1.0 EXECUTIVE SUMMARY

The following details the findings of Benchmark relative to identifying RECs for a portion of 703 East Delavan Avenue in the City of Buffalo, Erie County, New York (Site).

1.1 General Information

Benchmark has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E 1527-13 and the protocols required by the Client. This section summarizes the findings of the environmental professional relative to the Site. The reader is encouraged to read the entire report.

1.2 Site Description

The Site is located in a highly developed commercial, industrial, and residential area of City of Buffalo (see Figure 1). The Site is currently an approximate 1.2-acre portion of a 4.6-acre greater property addressed at 703 East Delavan Avenue. As shown on Figure 2, the Site is currently vacant land that is used as a grass covered athletic field with a portion of an associated asphalt parking lot on the northern portion of the Site. The greater property is currently and has historically been developed with a church building.

We understand that the Site is slated for development as a senior housing complex.

The Site has access to municipal sanitary sewer, electric, natural gas, and public water and is further described in the table below:

Number	Street	Tax ID No.	Current Owner	Current Use
703	East Delavan Avenue	90.78-5-1.1	Mt. Olive Baptist Church	Grass covered athletic field and a portion of an asphalt parking lot.

1.3 Data Gaps

The following data gaps¹ were identified in completion of this inquiry.

Type of Data Gap	Details of Data Gap	Sources Consulted	Significance
Historical Information	Historical information for the Site was not available at five-year intervals.	Previous studies, city directories, aerial photographs, Sanborn maps, topographic maps and municipal information.	This data gap did not significantly limit Benchmark's ability to provide an opinion on RECs related to the Site.
Abstract of Title	The abstract of title was not available for review at the time of report preparation.	Current property owner (i.e., user of this report).	This data gap did not significantly limit Benchmark's ability to provide an opinion on RECs related to the Site.
Site Reconnaissance	Snow cover hindered observations at the time of the Site reconnaissance. In addition, Benchmark was unaccompanied at the time of the Site visit thus property boundaries were approximated.	Site reconnaissance	This data gap did not significantly limit Benchmark's ability to provide an opinion on RECs related to the Site.

1.4 Environmental Report Summary

1.4.1 Summary of Site Reconnaissance Potential Concerns

The following potential environmental concerns were identified at the time of the Site reconnaissance:

- Based on the history of the Site and the findings of a geotechnical investigation, fill materials from unknown origins were brought to the Site.
- The Site is located in an area with a heavy industrial history.

¹ A data gap is defined by 40 CFR 312.10 as “a lack of or inability to obtain information required by the standards and practices” of preparation of this document “despite good faith efforts by the environmental professional” or others to gather such information.

1.4.2 Summary of Historic Uses

Approximate Years	Reported or Suspected Use	Owner/Occupant
At least 1894 to prior to 1995	The Site is primarily vacant land with unknown disturbances identified on historic aerials from at least 1938 through at least 1951.	Unknown individual owners
At least 1995 to at least 2013	The Site is primarily vacant land with a portion of a greater asphalt parking lot for the adjacent Mt. Olive Baptist Church on the northern portion of the Site.	Mt. Olive Baptist Church/None
At least 2013 to present	The Site is developed with a grass covered athletic field and the portion of the parking lot remains on the northern portion of the Site.	Mt. Olive Baptist Church

Historic Sanborn maps identified adjacent operations as including automotive repair, rug/furniture cleaning and manufacturing with a fuel oil tank (apparently an AST), a gasoline UST, and an oil storage area.

1.4.3 Summary of Previous Studies

A geotechnical engineering report completed by Terracon Consultants in February 2021 identified fill material across the Site, in proposed areas of development, at depths ranging between 0.5 fbs and 4 fbs. The fill material reportedly consisted of a mixture of red-brown and black silt and sand with cinders and fragments of rock, brick, and concrete. See Section 5.4.8 below for additional information relative to previous assessments.

1.4.4 Regulatory Information

Site Listings

No regulatory listings were identified for the Site.

Adjacent Property Listings

Adjacent Database Listings	Address/Name	Summary
EDR Hist Auto	228 Sheridan Avenue/Geo R Dodd Auto Repairs	The adjacent property is listed as a historic automobile repair operation in at least 1950.
EDR Hist Cleaner	228 Sheridan Avenue/Hoover Rug & Furniture Cleaners, Styn	The adjacent property is listed as a historic carpet and furniture cleaning operation under numerous

**PHASE I ESA
A PORTION OF 703 EAST DELAVAN AVENUE
BUFFALO, NEW YORK**

	Rug Cleaners, Sterling Rug & Upholstery Cleaners, Compressed Air Carpet Rug Cleaners	different names (Styn Rug Cleaners, Sterling Rug and Upholstery Cleaners, Compressed Air Carpet Rug Cleaning, Hoover Rug Furniture Cleaners, etc.) from at least 1955 to 1993.
RCRA NonGen/NLR, FINDS, ECHO, NY Manifest	250 Grider Street/BSB Products Corp	BSB Products Corps is listed as a RCRA Non-Generator of hazardous waste with no reported violations in addition to being included in the FINDS, ECHO and NY Manifest databases.
RCRA SQG, FINDS, ECHO, NY Manifest	230 Grider Street/Hard Manufacturing	Hard Manufacturing is listed as a RCRA Small Quantity Generator of hazardous waste with no reported violations. Hazardous waste produced includes halogenated and nonhalogenated solvents, lead, chromium, ignitable waste, and corrosive waste. Additionally, the adjacent property is included in the FINDS, ECHO, and NY Manifest databases.
SEMS-Archive, NY HSWDS, FUDS	230 Grider Street/Otis Elevator	Otis Elevator is listed in the Superfund Enterprise Management System. The listing shows as of 1986, the adjacent property does not qualify for the National Priority List based on existing information. Additionally, the Site is listed as a Hazardous Substance Waste Disposal Site. However, the listing states that no hazardous wastes were disposed of on the property and that the property poses no threat to the environment/public health.
NY Spills	234 Grider Street/Three Phase Pole Top	Spill No. 0608189, dated October 17, 2006, involved downed leaking transformers onto pavement. The spill was cleaned up by National Grid and the NYSDEC reclassified the spill as “closed” on January 29, 2007.

Numerous regulatory listings were identified for nearby properties located within the search radii.

1.4.5 Other Findings

Adjacent cleaning/dry cleaning facilities, automotive repair, and industrial operations with a fuel oil storage tank, a gasoline UST, and an oil storage area represent a potential VEC at the Site. Further testing would be required to assess whether a VEC exists at the Site.

1.4.6 Interviews/Questionnaires

According to the site contact (current property owner), the Site is currently and has historically been used as a green space/athletic field. The Site contact also indicated senior housing is planned to be constructed on Site.

The City of Buffalo Building Inspector would not provide an interview.

1.5 Report Findings

Where applicable for the Site, the following is a list of RECs, CRECs, HRECs, and de minimis conditions. Non-scope considerations are also provided.

RECs

Per ASTM E1527, a REC is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Benchmark's investigation revealed the following RECs in connection with the Site:

- A previous geotechnical report completed by Terracon Consultants identified fill materials across the Site consisting of mixtures of red-brown and black silt and sand with cinders and fragments of rock, brick, and concrete. Miscellaneous urban fill materials from unknown sources are considered a REC due to the potential for impacts.
- The Site is located in a historically industrial area with fuel oil and gasoline storage tanks and an oil storage area identified in close proximity to the Site. In addition, historic automobile repair and rug/furniture cleaning, possibly with dry-cleaning operations, were identified adjacent to the Site. These adjacent and nearby operations represent RECs and a potential VEC at the Site.

Controlled RECs

Per ASTM E1527, a CREC is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation

of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Benchmark's ESA did not reveal CRECs for the Site.

Historic RECs

Per ASTM E1527, a HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). For example, a spill that has been remediated to the satisfaction of the appropriate regulators would be considered a HREC.

Benchmark's investigation revealed the following HRECs for the Site:

- The "closed" and "inactive" spill incidents identified for adjacent/nearby properties are considered HRECs as such have been addressed to the satisfaction of the NYSDEC.

De-minimis Conditions

In accordance with ASTM E-1527, de-minimis conditions are conditions that generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de-minimis conditions are neither RECs nor CRECs.

Benchmark's ESA did not reveal de-minimis conditions for the Site.

Non-Scope Considerations

Per ASTM E1527-13, non-scope considerations are described as ancillary observations during performance of the on-site investigation. Non-scope considerations are not considered RECs under ASTM E1527, but may represent health or environmental issues impacting the Site and/or property value.

Benchmark's investigation identified the following non-scope considerations:

- Research in the area of the Site completed by the New York State Department of Health - Bureau of Environmental Radiation Protection (Radon) suggests an average basement radon concentration of 1.15 pCi/L in the area of the Site, which is below the USEPA action level of 4.0 pCi/L. As such, radon is not anticipated to be a concern.
- The EDR report includes information on wetlands and flood zones; no wetland or flood zone areas were identified on-Site.

1.6 Opinion

Based on the RECs detailed above, Benchmark recommends completion of a Phase II Environmental Investigation to assess subsurface conditions at the Site.

2.0 INTRODUCTION

2.1 Purpose

The primary purpose of this assessment was to provide People Inc. with sufficient information about the potential environmental risks associated with the Site.

A secondary purpose of this study was to document the inquiry of the environmental professional for all appropriate inquiries for the Site. Specifically, this document is intended to provide the “all appropriate inquiries” for the purposes of CERCLA Section 101(35)(B). Such is applicable to persons seeking to qualify for: (i) the innocent landowner defense pursuant to CERCLA Sections 101(35) and 107(b)(3); (ii) the bona fide prospective purchaser liability protection pursuant to CERCLA Sections 101(40) and 107(r); and (iii) the contiguous property owner liability protection pursuant to CERCLA Section 107(q). This report was not intended as part of the Site characterization and assessment with use of a grant awarded under CERCLA Section 104(k)(2)(B). More specifically, the scope is intended to identify conditions indicative of releases or threatened releases of hazardous substances in, on, or at the Site.

2.2 Scope of Work

The scope of work is intended to identify RECs at the Site, including the following tasks:

- A) Review of information provided by the User of this Report regarding commonly known or reasonably available information about the Site.
- B) Interviews with past and present owners, operators and occupants (if available).
- C) Review of historical sources of information documenting the Site’s use.
- D) Review of Federal, State, tribal and local government records.
- E) A visual inspection of the Site and adjoining properties (to the extent possible).
- F) Preparation of this written report.

2.3 Significant Assumptions

No significant assumptions were made during completion of this study other than as identified Section 2.4.

2.4 Limitations and Exceptions

2.4.1 *Limitations*

To the extent of our knowledge, the information contained in this Report is true and accurate. Benchmark personnel have exercised due diligence in the compilation of the information contained herein appropriate to environmental professionals engaged in investigations of this nature. Benchmark makes no guarantees regarding the accuracy of information gained from other sources.

This Phase I ESA is based on current and historical information reviewed by Benchmark and their Site inspection. This Report is not to be considered an environmental audit of the Site or a complete environmental investigation of the Site. Further, the purpose of this assessment is not to proclaim a property is devoid of environmental impact but rather to identify RECs, as defined above.

This Phase I ESA makes no warranties nor implies any liability regarding:

1. Site specific practices and/or disposal methods of the past or future owners.
2. Adjacent property owners, their environmental practices and/or impact of such properties and practices on the subject property other than observed from the subject property.
3. Unreported spills.
4. Practices, waste disposal, environmental concerns and/or modifications to waste site indexes after the date on this Report.
5. Site groundwater or soil conditions.
6. Accuracy or completeness of information supplied to Benchmark by others.
7. Environmental conditions in areas not practically or safely accessible.
8. Accuracy of previous studies (if any) provided to Benchmark.

This Report is also subject to any and all limitations defined within ASTM E1527-13. This includes, but is not limited to, the limitation that this Report is intended to identify environmental conditions at a specific time and is only valid for a period of six months from the date of issuance.

The principles defined within ASTM E1527-13, and followed within this study, include the following.

- This practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property.
- All appropriate inquiry does not mean an exhaustive assessment of a clean property. One of the purposes of this practice is to identify a balance between limiting costs/time and the reduction of uncertainty about unknown conditions.
- The level of inquiry is variable and depends on the type of property, risk level of the user and information developed in the course of the inquiry.
- Subsequent environmental assessments should not be used as standards to evaluate the appropriateness of prior inquiries based on hindsight, new information or new techniques.

2.4.2 User Responsibilities

The following information is the responsibility of the user and not of the environmental professional. This information may be provided by the user to the environmental professional for use in the final opinion of the all appropriate inquiry. If the information is not provided by the user, the environmental professional's ability to render such an opinion may be hindered and identified as a data gap.

- Searches for environmental cleanup liens against the subject property that are filed or recorded under any Federal, State, tribal, or local law, as required by 40 CFR Section 312.25.
- Assessments of any specialized knowledge or experience on the part of the landowner, as required by 40 CFR Section 312.28.
- An assessment of the relationship of the purchase price to the fair market value of the subject property, if the property was not contaminated, as required by 40 CFR Section 312.29.
- An assessment of commonly known or reasonably ascertainable information about the subject property, as required by 40 CFR Section 312.30.

2.4.3 User Protections

Persons claiming the liability protections under CERCLA must meet the statutory requirements of one of the following landowner liability protections. [It should be noted that

the user must also satisfy certain continuing obligations outside the scope of this Phase I Environmental Assessment, as required by CERCLA].

- The innocent landowner defense pursuant to CERCLA Sections 101(35) and 107(b)(3).
- The bona fide prospective purchaser liability protection pursuant to CERCLA Sections 101(40) and 107(r).
- The contiguous property owner liability protection pursuant to CERCLA Section 107(q).

2.5 Deviations

There were no deviations from the ASTM 1527-13 standard during the completion of this study except that a regulatory file review was not completed. Specifically, while a NYSDEC file review would typically be required under the ASTM standard for Site and adjacent property regulatory listings, such was not completed by Benchmark as: regulatory listings were not identified; completion of the file review was not anticipated to provide new or significant information; or records were not considered reasonably ascertainable in the timeframe of the report deliverable.

2.6 Special Terms and Conditions

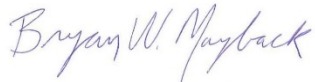

The work was completed in accordance with the executed Master Subcontract Agreement between People Inc. and Benchmark, dated December 14, 2016.

2.7 Reliance, Certification, and Declaration

This report was prepared for the exclusive use of People Inc. their respective affiliates and subsidiaries, and all successors and assigns thereof. Any other use, or using this Report in a fashion in which it was not intended, is at the sole risk of the user. Reliance may only be granted upon written consent and is subject to those same terms and conditions as expressed in the executed agreement.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Site. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

3.0 SITE/VICINITY DESCRIPTION

3.1 Location and Legal Description

The Site is located in the City of Buffalo and consists of the southern portion (approximately 1.2 acres) of a greater individual tax parcel legally described as Parcel No. 90.78-5-1.1.

3.2 Activity/Use Limitations

Benchmark is not aware of any institutional controls or activity/use limitations imposed against the referenced Site.

3.3 Site and Vicinity Description

The Site is located in a highly developed commercial, industrial, and residential area of City of Buffalo (see Figure 1). The Site is currently an approximate 1.2-acre portion of a 4.6-acre greater property addressed at 703 East Delavan Avenue. As shown on Figure 2, the Site is currently vacant land used as a grass covered athletic field with a portion of an associated asphalt parking lot on the northern portion of the Site. The greater off-site portion of the greater property is currently and has historically been developed with a church building.

We understand that the Site is slated for development as a senior housing complex.

The Site has access to municipal sanitary sewer, electric, natural gas and public water and is further described in the table below.

General Site Information	
Site Addresses	A portion of 703 East Delavan
Municipality, County, State	City of Buffalo, Erie County, New York
Current Site Use	Athletic Field
Fronting Streets	Sheridan Avenue
Site Size	Approx. 1.2-acres
Site Topography	Generally, level at grade
General Site Elevation (feet above mean sea level)	655'
Nearest Water Body	Scajaquada Creek located approx. 1.5 miles northwest of the Site
Improvements	Asphalt paved areas, green areas, trees, and landscaping

3.4 Current Use of Property

The Site, as further described below, is currently used as a grass covered athletic field.

Number	Street	Tax ID No.	Current Owner	Current Use
703	East Delavan Avenue	90.78-5-1.1	Mt. Olive Baptist Church	Grass covered athletic field

3.5 Adjoining Property Information

The adjacent properties were visually inspected from the Site at the time of the Site reconnaissance. The surrounding property uses include the following:

Direction	Current Use	Apparent Past Use	Comments/Concerns
North	Mt. Olive Baptist Church	Vacant Land, Commercial	Adjacent operations including current/historic industrial, auto repair and dry cleaning uses could result in impacts to the environment.
South:	CRG Development	Industrial	
East:	Hard Manufacturing Co.	Industrial	
West:	Warehouses, Residential	Commercial including automotive repair and cleaning/dry cleaning.	

4.0 USER PROVIDED INFORMATION

As required under 40 CFR 312, those seeking liability protection under CERCLA, for which this Report is prepared, must provide the environmental professional certain information and documentation. Benchmark requested information from Mrs. Jocelyn Bos of People Inc. representing the User, with responses to that inquiry as follows:

4.1 Environmental Liens

According to Ms. Bos, there are no environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state, or local law.

4.2 Activity Use Limitations

According to Ms. Bos, there are no engineering controls, land use restrictions or institutional controls in place, filed or recorded under federal, tribal, state, or local law.

4.3 Specialized knowledge or experience

Ms. Bos does not have specialized knowledge or experience related to the Site or nearby properties.

4.4 Purchase Price

Ms. Bos indicated that the purchase price being paid for the property reasonably reflects the fair market value of the property; an appraisal is reportedly underway.

4.5 Commonly Known or Reasonably Ascertainable Information

Ms. Bos is not aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases at the Site.

4.6 Obvious Indicators

Ms. Bos is not aware of any obvious indicators that point to the presence or likely presence of contamination at the property; she indicated that the Site was recently used for recreation purposes.

Appendix J includes the completed user questionnaire.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

Federal and state environmental regulatory information provided by Environmental EDR was reviewed at the radii defined in 40 CFR 312.26 (see Appendix A). Any sites unplottable by EDR were also reviewed, to the extent practical based on the site name and address, to assess whether they are also present within their appropriate radii. Any relevant listings such as those for the Site or any adjacent sites are included in the following table. Refer to Appendix A for complete acronym definitions.

Site Listings

No regulatory listings were identified for the Site.

Adjacent Property Listings

Adjacent Database Listings	Address/Name	Summary
EDR Hist Auto	228 Sheridan Avenue/Geo R Dodd Auto Repairs	The adjacent property is listed as a historic automobile repair operation in at least 1950.
EDR Hist Cleaner	228 Sheridan Avenue/Hoover Rug & Furniture Cleaners, Styn Rug Cleaners, Sterling Rug & Upholstery Cleaners, Compressed Air Carpet Rug Cleaners	The adjacent property is listed as a historic carpet and furniture cleaning operation under numerous different names (Styn Rug Cleaners, Sterling Rug and Upholstery Cleaners, Compressed Air Carpet Rug Cleaning, Hoover Rug Furniture Cleaners, etc.) from at least 1955 to 1993.
RCRA NonGen/NLR, FINDS, ECHO, NY Manifest	250 Grider Street/BSB Products Corp	BSB Products Corps is listed as a RCRA Non-Generator of hazardous waste with no reported violations in addition to being included in the FINDS, ECHO and NY Manifest databases.
RCRA SQG, FINDS, ECHO, NY Manifest	230 Grider Street/Hard Manufacturing	Hard Manufacturing is listed as a RCRA Small Quantity Generator of hazardous waste with no reported violations. Hazardous waste produced includes halogenated and nonhalogenated solvents, lead, chromium, ignitable waste, and corrosive waste. Additionally, the adjacent property is included in the FINDs, ECHO, and NY Manifest databases.
SEMS-Archive, NY HSWDS , FUDS	230 Grider Street/Otis Elevator	Otis Elevator is listed in the Superfund Enterprise Management System. The listing shows as of 1986, the adjacent property does not qualify for the National Priority List based on existing information.

		Additionally, the Site is listed as a Hazardous Substance Waste Disposal Site. However, the listing states that no hazardous wastes were disposed of on the property and that the property poses no threat to the environment/public health.
NY Spills	234 Grider Street/Three Phase Pole Top	Spill No. 0608189, dated October 17, 2006, involved downed leaking transformers onto pavement. The spill was cleaned up by National Grid and the NYSDEC reclassified the spill as “closed” on January 29, 2007.

Nearby Properties

Additional regulatory listings were identified for nearby properties. Brief summaries of the relevant listings are provided in the table below.

Nearby Database Listings	Address/Name	Summary
NY Spills and LTANKS	Several properties	The remaining spill incidents identified within the search radii for nearby properties are classified as “inactive” or “closed” by the NYSDEC, except for “active” Spill No. 1904228, dated July 18, 2019, involving equipment failure (failed spill bucket tests). This spill remains “active” on the NYSDEC Spill Incidents Database Search Details. There is no indication that the “active” spill incident resulted in environmental impacts at the Site.
Numerous Database Listings	Various properties	The numerous remaining regulatory listings were reviewed by Benchmark and none of the information suggested a specific environmental concern at the Site; see below for additional information.
FUDS	Southeast Corner of Northland and Dutton Avenue/Otis Elev Co Ord PLT	Based off an Army Corps of Engineers report the nearby property was part of the greater Otis Elevator manufacturing operation located on the southeast corner of Northland Avenue and Dutton Avenue. The property is listed as a Formerly Used Defense Site and was utilized as a foundry plant in the production of steel casings for antiaircraft gun mounts. Later the plant was sold to Niagara Machine and Tool Works and used as a tool and dye manufacturing plant. According to the report, the property is not included on the National Priority List.

In addition to the nearby properties listed above, several additional sites located proximate to the Site are listed on one or more environmental databases. However, based on Benchmark's review, each of these additional sites falls in one or more of the following categories:

- It is listed on databases that indicate a potential for, but not an actual documented current or historical release (e.g., RCRA small quantity generator or large quantity generator; registered chemical bulk storage or petroleum bulk storage sites). As such, these sites are not considered to pose a REC at the Site due to absence of a documented release.
- It is located greater than one-eighth mile from the Site and is not considered a REC based on the distance from the Site.
- It is present at a location that is not expected to pose potential for impact on the Site due to topography and likely groundwater flow direction and is not considered a REC based on unlikelihood for impacts associated with migration of contaminants onto the Site.

The discussion included above regarding adjacent and surrounding properties is based on information supplied to Benchmark as well as observations of nearby properties at the time of the Site reconnaissance. Further study would be required to positively confirm whether the Site has been impacted by nearby properties. It is also important to note that the environmental history and status of nearby properties, real or perceived, can affect the valuation of the target property.

5.2 Additional Environmental Record Sources

To augment the information provided by EDR, a FOIA request was forwarded to the NYSDEC on February 15, 2021 for information concerning the Site (see Appendix B). All responses have yet to be received from the NYSDEC. Should the NYSDEC provide additional information for the Site which identifies a currently unknown REC, an addendum to this report will be issued.

Benchmark also completed a search on the NYSDEC website, including the DECinfo Locator, of readily available records for the Site, including an Environmental Site Database Search for spills, remedial sites, and bulk storage facilities. A search of the USEPA Envirofacts website was also completed. No records involving the Site were identified.

5.3 Physical Setting Sources

Figure 1 shows the Site on an undated USGS Topographic Map, City of Buffalo Quadrangle. The Site is located in a highly developed residential, commercial, and industrial area. Due to extensive development in the area of the Site, individual structures are not shown on the map. The Site is located approximately 665 feet above mean sea level.

Groundwater flow is likely to the westerly direction toward the Scajaquada Creek and Lake Erie or consistent with topography in the area of the Site. Local groundwater flow, however, may be influenced by subsurface features, such as excavations, utilities, and localized fill-conditions.

5.4 Historical Use

The historical use of the Site has been researched through review of previous studies, historic Sanborn maps, historic aerial photographs, municipal records, historic topographic maps, and/or other reasonably obtainable documents. The following sections summarize Benchmark’s research.

5.4.1 Historic Aerial Photographs

Historical aerial photographs serve to reveal former topography, buildings, structures, and man-made works such as canals, lagoons and railroads that may have been altered or may no longer be in existence. Historical aerial photographs were obtained for additional historical information relative to the Site and surrounding area. Appendix C includes copies of the aerial photographs provided by EDR. Visual observations were limited on some aerial photographs due to poor quality.

YEAR	OBSERVATIONS
1938, 1951	
Site	The Site appears to be vacant land with unknown disturbances located on-Site.
North	Vacant land with disturbances
South	Vacant industrial
East	Industrial
West	Commercial/Residential

1958, 1966, 1970, 1978, 1983	
Site	The Site appears to be vacant land.
North	Vacant land
South	Industrial/asphalt parking lot
East	Industrial.
West	Commercial/Residential
1995, 2006, 2009, 2013	
Site	The Site appears to be primarily vacant land. A portion of an asphalt parking lot appears on the northern portion of the Site presumably in connection with an adjacent commercial operation.
North	Commercial/asphalt parking lot
South	Industrial/asphalt parking lot
East	Industrial
West	Commercial/Residential
2013,2017	
Site	The Site appears as it is presently and is developed with a grass covered athletic field with an associated asphalt parking lot.
North	Commercial/asphalt parking lot
South	Industrial/asphalt parking lot
East	Industrial
West	Commercial/Residential

5.4.2 Historical Sanborn Maps

Sanborn maps serve to reveal former buildings, building uses, and man-made works such as canals, lagoons and railroads that may have been altered or may no longer be in existence. The following table summarizes the maps. Appendix D includes copies of the Sanborn Maps provided by EDR.

YEAR	OBSERVATIONS
1917	
Site	The Site appears to be undeveloped vacant land.
North	Vacant land
South	Vacant land
East	The property is shown as Otis Elevator Co. and includes a carpenter shop, motor and control room, storage, and a boiler house proximate the Site.
West	Residential/vacant
1939, 1950	
Site	The Site appears to be undeveloped vacant land.
North	Vacant land

South	Portion of the larger Otis Elevator Co. including a boiler house and one gasoline UST.
East	The property is shown as Otis Elevator Co. and includes a beam shop, traveling crane, packing warehouse, railroad, and machine shop proximate the Site.
West	Residential/Commercial including an auto repair operation shown in 1950 at 228 Sheridan Avenue.
1986	
Site	The Site appears to be undeveloped vacant land.
North	Vacant land
South	Portion of the larger Foster Hard Manufacturing operation including a maintenance shop, a gasoline gallon storage tank, oil storage area, and a storage building.
East	Portion of the larger Foster Hard Manufacturing operation including a fuel oil tank proximate the southeastern corner of the Site.
West	Residential/Commercial including a rug cleaning operation at 228 Sheridan Avenue.

5.4.3 Historic City Directories

Historic city directories, dated between 1925 and 2017, were reviewed (generally in five-year intervals) through an EDR database search for additional information regarding the Site. A historic address of 701 East Delavan Avenue was identified during the investigation. Appendix E includes a copy of the abstract report.

Year	Greater Property Listing(s)
1925-1997	No listings/coverage
1998, 1999, 2001	Mount Olive Baptist Church
2004	Capital Dimensions
2008, 2009, 2014, 2017	Mount Olive Baptist Church

5.4.4 Historical Topographic Maps

Historical topographic maps were reviewed for additional information regarding the Site. Appendix F includes copies of the maps.

YEAR	OBSERVATIONS
1894, 1901, 1946, 1948, 1950	
Site	The Site appears to be vacant land.
1965, 2013	
Site	Due to extensive development in the area of the Site, individual structures are not shown on the map

5.4.5 Municipal Records

Records readily available at the City of Buffalo municipal offices (Building and Fire Departments) as well as records available online from the Erie County GIS were reviewed for additional information relative to the Site. Benchmark also researched historic addresses identified for the Site through review of Sanborn maps. Note that a FOIL was submitted to the City of Buffalo as required to access their records. The following summarizes municipal records provided to Benchmark at the time of this assessment; copies of the pertinent records are included in Appendix G.

