Phase I Environmental Site Assessment

Former Oliver Gear and Modern Heat Treating Properties
1112 and 1114 Niagara Street
Buffalo, New York

Prepared for Jenesis Development LLC

December 10, 2024

→ The Power of Commitment

Executive Summary

GHD was retained by Jenesis Development LLC (Jenesis) to complete a Phase I Environmental Site Assessment (Phase I ESA) of the Former Oliver Gear and Modern Heat Treating properties and building located at 1112 and 1114 Niagara Street in Buffalo, New York (the Subject Property, herein referred to as the Site). The purpose of this Phase I ESA is to identify Recognized Environmental Conditions (RECs), as defined in ASTM International (ASTM) Standard E1527-21 (the Standard), at the Site. This Phase I ESA was conducted to assist Jenesis in conducting All Appropriate Inquiries (AAI) into the previous ownership and use of the Site.

GHD conducted the reconnaissance of the Site on November 15, 2024.

The Site is developed with one approximately 33,020 square-foot single-story industrial building located on approximately 1.13 acres of land in Buffalo, New York. The Site building was formerly two separate buildings, consisting of one approximately 15,535 square-foot building located on a parcel of land addressed as 1112 Niagara Street and one approximately 17,485 square-foot building located on a parcel of land addressed as 1114 Niagara Street. These two formerly separate buildings, referred to as the “1112 Niagara Street building” and the “1114 Niagara Street building” in this report, are connected by a narrow corridor that was installed in the late 1990s or early 2000s. Additional improvements to the Site include asphalt- and concrete-paved areas. The 1112 Niagara Street building is part of a larger building that extends onto the 1106 and 1110 Niagara Street parcels. According to historical records, this larger building was most likely constructed as a single building. GHD observed a concrete block wall at the eastern end of the 1112 Niagara Street building that is a likely partition wall separating the Site from the larger building. This larger building that is present on the 1106, 1110, and 1112 Niagara Street parcels is referred to as the “1106-1112 Niagara Street building” in this report and was historically addressed as 1112 Niagara Street.

The 1114 Niagara Street building is currently utilized by Rich Products Corporation (Rich Products) for storage of furniture, construction materials, lights, carpeting, and other miscellaneous materials associated with its nearby business operations. The northeastern portion of the 1112 Niagara Street building is currently utilized by Rich Products to store tractors for snow removal. The remainder of the 1112 Niagara Street building is currently vacant.

Based on a review of historical documents, the majority of the 1114 Niagara Street building was constructed sometime between 1925 and 1935 and the 1106-1112 Niagara Street building was constructed sometime between 1938 and 1951. These buildings were constructed for industrial purposes. Before current Site development, the Site was vacant land in at least 1925 and included residential dwellings in the late 1890s.

Findings and Opinion

Based on this Phase I ESA, the following findings are identified:

1. **Likely Releases Related to Long-Term Industrial Site Operations**: The Site was utilized for industrial operations from the 1930s through the early 2000s, including gear manufacturing and heat treating and forging. These operations utilize significant quantities of petroleum products and hazardous substances and were primarily conducted prior to the promulgation of environmental regulations. The Site was listed as a former generator of hazardous waste including tetrachloroethene and trichloroethene. Moderate to heavy staining was observed on portions of the concrete floor throughout the Site building, although no significant cracks were observed in the concrete. A moderate petroleum odor was observed throughout the 1114 Niagara Street building. A small number of floor drains were observed and their discharge point is unknown. Based on the nature and amounts of petroleum products and hazardous substances used in machining and heat treating operations, typical chemical disposal and handling practices during the years of operation, the observed staining within the building, and the potential routes to the environment via floor drains and through concrete, a release of hazardous substances or petroleum products is likely. Likely releases associated with the historical Site use constitutes a REC.

2. **Likely Impacts from Northern Adjoining Property**: The property located at 1144 Niagara Street, which adjoins the Site to the north, is identified as an “active” BROWNFIELDS site in the database. Impacts include petroleum compounds and chlorinated volatile organic compounds (VOCs) in groundwater. According to the database listing, *“environmental sampling indicates soil vapor intrusion is a concern for off-site buildings.”* This property is also identified with a second “active” BROWNFIELDS listing for *“investigation and possible remediation of contamination that may have migrated from that site.”* Furthermore, this property is listed on the SPILLS database for identification of petroleum impacts, which reportedly could not be fully delineated due to the presence of the “Oliver Gear” driveway and foundation wall. Although this property appears to be cross-gradient of the Site to the north, based on reported potential vapor intrusion concerns at nearby properties and the identification of petroleum impacts at the Site boundary, adverse impact to the Site from this adjoining property is likely and constitutes a REC.
3. **Likely Impacts from Southern Adjoining Property:** The property located at 1100 Niagara Street, which adjoins the Site to the south, and the portion of the 1106-1112 Niagara Street building located on the 1106 and 1110 Niagara Street parcels, which adjoins the Site to the south and east, is identified as an “active” BROWNFIELDS site in the database. According to the listing, “nominal” contamination of metals and semi-volatile organic compounds was identified in shallow fill and “nominal” VOC impacts were identified in groundwater. The listing states that the remedial investigation has not been completed and no remedial measures have been completed. Based on the historical shared operations of this property with the Site, the identification of soil and groundwater contamination at this property, and the location of a portion of this property upgradient of the Site, adverse impact to the Site from this adjoining property is likely and constitutes a REC.
4. **Threat of Impact from Abandoned Drums**: Three 55-gallon drums were observed in the western portion of the 1114 Niagara Street building. One drum was labeled “waste paint” and the other drums were not labeled. Mr. Jack Kane was unaware of the contents and origins of these drums. Although no evidence of a release from these drums was observed, the drums appeared moderately rusted and the underlying concrete was cracked. No floor drains were observed proximate to these drums. Based on their observed condition, storage location, and contents likely consisting of hazardous substances, these drums pose a material threat of a future release to the environment and therefore constitute a REC.
5. **Potential Impacts from Historical Aboveground Storage Tanks**: The Site address of 1112 Niagara Street was identified on the CBS, CBS UST, AST, and CBS AST databases for one 1,400-gallon methanol tank that was located “aboveground in a subterranean vault with access for inspections” that was closed in-place in 1998 and one 1,000-gallon methanol tank that was located "aboveground - contact with soil - tank bottom rests on soil, allowing no visual inspection” and closed in-place in 2000. These tanks may have been located in the basement of the 1112 Niagara Street building, which was not accessible during the Site reconnaissance. Mr. Jack Kane is unaware of any current or historical ASTs at the Site and no information was available to confirm the closure and removal of these tanks and their former locations. No reasonably ascertainable information was found to suggest that a release from these tanks had occurred. The inability to inspect the basement of the 1112 Niagara Street building to evaluate potential impacts from historical tanks or other chemicals or wastes stored in this basement constitutes a significant data gap, which prohibits the determination if a REC exists. However, it is important to note that this determination may change if additional information becomes available.
6. **Potential Impacts from Transformers**: According to Mr. Jack Kane, a locked room in the basement of the 1114 Niagara Street building contains three pad-mounted transformers owned by National Grid. Mr. Kane does not maintain the key to this room and therefore this room was not inspected during the Site reconnaissance. Information was not available to determine the age, condition, and PCB content of these transformers. No reasonably ascertainable information was found to suggest that a release from these transformers had occurred. The inability to inspect this locked room in the basement of the 1114 Niagara Street building to evaluate potential impacts from these transformers constitutes a significant data gap, which prohibits the determination if a REC exists. However, it is important to note that this determination may change if additional information becomes available.
7. **Historical Structures**: Based on a review of historical documents, residential dwellings and associated structures were located on the 1114 Niagara Street parcel prior to construction of the current building and a

former structure may have been located on the 1112 Niagara Street parcel. Information regarding historical operations conducted at these structures is not reasonably ascertainable. No information was available regarding demolition of the structures, potential underground storage tanks, potential aboveground storage tanks, water supply, chemical use/storage, solid waste generation, or potential hazardous waste generation. No evidence was found to suggest a release of hazardous substances or petroleum products associated with activities conducted at the former structures has occurred, nor was any evidence found that operations conducted at the former structures have impacted soil and groundwater at the Site. It is possible that remnants may remain in the subsurface. The mere presence of historical structures on the Site does not constitute a REC.

8. **Subsidence Areas in Floor**: Two areas of minor subsidence were observed in the concrete floor along the western interior of the 1112 Niagara Street building. One area was filled with stone and an unknown hard whitish substance. The other area is a suspected former machine area and has heavily stained concrete floor and debris. No evidence was observed suggesting that these areas of subsidence were associated with a release of hazardous substances or petroleum products.

Conclusions

GHD has completed this Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the Former Oliver Gear and Modern Heat Treating properties and building located at 1112 and 1114 Niagara Street in Buffalo, New York. Any exceptions to, or deletions from, this practice are described in Section 1 of this report.

Recognized Environmental Conditions

This assessment has identified the following RECs, as described above:

– Likely Releases Related to Long-Term Industrial Site Operations
– Likely Impacts from Adjoining Properties
– Threat of Impact from Abandoned Drums

Based on this Phase I ESA, no additional findings are identified.

This summary does not present all of the information that is found in the full report. This Phase I ESA should be read in its entirety to obtain a more complete understanding of the information provided, and to aid in any decisions made, or actions taken, based on this information.

Key Terms

The following key terms used in this report are defined in the ASTM International Standard E1527-21 as follows:

- **Recognized Environmental Condition (REC)** is (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. (For the purposes of this definition, "likely" is that which is neither certain nor proved but can be expected or believed by a reasonable observer based on the logic and/or experience of the Environmental Professional, and/or available evidence, as stated in the report to support the opinions given therein.)
- **Controlled Recognized Environmental Condition (CREC)** is a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations). A past release that previously qualified as a CREC may no longer constitute a CREC at the time of the Phase I ESA if new conditions or information have been identified such as, among other things, a change in regulatory criteria, a change of use at the Site, or a subsequently identified migration pathway that was not previously known or evaluated.
- **Historical Recognized Environmental Condition (HREC)** is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). An HREC is not a REC.

  A past release that qualified as an HREC may no longer qualify as an HREC if new conditions or information have been identified, such as, among other things, a change in regulatory criteria or a subsequently identified migration pathway that was not previously known or evaluated.
- ***De minimis* condition** is a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis* condition is not a REC nor a CREC.
- **Activity and Use Limitations (AULs)** are legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.
- **Data gap** is a lack of or inability to obtain information required by this practice (i.e., ASTM E1527) despite good faith efforts by the Environmental Professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice (i.e., ASTM E1527), including, but not limited to, site reconnaissance (for example, and inability to conduct the Site visit), and interviews (for example, an inability to interview the Key Site Manager, regulatory officials).
- **Significant data gap** is a data gap that affects the ability of the Environmental Professional to identify a REC.
- **Limiting conditions** are general limitations and basis of review, including limitations imposed by physical obstructions such as adjacent buildings, bodies of water, asphalt, or other paved areas, and other physical

constraints (for example, snow, rain, flooding, etc.) shall be noted during the site visit and documented in the report.

- **Reasonably ascertainable** is information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.
- **Adjoining properties** are any real property or properties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.
- **Key Site Manager** is the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.
- The **User** is the party seeking to use ASTM Standard Practice E1527 to complete an environmental site assessment of the subject property.

1. Introduction

GHD was retained by Jenesis Development LLC (Jenesis) to complete a Phase I Environmental Site Assessment (Phase I ESA) of the Former Oliver Gear and Modern Heat Treating properties and building located at 1112 and 1114 Niagara Street in Buffalo, New York (the Subject Property, herein referred to as the Site). The User of this Phase I ESA is Jenesis Development LLC. The purpose of this Phase I ESA is to identify Recognized Environmental Conditions (RECs), as defined in ASTM International (ASTM) Standard E1527-21 (the Standard), at the Site. This Phase I ESA was conducted to assist Jenesis in conducting All Appropriate Inquiries (AAI) into the previous ownership and use of the Site.

GHD conducted the reconnaissance of the Site on November 15, 2024.

A Site location map is provided in Figure 1. A Site plan is provided in Figure 2. Photographs taken during the Site reconnaissance are presented in Appendix A.

This assessment has been performed in accordance with the Standard for conducting Phase I ESAs. This Phase I ESA has been prepared by Margaret A. Popek and Matthew Talbert of GHD, who are Environmental Professionals, as defined in the Standard. These Environmental Professionals were involved in the review and interpretation of the information used to form the basis of the findings, opinions and conclusions as presented in this Phase I ESA. Copies of curricula vitae outlining their qualifications are included in Appendix B.

The following tasks were completed during the assessment:

– Interviews with personnel associated with the Site
– Review of publicly available Federal and State environmental databases, local agency records, and historical records (e.g., fire insurance maps, topographic maps, city directories) of the Site and surrounding properties as applicable
– Review of historical aerial photographs of the Site and surrounding properties
– Review of past and current Site use and adjoining property occupancy
– Reconnaissance of the Site and structures, equipment, utility services, operations, and review of associated Site records
– Observations of conditions that represent releases, or likely releases, or a material threat of a release of hazardous substances or petroleum products to the ground, surface waters, or groundwater of the Site
– Review of chemical use and storage and spill/release incidents associated with the Site
– Review of waste handling, accumulation, storage, and disposal practices
– Review of air emissions and wastewater discharges
– Review of aboveground storage tank (AST) and underground storage tank (UST) records
– Review of electrical or hydraulic equipment that has the potential to contain polychlorinated biphenyls (PCBs)
– Review of previous environmental reports prepared for the Site

GHD relied on information received from third parties and during the Phase I ESA interviews to the extent that the information was reasonably ascertainable and assumed the information received to be accurate unless contradicted by written documentation or field observations.

The following report summarizes the information gathered by GHD during the Phase I ESA and identifies RECs, Historical RECs (HRECs), Controlled RECs (CRECs), and *de minimis* conditions as defined in the Standard at the Site.

1.1 Data Gaps, Limiting Conditions, and Deletions

The following data gaps, limiting conditions, and/or deletions to the Standard were encountered in the completion of this Phase I ESA:

- The presence of fencing, topographic conditions, and abutting structures on adjoining properties prevented inspection of the west and south exterior walls of the 1112 Niagara Street building and prevented complete inspection of the south exterior wall of the 1114 Niagara Street building.
- The Key Site Manager indicated that the basement in the 1112 Niagara Street building was inaccessible and therefore the basement of this structure was not inspected during the Site reconnaissance.
- According to the Key Site Manager, a locked room in the basement of the 1114 Niagara Street building contains three pad-mounted transformers owned by the utility. The Key Site Manager does not maintain the key to this room and therefore this room was not inspected during the Site reconnaissance.
- Mr. Jack Kane, the Director of Facility Services for the Site Owner, has been associated with the Site for 3 years and did not know details regarding the history of former operations/uses conducted at the Site before his tenure.
- Responses for all Freedom of Information Act (FOIA) information requests have not been received as of the date of this Phase I ESA.
- Standard historical sources reviewed for this Phase I ESA were not available at the 5-year intervals described in Section 8.3.5 of the Standard. Additional information sources were not considered reasonably ascertainable.

The significance of the above has been evaluated relative to the findings and conclusions of this Phase I ESA. Opinions regarding significant data gaps, as defined in the Standard, and their impact on the findings of this Phase I ESA are provided in Section 5.3.

1.2 Interviews

To the extent available, questions of past and present owners, operators, and occupants of the Site were asked by a GHD Environmental Professional in an attempt to obtain information about current and past features, uses, activities, and conditions. Interviews with past and present owners, operators, and occupants of the Site who are likely to have material information regarding the potential for contamination at the Site were conducted to the extent that they were identified and available. To the extent practical, attempts were made to interview a reasonable number of occupants when multi-tenants were involved, which included large or significant tenants and those other occupants whose operations are likely to indicate RECs in connection with the Site.

Before the reconnaissance of the Site, the User was asked to identify a person with good knowledge of the uses and physical characteristics of the Site (i.e., the Key Site Manager). In addition to questions about current and past features, uses, activities, and conditions associated with the Site, the User, Jenesis, and Key Site Manager were asked about any helpful documents that are available.

GHD interviewed the following User-identified Site personnel:

Site Personnel	Position	Years Familiar with the Site
Mr. Jack Kane	Site Owner, Key Site Manager, and Director of Facility Services at Rich Products (Jenesis is subsidiary)	3

Mr. Jack Kane, as the Director of Facility Services for the Site Owner, was identified by the User as the Key Site Manager to be interviewed and provided information regarding Site operations and historical Site use. Mr. Kane accompanied GHD on the Site reconnaissance.

1.3 Significance and Use

The purpose of the E1527 Phase I Standard Practice is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment for commercial real estate concerning the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (i.e., Hazardous Substances - 42 U.S.C. §9601) and petroleum products. Petroleum products are included within the scope of this practice because they are of concern with respect to commercial real estate, and current custom and usage are to include an inquiry into the presence of petroleum products when conducting an environmental site assessment of commercial real estate. Inclusion of petroleum products within the scope of this practice is not based upon the applicability if any, of CERCLA to petroleum products.

It is also important to note that the Standard does not address requirements of any state or local laws or federal laws other than the AAI provisions of the Landowner Liability Protections to CERCLA. Users are cautioned that federal, state, and local laws may impose environmental assessment obligations beyond this practice's scope (e.g., those associated with emerging contaminants). Users should also be aware that there are likely to be other legal obligations concerning hazardous substances or petroleum products discovered in, on, or at the Site that are not addressed in this practice and may pose risks of civil and/or criminal sanctions for non-compliance.

This Phase I ESA was conducted consistent with that level of care and skill exercised by members of the environmental engineering and science profession currently practicing under similar conditions and was based upon the information made available to GHD representatives at the time of this assessment. It remains important to recognize that no Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with the Site. The performance of the assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a Site. As defined in the Standard, the User must recognize the reasonable time and cost limits. For this Phase I ESA, the User has been identified as Jenesis Development LLC.

This Phase I ESA has been prepared for the use of Jenesis and may not be relied upon by any other party without GHD's written consent. Per Section 4.6 of the Standard, this Phase I ESA is viable until May 7, 2025, 180 days from the oldest primary component of the Phase I ESA.

1.4 User Questionnaire

GHD understands that Jenesis is evaluating User information regarding the Site. Therefore, no evaluation of User information is included in this Phase I ESA. GHD has considered the significance of the absence of this information during the evaluation of the findings of this report. A copy of the User Questionnaire, which GHD provided to Jenesis, is included in Appendix C.

2. Site Description and Location

2.1 Site Description

The Site is developed with one approximately 33,020 square-foot single-story industrial building located on approximately 1.13 acres of land in Buffalo, New York. The Site building was formerly two separate buildings, consisting of one approximately 15,535 square-foot building located on a parcel of land addressed as 1112 Niagara Street and one approximately 17,485 square-foot building located on a parcel of land addressed as 1114 Niagara Street. These two formerly separate buildings, referred to as the “1112 Niagara Street building” and the “1114 Niagara Street building” in this report, are connected by a narrow corridor that was installed in the late 1990s or early 2000s, based on a review of aerial photographs. Additional improvements to the Site include asphalt- and concrete-paved areas.

The 1114 Niagara Street building is a steel frame and concrete block structure with a brick façade and a concrete floor and steel deck roof. Based on a review of Sanborn maps and aerial photographs, the majority of this building was constructed sometime between 1925 and 1935 and was fully constructed by at least 1978 with a small addition on the western end of the building. The building has a large former production area and a series of smaller rooms in the western portion of the building. A small former office area is present on the eastern end of the building. An asphalt-paved driveway is present north of the building leading west from Niagara Street, through a small concrete-paved area, and into an asphalt-paved parking area west of the building. West of the parking area is a fence and a steep topographic decline to the west-adjoining railroad tracks and interstate. Two overhead doors are present on the north side of this building. A suspected historical exhaust is present on the west side of this building. This building has a partial basement on the east end consisting of two main rooms and two smaller rooms. The basement floors are concrete. One of the small rooms is locked and reportedly contains three pad-mounted transformers owned by National Grid.

According to Sanborn maps, the 1114 Niagara Street parcel included residential dwellings in the 1890s and was vacant land by at least 1925. Based on municipal records, this parcel was purchased by A.F. Oliver Gear & Machine Co. (Oliver Gear) in 1911. Based on Sanborn maps and city directories, this parcel was used by Oliver Gear for gear manufacturing from at least 1935 through at least 2020. No information was available regarding demolition, potential USTs, potential ASTs, wastewater disposal, water supply, chemical use/storage, solid waste generation, or potential hazardous waste generation associated with the former residential structures.

