___ Category 2 - Small Quantity Generator - generates less than 100 kg/mo and stores more than 100 kg but less than 1,000 kg. - 372.2(a)(8)(vi) - Complete Part II, 1B.

3. ___ Category 3 - Generator Subject to Reduced Requirements - generates more than 100 kg/mo but less than 1,000 kg/mo and stores less than 1,000 kg. - 372.2(a)(8)(iii) - Complete Part II, 1C.

4. ___ Category 4 - Generator - generates and/or stores 1,000 kilograms or more per month or generates acute hazardous waste in quantities greater than 1 kg per month. Complete Part II, Questions 2-7. (Generators over sole source aquifers also complete Appendix A.)

C. Treatment, Storage or Disposal Facility Status NA

1. Hazardous waste is generated and stored on-site. If so:

(a) NA Is hazardous waste stored on-site longer than 90 days? 373-1.1(d)(1)(iii) - If yes, complete Appendix A.*

(b) NA Is more than 8,800 gallons of hazardous waste stored in containers? 373-1.1(d)(1)(iii)(a) - If yes, complete Appendix A.*

(c) NA Is more than 20,000 gallons of hazardous waste stored in tanks? 373-1.1(d)(1)(iii)(b) - If yes, complete Appendix A.*

* (Note: Do not complete Appendix A for generators only that have exceeded 90 days or quantity limits.)

2. NA Hazardous waste is received from off-site and not beneficially used, reused or legitimately recycled or stored. If yes, complete Appendix A.

3. NA Hazardous waste is treated on-site. If yes, complete appropriate portion of this report.

4. NA Hazardous waste is disposed of on-site. If yes, complete appropriate portion of this report.

D. Hazardous Waste Generation/Storage

1. Describe the activities that result in the generation of hazardous waste. Include manufacturing processes that generate hazardous waste.

The respondent operates a 'metal cutting' machine shop (job shop) - raw materials are ferrous and non-ferrous metal rods (circular cross section); metal rods are drilled, cut, threaded, milled to various final shapes (flanges etc.) - Specialty applications include food processing and aerospace industries - the only RCRA wastes generated onsite are D001 Safety-Kleen (No. 105) mineral spirits in one parts washer onsite.

2. Identify the hazardous wastes that are on-site, the quantity of each, the storage method, the type and size container or tanks used and the location in the storage area. (Be as specific as possible.)

Accumulation Areas:

— NA —

STORAGE AREA: One 30-gal capacity Safety-Kleen parts washer unit with approx. 30 gal Safety-Kleen 'No. 105' solvent in the process — No RCRA waste onsite at time of inspection.

Part II

Generator Inspection Section

Indicate:

X Violations

Indicate:

X Satisfactory
NA Not Applicable

1. Requirements for Exempt and Small Quantity Generator (Category 1-3 Generators):

A. Category 1 - The conditionally exempt generator has:

1. X made a hazardous waste determination - 372.1(e)(1)(vii)(a). Approx. 11 full drums machine oil/coolant onsite - NOT CHARACTERIZED. —
2. ___ accumulated no more than 100 kg of hazardous waste on-site - 372.1(e)(1)(vii)(b). X
3. ___ disposed of hazardous waste in an authorized, permitted or licensed on-site or off-site facility - 372.1(e)(1)(vii)(c). X
4. ___ ensured delivery to an off-site facility by a transporter authorized under Part 364 or by the generator himself - 372.1(e)(1)(vii)(d). X

B. Category 2 - The generator who generates less than 100 kg/month and stores between 100-1000 kg has complied with the following: NA

General Requirement - Items 2A-E (pg. II-5)
Manifest & Reporting - Item 4A-P, except for Item G
(pgs. II-10, 11, 12)

1. ___ uses tanks that are properly sheltered and protected to prevent spillage, seepage or any discharge - 372.2(a)(8)(vi)(a). NA
2. ___ keeps containers and tanks holding hazardous waste closed during storage except to add or remove wastes. Containers and tanks must not be opened, handled or stored in a manner which may rupture the tank or containers or cause them to leak. Tanks and containers must be inspected at least quarterly for leaks or damage - 372.2(a)(8)(vi)(b). NA
3. ___ uses tanks that are designed, constructed or operated in accordance with whichever of the following requirements are in effect in the municipality where the facility is located: 372.2(a)(8)(vi)(c). NA

3/92

Company Name: BUERK TOOL AND MACHINE CORP.
EPA ID NO: NYD002109692

WASTE REDUCTION CHECKLIST

A. Does the generator use manifests to transport the hazardous waste? — Yes ___ No X

If No, Explain:
Respondent operates as Cat. #1 CESQG.

B. Do the manifests contain the certification that the generator has a program in place to reduce the volume and toxicity of waste generated to the degree determined by the generator to be economically practicable? (ECL 27-0907) — Yes ___ No ___ X NA

C. Is the certification portion of the manifest crossed out or marked in any way to indicate that a program to reduce the volume and toxicity of the waste is not in place? — Yes ___ No ___ X NA

If Yes, Explain:
NA

D. Is the generator required to have a written Hazardous Waste Reduction Plan. (ECL 27-0908) — Yes ___ No X

If No, Explain:
CAT. #1 CESQG.

E. Does the generator have a written Hazardous Waste Reduction Plan? (ECL 27-0908) — Yes ___ No X

If No, Explain:
CAT. #1 CESQG.