- The Site, Tax ID No. 90.78-5-1.1, is a southern portion of a greater property addressed at 703 East Delavan Avenue. The Site is owned by Mt. Olive Baptist Church.
- A fire record indicates the greater property was owned by Mt. Olive Baptist Church in at least 1995.
- The Site has access to natural-gas, municipal sanitary sewer, public water and electric.
- A letter dated February 17, 2021 in response to the FOIL indicates that there are no records on file in connection with fuel storage tanks, fire violations, or property maintenance/code violations.

The City of Buffalo Building Inspector would not provide Benchmark with an interview relative to the Site.

5.4.6 Site History Provided by Site Contact

According to the site contact (current property owner), the Site is currently and has historically been used as a green space/athletic field. The Site contact also indicated senior housing is planned to be constructed on Site.

Section 7.1 includes additional information provided by the Site contact.

5.4.7 Abstract of Title

Abstract of Title information was not provided to Benchmark.

5.4.8 Previous Assessments

A geotechnical engineering report was completed by Terracon Consultants-NY, Inc., dated February 8, 2021. The report was completed to provide information and geotechnical engineering recommendations relative to the construction of a proposed senior housing project planned to be completed on-Site. The assessment included the advancement of seventeen test borings to depths ranging from approximately 1.6 to 6 feet below existing Site grades throughout the Site. The following summarizes the results found in the previous study:

- The Site is developed with a grass-covered athletic field with associated paved areas in the northern portion of the Site.
- Fill material generally consisting of a mixture of red-brown and black silt and sand with cinders and fragments of rock, brick, and concrete was encountered at depths varying from 0.5 fbg to 4 fbg at 15 of the 17 test borings completed throughout the property.
- Bedrock was encountered at depths varying from 2 to 4 fbg.
- Groundwater was generally not observed in the borings during the assessment.

A copy of the previous study is included in Appendix H.

5.4.9 Summary of Historic Uses

Approximate Years	Reported or Suspected Use	Owner/Occupant
At least 1894 to prior to 1995	The Site is primarily vacant land with unknown disturbances identified on historic aerials from at least 1938 through at least 1951.	Unknown individual owners
At least 1995 to at least 2013	The Site is primarily vacant land with a portion of a greater asphalt parking lot for the adjacent Mt. Olive Baptist Church on the northern portion of the Site.	Mt. Olive Baptist Church
At least 2013 to present	The Site is developed with a grass covered athletic field and the portion of the parking lot remains on the northern portion of the Site.	Mt. Olive Baptist Church

5.5 Environmental Liens

Benchmark is not aware of any formal environmental liens, enforcement action, civil, judicial or administrative enforcement cases in connection with the Site.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

A visual review of the Site was completed to document Site conditions and identify potential RECs. The presence of snow cover hindered observations of ground surfaces at the time of the Site reconnaissance.

6.2 General Site Setting

Mr. Chester Hochreiter of Benchmark performed the Site reconnaissance on February 18, 2021.

Appendix I includes photographs taken during the Site reconnaissance.

6.3 Site Visit Findings

6.3.1 Current On-Site Operations

The Site is currently a grass covered athletic field with a portion of an asphalt parking lot in the northern portion of the Site.

6.3.2 Storage Tanks

No evidence indicative of an AST or UST was observed at the time of the Site reconnaissance.

6.3.3 Hazardous or Regulated Materials

No hazardous or regulated wastes were observed at the time of Site reconnaissance.

6.3.4 Solid, Hazardous or Regulated Wastes

No wastes are generated on-Site at this time as the Site.

6.3.5 Fill

Benchmark is aware of the presence of fill material on-Site based on the previous geotechnical report summarized above.

6.3.6 Suspected Former Building Foundation

None observed.

6.3.7 Staining/Spillage and Pools of Liquid

None observed.

6.3.8 Stressed and/or Dead Vegetation

None observed.

6.3.9 Odors

None noted.

6.3.10 Unidentified Substance Containers

None observed.

6.3.11 Heating/Cooling

None

6.3.12 Wastewaters

The Site currently has access to the municipal sanitary sewer system.

6.3.13 Potable Water Supply/Wells

The Site has access to the municipal water supply.

6.3.14 Drains and Sumps

No drains or sumps were observed during the Site reconnaissance.

6.3.15 Air Emissions

No process exhaust systems were noted on-site at the time of the Site inspection.

6.3.16 Pits, Ponds and Lagoons

None observed.

6.3.17 Septic System

None observed.

6.3.18 PCBs

One utility-owned pole-mounted transformers, was noted along the southwestern property border of the Site. It is unknown whether the transformer is non-PCB. No concerns (staining, odors, etc.) were noted proximate to the transformers at the time of the Site visit.

6.3.19 Previous Intrusive Work

Two stakes associated with boring locations from the previous geotechnical study were observed at the time of Site reconnaissance.

6.3.20 Adjacent Property Use

Adjacent properties are currently utilized for residential/commercial/industrial purposes, including a manufacturing operation to the south and east of the Site. No concerns (staining, odors, obvious spills, etc.) were noted on-Site in connection with current adjacent operations.

6.4 Summary of Site Reconnaissance Potential Concerns

The following potential environmental concerns were identified at the time of the Site reconnaissance:

- Based on the history of the Site and the findings of a geotechnical investigation, fill materials from unknown origins were brought to the Site.
- The Site is located in an area with a heavy industrial history.

7.0 INTERVIEWS

7.1 Site Owner

An Environmental Questionnaire requesting information on any known environmental hazards or impacts at the Site was completed by the current property owner, Mr. Robert Mootry. Appendix J includes the completed questionnaire. The following summarizes the information provided by Mr. Mootry:

- The Site is currently used as a green space/athletic field.
- The Site is intended to be used as senior housing.
- Mr. Mootry is unaware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Site. Further, Mr. Mootry is unaware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products related to the Site.

7.2 Municipal Interview

As indicated above, the City of Buffalo Building Inspectors would not provide interviews relative to the Site.

7.3 Former Site Owner/Operator

Former owners/operators were not interviewed as part of this assessment.

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

Other environmental considerations are discussed below. Such include non-scope considerations, described under ASTM E1527-13 as ancillary conditions that are typically outside the standard Phase I scope of practice. Non-scope considerations, such as asbestos, lead, radon, wetlands and mold, are not considered RECs under ASTM E1527-13, but may represent health or environmental issues impacting the Site and/or property value.

8.1 Asbestos and lead

As the Site is currently undeveloped land, the presence of asbestos and lead is not anticipated.

8.2 Radon

Research in the area of the Site completed by the New York State Department of Health - Bureau of Environmental Radiation Protection (Radon) suggests an average basement radon concentration of 1.15 pCi/L in the area of the Site, which is below the USEPA action level of 4.0 pCi/L. As the site is vacant land, radon is not a current concern; however, such should be considered as part of future redevelopment activities.

8.3 Wetlands and Flood Zones

The EDR regulatory database includes general information on wetlands and flood zones. No wetland or flood zone areas were identified on-site or adjacent to the Site.

8.4 Microbial Contamination (Mold)

As the Site is vacant land, the presence of mold does not apply to this project.

8.5 Vapor Encroachment Conditions

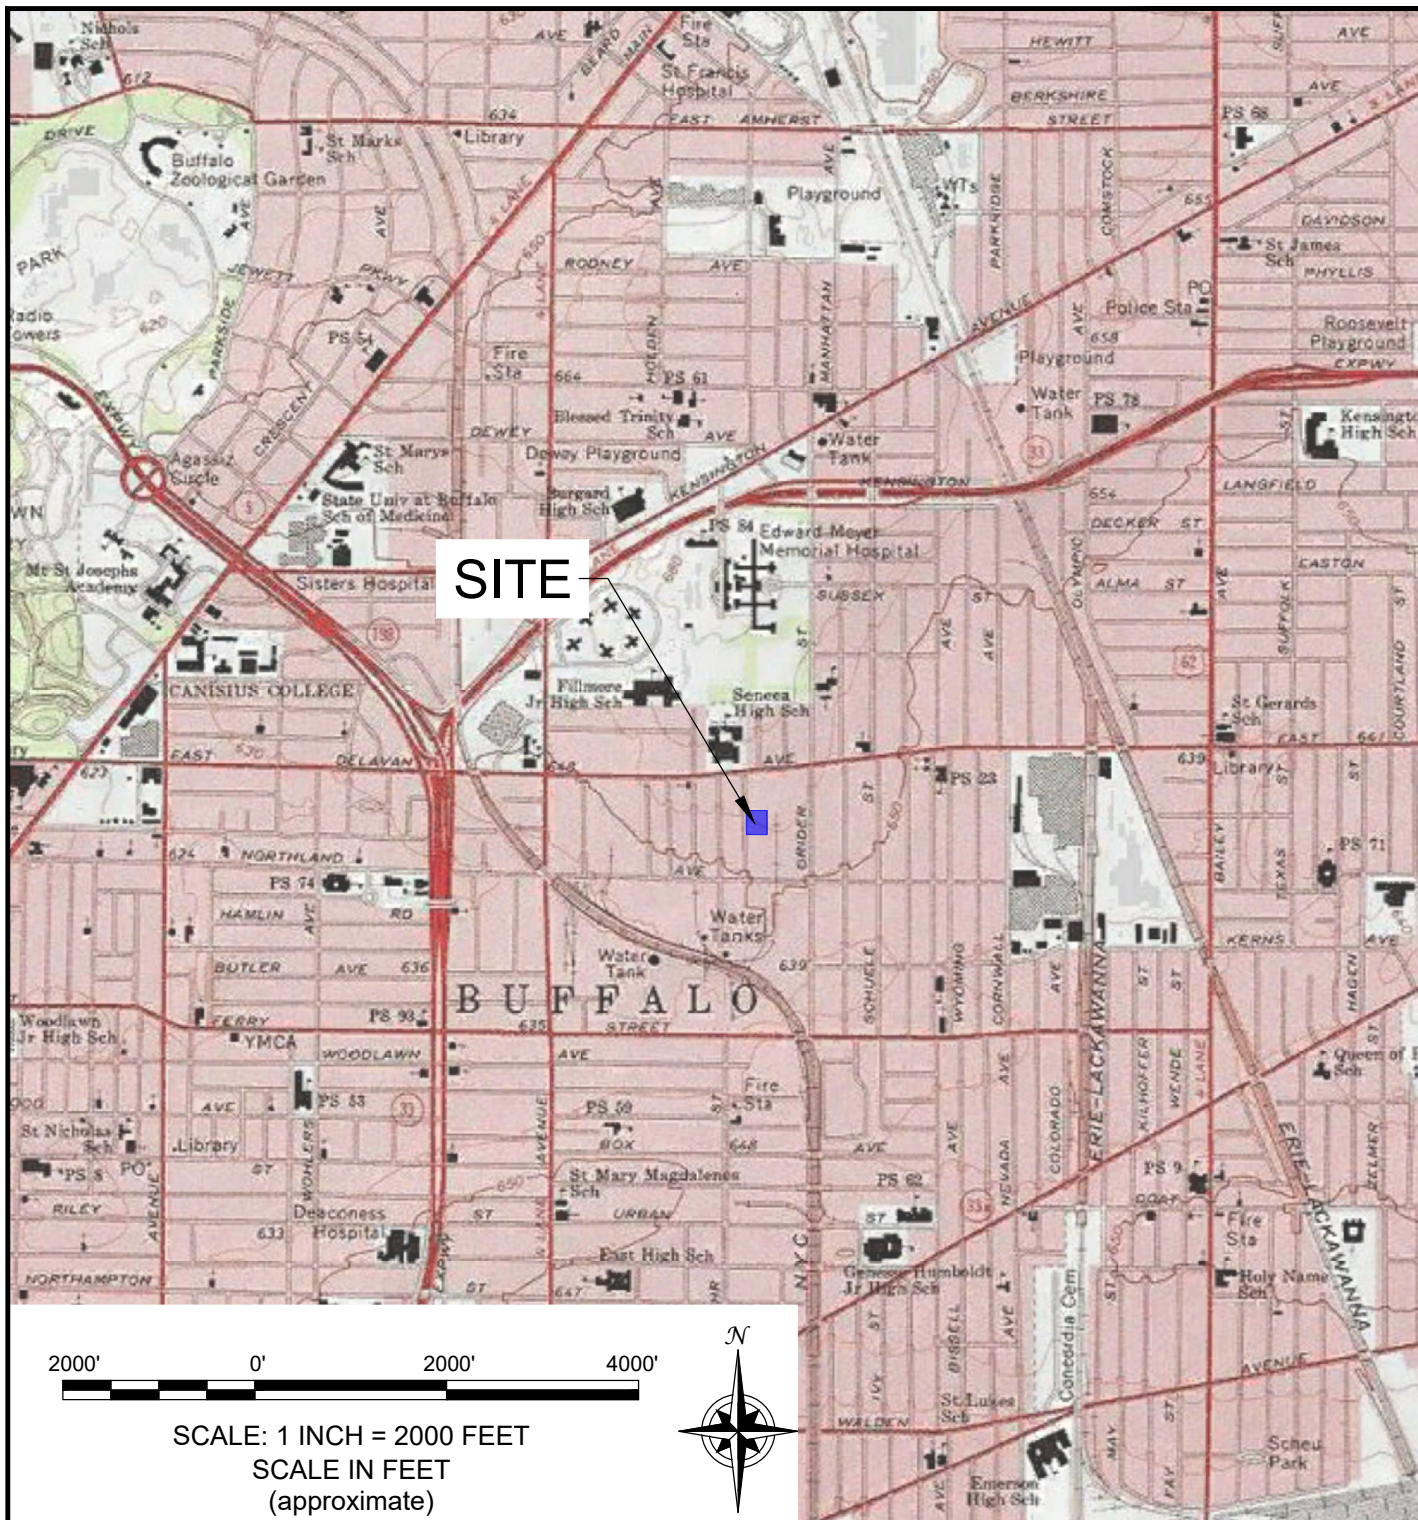

This assessment included review of the regulatory database discussed in Section 6.1 in relation to the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.

If soil or groundwater is contaminated with a volatile compound such as gasoline or solvents, that contaminant can migrate through the soil pore space and end up in the air inside of buildings, especially within basement areas. Soil vapors do not necessarily migrate along groundwater flow paths; they can also move up hydraulic gradients and can extend beyond a groundwater plume. The ASTM standard named this a VEC, which is a more recent environmental concern and there have been a significant number of sites where vapor intrusion has been discovered. The state and federal environmental regulators have "reopened" numerous spill and waste sites in order to assess whether vapor encroachment is a concern.

Adjacent cleaning/dry cleaning facilities, automotive repair, and industrial operations with a fuel oil storage tank, a gasoline UST, and an oil storage area represent a potential VEC at the Site. Further testing would be required to assess whether a VEC exists at the Site.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/28/2020 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
VIBRATECH Site ID: 0206025 EPA Id: NYN000206025	537 EAST DELVAM AVEN	W 1/4 - 1/2 (0.274 mi.)	L67	245
1681 FILLMORE	1681 FILLMORE AVENUE	WSW 1/4 - 1/2 (0.384 mi.)	78	293

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/28/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NATIONAL GRID - DEWE EPA ID:: NYD000730390	144 KENSINGTON AVE	NW 1/2 - 1 (0.843 mi.)	97	454

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/09/2020 has revealed that there are 6 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2020 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/09/2020 has revealed that there are

EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

NY ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

A review of the NY ERP list, as provided by EDR, and dated 11/09/2020 has revealed that there is 1 NY ERP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

A review of the FUSRAP list, as provided by EDR, and dated 08/08/2017 has revealed that there is 1 FUSRAP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
BUFLOVAK CO. Site Status: Eliminated from further consideration under FUSRA Site ID: NY.56	1543 FILLMORE AVE.	SW 1/4 - 1/2 (0.486 mi.)	91	385

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 15 EDR Hist Auto

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 7 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was JFO 09/26/01 JFO ON SITE MET WITH FORMAN TIM MULVEY. HE WAS DIGGING A TRENCH FOR A SEWER LINE AND DISCOVERED THE CONTAMINATION. HE WILL PLACE ON PLASTIC ALL CONTAMINATED SOIL HE COMES ACROSS. I WILL CHECK SITE TOMORROW. ALSO CALLED BOB FARGO OF THE MCDONALD'S CORP. HE WAS NOT IN, I LEFT A MESSAGE ON HIS MACHINE. 09/27/01 JFO TELCON WITH TIM MULVEY THE OWNER OF THE CONSTRUCTION COMPANY IN LOCKPORT. I EXPLAINED OUR REQUIREMENTS FOR CLEANUP. 10/01/01 JFO CALL TO BOB FARGO. LEFT A MESSAGE ON HIS V-MAIL FOR HIM TO CALL ME. 10/02/01 JFO SENT TREATMENT LETTER TO MR. FARGO. RESPONSE 10/12/01 10/03/01 JFO ON SITE MET WITH FORMAN TIM M. THE HOLE LOOKS OK. I SHOWED TIM WHERE TO COLLECT THE SAMPLES. ALSO I SPOKE WITH THE OWNER OF THE CONSTRUCTION TIM MULVEY. HE WILL HIRE A LAB TO SAMPLE THE TRENCH AND THE SOIL PILE. 3 SAMPLES 2 SIDEWALL AND 1 BOTTOM. 8021 AND 8270. 10/18/01 JFO RECEIVED THE ANALYTICAL RESULTS FOR THE TRENCH AND THE SOIL PILE. THE TRENCH IS

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

OSHA ESTABLISHMENT

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:

"9/1/15 FG CALLED FOR JAMES MOORE OR PETER CAMMARRATTA REQUESTING THE PHASE II REPORT AS IT HAS NOT BEEN SUBMITTED YET. JAMES MOORE CALLED AND SAID THERE IS A MEETING SCHEDULED TO REVIEW THE SITE THURSDAY. THE REPORT WILL BE FINALIZED AND SUBMITTED POSSIBLY NEXT WEEK. 9/3/15 PETER CAMARRATO CALLED. HE SAID THE PHASE II NEEDS TO BE FINALIZED NEXT WEEK. HE WILL PROVIDE A COPY ONCE IT IS COMPLETE. 362-8361 9/15/15 RECORDED COPY OF PHASE II From: Staniszewski, Chad (DEC) Sent: Tuesday, October 20, 2015 3:14 PM To: Stebbins, David Cc: Sutton, Gregory (DEC) Subject: FW: spill 1503832 777 Northland, Buffalo Hi Dave, Have you decided how you want to proceed relative to the open spill at 777 Northland? Are you considering the BCP at this point? Let me know. Thanks, Chad Chad Staniszewski, PE Acting Region 9 Remediation Engineer, Division of Environmental Remediation From: Stebbins, David [mailto:dstebbins@ecidany.com] Sent: Wednesday, October 21, 2015 1:31 PM To: Sutton, Gregory (DEC); Staniszewski, Chad (DEC) Cc: pcammarata@buffalourbandevelopment.com Subject: RE: spill 1503832 777 Northland, Buffalo Greg and Chad, Give us a couple of days to review this internally. Thanks, Dave dstebbins@buffalourbandevelopment.com From: Sutton, Gregory (DEC) [mailto:gregory.sutton@dec.ny.gov] Sent: Tuesday, October 20, 2015 3:24 PM To: Stebbins, David ; Staniszewski, Chad (DEC) Cc: pcammarata@buffalourbandevelopment.com Subject: RE: spill 1503832 777 Northland, Buffalo Dave Problem is this is an open spill and therefore we can t give you an open ended schedule to perform the work. It would be better if you applied and were accepted into the BCP and then we could adjust the implementation schedule, however that is limited by the constraints of the BCA requirements. Greg From: Stebbins, David [mailto:dstebbins@ecidany.com] Sent: Tuesday, October 20, 2015 3:19 PM To: Staniszewski, Chad (DEC) Cc: Sutton, Gregory (DEC); pcammarata@buffalourbandevelopment.com Subject: RE: spill 1503832 777 Northland, Buffalo Yes, we would like to enter the BCP, although we would prefer to wait to apply until we are further along the redevelopment path. Dave dstebbins@buffalourbandevelopment.com From: Staniszewski, Chad (DEC) [mailto:chad.staniszewski@dec.ny.gov] Sent: Tuesday, October 20, 2015 3:14 PM To: Stebbins, David Cc: Sutton, Gregory (DEC) Subject: FW: spill 1503832 777 Northland, Buffalo Hi Dave, Have you decided how you want to proceed relative to the open spill at 777 Northland? Are you considering the BCP at this point? Let me know. Thanks, Chad Chad Staniszewski, PE 11/5/15 GPS: TELECON W/PETER CAMMARATA AND DAVE STEBBINS BURA - THEY PROPOSED HIRING LIRO TO DEVELOP A SOW TO PERFORM A SITE CHARACTERIZATION TO IDENTIFY THE EXTENT OF THE CONTAMINATION. THIS WILL ALLOW THEM TO BETTER UNDERSTAND THE REMEDIAL REQUIREMENTS OF THE SITE AND BUDGET FOR ANY REMEDIATION THAT WOULD BE NECESSARY. I AGREED THIS WOULD BE ACCEPTABLE. THEY WOULD CONTACT LIRO TODAY AND HAVE SOW TO DEC BY NEXT WEEK WITH IMPLEMENTATION SOON AFTER. 11/16/15 From: Gallego, Francine (DEC) Sent: Monday, November 16, 2015 3:11 PM To: 'dstebbins@ecidany.com' Cc: Sutton, Gregory (DEC); Staniszewski, Chad (DEC); 'dsutton@city-buffalo.com'; 'pcammarata@buffalourbandevelopment.com' Subject: Spill 1503832 777 Northland Ave, Buffalo Mr. Stebbins: LiRo Engineers provided the 11/13/15 Investigation Work Plan for the site. The work proposed includes the advancement of 3 bedrock wells surrounding MW3 to address the TCE discovered. The Department has the following comments on additional work at the property: The following comments were included in the September 2015 Fisher Associates Phase II Environmental Assessment: Soil sampling to determine the localized

horizontal and vertical extent of contamination surrounding SB009, SB010, and SB019 should be performed to identify the area to remediate. This area has exceeded levels of RCRA Metals, and PCBs, with noticeable petroleum staining and product. It is recommended that MW-1, MW-2 and MW-3 be resampled within three (3) months of the original Phase II sampling to compare the initial findings. Cleaning and removal of existing waste in pits and on pit walls, sumps, secondary containment areas (waste oil AST), wood flooring, and the five (5) USTs, will need to be conducted and associated waste handled properly for disposal. Samples for Toxicity Characterization Leachate Procedure (TCLP) will most likely be required for landfill characterization before disposal of any materials contained in these waste containers or solids. The following comments in addition are provided: All of the 5 ust s identified contain petroleum products. Only SB011 was advanced in or near the ust areas. You may want to expand your boring program to investigate both areas where ust s are located including adding additional borings near SB011. Petroleum impacts at ASB5 were identified at levels above CP51 values. Additional subsurface investigation in this area is recommended. Lead levels at ASB8 were elevated. A TCLP lead analysis is recommended at this location. Please provide your response. If you have any questions, please call. Best Regards, Francine Gallego NYSDEC 270 Michigan Ave Buffalo, NY 14203 Francine.gallego@dec.ny.gov 716-851-7220 From: Stebbins, David [mailto:dstebbins@ecidany.com] Sent: Monday, November 16, 2015 3:56 PM To: Gallego, Francine (DEC) Cc: Sutton, Gregory (DEC); Staniszewski, Chad (DEC); dsutton@city-buffalo.com; pcammarata@buffalourbandevelopment.com Subject: RE: Spill 1503832 777 Northland Ave, Buffalo Francine, Thank you for your prompt response to the work plan. We will work with LiRo to adjust accordingly. Dave dstebbins@buffalourbandevelopment.com 11/24/15 D STEBBINS WITH BUDC RESPONDED TO THE DEPARTMENTS EMAIL. THEY PLAN ON INSTALLING THE WELLS TO CHECK ON THE TCE DISCOVERED AND WILL SAMPLE THEM NOW AND IN 6 MONTHS. THEY WILL HAVE THEIR CONSULTANT RESPOND TO THE DEPARTMENTS OTHER ISSUES BY EARLY SPRING 2016. 9/6/16 From: Staniszewski, Chad (DEC) Sent: Tuesday, September 06, 2016 10:29 AM To: Hinton, Michael (DEC) Cc: Gallego, Francine (DEC) Subject: RE: 777 Northland, Buffalo Spill number 1503832 Have not received a BCP application for this one yet. I have not had any recent conversations regarding entering it into the BCP so we should continue to follow up as a spill. Chad Staniszewski, PE Region 9 Remediation Engineer, Division of Environmental Remediation New York State Department of Environmental Conservation 270 Michigan Avenue, Buffalo, NY 14203 P: 716-851-7220 - F: 716-851-7226 - chad.staniszewski@dec.ny.gov 9/8/16 From: Gallego, Francine (DEC) Sent: Thursday, September 08, 2016 12:29 PM To: 'dstebbins@buffalourbandevelopment.com' ; 'pcammarata@buffalourbandevelopment.com' ; 'dsutton@city-buffalo.com' Cc: Staniszewski, Chad (DEC) ; Hinton, Michael (DEC) Subject: 1503832 777 Northland, Buffalo Hi, LiRo Engineers provided the 11/13/15 Investigation Work Plan for the site. The Department has not had any updates on the proposed work. Please provide an update on the investigation to be completed on the property. Please call if you have any questions. Best Regards, Francine Gallego NYSDEC 270 Michigan Ave Buffalo, NY 14203 Francine.gallego@dec.ny.gov 716-851-7220 9/19/16 LIRO SUBMITTED THE MW3 SAMPLING LETTER REPORT AND REQUESTED CLOSURE. FG TOLD LIRO ET AL THAT ADDITIONAL WORK BESIDES SAMPLING AT MW3 WOULD BE REQUIRED BEFORE CLOSURE COULD BE

CONSIDERED. 9/23/16 REQUEST FOR RESPONSE TO BUDC: From: Gallego, Francine (DEC) Sent: Friday, September 23, 2016 10:12 AM To: 'Frank, Stephen' ; Peter Cammarata ; dstebbins@buffalourbandevelopment.com; dsutton@city-buffalo.com Cc: Staniszewski, Chad (DEC) ; Hinton, Michael (DEC) ; Kreuzer, Robert ; Grasso, Peter (DEC) Subject: RE: 1503832 777 Northland, Buffalo Steve, Thank you for the clarification on the status of the 683 Northland site. My understanding of the spill report was that it was for all of the properties included in the Phase II submitted, not just 777 Northland. That is why my comments included the spills identified on the 683 parcel. I have additional comments on the remaining parcels included in the Phase II. Please let me know who the individual owners are so that I can include them in the correspondence. I have the following comments: 631 Northland The Phase II report identifies wood block flooring and leftover chemicals that are a concern. 683 Northland I have attached the PBS Facility Information Report for your reference. This indicates there are 7 tanks still on the property. I have also attached the City of Buffalo Fire Department records for your review. 711 Northland Attached are the City of Buffalo Fire Department and permit records. These indicate there was a leaky 12000 gallon fuel oil ust on the property. 733 Northland Attached are City of Buffalo Fire Department records that indicate there was a leaky 550 gallon ust on the property. 743 745 Northland The attached City of Buffalo permit records identify the presence of a steel gas tank. 777 Northland The Department is requiring that you proceed with the installation of additional monitoring wells surrounding MW3 to determine the direction of groundwater flow and upgradient and downgradient conditions. The attached City of Buffalo Fire Department records indicate there was a gas station on the property. A 550 gallon replaced an existing tank of unknown size. The Phase II identifies leftover paint/chemical containers. It also identifies the presence of 100 cu yds of tires. Please provide your response to these comments by October 14, 2016. If you have any questions, please call me at 716-851-7220 or email me at francine.gallego@dec.ny.gov. Best Regards, Francine Gallego NYSDEC 270 Michigan Ave Buffalo, NY 14203 francine.gallego@dec.ny.gov 716-851-7220 11/22/16 LIRO SUBMITTED A WORK PLAN FOR THE 3 MONITORING WELLS ONLY. THEY WILL COMPLETE THE ADDITIONAL INVESTIGATION AS WELL AT A LATER DATE. THEY WILL ONLY BE DEALING WITH 777 NORTHLAND AT THIS TIME. 1/17/17 LIRO PROVIDED THE MW REPORT. 3 BEDROCK WELLS WERE INSTALLED. LOW LEVELS OF CHLORINATED SOLVENT WAS DETECTED IN THE WELLS CONSISTENT WITH WHAT WAS FOUND IN MW3 PREVIOUSLY. WELL 1 OVERBURDEN SOIL HAD LOW LEVEL VOLATILES (NOT CHLORINATED). LIRO HAS REQUESTED AN INACTIVE STATUS. THE FORMER GAS STATION WAS NOT ADDRESSED - NEITHER WERE THE LEFTOVER CHEMICALS OR THE TIRES. 1/19/17 MARY MACINTOSH, REGIONAL SPILLS GEOLOGIST, AND CHAD STANISZEWSKI, REGIONAL REMEDIATION ENGINEER INDICATED THAT THE SITE SHOULD BE MADE INACTIVE. NO FURTHER WORK IS REQUIRED."