The 1112 Niagara Street building is part of a larger building that extends onto the 1106 and 1110 Niagara Street parcels. Based on a review of Sanborn maps and aerial photographs, this larger building was most likely constructed as a single building. GHD observed a concrete block wall at the eastern end of the 1112 Niagara Street building that is a likely partition wall separating the Site from the larger building. This larger building that is present on the 1106, 1110, and 1112 Niagara Street parcels is referred to as the “1106-1112 Niagara Street building” in this report and was historically addressed as 1112 Niagara Street.

The 1112 Niagara Street building is a steel frame and concrete block structure with a concrete floor. Based on a review of Sanborn maps and aerial photographs, the 1106-1112 Niagara Street building was constructed sometime between 1938 and 1951. This building has a small room on the northeastern portion that was historically used for shipping. The remainder of this building is open space. Two overhead doors are present on the north side of this building. Access to a partial basement is present near the southwestern interior corner of this structure but the basement was not accessible during the Site reconnaissance. This basement is in the same approximate location as a basement depicted in this structure on the Sanborn maps. In addition, a padlocked metal door on the southern interior wall of this structure near the southeastern corner may be a door depicted on the Sanborn maps historically leading into the building on the south-adjoining 1100 Niagara Street parcel, which was historically part of the same grain storage/processing operation.

Topographic maps depict a commercial/industrial-type structure over the entirety of the 1112 Niagara Street parcel in at least 1948 and 1950, without the remainder of the 1106-1112 Niagara Street building depicted. No other evidence for this structure was identified. No information was reviewed to discern if this structure actually existed, and if it was part of the 1106-1112 Niagara Street building or if it was a former building. Sanborn maps, aerial photographs, and topographic maps indicate that this parcel was undeveloped at least as far back as the 1890s and in at least 1925, 1938, and 1946. No information was available regarding demolition, potential USTs, potential ASTs, wastewater disposal, water supply, chemical use/storage, solid waste generation, or potential hazardous waste generation for this potential former structure.

According to Sanborn maps, the 1106-1112 Niagara Street building was used as a warehouse for the Co-Operative G.L.F. Mills/Exchange Inc. grain processing and storage operation that extended onto the south-adjoining 1100 Niagara Street property from at least 1951 through at least 1981. According to Sanborn maps, the 1106-1112 Niagara Street building was used by Modern Heat Treating & Forging in at least 1986. City directories indicate that 1112 Niagara Street was occupied by Modern Heat Treating & Forging/Modern Heat Treating from at least 1985 through at least 2014 for steel heat treating and metal heat treating. Information was not reviewed to discern which of these listings pertained to the 1112 Niagara Street building (Site) and which of these listings pertained to the greater 1106-

1112 Niagara Street building. However, according to municipal records, the 1112 Niagara Street parcel was purchased by Gear Motions Inc. in 1982 and by Oliver Gear Inc. in 1988, which may coincide with the end of Modern Heat Treating's operations at the Site.

According to municipal records, the Site was purchased by Jenesis in 2021. According to Site personnel and based on observations made during the Site reconnaissance, the 1114 Niagara Street building is currently utilized by Rich Products Corporation (Rich Products) for storage of furniture, construction materials, lights, carpeting, and other miscellaneous materials associated with its nearby business operations. The northeastern portion of the 1112 Niagara Street building is currently utilized by Rich Products to store tractors for snow removal. The remainder of the 1112 Niagara Street building is currently vacant. Site personnel indicated that the Site building was owned by Oliver Gear prior to purchase by Jenesis and that Oliver Gear used the building for gear manufacturing. The former Oliver Gear production equipment had reportedly been removed at the time of purchase and no building rehabilitation, gutting, or sealing had been performed.

No pits, ponds, lagoons, or areas of stained soil or stressed vegetation were observed on Site during the reconnaissance.

2.2 Environmental Setting

The Site is in a predominantly commercial and residential area in the western portion of the City of Buffalo in Erie County, New York. The general topographic gradient at the Site and surrounding area is to the west based on topographic maps and information provided in the GeoCheck section of the Environmental Data Resources (EDR) Radius Map report.

No surface water bodies are present on the Site. The nearest surface water body is the Black Rock Canal of the Niagara River which is approximately 150 feet west of the Site. The Site is not listed as being in a mapped flood hazard area according to the EDR Radius Map report. EDR conducted a records search of the United States (U.S.) Fish and Wildlife Service 2002, 2005, 2010, and 2015 National Wetlands Inventory (NWI) and requested state wetland data from the NYSDEC for the Site and surrounding area. No wetlands were identified by EDR on or adjoining the Site in the NWI or by NYSDEC.

According to information provided in the GeoCheck section of the EDR Radius Map report, soils underlying the Site consist of Urban land. Urban land is defined as miscellaneous areas that are covered by concrete, asphalt, buildings, or other impervious surfaces that obscure or alter the soils so that identification is not feasible. Most areas of Urban land are artificially drained by storm sewer systems, gutters, tile drains, and surface ditches. Based on the general topographic gradient at the Site and the presence of the Niagara River to the west, it is inferred that shallow groundwater beneath the Site would flow to the west. According to BROWNFIELDS listings for adjoining properties, underlying soils proximate to the Site consist of approximately one to six feet of fill materials including concrete, brick, cinders, ash, and wood overlying native silty clay to the bedrock surface at depths of approximately 4 to 18 feet below ground surface. Discontinuous sand and gravel lenses have been reported at the bedrock surface. These BROWNFIELDS listings also indicate that groundwater flow proximate to the Site in both the overburden and the bedrock is to the west.

Based on the United States Geological Survey (USGS) 7.5 Minute Buffalo Northwest, New York Topographic Map, the Site is approximately 602 feet above mean sea level.

3. Environmental Databases Search and Document Review

3.1 Environmental Databases Search

GHD contracted EDR to search federal and state environmental databases. Based on the address of the Site and the Site boundaries, the database searches were completed to assist in the identification of RECs in connection with the Site and assess the likelihood of an impact to the Site from migrating hazardous substances or petroleum products.

The following Standard Environmental Records were searched within the approximate minimum search distance (AMSD) specified in the Standard, and Additional Environmental Records were searched as listed below:

Database	Search Radius
Standard Environmental Records	
National Priority List (NPL)	1 mile
Proposed NPL	1 mile
Federal Superfund Liens (NPL LIENS)	Site only
National Priority List Deletions (Delisted NPL)	1 mile
Federal Facility Site Information Listing (FEDERAL FACILITY)	0.5 mile
Superfund Enterprise Management System (SEMS)	0.5 mile
Superfund Enterprise Management System Archive (SEMS-ARCHIVE)	0.5 mile
Corrective Action Report (CORRACTS)	1 mile
Resource Conservation and Recovery Act (RCRA) Treatment, Storage and Disposal Facility (RCRA-TSDF)	0.5 mile
RCRA-Large Quantity Generators (RCRA-LQG)	Site/Adjoining Property
RCRA-Small Quantity Generators (RCRA-SQG)	Site/Adjoining Property
RCRA-Very Small Quantity Generators (RCRA-VSQG)	Site/Adjoining Property
Land Use Control Information System (LUCIS)	0.5 mile
Engineering Controls Sites List (US ENG CONTROLS)	0.5 mile
Institutional Controls Sites List (US INST CONTROLS)	0.5 mile
Emergency Response Notification System (ERNS)	Site only

EDR Exclusive Historical Cleaners (EDR Hist Cleaner)	0.125 mile
Recovered Government Archive LUST (RGA LUST)	0.5 mile
Per- or Poly- Fluoroalkyl Substances (PFAS)	0.5 mile

A copy of the database search is included in Appendix D, which includes definitions for the above-referenced databases. It should be recognized that the availability, accuracy, and completeness of the record information may vary among information sources, including governmental sources. GHD reviewed information for properties identified within the referenced AMSD. GHD considers a variety of factors in determining which off-Site properties, if any, can impact the Site. These factors include, but are not limited to, the following:

– Type of database on which property was identified
– Information presented in the EDR Radius Map report and reasonably ascertainable government databases
– Direction and distance of the property from the Site
– Suspected or known groundwater flow direction at or near the Site
– The likelihood that released contaminants, if any, could migrate to the Site
– Surface and subsurface features (e.g., soil types, utility corridors)

The following is a summary of the databases searched with the findings as listed.

3.1.1 Database Listings for the Site

The Site addresses are listed in the following aforementioned databases:

Site Address	Listed Entity	Listing
1112 Niagara St	Modern Heat Treating & Forging	CBS UST (1 Closed) CBS (Unregulated/Closed) AST (2 Closed-In Place) CBS AST
1120 Niagara St	Oliver Gear Inc	RCRA-VSQG (No Violations)

In addition to the above, the Site is listed in the RCRA Non-Generators/No Longer Regulated (RCRA NonGen/NLR), Facility Index System/Facility Registry System (FINDS), Enforcement and Compliance History Online (ECHO), and MANIFEST databases, the definitions of which are provided in Appendix D.

Refer to Sections 4.2, 4.3, and 4.6 for details.

3.1.2 Database Listings for Adjoining Properties

The following adjoining properties are listed in the aforementioned databases searched with the status as listed:

Property Address	Listed Entity	Listing
1110 Niagara St (South and East Adjoining)	1110 Niagara Street II LLC	RCRA-SQG (No Violations)
1100 Niagara St (South Adjoining)	Curtiss Malt House Project	BROWNFIELDS
1130 Niagara St (North Adjoining)	1130 Niagara Street Site	BROWNFIELDS
	Jenesis Development LLC	RCRA-LQG (No Open Violations) LTANKS (Closed) UST (2 Closed-Removed) CBS (Unregulated/Closed) CBS AST
	Curtis Screw Co Inc	AST (Unregulated/Closed)
	1130 Niagara Street Site - Off-Site	BROWNFIELDS
	Curtis Screw Co. Inc.	AST (Tank Converted to Non-Regulated Use)
1130 - 1144 Niagara St (North Adjoining)	1130 Niagara Street Site	SHWS

In addition to the above, one or more adjoining properties are listed in the ECHO, FINDS, SPILLS, Electronic Hazardous Waste Manifest (E MANIFEST), and MANIFEST databases, the definitions of which are provided in Appendix D.

Refer to Section 3.5 for details.

3.1.3 Additional Database Listings for Area Properties

In addition to the above, the following Area Properties (i.e., properties located within the effective AMSD of the Site) are listed in the aforementioned databases:

Property Address	Listed Entity	Listing
1095 Niagara St (0 – 1/8 mile ESE)	Keystone Corp	BROWNFIELDS
1155 Niagara St (0 – 1/8 mile NE)	1155 Niagara Street Site	ENG CONTROLS INST CONTROL BROWNFIELDS
1073 Niagara St (0 – 1/8 mile SE)	Cosuma	LTANKS (Closed)
1050-1088 Niagara St (0 – 1/8 mile SSE)	1050-1088 Niagara Street Site	ENG CONTROLS INST CONTROL BROWNFIELDS
Niagara St (0 – 1/8 mile SE)	Pratt And Lambert * this listing is suspected to be 0.5 mile N of Site	LTANKS (Closed)
Ft. West Ferry St (0 – 1/8 mile NW)	Air Release	LTANKS (Closed)
990 Niagara St (1/8 – 1/4 mile S)	990 Niagara Street	BROWNFIELDS
118 Hampshire St (1/4 – 1/2 mile SE)	School #18	LTANKS (Closed)
	STERLING ENGINE CO	FUDS
959 Niagara St (1/4 – 1/2 mile SSE)	7-Eleven	LTANKS (Closed)
35 Hampshire St (1/4 – 1/2 mile SSE)	Ultimate Auto Service	LTANKS (Closed)
1315 Niagara St (1/4 – 1/2 mile NNE)	Soil Borings	LTANKS (Closed)
1318 Niagara St (1/4 – 1/2 mile N	Buffalo City Of - Former Stroh Brewery	ENG CONTROLS INST CONTROL
	1318 Niagara Street	ERP
1345 Niagara St (1/4 – 1/2 mile NNE)	Buffalo Sewer Authority Site	SEMS-ARCHIVE
Grant & Arkansas (1/4 – 1/2 mile E)	Demolition Project	LTANKS (Closed)
1382 Niagara St (1/2 – 1 mile NNE)	Chemical Sales Corp	SHWS

Based on the factors listed in Section 3.1, no evidence of the likelihood for a hazardous substance or petroleum product release impacting the Site through migration from the above-mentioned Area Properties was identified based on information provided in the EDR Radius Map report.

3.1.4 Unmapped Properties

In addition to the properties identified above, the database search identified three properties that could not be mapped based on the address information within the database system, also referred to as "orphan" sites in the database search results. A complete listing of the unmapped properties is included in Appendix D.

GHD reviewed the list of unmapped properties and confirmed that none of the listed properties are adjoining or close to the Site based on the available information and observations made during the Site reconnaissance.

3.2 Historical Records Review

GHD reviewed the following information, where reasonably ascertainable, to identify the historical usage of the Site and adjoining properties:

- Sanborn Fire Insurance Maps
- Historical Aerial Photographs
- City Directories
- Historical Topographic Maps

3.2.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps assist in identifying historical land use and commonly illustrate the existence and location of ASTs, USTs, structures, improvements, and Site operations. Sanborn map year information is presented in Appendix E. The following is a summary of observations based on a review of the Sanborn maps:

1889: The Site is developed with one residential dwelling and one outbuilding on the 1114 Niagara Street parcel. The remainder of the Site is undeveloped. Residential dwellings and associated outbuildings as well as an industrial building labeled “Wiesbauer Manufacturing Co.” are depicted on the adjoining property north of the Site to Gull Street. The “Wiesbauer Manufacturing Co.” building (17 Gull Street parcel) is depicted as including sawing and planing, covering jewelry cases, and paper box manufacturing, and heated with coal. The adjoining properties south of the Site to Albany Street are depicted as undeveloped. The adjoining property west of the Site is depicted as railroad tracks. Due to limited coverage, only the western portion of the adjoining property east of the Site, east of Niagara Street, is depicted. This property is shown as undeveloped.

1899: The Site and adjoining property north of the Site to Gull Street remain consistent with how they appeared on the 1889 Sanborn map, except that the residential dwelling on the Site is now labeled “tenements” and the industrial building on the north-adjoining property is now labeled “The Burns Typewriter Co” (17 Gull Street parcel) and is depicted as including a machine shop, assembling, an oil-powered engine, and heated with coal. The adjoining property south of the 1112 Niagara Street parcel to Albany Street is depicted with a complex labeled “The C.G. Curtiss Co. Malt House” (1100 Niagara Street parcel) which includes a building labeled “malting drum house” with a kiln, carpenter area, and heated with coal; and a grain elevator connected to a turn table and railroad tracks. The adjoining property south of the 1114 Niagara Street parcel is depicted as undeveloped (1106 and 1110 Niagara Street parcels). The adjoining property west of the Site is depicted as railroad tracks. Due to limited coverage, only the western portion of the adjoining property east of the Site, east of Niagara Street, is depicted. This property is shown as developed with a residential dwelling.

1925: The Site is depicted as vacant land. A building labeled “manufacturer of medical specialties” with a contractors’ yard and storage (1144 Niagara Street parcel) as well as residential dwellings and a

building labeled “Curtis Screw Co. Inc.” are depicted on the adjoining property north of the Site to Gull Street. The “Curtis Screw Co. Inc.” building (17 Gull Street parcel) is depicted as including machining, storage/stock rooms, and a coal shed. The adjoining property south of the 1112 Niagara Street parcel to Albany Street is depicted with a complex labeled “Co-Operative Grange League Federation Exchange Inc.” (1100 Niagara Street parcel) which includes a building labeled “grain and feed supply house” with grain tanks and a turn table connected to railroad tracks. The adjoining property south of the 1114 Niagara Street parcel is depicted as undeveloped (1106 and 1110 Niagara Street parcels). The adjoining property west of the Site is depicted as railroad tracks. Due to limited coverage, only the western portion of the adjoining property east of the Site, east of Niagara Street, is depicted. This property is shown as developed with residential dwellings and a wagon shed.

1951 The Site is developed with the majority of the 1114 Niagara Street building, labeled “A.F. Oliver Gear & Machine Co. Inc.” which includes a machine shop, office area, a pattern shop, pattern storage, scrap sheds, and electric power. The remainder of the 1114 Niagara Street parcel is undeveloped. The 1112 Niagara Street parcel is fully developed with the current building, which is a portion of the 1106-1112 Niagara Street building labeled “warehouse” and is part of a complex labeled “Co-Operative G.L.F. Mills Inc.” A basement is depicted in the 1112 Niagara Street Site building. This complex extends onto the adjoining property south of the Site to Albany Street (1100 Niagara Street parcel), where it is depicted with a building labeled “seed warehouse” with grain tanks and a turn table connected to railroad tracks. Doors are depicted between the 1106-1112 Niagara Street building and the 1100 Niagara Street building. The adjoining property west of the Site is depicted as railroad tracks. The adjoining property north of the Site is depicted with buildings labeled “Rest & Bowling” and “Auto Car Co. – Lesses, Truck Sales & Service” (1144 Niagara Street parcel) and the Curtis Screw Co. Inc. (17 Gull Street parcel). The “Auto Car Co.” building is depicted as including truck storage, a display room, and a shop. The Curtis Screw Co. is labeled “manufacturing screw machine products” and includes an expanded footprint relative to how this operation appeared on the 1925 Sanborn map. Due to limited coverage, only the western portion of the adjoining property east of the Site, east of Niagara Street, is depicted. This property is shown as developed with a building labeled “private garage.”

1981 The Site and adjoining properties to the south and west of the Site remain consistent with how they appeared on the 1951 Sanborn map. The majority of the adjoining property north of the Site is developed with the Curtis Screw Co. complex and includes a large machine shop directly north of the northern Site boundary. The building labeled “Auto Car Co.” on the 1951 Sanborn map is also shown and is labeled as vacant. Due to limited coverage, only the western portion of the adjoining property east of the Site, east of Niagara Street, is depicted. This property is shown as including a parking area and a building containing an office.

1986 The Site and adjoining properties remain consistent with how they appeared on the 1981 Sanborn map, except that the 1114 Niagara Street building appears to be fully constructed due to a small addition on the western end; the 1106-1112 Niagara Street building is labeled “Modern Heat Treating & Forging Inc.;” and the buildings on the south-adjoining property (1100 Niagara Street Parcel) are labeled vacant.

A copy of the Certified Sanborn Map report is presented in Appendix E.

3.2.2 Property Title Search

Property title information for the Site was not made available to GHD from Jenesis.

Property information reviewed at the Erie County Department of Real Property Tax Services online parcel search (https://paytax.erie.gov) on November 14, 2024 included the below information regarding historical Site ownership:

1112 Niagara Street parcel

– 7/1982 – Gear Motions Inc.
– 12/1988 – Oliver Gear Inc.
– 8/2021 – Jenesis Development LLC

1114 Niagara Street Parcel

– 11/1911 – Oliver A.F. Gear & Machine Co.
– 8/2021 – Jenesis Development LLC

3.2.3 Historical Aerial Photographs

Aerial photographs assist in the identification of Site features and outdoor activities of potential environmental concern. The specific details observed at the Site and adjoining properties are dependent on the scale and quality of the aerial photographs reviewed. Aerial photograph year and scale information is presented in Appendix F. The following is a summary of observations based on a review of the aerial photographs:

1938: The Site appears to be developed with the majority of the 1114 Niagara Street building. The remainder of the Site appears to be undeveloped. A large industrial/commercial-type building (1144 Niagara Street parcel) and residential dwellings along with a smaller industrial/commercial-type building (17 Gull Street parcel) are shown on the adjoining property north of the Site to Gull Street. A commercial-type building is shown on the adjoining property east of the Site, east of Niagara Street. An industrial-type complex is shown on the adjoining property south of the 1112 Niagara Street parcel to Albany Street (1100 Niagara Street parcel). The adjoining property south of the 1114 Niagara Street parcel (1106 and 1110 Niagara Street parcels) appears to be developed with a shed-type outbuilding. Railroad tracks are evident on the adjoining property west of the Site.