F. If the generator does not have a written Hazardous Waste Reduction Plan, is the generator aware of the requirement to have a program in place to reduce the volume and toxicity of waste generated to the degree determined by the generator to be economically practicable? — Yes X No ___

G. If the Hazardous Waste Reduction Plan is not a Written Plan, can the generator describe orally the waste reduction program in place? Yes X No ___

If No, Explain:

H. Did the generator submit a Biennial update of the Hazardous Waste Reduction Plan by July 1 of the year it is due? (The update must be submitted every two years, with the first update due two years after the Hazardous Waste Reduction Plan is submitted.) (ECL 27-0908) Yes ___ No X NA X

If No/NA Explain: CAT. #1 CESQG.

I. Did the generator submit a Annual status report of the Hazardous Waste Reduction Plan by July 1 of the year it is due? (The status report must be submitted for each year that a Hazardous Waste Reduction Plan Biennial update is not submitted.) (ECL 27-0908) Yes ___ No X NA X

If No/NA Explain: CAT. #1 CESQG.

Items #J thru L is applicable only to the permitted facilities.

J. Is the generator permitted for TSD activities? Yes ___ No X

K. Does the permit contain a condition requiring the permittee to certify annually that the generator (i.e. the permittee) of the hazardous waste has a Hazardous Waste Reduction program in place to reduce the volume or quantity and toxicity of such waste to the degree determined by the generator to be economically practicable? Yes ___ No ___ NA X

L. Did the permittee submit the annual certification? Yes ___ No ___ NA X

Address: 315 Grote Street
Buffalo, NY 14207

RE: Hazardous Waste Inspection Date: March 16, 1990 Inspected By: Raymond Henning
Location of Business: same

EPA Identification Number: NYD002109692

Dear Mr. Buerk:

In order to determine compliance with the New York State Hazardous Waste Regulations, the New York State Department of Environmental Conservation conducted an inspection of your facility on the above referenced date.

As a result of that inspection, you were found to be operating as follows:

☐ Small Quantity Generator—Generates less than 100 kg/month and stores less than 100 kg.

☐ Small Quantity Generator—Generates less than 100 kg/month and stores more than 100 kg., but less than 1,000 kg.

☐ Small Quantity Generator—Generates more than 100 kg/month but less than 1,000 kg/month and stores less than 1,000 kg.

☐ Generator—Generates 1,000 kg or more per month and/or stores more than 1,000 kg.

☐ Other—_____

_____

☒ The Department's Inspector found no violations of the New York State Hazardous Waste Regulations on the inspection date referenced above. A copy of the Inspection Form is enclosed for your records.

☐ Your facility was not subject to the New York State Hazardous Waste Regulations on the inspection date referenced above. A copy of the Inspection Form is enclosed for your records.

If you have any questions, please contact the Inspector at the location circled on the back.

Thank you for your cooperation.

Sincerely,

Richard J Buerk

PART I

General Information and Classification of Facility

1. Identification of Hazardous Waste - 371 — Yes / No

A. Is there reason to believe the facility has hazardous waste on-site? If yes, what leads you to believe it is hazardous waste? Check appropriate box/boxes and attach any applicable correspondence with DEC or EPA: ✓ / ___

(1) ✓ Company recognizes that its waste is hazardous during the inspection.

(2) ___ Company admitted the waste is hazardous in its RCRA notification and/or Part A permit application.

(3) ✓ Testing has shown characteristics of:

(✓) Ignitability - 371.3(b);
( ) Corrosivity - 371.3(c);
( ) Reactivity - 371.3(d);
( ) EP Toxicity - 371.3(e).

___ Has revealed hazardous constituents (please attach analysis report) 371.4(a)(2), Appendix 22, Appendix 23

(4) ___ The material is listed in the regulations as a hazardous waste from non-specific sources 371.4(b).

(5) ___ The waste is listed in the regulations as a hazardous waste from specific sources. 371.4(c).

(6) ___ The material or product is listed in the regulations as discarded commercial chemical products, off-specification species, container residues and spill residues thereof. 371.4(d).

(7) ___ Company is unsure, but have reason to believe that waste materials are hazardous. (Explain) _____

_____

_____

_____

B. Is there reason, other than those above, for you to believe that there is hazardous waste on site? (Explain) _____

No

C. What other environmental permits are held by the company, relative to hazardous waste management?

___ SPDES Permit Number ___ Air Permit Number

___ Part 364 Industrial Waste Transporter Permit (indicate this company's permit number if any)

Please describe other relative (if any) permits and give the name, address, Part 364 Permit Number and EPA I.D. Number of transporter(s) used by company.

D. If the facility is a treatment, storage or disposal facility, have they:

___ Submitted a Part A application.

___ Have changes been made that are not reflected in the Part A application?

___ Should the Part A be modified by the Company? If so, explain.

___ Submitted a Part B application.

___ Been granted a Part 373 permit.

If so, when does it expire: _____

Please attach or explain any special conditions or variances - 373-1.1(e)

___ Been granted a hazardous waste Part B permit.

If so, also complete Appendix M.

E. Describe the activities that result in the generation of hazardous waste. Include the company's manufacturing processes.

BUERK OPERATES A JOB SHOP MACHINE SHOP. PETROLEUM NAPHTHA (MINERAL SPIRITS) D001 IS USED IN SMALL QUANTITIES TO DEGREASE SOME PARTS. 1-2 DRUMS (MAX) ARE GENERATED ON AN ANNUAL BASIS.

F. Identify the hazardous wastes that are on-site and the quantity of each (use the identification numbers referred to in Part 371).

NO WASTE CURRENTLY ON SITE.

G. The handler notified EPA as a:

GENERATOR