Remarks:

"while conducting a phase II on the property, discovered minor petroleum impacts in the groundwater analytical results. a copy of the report will be forwarded in a few weeks. tce identified in water at 28 ppb."

Tank Info:

Tank Number: 16
Tank Id: 281703

Equipment Records:

H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
E00 - Piping Secondary Containment - None
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.

Tank Type: Steel/Carbon Steel/Iron

Tank Status: In Service
Pipe Model: Not reported
Install Date: 03/03/2010
Capacity Gallons: 3200
Tightness Test Method: -
Date Test: Not reported

Contact Name: JEFF J. PLESH
DEC Memo: "03/13/07 JFO ON SITE MET WITH MR PLESH. HE SHOWED ME THE SPILL AREA IN THE BASEMENT. IT WAS LESS THAN 1 GALLON AND DRIED UP. HE WILL SCRAPE IT UP AND DISPOSE IN REG WASTE STREAM. 03/19/07 JFO RECEIVED FROM MR PLESH A BRIEF REPORT ON THIS SPILL. NO FURTHER ACTION REQUIRED. CLOSED"

Remarks: "Tom at site this morning and observed spill apparently resulting from a fork truck hitting a drum (possibly two) in the plant basement. Drum(s) contained solvent naphtha The area is used to store numerous drummed chemicals. Release outside of basement was not evident; however Tom did not see any actions or attempts to contain or clean-up spilled material."

the City of Buffalo, Erie County. The site is bounded to the north by Northland Avenue, a railroad spur to the south, and commercial/industrial properties to the east and west. Site Features: The site is mostly flat and includes an approximately 235,000 square foot building complex. The building complex consists of a four-story office area along Northland Avenue, a series of connecting manufacturing spaces, and a detached one-story garage. Areas not covered by buildings are either paved or covered by grass and other small vegetation. Current Zoning and Land Use: The site and adjacent parcels are zoned for industrial use. The site is partially redeveloped as the WNY Workforce Training Center in the northern portion of the building, with portion of the remaining building occupied by Buffalo Manufacturing Works. The surrounding area includes commercial, industrial, and residential uses. The nearest residential property is located approximately 175 feet north of the site. Past Use of the Site: The site was developed as a machine and tool works facility beginning in approximately 1911. The facility used hydraulic equipment, electrical equipment, and other industrial equipment (i.e., cranes, foundry, etc.) that led to the present site contamination. The building has had several additions and upgrades since its initial construction. The property was most recently used for storage until it was purchased by the current owner in 2015. Site Geology and Hydrogeology: Site overburden contains native soil and fill material from the ground surface to depths of 2 to 12 feet below ground surface. The fill generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood. Native soil, where present, typically consists of brown silty clay and is directly on top of bedrock. Limestone bedrock is present at depths ranging from 2 feet to 12 feet below ground surface. Groundwater was observed in bedrock at depths ranging from approximately 9 feet to 12 feet below ground surface. Groundwater flow is to the south and southwest.

Env Problem:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals in soil and trichloroethylene in soil vapor. Additionally, petroleum product (hydraulic oil) is present in some areas of the on-site bedrock. Remedial actions have successfully achieved site specific soil cleanup objectives for commercial use. Residual contamination in the soil, bedrock, and soil vapor is being managed under a Site Management Plan

Health Problem:

Measures are in place to properly manage human exposures to residual site contaminants.

Site Description:

Location: The Western New York Workforce Training Center is an 8.548-acre site located in an urban area at 683 Northland Avenue in the City of Buffalo, Erie County. The site is bounded to the north by Northland Avenue, a railroad spur to the south, and commercial/industrial properties to the east and west. Site Features: The site is mostly flat and includes an approximately 235,000 square foot building complex. The building complex consists of a four-story office area along Northland Avenue, a series of connecting manufacturing spaces, and a detached one-story garage. Areas not covered by buildings are either paved or covered by grass and other small vegetation. Current Zoning and Land Use: The site and adjacent parcels are zoned for industrial use. The site is partially redeveloped as the WNY Workforce Training Center in the northern portion of the building, with portion of the remaining building occupied by Buffalo Manufacturing Works. The surrounding area includes commercial, industrial, and residential uses. The nearest residential property is located approximately 175 feet north of the site. Past Use of the Site: The site was developed as a machine and tool works facility beginning in approximately 1911. The facility used hydraulic equipment, electrical equipment, and other industrial equipment (i.e., cranes, foundry, etc.) that led to the present site contamination. The building has had several additions and upgrades since its initial construction. The property was most recently used for storage until it was purchased by the current owner in 2015. Site Geology and Hydrogeology: Site overburden contains native soil and fill material from the ground surface to depths of 2 to 12 feet below ground surface. The fill generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood. Native soil, where present, typically consists of brown silty clay and is directly on top of bedrock. Limestone bedrock is present at depths ranging from 2 feet to 12 feet below ground surface. Groundwater was observed in bedrock at depths ranging from approximately 9 feet to 12 feet below ground

surface. Groundwater flow is to the south and southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals in soil and trichloroethylene in soil vapor. Additionally, petroleum product (hydraulic oil) is present in some areas of the on-site bedrock. Remedial actions have successfully achieved site specific soil cleanup objectives for commercial use. Residual contamination in the soil, bedrock, and soil vapor is being managed under a Site Management Plan

Health Problem: Measures are in place to properly manage human exposures to residual site contaminants.

Site Description: Location: The Western New York Workforce Training Center is an 8.548-acre site located in an urban area at 683 Northland Avenue in the City of Buffalo, Erie County. The site is bounded to the north by Northland Avenue, a railroad spur to the south, and commercial/industrial properties to the east and west. Site Features: The site is mostly flat and includes an approximately 235,000 square foot building complex. The building complex consists of a four-story office area along Northland Avenue, a series of connecting manufacturing spaces, and a detached one-story garage. Areas not covered by buildings are either paved or covered by grass and other small vegetation. Current Zoning and Land Use: The site and adjacent parcels are zoned for industrial use. The site is partially redeveloped as the WNY Workforce Training Center in the northern portion of the building, with portion of the remaining building occupied by Buffalo Manufacturing Works. The surrounding area includes commercial, industrial, and residential uses. The nearest residential property is located approximately 175 feet north of the site. Past Use of the Site: The site was developed as a machine and tool works facility beginning in approximately 1911. The facility used hydraulic equipment, electrical equipment, and other industrial equipment (i.e., cranes, foundry, etc.) that led to the present site contamination. The building has had several additions and upgrades since its initial construction. The property was most recently used for storage until it was purchased by the current owner in 2015. Site Geology and Hydrogeology: Site overburden contains native soil and fill material from the ground surface to depths of 2 to 12 feet below ground surface. The fill generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood. Native soil, where present, typically consists of brown silty clay and is directly on top of bedrock. Limestone bedrock is present at depths ranging from 2 feet to 12 feet below ground surface. Groundwater was observed in bedrock at depths ranging from approximately 9 feet to 12 feet below ground surface. Groundwater flow is to the south and southwest.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals in soil and trichloroethylene in soil vapor. Additionally, petroleum product (hydraulic oil) is present in some areas of the on-site bedrock. Remedial actions have successfully achieved site specific soil cleanup objectives for commercial use. Residual contamination in the soil, bedrock, and soil vapor is being managed under a Site Management Plan
Health Problem: Measures are in place to properly manage human exposures to residual site contaminants.

the City of Buffalo, Erie County. The site is bounded to the north by Northland Avenue, a railroad spur to the south, and commercial/industrial properties to the east and west. Site Features: The site is mostly flat and includes an approximately 235,000 square foot building complex. The building complex consists of a four-story office area along Northland Avenue, a series of connecting manufacturing spaces, and a detached one-story garage. Areas not covered by buildings are either paved or covered by grass and other small vegetation. Current Zoning and Land Use: The site and adjacent parcels are zoned for industrial use. The site is partially redeveloped as the WNY Workforce Training Center in the northern portion of the building, with portion of the remaining building occupied by Buffalo Manufacturing Works. The surrounding area includes commercial, industrial, and residential uses. The nearest residential property is located approximately 175 feet north of the site. Past Use of the Site: The site was developed as a machine and tool works facility beginning in approximately 1911. The facility used hydraulic equipment, electrical equipment, and other industrial equipment (i.e., cranes, foundry, etc.) that led to the present site contamination. The building has had several additions and upgrades since its initial construction. The property was most recently used for storage until it was purchased by the current owner in 2015. Site Geology and Hydrogeology: Site overburden contains native soil and fill material from the ground surface to depths of 2 to 12 feet below ground surface. The fill generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood. Native soil, where present, typically consists of brown silty clay and is directly on top of bedrock. Limestone bedrock is present at depths ranging from 2 feet to 12 feet below ground surface. Groundwater was observed in bedrock at depths ranging from approximately 9 feet to 12 feet below ground surface. Groundwater flow is to the south and southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals in soil and trichloroethylene in soil vapor. Additionally, petroleum product (hydraulic oil) is present in some areas of the on-site bedrock. Remedial actions have successfully achieved site specific soil cleanup objectives for commercial use. Residual contamination in the soil, bedrock, and soil vapor is being managed under a Site Management Plan

Health Problem: Measures are in place to properly manage human exposures to residual site contaminants.

Site Code: 533504
Site Description: Location: The Western New York Workforce Training Center is an 8.548-acre site located in an urban area at 683 Northland Avenue in the City of Buffalo, Erie County. The site is bounded to the north by Northland Avenue, a railroad spur to the south, and commercial/industrial properties to the east and west. Site Features: The site is mostly flat and includes an approximately 235,000 square foot building complex. The building complex consists of a four-story office area along Northland Avenue, a series of connecting manufacturing spaces, and a detached one-story garage. Areas not covered by buildings are either paved or covered by grass and other small vegetation. Current Zoning and Land Use: The site and adjacent parcels are zoned for industrial use. The site is partially redeveloped as the WNY Workforce Training Center in the northern

portion of the building, with portion of the remaining building occupied by Buffalo Manufacturing Works. The surrounding area includes commercial, industrial, and residential uses. The nearest residential property is located approximately 175 feet north of the site. Past Use of the Site: The site was developed as a machine and tool works facility beginning in approximately 1911. The facility used hydraulic equipment, electrical equipment, and other industrial equipment (i.e., cranes, foundry, etc.) that led to the present site contamination. The building has had several additions and upgrades since its initial construction. The property was most recently used for storage until it was purchased by the current owner in 2015. Site Geology and Hydrogeology: Site overburden contains native soil and fill material from the ground surface to depths of 2 to 12 feet below ground surface. The fill generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood. Native soil, where present, typically consists of brown silty clay and is directly on top of bedrock. Limestone bedrock is present at depths ranging from 2 feet to 12 feet below ground surface. Groundwater was observed in bedrock at depths ranging from approximately 9 feet to 12 feet below ground surface. Groundwater flow is to the south and southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals in soil and trichloroethylene in soil vapor. Additionally, petroleum product (hydraulic oil) is present in some areas of the on-site bedrock. Remedial actions have successfully achieved site specific soil cleanup objectives for commercial use. Residual contamination in the soil, bedrock, and soil vapor is being managed under a Site Management Plan

Health Problem: Measures are in place to properly manage human exposures to residual site contaminants.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

(2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F017
Waste Description: Not Defined

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U159
Waste Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U160
Waste Description: 2-BUTANONE, PEROXIDE (R,T) (OR) METHYL ETHYL KETONE PEROXIDE (R,T)

Waste Code: U161
Waste Description: 4-METHYL-2-PENTANONE (I) (OR) METHYL ISOBUTYL KETONE (I) (OR) PENTANOL, 4-METHYL-

Waste Code: U162
Waste Description: 2-PROPENOIC ACID, 2-METHYL-, METHYL ESTER (I,T) (OR) METHYL METHACRYLATE (I,T)

Waste Code: U210
Waste Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code: U239
Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Updated By: JLDYBER

Site Description: Location: The Vibrattech site is located at 537 East Delavan Avenue in a mixed industrial/commercial/residential area in the City of Buffalo. Site Features: The main site features include two and three story brick buildings covering more than half of this 10.3 acre site. Majority of remaining acreage is covered with asphalt. Current Zoning and Land Use: The site is currently zoned for light industrial use. The northern portion of the on-site buildings are currently being utilized for dismantling and metals recycling. The remainder of the site is inactive. The site is surrounded by residential, commercial and industrial properties. Past Use of the Site: The site was historically utilized for the manufacture of vibration dampeners and rotary shock absorbers for the truck and railroad industry. Specific operations at the plant included chip turning, assembly of components, heat treating and plating. The plant operated from 1927 through the mid 1990s. Site Geology and Hydrology: The majority of the site is covered by buildings and asphalt underlain by sandy gravel fill containing ash and cinders to a depth of 1 to 7 feet below ground surface. Natural soils identified below the fill consist of fine textured lake deposited sediment with a clayey-silt texture and/or glacial deposits extending to the top of bedrock located 2 to 12 feet below ground surface. Bedrock is fractured and is typical of the Onondaga Limestone Formation. Depth to groundwater is generally 4 to 12 feet below ground surface trending west and north, influenced near surface by utilities and the Scajaquada Drain.

Env Problem: Nature and Extent of Contamination: Based on investigations completed to date, the primary contaminants of concern are trichloroethene (TCE), 1,1,1-trichloroethane and free phase petroleum products. Solvent contaminated soil containing TCE was remediated at the southern portion of the facility in the mid 1990s. Groundwater concentrations have steadily decreased following soil remediation. Low level concentrations of chlorinated solvents remain in the groundwater at the southern end of the site. A removal action was undertaken by USEPA to remove asbestos and PCBs from light ballasts, capacitors and associated contamination throughout the facility. Additionally, mercury containing switches and lamps were removed and disposed. The removal action was complete on September 9, 2009. A supplemental investigation completed in 2010 identified additional TCE contamination in groundwater north of the previously impacted groundwater plume. Additional investigation(s) will be needed to determine the nature and extent of this contamination. Subsurface petroleum products have been identified in multiple on-site monitoring wells. A specific source of the petroleum has not been determined, however, it is likely the result of numerous spills and leakage over the life of the facility. Significant dissolved phase petroleum contamination has not been identified in the groundwater. An off-site soil vapor intrusion investigation (indoor air and subslab), completed in Spring 2012, determined no significant off-site impacts due to existing groundwater contamination. A re-evaluation is necessary once the building is demolished and additional remedial investigations completed and/or remedial actions are implemented. A soil gas survey completed in Fall of 2015 identified potential source areas requiring additional remediation under the central-northern portion of the existing building. Subsequent sampling of a sump in this area indicate a potential VOC

source area.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. No off-site soil impacts have been identified to-date. People are not expected to come into direct contact with contaminated groundwater unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the on-site building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FG 12/11/97: MNP INSP. MET W/ DETECTIVE MEGAN - BUFFALO PD ON SITE. WE SMELLED SMOKE FROM RECENT BURNING INSIDE MAIN PLANT. WE OBSERVED BURNED COPPER WIRE & PARTIALLY BURNED TRANSFORMERS ON CONCRETE PAD. ASHES & STEEL POKER LYING NEARBY. A COUPLE SMALL TREES HAD BEEN BROUGHT IN & STAGED IN THE NE CORNER OF THE BUILDING. SPOKE W/ 2 MEN, THEY WERE WORKING FOR THE OWNER MARIO PUGLEISI. AT OUR REQUEST THEY LOCATED MR. PUGLEISI WHO WAS ON SITE. WE SPOKE W/ MR. PUGLEISI, HE DENIED BURNING ANY WIRE OR TRANSFORMERS. HE SAID THEY WERE JUST

STRIPPING & SALVAGING COPPER & STEEL FROM BUILDING. HE ADMITTED SPILLAGE OF OIL FROM A COMPRESSOR. I NOTED OIL SPILLAGE ON FLOOR NEXT TO BFC ROLLOFF & IN TRANSFORMER ROOM. MR. PUGLEISE SAID THIS SITE WAS FORMERLY OWNED BY VIBRATECH & DEC WAS AWARE OF ANY ENVIRONMENTAL PROBLEMS. ONE OF THE TRANSFORMERS WAS A WESTINGHOUSE MADE MADE IN 1956, TYPE F-100, DE-ION GRID OIL CIRCUIT BREAKER, 75 KV, SERIAL NUMBER 33Y6527. I ASKED IF I COULD TAKE PICTURES, PUGLEISE GRANTED ME PERMISSION, BUT ASKED ME TO STOP AFTER TAKING ONE PICTURE. HE WANTED TO CALL HIS LAWYER FIRST. I TOLD HIM WE WERE EXPECTING AN ECO TO ARRIVE SHORTLY. HE THEN ASKED HIS WORKERS TO LOCK THE OUTSIDE GATE TO THE FACILITY. WHILE WAITING I CONTACTED ECO RON BOSELLI BY RADIO & ADVISED HIM OF THE SITUATION. HE WAS ONLY 10 MINUTES AWAY. UPON RETURNING TO THE BUILDING MR. PUGLEISE WAS ON THE PHONE W/ HIS ATTORNEY - STEVEN COHEN. DETECTIVE MEGAN ALSO SPOKE W/ COHEN & ADVISED HIM OF THE NEED FOR COOPERATION. ECO RON BUSELLI ARRIVED & OBTAINED INFO. FROM MR. PUGLEISE. I WAS THEN GRANTED PERMISSION TO TAKE PICTURES. THREE WESTINGHOUSE TRANSFORMERS SINGLE PHASE TYPE SL LOCATED IN THE TRANSFORMER ROOM WERE NUMBERED 11, 12, & 13. SERIAL NUMBERS FOR #11 - 3412518, #12 - 3412513, #13 - 3413725. I ADVISED MR. PUGLEISE OF THE HYDRAULIC OIL CLEANUP PROCEDURES, INCLUDING PROPER STAGING & DISPOSAL METHODS. I TOLD HIM DEC MAY REQUIRE PCB SAMPLING, DEPENDING WHAT INFO. WE GET FROM VIBRATECH. 12/12/97: MNP TELECON TO VIBRATECH. SPOKE W/ PAUL WILSON HE BELIEVED THAT THE PCB'S HAD BEEN TAKEN CARE OF, BUT WASN'T SURE. I TOLD HIM WE HAVE INFO. FROM THE PHASE1 REPORT INDICATED PCB'S IN SOME OF THE TRANSFORMERS, BUT NO DOCUMENTATION IN PHASE 2 NOR REMEDIATION FILES. WILSON SAID HE WILL LOOK FOR DOCUMENTATION, BUT MARIO PUGLEISE IS CURRENT OWNER & RESPONSIBLE FOR ANY PROBLEMS, EXCAEPT FOR ONGOING HAZ-WASTE MONITORING. 01/12/98: MNP TELECON WITH MR.PUGLEISE'S ATTORNEY, STEVEN COHEN. I TOLD HIM THAT MR.PUGLIESE DID NOT CLAIM THE CERTIFIED LETTER WE SENT NOR DID HE RETURN MY PHONE CALLS EITHER. MR.COHEN SAID HE WILL ACCEPT THE LETTER & COMPLY. I ALSO ADVISED HIM ABOUT THE TENTATIVE MEETING WITH ECO RON BOSELA ON WEDNESDAY 1/14/98. MR.COHEN DID NOT KNOW WHETHER HE COULD MAKE IT OR NOT, I GAVE HIM ECO BOSELA'S PHONE NUMBER. 2/03/98: JDC ON SITE W/ BECI INVESTIGATION AND MET W/ MR STEVEN COHEN WHO AUTHORIZED MY COLLECTION OF SAMPLES UNDER THE CURRENT COURT ORDER. COLLECTED SAMPLES FROM N.E. CORNER OF THE COMPLEX, WIPE SAMPLES OF FLOOR, TRANSFORMER ROOM AND CONCRETE PAD. 02/25/98: MNP REVIEWED WST 2/16/98 SAMPLE REPORT, NO PCB'S DETECTED FOR 1 OIL & 2 WIPE SAMPLES COLLECTED ON 2/3/98. 03/09/98: MNP REVIEWED WST PAYMENT PACKAGE FOR \$485.00 RECEIVED ON 3/5/98, PAYMENT APPROVED. 6/22/99 FG SITE INSPECTION. MET REVEREND HARRIS ON SITE. ONE 55 GALLON DRUM OF OIL & WATER (MOSTLY WATER) WAS FOUND IN THE BUILDING. REVEREND HARRIS IS IN THE PROCESS OF PURCHASING THE PROPERTY. HE WILL SEND IN A DISPOSAL RECEIPT. 3/2/00 RECD UNCLAIMED LTR TO PROPHET HARRIS BACK. CITY OF BUFFALO REAL PROPERTY INDICATED THAT THE OWNER OF THE PROPERTY IS: WORLD SERIES OF SPORTS NY, INC, C/O LORENZO & COHEN LAW OFFICES, SUITE 1400, STATLER TOWER, BUFFALO, NY 14202. SENT A LTR REQUESTING AN UPDATE ON THE REMEDIATION STATUS TO WORLD SERIES OF SPORTS. A RESPONSE IS DUE ON 3/24/00. 3/21/00 MARIO PUGLIESE CALLED AND REQUESTED THAT WE SEND HIM A COPY OF COMPANIES WHICH ACCEPT WASTE OIL FOR RECYCLING WHICH WE FAXED HIM AT (905)357-6383. 9/18/00 MAURICE MOORE WITH THE NYSDEC, INACTIVE HAZARDOUS WASTE PROGRAM SENT ME A NOTE THAT HE INSPECTED THE SITE ON 9/15/00 AND DISCOVERED OIL IN MW6. HE REFERRED THIS PROBLEM TO THE SPILLS GROUP. 9/21/00 LTRS SENT TO VIBRATECH AND MARIO PUGLIESE REQUESTING THAT THEY EITHER ALLOW NYSDEC TO COMPLETE THE SITE WORK OR

DO IT THEMSELVES. A RESPONSE IS DUE 10/6/00. 9/28/00 BRYAN KEYT WITH BELL BOYD & LLOYD CALLED FOR VIBRATECH AND SAID THAT THEY WILL PROVIDE A RESPONSE BY 11/6/00. HIS PHONE NUMBER IS 312-807-4328. 10/2/00 BRYAN KEYT SENT A LETTER STATING THEY WILL PROVIDE A RESPONSE BY 11/6/00. 8/31/01 FG JFO MAURICE MOORE, NATURE'S WAY-RUSS SAVAGE & JAMIE HALL SITE VISIT. MARIO PUGLIESE WAS NOT ON SITE BUT THE MAINTENANCE MAN WAS ON SITE AND SAID THAT THE SIDE DOOR WAS OPEN AND WE COULD GO IN. SEVERAL DRUMS WITH OIL WERE FOUND. THE FLOORING WAS ALL PILED UP. IT IS SOAKED WITH OIL. VIBRATECH WILL BE SAMPLING THE WELLS ON 9/6/01. NATURE'S WAY WILL BE ON SITE TO COLLECT SAMPLES AT THE SAME TIME. WATER IN THE BASEMENT HAD OIL ON IT. MR. PUGLIESE CALLED THE OFFICE PER SAL CALANDRA AT 10:15 INDICATING HE COULD NOT MEET US AT THE SITE. 09/06/01 JFO MET WITH DUSTIN STEINER, DAVID TYRAN AND JANE ALL FROM CRA AND RUSS SAVAGE OF NATURE'S WAY. THEY COLLECTED SAMPLES FROM THE 3 WELLS. RUSS GOT A SAMPLE FROM THE 1 WELL WITH THE OIL. HE WILL ANALYZE FOR 310.13, 8021 AND 8270. RESULTS TO FOLLOW. THERE WAS A LAYER OF PRODUCT IN THE WELL. A SUBSURFACE INVESTIGATION WILL IS NECESSARY. 09/14/01 RCVD ABOVE-NOTED ANALYTICAL RESULTS FOR MW6. THE 310.13 INDICATES LUB OIL 8260 VINYL CHLORIDE 23.1 PPB 1,1-DICHLOROETHANE 99.9 PPB CTS-1,2-DICHLOROETHENE 96.5 PPB TETRACHLOROETHENE 10.8 PPB ALL OTHER COMPOUNDS ON THE 8260 AND ALL ON THE 8270 ARE less than DL 09/24/01: KAB/DALE GRAMZA, NATURE'S WAY/TELECON (1000 HRS) - MR. GRAMZA INDICATED THAT HE WAS AT THE PROPERTY TO DO SOME SAMPLING AND THAT THE LOCK ON THE GATE HAD BEEN CHANGED. ADVISED THAT I WOULD CALL HIM BACK. SPOKE TO JOE HOUSEBECK, DEC ATTY., WHO ADVISED THAT THERE WAS AN AGREEMENT THAT SITE COULD NOT BE ACCESSED UNLESS MR. PUGLISSI IS PRESENT. KAB CONTACTED DALE GRAMZA AND ADVISED THAT FG IS ON INDEFINITE LEAVE AND THAT, PER OUR ATTORNEY, WORK ON THE PROPERTY SHOULD BE CEASED UNTIL FURTHER NOTICE. 09/24/01: JFO RETURNED TO OFFICE AND ADVISED THAT DALE GRAMZA HAD PAGED HIM AND WANTED TO GAIN ACCESS TO THE SITE. THAT CONVERSATION WAS AT APPROXIMATELY 12:00 P.M., 2 HOURS AFTER MR. GRAMZA HAD BEEN ADVISED THAT HE WAS NOT TO ENTER THE SITE UNTIL FURTHER NOTICE. 10/25/01 JFO REC'D PAYMENT REQUEST FOR WORK DONE 8/31/01 THRU 9/24/01. 687.41. SUBMITTED TO SAC. PJB INFORMED JFO THAT HE HAS RECEIVED A KEY FOR THE FENCE FROM MR PUGLIESE. HE WILL KEEP IT IN HIS DESK DRAWER. 11/16/01 JFO ON SITE MET WITH DALE GRAMZA AND HELPER BOTH OF NATURE'S WAY. THEY WILL DO SOME SOIL BORINGS. JFO BACK ON SITE, THERE IS A CONCRETE SLAB APPROX 4' UNDER THE SLOPE OF THE DOCK. 12/07/01: MF FOR FG, NW SUBMITTED PROPOSAL FOR BEDROCK MW INSTALLATION. LETTER TO NW, NEED MORE DETAIL. RESPONSE BY 1/7/02. 01/18/02 JFO OPENED THE GATE FOR NATURE'S WAY. MET WITH DALE, LUI AND STEVE, ON SITE IS THE DRILL RIG AND A VAN. THEY WILL DRILL 4 ROCK WELLS OUTSIDE AND POSSIBLY 2 INSIDE. THEY WILL ALSO SAMPLE THE DRUM INSIDE AND INSPECT THE BASEMENT. JFO BACK ON SITE MET WITH DALE G LUI AND STEVE. THEY HAVE ONE WELL DRILLED. THEY FOUND ANOTHER DRUM INSIDE. DALE WILL SAMPLE THE DRUMS ON MONDAY (HOLIDAY) AND HE WILL ALSO SAMPLE THE WOOD BLOCKS ON TUESDAY. MAURICE MOORE OF DER SUGGESTS WE COLLECT 5 BLOCKS FROM THE 5 PILES. DALE WILL SAMPLE THE 5 LARGEST PILES (5 BLOCKS WILL BE ONE SAMPLE) ALSO HE WILL SUBMIT A SKETCH OF WHERE EACH PILE IS LOCATED. THERE IS ABOUT 1 1/2 FEET OF WATER IN THE BASEMENT. DALE WILL ENTER AND SEARCH FOR A SHEEN. I WILL RETURN AT 4:00 TO LOCK THE GATE. ALSO THEY INTEND TO WORK ON MLK DAY. I WILL UNLOCK THE GATE FOR THEM AT 7AM. JFO ON SITE AT 4PM. 1 WELL HAS BEEN INSTALLED. 01/21/02 JFO ON SITE TO UNLOCK THE GATE FOR NW. DALE AND STEVE ARRIVED AT 9AM THE DRILL RIG AND THE VAN. THEY WILL SAMPLE THE DRUMS AND INSTALL MORE WELLS. THEY WILL SAMPLE THE WOODEN BLOCKS