1951-1970: The Site appears to be developed with the majority of the 1114 Niagara Street building and with the entirety of the 1106-1112 Niagara Street building. The property adjoining the Site to the north appears generally consistent with how it appeared on the 1938 aerial photograph except that the smaller industrial/commercial-type building on the 17 Gull Street parcel has expanded. Residential dwellings are no longer evident on the 17 Gull Street parcel on the 1966 aerial photograph. The properties adjoining the Site to the east, west, and south to Albany Street (1100 Niagara Street parcel) appear generally consistent with how they appeared on the 1938 aerial photograph.

1978-2008: The Site appears to be developed with the entirety of the 1114 Niagara Street building, including a small addition on the western end of the building and a narrow corridor connecting the 1112 and 1114 Niagara Street buildings is present. The remainder of the Site and adjoining properties remain generally consistent with how they appeared on the 1970 aerial photograph.

2011-2015: The Site and adjoining properties appear generally consistent with how they appeared on the 2008 aerial photograph except that the industrial/commercial-type building on the 17 Gull Street parcel on the north-adjoining property has been demolished.

2019: The Site and adjoining properties appear generally consistent with how they appeared on the 2015 aerial photograph except that the large industrial/commercial-type building on the 1144 Niagara Street parcel on the north-adjoining property has been demolished.

Copies of reviewed aerial photographs are presented in Appendix F.

3.2.4 City Directories

EDR conducted a city directory search from the first available directory to the present. Directories were available and were reviewed by EDR at approximately five-year intervals beginning in 1925 and ending in 2020.

The Site address of 1112 Niagara Street was listed in the following city directories reviewed:

Year	Entity
1985, 1992, 1995, 1998, 2000, 2001	Modern Heat Treating & Forging Inc. (steel/metal heat treating)
2005	Fend Corp. Modern Heat Treating & Forging
2008	Modern Heat Treating & Forging (metal heat treating)
2010, 2014	Modern Heat Treating

It was not reasonably ascertainable to determine which of these listings for 1112 Niagara Street pertained to the 1112 Niagara Street building and which listings pertained to the 1106-1112 Niagara Street building.

The Site address of 1114 Niagara Street and historical Site addresses of 1116 Niagara Street and 1120 Niagara Street, which were located on the current 1114 Niagara Street parcel, were listed in the following city directories reviewed:

Year	Entity
1114 Niagara Street	
1935, 1940, 1946	A.F. Oliver Gear & Machine Co. (gear manufacturers)
1950, 1955, 1960, 1964, 1970	Oliver Gear & Machine Co. Inc. (gear manufacturers)
1998	1114 11 Oliver Gear (iron steel forging)
2001	Oliver Gear (forged steel gears)
1116 Niagara Street	
1930	Deco Lunch
1120 Niagara Street	
1935, 1940, 1946	A.F. Oliver Gear & Machine Co. gear manufacturers)
1950, 1960, 1964, 1975	Oliver Gear & Machine Co. Inc. (gear manufacturers)
1980, 1985, 1992, 1995	Oliver Gear Inc. (gear manufacturers)
1998	Cavalier Motor Lodge (hotels & motels)
2001	Nicholas Deluca Office
2005	Oliver Gear Inc.
2008	Oliver Gear Inc. (business services) – listed for 1120 Niagara Square
2010	Oliver Gear Inc.
2020	Oliver Gear Inc. Gear Motions Inc. Beverly Haynes

The Site addresses are not listed in any of the preceding years reviewed by EDR.

The following adjoining properties are listed in the city directories reviewed:

Address	Years	Entity
Southern Adjoining – Current 1100 Niagara Street		
1096 Niagara Street	1925, 1930 1935 – 1946 1950 – 1964 1970 1975 1980 1985, 1992 2000 2001 2020	Co-Operative Grange League Federation Exchange Inc. Co-Operative GLF Mills Inc. 1128 Niagara Street	1930 1935 – 1946 1950	1122 28 Autocar Sales & Service (auto trucks) Autocar Sales & Service (autos, commercial cars) Autocar Sales & Service (commercial cars), Strand Recreation (bowling)
1130 Niagara Street	1955, 1960 1964, 1970 1975 – 2001 2005 2008	Namor Products of NY Inc. (wholesale furniture) Vacant Curtis Screw Co. (screw machine product manufacturers) Curtis Niagara LLC Leisure Living (swimming pool contract.) – listed for 1130 Niagara Square
1136 Niagara Street	1975	Rich Products Additional Space
41 Gull Street	1960, 1964	Curtis Screw Co. Inc. (screw machine products)
59 Gull Street	1925	Residential listings
Northern Adjoining – Current 17 Gull Street		
17 Gull Street	1930 – 1970	Curtis Screw Co. Inc. (screw machine products)
25 Gull Street	1925 1930 1935, 1940	Residential listings Residential listing, vacant Residential listings
27 Gull Street	1925 – 1940	Residential listings
31 Gull Street	1925 – 1960	Residential listings
37 Gull Street	1925 – 1940 1946	Residential listings Vacant

In addition to the above, numerous other commercial businesses were identified in the vicinity of the Site in the city directories reviewed. GHD reviewed the city directory search and determined that the commercial activity listed would not be indicative of a release to the environment.

A copy of the city directory search is presented in Appendix G.

3.2.5 Historical Topographic Maps

Historical topographic maps were reviewed to assist in identifying historical land use, document the general development of the Site and properties in the vicinity of the Site, and identify potential on-Site fill activities. Topographic map year and scale information is presented in Appendix H.

The following is a summary of observations based on the historical topographic map review:

1894: No buildings are depicted on the Site or on the adjoining properties south of the Site. Due to the level of detail provided, no features are depicted on the adjoining properties north and east of the Site. Railroad tracks are depicted on the adjoining property west of the Site.

1901: Due to the level of detail provided, no features are depicted on the Site or adjoining properties north and east of the Site. A small commercial/industrial-type building and a railroad spur are depicted on the adjoining property south of the Site. Railroad tracks are depicted on the adjoining property west of the Site.

1946,1949: The majority of the 1114 Niagara Street building is depicted on the Site. No buildings are depicted on the remainder of the Site. Large commercial/industrial-type buildings are depicted on the adjoining properties north and south of the Site. A residential-type structure is also present on the adjoining

property north of the Site. Railroad tracks are depicted on the adjoining property west of the Site. Due to the level of detail provided, no features are depicted on the adjoining property east of the Site.

1948,1950: The Site and adjoining properties remain consistent with how they appeared in the 1946/1949 topographic map except that a commercial/industrial-type building is located on the 1112 Niagara Street parcel.

1965 – 2019: Due to the level of detail provided, no features are depicted on the Site or the adjoining properties other than roadways and surface water bodies.

It should be noted that topographic maps do not always accurately depict structures and development as of the date of the map.

Copies of reviewed historical topographic maps are presented in Appendix H.

3.3 Government Records Review

GHD submitted FOIA requests for the Site addresses and historical Site addresses to the following regulatory agencies on November 13 and 14, 2024:

- The New York State Department of Environmental Conservation (NYSDEC)
- The New York State Department of Health (NYSDOH)
- The Erie County Department of Health (ECDOH)
- The Erie County Department of Public Works (ECDPW)
- The Erie County Department of Environment & Planning – Compliance
- The Erie County Department of Environment & Planning – Planning
- The Erie County Department of Real Property Tax
- The Erie County Division of Sewerage Management (ECDSM)
- The City of Buffalo City Clerk
- The City of Buffalo Department of Assessment and Taxation
- The City of Buffalo Department of Permits & Inspections
- The City of Buffalo Office of Strategic Planning
- The City of Buffalo Fire Department

Environmental records associated with utilities (e.g., septic systems, wells), hazardous and solid waste, water, air, remediation, emergency responses, spills/releases, USTs, and ASTs were requested. It should be noted that summarized information received from the agencies is not intended to be all-inclusive of the complete files obtained from the agencies, but only to briefly summarize pertinent details.

According to City of Buffalo Office of Strategic Planning personnel, no underground/aboveground storage tank records are on file in the Fire Department records and any information pertaining to sewers/stormwater systems will need to be requested from the Buffalo Sewer Authority. The following files were provided:

- NYSDEC Environmental Remediation database record dated November 15, 2024 indicating that the adjoining property south of the Site addressed as 1100 Niagara Street is in the Brownfield Cleanup Program as the Curtiss Malt House Project, Site No. C915382, with a classification of “active.”
- NYSDEC Environmental Remediation database record dated November 15, 2024 indicating that the adjoining property north of the Site addressed as 1130 Niagara Street is in the Brownfield Cleanup Program as the 1130 Niagara Street Site, Site No. C915284, with a classification of “active.”
- NYSDEC Environmental Remediation database record dated November 15, 2024 indicating that the adjoining property north of the Site addressed as 1130 Niagara Street is in the Brownfield Cleanup Program as the 1130 Niagara Street Site – Off-Site, Site No. C915284A, with a classification of “active.”

– NYSDEC Bulk Storage database record dated November 15, 2024 for Modern Heat Treating Inc., addressed as 1112 Niagara Street, Site No. 9-000016, indicating that one 1,400-gallon aboveground fiberglass reinforced plastic (FRP) tank in a subterranean vault was closed in-place in 1998 (Tank No. 00001) and one 1,000-gallon aboveground storage tank in contact with soil was installed in 1998 and closed in 2000 (Tank No. 2).

Erie County Department of Environment & Planning – Compliance personnel provided a file dated July 2008 with a list of industries/companies in Erie County where multiple incidents of complaints have occurred and an associated summary of complaint response activities. The Site was not listed in this file.

According to City of Buffalo City Clerk personnel, the City Clerk does not maintain the requested records and redirection of the FOIA request to the City of Buffalo Department of Permits & Inspections and Office of Strategic Planning was recommended.

According to ECDPW personnel, the ECDPW does not maintain the requested records and redirection of the FOIA request to the City of Buffalo was recommended. ECDSM personnel also indicated that the ECDSM does not maintain the requested records.

No additional agency responses have been received as of this Phase I ESA date. The documentation will be reviewed once received. Once reviewed, if it is determined that the documentation affects or attributes to RECs identified in this Phase I ESA, the documentation will be summarized and provided in a separate letter and provided to Jenesis. FOIA documentation received within 20 calendar days of receiving a written, telephone, or in-person request is considered reasonably ascertainable. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 calendar days of the request.

GHD accessed the following regulatory websites for environmental-related information related to the Site:

– The NYSDEC DECinfo Locator
– The National Pipeline Mapping System (NPMS) Public Viewer
– The U.S. EPA UST Finder website

According to the NPMS Public Viewer, no gas transmission or liquid hazardous material pipelines cross the Site.

No USTs or UST releases were identified for the Site on the U.S. EPA UST Finder website.

No information was found for the Site on the NYSDEC DECinfo Locator.

Records of FOIA requests and responses are included as Appendix I.

3.4 Recorded Environmental Cleanup Liens

The Site is not listed in the EDR Radius Map report as having any environmental liens or AULs. Mr. Jack Kane is unaware of any environmental liens or AULs associated with the Site.

3.5 Adjoining Properties

The Site is bordered by the following:

North: By vacant land and a parking lot (1144 Niagara Street and 17 Gull Street)

East: By Niagara Street and beyond by a vacant industrial/commercial building (1115 Niagara Street) and by a vacant industrial building (1106 and 1110 Niagara Street)

South: By vacant industrial buildings (1100, 1106, and 1110 Niagara Street)

West: By railroad tracks and beyond by Interstate-190 and the Black Rock Canal

No activities were observed on the adjoining properties during the Site reconnaissance, as viewed from the Site and publicly accessible areas that appeared to pose an obvious risk of migration of hazardous substances or petroleum products to the Site. No evidence of gas or oil wells, water supply wells, groundwater monitoring wells, or bulk

chemical/petroleum storage was observed on properties adjoining the Site, with the exception of groundwater monitoring wells observed on the north-adjoining 1144 Niagara Street property. No gas, oil, or water supply wells are depicted on the adjoining properties in the EDR Radius Map report. No underground pipelines are depicted on the adjoining properties in the EDR Radius Map report or on the NPMS website.

The following adjoining properties are listed in the EDR Radius Map report regarding the use or storage of hazardous substances or petroleum products:

– **1110 Niagara Street (currently vacant industrial building):** The property located at 1110 Niagara Street and identified as 1110 Niagara Street II LLC is listed on the RCRA-SQG database for generation of ignitable, corrosive, and barium waste. This property is also listed on the historical RCRA-SQG database and on the ECHO and FINDS databases relative to the RCRA activities. No violations are listed. As these listings are registrations, they are not indicative of a release. As such, adverse impact to the Site from this adjoining property relative to these listings is not expected.

– **1100 Niagara Street (current vacant industrial building):** The property located at 1100 Niagara Street is listed on the BROWNFIELDS database as the Curtiss Malt House Project and NYSDEC Site No. C915382. According to the listing, this property is comprised of the 1100, 1106, and 1110 Niagara Street parcels, which adjoin the Site to the south and east. The listing indicates that the property had been utilized industrially since 1899 and had been owned or operated by the C.G. Curtiss Malting Drum House, the Co-Operative Grange League Federation (GLF) Exchange Inc./Agway Inc., Gear Motions Inc., and Niagara View Properties Inc. According to the listing, the 1100 Niagara Street parcel was historically used for grain processing for breweries and grain storage, and the building on the 1106 and 1110 Niagara Street parcels was used for metal heat treating from 1984 until as recent as 2022 and had been used by GLF/Agway prior. The listing states, *"There is nominal contamination from metals and semi-volatile organic compounds (SVOCs) in a shallow urban soil fill layer. There is nominal chlorinated volatile organic compound (VOC) contamination in groundwater that is likely emanating from an upgradient former commercial plating site (BCP Site C915364) east of this site across Niagara Street. There have been no remedial measures completed on the site and contaminants found during recent investigations are a result of impacted fill from historic operations and initial construction practices and influences from adjacent offsite sources. Additional information for the environmental assessment will be provided upon completion of the remedial investigation."*

  According to information reviewed on the NYSDEC DECInfo Locator on November 25, 2024, this BROWNFIELDS listing has a classification of "active." A portion of this property is upgradient of the Site. Furthermore, the building on the 1106 and 1110 Niagara Street parcels (BROWNFIELD) are connected to the building on the 1112 Niagara Street parcel (Site) and were historically part of the same operations conducted by the Co-Operative GLF Exchange Inc. and Modern Heat Treating & Forging Inc. Based on the regulatory status of this listing as "active," the historical shared operations with the Site, the identification of soil and groundwater contamination at this property, and the location of a portion of this property upgradient of the Site, adverse impact to the Site from this adjoining property relative to this listing is likely.

– **1130 Niagara Street (current parking lot on 1144 Niagara Street parcel):**

  The property located at 1130 Niagara Street is listed on the following databases:

  - BROWNFIELDS database as the 1130 Niagara Street Site and NYSDEC Site No. C915284. According to the listing, this property is comprised of the 1144 Niagara Street, 17 Gull Street, and 103 West Ferry Street parcels, which adjoin the Site to the north. The listing indicates that the property had been utilized for residential and commercial/industrial operations since the late 1880s, including a medical manufacturing company, a bowling alley, an auto parts supplier and service station, a contractor yard area, a screw machine parts manufacturer, a swimming pool supply products warehouse, a typewriter manufacturer, and a foundry iron works facility. The listing states, *"Based upon investigations conducted to date, the primary contaminants of concern include chlorinated VOCs in soil and groundwater, petroleum-impacted soil and, to a limited extent, groundwater, and chlorinated VOCs in sub-slab soil vapor and indoor air in a building that was subsequently demolished after the remedial investigation."* The listing also states, *"Contaminants of concern are present in site groundwater. Trichloroethene (TCE) levels as high as 18,000 ppb were found in*

bedrock at the western edge of Parcel 1 [1144 Niagara Street]. The groundwater is flowing westward toward the Black Rock Canal." and, *"Environmental sampling indicates soil vapor intrusion is a concern for off-site buildings."* According to information reviewed on the NYSDEC DECInfo Locator on November 25, 2024, this listing has a classification of "active." Although this property appears to be cross-gradient of the Site to the north, based on the reported environmental sampling results indicating that soil vapor intrusion is a concern for off-site buildings, adverse impact to the Site from this adjoining property relative to this listing is likely.

- SHWS database as the 1130 Niagara Street Site and NYSDEC Site No. 915284. This listing is related to the BROWNFIELDS listing for the 1130 Niagara Street Site (Site No. C915284) and has a classification of "no further action at this time."
- BROWNFIELDS database as the 1130 Niagara Street Site – Off-Site and NYSDEC Site No. C915284A. The listing states, *"The area of concern subject to this work is considered off-site from BCP site C915284 and reflects the investigation and possible remediation of contamination that may have migrated from that site. The off-site area is located south and west of the intersection of Ferry and Niagara Streets and borders the western side of the BCP site."* The listing indicates that groundwater in both the overburden and the bedrock flows westward toward the Black Rock Canal. According to the listing, in-situ thermal desorption of chlorinated VOCs in the adjoining BCP site C915284 was completed in 2022 and that post-treatment data for soil indicated that the thermal desorption was effective in treating chlorinated VOCs in soil down to or below the site-specific action levels and that post-treatment groundwater monitoring data had not been submitted to date. The listing states, *"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.* According to information reviewed on the NYSDEC DECInfo Locator on November 25, 2024, this listing has a classification of "active." As this listing is related to the "active" BROWNFIELDS listing for 1130 Niagara Street Site, which is NYSDEC Site No. C915284, adverse impact to the Site from this adjoining property relative to this listing is likely.
- RCRA-LQG database, identified as Jenesis Development LLC, for generation of TCE and spent halogenated solvents waste. Jenesis Development LLC and Curtis Screw Co. Inc. are also listed on the historical RCRA-SQG and LQG databases. Several violations were listed, which have since achieved compliance. Detail was not provided regarding the nature of the violations. This property is listed on the FINDS, ECHO, E MANIFEST, and MANIFEST database relative to the RCRA activities. As these listings are registrations, they are not indicative of a release. As such, adverse impact to the Site from this adjoining property relative to these listings is not expected.
- LTANKS database, identified as Jenesis Development LLC but listed as Curtis Screw Company. Spill No. 8707193 involved discovery of a leak in a tank fill pipe in 1987 and was closed in 1988. Spill No. 9504353 involved discovery of contamination in a "clean hole test" in 1995 and was made inactive in 1995. Based on the regulatory status of these listings and the reported nature of the spills, adverse impact to the Site from this adjoining property relative to these listings is not expected.
- SPILLS database, identified as Jenesis Development LLC. Spill No. 0802399, listed as Curtis Screw Co., involved a fire at a warehouse containing pool chemicals in 2008 with reported runoff from the fire entering the storm sewer and was made inactive in 2008. Spill No. 0802424, listed as Leisure Pool Supply, involved a fire at a pool supply warehouse in 2008 with materials observed headed for the Blackrock Canal and was closed in 2008. Spill No. 0485364, listed for Curtis Screw Company, Inc., involved discovery of reported "residual contamination" in a former tank area in 2004 and was made inactive in 2006. Based on the regulatory status of these listings and the reported nature of the spills, adverse impact to the Site from this adjoining property relative to these listings is not expected.
- UST, CBS, and CBS AST databases, identified as Jenesis Development LLC but listed as Curtis Screw Co. Inc. One tank (size/material not provided) and two 10,000-gallon #2 fuel oil tanks were closed-removed in 1995. The CBS facility is listed as unregulated/closed. One 1,200-gallon 1,1,1-Trichloroethane AST was closed in 1995. As these listings are registrations, they are not indicative of a release. As such, adverse impact to the Site from this adjoining property relative to these listings is not expected.
- AST database, identified as Curtis Screw Co Inc. with a status of unregulated/closed. One 1,500-gallon waste oil/used oil tank was closed-removed in 2004. As this listing is a registration, it is not indicative of a

release. As such, adverse impact to the Site from this adjoining property relative to this listing is not expected.

- AST database, identified as Curtis Screw Co. Inc. with a status of unregulated/closed. One 1,200-gallon tank (material not provided) was converted to non-regulated use in 1995. As this listing is a registration, it is not indicative of a release. As such, adverse impact to the Site from this adjoining property relative to this listing is not expected.