HE IS PURCHASING THE PROPERTY FROM SILENT PARTNER GROUP, LEE CARMEN, 1-800-766-6784. 04/29/02 JFO TO MEET NATURE'S WAY ON SITE TO REMOVE AND DISPOSE THE DRUM OF OILY WATER. 06/07/02: MF RECEIVED A LETTER FROM VIBRATECH INDICATING THEY WILL CONTINUE TO MONITOR. 12/12/02: JAA/FILE. ON 6/24 NATURE'S WAY PROVIDED REPORT ON ADDITIONAL FIELD WORK NEEDED TO COMPLETE SUBSURFACE INVESTIGATION. ON 10/11/02: MLD SPOKE TO JERVIS SLATER ABOUT SITE, 871-1396. HE WAS INTERESTED IN PURCHASING AT AUCTION. MLD INFORMED HIM OF VIBRATECH OBLIGATIONS TO MONITOR, AND REQUIREMENT FOR SPILL INVESTIGATION AND REMEDIATION. 12/24/02 FG SPOKE TO DALE GRAMZA WITH NATURE'S WAY. HE WILL PREPARE A REPORT OF BACKGROUND INFORMATION AND SURVEY THE SITE. A MAP WILL BE GENERATED AND DECISIONS ON ADDITIONAL FIELD WORK WILL BE MADE AFTER THIS. 1/8/03 FG SITE INSPECTION ALONG WITH DALE GRAMZA OF NATURE'S WAY. WE COLLECTED A PRODUCT SAMPLE FROM THE UST ON SITE TO BE ANALYZED FOR DOH 310-13. IT WAS TAKEN FROM 15,000 GALLON FUEL OIL REGISTERED UST FURTHEST NORTH. DALE HAD ALREADY TAKEN A SAMPLE FROM THE OTHER UST ON HIS LAST INSPECTION. THE REASON FOR THE SAMPLES IS TO TRY TO COMPARE PRODUCT WITH THE OIL FOUND IN THE WELLS THAT HAD BEEN INSTALLED IN BEDROCK BY NATURE'S WAY. DALE GRAMZA'S LAST INSPECTION REVEALED THAT TWO FEET OF PRODUCT IS PRESENT IN THESE WELLS. MR. GRAMZA BELIEVES THAT THE SOURCE MAY BE THESE UST'S. MET DAN TREDON ON SITE. HE IS PLACING JUNK VEHICLES IN THE BUILDING AND MAY BE DUMPING FLUIDS. ADDITIONAL BEDROCK WELLS WILL BE INSTALLED NEXT WEEK TO DETERMINE THE SOURCE OF THE NEWLY DISCOVERED PRODUCT IN THE WELLS. THIS WILL BE DONE ONCE THE OWNERS ARE CONTACTED. 01/20/03 JFO ON SITE MET WITH DALE G OF NATURE'S WAY. THEY ARE AT APPROX 8' ON THE FIRST WELL. NO PRODUCT YET. 01/23/03 JFO CALL FROM DALE GRAMZA OF NATURE'S WAY. THEY WILL NOT BE ON SITE TODAY OR TOMORROW. HE SAID WORK WILL RESUME ON MONDAY JAN 27. 1/28/03 FG SITE INSPECTION. NATURE'S WAY ON SITE CONTINUING BEDROCK WELLS. SO FAR, 5 WELLS HAVE BEEN INSTALLED. 4 OF THE WELLS SHOWED SIGNS OF PETROLEUM ON THE BEDROCK. ADDITIONAL WELLS WILL BE INSTALLED TO DETERMINE THE EXTENT OF THE CONTAMINATION. 2/4/03 RECD THE RESULTS FROM THE SAMPLE COLLECTED FROM THE OTHER UST ON SITE. THE RESULTS SHOW THAT FUEL OIL #2 IS PRESENT. 2/4/03 MARIO PUGLIESE REQUESTED THAT THIS OFFICE FAX HIM THE MOST RECENT LETTERS THAT WERE SENT TO HIM. THIS WAS DONE. 4/9/03 RECD GROUNDWATER SAMPLING RESULTS. MW1 SHOWED ND. MW4 SHOWED THAT LUBRICATING OIL IS PRESENT. MW8 SHOWED THAT LUBRICATING OIL IS ALSO PRESENT. 4/24/03 RECD ANALYTICAL RESULTS FROM UST SAMPLES FOR PCB'S. NO PCB'S WERE DETECTED. 5/6/03 RECD ANALYTICAL RESULTS FROM LSL FOR MW1 - 8270, 8260 AND DOH310-13 ALL ND. MW4 -LUBRICATING OIL PRESENT. MW8 LUBRICATING OIL PRESENT. 11/21/03 RECD NATURE'S WAY REPORT OF FINDINGS. SUBMITTED A COPY TO VIBRATECH AND MARIO PUGLIESE REQUESTING REMEDIATION WITH A RESPONSE DUE BY 12/17/03. 1/20/04 FG SPOKE TO MARIO PUGLIESE, OWNER OF PROPERTY. HE RECEIVED OUR LETTERS AND IS

RESPONDING BY THIS CALL. HE DOES NOT FEEL HE IS RESPONSIBLE FOR THE WORK THAT IS NECESSARY ON SITE AND WILL NOT SPEND ANY ADDITIONAL MONEY ON CLEANUP BECAUSE HE DOESN'T HAVE IT. HE REQUESTED THE NAME AND NUMBER OF VIBRATECH AND WILL CALL THEM. HE SAID HE HAD AN AGREEMENT WITH THEM PRIOR TO HIS PURCHASE OF THE PROPERTY. 1/20/04 FG CALLED VIBRATECH AT 937-6600. THE NUMBER WAS TRANSFERRED TO HORSCHEL BROS IN SPRINGVILLE. THEY SAID THAT VIBRATECH IS IN BANKRUPTCY AND THE ATTORNEY FOR THE BANKRUPTCY IS RING. HE SAID VIBRATECH IS LIQUIDATED. 2/13/04 LETTER SENT TO MARIO PUGLIESE REQUESTING SITE ACCESS BECAUSE VIBRATECH IS BANKRUPT. RESPONSE IS DUE 3/16/04. 4/2/04 RECD ESTIMATE FOR UST REMOVAL FROM NATURE'S WAY AND FAXED TO MARIO PUGLIESI AT 519-686-0176. HE SAID HE WOULD CALL BACK. 4/13/04 FG SPOKE TO MARIO PUGLIESE WHO SAID THAT HE RECEIVED THE FAX OF THE COST ESTIMATE FOR THE UST REMOVALS AND HAS FORWARDED IT TO HIS CONTRACTOR. HE HAS NOT HEARD BACK FROM HIS CONTRACTOR WITH A PRICE. HE WILL NOTIFY THIS OFFICE BY THE END OF THIS WEEK, 4/16/04 WHETHER OR NOT HE WILL COMPLETE THE WORK OR ALLOW NYSDEC TO COMPLETE THE WORK. 4/22/04 FG SPOKE TO MARIO PUGLIESE, 905-932-4412 WHO SAID THAT HE WILL GET BACK TO ME BY 4/30/04 WITH A COMMITMENT FROM HIS CONTRACTOR, DNL CONSTRUCTION, FROM PA AS TO WHEN THEY WILL COMPLETE THE UST REMOVAL. 6/23/04 RECD A RESPONSE TO AN RP LETTER TO IDEX. THEY INDICATE THEY ARE NOT RESPONSIBLE. THEY STATE THEY MERELY OWNED STOCK IN VIBRATECH. 7/15/04 MR. PUGLIESE HAS NOT RESPONDED TO LEGAL'S REQUEST FOR ACTION ON THE PBS/UST ISSUE. LEGAL HAS REQUESTED THAT I WAIT FOR THAT ACTION TO BE RESOLVED BEFORE I PROCEED WITH ANYTHING ON THE SPILLS SIDE. 6/9/05 SPILL SITE REFERRED TO THE LONG TERM REMEDIATION GROUP. SPILL SITE IS CLOSED. SPILL FILE GIVEN TO LONG TERM. 06/17/06 (CRS) Marty Doster and myself met on-site with Kevin Mathies and Joe Consentino (both with EPA). EPA was completing a walk through of the building to determine if hazardous materials may exist within the building. Joe Consentino outlined the following potential issues in a follow-up e-mail: On site observations indicate a need to conduct a comprehensive sampling investigation to confirm or dispel the presence of hazardous waste and/or hazardous substances at the site. Substances believed present include; mercury (switches, bulbs and vapor lamps), asbestos (pipe and boiler wrap), petroleum hydrocarbons, oils and greases, PCB ballast on old fluorescent lights and possible peeling lead paint. Several drums(55 gallon) and smaller containers were located throughout the site buildings will require sampling. In addition, wooden block floors, sumps and drains appear heavily contaminated and need to be investigated. 06/08/06 RMC/FILE. SITE ACTIVE UNDER CHAD STANISZEWSKI. 06/08/06 (CRS) Unrestricted site access granted by Mario Pugliese's attorney, Steven Cohen, in a letter to the AG dated May 7, 2006. DEC received notification that access was granted in a letter from the AG's office dated May 22, 2006. 06/15/06 (CRS) Cut existing EPA chains on two access gates and placed a new lock on the chains (in addition to the EPA locks which already existed). DEC now has access to the site via two gates: the eastern most gate on E. Delevan and the eastern most gate on Northland Drive. 06/19/06 (CRS) Met on-site with Gary House and Brian Hutzler of OpTech Environmental Services to access removal of the two fuel oil tanks on the east side of the building. Approximately 2-3 feet of product in each tank. Bottom of tanks appear to be approximately 10-12 feet below ground. Also, informed Op-Tech that we would like product removed from all existing wells that currently contain product ((6) wells total MW6, MW1-02, MW3-02, MW4-02, MW5-02 and MW8-03). OpTech indicated they should be able to mobilize in a

couple of weeks. 08/04/06 - 08/10/06 (CRS) Optech on-site to clean the two underground No. 6 fuel oil tanks. The fuel oil in each tank was removed with a vac. truck (the oil in the southern tank was heated with a boiler/enclosed steam pipe for (3) days to thin the oil prior to removal). The tanks were swept with No. 2 fuel oil to remove residual oil on the tank walls, pressure washed and wiped with adsorbent pads. The tanks were cleaned in place. The northern tank was excavated and removed from the ground. The sand bedding around the tank was generally not visually impacted, however, when the bedding material was removed from the excavation, oil began seeping out of the bedrock. It is not believed that the oil seeping from the bedrock originated from the north tank. The tank was in good condition with no holes observed. Additional investigation is necessary. Testing on the oil leaking from the bedrock identified the oil as #6 fuel. The southern tank was not removed due to its proximity to a smoke stack. Optech was concerned that removal of the tank may undermine the stability of the stack. The south tank was left in place, empty. 02/14/14 (CRS) Site continues to be investigated under the Superfund program to address historic TCE contamination. Additional spills investigation of on-site oil anticipated following Superfund work. 6/9/16 NO FURTHER WORK WILL TAKE PLACE UNDER THIS SPILL. ALL WORK IS BEING CONDUCTED UNDER THE HAZARDOUS WASTE SITE 915165. ALL FOLLOWUP WILL BE UNDER THAT SITE NUMBER. THIS SPILL IS CLOSED WITH NO FURTHER WORK REQUIRE."

DROPLETS FOUND IN GP-3 THEY PROPOSED TO BAIL THE WELL TO SEE IF THEY COULD REMOVE THE PRODUCT FROM THE WELL IN THIS MANNER, SAC INDICATED THAT WAS OK TO TRY FIRST, ALSO ALTHOUGH IT IS ALWAYS RECOMMENDED TO REMOVE UNDERGROUND STORAGE TANKS, THE (2) 20,000 GALLON FUEL OIL TANKS WHICH WERE FILLED BUT THE FILLED MATERIAL HAD NOW SETTLED COULD BE FILLED AGAIN BUT THE CONTAMINATION WOULD HAVE TO BE ADDRESSED, FOR GP-22 A TCLP SAMPLE COULD BE TAKEN TO ADDRESS THIS AREA, IT WAS AGREED THAT SAC WOULD SEND A LETTER REQUESTING A WORKPLAN BY JULY 30TH. 6/24/99:SAC REVIEWED REPORTS AGAIN AND FOUND THAT TP-2 ANALYTICAL RESULTS HAD ELEVATED LEVELS THAT WERE NOT DISCUSSED W/RNL OR AT THE MEETING, SAC TELECON GARY KLAWSKI - GZA REGARDING THESE LEVELS, IT WAS AGREED THAT THE RESAMPLING OF GP-22 AREA AND REANALYZED USING TCLP METHOD SHOULD BE POSTPONED UNTIL A MEETING WAS SETUP TO FURTHER EVALUATE THE AREA, TENTATIVELY SET UP A MEETING FOR 7/2/99. 7/2/99:RNL, SAC MET WITH GARY KLAWSKI - GZA, BILL SCHMIDT & TOM NICHOLS - WYMAN GORDON, INSPECTED TANK AREA 1, 2 & 3, RNL REQUIRES FURTHER WORK IN TANK 3 AREA BASED ON SAMPLE RESULT LEVELS, DISCUSSED REMEDIAL OPTION FOR TANK 3 AREA WHICH IS TP-2 & GP-22 AREA, MR. GLAWINSKI SAID THEY WILL PROBABLY TRY TO INTRODUCE OXYGEN RELEASING COMPOUNDS TO THE AREA TO REMEDIATE THIS AREA, THEY WILL STILL SUBMIT A WORKPLAN BY JULY 31ST. 7/6/99:SAC DRAFTED LETTER REQUIRING WORKPLAN BY 7/31/99. 7/19/99:RECEIVED WORKPLAN FROM GZA. 7/26/99:DRAFTED COMMENT LETTER TO BILL SCHMIDT - WYMAN GORDON, INC., REQUIRING GROUNDWATER SAMPLED AT TANK AREA NO.1, TANK AREA 5 MUST HAVE SIDE WALLS SAMPLED IN THE OVERBURDEN, AND A BORING LOCATION MAP FOR THE ORC INJECTION POINTS AT AREA TP-2 & GP-22. 7/28/99:RECEIVED A FAXED COPY OF THE BORING LOCATION MAP FOR ORC INJECTION. 8/24/99:SAC INSPECT SITE AND MET W/GARY KLAWSKI, JASON KELLY, & DAN TROY - GZA, TANK 5 AREA HAD TANK REMOVED, CONTAMINATED SOIL WAS STAGED ON SITE, SMALL AMOUNT OF WATER NOTED W/SLIGHT SHEEN, THEY WILL PUMP THE WATER INTO THE BIO CELL, HAND DIG OUT THE REMAINING AREAS OF CONTAMINATION TAKE SIDE WALL SAMPLES AND INSTALL WELL, TANK 4 AREA AND THE TANK 2 AREA WERE BEING FILLED IN WITH FLOWABLE FILL, TANK 1 AREA WAS EXCAVATED, THEY DID NOT WANT TO DIG INTO THE ROAD BECAUSE THE ROAD HAD 8 INCHES TO 1 FOOT OF REINFORCED CONCRETE, THEY ARE GOING TO CONTINUE TO EXCAVATE THE AREA, ONCE COMPLETED THEY AREA GOING TO TAKE SAMPLES AND INSTALL A WELL, THEY MAY NOT BE ABLE TO SAMPLE THE BOTTOM SINCE THEY ARE SO CLOSE TO EXCAVATING TO BEDROCK, THEY WILL ALSO PLACE ORCs INTO THE EXCAVATION TO TRY AND REMOVE ANY RESIDUAL CONTAMINATION THAT REMAINS, THE EXCAVATION HAD SOME GROUNDWATER WITH SHEEN, THEY ARE IN THE PROCESS OF SETTING UP THE BIOCELL, THEY INJECTED THE ORCs PREVIOUSLY IN THE GP-22/TP-2/TANK 3 AREA, PER MR. KLAWSKI THEY STARTED TO BAIL THE WELL GP-3 TO REMOVE THE OIL DROPLETS OF PRODUCT SINCE THE INITIAL MEETING AND THIS PROCEDURE HAS BEEN ONGOING, THE AMOUNT OF OIL RECOVERED HAS DECREASED WITH THE BAILINGS, THEY HAVE FIVE DAY TURNAROUND FOR THE ANALYTICAL RESULTS AND ARE USING PARADIGM LABS FOR ALL ANALYSES, THEY WILL ISSUE THE REPORT ON TEH COMPLETED WORK IN THE NEXT FEW WEEKS, THEY ARE NOT GOING TO SAMPLE THE GP-22/TP-2/TANK 3 FOR AT LEAST A FEW MONTHS SO THIS WILL NOT BE PART OF THE REPORT. 11/18/99:RNL, SAC MET W/GARY KLAWSKI - GZA, BILL SCHMIDT AND JIM THARPE, IXP - WYMAN GORDON, MR. KLAWSKI WILL SUBMIT A PROGRESS REPORT AND INCLUDE AN EXPOSURE ASSESSMENT BASED ON THE WORK DONE. 2/3/00:SAC TELECON GARY KLAWSKI - THEY HAVE TAKEN THE AIR SAMPLES AND THE SOIL GAS SURVEY SAMPLES AND ARE WAITING FOR THE RESULTS, WILL BE SENDING A REPORT TO DEC IN THE NEXT FEW WEEKS. 7/5/01:SAC MET W/GARY KLAWSKI TO DISCUSS SITE, MR. KLAWSKI HAS DONE ADDITIONAL SAMPLING AND WILL SUBMIT A REPORT NEXT

Description:	The former Air Force Plant No. 49 is located on Grider Street, City of Buffalo, State of New York. The mission of Air Force Plant No. 49 was the production of steel extrusions. It is currently being used as an industrial plant.

History: On 5/7/1952, the Government purchased 7.65 acres fee from the Curtiss-Wright Corporation. On 5/21/1952, the Government purchased 0.24 of an acre easement from the Curtiss-Wright Corporation. The easement was for a right-of way for a railroad spur. On 6/24/1965, Air Force Plant No. 49 was declared excess to the needs of the US Air Force. By letter dated 3/28/1966, from the Secretary of the Air Force, the installation was reinstated into the Air Force Real Estate Inventory. On 6/2/1980, GSA accepted care and custody of Air Force Plant No. 49. By quitclaim deed dated 12/21/1983, 7.65 acres fee and 0.24 acre easement were conveyed to the Curtiss-Wright Corporation. There were no restrictive, restoration or recapture clauses in the deed. By bargain and Sale Deed dated 21/21/1983, Curtiss-Wright Corporation conveyed 7.65 acres fee and 0.24 acres easement were conveyed to the Erie County Industrial Development Agency (ECIDA).

Site Description: Location: The 858 East Ferry Street site is a 3.32 acre property located in the City of Buffalo. The site is located in an urban area.
 Site Features: The site is currently a vacant lot. The site is situated on the north side of East Ferry Street and is zoned as commercial/industrial. The site is bordered on the north by a New York Central Railroad embankment and industrial property occupied by International Extruded Products. The True Bethel Baptist Church is located opposite of the site, on the south side of East Ferry Street. TNT Used Autos, a small used car lot, is located to the west of the site. The adjacent properties west of the site are currently zoned commercial/industrial. Current Zoning/Use(s): This site is currently vacant and zoned for industrial use. Historical Use(s): At the adjacent property to the west of 858 E. Ferry Street, now occupied by the used auto lot, the 1939 Sanborn map showed that a Michael Heyman Company operated a zinc and lead smelting and refining facility. Two

MAP FINDINGS

858 EAST FERRY STREET (Continued)

S104541709

buildings were once located on the Heyman property; the west building was the foundry and blast furnace, and the east building, nearest the 858 E. Ferry Street site, housed the metal casting facility. A 1958 aerial photo shows a path leading from the Heyman property to the central part of the East Ferry Street site. The location of the Heyman facility adjacent to the site and the path leading onto the site support the past disposal of lead-contaminated ash in this location. Under the Environmental Restoration Program (ERP), the City of Buffalo completed an investigation in 1997-1998. The results from this investigation showed significant lead contamination in soil. Based on the results of this investigation, a ROD was signed by NYSDEC in March 1999. The selected remedy included the excavation and off-site disposal of hazardous waste and contaminated soil. The ROD also stated that the remedy would be deferred until further investigation is conducted to the west of the site. Since extensive off-site contamination was found the NYSDEC conducted the additional off-site investigation and completed remediation of the site under the State Superfund program. The site is currently considered as a single operable unit. An additional investigation was completed in 2001 by the NYSDEC at adjacent properties and the results indicated that the soil is contaminated with lead on adjacent properties. The March 1999 ROD was amended in August 2005 based on a significant increase in volume of lead contaminated soil. The amended remedy included the excavation of surface and subsurface contaminated soil from the site and disposal to a permitted landfill to achieve a clean up goal for unrestricted future use and the excavation of contaminated soil from off-site properties and disposal to a permitted landfill to achieve a clean up goal for industrial/commercial use which is consistent with the current zoning. The remedial design of the amended remedy was completed in February 2006. The remedial action completed in 2007 at the site and off-site properties removed the lead-contaminated soils from surface and subsurface. The excavated soils were treated on-site and disposed appropriately in an off-site landfill. Since the contaminated soils were removed the groundwater contamination was expected to decrease. After the successful completion of the remedial action at the site, a groundwater sampling event was conducted in May 2009. The results indicated that the on-site wells did not show lead contamination above groundwater standards, which was consistent with the sampling event during the investigation. Therefore, the site can be delisted and groundwater at the site need not be monitored in the future. Currently public water supply is available in this area. The process of delisting the site has been completed. The site will be designated as 'C' which refers to as completed remediation. No monitoring or institutional controls are required. Site Geology and Hydrogeology: The overburden deposits in the region have been mapped as lake silts and clays. The thickness of the overburden at the study area varies from approximately 8.4 feet to 17.5 feet. Beneath the overburden deposits, the bedrock consists of the Middle Devonian age Onondaga Limestone. The primary hydrogeologic unit identified beneath the study area is the unconfined watertable aquifer present in the limestone of the Onondaga Formation. However, groundwater is present in the overburden and is found primarily in the ash type fill material and in the backfilled excavation of the Scajaquada Creek Drain. The water in the overburden is reportedly connected to the bedrock groundwater. Groundwater generally flows toward the Scajaquada Creek Drain.

858 EAST FERRY STREET (Continued)

S104541709

Env Problem: Nature and Extent of Contamination: Prior to Remediation: Based on the results from investigations conducted at the site the lead-contaminated soils found at the on-site and off-site areas were located near and over the top of the covered Scajaquada Creek drain. The highest concentration of total lead detected in the surface soil was 11,500 ppm, which was found beneath a pile of gray ash. The concentrations found in the subsurface soil were as high as 28,500 ppm lead. There was a potential for the contamination from the soil to migrate to Creek Drain and the groundwater. During the investigation groundwater samples were collected from the site and off-site. Total lead was detected at a concentration of 400 g/l in the groundwater sample collected from the well located on the 856 East Ferry Street property. The sample from this well was the only sample that reported lead concentrations exceeding the NYSDEC groundwater standard. The remaining groundwater samples analyzed have detected total lead at or below groundwater standard.
Post-Remediation: As stated in the amended Record of Decision (ROD), the remedial action completed in 2007 at the on-site and off-site properties removed lead contaminated soils from surface and subsurface to a clean up goal of 400 ppm of lead at the site and 1000 ppm of lead at off-site properties. As stated in the amended ROD, the goal of remediating the site to unrestricted future was achieved by implementing the remedy. After the successful completion of the remedial action at the site, a groundwater sampling event was conducted in May 2009. The results indicated that the on-site wells did not show lead contamination above groundwater standards, which was consistent with the sampling event during the investigation. Therefore, groundwater at the site need not be monitored in the future. Currently public water supply is available in this area. Currently the site declassified as 'C' indicating that the remediation is completed at the site and no future monitoring of the site is required.

Health Problem: No human exposure to contamination from this site is expected since contaminated soil is either removed or covered and public water serves the area.

However, groundwater is present in the overburden and is found primarily in the ash type fill material and in the backfilled excavation of the Scajaquada Creek Drain. The water in the overburden is reportedly connected to the bedrock groundwater. Groundwater generally flows toward the Scajaquada Creek Drain.

Env Problem: Nature and Extent of Contamination: Based on the results from investigations conducted at the site the lead-contaminated soils found at the on-site and off-site areas were located near and over the top of the covered Scajaquada Creek drain. The highest concentration of total lead detected in the surface soil was 11,500 ppm, which was found beneath a pile of gray ash. The concentrations found in the subsurface soil were as high as 28,500 ppm lead. There was a potential for the contamination from the soil to migrate to Creek Drain and the groundwater. During the investigation groundwater samples were collected from the site and off-site. Total lead was detected at a concentration of 400 g/l in the groundwater sample collected from the well located on the 856 East Ferry Street property. The sample from this well was the only sample that reported lead concentrations exceeding the NYSDEC groundwater standard. The remaining groundwater samples analyzed have detected total lead at or below groundwater standard. As stated in the amended Record of Decision (ROD), the remedial action completed in 2007 at the on-site and off-site properties removed lead contaminated soils from surface and subsurface to a clean up goal of 400 ppm of lead at the site and 1000 ppm of lead at off-site properties. As stated in the amended ROD, the goal of remediating the site to unrestricted future was achieved by implementing the remedy. After the successful completion of the remedial action at the site, a groundwater sampling event was conducted in May 2009. The results indicated that the on-site wells did not show lead contamination above groundwater standards, which was consistent with the sampling event during the investigation. Therefore, groundwater at the site need not be monitored in the future. Currently public water supply is available in this area.

Health Problem: Special Resources Impacted/Threatened: Significant Threat: Not reported

 Date Record Added: 11/15/2019
 Date Rec Updated: 12/31/2019
 Updated By: DPLOCEY
 Site Description: Site Location: The 1827 Fillmore Avenue site is an approximately 17.1 acre site located in an urban area at 1827 Fillmore Ave in the City of Buffalo, Erie County. It is bounded by the Kensington Expressway (Route 33) and Buffalo Public School #84 to the north, Erie County Medical Center (ECMC) to the east, Buffalo Public School #89 to the south and Fillmore Avenue to the west. Site Features: The site is currently vacant land with green areas, asphalt-paved parking lots and roadways. The entire site is enclosed by fence. Current Zoning and Land Use: The site is in one of Buffalo's District Zones (D-C Flex Commercial) which will allow for its proposed redevelopment and use as a parking lot. The site is currently vacant. Past Use of the Site: From at least 1917 the site was part of a stone quarry which encompassed the entire site and portions of the adjacent properties to the east and to the south. Between the 1940s and the 1950s, the stone quarry was backfilled with sand, gravel, cinders, ash, asphalt, broken concrete, brick, metal debris, wood, glass and ceramics. The Kensington Heights Towers complex was constructed on-site in 1958. The complex consisted of six, seven-story brick apartment buildings, open space, and on-site parking. The site has been vacant since the 1980s. From 2009 to 2014, asbestos was removed from the apartment buildings and by 2018, all six buildings had been demolished. The site contamination is largely attributed to the waste fill materials used to backfill the stone quarry. Site Geology and Hydrogeology: The fill materials extend from the surface to the top of bedrock, varying in depths from 3 to 24 feet. Two soil mounds are located on-site,

consisting mainly of topsoil, sandy clay and minimal fill. Groundwater was encountered within the fill material in the central and eastern portions of the site, at depths of approximately 14 to 18 feet, typically within a layer of ash. No groundwater was encountered within the fill in the western portion of the site. Bedrock wells installed in the western portion of the site found groundwater at depths of approximately 20 feet. Groundwater flows in a westerly direction.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in the soil/fill were SVOCs and metals (arsenic, barium, cadmium, copper, lead and mercury). Manganese and sodium, were reported in the groundwater at naturally occurring concentrations. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil/fill and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The 1827 Fillmore Avenue site is an approximately 17.1 acre site located in an urban area at 1827 Fillmore Ave in the City of Buffalo, Erie County. It is bounded by the Kensington Expressway (Route 33) and Buffalo Public School #84 to the north, Erie County Medical Center (ECMC) to the east, Buffalo Public School #89 to the south and Fillmore Avenue to the west. Site Features: The site is currently vacant land with green areas, asphalt-paved parking lots and roadways. The entire site is enclosed by fence. Current Zoning and Land Use: The site is in one of Buffalo's District Zones (D-C Flex Commercial) which will allow for its proposed redevelopment and use as a parking lot. The site is currently vacant. Past Use of the Site: From at least 1917 the site was part of a stone quarry which encompassed the entire site and portions of the adjacent properties to the east and to the south. Between the 1940s and the 1950s, the stone quarry was backfilled with sand, gravel, cinders, ash, asphalt, broken concrete, brick, metal debris, wood, glass and ceramics. The Kensington Heights Towers complex was constructed on-site in 1958. The complex consisted of six, seven-story brick apartment buildings, open space, and on-site parking. The site has been vacant since the 1980s. From 2009 to 2014, asbestos was removed from the apartment buildings and by 2018, all six buildings had been demolished. The site contamination is largely attributed to the waste fill materials used to backfill the stone quarry. Site Geology and Hydrogeology: The fill materials extend from the surface to the top of bedrock, varying in depths from 3 to 24 feet. Two soil mounds are located on-site, consisting mainly of topsoil, sandy clay and minimal fill. Groundwater was encountered within the fill material in the central and eastern portions of the site, at depths of approximately 14 to 18 feet, typically within a layer of ash. No groundwater was encountered within the fill in the western portion of the site. Bedrock wells

installed in the western portion of the site found groundwater at depths of approximately 20 feet. Groundwater flows in a westerly direction.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in the soil/fill were SVOCs and metals (arsenic, barium, cadmium, copper, lead and mercury). Manganese and sodium, were reported in the groundwater at naturally occurring concentrations. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil/fill and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 482726

Site Description: Site Location: The 1827 Fillmore Avenue site is an approximately 17.1 acre site located in an urban area at 1827 Fillmore Ave in the City of Buffalo, Erie County. It is bounded by the Kensington Expressway (Route 33) and Buffalo Public School #84 to the north, Erie County Medical Center (ECMC) to the east, Buffalo Public School #89 to the south and Fillmore Avenue to the west. Site Features: The site is currently vacant land with green areas, asphalt-paved parking lots and roadways. The entire site is enclosed by fence. Current Zoning and Land Use: The site is in one of Buffalo's District Zones (D-C Flex Commercial) which will allow for its proposed redevelopment and use as a parking lot. The site is currently vacant. Past Use of the Site: From at least 1917 the site was part of a stone quarry which encompassed the entire site and portions of the adjacent properties to the east and to the south. Between the 1940s and the 1950s, the stone quarry was backfilled with sand, gravel, cinders, ash, asphalt, broken concrete, brick, metal debris, wood, glass and ceramics. The Kensington Heights Towers complex was constructed on-site in 1958. The complex consisted of six, seven-story brick apartment buildings, open space, and on-site parking. The site has been vacant since the 1980s. From 2009 to 2014, asbestos was removed from the apartment buildings and by 2018, all six buildings had been demolished. The site contamination is largely attributed to the waste fill materials used to backfill the stone quarry. Site Geology and Hydrogeology: The fill materials extend from the surface to the top of bedrock, varying in depths from 3 to 24 feet. Two soil mounds are located on-site, consisting mainly of topsoil, sandy clay and minimal fill. Groundwater was encountered within the fill material in the central and eastern portions of the site, at depths of approximately 14 to 18 feet, typically within a layer of ash. No groundwater was encountered within the fill in the western portion of the site. Bedrock wells installed in the western portion of the site found groundwater at depths of approximately 20 feet. Groundwater flows in a westerly direction.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in the soil/fill were SVOCs and metals (arsenic, barium, cadmium, copper, lead and mercury). Manganese and sodium, were reported in the groundwater at naturally occurring concentrations. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil/fill and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RNL 12/05/96: RMC/GREGG WEBBER/PHONE MNP SPILL UNABLE TO CONTACT, DIGGING BEGUN 12/4 . AREA OF CONTAMINATION LARGER THAN EXPECTED, WANT DEC TO INSPECT, REMOVED SOIL IN 12 BY 20 BY 10 FOOT AREA. 12/5/96 RMC/NATURES WAY/SITE AREA OF CONTAMINATION APPEARS TO BE MUCH DEEPER THAN IDENTIFIED IN SOIL BORINGS, CONTAMINATION HAS PENETRATED SEVERAL FEET INTO VIRGIN SIOL. ESTIMATE EXCAVATION 10 PERCENT COMPLETE WITH 75 TONS ALREADY REMOVED. 12/6/96 RMC/WEBBER/PHONE RP WAS ADVISED BY NATURES WAY OF ADDITIONAL SCOPE OF WORK REQUIRED, NATURES WAY TO CONTACT MNP WITH SITE PLANS BY 12/13/96. 12/18/96: MNP INSP. EXCAVATION IN FRONT OF BUILDING, NEARLY FILLED W/ WATER & HAS A FILM OF OIL PRODUCT ON THE SURFACE. CONTAMINATED SOIL PILE STAGED ON PLASTIC ON WEST SIDE OF BLDG. 12/27/96: MNP TELECON W/ TOM WOELFE - NATURE'S WAY. THEY STARTED DIGGING WEST OF CURRENT EXCAVATION WHICH IS NEARLY FILLED W/ WATER. WORK TO CONTINUE TOMORROW (SATURDAY) & 12/30/96 (MON.), BIO-PILE WILL BE CONSTRUCTED FOR CONTAMINATED SOIL & WATER TO BE PUMPED INTO TEMPORARY TANKS UNTIL SAMPLED & DISCHARGE APPROVED BY BSA. MNP TO INSP. MON. PM. 12/30/96: MNP INSP. MET W/ TOM WOELFE - NATURE'S WAY. OVER 500 YDS. GASOLINE CONTAM. SOIL ALREADY EXCAVATED. BOTTOM OF EAST EXCAVATION DOWN TO BEDROCK & APPEARS TO BE OK. HOWEVER, SOIL ALONG SOUTH SIDE OF EXCAVATION TOARD STREET STILL HAS STRONG GASOLINE ODOR. WATER BEING PUMPED FROM MIDDLE EXCAVATION INTO TANKER, THEN FILTERED THROUGH CARBON DRUM INTO TANK ON SITE. SAMPLES OF FILTERED WATER TAKEN FOR ANALYSIS BEFORE DISCHARGING. MORE EXCAVATION TO BE DONE IN MIDDLE EXCAVATION. SAMPLES TO BE COLLECTED FROM BOTTOM & SIDES, 3 & 7 RESPECTIVELY. MW'S WILL BE REQUIRED BECAUSE OF GASOLINE PRODUCT STILL SEEPING INTO EXCAV. FROM UNDER BUILDING. ALSO, MW'S MAY BE NEEDED ALONG SOUTH SIDE OF EXCAVATION, IF ADDITIONAL SOIL IS NOT REMOVED. ALSO, FURTHER SITE ASSESSMENT MAY BE REQUIRED. SOIL BEING STAGED ON HAY & PLASTIC 2-3 FT DEEP FOR BIOREMEDIATION. 01/06/96: MNP TELECON W/ GREG WEBER - NWI. SEVERAL HUNDRED YARDS OF GASOLINE CONTAMINATED SOIL EXCAVATED BETWEEN BUILDING & E. FERRY ST. 2 TRUCKLOADS OF CONTAMINATED SOIL TAKEN TO 56 CLYDE ST, BUFFALO (PROPERTY OWNED BY INDUSTRIAL REALTY & FUNDING). WEBER SAID BOTTOM & SIDE SAMPLES COLLECTED & BEING SENT TO EXPRESS LAB FOR ANALYSIS. EXCAVATION BACKFILLED, NO MW'S INSTALLED AS I HAD DISCUSSED W/ TOM WOELFE. I EXPLAINED MY CONCERNS THAT A MW (OR MW'S) MAY BE NEEDED BECAUSE OF THE PRODUCT SEEPING INTO THE EXCAVATION FROM UNDER THE BUILDING ON THE NORTH SIDE. 01/06/96: MNP TELECON W/ TED KOSIOREK - INDUSTRIAL REALTY & FUNDING, INC., PO BOX 1011, BUFFALO, NY 14240, PH# (716)895-1880. HIS COMPANY IS FINANCING THE CLEANUP BY NATURE'S WAY. KOSIOREK SAID IR&F SOLD THE THE PROPERTY TO MIKE ABUHAMRA 3 YEARS AGO. THEY PLAN TO SETTLE COSTS BETWEEN THEM, MDM PETROLEUM & ABUHAMRA. I WILL CC CORRESPONDENCE TO IR&F & NWI. 10/02/97: MNP REVIEWED SAMPLE RESULTS FOR BIO-REMEDICATION PILES. SOME VOLATILES DETECTED, BUT ALL WERE BELOW STARS #1. SITE NEEDS TO BE INSPECTED BEFORE CLOSURE. 11/05/97: MNP INSP. CHECKED SOIL PILE BEHIND BUILDING. GASOLINE ODORS NOTED IN WEST END OF PILE, REST OF PILE OK. ALSO, CHECKED SOIL AT 56 CLYDE AVE SITE, NO ODORS NOTED. 11/30/97: RNL INSPECTION, DUG SEVERAL LOCATIONS, NO ODORS OR SHEENS NOTED, BASED ON SAMPLE RESULTS, CLOSEOUT 02/19/98: RNL NOTE, MNP SENT CLOSURE LETTER TO MIKE ABUHAMRA 05/30/98: RNL UPDATE, RECIEVED QUERY FROM CITY ABOUT SOIL ON SITE, I CHECKED FILE AND FOUND IT NOT TO BE CLOSED, CLOSED FILE, SENT LETTER TO CITY ABOUT SOIL, COULD STAY ON SITE OR BE REUSED, MET OUR SOIL GUIDANCE VALUES"

DEC Region: 9
DER Facility ID: 146488
DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FG 3/3/97 REQUESTED THAT ANGELA DEMERLE SEND A COPY OF THE PHASE II ASSESSMENT. SHE AGREED AND SAID THAT THE OWNER IS LOOKING FOR BIDS TO COMPLETE THE REMOVAL OF 2 UST'S & ASSOCIATED CONTAMINATION. 3/11/97 SPOKE TO CRAIG SLATER. REQUESTED A COPY OF THE PHASE II AGAIN. HE SAID HE WILL PUT IT IN THE MAIL TOMORROW. HE WAS UNSURE AS TO WHO THE OWNER OF THE PROPERTY WAS. HE SAID TO SEND LETTERS TO CAMAIR. 3/12/97 SPOKE TO M. ARNO. HE SAID THAT 757 E FERRY INC. OWNS THE PROPERTY AND HE IS THE PRESIDENT OF THAT COMPANY. HE IS HIRING HORIZON ENVRL TO REMOVE UST'S. HE SAID THEY HAVE ALREADY UNCOVERED THE UST'S AND WILL DISPOSE OF THE WATERS AT THE BSA. HE HAS ALREADY OBTAINED A PERMIT FROM BSA FOR THIS ACTIVITY. HE WILL COLLECT SAMPLES FROM THE EXCAVATION FOR ANALYSIS. 3/12/97 LETTER SENT REQUESTING SITE CLEANUP & UST REMOVAL AS WELL AS EXCAVATION SAMPLE COLLECTION. RESPONSE DUE 4/4/97 3/19/97 RECEIVED PHASE II REPORT FOR THE SITE. TANK WATERS ARE ABOVE STARS. 3/24/97 SITE VISIT. MET MICHAEL ARNO. HE SHOWED ME LOCATION OF USTS ON SITE. HE IS WAITING FOR BSA TO APPROVE THE DISCHARGE OF THE WATERS TO THE SEWER. HE EXPECTS TO START WORK IN APPROX 2 WEEKS. 4/8/97 MR. ARNO CALLED STATING THAT WORK IS TO BEGIN SOME TIME THIS WEEK. HE WILL LET ME KNOW WHEN THEY START. HE JUST RECEIVED APPROVAL TO DISCHARGE TO BSA. 4/21/97 MR. ARNO SAID THAT HE WILL DISCHARGE WATER IN USTS AT 9GPM PER THE BSA PERMIT. HE HAS 40,000 GAL OF WATER TO DISCHARGE. HE WILL REMOVE UST'S BY 4/30/97 AND WILL CONTACT ME WHEN HE DOES. 6/6/97 SPOKE TO MIKE ARNO WHO SAID HIS PUMP BROKE SO HE HAS NOT COMPLETED REMOVING WATERS FROM THE UST. HE WILL HAVE THE PUMP REPAIRED AND START WORK BY MONDAY 6/9/97. I TOLD HIM TO CALL AND LET ME KNOW. HE AGREED. 07/01/97: MNP TELECON WITH MIKE ARNO. HE CONFIRMED TANK PULL WAS SCHEDULED FOR 7/9/97, BUT HE ASKED IF TANKS COULD BE FILLED WITH CONCRETE. I SAID OK PROVIDING THE TANKS ARE CLEANED OUT & NO CONTAMINATION PRESENT. SAMPLING UNDER & AROUND THE TANK MUST BE DONE TO CONFIRM NO CONTAMINATION. HE MUST CALL BEFORE PROCEEDING WITH TANK CLOSURE FOR DEC INSPECTION. 7/1/97 JFO SITE VISIT. FOUND CONTAMINATION WHILE UNCOVERING THE TOP OF THE UST'S. SOIL STOCKPILED ON SITE. ADDITIONAL SOIL TO BE REMOVED. UST REMOVAL TO TAKE PLACE ON 7/9/97. 07/09/97: MNP TELECON WITH MR. ARNO. TANK PULL CANCELLED FOR THIS WEEK. I ASKED HIM TO CONTACT FRANCINE GALLEGGO WITH NEW DATE. 7/14/97 PHIL BADAME WITH HORIZON CALLED & SAID THAT ANALYTICAL IS BELOW STARS FOR THE EXCAVATION SAMPLES AS WELL AS THE CONTAMINATED SOIL SAMPLES. HE SAID THAT THE UST'S WON'T BE REMOVED AND THE SAMPLES ARE FROM AROUND THE BOTTOM AND ALONG THE SIDES BUT A HOLE WAS NOT CUT THROUGH THE BOTTOM OF THE UST. MR. BADAME SAID HE GOT APPROVAL FOR THIS FROM SOMEONE ELSE IN THIS OFFICE BUT HE DID NOT SAY WHO. HIS INFORMATION ON WHAT WAS TO BE USED IN THE TANKS FOR FILL WAS CONFUSING. I TOLD HIM TO PROVIDE DATA. HE SAID THAT HE MAY START BACKFILLING TODAY. SITE VISIT. EXCAVATION STILL OPEN. USTS HAD BEEN CUT OPEN. NO ONE ON SITE. CALLED MR. BADAME & LEFT A MESSAGE FOR HIM TO RETURN CALL TO CLARIFY ISSUES. 8/21/97 ALL RESULTS SUBMITTED AND SHOW THAT LEVELS ARE BELOW STARS FOR THE SOIL

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F004
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F006
Waste Description:	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Waste Code:	F007
Waste Description:	SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.
Waste Code:	F008
Waste Description:	PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
Waste Code:	F009
Waste Description:	SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
Waste Code:	F010
Waste Description:	QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
Waste Code:	F014

Waste Code:	K011
Waste Description:	BOTTOM STREAM FROM THE WASTEWATER STRIPPER IN THE PRODUCTION OF ACRYLONITRILE.
Waste Code:	K014
Waste Description:	BOTTOMS FROM THE ACETONITRILE PURIFICATION COLUMN IN THE PRODUCTION OF ACRYLONITRILE.
Waste Code:	K016
Waste Description:	HEAVY ENDS OR DISTILLATION RESIDUES FROM THE PRODUCTION OF CARBON TETRACHLORIDE.
Waste Code:	K018
Waste Description:	HEAVY ENDS FROM THE FRACTIONATION COLUMN IN ETHYL CHLORIDE PRODUCTION.
Waste Code:	K019
Waste Description:	HEAVY ENDS FROM THE DISTILLATION OF ETHYLENE DICHLORIDE IN ETHYLENE DICHLORIDE PRODUCTION.
Waste Code:	K020
Waste Description:	HEAVY ENDS FROM THE DISTILLATION OF VINYL CHLORIDE IN VINYL CHLORIDE MONOMER PRODUCTION.
Waste Code:	K023
Waste Description:	DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.
Waste Code:	K024
Waste Description:	DISTILLATION BOTTOMS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM NAPHTHALENE.
Waste Code:	K036
Waste Description:	STILL BOTTOMS FROM TOLUENE RECLAMATION DISTILLATION IN THE PRODUCTION OF DISULFOTON.
Waste Code:	K037
Waste Description:	WASTEWATER TREATMENT SLUDGES FROM THE PRODUCTION OF DISULFOTON.
Waste Code:	K038
Waste Description:	WASTEWATER FROM THE WASHING AND STRIPPING OF PHORATE PRODUCTION.
Waste Code:	K045
Waste Description:	SPENT CARBON FROM THE TREATMENT OF WASTEWATER CONTAINING EXPLOSIVES.
Waste Code:	K046
Waste Description:	WASTEWATER TREATMENT SLUDGES FROM THE MANUFACTURING, FORMULATION, AND LOADING OF LEAD-BASED INITIATING COMPOUNDS.
Waste Code:	K047
Waste Description:	PINK/RED WATER FROM TNT OPERATIONS.
Waste Code:	K062
Waste Description:	SPENT PICKLE LIQUOR FROM STEEL FINISHING OPERATIONS OF PLANTS THAT PRODUCE IRON OR STEEL.
Waste Code:	P005
Waste Description:	2-PROPEN-1-OL (OR) ALLYL ALCOHOL

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Name: AMERICAN AXLE PLANT
 Address: 1001 EAST DELAVAN AVENUE
 City,State,Zip: BUFFALO, NY 14215
 Program: HW
 Site Code: 346870
 Classification: 2
 Region: 9
 Acres: 5
 HW Code: 915196
 Record Add: 06/01/2005
 Record Upd: 09/19/2019
 Updated By: JLDYBER

Site Description: Location: The former American Axle Plant site is 2.654 acre area situated within a 35.54 acre former manufacturing facility (1001 East Delavan Street) located at the intersection of East Delavan Ave. and Cornwall Ave. in the City of Buffalo, Erie County. The site is in an urban area. Site Features: The site is part of a larger former automobile drivetrain manufacturing facility located on the parcel. The former plant complex also includes plant facilities located on non-contiguous parcels at 1057 East Delavan (3.43 acres) and at 320 Scjacuada Street (8.31 acre Saginaw Site - 915152). The site is also bisected by a 5 ft. by 9 ft. (5X9) oval combined sewer that traverses beneath the site. The adjoining parcel contains plant facilities consisting of on-grade structures and paved surfacing. The surface water body nearest the site is Scjacuada Creek Drain (see discussion on fill below). 5x9 Oval Sewer: The oval sewer is constructed from brick and serves as a combined sewer for the Buffalo Sewer Authority (BSA) sewer system. Several of the existing plant building were constructed over the 5x9 sewer. Numerous sewer laterals connect to the 5x9 oval sewer beneath the facility. The 5x9 oval sewer empties into the BSA Scjacuada Interceptor (interceptor) south of the site which flows west to the BSA Wastewater Treatment Facility. A combined sewer overflow relief point, referred to by the BSA as Sewer Patrol Point (SPP) 337, is present at the junction of the 5x9 oval sewer and a vertical shaft leading to the BSA interceptor. Current Zoning and Land Use: The site is zoned industrial. The site is not in active use

MAP FINDINGS

EAST DELAVAN PROPERTY LLC (Continued)

S104497613

except for operating a groundwater recovery and treatment system. The nearest residence is approximately 700 feet west of the site. Past Use of the Site: The former manufacturing facility was operated by General Motors from the 1920s to 1994 where initially automobiles were assembled, and later automobile drivetrain components were manufactured. The site, along with the balance of the property and adjoining parcels, and axle manufacturing business was sold to American Axle in 1994. American Axle ceased its manufacturing operations at this facility in 2008 and sold the site and balance of property and adjoining parcels to East Delavan Property, LLC (EDP) in September 2008. The 2.64 acre site was subdivided from the larger former plant complex in 2017. A portion of the 1001 East Delavan parcel is occupied by a sister entity of EDP and several other tenants. Following the discovery of a petroleum spill in the former B-26 coolant pit containing Polychlorinated Biphenyl (PCB) contaminated metal working oil, site investigations started in 1991 initially centered around the B-26 cooling pit. Site Geology: The overburden ranges from 6.5 to 20.7 feet and consists of fill, clay and till units above bedrock. Fill: The fill varies between 0.2 feet to 15.5 feet and is composed of reworked soil, crushed concrete, gravel, foundry slag, crushed brick, cinders, wood, and other refuse such as pieces of metal and glass fragments. The southern end of the 1001 East Delavan and 320 Scajaquada Street parcels previously contained a free flowing creek (Scajaquada Creek) before being filled and relocated south of the site along Scajaquada Street and tunnelized (referred to as the Scajaquada Creek Drain). Clay: The clay layer consists of gray or black silt/clay in the upper horizon and red-brown clay in the lower horizon. The average thickness of the upper silt/clay is 2.4 feet and the average thickness of the red-brown clay is 8.5 feet. Till: The till is intermittently present overlying the bedrock. The average thickness of the till is 1.4 feet. Bedrock: The average depth to bedrock beneath the site is approximately 15.8 feet below ground surface. The bedrock consists of light to dark gray cherty limestone (Onondaga Limestone). Site Hydrogeology: Subsurface features beneath the 1001 East Delavan manufacturing plant influences groundwater flow, especially in the fill and upper clay layers. The primary influencing features are a 5X9 oval combined sewer and the former B-26 coolant pit. The 2019 groundwater/oil collection system further depresses shallow groundwater around the 5x9 sewer.

Env Problem:

Nature and Extent of Contamination: Based upon data from the November 2006 RI Report, the primary contaminants at the site are PCB contaminated oil in the vicinity of the B-26 coolant pit and surrounding area where the 5X9 oval sewer passes under the site. The draft June 2009 Supplemental RI concluded that adjoining areas beyond the defined site are also contaminated with PCB contaminated oil. The contamination at the site is due to spills of hydraulic oils and heat transfer fluids containing PCBs previously used at the plant. Petroleum Oil Characterization: A number of groundwater wells contained separate phase oil and varied by geologic unit. Fill Unit: Oil was noted in approximately 26 of the 107 borings installed for environmental investigations initiated in 1994. Out of 30 fill wells, 13 showed presence of oil with thickness ranging from 0.01 to 5.66 ft. Most of the wells containing oil are located east side of the 5x9 sewer and south of the B-26 Coolant Pit. The greatest volume of oil found was in wells CP 14, M-1, M-3. The estimated volume of recoverable oil in the fill unit is 50,000 to 110,000 gallons. Clay

Unit: 23 out of 40 wells sampled contained oil with thickness from 0.01 to 12.83 ft. MW-400 showed the greatest amount of product. The estimated volume of recoverable oil in clay unit is 1000 gallons. Bedrock Unit: 9 out of 18 wells sampled showed oil with thickness ranging from 0.01 to 4.07 ft. PCB Characterization: PCB Aroclor 1248 was detected most frequently at the site, followed by Aroclor 1242. Aroclors 1254 and 1260 were detected in a limited number of samples. PCB concentrations also vary by geologic unit. PCBs in Soil: The characterization summary of PCBs in subsurface soils at the site is as followed: PCBs are present in subsurface soils consisting of the fill (up to 64 ppm) and native clay (up to 50 ppm) units at concentrations exceeding the NYSDEC soil cleanup objective. PCB found in subsurface soils occurs in the same areas where oil is observed in the subsurface soils. No PCBs were found in till. PCBs in Groundwater: The fill and clay wells showing greatest volumes of oil do not necessarily show highest levels of PCBs. PCB results by respective geologic unit wells is as followed. Fill Unit Wells: PCBs were detected in oil samples from 10 of 11 wells sampled. PCB concentrations varied from 2.17 ppm (MW 401) to 3,850 ppm (CP 28). Clay Unit Wells: PCBs were detected in all 19 clay wells sampled. The concentrations ranged from 4.4 ppm (M 2A) to 440,000 ppm (MW 406). Well CP 17A showed 3,620 ppm PCBs. Another source area may be around GP 12 (840 ppm PCBs). Bedrock Unit Wells: Six bedrock wells sampled showed presence of PCBs which varied from 2.8 ppm (CP 27B) to 4,350 ppm (CP 23B) to 12,000 ppm (CP 16B). Based upon the PCB concentrations in groundwater and soil and groundwater gradient, it does not appear that PCBs are migrating from the site. However, PCB contaminated oil was determined to be seeping into the 5x9 oval sewer that traverses the site and former automotive parts manufacturing complex. Samples (wipe samples, seeping oil, wall scrapings) indicated the following: Water samples from downgradient manholes showed PCBs up to 0.785 ppb. Samples from laterals to the oval sewer revealed PCB levels up to 2.31 ppb. A water sample from a sewer clean-out revealed PCBs up to 68 ppb. Oil was found in laterals connected to the oval sewer with PCB levels up to 4.7 ppm. Concentrations of PCBs in standing oil in the oval sewer ranged from 440 ppm to 1,500 ppm. Samples of oil stains on the oval sewer wall indicated PCBs levels ranging from 95 ppm to 565 ppm. The B-26 Coolant Pit Interim Remedial Measure (IRM) was implemented in 1991 to begin recovery of the PCB contaminated oil from soil and groundwater around the B-26 coolant pit. Operation of the oil recovery system for the B-26 coolant pit is ongoing. An IRM to collect groundwater/oil in areas where measureable levels of oil were detected and intercept groundwater/oil from potentially seeping into the 5x9 sewer was implemented in 2019. The collected oil is separated from the influent and the groundwater is treated through the B-26 coolant pit groundwater treatment system prior to discharge to the BSA sewer. Further site assessment and evaluation of long term remedial action measures to address site contamination is underway (2019).