The property located at 1130-1144 Niagara Street is listed on the following databases:

- SPILLS database, identified as Screw Company. Spill No. 0903551 involved a reported discovery of possible oil or free product in soil borings completed in 2009. Subsequent delineation work reportedly identified widespread oil contamination. According to the notes in the listing, this contamination was also identified proximate to the property boundary with Oliver Gear. A request was made to complete a delineation boring in this area but the area was inaccessible due to the Oliver Gear driveway and foundation wall. This spill was made inactive in 2012. According to the listing, “Petroleum was also identified in borings outside of the source area that has been removed. Because of the residual oil remaining that is inaccessible, the site is inactive.” Based on the reported identification of oil contamination proximate to the Site boundary that was not accessible for delineation due to the presence of the Oliver Gear driveway and building foundation, adverse impact to the Site from this adjoining property relative to this listing is likely.

– **17 Gull Street (current vacant land):**

The property located at 17 Gull Street, Gull Street, and Foot of Gull Street is listed on the following databases:

- SPILLS database, identified as Curtis Screw Company. Spill No. 9404175 involved a release of machine oil due to a forklift accident in 1994 and was closed in 1995. Based on the regulatory status of this listing and the reported nature of the spill, adverse impact to the Site from this adjoining property relative to this listing is not expected.
- SPILLS database, identified as Curtin Screw Inc. Spill No. 9503176 involved a release of waste oil while moving machinery in 1995 and was closed in 1995. Based on the regulatory status of this listing and the reported nature of the spill, adverse impact to the Site from this adjoining property relative to this listing is not expected.
- SPILLS database, identified as Curtis Screw Inc. Spill No. 9503204 involved a release of hydraulic fluid while moving a machine in 1995 and was closed in 1995. Based on the regulatory status of this listing and the reported nature of the spill, adverse impact to the Site from this adjoining property relative to this listing is not expected.

Based on the review of Sanborn maps, aerial photographs, city directories, and topographic maps, no other operations or conditions that would typically be expected to be indicative of known or suspected releases of hazardous substances or petroleum products were identified relative to the Site.

Mr. Jack Kane stated that he is unaware of the release or likely release of hazardous substances or petroleum products that would potentially migrate to the Site from the adjoining properties.

Based on the reasonably ascertainable information reviewed during this Phase I ESA, no adjoining properties were identified that pose an obvious risk of groundwater or soil vapor migration of hazardous substances or petroleum products to the Site that requires further evaluation, other than those discussed above.

3.6 Previous Investigations/ESAs

The following previous ESAs or environmental investigative reports were reviewed by GHD:

– Hazardous Materials and Environmental Survey Report, Oliver Gear Building, 1120 Niagara Street, Buffalo, New York, prepared by GHD for Rich Products Corporation, dated May 30, 2024.

Hazardous Materials and Environmental Survey Report, May 30, 2024

At the time of the May 2024 Hazardous Materials and Environmental Survey, the Site consisted of the Oliver Gear building addressed as 1120 Niagara Street, which consists of the 1112 and 1114 Niagara Street buildings discussed in this Phase I ESA. The purpose of the survey was to determine if certain building materials were asbestos-containing materials (ACM) and if certain painted surfaces at the Site were lead-containing. GHD identified both ACM and LBP within the Site building.

A copy of the previous Hazardous Materials and Environmental Survey provided in Appendix J.

Based on communication with the User, no other previous ESAs or additional environmental investigation reports are known to have been prepared for the Site.

4. Site Visit

On November 15, 2024, Margaret A. Popek of GHD completed a reconnaissance of the building and related property that comprise the Site. The visit included a reconnaissance of the Site and Site structure, review of relevant Site records available to GHD, visual observations of adjoining properties as viewed from the Site and surrounding roadways (to identify features, activities, uses, and conditions that may indicate recognized environmental conditions at the Site) and an interview with Mr. Jack Kane. The interview was conducted using a prepared questionnaire covering environmental and other Site-related topics. GHD employs a systematic approach to the Site reconnaissance process that includes the Environmental Professional who remains involved in planning the interviews and the Site reconnaissance. The goal of the Site reconnaissance process is to seek to obtain information indicating the likelihood of identifying RECs in connection with the Site, including exterior observations and those associated with the interior of structures, as applicable on the Site. Any significant limiting conditions encountered during the Site reconnaissance were previously identified in Section 1.

4.1 Utility Services

According to Mr. Kane, potable water is supplied to the Site by the City of Buffalo and no water supply, oil/gas, irrigation, groundwater monitoring, or dry wells are currently or were historically present on the Site. No obvious evidence of any water supply, oil/gas, irrigation, groundwater monitoring, or dry wells was observed by GHD during the Site reconnaissance. No gas, oil, or water supply wells are depicted on the Site in the EDR Radius Map report. No underground pipelines are depicted on the Site in the EDR Radius Map report or on the NPMS website.

The Site is currently connected to the City of Buffalo municipal sanitary sewer system to discharge domestic wastewater. According to Mr. Kane, no septic systems are now or were historically present on the Site, and GHD observed no obvious evidence of septic systems during the Site reconnaissance.

Electricity and natural gas for the Site are supplied via underground connections by National Grid and National Fuel, respectively.

4.2 Underground Storage Tanks

According to Mr. Kane, no USTs are currently located at the Site or are known to have previously been present at the Site. No obvious evidence of USTs (e.g., vent pipes, fill ports) was observed by GHD during the Site reconnaissance.

The Site address of 1112 Niagara Street, identified as Modern Heat Treating & Forging, is listed on the CBS and CBS UST databases as Modern Heat Treating Inc. (Facility No. 9-000016). The CBS listing has a facility status of “unregulated/closed.” According to the CBS UST listing, one 1,400-gallon methanol tank (Tank No. 00001) was closed in 1998 and is listed as “temporarily out of service.” The tank is listed as an aboveground/underground combination. It

was not reasonably ascertainable to determine if these listings pertain to the 1112 Niagara Street Site building or the 1106-1112 Niagara Street building.

According to information reviewed on the NYSDEC Bulk Storage Database on November 25, 2024, this tank has a status of “closed in place” and was located “aboveground in subterranean vault with access for inspections.”

4.3 Aboveground Storage Tanks

According to Mr. Kane, no ASTs are currently or have historically been located at the Site. GHD observed no evidence of current or former ASTs during the Site reconnaissance.

The Site address of 1112 Niagara Street, identified as Modern Heat Treating & Forging, is listed on the AST and CBS AST databases as Modern Heat Treating Inc. (Facility No. 9-000016). The AST listing has a site status of “unregulated/closed” and the CBS AST listing has a facility status of “in service.” Tank No. 00001 on the AST listing is the same Tank No. 00001 on the CBS UST listing. Refer to Section 4.2. Tank No. 2 on the AST and CBS AST listing is a 1,000-gallon methanol tank that was installed in 1998 and closed in place in 2000. The tank location is listed as “indoors, aboveground” on the CBS AST listing and “aboveground – contact with soil…tank bottom rests on soil, allowing no visual inspection” on the AST listing. It was not reasonably ascertainable to determine if these listings pertain to the 1112 Niagara Street Site building or the 1106-1112 Niagara Street building.

4.4 Raw Material and Chemical Use and Storage

The following general types of raw materials and chemicals were observed at the Site by GHD during the Site reconnaissance:

Material	Container Capacity	Storage Location
Paint	5-gallon	Office area in 1114 Niagara Street Site building
Maintenance–related chemicals including oils	Quart to 5-gallon	Office area and western portion of 1114 Niagara Street Site building

In addition, a flammables cabinet was observed within the 1114 Niagara Street building but was locked and therefore inaccessible. According to Mr. Kane, gasoline is stored within this cabinet.

No floor drains were observed in proximity to the chemical storage areas. General housekeeping appeared to be good.

No evidence of a release of chemical or petroleum products from the Site associated with the stored chemicals observed during the Site reconnaissance was observed by GHD during the Site reconnaissance. According to Mr. Kane, no chemical or petroleum spills or releases from Site operations have occurred at the Site to the best of his knowledge.

4.5 Non-Hazardous Waste

The Site generates the following types of non-hazardous wastes as listed below:

Waste Stream	On-Site Management	Off-Site Management
Scrap metal	Dumpster	Niagara Metals
General refuse	Dumpster/compactor	Modern Disposal Services

According to Mr. Kane, no non-hazardous wastes have been disposed/buried on the Site. No obvious evidence of the on-Site disposal of non-hazardous waste was observed by GHD during the Site reconnaissance or in the aerial photographs reviewed.

Crushed stone was observed along a fence line on the western boundary of the 1114 Niagara Street parcel. According to Mr. Kane, this material was purchased from a commercial source and used to build up the fence area to discourage trespassing.

4.6 Hazardous Waste/Universal Waste

The historical Site address of 1120 Niagara Street, identified as Oliver Gear Inc., is listed on the RCRA-VSQG database for generation of ignitable, lead, benzene, tetrachloroethene (PCE), and trichloroethene (TCE) waste. Oliver Gear Inc. is also listed as a historical RCRA-CESQG and RCRA-SQG. No violations were listed. As a result of the RCRA activities, the Site is also listed on the FINDS, ECHO, and MANIFEST databases. These listings pertain to historical Site operations.

The Site address of 1112 Niagara Street, identified as Modern Heat Treating & Forging, is listed on the RCRA NonGen/NLR database and on the historical RCRA-SQG and LQG databases. No violations were listed. As a result of the RCRA activities, the Site is also listed on the FINDS, ECHO, and MANIFEST databases. These listings pertain to historical Site operations.

According to Mr. Kane, the Site does not generate any hazardous or universal wastes. No evidence of the on-Site generation or management of hazardous waste or universal waste was observed by GHD during the reconnaissance of the Site.

Three 55-gallon steel drums were observed in the western portion of the 1114 Niagara Street building. One drum was labeled “waste paint” and the other drums were not labeled. Mr. Kane indicated that the drums were from the historical operations, and did not know their contents. The drums appeared moderately rusted. No floor drains were observed proximate to the drums, but the concrete floor beneath the drums appeared cracked.

4.7 Wastewater/Sewers

According to Mr. Kane, no non-sanitary wastewater is generated or discharged on Site. Sanitary wastewater from Site sinks, toilets, and janitorial wash water is discharged to the municipal sanitary sewer system.

Based on observations during the Site reconnaissance, no wastewater is generated or discharged on Site.

4.8 Stormwater

Stormwater generated at the Site consists of precipitation runoff from the Site building roof and related impervious surfaces such as the paved parking areas and flows via sheet flow to undeveloped Site surfaces. Storm drains were observed on the east exterior side of the 1114 Niagara Street building and in the driveway during the Site reconnaissance. In addition, a trench drain was observed in front of an overhead door on the northern exterior of the 1112 Niagara Street building during the site reconnaissance. No staining was observed proximate to these drains.

No evidence of outdoor storage of materials or industrial activity with the potential to significantly impact stormwater runoff quality was observed by GHD during the reconnaissance of the Site.

4.9 Air Emissions

Based on observations during the Site reconnaissance, no significant air emission sources are located on the Site.

A suspected historical exhaust was observed on the western exterior of the 1114 Niagara Street building. Mr. Kane was not aware of the nature of this feature.

4.10 Polychlorinated Biphenyls

Electricity is provided to the Site by National Grid via three pad-mounted transformers located in a locked room in the basement of the 1114 Niagara Street building. This room was not accessible during the Site reconnaissance as

National Grid maintains the lock. According to Mr. Kane, these transformers are located on concrete pads on a concrete floor and do not have spill containment. Mr. Kane was not aware of the age of the transformers or if they had ever been tested for PCB content and suspected that the transformers are original to the building. The transformers are owned by the utility and the utility would be responsible for any reporting, inspections, testing, or release response.

No other obvious evidence of potential PCB-containing equipment was observed by GHD during the Site reconnaissance.

According to Mr. Kane, the former Oliver Gear operations utilized air compressors. In addition, a structure was observed during the Site reconnaissance in the 1112 Niagara Street building that Mr. Kane indicated was a historical elevator shaft. Gear manufacturing was historically conducted at the Site, which likely utilized hydraulic fluids. In addition, heat treating operations were historically completed at the Site, which likely utilized quench oils. Based on the date of the Site building construction prior to 1979, hydraulic fluids and quench oils historically used on-site prior to that date are likely to have been manufactured with PCB content. Mr. Kane is not aware of any PCB-containing equipment at the Site.

4.11 Per or Polyfluoroalkyl Substances

Mr. Kane is unaware of any PFAS use or testing having been conducted at the Site. No occurrences in which PFAS would be applied to the Site, such as for fire suppression, were reported at the Site by EDR or the FOIA documentation received. The Site is not listed in the databases searched regarding PFAS.

No PFAS sites are mapped on or near the Site on the interactive Environmental Working Group (EWG) website.

4.12 Spills/Releases

According to Mr. Kane, no spills or releases of hazardous substances or petroleum products have occurred at the Site. The Site is not listed in the databases reviewed as reporting any spills or release incidents.

Moderate to heavy-staining was observed on portions of the concrete floors throughout the 1112 and 1114 Niagara Street buildings and in the basement of the 1114 Niagara Street building. Concrete floors in the Site building appeared to be mostly in decent condition, with only minor cracking and pitting observed. Staining was also observed proximate to suspected former machine areas, as indicated by concrete cut-outs/patches, suspected former machine supports, and suspected outlines of former machines surrounded by stained floors observed throughout both the 1112 and 1114 Niagara Street buildings. Heavy staining was also observed on the concrete floor and concrete walls in a small room in the basement of the 1114 Niagara Street building. A moderate oil-type odor was observed throughout the 1114 Niagara Street building during the Site reconnaissance.

Drain plates were observed at the entrance to the restroom and at the entrance to the western portion of the 1114 Niagara Street building. One floor drain was observed in the restroom and one floor drain was observed in the basement of the 1114 Niagara Street building. No other floor drains were observed in the 1114 Niagara Street building. Staining was observed on the concrete floor proximate to the basement floor drain. No floor drains were observed in the 1112 Niagara Street building. Mr. Kane was not aware of the discharge points of these drains.

Two areas of minor subsidence in the concrete floor were observed along the western interior wall of the 1112 Niagara Street building. The first area was filled with stone and an unknown hard whitish substance. The second area appeared to have an outline of a former machine and had a heavily stained concrete floor and debris.

5. Findings and Conclusions

5.1 Findings and Opinion

Based on this Phase I ESA, the following findings are identified:

1. **Likely Releases Related to Long-Term Industrial Operations:** The Site was utilized for industrial operations from the 1930s through the early 2000s, including gear manufacturing and heat treating and forging. These operations utilize significant quantities of petroleum products and hazardous substances and were primarily conducted prior to the promulgation of environmental regulations. The Site was listed as a former generator of hazardous waste including tetrachloroethene and trichloroethene. Moderate to heavy staining was observed on portions of the concrete floor throughout the Site building, although no significant cracks were observed in the concrete. A moderate petroleum odor was observed throughout the 1114 Niagara Street building. A small number of floor drains were observed and their discharge point is unknown. Based on the nature and amounts of petroleum products and hazardous substances used in machining and heat treating operations, typical chemical disposal and handling practices during the years of operation, the observed staining within the building, and the potential routes to the environment via floor drains and through concrete, a release of hazardous substances or petroleum products is likely. Likely releases associated with the historical Site use constitutes a REC.
2. **Likely Impacts from Northern Adjoining Property:** The property located at 1144 Niagara Street, which adjoins the Site to the north, is identified as an “active” BROWNFIELDS site in the database. Impacts include petroleum compounds and chlorinated volatile organic compounds (VOCs) in groundwater. According to the database listing, *“environmental sampling indicates soil vapor intrusion is a concern for off-site buildings.”* This property is also identified with a second “active” BROWNFIELDS listing for *“investigation and possible remediation of contamination that may have migrated from that site.”* Furthermore, this property is listed on the SPILLS database for identification of petroleum impacts, which reportedly could not be fully delineated due to the presence of the “Oliver Gear” driveway and foundation wall. Although this property appears to be cross-gradient of the Site to the north, based on reported potential vapor intrusion concerns at nearby properties and the identification of petroleum impacts at the Site boundary, adverse impact to the Site from this adjoining property is likely and constitutes a REC.
3. **Likely Impacts from Southern Adjoining Property:** The property located at 1100 Niagara Street, which adjoins the Site to the south, and the portion of the 1106-1112 Niagara Street building located on the 1106 and 1110 Niagara Street parcels, which adjoins the Site to the south and east, is identified as an “active” BROWNFIELDS site in the database. According to the listing, “nominal” contamination of metals and semi-volatile organic compounds was identified in shallow fill and “nominal” VOC impacts were identified in groundwater. The listing states that the remedial investigation has not been completed and no remedial measures have been completed. Based on the historical shared operations of this property with the Site, the identification of soil and groundwater contamination at this property, and the location of a portion of this property upgradient of the Site, adverse impact to the Site from this adjoining property is likely and constitutes a REC.
4. **Threat of Impact from Abandoned Drums:** Three 55-gallon drums were observed in the western portion of the 1114 Niagara Street building. One drum was labeled “waste paint” and the other drums were not labeled. Mr. Jack Kane was unaware of the contents and origins of these drums. Although no evidence of a release from these drums was observed, the drums appeared moderately rusted and the underlying concrete was cracked. No floor drains were observed proximate to these drums. Based on their observed condition, storage location, and contents likely consisting of hazardous substances, these drums pose a material threat of a future release to the environment and therefore constitute a REC.
5. **Potential Impacts from Historical Aboveground Storage Tanks:** The Site address of 1112 Niagara Street was identified on the CBS, CBS UST, AST, and CBS AST databases for one 1,400-gallon methanol tank that was located “aboveground in a subterranean vault with access for inspections” that was closed in-place in 1998 and one 1,000-gallon methanol tank that was located "aboveground - contact with soil - tank bottom rests on soil, allowing no visual inspection” and closed in-place in 2000. These tanks may have been located in the basement

of the 1112 Niagara Street building, which was not accessible during the Site reconnaissance. Mr. Jack Kane is unaware of any current or historical ASTs at the Site and no information was available to confirm the closure and removal of these tanks and their former locations. No reasonably ascertainable information was found to suggest that a release from these tanks had occurred. The inability to inspect the basement of the 1112 Niagara Street building to evaluate potential impacts from historical tanks or other chemicals or wastes stored in this basement constitutes a significant data gap, which prohibits the determination if a REC exists. However, it is important to note that this determination may change if additional information becomes available.

6. **Potential Impacts from Transformers:** According to Mr. Jack Kane, a locked room in the basement of the 1114 Niagara Street building contains three pad-mounted transformers owned by National Grid. Mr. Kane does not maintain the key to this room and therefore this room was not inspected during the Site reconnaissance. Information was not available to determine the age, condition, and PCB content of these transformers. No reasonably ascertainable information was found to suggest that a release from these transformers had occurred. The inability to inspect this locked room in the basement of the 1114 Niagara Street building to evaluate potential impacts from these transformers constitutes a significant data gap, which prohibits the determination if a REC exists. However, it is important to note that this determination may change if additional information becomes available.
7. **Historical Structures:** Based on a review of historical documents, residential dwellings and associated structures were located on the 1114 Niagara Street parcel prior to construction of the current building and a former structure may have been located on the 1112 Niagara Street parcel. Information regarding historical operations conducted at these structures is not reasonably ascertainable. No information was available regarding demolition of the structures, potential underground storage tanks, potential aboveground storage tanks, water supply, chemical use/storage, solid waste generation, or potential hazardous waste generation. No evidence was found to suggest a release of hazardous substances or petroleum products associated with activities conducted at the former structures has occurred, nor was any evidence found that operations conducted at the former structures have impacted soil and groundwater at the Site. It is possible that remnants may remain in the subsurface. The mere presence of historical structures on the Site does not constitute a REC.
8. **Subsidence Areas in Floor:** Two areas of minor subsidence were observed in the concrete floor along the western interior of the 1112 Niagara Street building. One area was filled with stone and an unknown hard whitish substance. The other area is a suspected former machine area and has heavily stained concrete floor and debris. No evidence was observed suggesting that these areas of subsidence were associated with a release of hazardous substances or petroleum products.

5.2 Conclusions

GHD has completed this Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 of the Former Oliver Gear and Modern Heat Treating properties and building located at 1112 and 1114 Niagara Street in Buffalo, New York. Any exceptions to, or deletions from, this practice are described in Section 1 of this report.

5.2.1 Recognized Environmental Conditions

This assessment has identified the following RECs, as described above:

– Likely Releases Related to Long-Term Industrial Site Operations
– Likely Impacts from Adjoining Properties
– Threat of Impact from Abandoned Drums

5.3 Significant Data Gaps

A significant data gap, as defined in the Standard, is an absence of information that affects the ability of the Environmental Professional to identify RECs.