Site Description: Location: The Saginaw Site is located at 320 Scajacuada Street in the City of Buffalo, Erie County. The Site is defined as Parking Lot #4 at this inactive facility that manufactured axles and drive-train components for cars and trucks. It is located in an urban area. Site Features: The site is mostly comprised of a paved parking area, and is surrounded by industrial establishments and residential areas. A National Grid Power Corporation substation is adjacent to the site to the east. Current Zoning and Land Use: This site is currently being used and zoned for industrial purposes. Past Use of the Site: Scajaquada Creek originally flowed through the southern portion of the site. In the mid 1920 s, the creek was relocated through a concrete conduit to flow underground, below what is now Scajaquada Street. The former creek bed and adjacent low lying areas were used for the disposal of ash by the City of Buffalo. From 1947 to 1966, the Buffalo Gravel Corporation operated a concrete plant on portions of this site. General Motors (GM) purchased several parcels in the mid 1960s and constructed Parking Lot #4, which is the current listed site. The site was sold to AAM in 1994 along with the main facility west of the Conrail right of way. As part of this conveyance, a deed restriction was placed on the property limiting it for use for industrial purposes only. No other development of the site occurred until November 1994, when AAM began construction of a Parts Coating Facility on the northern third of Parking Lot #4. AAM ceased operations in December 2007 and sold the property and structures to East Delavan Property, LCC in October 2008. In 1989 during a spill cleanup of industrial oil, excavated soil was found to contain Polychlorinated Biphenyls (PCBs). General Motors-Saginaw, the previous owner of this site, entered into a Consent Order in 1995 to remove the clay pipe (contaminated with PCBs) and perform a site assessment to determine the environmental problems remaining at the site due to PCBs and lead. The clay pipe removal and disposal was completed in 1995. A Final Site Investigation Report and Engineering Evaluation Report of Alternatives was completed in 1997. A Record of Decision (ROD) was issued in March 1998 which required: 1)The further removal of PCB contaminated soil, water and oil; 2)Maintenance of the pavement to reduce infiltration and provide a barrier to the lead

contaminated soil; and 3) Long-term monitoring and maintenance. Remediation of this site was completed in 1998. A long term operation and maintenance (O&M) plan was in effect which required pavement inspection and maintenance, and groundwater and sewer monitoring for PCBs and lead contamination. In September 2009 the Department was informed that GM's bankruptcy would result in discontinuance of the OM&M activities. The matter is being reviewed by the Office of the Attorney General. Site Geology and Hydrogeology: The bedding material underneath the asphalt pavement is approximately one foot deep. The site geology underneath the bedding material is as follows: Below the bedding material is a layer of ash/slag type black or brown fill intermixed with various other materials and varies in thickness from 2 to 7 feet across the site (the lead contamination appears to be associated with this fill). Below this fill is a thin layer of black organic silt up to one foot in thickness. The thickness of the silty clay layer below the black organic silt ranges from 10 to 12 feet. This is underlain by Onondaga limestone bedrock which is approximately 17 to 19 feet below ground surface (bgs). The groundwater is found at a depth of 3 to 4 feet bgs and is believed to be due to perched water conditions. The general groundwater flow direction appears to be towards the Scajaquada Creek Drain, i.e. towards the south, in the overburden. Based upon the regional hydrogeology, it is assumed that groundwater in the bedrock flows towards the west - northwest.

Env Problem:

Nature and Extent of Contamination: Remediation of the site is complete. Prior to Remediation: In 1989 during a spill cleanup of industrial oil, excavated soil was found to contain Polychlorinated Biphenyls (PCBs) at 142 parts-per-million (ppm). Oily liquid found in an abandoned clay pipe sewer contained 8,420 ppm PCBs and samples showed high concentrations of lead as well. Fill containing elevated levels of lead contamination (ranges up to 23,900 ppm, with the majority of samples below 1000 ppm) is confined to the soils under the parking lot. On site sewer sediment were found contaminated with PCBs and were cleaned up using a power water washer during the summer of 1996. Post-Remediation: A long-term O&M plan is required to ensure the asphalt cap is in place and groundwater is not impacted.

Health Problem:

There is little potential for exposure to contaminated soils because access to the site is restricted and the contaminated soils are covered by a paved parking lot. The existing deed restriction prevents use of the site property for purposes other than industrial uses, thereby preventing the use of groundwater for drinking. The area is served by public water so exposures via drinking water are not expected. The remedy which included the removal of contaminated soils, maintenance of existing pavement, and deed restrictions will reduce the potential for exposure to site-related contaminants.

Site Description: Location: The former General Electric (GE) Service Center is located at 318 Urban Street, City of Buffalo, Erie County. The site is located in a mixed residential/industrial section of the City of Buffalo's east side. The site is bounded by residential homes along French Street to the north, Urban Street to the south, apartments and a playground to the east, and railroad tracks/corridor border to the west. A public school is located diagonally across Urban Street to the southeast. Site Features: The site is former industrial property approximately 2.5 acres in size and contains a brick/block high bay industrial use building. Asphalt pavement for access, parking and storage borders the northern, eastern and western sides of the building. All other areas are covered with turf grass. The entire parcel is secured with a chain link fence and driveway gate. The topographic land features are relatively flat, typical of the local area. The western side of the site is bounded by an elevated grade developed for the rail corridor. The site and local area is serviced with public water and sanitary sewer utilities. Current Zoning and Land Use: The site is zoned an M1-Light Industrial district that extends partially to the north, south and to the west. An R1-residential district is adjacent to the east and partially to the north. Past Use of the Site: GE owned and operated the site from 1921 to 1968. GE used the building as a service shop to repair electrical equipment and transformers and to machine parts. A transformer pit was used for operations including draining oil from transformers. Pyramid Steel Corporation (a.k.a. Sweeney Steel Service, Corp.) purchased the site in 1985 and used the building as a machine shop and warehouse for steel fabrication and supply. Pyramid vacated the property in the 2000s where it sat idle for a number of years. Several industrial tenants have used the building and site intermittently in the ensuing years. Site Geology and Hydrogeology: The surface soils consist primarily of poorly drained silts and clays. Based on the USGS topographic map, there are no surface water bodies within a one-mile radius of the site. The nearest surface water body shown on the map is Scajaquada Creek, which is one and one-half miles northwest of the site. The creek flows northwest, away from the site, and ultimately discharges into the Niagara River. However, Scajaquada Creek is reportedly contained within a tunnel approximately 2,000 feet north of the site. Drinking water is supplied to the surrounding neighborhood by the City of Buffalo, which draws surface water from Lake Erie. There are no known drinking water wells near the site. Storm water runoff enters on-site catch basins and is directed through storm drains to a publicly owned combined storm and sanitary sewer on French Street. During normal flow conditions, the flow is discharged to the publicly-owned treatment works (POTW) on Squaw Island. During heavy storms, the combined sewer overflow discharges directly to Scajaquada Creek. Env Problem: The primary contaminants of concern at the site are PCBs. PCB contaminated sewer sediments and site soils, and PCB contaminated portions of the building have been remediated. Offsite PCB

1000833429

contaminated soil in adjoining residential yards was also remediated. Pre-remediation: During an environmental site assessment in 1990, a prospective buyer learned that the two story brick and concrete structure at the site was once owned by General Electric (GE) and was used as a warehouse and repair shop for electrical equipment. In June 1990, samples were collected from oil stained sections of the building's wood block floor and from rust colored metal fines piled outside on an unused loading dock. The wood block flooring contained nearly 400 ppm PCBs and the rust colored debris contained up to 3085 ppm PCBs. Additional sampling by GE in 1990 found PCBs in the soils near the loading dock at concentrations from 2.9 to 38,530 ppm. Surface soil samples were collected by GE from the northern and eastern perimeters of the site in 1991 and contained 2 to 14 ppm PCBs. Based on this information, the NYSDOH concluded that the PCBs represented a significant health threat. Soil samples collected from the backyards of adjacent residential properties showed evidence of PCB contamination. A Remedial Investigation (RI) at the site began in July 1992 and a Feasibility Study presenting remedial alternatives was submitted in May 1994. A Record of Decision (ROD) was signed in March 1995 requiring removal of PCB contaminated soils and sediments at the site, decontaminating PCB impacted interior building surfaces, and cleaning impacted sewers of PCB contaminated sediments. Post-remediation: In December 1992, GE implemented an offsite IRM and excavated PCB contaminated soils from the affected residential yards and restored the yard surfaces. Remediation of the site began in 1996 and included flushing and vacuuming of off-site sewers; decontamination of the facility's interior; and removal of PCB contaminated soils at the site. Remediation was completed in 1999 in accordance with the remediation work plans. PCB residuals between 1 ppm and 10 ppm remain in a few areas at the site under soil or asphalt covers. Since minor levels of PCB residuals remain at the site, a deed restriction was required pursuant to the ROD. In 2011 the Department filed and recorded an Environmental Notice for this site.

Health Problem: Since the site is covered by asphalt, buildings, and clean backfill, people will not come in contact with site related soil or groundwater contamination that remains unless they dig below the surface. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. While the remaining extent of volatile organic compounds in soil is limited at the site, there is a process by which volatile organic compounds in soil may move into the soil vapor (air spaces within the soil), and in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Under current conditions and use of the site, soil vapor intrusion is not a concern, however, if use of the site changes from industrial use, the potential for soil vapor intrusion to occur will be evaluated.

near the loading dock at concentrations from 2.9 to 38,530 ppm. Surface soil samples were collected by GE from the northern and eastern perimeters of the site in 1991 and contained 2 to 14 ppm PCBs. Based on this information, the NYSDOH concluded that the PCBs represented a significant health threat. Soil samples collected from the backyards of adjacent residential properties showed evidence of PCB contamination. A Remedial Investigation (RI) at the site began in July 1992 and a Feasibility Study presenting remedial alternatives was submitted in May 1994. A Record of Decision (ROD) was signed in March 1995 requiring removal of PCB contaminated soils and sediments at the site, decontaminating PCB impacted interior building surfaces, and cleaning impacted sewers of PCB contaminated sediments. Post-remediation: In December 1992, GE implemented an offsite IRM and excavated PCB contaminated soils from the affected residential yards and restored the yard surfaces. Remediation of the site began in 1996 and included flushing and vacuuming of off-site sewers; decontamination of the facility's interior; and removal of PCB contaminated soils at the site. Remediation was completed in 1999 in accordance with the remediation work plans. PCB residuals between 1 ppm and 10 ppm remain in a few areas at the site under soil or asphalt covers. Since minor levels of PCB residuals remain at the site, a deed restriction was required pursuant to the ROD. In 2011 the Department filed and recorded an Environmental Notice for this site.

Health Problem: Since the site is covered by asphalt, buildings, and clean backfill, people will not come in contact with site related soil or groundwater contamination that remains unless they dig below the surface. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. While the remaining extent of volatile organic compounds in soil is limited at the site, there is a process by which volatile organic compounds in soil may move into the soil vapor (air spaces within the soil), and in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Under current conditions and use of the site, soil vapor intrusion is not a concern, however, if use of the site changes from industrial use, the potential for soil vapor intrusion to occur will be evaluated.

Site Description: Location: The former General Electric (GE) Service Center is located at 318 Urban Street, City of Buffalo, Erie County. The site is located in a mixed residential/industrial section of the City of Buffalo's east side. The site is bounded by residential homes along French Street to the north, Urban Street to the south, apartments and a playground to the east, and railroad tracks/corridor border to the west. A public school is located diagonally across Urban Street to the southeast. Site Features: The site is former industrial property approximately 2.5 acres in size and contains a brick/block high bay industrial use building. Asphalt pavement for access, parking and storage borders the northern, eastern and western sides of the building. All other areas are covered with turf grass. The entire parcel is secured with a chain link fence and driveway gate. The

Env Problem:

topographic land features are relatively flat, typical of the local area. The western side of the site is bounded by an elevated grade developed for the rail corridor. The site and local area is serviced with public water and sanitary sewer utilities. Current Zoning and Land Use: The site is zoned an M1-Light Industrial district that extends partially to the north, south and to the west. An R1-residential district is adjacent to the east and partially to the north. Past Use of the Site: GE owned and operated the site from 1921 to 1968. GE used the building as a service shop to repair electrical equipment and transformers and to machine parts. A transformer pit was used for operations including draining oil from transformers. Pyramid Steel Corporation (a.k.a. Sweeney Steel Service, Corp.) purchased the site in 1985 and used the building as a machine shop and warehouse for steel fabrication and supply. Pyramid vacated the property in the 2000s where it sat idle for a number of years. Several industrial tenants have used the building and site intermittently in the ensuing years. Site Geology and Hydrogeology: The surface soils consist primarily of poorly drained silts and clays. Based on the USGS topographic map, there are no surface water bodies within a one-mile radius of the site. The nearest surface water body shown on the map is Scajaquada Creek, which is one and one-half miles northwest of the site. The creek flows northwest, away from the site, and ultimately discharges into the Niagara River. However, Scajaquada Creek is reportedly contained within a tunnel approximately 2,000 feet north of the site. Drinking water is supplied to the surrounding neighborhood by the City of Buffalo, which draws surface water from Lake Erie. There are no known drinking water wells near the site. Storm water runoff enters on-site catch basins and is directed through storm drains to a publicly owned combined storm and sanitary sewer on French Street. During normal flow conditions, the flow is discharged to the publicly-owned treatment works (POTW) on Squaw Island. During heavy storms, the combined sewer overflow discharges directly to Scajaquada Creek. The primary contaminants of concern at the site are PCBs. PCB contaminated sewer sediments and site soils, and PCB contaminated portions of the building have been remediated. Offsite PCB contaminated soil in adjoining residential yards was also remediated. Pre-remediation: During an environmental site assessment in 1990, a prospective buyer learned that the two story brick and concrete structure at the site was once owned by General Electric (GE) and was used as a warehouse and repair shop for electrical equipment. In June 1990, samples were collected from oil stained sections of the building's wood block floor and from rust colored metal fines piled outside on an unused loading dock. The wood block flooring contained nearly 400 ppm PCBs and the rust colored debris contained up to 3085 ppm PCBs. Additional sampling by GE in 1990 found PCBs in the soils near the loading dock at concentrations from 2.9 to 38,530 ppm. Surface soil samples were collected by GE from the northern and eastern perimeters of the site in 1991 and contained 2 to 14 ppm PCBs. Based on this information, the NYSDOH concluded that the PCBs represented a significant health threat. Soil samples collected from the backyards of adjacent residential properties showed evidence of PCB contamination. A Remedial Investigation (RI) at the site began in July 1992 and a Feasibility Study presenting remedial alternatives was submitted in May 1994. A Record of Decision (ROD) was signed in March 1995 requiring removal of PCB contaminated soils and sediments at the site, decontaminating PCB impacted interior building surfaces,

Site Code: 57878

Site Description: Location: The former General Electric (GE) Service Center is located at 318 Urban Street, City of Buffalo, Erie County. The site is located in a mixed residential/industrial section of the City of Buffalo's east side. The site is bounded by residential homes along French Street to the north, Urban Street to the south, apartments and a playground to the east, and railroad tracks/corridor border to the west. A public school is located diagonally across Urban Street to the southeast. Site Features: The site is former industrial property approximately 2.5 acres in size and contains a brick/block high bay industrial use building. Asphalt pavement for access, parking and storage borders the northern, eastern and western sides of the building. All other areas are covered with turf grass. The entire parcel is secured with a chain link fence and driveway gate. The topographic land features are relatively flat, typical of the local area. The western side of the site is bounded by an elevated grade developed for the rail corridor. The site and local area is serviced with public water and sanitary sewer utilities. Current Zoning and Land Use: The site is zoned an M1-Light Industrial district that extends partially to the north, south and to the west. An R1-residential district is adjacent to the east and partially to the north. Past Use of the Site: GE owned and operated the site from 1921 to 1968. GE used the building as a service shop to repair electrical equipment and transformers and to machine parts. A transformer pit was used for operations including draining oil from transformers. Pyramid Steel Corporation (a.k.a. Sweeney Steel Service, Corp.) purchased the site in 1985 and used the building as a machine shop and warehouse for steel fabrication and supply. Pyramid vacated the property in the 2000s where it sat idle for a number of years. Several industrial tenants have used the building and site intermittently in the ensuing years. Site Geology and Hydrogeology: The surface soils consist primarily of poorly drained silts and clays. Based on the USGS topographic map, there are no surface water bodies within a one-mile radius of the site. The nearest surface water body shown on the map is Scajaquada Creek, which is one and one-half miles northwest of the site. The creek flows northwest, away from the site, and ultimately discharges into the Niagara River. However, Scajaquada Creek is reportedly contained within a tunnel approximately 2,000 feet north of the site. Drinking water is supplied to the surrounding neighborhood by the City of Buffalo,

MAP FINDINGS

GENERAL ELECTRIC - FORMER SHOP (Continued)

1000833429

Env Problem: which draws surface water from Lake Erie. There are no known drinking water wells near the site. Storm water runoff enters on-site catch basins and is directed through storm drains to a publicly owned combined storm and sanitary sewer on French Street. During normal flow conditions, the flow is discharged to the publicly-owned treatment works (POTW) on Squaw Island. During heavy storms, the combined sewer overflow discharges directly to Scajaquada Creek.

The primary contaminants of concern at the site are PCBs. PCB contaminated sewer sediments and site soils, and PCB contaminated portions of the building have been remediated. Offsite PCB contaminated soil in adjoining residential yards was also remediated.

Pre-remediation: During an environmental site assessment in 1990, a prospective buyer learned that the two story brick and concrete structure at the site was once owned by General Electric (GE) and was used as a warehouse and repair shop for electrical equipment. In June 1990, samples were collected from oil stained sections of the building's wood block floor and from rust colored metal fines piled outside on an unused loading dock. The wood block flooring contained nearly 400 ppm PCBs and the rust colored debris contained up to 3085 ppm PCBs. Additional sampling by GE in 1990 found PCBs in the soils near the loading dock at concentrations from 2.9 to 38,530 ppm. Surface soil samples were collected by GE from the northern and eastern perimeters of the site in 1991 and contained 2 to 14 ppm PCBs. Based on this information, the NYSDOH concluded that the PCBs represented a significant health threat. Soil samples collected from the backyards of adjacent residential properties showed evidence of PCB contamination. A Remedial Investigation (RI) at the site began in July 1992 and a Feasibility Study presenting remedial alternatives was submitted in May 1994. A Record of Decision (ROD) was signed in March 1995 requiring removal of PCB contaminated soils and sediments at the site, decontaminating PCB impacted interior building surfaces, and cleaning impacted sewers of PCB contaminated sediments.

Post-remediation: In December 1992, GE implemented an offsite IRM and excavated PCB contaminated soils from the affected residential yards and restored the yard surfaces. Remediation of the site began in 1996 and included flushing and vacuuming of off-site sewers; decontamination of the facility's interior; and removal of PCB contaminated soils at the site. Remediation was completed in 1999 in accordance with the remediation work plans. PCB residuals between 1 ppm and 10 ppm remain in a few areas at the site under soil or asphalt covers. Since minor levels of PCB residuals remain at the site, a deed restriction was required pursuant to the ROD. In 2011 the Department filed and recorded an Environmental Notice for this site.

Health Problem: Since the site is covered by asphalt, buildings, and clean backfill, people will not come in contact with site related soil or groundwater contamination that remains unless they dig below the surface. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. While the remaining extent of volatile organic compounds in soil is limited at the site, there is a process by which volatile organic compounds in soil may move into the soil vapor (air spaces within the soil), and in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Under current conditions and use of the

PCB contaminated sewer sediments and site soils, and PCB contaminated portions of the building have been remediated. Offsite PCB contaminated soil in adjoining residential yards was also remediated. Pre-remediation: During an environmental site assessment in 1990, a prospective buyer learned that the two story brick and concrete structure at the site was once owned by General Electric (GE) and was used as a warehouse and repair shop for electrical equipment. In June 1990, samples were collected from oil stained sections of the building's wood block floor and from rust colored metal fines piled outside on an unused loading dock. The wood block flooring contained nearly 400 ppm PCBs and the rust colored debris contained up to 3085 ppm PCBs. Additional sampling by GE in 1990 found PCBs in the soils near the loading dock at concentrations from 2.9 to 38,530 ppm. Surface soil samples were collected by GE from the northern and eastern perimeters of the site in 1991 and contained 2 to 14 ppm PCBs. Based on this information, the NYSDOH concluded that the PCBs represented a significant health threat. Soil samples collected from the backyards of adjacent residential properties showed evidence of PCB contamination. A Remedial Investigation (RI) at the site began in

July 1992 and a Feasibility Study presenting remedial alternatives was submitted in May 1994. A Record of Decision (ROD) was signed in March 1995 requiring removal of PCB contaminated soils and sediments at the site, decontaminating PCB impacted interior building surfaces, and cleaning impacted sewers of PCB contaminated sediments.

Post-remediation: In December 1992, GE implemented an offsite IRM and excavated PCB contaminated soils from the affected residential yards and restored the yard surfaces. Remediation of the site began in 1996 and included flushing and vacuuming of off-site sewers; decontamination of the facility's interior; and removal of PCB contaminated soils at the site. Remediation was completed in 1999 in accordance with the remediation work plans. PCB residuals between 1 ppm and 10 ppm remain in a few areas at the site under soil or asphalt covers. Since minor levels of PCB residuals remain at the site, a deed restriction was required pursuant to the ROD. In 2011 the Department filed and recorded an Environmental Notice for this site.

Health Problem: Since the site is covered by asphalt, buildings, and clean backfill, people will not come in contact with site related soil or groundwater contamination that remains unless they dig below the surface. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. While the remaining extent of volatile organic compounds in soil is limited at the site, there is a process by which volatile organic compounds in soil may move into the soil vapor (air spaces within the soil), and in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Under current conditions and use of the site, soil vapor intrusion is not a concern, however, if use of the site changes from industrial use, the potential for soil vapor intrusion to occur will be evaluated.

Site Description: Location: The former General Electric (GE) Service Center is located at 318 Urban Street, City of Buffalo, Erie County. The site is located in a mixed residential/industrial section of the City of Buffalo's east side. The site is bounded by residential homes along French Street to the north, Urban Street to the south, apartments and a playground to the east, and railroad tracks/corridor border to the west. A public school is located diagonally across Urban Street to the southeast. Site Features: The site is former industrial property approximately 2.5 acres in size and contains a brick/block high bay industrial use building. Asphalt pavement for access, parking and storage borders the northern, eastern and western sides of the building. All other areas are covered with turf grass. The entire parcel is secured with a chain link fence and driveway gate. The topographic land features are relatively flat, typical of the local area. The western side of the side is bounded by an elevated grade developed for the rail corridor. The site and local area is serviced with public water and sanitary sewer utilities. Current Zoning and Land Use: The site is zoned an M1-Light Industrial district that

Env Problem:

extends partially to the north, south and to the west. An R1-residential district is adjacent to the east and partially to the north. Past Use of the Site: GE owned and operated the site from 1921 to 1968. GE used the building as a service shop to repair electrical equipment and transformers and to machine parts. A transformer pit was used for operations including draining oil from transformers. Pyramid Steel Corporation (a.k.a. Sweeney Steel Service, Corp.) purchased the site in 1985 and used the building as a machine shop and warehouse for steel fabrication and supply. Pyramid vacated the property in the 2000s where it sat idle for a number of years. Several industrial tenants have used the building and site intermittently in the ensuing years. Site Geology and Hydrogeology: The surface soils consist primarily of poorly drained silts and clays. Based on the USGS topographic map, there are no surface water bodies within a one-mile radius of the site. The nearest surface water body shown on the map is Scajaquada Creek, which is one and one-half miles northwest of the site. The creek flows northwest, away from the site, and ultimately discharges into the Niagara River. However, Scajaquada Creek is reportedly contained within a tunnel approximately 2,000 feet north of the site. Drinking water is supplied to the surrounding neighborhood by the City of Buffalo, which draws surface water from Lake Erie. There are no known drinking water wells near the site. Storm water runoff enters on-site catch basins and is directed through storm drains to a publicly owned combined storm and sanitary sewer on French Street. During normal flow conditions, the flow is discharged to the publicly-owned treatment works (POTW) on Squaw Island. During heavy storms, the combined sewer overflow discharges directly to Scajaquada Creek.

The primary contaminants of concern at the site are PCBs. PCB contaminated sewer sediments and site soils, and PCB contaminated portions of the building have been remediated. Offsite PCB contaminated soil in adjoining residential yards was also remediated. Pre-remediation: During an environmental site assessment in 1990, a prospective buyer learned that the two story brick and concrete structure at the site was once owned by General Electric (GE) and was used as a warehouse and repair shop for electrical equipment. In June 1990, samples were collected from oil stained sections of the building's wood block floor and from rust colored metal fines piled outside on an unused loading dock. The wood block flooring contained nearly 400 ppm PCBs and the rust colored debris contained up to 3085 ppm PCBs. Additional sampling by GE in 1990 found PCBs in the soils near the loading dock at concentrations from 2.9 to 38,530 ppm. Surface soil samples were collected by GE from the northern and eastern perimeters of the site in 1991 and contained 2 to 14 ppm PCBs. Based on this information, the NYSDOH concluded that the PCBs represented a significant health threat. Soil samples collected from the backyards of adjacent residential properties showed evidence of PCB contamination. A Remedial Investigation (RI) at the site began in July 1992 and a Feasibility Study presenting remedial alternatives was submitted in May 1994. A Record of Decision (ROD) was signed in March 1995 requiring removal of PCB contaminated soils and sediments at the site, decontaminating PCB impacted interior building surfaces, and cleaning impacted sewers of PCB contaminated sediments. Post-remediation: In December 1992, GE implemented an offsite IRM and excavated PCB contaminated soils from the affected residential yards and restored the yard surfaces. Remediation of the site began in 1996 and included flushing and vacuuming of off-site sewers;

Site Description: Location: The Niagara Mohawk Dewey Ave. Service Station is located at 144 Kensington Ave. in a highly urban setting in the City of Buffalo. St. Mary's School for the Deaf borders the site to the west. Site Features: National Grid owns the property and services its customers from the active facility. A mechanic shop, several administrative buildings, an above ground fuel island, and an employee parking lot are currently located on-site and are part of the service center. Current Zoning and Land Use: The site is an active National Grid service center. Past Use of the Site: The facility serviced electrical equipment containing PCB's since the early 1930's. Concerns about potential PCB contamination of soil and groundwater, by prior operations, were raised during the public meetings for a DEC permit for the new facility. Sampling indicated three areas of PCB contamination along the property line bordering the St. Mary's School for the Deaf athletic field, with some migration onto the athletic field. Levels were 20 to 230 ppm PCBs on Niagara Mohawk property, 0 to 54 ppm on the school athletic field. Remedial measures were taken by Niagara Mohawk under a Consent Order. The measures included excavation and removal of contaminated soils. The work was concluded in 1990. Site Geology and Hydrogeology: Groundwater generally flows to the east across the site.

Env Problem:

Nature and Extent of Contamination: The facility serviced electrical equipment containing PCB's since the early 1930's. Concerns about potential PCB contamination of soil and groundwater, by prior operations, were raised during the public meetings for a DEC permit for the new facility. Sampling indicated three areas of PCB contamination along the property line bordering the St. Mary's School for the Deaf athletic field, with some migration onto the athletic field. Levels were 20 to 230 ppm PCBs on Niagara Mohawk property, 0 to 54 ppm on the school athletic field. Remedial measures were taken by Niagara Mohawk under a Consent Order. The measures included excavation and removal of contaminated soils. The work was concluded in 1990. Ground water monitoring results obtained pursuant to the Post-Remedial Ground Water Monitoring Program which was required by the Part 373 Hazardous Waste storage Permit indicate that hazardous constituents in concentrations exceeding Resource Conservation and Recovery Act (RCRA) Corrective Action Levels, Safe Drinking Water Act Maximum Contaminant Levels (MCLs), and New York State Groundwater Standards are present in the ground water at the Facility. A Groundwater Monitoring Program has been implemented to monitor the

migration of the impacted groundwater associated with contaminated groundwater in the vicinity of SWMU #7 and along the property boundary of the Facility.

Health Problem: The majority of soil is covered with pavement and buildings and contact with any potentially contaminated soil is not likely. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Hazardous Waste Summary:

Waste Code: D000

Waste Description: Not Defined

Waste Code: D001

Waste Description: IGNITABLE WASTE

Waste Code: D002

Waste Description: CORROSIVE WASTE

Waste Code: D007

Waste Description: CHROMIUM

Waste Code: D008

Waste Description: LEAD

Waste Code: D009

Waste Description: MERCURY

Waste Code: D018

Waste Description: BENZENE

Waste Code: D019

Waste Description: CARBON TETRACHLORIDE

Waste Code: D027

Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D035

Waste Description: METHYL ETHYL KETONE

Waste Code: D039

Waste Description: TETRACHLOROETHYLENE

Waste Code: F001

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/30/2020	Source: EPA

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: N/A
Date Made Active in Reports: 02/09/2021	Last EDR Contact: 01/14/2021
Number of Days to Update: 26	Next Scheduled EDR Contact: 04/12/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/30/2020

Next Scheduled EDR Contact: 04/12/2021
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/28/2020
Date Data Arrived at EDR: 11/05/2020
Date Made Active in Reports: 11/25/2020
Number of Days to Update: 20

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/28/2020	Source: EPA
Date Data Arrived at EDR: 11/05/2020	Telephone: 800-424-9346
Date Made Active in Reports: 11/25/2020	Last EDR Contact: 01/14/2021
Number of Days to Update: 20	Next Scheduled EDR Contact: 04/26/2021
	Data Release Frequency: Quarterly

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/14/2020	Source: EPA
Date Data Arrived at EDR: 12/17/2020	Telephone: 800-424-9346
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 12/17/2020
Number of Days to Update: 5	Next Scheduled EDR Contact: 04/05/2021

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (212) 637-3660
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 12/17/2020
Number of Days to Update: 5	Next Scheduled EDR Contact: 04/05/2021
	Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (212) 637-3660
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 12/17/2020
Number of Days to Update: 5	Next Scheduled EDR Contact: 04/05/2021

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (212) 637-3660
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 12/17/2020
Number of Days to Update: 5	Next Scheduled EDR Contact: 04/05/2021
	Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (212) 637-3660
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 12/17/2020
Number of Days to Update: 5	Next Scheduled EDR Contact: 04/05/2021

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 11/11/2020	Source: Department of the Navy
Date Data Arrived at EDR: 11/17/2020	Telephone: 843-820-7326
Date Made Active in Reports: 02/09/2021	Last EDR Contact: 02/08/2021
Number of Days to Update: 84	Next Scheduled EDR Contact: 05/24/2021
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/05/2020	Telephone: 703-603-0695
Date Made Active in Reports: 11/18/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 13	Next Scheduled EDR Contact: 03/08/2021
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/05/2020	Telephone: 703-603-0695

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City's Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 10/20/2020	Telephone: 860-424-3375

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

703 EAST DELAVAN
703 EAST DELAVAN
BUFFALO, NY 14211

TARGET PROPERTY COORDINATES

Latitude (North):	42.92119 - 42° 55' 16.28"
Longitude (West):	78.830849 - 78° 49' 51.06"
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	677037.9
UTM Y (Meters):	4754131.0
Elevation:	662 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5937939 BUFFALO NE, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3602300005B	FEMA Q3 Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
3602300015B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BUFFALO NE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 77 inches

Depth to Watertable Min: > 66 inches

No Layer Information available.

Soil Map ID: 2

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

I. Statement of Purpose

A. Management Action Plan

The Management Action Plan (MAP) is to outline the total multi-year environmental cleanup program for a Formerly Used Defense Site (FUDS) property. The plan will define the cleanup program requirements and propose a comprehensive approach and associated costs to conduct future investigations and response action at each cleanup site.

B. Formerly Used Defense Sites Program

During the past two centuries, the Department of Defense (DOD) has used land throughout the United States to both train Soldiers, Airmen, Sailors and Marines, and test new weapons to ensure the nation's military readiness. As training and testing needs changed, DOD obtained property or returned it to private or public uses. When no longer needed, many of these properties were cleaned up according to the best practices available at the time and then transferred to other owners such as private individuals or federal, state, tribal, or local government entities.

Today, DOD is responsible for the environmental restoration (cleanup) of properties that were formerly owned by, leased to or otherwise possessed by the United States and under the jurisdiction of the Secretary of Defense prior to October 1986. Such properties are known as Formerly Used Defense Sites or FUDS. The U.S. Army is DOD's lead agent for the FUDS Program. The U.S. Army Corps of Engineers executes the FUDS Program on behalf of the U.S. Army and DOD. The U.S. Army and DOD are dedicated to protecting human health and the environment by investigating and, if required, cleaning up potential contamination or munitions that may remain on these properties from past DOD activities.

The scope and magnitude of the FUDS Program are significant, with more than 10,000 properties identified for potential inclusion in the program. Information about the origin and extent of contamination or munitions, land transfer issues, past and present property ownership, applicable laws and DOD policies must be evaluated before DOD considers a property eligible for Defense Environment Restoration Account funding under the FUDS Program. Environmental cleanup at FUDS properties is conducted under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

C. Installation Restoration Program (IRP)

Installation Restoration Program (IRP) category projects include sites that require response actions to address releases of: (a) Hazardous substances and pollutants or contaminants; (b) Petroleum, Oil, and Lubricants (POLs); (c) Hazardous wastes or hazardous waste constituents; and (d) Explosive compounds released to soil, surface water, sediment, or groundwater as a result of ammunition or explosives production or manufacturing at ammunition plants. The IRP category also includes response activities to address UXO, DMM, or munitions constituents MC posing an explosive, human health, or environmental hazard that are incidental to an existing IRP site.

The relative risk site evaluation (RRSE) framework is a methodology used by all DoD Components to evaluate the relative risk posed by a site in relation to other sites. It is a tool used across all of DoD to group sites into high, medium, and low categories based on an evaluation of site information using three factors: the contaminant hazard factor (CHF), the migration pathway factor (MPF), and the receptor factor (RF). Factors are based on a quantitative evaluation of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) hazardous substances, pollutants, or contaminants and a qualitative evaluation of pathways and human and ecological receptors in the four media most likely to result in significant exposure groundwater, surface water, sediment, and surface soils.

D. Military Munitions Response Program (MMRP)

In 2001, DoD established the Military Munitions Response Program (MMRP). The MMRP addresses munitions response sites (MRSs) at Formerly Used Defense Site locations. MRSs are sites that are known or suspected to contain unexploded ordnance, discarded military munitions, or munitions constituents (MC). Through the MMRP, DoD complies with environmental cleanup laws, such as the Comprehensive Environmental Response, Compensation, and Liability Act, also known as Superfund.

To prioritize funding and cleanup of MRSs that pose the greatest threat to safety, human health, and the environment, DoD uses the Munitions Response Site Prioritization Protocol (MRSP). The MRSP consists of three separate modules to evaluate hazards associated with explosives, chemical warfare materiel, MC, and other incidental environmental contaminants. The MRSP scores affect how DoD sequences MRSs for cleanup. In addition to relative risk, DoD considers other factors such as economic, programmatic, and stakeholder concerns, as well as reuse and redevelopment plans, when prioritizing sites for cleanup.

III. Property Information

FUDS Number: C02NY0594

FFID: NY29799F113600

Name: OTIS ELEV CO ORD PLT

A. Property Description

The former Buffalo-Otis Elevator Company Ordnance Plant is located in the City of Buffalo Erie County New York. By Declarations of Taking dated 10 June 31 August and 15 October 1942 the Corps of Engineers obtained 4.12 acres in fee lease on 0.59 acre and easements on 0.34 acre from the Otis Elevator Company and the City of Buffalo. The DOD constructed a two story foundry plant at the southeast corner of Northland and Dutton Avenues at the rear of the then existing Otis Elevator Company foundry. On 13 February 1946 care and custody of the 4.12 acres fee and the 0.23 acre easement was accepted by the Reconstruction Finance Corporation. The War Assets Administration on July 1947 accepted accountability for the 0.11 acre easement and the 0.59 acre lease. Based on the FDE, the foundry was purchased by the Niagara Machine and Tool Works, while the current owner of the lease and easements is the Curtiss-Wright Corporation.

B. Locale

City: BUFFALO

State: NY

Latitude: 42.91777778

Longitude: -78.82972222

Congressional District: 26

Size (Acreage): No acreage reported

C. Organization

Division: North Atlantic Division

District: New England District

Phone: 978-318-8238

Current Owners:

No owners reported.

D. National Priorities List Status

The National Priorities List (NPL) is the list of national priorities among the known releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States and its territories. The NPL is intended primarily to guide the EPA in determining which sites warrant further investigation.

National Priorities List (NPL) Status: Not on the NPL

E. Project Summaries

The below table outlines all projects that have been identified on this FUDS property. The table provides information on the category of project, the legal driver, the RRSE or MRSP score that is used for prioritization, the total funding for the project, the status of work on the project, and the actual or anticipated remedy in place and response complete dates.

Project Number	Category	Name	Legal Driver	RRSE	MRSP	Status	RIP	RC
0	PA/INPR	PA/INPR Funding				Complete		

IV. Cleanup Program Summary

A. Historic Activity

The purpose of the foundry plant was the production of steel castings for anti-aircraft gun mounts. Based on the FDE, the site is currently used as a tool and die manufacturing plant.

V. Installation Restoration Program (IRP)

A. IRP Summary

Inception of IRP: No IRP projects have been reported

Projects Identified: 0

Projects at Response Complete: 0

Remedy-in-Place (RIP): No RIP scheduled

Response Complete (RC): No RC scheduled

IRP completion (including LTM): No IRP projects have been reported

B. IRP Schedule

Project Schedule

There are no IRP projects on this installation.

Five-Year Review

Status: No Reviews Planned

C. Project Descriptions

Please see **Appendix I** for detailed IRP project descriptions

D. Costs

Funding To Date* (\$K): \$0

2019 Funding (\$K): \$0

CTC (\$K): \$0

There are no IRP project costs on this installation.

*Past costs are approximate and not inflated to reflect current year fiscal dollars.

VI. Military Munitions Response Program (MMRP)

A. MMRP Summary

Inception of MMRP: No MMRP projects have been reported

Projects Identified: 0

Projects at Response Complete: 0

Remedy-in-Place (RIP): No RIP scheduled

Response Complete (RC): No RC scheduled

MMRP completion (including LTM): No MMRP projects have been reported

B. MMRP Schedule

Project Schedule

There are no MMRP projects on this installation.

Five-Year Review

Status: No Reviews Planned

C. Project Descriptions

Please see **Appendix II** for detailed MMRP project descriptions

D. Costs

Funding To Date* (\$K): \$0

2019 Funding (\$K): \$0

CTC (\$K): \$0

There are no MMRP project costs on this installation.

*Past costs are approximate and not inflated to reflect current year fiscal dollars.

VII. Community Involvement

Since 1993, the Department of Defense (DOD) has supported the development, implementation, and maintenance of the Restoration Advisory Board (RAB) program. Through the RAB program, communities provide input into the decision - making process of DOD's environmental cleanup program. A RAB is a group, equally co - chaired by a DOD representative and a community member, that serves as a forum for exchange of information between government officials and members of the local community on property cleanup issues. In addition to regular RAB meetings, a combination of activities may be conducted to enhance this process. Such activities may include coordinating installation site tours or providing interactive presentations with the use of cleanup technology models. Members of a RAB may include local citizens and representatives of the U.S. Environmental Protection Agency (EPA) and state, local, and tribal governments. The RAB team should reflect the diverse interests of the community and help identify possible issues associated with an installation's environmental cleanup program. RABs provide a link between the community and cleanup decision makers, and should complement other community involvement activities, such as holding public meetings, distributing informative mailings to the public on installation cleanup activities, and establishing local information repositories.

In fiscal year 1998 (FY98), DOD continued to build trust with local communities surrounding military installations by strengthening the RAB program and making new resources available; including the implementation of the Technical Assistance for Public Participation (TAPP) program. The TAPP program was designed to help community members of RABs and TRCs better understand the scientific and engineering issues underlying their properties' environmental cleanup activities. Under TAPP, the installation may contract for an independent technical consultant to advise the RAB on a specific project, which must be identified in the TAPP application. Typical projects may involve reviewing proposed remedial technologies, interpreting health and environmental effects data, or reviewing cleanup documents.

No RAB has been reported

APPENDIX I

IRP Project Descriptions

There are no IRP projects on this installation.

APPENDIX II

MMRP Project Descriptions

There are no MMRP projects on this installation.

APPENDIX B

ENVIRONMENTAL/GOVERNMENT AGENCY INFORMATION

From: [New York DEC Support](#)
To: [Chester E. Hochreiter](#)
Subject: FOIL Request :: W078693-021521
Date: Monday, February 15, 2021 3:00:36 PM

Dear Chester:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 2/15/2021 and given the reference number FOIL #W078693-021521 for tracking purposes. You may expect the Department's response to your request no later than **3/16/2021**.

Record Requested: For the purpose of an environmental review, we are requesting to review records related to 703 East Delevan Avenue, Buffalo, New York. The Site is owned by Mt. Olive Baptist Church with SBL# 90.78-5-1.1. We are interested in records related to tanks, spills/discharges, historic operations, environmental concerns, etc.

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Please note that due to the COVID-19 outbreak, DEC may be experiencing staffing shortages and some records custodians may be working remotely. This may result in a delayed response time to your FOIL request. We appreciate your understanding and cooperation.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by TurnKey Environmental Restoration, LLC. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1925 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Terracon Project No. J5205291

Dear Ms. Blickenstaff-Schwanz:

We have completed the Geotechnical Engineering services for the above referenced project. This study was performed in general accordance with Terracon Proposal No. PJ5205291 dated December 2, 2020. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork and the design and construction of foundations and floor slabs for the proposed project.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,
Terracon Consultants-NY, Inc.

Geotechnical Engineering Report

3 Story Senior Housing
701 East Delevan Avenue

Buffalo, New York

Terracon Project No. J5205291

February 8, 2021

INTRODUCTION

This report presents the results of our subsurface exploration and geotechnical engineering services performed for the proposed Senior Housing Project to be located at 701 East Delevan Avenue in Buffalo, New York. The purpose of these services is to provide information and geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Site preparation and earthwork
- Dewatering considerations
- Excavation considerations
- Foundation design and construction
- Floor slab design and construction
- Seismic site classification per IBC
- Frost consideration

The geotechnical engineering Scope of Services for this project included the advancement of seventeen test borings to depths ranging from approximately 1.6 to 6 feet below existing site grades.

Maps showing the site and boring locations are shown in the **Site Location** and **Exploration Plan** sections, respectively. The boring logs are included in the **Exploration Results** section.

SITE CONDITIONS

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly available geologic and topographic maps.

Item	Description
<p>Parcel Information</p>	<p>The project is located at 701 East Delevan Avenue in Buffalo, New York. The site is bordered on the north by the Mount Olive Baptist Church, on the east and south by manufacturing facilities, and on the west by Sheridan Avenue. The western side of Sheridan Avenue includes mixed residential and commercial/industrial land use. The approximate borders of the site are shown with the orange line in the aerial image below (from Bing).</p> 
<p>Current Ground Cover</p>	<p>The site is developed with a grass-covered athletic field with associated paved areas on the North of the site.</p>
<p>Existing Topography (Google Earth™)</p>	<p>The site appears relatively level, with ground surface elevations (El.) of approximately 654 to 656 feet.</p>
<p>Geology¹</p>	<p>The project is located within the Erie-Ontario Lowlands physiographic province. Geologic Maps indicate surficial deposits at the project site as lacustrine silt and clay deposits. The underlying bedrock is identified as Onondaga Limestone (Middle Devonian).</p>
<p>1. References: Fisher, D.W., Isachsen, Y.W., and Rickard, L.V., 1970, Geologic Map of New York State, consisting of 5 sheets: Niagara, Finger Lakes, Hudson-Mohawk, Adirondack, and Lower Hudson, New York State Museum and Science Service, Map and Chart Series No. 15, scale 1: 250,000.</p>	

PROJECT DESCRIPTION

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

Item	Description
Information Provided	The following information were provided by Silvestri Architects (Silvestri): <ul style="list-style-type: none"> ■ RFP emailed to Terracon on November 30, 2020. ■ Concept Plan prepared by Silvestri Architects, dated November 17, 2020
Project Description	The project includes two three-story, senior housing buildings including associated landscaping, sidewalks and a stormwater detention area to the East of the buildings.
Proposed Structure	The concept plan prepared by Silvestri indicates that the new buildings will have slab-on-grade (non-basement).
Building Construction	<ul style="list-style-type: none"> ■ Wood frame ■ Slab-on-grade ■ Concrete spread foundations
Finished Floor Elevation	Grading information was not provided. It is anticipated that minor (i.e. less than 4 feet) earthwork cut and fill may be required across the site to balance earthwork operations.
Maximum Loads¹	Structural loads were not provided. We have assumed the following: <ul style="list-style-type: none"> ■ Columns: 200 kips ■ Walls: 6 kips per linear foot (klf) ■ Slabs: 100 pounds per square foot (psf)

1. Please contact our office if structural loads information is significant higher, since revision to our recommendations may be required.

GEOTECHNICAL CHARACTERIZATION

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of site preparation and foundation options. Conditions encountered at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** section and the GeoModel can be found in the **Figures** section of this report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	General Description
1	Surface	Topsoil
2	Fill ¹	Silty sand; gray, red-brown or black; trace brick fragments; trace concrete fragments; trace cinders
3	Native Soil	Mixtures of Silt, Sand, and Gravel (SM); trace weathered limestone fragments; loose to medium dense
4	Bedrock	Limestone; weathered to slightly weathered; medium strong; gray or brown-gray

1. Fill was encountered in most borings starting at the surface in some cases and up to 4 feet below grade surface.

Bedrock

Bedrock was encountered in the borings at depths ranging from 2 to 4 feet below existing ground surface. The drillers were able to sample and/or auger within the bedrock 1 to 2.5 feet before encountering “practical” auger refusal. Practical auger refusal indicates a material that cannot be penetrated any further, over a reasonable amount of time, by power augering. At the location of B-8 and B-17 the borings were extended deeper by means of coring methods in order to investigate the nature and quality of the underlying bedrock. The recovered rock cores consist of limestone bedrock of poor quality. A summary of rock core recoveries and RQD values is presented in the table below:

Boring Number	Rock Core Depth (Feet Below grade)	Recovery (%)	Rock Quality Designation (RQD) (%)
B-8	2.0 – 7.0	80	47
B-16	2.5 – 6.0	86	35

Please note that ground surface elevations at each boring location are approximate and based upon a survey plan prepared by others and provided to our office. If elevations and a more precise boring layout are desired, we recommend borings be surveyed following completion of fieldwork. It should be noted that some variations in the depths/elevations and the quality of the bedrock were noted. This could result in encountering bedrock in localized areas which may be slightly shallower or deeper, or sounder, than the trend.

Groundwater Conditions

The boreholes were observed while drilling and after completion for the presence and level of groundwater. Groundwater was generally not observed in the borings for the short duration the borings could remain open.

Sedimentary bedrock was encountered in the borings at shallow depths and would be considered to be a relatively impermeable layer. Therefore, perched groundwater conditions could be encountered in excavations, particularly after rainfall events.

Groundwater level fluctuations may occur due to seasonal variations in the amount of rainfall, runoff, and other factors not evident at the time the borings were performed. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project. The predominant source of water to the site soils is likely from rainfall/snow melt.

GEOTECHNICAL OVERVIEW

The subsurface conditions encountered in the test borings performed at the project site generally consist of 2 to 4 feet of fill material overlying limestone bedrock. As discussed in **Geotechnical Characterization**, some variations in the depths/elevations and the quality of the bedrock were noted, which could result in encountering bedrock in localized areas which may be slightly shallower or deeper, or sounder, than the trend.

The key geotechnical consideration impacting the proposed construction is the presence of shallow bedrock. Within the building footprint we anticipate that bedrock may be encountered at depths ranging from about 2 to 4 feet below site grades. Excavations advanced into the bedrock will likely require very high capacity excavating equipment, in conjunction with use of pneumatic breakers to shatter the bedrock prior to removal.

In general, the site is suitable for the proposed construction based upon geotechnical conditions encountered during the exploration program. The proposed building may be supported on a shallow foundation system bearing upon compacted Structural Fill placed upon bedrock or directly upon bedrock. Existing fill (where encountered) is not suitable to support foundations and (if encountered) should be replaced with compacted Structural Fill within the foundation bearing zone, as discussed in the **Shallow Foundations** section of this report.

Support of floor slabs and pavement areas on or above existing fill is discussed in this report. However, even with the recommended construction testing services, there is an inherent risk for the owner that unsuitable material within or buried during re-grading will not be discovered. This risk of unforeseen conditions cannot be eliminated without completely removing the existing fill from beneath floor slabs and pavement areas but can be reduced by following the recommendations contained in this report. To take advantage of the cost benefit of not removing the entire amount of undocumented fill from beneath floor slabs areas, the owner must be willing to accept the risk associated with building over the undocumented fills following the recommended reworking of the material. We recommend that before of any fill placement, exposed grades (beneath the building footprint and pavement areas) be proofrolled with proper compaction

equipment. The compactive effort will help to improve the relative density of the bearing grades, and therefore, will help to better distribute the foundation loads. Unstable subgrades, as identified by the Geotechnical Engineer, should be over-excavated from the building footprint, footing bearing zones, and pavement areas to competent material and replaced with compacted Structural Fill.

The **Floor Slabs** and **Pavements** section addresses support of slab-on-grades and pavements, respectively.

Monitoring of the construction operations discussed herein will be critical in achieving the design subgrade support. We recommend Terracon be retained to evaluate soil bearing subgrades exposed after excavation to confirm they are suitable for footing, or slab support. Subsurface conditions in the explorations have been reviewed and evaluated with respect to the proposed construction plans known to us now.

The **General Comments** section provides an understanding of the report limitations.

EARTHWORK

Earthwork will include removal of topsoil, removal of any unsuitable soft soil and fill (if encountered), excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria as necessary to render the site in the state considered in our geotechnical engineering evaluation for foundations, floor slabs, and pavement.

Site Preparation

Complete stripping of the topsoil should be performed in the proposed building and parking/driveway areas. Subgrades should be proof-rolled with a minimum 10-ton (static weight) smooth drum roller compactor. We recommend a minimum of two overlapping passes in one direction, followed by two overlapping passes in a direction perpendicular to the first passes. The intent is to compact areas with relatively loose surficial soil, to re-compact areas loosened by stripping operations, and to identify unacceptable subgrade areas. As an alternative, proof-rolling can also be performed with an adequately loaded vehicle such as a fully loaded tandem axle dump truck or other heavy, rubber-tired construction equipment weighing at least 20 tons.

Areas which excessively deflect under the proof-roll should be delineated and subsequently addressed by the Geotechnical Engineer. Unstable subgrades, as identified by the Geotechnical Engineer, should be over-excavated from the building footprint, footing bearing zones, and pavement areas to competent material and replaced with compacted Structural Fill.

Fill Material Types

Structural Fill should be used as fill/backfill within the proposed building and pavement areas. The fill should consist of imported sand and gravel which meets the limits of gradation given below. Any imported materials should be free of recycled concrete, asphalt, bricks, glass, and pyritic shale rock.

IMPORTED STRUCTURAL FILL

Sieve Size	Percent Finer
3"	100
1/4"	30 to 75
No. 40	5 to 40
No. 200	0 to 10

The reuse of excavated native soils and/or existing fill materials may be considered for reuse outside the building area (excluding within three feet of finished grade in proposed pavement areas) if approved by the Geotechnical Engineer and pending the conditions encountered at the time of construction. Any reuse of the existing fill would require that all organics, oversize particles and unsuitable foreign matter found therein be separated and wasted off-site.

If construction is performed during the wet season, it is possible the moisture content of the excavated soils is in excess of the optimum moisture content required to achieve proper compaction, and that proper compaction of the on-site soils may be very difficult to achieve. Saturated soils which cannot achieve compaction should be removed or used in non-structural areas where significant post construction settlement is acceptable. The contractor is ultimately responsible for moisture conditioning of fill/backfill materials to achieve proper compaction.

Fill Compaction Requirements

New fills beneath the building pad and pavements should be placed in uniform loose layers no more than about one-foot thick where heavy vibratory compaction equipment is used. Smaller lifts should be used where hand operated equipment is required for compaction. Each lift should be compacted to no less than 95 percent of its maximum dry density as determined by the Modified Proctor Compaction Test, ASTM D1557. In landscape areas, the compaction requirement may be relaxed to 90 percent of maximum dry density.

Onsite soil used for subgrade fill should have a moisture content within +/-2 percent of its optimum moisture content when it is placed and compacted.

Utility Trench Backfill

Trench excavations should be made with sufficient working space to permit construction including backfill placement and compaction. Trenches should be backfilled with material that approximately matches the permeability characteristics of the surrounding soil to reduce the infiltration and preferential conveyance of surface water through the trench backfill. Fill placed as backfill for utilities located below the slab should consist of compacted Structural Fill or suitable bedding material.

Utility trenches are a common source of water infiltration and migration. All utility trenches that penetrate beneath the building should be effectively sealed to restrict water intrusion and flow through the trenches, which could migrate below the building. The trench should provide an effective trench plug that extends at least 5 feet out from the face of the building exterior. The plug material should consist of cementitious flowable fill or low permeability clay. The trench plug material should be placed to surround the utility line. If used, the clay trench plug material should be placed and compacted to comply with the water content and compaction recommendations for Structural Fill stated previously in this report.

Grading and Drainage

Grades must provide effective drainage away from the building during and after construction and should be maintained throughout the life of the structure. Water retained next to the building can result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential floor slab and/or foundation movements, cracked slabs and walls, and roof leaks. The roof should have gutters/drains with downspouts discharging onto splash blocks at a distance of at least 10 feet from the buildings.

Exposed ground should be sloped and maintained at a minimum 5 percent away from the building for at least 10 feet beyond the perimeter of the building. Locally, flatter grades may be necessary to transition ADA access requirements for flatwork. After buildings construction and landscaping, final grades should be verified to document effective drainage has been achieved. Grades around the structure should also be periodically inspected and adjusted as necessary as part of the structure's maintenance program. Where paving or flatwork abuts the structure a maintenance program should be established to effectively seal and maintain joints and prevent surface water infiltration.

Earthwork Construction Considerations

Shallow excavations, for the proposed structure, are anticipated to be accomplished with conventional construction equipment. Based upon the subsurface conditions encountered in the boring logs, we anticipate top of bedrock to be encountered at approximately 2 to 4 feet below existing site grades.

The contractor shall assure himself by site investigation or other necessary means that he is familiar with the type, quantity, quality, and character of excavation to be performed. We strongly recommend that the contractor be provided the opportunity to review the boring logs and data presented in our geotechnical report to determine the most efficient means and methods for excavation at the project site.

A grading plan was not available at the time of the preparation of the report. We anticipate that excavations for the building foundations and utilities extending within the bedrock will be difficult, and will likely require very high capacity excavating equipment, in conjunction with use of pneumatic breakers to shatter the bedrock prior to removal. Rock excavation (if required) should be advanced to form level bearing grades at the bottom of the utilities and foundation (if any extending down to bedrock) excavation. Loose or shattered rock layers should be removed to provide a sound and unshattered base for utilities and foundations. Where the top of bedrock is uneven, it would be acceptable to use a minus ¾-inch crushed stone or lean concrete to create a level working surface for the new utilities and foundation.

Upon completion of filling and grading, care should be taken to maintain the subgrade water content prior to construction of foundations and floor slabs. Construction traffic over the completed subgrades should be avoided. The site should also be graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over, or adjacent to, construction areas should be removed. If the subgrade freezes, desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted, prior to floor slab construction.

Although groundwater was generally not encountered in the borings at the time of our investigation, groundwater level fluctuations due to seasonal variations in the amount of rainfall, runoff and other factors should be anticipated. Sedimentary rock was encountered in the borings and would be considered to be relatively impermeable layers. Therefore, perched groundwater conditions could be encountered in excavations particularly after rainfall events. If perched water is encountered during construction, it is expected to be limited in volume and standard sump and pump methods should be sufficient for its removal. Dewatering is a means and methods consideration for the contractor.

As a minimum, excavations should be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P, "Excavations" and its appendices, and in accordance with any applicable local, and/or state regulations. The contractor should be aware that slope height, slope inclination, and excavation depth should in no instance exceed OSHA guidelines. OSHA guidelines are strictly enforced and if they are not followed, the owner, contractor, and/or earthwork and utility subcontractor could be liable and subject to substantial penalties.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for

construction site safety, or the contractor's activities; such responsibility shall neither be implied nor inferred.

Construction Observation and Testing

The earthwork efforts should be monitored under the direction of the Geotechnical Engineer. Monitoring should include documentation of adequate removal of vegetation and topsoil, proofrolling and mitigation of areas delineated by the proof-roll to require mitigation.

Each lift of compacted fill should be tested, evaluated, and reworked as necessary until approved by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the building areas and 5,000 square feet in pavement areas. One density and water content test for every 50 linear feet of compacted utility trench backfill.

In areas of foundation excavations, the bearing subgrade should be evaluated under the direction of the Geotechnical Engineer. If unanticipated conditions are encountered, the Geotechnical Engineer should prescribe mitigation options.