The following significant data gap is identified in this Phase I ESA:

- **Site Reconnaissance**: The Key Site Manager indicated that the basement in the 1112 Niagara Street building was inaccessible and therefore the basement was not inspected during the Site reconnaissance. Bulk storage database listings for the Site address of 1112 Niagara Street indicate that one 1,400-gallon methanol tank was located “aboveground in a subterranean vault with access for inspections” and was closed in-place in 1998 and one 1,000-gallon methanol tank was located “aboveground – contact with soil – tank bottom rests on soil, allowing no visual inspection” and closed in-place in 2000. These tanks may have been located in the basement of the 1112 Niagara Street building. In addition, chemicals and wastes associated with the historical industrial operations may have been stored in this basement. A reconnaissance of the basement of the 1112 Niagara Street building would potentially impact the findings and conclusions of this Phase I ESA.
- **Site Reconnaissance:** The Key Site Manager indicated that a locked room in the basement of the 1114 Niagara Street building contains three pad-mounted transformers owned by National Grid. The Key Site Manager does not maintain the key to this room and therefore this room was not inspected during the Site reconnaissance. The age, condition, and PCB content of these transformers is not known. A reconnaissance of this reported transformer room would potentially impact the findings and conclusions of this Phase I ESA.

6. Environmental Professional Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR §312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the AAI in conformance with the standards and practices set forth in 40 CFR Part 312.

Appendix B

Assessor Qualifications

Margaret A. Popek
Geologist

Qualified: The Pennsylvania State University, University Park, M.S. Geology (physical hydrogeology focus), 2009. University of Rochester, B.S. Geology, 2007.

Connected: National Groundwater Association

Professional Summary: Maggie has 8 years of experience in environmental consulting pertaining to site investigation and remediation. She has worked at sites ranging from small vacant lots to large Brownfields, including manufacturing facilities, gasoline stations, automotive repair shops, printing facilities, dry cleaners, foundries, machine shops, metal plating facilities, underground storage tank sites, and historical fill sites. She has prepared and managed numerous remedial work plans, remedial investigation reports, final engineering reports, Brownfield applications, and site management plans, in addition to several hundred Phase I and Phase II Environmental Site Assessment reports. Maggie also has experience in fulfilling reporting requirements for remediated sites in the operation and maintenance phase. Maggie applies her technical background to logically and effectively design and perform subsurface investigations and analyze information presented by other parties to ensure that her clients' interests are protected. Maggie is detail-oriented, has an aptitude for moving projects forward towards completion in a timely manner, and strives to generate deliverables of the highest technical and professional quality for her clients.

Geologist
NYSDEC Brownfield Cleanup Program | Real Estate Developer | Buffalo, New York

Maggie co-managed and performed a Remedial Investigation and Interim Remedial Measure at a site impacted by nearly 90 years of gasoline station and automotive repair operations. Maggie performed fieldwork, reviewed analytical results, performed regulatory research, authored reports and project deliverables, and interacted with the New York State Department of Environmental Conservation (NYSDEC) and client to ensure that project milestones and NYSDEC due dates were met. The efforts led to issuance of the first Brownfield Certificate of Completion for Track 1 unrestricted site use in NYSDEC Region 9.

Geologist
NYSDEC Brownfield Cleanup Program | Real Estate Developer | Tonawanda, New York

Maggie designed, managed, and performed a Remedial Investigation at a site impacted by over 50 years of gasoline station and automotive repair operations, and subsequently designed an Interim Remedial Measure. By completing an extensive review of existing NYSDEC files for the site, the scope of the Remedial Investigation was able to be reduced, which led to a reduction in investigation costs for the client.

Geologist
NYSDEC Brownfield Cleanup Program | Real Estate Developer | Ellicottville, New York

Maggie supervised a remedial injection program at a former Inactive Hazardous Waste Site to promote in situ anaerobic reductive dechlorination of chlorinated solvents in groundwater. Following completion of the fieldwork, Maggie analyzed the short-term efficacy of the bioremediation and worked with a biochemistry technical expert to evaluate the long-term implications for continued biodegradation at the site. Maggie also wrote the final report and other project deliverables. Based on the demonstrated success of the injection program in the final report, the NYSDEC issued a Certificate of Completion for the site without requiring any further remedial action.

Geologist
NYSDEC Brownfield Cleanup Program | Property Owner | Syracuse, New York

Maggie conducted an extensive previous study review, designed the scope of work, created a budget, and wrote a Draft Remedial Investigation Work Plan for three parcels formerly utilized for dry cleaning and bulk petroleum storage. The site had previously been accepted into the Brownfield Cleanup Program, with known significant chlorinated solvent impact in soil, groundwater, and vapor, including significant off-site impacts. The property owner was able to use the work plan as a marketing tool during bankruptcy proceedings.

Geologist/Project Coordinator
NYSDEC Brownfield Cleanup Program | Industrial Client | Batavia, New York

Following transition of the site from the Voluntary Cleanup Program to the Brownfield Cleanup Program, Maggie is leading the efforts to fulfill the NYSDEC's additional Brownfield-related investigation and reporting requirements for the site that will culminate in submittal of the Remedial Investigation/Alternatives Analysis Report. Through Maggie's thorough knowledge of the NYSDEC Brownfield requirements and proactive management style, the project is moving forward at a favorable rate for both the client and regulators.

Geologist/Project Coordinator
Closed NYSDEC Remedial Sites | Multiple Clients | Western New York

Maggie manages completion of routine reporting requirements for remediated sites in the operation and maintenance phase. This includes Periodic Review Reports, Discharge Monitoring Reports, Significant Industrial User Reports, Quarterly Operations Reports, and groundwater monitoring reports.

Geologist/Project Coordinator
PFAS Support | Multiple Clients | Western New York

Maggie has experience managing and performing groundwater sampling events for per- and polyfluoroalkyl substances (PFAS) in accordance with NYSDEC requirements.

Report Support
NYSDEC Brownfield Cleanup Program | Real Estate Developers | Buffalo, New York

Maggie provided support to project managers for two Brownfield Cleanup projects by writing the final reports and site management plans. One site was a former quarry filled with construction and demolition debris, and the other site was a plaza impacted by historical dry cleaning operations and tanks. Maggie quickly synthesized the project details and was able to meet the impending regulator deadlines for project completion.

Geologist
Remedial Work Plan Development | Property Owner | Schenectady, New York

Maggie conducted an extensive previous study review, designed the scope of work, created a budget, and wrote a Draft Remedial Investigation and Remedial Work Plan for a property formerly utilized for dry cleaning and bulk petroleum storage. The site was associated with an active NYSDEC spill. Maggie worked with a biochemistry technical expert to develop a remedial work plan involving excavation of petroleum-impacted soil in the vadose zone and in situ chemical oxidation in the saturated zone, with a design for subsequent remedial performance monitoring. The property owner was able to use the work plan as a marketing tool during bankruptcy proceedings.

Technical Reviewer
Former Wood Preserving State Superfund Site | Real Estate Developer | Buffalo, New York

Maggie conducted an extensive file review of the entire NYSDEC file for a former State Superfund site that a client was interested in purchasing and redeveloping. Maggie wrote a 30-page summary of all previous investigation and remediation work conducted at the site, the current regulatory status of the site, and specific recommendations for additional investigation of the site and adjoining parcels, which had not been investigated as part of the NYSDEC remedial work. Based on the summary, the client was able to understand the technical material for use in their proceedings with the site.

Technical Reviewer
Dry Cleaner State Superfund Site | Prospective Purchaser | Central New York

Maggie performed a review and critique of technical documents associated with a dry cleaner State Superfund site for the prospective purchaser of an adjoining commercial property. Based on the review, it was recommended to the purchaser that additional investigation be completed relative to exceedances of dry cleaner solvent in groundwater proximate to the property line which had not been within the radius of influence of the remedial injections performed at the dry cleaner. The client was able to understand the technical material and risk associated with the property transaction for use in their proceedings with the site.

Technical Reviewer
Historical Unlined Landfill | Prospective Purchaser | Lackawanna, New York

Maggie performed a review and critique of technical documents associated with a historical unlined landfill for the prospective purchaser of an adjoining commercial property. Based on the review, it was determined that the landfill did not pose a significant risk of contaminant migration to the adjoining property. The client was able to understand the risk associated with landfill and move forward in their proceedings with the site.

Geologist
Phase II Environmental Site Assessments | New York, Pennsylvania, and Ohio

Maggie has conducted and directed fieldwork for Phase II Environmental Site Assessments at more than 50 sites throughout New York, Pennsylvania, and Ohio and has written over 500 Phase II reports for fieldwork conducted by others throughout New England, the Mid-Atlantic, and the Midwest. Maggie is familiar with soil and groundwater remediation standards and testing requirements in New York, Pennsylvania, Ohio, New Jersey, Maryland, Delaware, Virginia, and Ontario and is also familiar with state and federal vapor intrusion regulations and guidance.

Environmental Scientist
Phase I Environmental Site Assessments | New York State

Maggie has written over 400 Phase I Environmental Site Assessment reports and Transaction Screen reports for lenders, developers, attorneys, purchasers, and sellers. Maggie is experienced with conducting site reconnaissance visits, reconstructing site history using standard historical sources, conducting regulatory database searches, and identifying recognized environmental conditions.

Field Technician
Construction Oversight | National Grid | Boston, Massachusetts

Maggie conducted air monitoring, construction oversight, and soil stockpile management during the initial phases of dike system upgrades at a liquefied natural gas plant built on a former Manufactured Gas Plant.

Field Technician
Construction Oversight | Hanover, New Hampshire

Maggie performed construction oversight of trenching work during installation of a large-scale pump and treat system at a site impacted by 1,4-dioxane.

Relevant experience summary

Matthew is a project manager and professional engineer in the Atlanta, Georgia office. He supports and manages a wide variety of environmental remediation, investigation, decommissioning, and compliance projects throughout the US. He is a senior due diligence assessor with extensive experience performing Phase I ESAs and follow-up compliance and investigation activities for properties ranging from undeveloped land to industrial / manufacturing facilities. Environmental investigation and remediation experience includes facility decommissioning, UST investigations, regulatory reporting support, release investigations, and implementation and assessment of corrective actions. Additional project work includes environmental impact assessments, engineering feasibility studies, stormwater management, spill prevention measures, and industrial hygiene evaluations.

Environmental Site Investigation and Remediation

Former Textile Fiber Plant

Project Manager |
Major Oil Company | Spartanburg, South Carolina |
Project Value: $2.1M | Date Sep 2016 – Ongoing

Matthew is the current project manager for the groundwater remediation and surface water monitoring activities at this former textile facility in 2022. Groundwater at the facility is primarily impacted by chlorinated ethenes as a result of historical releases at the former textile plant. Hydraulic control of the plume is maintained using a groundwater extraction and treatment system (GWETS) to prevent off-Site migration of contaminants. The remedial approach at the Site consists of in-situ bioremediation through the introduction of nutrient-supplemented emulsified vegetable oil amended with a *dehalococcoides* microbial consortium to the impacted shallow aquifer. Matthew has performed injections, led field sampling activities, and led report preparation efforts for the project prior to taking on the project manager role. The GWETS has recovered over 100 lbs of PCE from groundwater and treated over 223 million gallons of water since installation. Site contaminants are present in a large dilute plume with several treatment zones installed upgradient of the GWETS. Post-injection monitoring is ongoing to evaluate the effectiveness of the remedial activities.

Former Textile Plant and Landfill

Project Manager |
Major Oil Company | Rocky Mount, North Carolina |
Project Value: $2.3M | Date Sep 2016 – Ongoing

Matthew has worked in various roles on this remediation project at a former textile factory and unpermitted landfill being addressed under the NC Registered Environmental Consultant (REC) Program and is the current project manager. Groundwater at two locations was impacted with chlorinated VOCs and various SVOCs. Matthew has assisted in the planning and implementation of oxidant and stabilization injections at the on-Site landfill and former textile plant to degrade and immobilize the groundwater impacts. Contaminants in groundwater have been reduced by between 75% and 99% in the landfill area and up to 95% in the vicinity of the plant. Injection performance monitoring is ongoing as well as evaluation of polishing injections. Extensive soil and landfilled material excavation has been performed in the landfill area, a soil zone impacted by antimony at the plant, and isolated drum disposal areas. Matthew was responsible for the preparation of the Soil Remedial Action Plan Construction Completion Report following soil removal and impact delineation activities.

IMTT Savannah North Terminal

Project Coordinator |
IMTT | Savannah, Georgia |
Project Value: $1.3M | Date Nov 2015 – Dec 2022

Matthew managed the LNAPL extraction operations and assisted in a technical support role for this site being remediated under the Voluntary Remediation Program (VRP). The site operated as a petroleum midstream facility for over 100 years and had a 13-acre plume of LNAPL in the shallow aquifer beneath the tank farm resulting from historical releases. ITRC methodologies were implemented to recover mobile LNAPL using pneumatic skimmer units to achieve de minimis transmissivity throughout the site. Dissolved phase groundwater and soil impacts were evaluated on the perimeter and below the LNAPL plume. An engineering control consisting of a 40mm-thick geotextile membrane is maintained along the river front and extends from near ground surface to 20 feet below ground. Site-wide LNAPL transmissivity, tidal influence, vapor risk, and geophysical studies were performed to establish a detailed Conceptual Site Model. Activities during the project involved routine groundwater and LNAPL monitoring, LNAPL extraction, development of restrictive covenants, and preparation of a long-term monitoring and maintenance plans in order to achieve closure through the Type 5 RRS.

Facility Closure and Post Closure Care

Fourth Street Landfill

Project Coordinator |
Municipal PRP Group | Brunswick, Georgia |
Date Sep 2016 – Ongoing

Matthew is the project coordinator for this closed MSW landfill located near the south Georgia coast. The landfill is unlined and currently in the stage of post-closure care and maintenance. The property has been partially repurposed for gravel and grassed parking areas for a community college stadium. Maintenance and monitoring activities have involved installation and monitoring of methane monitoring wells located within the landfill boundary and around the periphery of the landfill, soil and vegetative cover inspections, fence installations for property access restriction, and groundwater evaluations. Post-closure care has been reduced from monthly to semi-annual methane monitoring and groundwater quality evaluations frequency has been reduced to a 5-year schedule of a reduced list of contaminants based on negotiations with State agencies. Reporting of groundwater flow, cap evaluations, methane monitoring, and remedial activities is completed annually.

NutraSweet Facility

Field Engineer |
NutraSweet | Augusta, Georgia |
Date Sep 2016 – Feb 2017

Matthew conducted soil and groundwater sampling activities for the regulatory closure of the NutraSweet RCRA generator facility as a field engineering lead. His primary responsibilities were to assist field staff and lead contractors in groundwater monitoring well installation, field data collection and sampling, surface water evaluations, and well abandonment during Site closure activities. The closure was completed in accordance with RCRA regulations for a large quantity generator of hazardous waste prior to divestiture of Site assets by the client.

Former Anvil Facility

Field Engineer |
OSP, LLC | Statesboro, Georgia |
Project Value: $6M | Date Sep 2016 - Nov 2017

Matthew conducted building materials and waste sampling for the decommissioning and demolition of a former 500,000 square-foot WWII-era steel foundry. A site-wide groundwater and soil evaluation was also performed following building removal to facilitate property divestiture. Building materials and environmental media were impacted with PCBs, RCRA metals, and low levels of SVOCs. Project work included sampling and characterizing waste streams and waste

generation and disposal tracking during demolition. Matthew developed and implemented impact investigation plans following discovery of several unregistered USTs discovered during the demolition activities and prepared appropriate reporting documents summarizing the investigation findings.

Due Diligence

Phase I and II ESAs

Project Manager/Senior Reviewer | Various Clients | U.S.

Matthew has managed, conducted, or reviewed over 500 Phase I and Phase II ESAs and similar assessments throughout the US and is a senior peer reviewer for GHD's Phase I ESA program. His projects have provided environmental support for a variety of clients with a focus on acquisitions, divestitures, telecommunications equipment collocation, and refinancing. He is experienced in both the project manager and assessor roles for Phase I and Phase II environmental assessments, remedial cost estimation, regulatory document reviews, and proposal development and scoping. Projects have involved clients and facilities in the following industries:

- Automotive service centers
- Manufacturing and industrial facilities
- Metal forges and foundries
- Assisted living facilities
- Hospitals and medical office buildings
- Telecommunications sites
- Multitenant retail and residential facilities
- Petroleum midstream facilities
- Mines and processing plants
- Industrial landfills

In addition to CERCLA liability evaluations through the Phase I ESA process, Matthew also routinely performs environmental compliance due diligence for property transactions of operating facilities in the above sectors.

Mining Portfolio Preacquisition Due Diligence

Project Lead | Confidential Client | Confidential Location | Project value: $85,000 | Date May 2021 – Aug 2021

Matthew was the lead assessor and project coordinator for this due diligence portfolio. The project involved the prospective purchase of four large clay products processing plants, four associated mills, two retired mills, 33 mining properties, one active landfill, and two inactive landfills. The evaluation included Phase I ESA due diligence for each property under ASTM E1527-13 for the mills, landfills, and processing plants and ASTM E2247-16 for the mining properties. The mills and plants were also evaluated for environmental compliance and asbestos-containing materials. Additional evaluation was performed to determine practicability and estimated cost of implementing a proposed process water treatment for selenium through a designed wetland and dust capture optimization to address repeated air permit NOVs for dusting.

Environmental Compliance

Industrial Facility Environmental Compliance

Project Manager and Technical Resource | Various Clients | U.S.

Matthew has prepared numerous SWPPP and SPCC Plan reports and updates for adhesive manufacturers, heavy equipment manufacturing, commercial kitchens, distribution centers, and a variety of other industrial properties. He has experience in updating outdated existing plans to comply with updated facility layouts, material usage changes, and regulatory and/or permit updates. He has also consulted clients on air and water discharge compliance matters, Tier II reporting, waste management matters, and evaluating and optimizing site-specific BMPs to achieve or maintain environmental compliance goals and requirements.

Stormwater System Redesign and SPCC Compliance

Project Coordinator and Key Client Coordinator | Confidential Client | Southeast U.S. | Project value: $1.5M | Date Feb 2019 – May 2022

Matthew was a key project team member throughout the life cycle of this cross-functional civil and environmental engineering project. The complex project involved routing stormwater around an oil containment structure to ensure SPCC compliance with the proposed piping path extending through an environmentally sensitive area at a transformer repair facility. Impacts along the stormwater pathway were known, but not fully characterized or delineated. Matthew was a lead team member in assessing potential piping configurations, evaluating strategies to minimize operations and maintenance of the system, and develop the environmental contingency plans should impacted media be discovered. He was responsible for developing the written Environmental Response Plan for the construction activities, reviewed and edited civil construction drawings, and coordinated data gathering activities at the site. The project resulted in improved stormwater management, ensured SPCC secondary containment capacity compliance, and mitigated a mobilizing force for subsurface contaminant migration. Planned follow-up activities involve additional contaminant source area characterization and implementation of targeted remediation.

Industrial Hygiene

Industrial Hygiene Assessments

Project Manager |
Various Clients | Southeast U.S. |

Matthew has performed various industrial hygiene and indoor environmental quality assessments for clients throughout the southeastern US. Experience includes sampling commercial, industrial, and residential buildings for radon, asbestos, lead paint, and drinking water. He has developed and implemented worker exposure evaluations under OSHA and ACGIH guidelines for site-specific volatile chemicals, noise, dusts, and carbon monoxide. Experience includes the use of personal air sampling equipment, area-specific monitoring, emergency response air monitoring, and engineering evaluations of exposure control equipment. He has prepared reports quantifying asbestos-containing materials and lead paint per OSHA and NESHAP guidelines for demolition and renovation projects. He has conducted indoor and subslab vapor intrusion sampling and performed risk screening based on those analytical results using EPA OSWER and Johnson and Ettinger modeling methodologies.

Railyard Asbestos Inspections with Digital Delivery

Asbestos Inspector |
Major Railroad Company | Southeast U.S. |
Project value: $70,000 | Date Aug 2021 – Dec 2021

Matthew performed an evaluation of Site-wide asbestos content of building materials at two major rail yards in Atlanta, GA and Charlotte, NC. The assessments involved a review of prior asbestos inspection reports, identification of data gaps, and a comprehensive inspection of the buildings at the yards. 18 pre-1980 buildings were assessed and approximately 250 bulk asbestos samples were collected and analysed. The sample locations were collected in the field using GPS and provided in a digital format with sample results for uploading into the client's internal GIS platform and were provided in building-by-building diagrams detailing ACM and non-ACM material locations.