In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer's evaluation of subsurface conditions, including assessing variations and associated design changes.

SHALLOW FOUNDATIONS

Based upon the subsurface conditions encountered in the boring logs, we anticipate top of bedrock to be encountered at about 2 to 4 feet below existing site grades. A grading plan was not available at the time of the preparation of the report. We anticipate that excavations for the building foundations and utilities extending within the bedrock will be difficult, and will likely require very high capacity excavating equipment, in conjunction with use of pneumatic breakers to shatter the bedrock prior to removal.

If the site has been prepared in accordance with the requirements noted in **Earthwork**, the following design parameters are applicable for shallow foundations.

Design Parameters – Compressive Loads

Item	Description
Maximum Net Allowable Bearing Pressure ^{1, 2}	5,000 psf
Required Bearing Stratum ³	Bedrock or compacted Structural Fill placed over bedrock.
Minimum Foundation Dimensions	Columns: 30 inches Continuous: 18 inches
Ultimate Passive Resistance ⁴ (equivalent fluid pressures)	390 pcf (compacted Structural Fill)
Ultimate Coefficient of Sliding Friction ⁵	0.70 (Footing on bedrock) 0.50 (Footing on compacted Structural Fill)
Minimum Embedment below Finished Grade ⁶	Exterior footings in unheated areas: 48 inches Exterior footings in heated areas: 48 inches Interior footings in heated areas: 18 inches
Estimated Total Settlement from Structural Loads ²	Less than about 1 inch
Estimated Differential Settlement ^{2, 7}	About 2/3 of total settlement

1. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. An appropriate factor of safety has been applied. These bearing pressures can be increased by 1/3 for transient loads unless those loads have been factored to account for transient conditions. Values assume that exterior grades are no steeper than 20% within 10 feet of structure.
2. Values provided are for maximum loads noted in **Project Description**.
3. Unsuitable or soft soils should be over-excavated and replaced per the recommendations presented in the **Earthwork**. If wet soils are present at the planned foundation bearing elevation, a nominal 6-inch thick base of clean Crushed Stone should be installed to establish a more stable surface for construction and to assist in dewatering if required. The Crushed Stone should be an ASTM C33 Blend 57 aggregate and it should be placed over a geotextile stabilization fabric meeting the requirements of NYSDOT Table 737-01E.
4. Use of passive earth pressures require the sides of the excavation for the spread footing foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the footing forms be removed and compacted Structural Fill be placed against the vertical footing face. The Structural Fill must extend out and up from the base of the foundation at an angle of at least 60 degrees from vertical for the passive case.
5. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Should be neglected for foundations subject to net uplift conditions.
6. Embedment necessary to minimize the effects of frost and/or seasonal water content variations. For sloping ground, maintain depth below the lowest adjacent exterior grade within 5 horizontal feet of the structure.
7. Differential settlements are as measured over a span of 50 feet.

Design Parameters - Uplift Loads

Uplift resistance of spread footings can be developed from the effective weight of the footing and the overlying soils. As illustrated on the figure to the right, the effective weight of the soil prism defined by diagonal planes extending up from the top of the perimeter of the foundation to the ground surface at an angle, θ , of 20 degrees from the vertical can be included in uplift resistance. The maximum allowable uplift capacity should be taken as a sum of the effective weight of soil plus the dead weight of the foundation, divided by an appropriate factor of safety. A maximum total unit weight of 125 pcf should be used for the backfill, provided the fill is placed and compacted following the recommendations contained in **Fill Material**

Types and **Fill Compaction Requirements**. This unit weight should be reduced to 62 pcf for portions of the backfill or natural soils below the groundwater elevation.

Foundation Construction Considerations

As noted in **Earthwork**, the footing excavations should be evaluated under the direction of the Geotechnical Engineer. The base of all foundation excavations should be free of water and loose soil, prior to placing concrete. Rock excavation should be advanced to form level bearing grades at the bottom of the foundation excavation. Loose or shattered rock layers should be removed to provide a sound and unshattered base for foundations. Where the top of bedrock is uneven, it would be acceptable to use a minus ¾-inch crushed stone or lean concrete to create a level working surface for the foundation.

SEISMIC CONSIDERATIONS

The seismic design requirements for buildings and other structures are based on Seismic Design Category. Seismic site class is required to determine the Seismic Design Category for a structure, in accordance with Section 1613 Earthquake Loads of the 2020 Building Code of New York State, which refer to Chapter 20 of ASCE 7.

Based on the properties of subsurface materials encountered at the site, it is our opinion that the Seismic Site Classification for the site is **C**. Subsurface explorations at the site were extended to a maximum depth of 7 feet. The properties of materials below the bottom of the deepest boring at the site to a depth of 100 feet were estimated based on our experience and knowledge of geologic conditions of the general area. If a more precise seismic site classification is desired,

additional deeper borings or geophysical testing may be performed to confirm the conditions below the deepest current boring depth.

FLOOR SLABS

If the owner elects to leave existing fills in place beneath new building floor slabs, proof-rolling and stabilization of the subgrades as described herein will lessen but cannot eliminate the risk of settlement. If this risk cannot be accepted, the existing fills should be removed and replaced in their entirety as part of the site preparation. Design parameters for floor slabs assume the requirements for **Earthwork** have been followed. Specific attention should be given to positive drainage away from the structure and positive drainage of the aggregate base beneath the floor slab.

Floor Slab Design Parameters

Item	Description
Floor Slab Support ¹	Minimum 9 inches of Aggregate Base material which conforms to the requirements for NYSDOT Type 2 Subbase compacted to at least 95% of Modified Proctor (ASTM D 1557). The Aggregate Base should be placed upon proofrolled stable on-site subgrade soils. Consideration should be given to using a thicker subbase course in areas subject to heavier loads and/or use, or those exposed to freezing temperatures.
Estimated Modulus of Subgrade Reaction ²	150 pounds per square inch per inch (psi/in) for point loads for slab placed upon 9 inches of compacted Aggregate Base material.

1. Floor slabs should be structurally independent of building footings or walls to reduce the possibility of floor slab cracking caused by differential movements between the slab and foundation.
2. Modulus of subgrade reaction is an estimated value based upon our experience with the subgrade condition, the requirements noted in **Earthwork**, and the floor slab support as noted in this table. It is provided for point loads. For large area loads the modulus of subgrade reaction would be lower.

The use of a vapor retarder should be considered beneath concrete slabs on grade covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding the use and placement of a vapor retarder.

Saw-cut control joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations refer to the ACI Design Manual. Joints or cracks should be sealed with a waterproof, non-extruding compressible compound specifically recommended for heavy duty concrete pavement and wet environments.

Where floor slabs are tied to perimeter walls or turn-down slabs to meet structural or other construction objectives, our experience indicates differential movement between the walls and

slabs will likely be observed in adjacent slab expansion joints or floor slab cracks beyond the length of the structural dowels. The Structural Engineer should account for potential differential settlement through use of sufficient control joints, appropriate reinforcing or other means.

Floor Slab Construction Considerations

Finished subgrade within and for at least 10 feet beyond the floor slab should be protected from traffic, rutting, or other disturbance and maintained in a relatively moist condition until floor slabs are constructed. If the subgrade should become damaged or desiccated prior to construction of floor slabs, the affected material should be removed, and Structural Fill should be added to replace the resulting excavation. Final conditioning of the finished subgrade should be performed immediately prior to placement of the floor slab support course.

The Geotechnical Engineer should approve the condition of the floor slab subgrades immediately prior to placement of the floor slab support course, reinforcing steel and concrete. Attention should be paid to high traffic areas that were rutted and disturbed earlier, and to areas where backfilled trenches are located.

FROST CONSIDERATIONS

Frost may penetrate beneath sidewalks and pavements and cause them to heave, and resulting displacements may be differential, particularly where sidewalks and pavements meet building doorways and along curbs. To limit heave and the creation of such uneven joints to generally tolerable magnitudes for most winters, a 16-inch thick base of ASTM C33 Blend 57 crushed stone should be placed beneath sensitive sidewalk or pavement areas, along with an underdrain to relieve any collected waters.

GENERAL COMMENTS

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Natural variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence or collaboration through this system are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client, and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly impact excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety, and cost estimating including, excavation support, and dewatering requirements/design are the responsibility of others. If changes in the nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

EXPLORATION AND TESTING PROCEDURES

Field Exploration

Number of Borings	Boring Depth (feet) ¹	Location
16 (B-1, B-2 and B-4 to B-17)	1.6 to 7	Proposed building
1 (B-3)	4	Proposed entrance sidewalk

1. Borings B-1 through B-7 and B-9 through B-16 were completed with auger refusal upon apparent bedrock. At the location of B-8 and B-17 the borings were extended deeper by means of coring methods in order to investigate the nature and quality of the underlying bedrock.

Boring Layout and Elevations: Terracon personnel provided the boring layout. Coordinates were obtained with a handheld GPS unit (estimated horizontal accuracy of about ± 20 feet) and approximate elevations were obtained by interpolation from Google Earth. If elevations and a more precise boring layout are desired, we recommend borings be surveyed following completion of fieldwork.

Subsurface Exploration Procedures: We advanced the borings with a track-mounted CME-550X rotary drill rig using continuous hollow stem flight augers. Soil samples were obtained using a split-spoon sampler. In the split-barrel sampling procedure, a standard 2-inch outer diameter split-barrel sampling spoon was driven into the ground by a 140-pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the middle 12 inches of a normal 24-inch penetration is recorded as the Standard Penetration Test (SPT) resistance value. The SPT resistance values, also referred to as N-values, are indicated on the boring logs at the test depths. We observed and recorded groundwater levels during drilling and sampling. For safety purposes, all borings were backfilled with auger cuttings after their completion.

Bedrock core samples were obtained at boring locations B-8 and B-17 to investigate the nature and quality of the underlying bedrock. Standard diamond rock coring methods were utilized to obtain NQ-2 size (2-inch nominal diameter) samples of the underlying bedrock strata. The percent recovery and the Rock Quality Designation (RQD) for the recovered sample were recorded. The percent recovery is the ratio of the length of rock recovered over the length of coring. The RQD is the ratio of the sum of the length of recovered rock core 4 inches or greater in length, over the length of rock core recovered. The RQD is useful in providing a qualitative and quantitative evaluation of the engineering quality of bedrock.

The sampling depths, penetration distances, and other sampling information were recorded on the field boring logs. The samples were placed in appropriate containers and taken to our soil laboratory for testing and classification by a Geotechnical Engineer. Our exploration team prepared field boring logs as part of the drilling operations. These field logs included visual classifications of the materials encountered during drilling and our interpretation of the subsurface conditions between

Geotechnical Engineering Report

3 Story Senior Housing ■ Buffalo, New York

samples. Final boring logs were prepared from the field logs. The final boring logs represent the Geotechnical Engineer's interpretation of the field logs and include modifications based on observations and tests of the samples in our laboratory.

Rock classification was conducted using locally accepted practices for engineering purposes; petrographic analysis may reveal other rock types. Rock core samples typically provide an improved specimen for this classification. Boring log rock classification was determined using the Description of Rock Properties.

ROCK CORE PHOTOS

3 Story Senior Housing ■ Buffalo, New York

February 3, 2021 ■ Terracon Project No. J5205291

Rock cores extracted at borings: B-8 and B-17

Boring:	Depth (ft)	Recovery (%)	RQD (%)
B-8	2 to 7	80	47
B-17	2.5 to 6	86	35

Notes:

The ruler presented in the photographs is intended to provide a reference scale only. Therefore, the dimensions of the cores may not be accurately reflected in the photographs. Please refer to the boring logs for accurate core measurements.

Unified Soil Classification System

Description of Rock Properties

Note: All attachments are one page unless noted above.

GENERAL NOTES

DESCRIPTION OF SYMBOLS AND ABBREVIATIONS

Senior Housing ■ Buffalo, New York
Terracon Project No. J5205291

SAMPLING	WATER LEVEL	FIELD TESTS
 Rock Core  Standard Penetration Test	 Water Initially Encountered  Water Level After a Specified Period of Time  Water Level After a Specified Period of Time  Cave In Encountered Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.	N Standard Penetration Test Resistance (Blows/Ft.) (HP) Hand Penetrometer (T) Torvane (DCP) Dynamic Cone Penetrometer UC Unconfined Compressive Strength (PID) Photo-Ionization Detector (OVA) Organic Vapor Analyzer

DESCRIPTIVE SOIL CLASSIFICATION
<p>Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.</p>

LOCATION AND ELEVATION NOTES
<p>Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.</p>

STRENGTH TERMS				
RELATIVE DENSITY OF COARSE-GRAINED SOILS (More than 50% retained on No. 200 sieve.) Density determined by Standard Penetration Resistance		CONSISTENCY OF FINE-GRAINED SOILS (50% or more passing the No. 200 sieve.) Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance		
Descriptive Term (Density)	Standard Penetration or N-Value Blows/Ft.	Descriptive Term (Consistency)	Unconfined Compressive Strength Qu, (tsf)	Standard Penetration or N-Value Blows/Ft.
Very Loose	0 - 3	Very Soft	less than 0.25	0 - 1
Loose	4 - 9	Soft	0.25 to 0.50	2 - 4
Medium Dense	10 - 29	Medium Stiff	0.50 to 1.00	4 - 8
Dense	30 - 50	Stiff	1.00 to 2.00	8 - 15
Very Dense	> 50	Very Stiff	2.00 to 4.00	15 - 30
		Hard	> 4.00	> 30

RELEVANCE OF SOIL BORING LOG
<p>The soil boring logs contained within this document are intended for application to the project as described in this document. Use of these soil boring logs for any other purpose may not be appropriate.</p>

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests ^A				Soil Classification			
				Group Symbol	Group Name ^B		
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	Gravels: More than 50% of coarse fraction retained on No. 4 sieve	Clean Gravels: Less than 5% fines ^C	$Cu \geq 4$ and $1 \leq Cc \leq 3$ ^E	GW	Well-graded gravel ^F		
			$Cu < 4$ and/or $[Cc < 1$ or $Cc > 3.0]$ ^E	GP	Poorly graded gravel ^F		
		Gravels with Fines: More than 12% fines ^C	Fines classify as ML or MH	GM	Silty gravel ^{F, G, H}		
			Fines classify as CL or CH	GC	Clayey gravel ^{F, G, H}		
	Sands: 50% or more of coarse fraction passes No. 4 sieve	Clean Sands: Less than 5% fines ^D	$Cu \geq 6$ and $1 \leq Cc \leq 3$ ^E	SW	Well-graded sand ^I		
			$Cu < 6$ and/or $[Cc < 1$ or $Cc > 3.0]$ ^E	SP	Poorly graded sand ^I		
		Sands with Fines: More than 12% fines ^D	Fines classify as ML or MH	SM	Silty sand ^{G, H, I}		
			Fines classify as CL or CH	SC	Clayey sand ^{G, H, I}		
Fine-Grained Soils: 50% or more passes the No. 200 sieve	Silts and Clays: Liquid limit less than 50	Inorganic:	$PI > 7$ and plots on or above "A" line	CL	Lean clay ^{K, L, M}		
			$PI < 4$ or plots below "A" line ^J	ML	Silt ^{K, L, M}		
		Organic:	Liquid limit - oven dried	< 0.75	OL	Organic clay ^{K, L, M, N}	
			Liquid limit - not dried			Organic silt ^{K, L, M, O}	
	Silts and Clays: Liquid limit 50 or more	Inorganic:	PI plots on or above "A" line	CH	Fat clay ^{K, L, M}		
			PI plots below "A" line	MH	Elastic Silt ^{K, L, M}		
		Organic:	Liquid limit - oven dried	< 0.75	OH	Organic clay ^{K, L, M, P}	
			Liquid limit - not dried			Organic silt ^{K, L, M, Q}	
		Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat

^A Based on the material passing the 3-inch (75-mm) sieve.

^B If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.

^C Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.

^D Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.

$$C_u = D_{60}/D_{10} \quad C_c = \frac{(D_{30})^2}{D_{10} \times D_{60}}$$

^F If soil contains $\geq 15\%$ sand, add "with sand" to group name.

^G If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.

^H If fines are organic, add "with organic fines" to group name.

^I If soil contains $\geq 15\%$ gravel, add "with gravel" to group name.

^J If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.

^K If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.

^L If soil contains $\geq 30\%$ plus No. 200 predominantly sand, add "sandy" to group name.

^M If soil contains $\geq 30\%$ plus No. 200, predominantly gravel, add "gravelly" to group name.

^N $PI \geq 4$ and plots on or above "A" line.

^O $PI < 4$ or plots below "A" line.

^P PI plots on or above "A" line.

^Q PI plots below "A" line.

WEATHERING	
Term	Description
Unweathered	No visible sign of rock material weathering, perhaps slight discoloration on major discontinuity surfaces.
Slightly weathered	Discoloration indicates weathering of rock material and discontinuity surfaces. All the rock material may be discolored by weathering and may be somewhat weaker externally than in its fresh condition.
Moderately weathered	Less than half of the rock material is decomposed and/or disintegrated to a soil. Fresh or discolored rock is present either as a continuous framework or as corestones.
Highly weathered	More than half of the rock material is decomposed and/or disintegrated to a soil. Fresh or discolored rock is present either as a discontinuous framework or as corestones.
Completely weathered	All rock material is decomposed and/or disintegrated to soil. The original mass structure is still largely intact.
Residual soil	All rock material is converted to soil. The mass structure and material fabric are destroyed. There is a large change in volume, but the soil has not been significantly transported.

STRENGTH OR HARDNESS		
Description	Field Identification	Uniaxial Compressive Strength, psi (MPa)
Extremely weak	Indented by thumbnail	40-150 (0.3-1)
Very weak	Crumbles under firm blows with point of geological hammer, can be peeled by a pocket knife	150-700 (1-5)
Weak rock	Can be peeled by a pocket knife with difficulty, shallow indentations made by firm blow with point of geological hammer	700-4,000 (5-30)
Medium strong	Cannot be scraped or peeled with a pocket knife, specimen can be fractured with single firm blow of geological hammer	4,000-7,000 (30-50)
Strong rock	Specimen requires more than one blow of geological hammer to fracture it	7,000-15,000 (50-100)
Very strong	Specimen requires many blows of geological hammer to fracture it	15,000-36,000 (100-250)
Extremely strong	Specimen can only be chipped with geological hammer	>36,000 (>250)

DISCONTINUITY DESCRIPTION			
Fracture Spacing (Joints, Faults, Other Fractures)		Bedding Spacing (May Include Foliation or Banding)	
Description	Spacing	Description	Spacing
Extremely close	< ¼ in (<19 mm)	Laminated	< ½ in (<12 mm)
Very close	¾ in – 2-1/2 in (19 - 60 mm)	Very thin	½ in – 2 in (12 – 50 mm)
Close	2-1/2 in – 8 in (60 – 200 mm)	Thin	2 in – 1 ft. (50 – 300 mm)
Moderate	8 in – 2 ft. (200 – 600 mm)	Medium	1 ft. – 3 ft. (300 – 900 mm)
Wide	2 ft. – 6 ft. (600 mm – 2.0 m)	Thick	3 ft. – 10 ft. (900 mm – 3 m)
Very Wide	6 ft. – 20 ft. (2.0 – 6 m)	Massive	> 10 ft. (3 m)

Discontinuity Orientation (Angle): Measure the angle of discontinuity relative to a plane perpendicular to the longitudinal axis of the core. (For most cases, the core axis is vertical; therefore, the plane perpendicular to the core axis is horizontal.) For example, a horizontal bedding plane would have a 0-degree angle.

ROCK QUALITY DESIGNATION (RQD) ¹	
Description	RQD Value (%)
Very Poor	0 - 25
Poor	25 – 50
Fair	50 – 75
Good	75 – 90
Excellent	90 - 100

1. The combined length of all sound and intact core segments equal to or greater than 4 inches in length, expressed as a percentage of the total core run length.

APPENDIX J

QUESTIONNAIRES

**Phase I Environmental Site Assessment
User Questionnaire**

SITE NAME: Southern Portion of 703 East Delevan Avenue Site

ADDRESS: Southern Portion of 703 East Delevan, Buffalo, NY

- 1.) Are you aware of any environmental cleanup liens against the Site that have been filed or recorded in a registry under federal, tribal, state or local law?
 No Yes Explain: _____

- 2.) Are you aware of any engineering controls, land use restrictions or institutional controls that are in place and/or that have been filed or recorded in a registry under federal, tribal, state or local law?
 No Yes Explain: _____

- 3.) As the User of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
 No Yes Explain: _____

- 4.) Does the purchase price being paid for this property reasonably reflect fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
 No Yes If No, Explain: WE will enter into a contraCT BASED UPON THE APPRAISED PRICE...APPRIASAL IS UNDERWAY..

- 5.) Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as User,
 - a. Do you know the past use of the property?
 No Yes Explain: we were told it was used recently for recreation.
 - b. Do you know of specific chemicals that are present or once were present at the property?
 No Yes Explain: _____
 - c. Do you know of spills or other chemical releases that have taken place at the property?
 No Yes Explain: _____
 - d. Do you know of any environmental cleanup activities that have taken place at the property?
 No Yes Explain: _____

- 6.) As the User of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
 No Yes Explain: Unknown at this time....will await further testing

CERTIFICATION OF RESPONSES

I, Jocelyn S Bos, the user of the Phase I ESA being completed for this Site, do hereby attest and certify that to the best of my knowledge, the answers and information provided in this questionnaire, are true and accurate. I have not willfully withheld information that may be pertinent to the questions contained herein and have not distorted or misrepresented the facts regarding the content of this questionnaire.

Title: Vice President

Phase I Environmental Site Assessment
Environmental Questionnaire

1) Site Information

Site Name: Southern portion of 703 East Delevan Avenue Site
Address: Southern Portion of 703 East Delevan Avenue, Buffalo, NY

Business Owner/Operator: MT OLIVE DEVELOPMENT CORPORATION
Title: Chairperson Years in Position: 4 yrs

2) Size & Nature of Operation

Number of Buildings: Total Sq. Ft.: Property Size (acres):

Description of Operations: Athletic Field

Current Tenants: N/A

What is the intended use of the subject property and/or structures located on the subject property?

Senior Housing

3) What are the past uses/occupants of this facility/property & dates of occupancy?

- 1) Athletic Field
- 2) Green Space
- 3)

4) Utilities

Floor Drains: — Discharge Point: —
Sump Pumps: — Discharge Point: —
Storm Drains: — Discharge Point: —

Other:

On-site utilities:

When was subject property connected to municipal sewer, if currently connected?

5) List and describe the stormwater and wastewater discharges from the facility, including the sources, discharge points, and receiving waters or facility. ?

6) What is the nature of the wastes generated on-site (including hazardous/ regulated wastes, the disposal methods and waste disposal vendors)? N/A

How is it stored on-site?

Who collects the waste?

7) Has the refuse service ever refuse to collect the waste?

No Yes Explain:

Phase I Environmental Site Assessment
Environmental Questionnaire

8) Have there ever been any complaints or notices of violations about your facility?

No Yes Nature: _____

9) What type of HVAC (Heating, Ventilation & Air Conditioning) system does this facility have (ex; natural gas, electric, heating oil, propane, etc. /forced air, radiant, HVAC, etc.)? *N/A*

10) Was this facility ever heated with oil?

No Yes When? _____
Method of Storage: _____

11) Was this facility ever a car repair shop, paint shop, or gas station?

No Yes When? _____
Owner: _____

12) Are there any aboveground or underground storage tanks?

No Yes
Tank ID#: _____
 UST AST Capacity: _____ Product: _____
Location: _____
Notable Information: _____

Tank ID#: _____
 UST AST Capacity: _____ Product: _____
Location: _____
Notable Information: _____

Tank ID#: _____
 UST AST Capacity: _____ Product: _____
Location: _____
Notable Information: _____

Do the tanks comply with December 1998 EPA requirements (including overfill protection, monitoring systems, cathodic protection/double walled tank & piping, etc.)?

No Yes

When were the tanks leak tested? _____

Are the tanks registered? _____

Leak detection devices in place? No Yes Type of system? _____

Monitoring reports available? No Yes Please supply reports. _____

13) Were there ever, to your knowledge, any underground or aboveground tanks located on-site previously?

No Yes When? _____

Are closure reports available? No Yes

**Phase I Environmental Site Assessment
Environmental Questionnaire**

14) What type of chemicals are used in the operations (attach list)?

List hazardous waste/material storage locations: N/A

15) List the environmental or safety reports to be submitted to regulatory agencies, the frequency of such reports, and the agencies to which they are submitted.

N/A

16) Do you have any federal, state, or local permits for the following?

SPDES: No Yes ID #:
 RCRA: No Yes ID #:
 EPA ID: No Yes ID #:
 Title V Air Emissions: No Yes ID #:

17) Have you ever transported Hazardous waste from this site?

No Yes manifests available? No Yes

18) Are PCBs or PCB-containing equipment present on the subject property, including light ballasts or other equipment?

No Yes

Location: _____ Type of Equipment: _____
 Location: _____ Type of Equipment: _____
 Location: _____ Type of Equipment: _____

19) Are there any transformers located on-site?

No Yes Are they utility owned? No Yes Utility Company or owner: _____

20) Do you treat or dispose of any waste materials on-site including incineration, neutralization, or landfilling?

No Yes Type: _____

21) Do you store any hazardous/regulated wastes on-site for transfer to a disposal facility?

No Yes Waste recipient: _____ Permit #: _____

22) Have you ever been the subject of an enforcement action by any federal, date, or local agency regarding environmental issues?

No Yes Nature of action: _____

23) Have there ever been any spills, unpermitted discharges, or releases of hazardous or contaminated materials at or near this facility?

No Yes Nature of release: _____

24) Are there any stained, stressed or dead vegetation surfaces on-site?

No Yes Suspected cause: _____

25) Are you presently under any federal, state, or local consent orders, decrees or causes of action?

No Yes Are they pending? No Yes

**Phase I Environmental Site Assessment
Environmental Questionnaire**

- 26) Have you ever allowed or permitted any other entity to dump, store, dispose, transport, bury, incinerate, or landfill any materials at the site?
 No Yes Who? _____ When? _____
- 27) Does anyone other than your operations utilize this site presently?
 No Yes Who? _____
 Nature of their operations: _____
- 28) Have you ever experienced any problems from odors, drainage, storage practices, or operations from your neighbors?
 No Yes Nature of the problem: _____
 Actions taken to correct the problem: _____
- 29) Are you aware of any environmental liens on the property?
 No Yes Nature: _____
- 30) Was there ever a septic tank, leach field injection well, or dry well located on the property?
 No Yes When? _____
- 31) Are there, or were there ever any water wells located on-site?
 No Yes When? _____
- 32) Are there any dry cleaning operations conducted on-site?
 No Yes How long has dry cleaning been conducted on-site?
 What is the current generation of machine used on-site?
 How old is the current machine?
 Was there a previous machine used on-site?
- 33) Is there currently any X-ray developing or film developing conducted on-site?
 No Yes Is there a silver recovery system in use? No Yes
- 34) Do you have any specialized knowledge that would provide information regarding previous ownership or uses of the property that may be material to identifying recognized environmental conditions regarding the site?
 No Yes Nature: _____
- 35) What are the past and present uses of the properties adjacent to you (please include dates of occupancy)? *N/A*
- | Direction | Current Use/ Occupant | Past Use/Occupants |
|-----------|-----------------------|--------------------|
| North | | |
| South | | |
| East | | |
| West | | |
- 36) Are there any pending, threatened or past litigation relevant to hazardous substances or petroleum products in, on or from the subject property?
 No Yes Nature: _____

Phase I Environmental Site Assessment
Environmental Questionnaire

37) Are there any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the subject property?

No Yes Nature: _____

38) Are there any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products related to this site?

No Yes Nature: _____

CERTIFICATION OF RESPONSES

I, Robert Mootay Jr, the owner/operator and/or responsible person for this facility, do hereby attest and certify that to the best of my knowledge, the answers and information provided in this questionnaire, are true and accurate. I have not willfully withheld information that may be pertinent to the questions contained herein and have not distorted or misrepresented the facts regarding the content of this questionnaire.