Environmental Impact Studies

Naval Landing Field Land Swap

Project Engineer |
United States Navy | Escambia County, Florida |
Project Value: $250,000 | Date Jan 2016 – Aug 2016

Matthew was responsible for evaluating soil and geological, air space disturbance, surface and groundwater impacts, hazardous materials, and land use implications resulting from redevelopment and relocation of a U.S. Navy helicopter training facility. The assessment was conducted in accordance with NEPA and DOD guidelines for Environmental Impact Assessments prior to the proposed 600-acre land swap involving the U.S. Navy and two Floridian counties. Matthew researched and synthesized the potential environmental and social impacts for the above-listed sectors resulting from the proposed decommissioning of the current and construction of the proposed landing fields.

2014 - 2016	Terracon Consulting Inc., Staff Environmental Engineer

Appendix C

User Questionnaire

11/19/2024 Reference No. 12656942

Phase I ESA User Questionnaire

Description of Site/Address:

1112 and 1114 Niagara Street, Buffalo, New York. SBL Nos. 99.41-1-14.112 and 99.41-1-13.

Introduction

As described in ASTM E1527-21, in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must conduct the following inquiries required by 40 CFR 312. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

1. Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state, or local law?

   No indication of any environmental liens.

2. Did a search of recorded land title records (or judicial records where appropriate) identify any activity and use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state, or local law?

   No AULs noted in closing documents.

3. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   No experience with the subject property.

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

   The company was satisified witht he sum paid for the property.

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,
   a. Do you know the past uses of the property? Metal Heat Treating
   b. Do you know of specific chemicals that are present or once were present at the property? No
   c. Do you know of spills or other chemical releases that have taken place at the property? No
   d. Do you know of any environmental cleanups that have taken place at the property? No

6. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

   No obvious indicators, however, historical use warrants investigations.

Preparer represents that, to the best of the Preparer's knowledge, the above statements and facts are true and correct; and, to the best of the Preparer's actual knowledge, no material facts have been suppressed or misstated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/30/2024 has revealed that there are 9 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 8 NY CBS UST sites within approximately 0.25 miles of the target property.

NY ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

A review of the NY ERP list, as provided by EDR, and dated 08/01/2024 has revealed that there is 1 NY ERP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/30/2024 has revealed that there are 34 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 16 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 2 E MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 10 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Acres: 1.559
HW Code: C915382
SWIS: 1502
Town: Buffalo (c)
Record Added Date: 02/16/2022
Record Updated Date: 01/19/2024
Update By: AECAPRIO
Site Description: "Site Location: The Curtiss Malt House Project site is an approximate 1.559-acre site located in the highly developed commercial and residential Niagara St. corridor in the City of Buffalo, Erie County. The site is located just northwest of the intersection of Albany and Niagara Streets and about 720 feet southwest of the corner of West Ferry and Niagara Streets. The site is also situated within the Tonawanda Street Corridor Brownfield Opportunity Area (BOA). The site is bordered by Niagara Street to the east, I-190 and an active rail line to the west, commercial and light industrial facilities to the north and the Albany St. paper street to the south. Site Features: The site is comprised of 3 adjoining parcels with existing structures. The site straddles the edge of a ridge that slopes westerly toward the Niagara River. The 1100 Niagara St. parcel contains a 2-story brick structure (formerly the Curtiss Malt House) with a 3-story brick addition to the rear facing the railroad tracks (western side of the site). A reinforced concrete grain elevator is attached to the southwest corner of the building. A portion of the area adjoining the southern side of the building is covered with remnants of building floors and foundations from a former structure. The remainder of this parcel is covered with a mix of scrub vegetation. The 1106 and 1110 Niagara St. parcels contain an interconnected masonry building that adjoins the 1100 Niagara St. building. The front area of the parcels facing Niagara St. are partially paved. Current Zoning and Land Use: The current zoning for the site is defined as N-1S Urban Core Secondary Employment Center,

CURTISS MALT HOUSE PROJECT (Continued) **S128906251**

defined as mixed-use mid-rise development clusters with large footprint structures. The buildings and property are currently vacant. Future redevelopment will be in accordance with the local zoning. The surrounding parcels are commercial to the north, commercial and residential to the south, residential to the east and railroad and highway to the west. Residential and commercial properties are immediately adjacent to the site. Past Use of the Site: The property has used as an industrial facility since 1899. The C.G. Curtiss Malting Drum House processed grain for local breweries using a series of large malting drums to process the malt. In 1925 the facility was sold to the Co-Operative Grange League Federation (GLF) Exchange, Inc. (Agway, Inc. successor) for grain storage. In 1927 part of the structure was destroyed by a fire. GLF/Agway operated the site until 1982 and sold the property to Gear Motions, Inc. In 1988, 1100 Niagara Street was purchased by Niagara View Properties, Inc. and housed an art gallery for much of the 1990s. The 1100 Niagara St. parcel was foreclosed on by the County in 1996 and subsequently changed owners several times before 2012 when it was purchase by current owner and BCP applicant. The adjoining building at 1106 and 1110 Niagara St. was previously used for metal heat treating from 1984 until as recent as 2022. Prior to 1984, the building used by GLF/Agway. Site Geology and Hydrogeology: The site is located within the Lake Erie-Niagara River major drainage basin, which is typified by little topographic relief that gently slope westwards towards the Niagara River, except in the immediate vicinity of the major drainage ways. The surficial geology of the Lake Erie Plain consists of a thin glacial till, glacio-lacustrine deposits, recent alluvium, and the soils derived from these deposits. Site soils are characterized as Urban Land (Ud). Soils within the City of Buffalo are characterized as urban land (Ud) with surface covered by asphalt, concrete, buildings, or other impervious structures, typical of an urban environment. Based on recent investigations, on-site overburden soil-fill consists of concrete, brick, cinders, ash, wood, and gravely silt to depths averaging approximately 1-6 feet below ground surface (fbgs) with one boring indicating fill to 15 feet. Underlying native materials consists of reddish-brown silty clay to depths up to 14 fbgs with some borings indicating some sand and gravel just above the bedrock interface. Bedrock was encountered at each location, ranging in depth from approximately 9 to 16 fbgs. Groundwater was encountered at the soil/bedrock interface at only one location during borings. Regional groundwater gradient is westward towards the Niagara River located approximately 600 feet west of the site. Local groundwater flow, however, may be influenced by subsurface features, such as utilities and localized fill conditions.
"

Env Problem: "The information below was submitted with the BCP application regarding the environmental condition at the site. The summary below will be revised as additional information becomes available. The operational site history mainly involved malting, and grain storage and distribution that would not result in recognized environmental concerns. Recent site uses would result in recognized environmental concerns (i.e motor vehicle repair or light industrial or commercial business use). There is nominal contamination from metals and semi volatile organic compounds (SVOCs) in a shallow urban soil fill layer. There is nominal chlorinated VOC contamination in groundwater that is likely emanating from an upgradient former commercial plating site (BCP Site C915364) east of this site across Niagara St. There

CURTISS MALT HOUSE PROJECT (Continued) **S128906251**

	have been no remedial measures completed on the site and contaminants found during recent investigations are a result of impacted fill from historic operations and initial construction practices and influences from adjacent offsite sources. Additional information for the environmental assessment will be provided upon completion of the remedial investigation."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	08/28/2014
Record Updated Date:	11/21/2023
Update By:	AECAPRIO
Site Description:	"Location: The 1130 Niagara Street site is a 2.62-acre site, located in an urban area, at 1130 Niagara Street in the City of Buffalo, Erie County. The site is south of the intersection of West Ferry and Niagara Streets. The site is bordered by an active railroad track and NYS I-190 to the west, Niagara Street to the east, and commercial properties to the north and south. Site Features: The site is comprised of three separate parcels with two parcels contiguous, and the other separated by Gull Street. Parcel 1 (1144 Niagara Street) is an L shaped lot that is currently vacant but formerly contained a 63,000 sq. ft. one story L-shaped masonry warehouse/manufacturing building that covered most of the parcel. The building was demolished in early 2016, but the concrete floor slab remains and has been partially repurposed for parking. The ground surface on the western side of the parcel abruptly drops off near the railroad tracks with an embankment. The embankment is supported by a limestone block wall at the base. Due to the sloping topography toward the Niagara River, the back side of the former building has a built-up foundation to maintain a level floor elevation from the front side facing Niagara Street. The building had a small basement area which was used to house boiler equipment. The basement area has been filled in with hard fill. Parcel 2 (17 Gull Street) is a vacant open lot contiguous with Parcel 1. It formerly contained a three-story masonry building that was destroyed by a fire in 2008. The eastern third of the lot is paved with asphalt and several loading docks for the former 1144 Niagara Street building. The balance of the parcel is vacant and is covered with a mix of soil, gravel and small pieces of hard demolition debris. The parcel slopes westerly toward the railroad tracks. Parcel 3 (103 West Ferry Street - currently named Robert Rich Way) is covered by an approximately 38,000 sq. ft. asphalt paved parking lot and a 1,500 sq. ft. one story masonry building located at the southwest corner of the parcel. This parcel is separated from the other two parcels by Gull Street and is bounded by Robert Rich Way to the north, railroad tracks to the west, and Haggert Alley to the east. The parking lot is nearly level with Niagara Street and is built up with fill resulting in embankments that drop off to north, west and south. Current Zoning and Land Use: The site is zoned M-1, light industrial. Zoning across Niagara Street to the east is commercial. Part of the site is currently being used for parking and the remainder of the site is vacant. Past Use of the Site: The three parcels that comprise this site have been used for residential and

1130 NIAGARA STREET SITE (Continued) **S128906177**

commercial/industrial operations since the late 1880s. Parcel 1: 1144 Niagara Street has been occupied by several industrial and commercial businesses since approximately 1925, including a medical equipment manufacturing company, a bowling alley, an auto parts supplier and service station, a contractor yard area, a screw machine parts manufacturer, and warehousing for a swimming pool supply products distribution company. Curtis Screw operated the facility as a manufacturing facility from 1906 to 2005. Various lubricants and solvents were used in the manufacturing of screws and small machine components during that time. The building was demolished in 2017, but the building floor slab and foundation remain. The eastern section of the floor slab was paved for parking. Parcel 2: Prior to 1906, a typewriter manufacturer occupied the west side of the 17 Gull Street parcel. Prior to 1925, the mid-section of this parcel contained residential dwellings, and until 1951, residential dwellings occupied the east side of the parcel. Curtis Screw occupied parts of this site from 1906 to 2005. In approximately 1940, Curtis Screw expanded their facilities by the addition of a building that occupied the mid-section of this parcel and was interconnected with the building on the 1140 Niagara Street parcel. A pool equipment supplier used these buildings from 2005 until 2008 when the complex was destroyed by a fire. The fire damaged building was demolished in 2008, and the ground surface was graded with imported fill. The parcel has remained vacant since the fire. Parcel 3: 103 West Ferry Street was occupied from the late 1880s. Prior to 1925, a foundry-iron works facility occupied the southern half of the parcel. Sometime before 1951, the foundry facility was demolished and a smaller factory building for annealing steel occupied the southeast section of the parcel. This building has since been demolished. Prior to 1925, a boarding house and several residential dwellings occupied the northern half of the parcel. By 1951, some of these dwellings had been demolished and the area was filled and paved for parking. Site Geology: The overburden geology in the immediate vicinity of the site is classified as urban land and is mostly covered by streets, parking lots, and buildings. The native regional overburden consists of glacial till and glacial lacustrine deposits, predominately silts and clays. The site overburden geology was found to be generally consistent with the regional overburden geology. The overburden consists of the following materials listed from the ground surface to bedrock: Ground surface covering consisting of concrete, asphalt, or soil; Fill material consisting of a mixture of sand and gravel with brick fragments, wood, and cinders. This material is typical of historic urban fill; Native clay with fine gravel and sand; and Discontinuous sand with silt was observed in a few soil boring/well locations at the bedrock interface. The overburden at the site ranges in thickness from approximately 4.5 feet thick on Parcel 2 to 18 feet thick on Parcel 3. In general, the overburden is thinnest on Parcel 2, the location of a building that was destroyed by fire in 2008. The fill material within the overburden at the site ranges in thickness from approximately 4.5 feet thick on Parcel 3 to 7.5 feet thick on Parcel 1. The bedrock at the site is encountered at depths ranging from 4.5 feet below ground surface (fbgs) on Parcel 2 to 18 fbgs on Parcel 3. The bedrock encountered during the remedial investigation (RI) is consistent with the regional bedrock, with the upper unit consisting of limestone. Hydrology: Groundwater was encountered in the overburden and in bedrock. The groundwater in both units flows generally in a westerly direction towards the Blackrock Canal/Niagara

1130 NIAGARA STREET SITE (Continued) **S128906177**

River."

Env Problem: "Based upon investigations conducted to date, the primary contaminants of concern include chlorinated volatile organic compounds (VOCs) in soil and groundwater, petroleum impacted soil and, to a limited extent, groundwater, and chlorinated VOCs in sub-slab soil vapor and indoor air in a building that was subsequently demolished after the remedial investigation (RI). Several metals and semi-volatile organic compounds (SVOCs) were detected in a fill layer present across the site. Surface and Near Surface Soil/Fill Surface (0-1 feet below ground surface (fbgs)) and near surface (1-2 fbgs) soil samples from across the site were analyzed for SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides and herbicides. Several SVOCs, mainly polycyclic aromatic hydrocarbons (PAHs), were detected above commercial use soil cleanup objectives (CUSCOs) in surface and near surface soils, including: benzo (a) pyrene at up to 7.6 parts per million (ppm)(CUSCO 1 ppm); and benzo (b) fluoranthrene at up to 20 ppm (CUSCO 5.6 ppm). The only metal detected above CUSCOs in surface and near surface soils was barium at 411 ppm (CUSCO 400 ppm) found beneath the asphalt paving on Parcel 3. There were no PCBs or pesticides and herbicides in surface and near surface soil/fill detected above CUSCOs. Subsurface Overburden Soil/Fill (greater than 2 fbgs) Fill was identified across the site varying in thickness from 2 to 8 feet, mostly on Parcel 3. Fill on Parcel 3 consists of distinct and mixed layers, lenses and pockets of sandy lean clay fill soil, foundry sand, ash, stained soil-like fill, and construction and demolition debris. Parcel 2 fill consists mostly of imported fill soil with some hard demolition debris fragments. Fill was also encountered below the floor slab of the former building on Parcel 1. Subsurface overburden soil/fill samples from across the site were analyzed for VOCs, SVOCs, metals, PCBs and pesticides and herbicides. SVOCs detected above CUSCOs in subsurface overburden soils included: benzo (a) pyrene at up to 20 ppm (CUSCO 1 ppm); benzo (b) fluoranthene at up to 23 ppm (CUSCO 5.6 ppm); and dibenzo (ah) anthracene at up to 3.5 ppm (CUSCO 0.56 ppm). Metals detected above CUSCOs in subsurface overburden soils included: arsenic at up to 38.0 ppm (CUSCO 16 ppm); barium at up to 3,230 ppm (CUSCO 400 ppm); lead at up to 3,880 ppm (CUSCO 1000 ppm); a single exceedance of cadmium at 230 ppm (CUSCO 9.3 ppm); and a single exceedance of mercury at 10.4 ppm (CUSCO 2.8 ppm). There were no PCBs or pesticides and herbicides detected in subsurface overburden soil/fill that exceeded CUSCOs. A pre-remediation design source delineation investigation was completed in which soil samples were field screened for the presence of separate phase solvent contamination in the form of dense non-aqueous phase liquid (DNAPL). Out of 177 samples collected for field screening, 16 exhibited results indicating potential for the presence of DNAPL. A total of 121 soil samples were analyzed for VOCs, which were detected above CUSCOs in 8 of those samples. Since groundwater has been impacted by VOCs, the results were compared with protection of groundwater SCOs (POGWSCOs) which have significantly lower threshold values. There were several more soil sample locations that had values exceeding POGWSCOs. Detected VOC compounds exceeding both POGWSCOs and CUSCOs include: Trichloroethene (TCE) at up to 3,400 ppm (CUSCO 200 ppm) (0.47 ppm POGWSCO); and 1,1,1-Trichloroethane (TCA) at up to 1,400 ppm (CUSCO 500 ppm) (0.68 ppm POGWSCO). Only one additional detected VOC compound exceeding POGWSCOs includes 1,1-dichloroethane (DCA) in several additional soil sampling points at up to 130 ppm (0.33 ppm

1130 NIAGARA STREET SITE (Continued) **S128906177**

POGWSCO). All exceedances for VOCs in soil occurred in the vicinity of the former degreaser. Waste and Source Materials (pre-interim remedial measure (IRM)): Trace amounts of petroleum were observed during the RI as a sheen on silt material located within micro-fractures in the clay matrix in the southeast corner of the site. These micro-fractures are discontinuous, thus limiting the potential for mobility. Free petroleum product was encountered at an initial location for a monitoring well in the former chip removal corridor. During drilling, fill was encountered throughout the entire boring and refusal was encountered at 11 fbgs, shallower than the approximate 14 to 17-foot depth to bedrock at other borings in the immediate vicinity. The 8 to 11-foot interval was saturated with what appeared to be free petroleum product. The borehole location was re-designated and abandoned, and a new monitoring well was moved approximately 20 feet west. No petroleum was observed at the new well and encountered soils consisted of a shallow layer of fill below the floor slab, underlain by native clay. The data also indicated the presence of chlorinated VOCs in groundwater hydraulically upgradient from the primary source area surrounding the former degreaser. This suggested that a secondary source may be present in the overburden beneath the former chip removal corridor area. This potential secondary source area could account for the variation in chlorinated VOC concentrations observed in the southeast portion of the site. Post-Petroleum IRM Following the IRM to remove petroleum impacted soil, a limited groundwater sampling event took place. Groundwater samples were collected from several overburden wells, a standpipe installed during the IRM and a bedrock well, and analyzed for VOCs. No exceedances of groundwater quality standards were observed in any of the overburden locations. In addition, all the observation standpipes were inspected for the presence of free phase petroleum product. Only one of the four standpipes exhibited a sheen layer of oil which was less than 0.01 feet in thickness. Groundwater - Overburden Chlorinated VOCs are the predominant groundwater contaminants at the site. The greatest concentrations of chlorinated VOCs were in the degreaser area on Parcel 1 and consisted mainly of TCE, and its degradation compounds. TCE was found in the greatest concentrations in the most widespread area. The highest TCE concentrations observed were at a monitoring well in close proximity to the former degreaser area. VOC concentrations have decreased from earlier sampling events. VOCs in overburden groundwater from the most recent sampling include: TCE at up to 67,000 parts per billion (ppb) (GWQS 5 ppb); 1,1,1 trichloroethane (TCA) at up to 20,000 ppb (GWQS 5 ppb); 1,1 dichloroethene (DCE) at up to 4,600 ppb (GWQS 5 ppb); Chloroethane at up to 15 ppb (GWQS 5 ppb); and Cis-1,2 DCE at up to 1,700 ppb (GWQS 5 ppb); Petroleum related VOCs (benzene, toluene, ethylbenzene, xylenes) were detected above groundwater quality standards (GWQS) in overburden groundwater. There were limited detections of petroleum related VOCs and acetone in the former chip storage area. SVOCs were detected at concentrations above GWQS at four of the overburden monitoring wells. The compounds showing exceedances included: 4-methylphenol at up to 10 ppb (GWQS 1 ppb) at two wells; Benzo (b) fluoranthene at up to 0.33 ppb (GWQS 0.002 ppb) at one well; and Phenol at up to 22 ppb (GWQS 1 ppb) at two wells. Dissolved metals contamination in groundwater was limited to manganese, sodium and zinc at concentrations above GWQSs. The presence of manganese and zinc is likely due to the mineral content of the soil and the sodium may be from pavement deicing. Emerging

1130 NIAGARA STREET SITE (Continued) **S128906177**

Contaminants were sampled and analyzed from four overburden groundwater wells (one upgradient perimeter wells and three downgradient perimeter wells) sampled for these compounds and included: Perfluorooctanoic acid (PFOA) at up to 13 parts per trillion (ppt) (10 ppt drinking water maximum contaminant level MCL) in one well; and Perfluorooctanesulfonic acid (PFOS) at an estimated concentration of 10 ppt (10 ppt MCL) in one other well. 1,4-dioxane was not detected above applicable water quality criteria in any of the sampled wells. Groundwater - Bedrock There are site-wide detections of VOCs in bedrock groundwater, consisting mainly of TCE, 1,1,1 TCA, and their degradation compounds. TCE was detected in all but three bedrock monitoring wells at concentrations above criteria. VOC compounds in bedrock groundwater from the most recent sampling include: TCE at up to 65,000 ppb (GWQS 5 ppb); 1,1,1 TCA at up to 42,000 ppb (GWQS 5 ppb); 1,1 dichloroethane (DCA) at up to 3,700 ppb (GWQS 5 ppb); 1,1 DCE at up to 12,000 ppb (GWQS 5 ppb); Chloroethane at up to 140 ppb (GWQS 5 ppb); Cis-1,2 DCE at up to 82,000 ppb (GWQS 5 ppb); Trans-1,2 DCE at up to 11 ppb (GWQS 5 ppb); and Vinyl chloride at up to 150 ppb (GWQS 5 ppb). Low level SVOC concentrations were detected in three of the bedrock monitoring wells. Dissolved metals contamination was limited to manganese and sodium at concentrations above respective GWQSs. Similar to the overburden wells, the presence of manganese and zinc is likely due to the mineral content of the soil and the sodium may be from pavement deicing. Groundwater Contaminant Migration Contaminants of concern (COCs) are present in site groundwater. TCE levels as high as 18,000 ppb were found in bedrock at the western edge of Parcel 1. The groundwater is flowing westward toward the Black Rock Canal. The hydraulic conductivity of site overburden and bedrock was evaluated and found to be relatively low (on the order of 10-5 cm/sec and 10-6 cm/sec, respectively). Groundwater flow and transport modeling was also completed to evaluate the potential transport of TCE, the most prevalent of the site COCs, to the Black Rock Canal and determine potential impacts to surface water quality, aquatic life, and human health. In summary, a TCE concentration of 1.3 ppb is predicted to reach the Black Rock Canal, below applicable regulatory criteria. Sub-Slab Vapor and Indoor Air Five sub-slab soil vapor samples and four indoor air samples were collected at various locations within and below the former 1130 Niagara Street structure prior to demolition. One outdoor air sample was collected for comparison. TCE was detected at five of the sub-slab samples, ranging from 240 micro-grams/cubic meter (ug/m3) to 56,000 ug/m3. TCE was detected in three indoor air samples ranging from 1.8 to 10 ug/m3. 1,1,1-TCA was found in four of the sub-slab samples ranging from 10 to 7,000 ug/m3 and in three indoor air samples ranging from 1.9 to 13 ug/m3. Following the demolition of the 1130 Niagara Street building, a supplemental sub-slab vapor sample was collected below the remaining concrete floor slab along the southern property boundary to assess potential offsite vapor migration. TCE was detected at a concentration of 7,600 ug/m3. The sub-slab vapors in this location are confined by the concrete floor slab and building footer, and are not directly relatable to potential impacts from soil vapors located off-site to the south. "

Health Problem: "Access to the site is unrestricted. However, human contact with contaminated soil or groundwater is unlikely unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not

1130 NIAGARA STREET SITE (Continued) **S128906177**

affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, environmental sampling indicates soil vapor intrusion is a concern for off-site buildings."

DEC Memo:	12/23/04:SAC telecon Paul Meosky - Hodgson Russ. Mr. Meosky reported contamination that was found around the former location of 3 tanks where there was a previous spill and clean up. The spill number was 9504353. 2 tanks were #2 fuel oil and the other tank was a cutting oil. Per Mr. Meosky, the contaminant of concern was cutting oil for Spill Number 9504353 and he believes this time it is the fuel oil. He will send in the analytical results, boring logs, and site map showing the boring locations. Mr. Meosky said for now he would be the contact person. 1/27/05 CALL INTO MR. MEOSKY REQUESTING SUBMISSION OF THE INFORMATION HE INDICATED HE WAS TO HAVE PROVIDED ON 12/23/04. REQUESTED A CALL BACK. 2/22/05 RECD THE BORING LOGS FOR TWO BORINGS AND THE ANALYSIS OF SOIL AND GROUNDWATER FROM THESE LOCATIONS. THE SOIL EXCEEDS TAGMS FOR THE SVOC BENZO COMPOUNDS AND THE GROUNDWATER EXCEEDS FOR THE SAME COMPOUNDS. THE SAMPLES WERE COLLECTED FROM A FORMER UST REMOVAL THAT THE DEC MADE INACTIVE. CALL INTO MR. MEOSKY ASKING WHAT CURTIS SCREW PLANS ON DOING. 6/27/05 LETTER REQUESTING INVESTIGATION AND REMEDIATION SENT TO CURTIS SCREW. A RESPONSE IS DUE BY 7/13/05. 7/13/05 PAUL MEOSKY CALLED AND INDICATED HE WILL REVIEW THE STATUS OF THE SITE AND GET BACK TO ME WITHIN TWO WEEKS. 10/27/05 EVAN CASEY WITH GREAT LAKES ENVIRONMENTAL NOTIFIED THIS OFFICE THAT HE COMPLETED SITE SAMPLING ON SATURDAY AND DIDN'T NOTIFY THIS OFFICE. HE SAID SAMPLES HAD BEEN SUBMITTED TO THE LABORATORY AND RESULTS ARE EXPECTED NEXT WEEK. HE SAID THE SAMPLES LOOKED CLEAN. 1/23/06 DKK REVIEWED 11/3/05 AND 11/23/06 SOIL CLOSURE REPORTS, SUPPLEMENTAL FILE INFORMATION AND SPILL NO. 9504353(1995 TANK PULL & SOIL INVESTIGATION AT THIS SITE). RESIDUAL CONTAMINATION EXISTS

JENESIS DEVELOPMENT LLC (Continued) **1000413710**

BUT REMEDIAL ACTION IS NOT REQUIRED AT THIS TIME. SPILL SITE CAN BE MADE INACTIVE - LETTER SENT.

Remarks: GZA, inc. was doing a Phase II site assessment, a based on analytical results were STARS guidance values. Area where this was found is former tank location where there was a previous spill and was made inactive.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Registry ID: 110066960346

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	03/29/2019
Record Updated Date:	06/05/2024
Update By:	AECAPRIO
Site Description:	"Location: The area of concern subject to this work is considered off-site from BCP site C915284 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. The off-site area is located south and west of the intersection of Ferry and Niagara Streets and borders the western side of the BCP site. Site Features: The off-site area consists of industrial use properties and road and railway rights-of-way adjacent to the BCP site. The ground surface on the western side of the off-site area abruptly drops off near the railroad tracks with an embankment to I-190 roadway. The topography slopes toward the Blackrock Canal/Niagara River which is further west of the site. Current Zoning and Land Use: The general site area is zoned is M-1, light industrial use, along the west side of Niagara Street and zoning along the east side of Niagara Street is commercial. Past Use of the Site: The off-site area consists of several parcels that were used for commercial and industrial uses. There is an active rail line that has been in use since the early 1900s, a portion of the I-190 expressway constructed in the 1960s, a portion of the Black Rock Canal constructed in the 1820s, and a portion of the Niagara River included in the off-site area. Site Geology and Hydrogeology: The overburden geology in the immediate vicinity of the site is classified as urban land and is mostly covered by streets, parking lots, and buildings. The native regional overburden consists of glacial till and glacial lacustrine deposits, predominately silts and clays. The overburden geology on the adjoining BCP site was found to be generally consistent with the regional overburden geology. The overburden consists of the following materials listed from the ground surface to bedrock. Ground surface covering consisting of concrete, asphalt, or topsoil Fill material consisting of a mixture of varying amounts of sand and gravel with brick fragments, wood, and cinders. This material is consistent with the types of material that would be classified as Urban Land using the soil systematic naming convention Native clay with fine gravel and sand Discontinuous sand with silt was observed in a few soil boring/well locations at the bedrock interface. The bedrock encountered during the remedial investigation of the adjoining BCP site is consistent with the regional bedrock with the upper unit consisting of limestone. Groundwater was encountered in the overburden and in bedrock. The groundwater gradient in both units flows generally in a westerly direction towards the Blackrock Canal/Niagara River."
Env Problem:	"Groundwater Contaminant Migration Contaminants of concern (COC) are present in the groundwater emanating from the adjacent BCP site. TCE levels as high as 18,000 parts per billion (ppb) were found in bedrock at the western edge of the BCP site. The groundwater flow is westward, toward the Black Rock Canal. The hydraulic conductivity of the overburden and bedrock from the adjoining BCP site was evaluated and found to be relatively low, on the order of 10-5 cm/sec and 10-6

1130 NIAGARA STREET SITE - OFF-SITE (Continued) **S128906227**

	cm/sec respectively. Groundwater flow and transport modeling was also completed to evaluate the potential transport of TCE to the Black Rock Canal and determine potential impacts to surface water quality, aquatic life, and human health. In summary, a TCE concentration of 1.3 ppb is predicted to reach the Black Rock Canal, below applicable regulatory criteria. Although COC transport due to groundwater flow is possible from the BCP site, the projected concentration at the first viable exposure point would not exceed regulatory criteria. Following the demolition of the 1130 Niagara Street building on the associated BCP site, supplemental sub-slab vapor samples were collected below the remaining concrete floor slab along the southern property boundary to assess potential offsite vapor migration. TCE was detected at a concentration of 7,600 ug/m3. The sub-slab vapors in this location are confined by the concrete floor slab and building footer and are not directly relatable to potential impacts from soil vapors located off-site to the south. In-situ thermal desorption of chlorinated VOCs in the adjoining BCP site C915284 was completed in 2022. Post treatment data for soil indicated that the thermal desorption effective in treating contaminated oil lowering the chlorinated VOCs in soil down to or below the site-specific action levels. Post treatment groundwater monitoring data has not been submitted to date."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Record Upd: 06/19/2015
Updated By: BXANDERS
Site Description: "Location: The site is located at 1130 Niagara Street situated in the northwest section in the City of Buffalo. The site is situated about 100 feet south of the Ferry Street intersection facing the west side of Niagara Street. The western side of the site borders an active railroad track, followed by the NYS Interstate 190, the Black Rock shipping canal, the southern tip of Squaw Island and finally the Niagara River and international border with Canada. The local area use consists of a mix of light industrial and commercial along Niagara Street and transitions to residential beyond the eastern side of Niagara Street. Site Features: The site consists of three separate parcels with two contiguous and the other separated by Gull Street. Parcel 1: 1144 Niagara St. parcel sits on an L shaped lot with a 63,000 sq. ft. one story high bay L shaped masonry building with an approximate 6500 sq. ft. office area facing Niagara St. and a high-bay warehouse/manufacturing area on the backside of the building. The building covers most of the parcel. The floor is generally level with Niagara St. The ground surface on western side of the parcel abruptly drops off near the railroad tracks and the embankment is supported by a limestone block wall. Due to the general sloping topography of the area toward the Niagara River, the backside of the high bay building has a built-up foundation to maintain a level floor elevation from front facing Niagara Street and back to the railroad embankment adjacent to the west side of this building. The building has a small basement area located adjacent to the back side of the office area, and was formally used to house boiler equipment to heat the building. Parcel 2: 17 Gull Street parcel is a vacant open lot that formerly contained a three story masonry building that was raised by a fire in 2008. This parcel adjoins the 1144 Niagara St. parcel. The eastern third of the lot is paved with asphalt paving to serve loading docks on the 1144 Niagara St. building. The balance of the parcel is fallow and is covered with a mix of soil, gravel and small pieces of hard demolition debris. The parcel slopes westerly toward the railroad tracks. Parcel 3: 103 West Ferry St. (currently named Robert Rich Way) parcel is occupied by an asphalt paved parking lot approximately 38,000 sq. ft. in area, and a 1,500 sq. ft. standalone one story masonry building located at the southwest corner of the parcel. This parcel is separated from the two contiguous parcels by Gull St. and is bounded by Ferry St. to the north, the railroad tracks to the west, and an alley street named Haggert Alley. The parking lot is nearly level with Niagara St. and

1130 NIAGARA STREET SITE (Continued) **S113916821**

is built up with fill resulting in embankments that drop off to Ferry St., Gull St. and the railroad tracks. Current Use/Zoning: The high bay back area of the 1144 Niagara St. building is currently used for warehousing of swimming pool supply equipment. The office area of this building is currently not in use. The masonry building at the southwest corner of the 103 West Ferry St. parcel is vacant. The site zoning is M-1, light industrial use, but is being used for commercial purposes The M-1 zone extends north and south along the west side of Niagara St. Zoning across Niagara St. to the east is commercial. Past Use of the Site: The site consists of three parcels and ownership and use has varied over the decades. The respective parcels that constitute the site have a long history of being utilized for commercial/industrial operations from the late 1880s. Parcel 1: 1144 Niagara St. has been occupied by several industrial and commercial businesses since approximately 1925 including a medical equipment manufacturing company, a bowling alley business, an auto parts supplier and service station, a contractor s yard area, a screw machine parts manufacturer (Curtis Screw from 1960 until 2005), and a swimming pool supply products distribution company (Leisure Living Pool Supply Co. owned by the Gerspach Properties applicant) from 2005 to current. The parcel currently contains a 63,000 square foot warehouse/office building for swimming pool supply products distribution (Leisure Living). This building was previously used by Curtis Screw where they used various lubricants and solvents in the manufacturing of screws and small machine components. Parcel 2: Prior to 1906, a manufacturing company and a typewriter manufacturer occupied the west side of the 17 Gull St. parcel which contained an industrial building. Curtis Screw occupied this building from 1906 to 2005 and by Leisure Living pool equipment supply until 2008 when the building was raised in a fire. Approximately 1940, Curtis Screw expanded their facilities by the addition of a building that occupied the mid-section of the parcel. Prior to 1925, the mid-section contained residential dwellings. Prior to 1951, residential dwellings occupied the east side of the parcel. The parcel remains vacant after the demolition of the buildings in 2008 after the fire in the previous buildings. Parcel 3: 103 West Ferry St. was occupied in the late 1880s by a number of structures and varied use. Prior to 1925, a foundry-iron works facility occupied the southern half of the parcel. Sometime before 1951, the foundry facility had been demolished and smaller factory building for annealing steel occupied a section of the south-east portion of the parcel. This building was demolished during the ensuing years. Prior to 1925, a boarding house and several residential dwellings occupied the northern half of the parcel. By 1951, some of these dwellings had been demolished, the area filled and paved for parking. The parcel currently contains a 2000 square foot vacant storage building located at the southwest corner of the site. Site Geology and Hydrology: The surface soils on the site is characterized as Urban Land, consisting of level to gently sloping land with 80 percent or more of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. Mapping of the surface soils in the vicinity of the site, based on the USDA soil survey, indicates the surficial geology of the area consists of various loams, with slopes typically ranging from 0-6%. The subsurface soil/fill can generally be described as sandy lean clay with varying amounts and depths of fill material (i.e., brick, concrete). "

Env Problem: "Groundwater: Analytical data at the site obtained from the 2014 site

1130 NIAGARA STREET SITE (Continued) **S113916821**

	characterization and the previous unreleased 2009 Phase 2 site investigation indicate presence of chlorinated VOC contamination in groundwater at several sampling points at the site, primarily under the building on parcel 1. Additional investigation regarding the extent of VOC groundwater contamination in parcel 1 and balance of site is required. Soil: The site contains varying amounts historic fill. Environmental data from the limited 2014 site characterization investigation and previous unreleased 2009 Phase 2 investigation revealed SVOCs in soils and fill, but below commercial use SCOs. Lead and barium were found in fill on parcel 3 above commercial uses SCOs. VOC contamination in soil was revealed, but only above several unrestricted and restricted residential SCOs. Due to levels of lead revealed in the fill in parcel 3, hazardous evaluation of lead contaminated fill at the site is required. "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo:	06/25/09 TDJ CONTACTED SPILL CALLER AND FOUND IN THE PROCESS OF CHANGE OF OWNERSHIP ENVIRONMENTAL PHASE 2 WORK HAS SHOWN POSSIBLE OIL OR FREE PRODUCT IN BORINGS. CRA IS PERFORMING WORK FOR JOHN PAPPANO / PHILLIP LYDEL (847-5404) 7/8/09 FG SPOKE TO JOHN KOLAGA WHO WILL BE REPRESENTING THE OWNER AND HE WILL PROVIDE A PROPOSAL BY 7/13/09. 7/29/09 JOHN KOLAGA INDICATED THAT HE WILL CONTACT THE CLIENT AND GET BACK TO THIS OFFICE BY THE END OF THE WEEK. 8/27/09 JOHN KOLAGA CALLED AND SAID HE REPRESENTS GERSPACH, THE CURRENT OWNER. RICH PRODUCTS IS INTERESTED IN PURCHASING THE PROPERTY AND THEY ARE REPRESENTED BY PHILLIPS LYDLE, MORGAN GRAHAM. RICH IS CONSIDERING BROWNFIELDS AND THEY WILL PROVIDE A RESPONSE ON WHICH WAY THEY WILL GO WITHIN 30 DAYS. 12/16/09 JOHN KOLAGA CALLED AND SAID HE WILL SUBMIT A WORKPLAN FOR THE SITE WORK SOMETIME DURING THE WEEK OF 1/11/10. 1/8/10 JOHN KOLAGA NOTIFIED THE DEPT THAT GZA TOOK A SAMPLE OF FREE PRODUCT FOUND AT MW1 ON 1/7/10 AND SUBMITTED IT FOR ANALYSIS. THE RESULTS ARE EXPECTED IN 1-2 WEEKS. ONCE THE RESULTS ARE OBTAINED, HE EXPECTS TO BE BACK TO THE DEPT WITH THE RESULTS AND FURTHER COMMUNICATIONS ABOUT NEXT STEPS. 1/28/10 GZA COLLECTED A PRODUCT SAMPLE ON 1/7/10 FROM MW1. FUEL OIL#2 AND MOTOR OIL WERE IDENTIFIED. APPROXIMATELY 5 FT OF PRODUCT WAS MEASURED IN MW1. JOHN KOLAGA INDICATED HE WOULD BE DISCUSSING THESE RESULTS WITH HIS CLIENT AND GET BACK TO ME SHORTLY. 2/25/10 FG SPOKE TO MICHELLE WITTMAN WITH GZA 844-7047, 570-3219 CELL. SHE SAID THAT GZA IS PUMPING OFF THE PRODUCT FROM THE WELL TODAY AND WILL PLACE IT IN DRUMS ON SITE FOR LATER DISPOSAL. THEY WANT TO DETERMINE IF THE OIL WILL COME BACK AFTER PUMPING IT OUT. THEY WILL CONTINUE THIS ON A 5

SCREW COMPANY (Continued) **S109827004**

DAY CYCLE AND WILL LET ME KNOW
THE RESULTS ON A REGULAR BASIS. A PLAN TO DETERMINE THE EXTENT OF CONTAMINATION WILL BE PRESENTED
ALONG WITH DISPOSAL RECEIPTS ONCE THE INFORMATION IS GATHERED. 6/1/10 FG SPOKE TO MICHELLE WITTMAN
WITH GZA WHO SAID THAT THE PROPERTY OWNER IS CONTINUING TO BAIL OFF THE OIL INTO A DRUM. SHE IS
AWARE THAT ADDITIONAL SUBSURFACE INVESTIGATION AS WELL DISPOSAL OF THE BAILED OIL IS NECESSARY. SHE
IS NOT THE CONSULTANT ON THIS PROJECT AT THIS TIME AND SUGGESTS THAT WE CONTACT THE PROPERTY OWNER.
FG CONTACTED JOHN KOLAGA REQUESTING AN UPDATE ON THE STATUS OF THE SITE. 7/13/10 JOHN KOLAGA
PROVIDED AN UPDATE. HE AND MICHELLE WITTMAN OF GZA ARE CURRENTLY WORKING ON A PROPOSED WORK PLAN TO
FURTHER INVESTIGATE AND DELINEATE THE EXTENT OF THE PETROLEUM CONTAMINATION IN THE VICINITY OF MW1.
HE EXPECTS TO SUBMIT THE PROPOSAL DURING THE WEEK OF 7/29/10. 8/27/10 RECEIVED AN APPROVED A SOIL
BORING PROGRAM SCHEDULED FOR 9/13/10. 11/2/10 Francine: You will have the GZA report on these
activities by Friday at the latest. John Kolaga John T. Kolaga, Esq.
Special Counsel DAMON MOREY
LLP The Avant Building - Suite 1200 200 Delaware Avenue Buffalo, New York 14202-2150 p.
716.858.3760 f. 716.856.5510 11/5/10 GZA SUBMITTED THE REPORT OF FINDINGS OF THE FURTHER
DELINEATION ON THE PROPERTY. 16 BORINGS WERE COMPLETED. OIL CONTAMINATION IS WIDESPREAD AND THE
SOURCE APPEARS TO BE NEAR MW1 AND/OR AN OPEN PIT NEAR MW1. FG SPOKE TO MR. KOLAGA WHO SAID HIS
CLIENT IS UNABLE TO CONDUCT ANY REMEDIAL EFFORT AND WOULD CONSIDER GIVING ACCESS TO THE DEPT TO
COMPLETE THE CLEANUP. 11/19/10 FG SPOKE TO PAUL MEOSKY, ATTORNEY FOR CURTIS SCREW 848-1482 WITH
HODGSON RUSS STATING THAT THE CONTAMINATION IDENTIFIED APPEARS TO HAVE COME FROM THE FORMER CURTISS
SCREW OPERATION. HE SAID HE WILL REVIEW THE STATUS AND GET BACK TO ME BY DECEMBER 20, 2010. HE DID
NOT WANT A COPY OF THE REPORT YET. 1/24/11 PAUL MEOSKY SENT A LETTER DATED 1/11/11. MR. MEOSKY
STATED THAT THEY ARE IN THE PROCESS OF COMMUNICATING WITH GERSPACH'S COUNSEL REGARDING GERSPACH'S
ASSUMPTION OF RESPONSIBILITY FOR ANY LIABILITY WHICH MAY EXIST. FG SENT A LETTER TO MR. MEOSKY ON
1/14/11 STATING: I received your letter of 1/11/11 requesting the January 2010 Letter Report from
GZA. Attached is that report for your reference. Please provide your response to the Department's
January 4, 2011 letter by January 28, 2011. Please call me at 716-851-7220 if you have any
questions. 1/27/11 PAUL MEOSKY SUBMITTED A LETTER DATED 1/27/11 WHICH STATES THAT THEY HAVE
CONTACTED GERSPACH COUNSEL REGARDING THEIR CONTRACTUAL AGREEMENT TO ACCEPT ANY ENVIRONMENTAL
LIABILITY REGARDING THE PROPERTY. THEY REQUESTED THAT GERSPACH CONTACT DEC TO RESOLVE THE

SCREW COMPANY (Continued) **S109827004**

ENVIRONMENTAL LIABILITY. THEY RECD AN INITIAL RESPONSE FROM GERSPACH'S COUNSEL. THEY WILL CONTINUE
TO CORRESPOND. THEY NEED MORE TIME TO ADDRESS THE ISSUES AND BELIEVE IT IS PREMATURE FOR CURTIS
SCREW TO UNDERTAKE A COMPLETE ASSESSMENT OF THE ENVIRONMENTAL INFORMAITON PROVIDED OR TO CONSIDER
PREPARING A REMEDIAL ACTION PLAN. THEY ARE DOING THEIR BEST TO MOVE THIS FORWARD. 3/10/11 FG, GREG
SUTTON, PAUL MEOSKY, CHUCK GUZZETTA & JEFFREY STRAVINO - REPRESENTING CURTIS SCREW- AND JOHN KOLAGA
- REPRESENTING GERSPACH MET AT THE NYSDEC OFFICES AT 270 MICHIGAN AVENUE. WE AGREED THATTHEY WOULD
PROVIDE A RESPONSE TO THE DEPARTMENT WITHIN 30 TO 45 DAYS PROVIDING A WORK PLAN TO INVESTIGATE THE
SOURCE OF CONTAMINATION. THEY WOULD WORK OUT AMONG THEMSELVES COSTS AND RESPONSIBILITY. 5/18/11 FG
SITE INSPECTION. MET JEFF STRAVINO, JOHN KOLAGA AND DAVE STEINER WITH EMPIRE GEO ON SITE. WE
INSPECTED THE SITE MICRO WELLS RECENTLY INSTALLED BY EMPIRE. THE THREE MICROWELLS INSTALLED BY
EMPIRE HAD OIL IN THEM. THE ORIGINAL WELL INSTALLED BY GZA AND TWO OF THE THREE MICROWELLS ALSO
INSTALLED BY GZA HAD OIL IN THEM. CURTIS SCREW AND GERSPACH WILL GET BACK TO THE DEPT AND DECIDE
WHAT COURSE OF ACTION THEY WILL TAKE. 8/4/11 EMPIRE GEO SUBMITTED THE 7/29/11 SUPPLEMENTAL
SUBSURFACE INVESTIGATION REPORT ON WORK COMPLETED ON 5/12/11. SOIL BORINGS E1 THROUGH E9 WERE
ADVANCED THAT DAY. ELEVATED PID READINGS AND OIL TYPE ODORS WERE OBTAINED FROM VARYING DEPTHS AT
ALL NINE SOIL PROBE LOCATIONS. EMPIRE BELIEVES THE OIL DISCOVERED IS AND UNIDENTIFIED OIL AND NOT A
FUEL OIL. MW1 HAD 4 FT OF FLOATING PRODUCT. E4 HAD 2 FT OF WATER WITH 1/4 INCH OF FLOATING BLACK
PRODUCT. E5 HAS VERY SMALL NODULES OF BLACK PRODUCT. E6 HAS 2 FT OF FLOATING BLACK PRODUCT AND NO
WATER. SP5 AND SP12 DID NOT INDICATE FLOWATING PRODUCT, BUT A GOLDEN YELLOW OILY RESIDUE WAS FOUND.
THIS OILY RESIDUE HAS AN ODOR AND APPEARANCE SIMILAR TO THAT OF THE PRODUCT THAT IS RECOVERED FROM
EXISTING WELL MW1. SP10 NO EVIDENCE OF PETROLEUM PRODUCT IS PRESENT. 9/22/11 FG SPOKE TO JOHN
KOLAGA WITH DAMON MOREY. HE SAID THAT THE PROPERTY OWNER IS INTERESTED IN REMOVING THE FLOORING TO
DETERMINE IF THERE ARE ANY SOURCES UNDER THE FLOOR. THEY PLAN ON DOING THIS WORK IN THE NEXT
SEVERAL WEEKS. MR. KOLAGA WILL NOTIFY THE DEPT OF THE DATE SO THAT WE CAN BE ON SITE. HE ALSO
MENTIONED THAT OIL SAMPLES WERE COLLECTED FROM THE AREA WHERE THE TUMBLER WAS AND THEY WERE CROSS
MATCHED WITH THE OIL IN THE WELLS AND IT WAS CONFIRMED THAT THEY WERE THE SAME. 11/8/11 FG SPOKE TO
PAUL GERSPACH, OWNER 773-7500. HE SAID THEY EXCAVATED A PIT AND ARE RECOVERING OIL ON A DAILY
BASIS. HE SAID HE WILL CONTACT ME THE NEXT TIME THEY ARE ON SITE SO THAT I CAN INSPECT. NONE OF THE
OIL COLLECTED HAS BEEN DISPOSED OF YET. 11/9/11 FG SITE INSPECTION.

SCREW COMPANY (Continued) **S109827004**

MET PAUL GERSPACH AND SMITTY
WITH LEISURE LIVING. THEY EXCAVATED THE FLOOR IN THE AREA OF WHERE THE PRODUCT WAS DISCOVERED. THE
METAL TANK THAT WAS VISIBLE AT THE FLOOR WAS REMOVED AND CONCRETE WAS UNDER IT. THIS IS WHERE THE
TUMBLER WAS ACCORDING TO SMITTY. THEY WERE ACTIVELY PUMPING OUT THE PRODUCT FROM THE MIDDLE OF THE
EXCAVATION WITH A LOW FLOW PUMP THAT OPERATES CONTINUOUSLY. THEY ESTIMATE THEY ARE GETTING ONE
QUART OF OIL PER DAY AND WILL CONTINUE UNTIL THE OIL/FREE PRODUCT IS DIMINISHED. THEY INSPECT THE
SITE EVERY OTHER DAY TO MAKE SURE THE OPERATION CONTINUES. I TOLD THEM TO CONTACT ME IF THERE ARE
ANY CHANGES AND THEY SAID THEY WOULD. THEY PLAN ON SEEING IF NOCO WILL ACCEPT THE OIL AND THEY WILL
THROW THE SMALL NUMBER OF PADS USED IN THE REGULAR WASTE STREAM. 1/25/12 FG CONTACTED PAUL GERSPACH
FOR AN UPDATE - LEFT A MESSAGE. 1/26/12 PAUL GERSPACH PROVIDED THE FOLLOWING UPDATE: Just a quick
update: We have temporarily stopped siphoning off the oil in the
wells, as the cold temperature is
creating problems with the pumps. We plan to restart as soon as we get
some consistently warmer
weather, hopefully early March. The levels continue to diminish and we
have hopes of finalizing
this soon. Paul Gerspach, President Leisure Living 574 Main St.
Tonawanda, NY 14150 1800-356-3025
Paul.Gerspach@LeisureLiving.com http://www.poolsupplies.com 3/25/12
MARTY DOSTER PROVIDED THE
FOLLOWING UPDATE: Rich Products (Morgan Graham) is interested in
acquiring this property. However
they need to know if the site requires additional remediation and what
the enforcement status is. I
could not tell from the UIS file other than the owner is operating
some type of collection system.
Morgan will likely be calling you. I think he may be thinking about
BCP here. 4/5/12 LINDA OWEN
CALLED AS SAID THAT THE PUMPING OF THE PRODUCT HAS BEGUN AGAIN. THEY WILL KEEP THE DEPARTMENT
UPDATED. MS. OWEN SAID RICH PRODUCTS AND ANOTHER PARTY ARE INTERESTED IN PURCHASING THE PROPERTY.
6/28/12 FG SITE INSPECTION MET LINDA OWEN WITH LEISURE LIVING AND RAJ CHOPRA, CONSULTANT. LEISURE
LIVING PLANS ON EXCAVATING THE CONTAMINATED MEDIA AND DISPOSING. THEY WILL SUBMIT A PLAN AND WORK
START DATE WITHIN THE NEXT FEW WEEKS. 7/27/12 FG SITE INSPECTION. MET LINDA OWEN, ANDY AND RAJ
CHOPRA ON SITE. OIL IN EXCAVATION. ADDITIONAL WORK NEEDS TO BE COMPLETED. THEY WILL NOTIFY THE
DEPARTMENT WHEN WORK WILL BEGIN. EXCAVATION SAMPLES WERE COLLECTED FROM A SHALLOW EXCAVATION
COMPLETED BY RAJ CHOPRA AND THEY SLIGHTLY EXCEEDED THE CP51 GUIDANCE LEVELS. THEY DID NOT REMOVE
THE SOURCE AND ADDITIONAL EXCAVATION WILL BE COMPLETED. 8/6/12 FG SITE INSPECTION. MET RAJ CHOPRA
AND DAVID, THE EXCAVATOR. THE SOURCE AREA WILL BE REMOVED TO THE PRODUCT LAYER. THEY WILL

SCREW COMPANY (Continued) **S109827004**

JACKHAMMER THE CONCRETE AND REMOVE THE SOIL. THE SOIL WILL BE STAGED ON SITE ON PLASTIC AND WILL BE
DISPOSED AT THE TONAWANDA LANDFILL. 8/7/12 FG SITE INSPECTION. THE COMPANY COMPLETING THE
EXCAVATION WAS ON SITE. THEY UNCOVERED WHAT APPEARED TO BE AN OIL PIT UNDER THE CONCRETE PAD THAT
HELD THE TUMBLER. IT WAS BRICK LINED AND HAD A CONCRETE BOTTOM. APPROX 6 INCHES OF OIL WAS INSIDE.
8/8/12 FG SITE INSPECTION. RAJ CHOPRA ON SITE WITH THE EXCAVATOR COMPANY. EXCAVATED TO APPROX 7 FT
DEPTH AND THE AREAS WHERE PRODUCT WAS FOUND PREVIOUSLY NOW DRIED UP AND NO OIL WAS PRESENT. THE
FARTHEST SOUTH WALL HAD SOME WOOD PRESENT AND THAT WOOD WAS LEACHING OIL. THEY COULD NOT EXCAVATE
ANY FURTHER IN THAT DIRECTION. THEY PLAN ON LEAVING A COLLECTION PIT OPEN TO SEE WHAT IS COLLECTED
AFTER PADDING IT UP. LOOKING AT THE PREVIOUS BORINGS, OIL WAS FOUND TO 12 FT BGS. I REQUESTED THAT
THEY EXCAVATE TO 12 FT IN THE AREA OF MW1 TO SEE IF THERE IS ANY RESIDUAL OIL. THEY SAID THEY WILL
HAVE IT READY TOMORROW MORNING TO INSPECT. 8/9/12 FG SITE INSPECTION. LINDA OWEN, RAJ CHOPRA,
EXCAVATOR ON SITE. TWO PITS WERE DUG TO 12 FT DEPTH. ONE WAS LOCATED ON THE NORTHWEST SECTION OF
THE EXCAVATION AND THE OTHER WAS ON THE NORTHEAST SECTION OF THE EXCAVATION. NO OIL NOTED.
EXCAVATION SAMPLES WILL BE COLLECTED AND A CLOSURE REPORT PROVIDED. 8/22/12 RAJ CHOPRA PROVIDED A
CLOSURE REPORT DATED 8/21/12 THAT INCLUDED SAMPLING RESULTS AND DISPOSAL RECEIPTS. FG REQUESTED
THAT A MAP BE PROVIDED TO DOCUMENT THE EXCAVATION AND THE SAMPLING LOCATIONS. MAP IS NEEDED BEFORE
SITE REVIEW CAN BE COMPLETED. 8/31/12 RAJ CHOPRA PROVIDED THE SAMPLING MAP. BORING SB12B PREVIOUSLY
COMPLETED ON THE SOUTH SIDE OF THE EXCAVATION SHOWED EVIDENCE OF OIL TO BE PRESENT. DUE TO THIS, FG
REQUESTED THAT ADDITIONAL SUBSURFACE BORING BE COMPLETED IN THE AREA TO DETERMINE THE EXTENT OF
CONTAMINAITON. 9/10/12 FG SPOKE TO LINDA OWEN WITH LEISURE LIVING. SHE SAID THE ADJACENT PROPERTY
ON THE OPPOSITE SIDE OF SB12B IS A DRIVEWAY OWNED BY OLIVER GEAR. THE OLIVER GEAR FOUNDATION IS
ALONG THE DRIVEWAY AS WELL. THERE IS NOT SUFFICIENT AREA TO COLLECT A SAMPLE. THE SOURCE AREA OF
THE OIL APPEARS TO HAVE BEEN REMOVED. 132 TONS OF CONTAMINATED SOIL WAS EXCAVATED AND DISPOSED AT
THE TONAWANDA LANDFILL. MOST SAMPLES COLLECTED WERE BELOW GUIDANCE LEVELS. THE 7/18/12 SAMPLES
EXCEED SVOC AT SOUTH AND EAST EXCAVATION SAMPLES. THE PHYSICAL PRESENCE OF OIL WAS PRESENT AT THE
SOUTHWEST WALL. PETROLEUM WAS ALSO IDENTIFIED IN BORINGS OUTSIDE OF THE SOURCE AREA THAT HAS BEEN
REMOVED. BECAUSE OF THE RESIDUAL OIL REMAINING THAT IS INACCESSIBLE, THE SITE IS INACTIVE. NO
FURTHER WORK IS BEING REQUIRED. 8/27/13 UPDATE: Ben, in having
recently received your email on our
other matter, which corrected the email address I was using, I went

SCREW COMPANY (Continued) **S109827004**

back to my emails to you
concerning the above matter(which I did not copy anyone else on). Thus, it is not clear to me that
you ever received the report that I referenced in our initial conversation, which presents data,
and which you requested. The time frame for notice of intent to sue the action has run, but we
wanted to check the status with the DEC before doing so. I look forward to hearing from you. I am
copying Marty Doster on this email, as I just spoke with him as to whether the Region had a
referral for an investigation at the subject property, and he indicated he did not have the
background data. Ben, can I bother you for a quick reply, so I know you received this? I did delete
the other bad address from my system, but you never know. Regards, Morgan From: Morgan G. Graham

Name:	1095 NIAGARA STREET SITE
Address:	1095 NIAGARA STREET
City,State,Zip:	BUFFALO, NY 14213
Program:	BCP
Site Code:	606421
Acres:	0.940
HW Code:	C915364
SWIS:	1502
Town:	Buffalo (c)
Record Added Date:	06/10/2020
Record Updated Date:	11/22/2023
Update By:	AECAPRIO
Site Description:	"Location: The 1095 Niagara Street site is an approximately 0.94-acre site, located in an urban area, on the northeast corner of Niagara and Albany Streets in the City of Buffalo, Erie County. The site is bordered by commercial operations to the north, Albany Street to the south with commercial and residential use beyond, residential properties to the east, and Niagara Street to the west with rail lines and the NYS I-190 beyond. Site Features: The site includes a surface parking lot with nominal green spaces. Security fencing is installed along the property boundary. Zoning and Land Use: The current zoning for the site is N-1S, which is defined as Urban Core Secondary Employment Center: mixed-use mid-rise development clusters defined by large footprint structures. Past Use of the Site: Based on historic records and previous investigations, the site was owned by the Keystone Chromium Corporation from about 1936 until 2002 and was used as a chromium plating operation during that time. Previous site uses include a metal alloy foundry as early as 1905 and was residential use prior to that time. The site was previously developed with several interconnected masonry style buildings. The buildings were severely damaged by a fire in 2005 and were subsequently demolished in 2008 by the City of Buffalo. A subsequent property owner imported some fill on the site to level the surface and the current owner upgraded the surface with gravel for overflow parking and a landscape berm in 2017. Site Geology: The overburden geology in the immediate vicinity of the site is classified as urban land and is mostly covered by streets, parking lots, and buildings. The native regional overburden consists of glacial till and glacial lacustrine deposits, predominately silts and clays. The site overburden geology was found to be generally consistent with the regional overburden geology. Based on previous investigations, on-site overburden, the overburden consists of the following materials listed from the ground surface to bedrock: Ground surface covering consisting of gravel, asphalt, or soil; soil-fill consists of concrete, brick, cinders, ash, wood and gravelly silt to depths of approximately 4 feet below ground surface (fbgs). This material is typical of historic urban fill; Underlying native materials consisting of reddish-brown silty clay to depths up to 14 fbgs; and Bedrock was encountered at each location, ranging in depths from approximately 9 to 14 fbgs. Site Hydrogeology: Groundwater was encountered at the soil/bedrock

KEYSTONE CORP (Continued) **1000389295**

	interface during previous investigations. Regional groundwater is presumed to flow west towards the Niagara River, which is located approximately 600 feet west of the site. However, local groundwater flow may be influenced by subsurface features, such as excavations, utilities, and localized fill-conditions."
Env Problem:	"The historic use of the site as a metal plating operation and foundry has impacted the site with volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), and metals. A Remedial Investigation of the site is underway, and a Remedial Investigation Report is expected in early 2024."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110046278880

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	01/02/08 JFO ON SITE MET WITH ECO LOHR. 1 DRUM IS ABOUT 1/4 FULL AND IS FROZEN. THE OTHER IS WASTE OIL WITH DIRT OR SAND, ALSO 1/4 FULL. ECO LOHR SPOKE WITH NEIGHBOR RUSS SMIRAGLIA (80 ALBANY ST. 883-0034). HE SAID HE HEARD A VEHICLE BEHIND HIS HOUSE, WHERE THE DRUMS WERE LEFT, EARLY NEW YEARS MORNING. THE PROPERTY IS OWNED ALKEY CASTRICONE 681-3305 5662 BROADWAY, LANCASTER. CALL TO MR CASTRICONE. LEFT A MESSAGE ON HIS V-MAIL. 01/04/08 JFO CALL FROM MR CASTRICONE. HE SAID HE GAVE PERMISSION TO MARCOS RESTAURANT ACROSS THE STREET TO STAGE THEIR SPENT COOKING GREASE ON THE PROPERTY. I WILL CHECK WITH MARCOS TO SEE IF THEY ARE THEIRS. 01/07/08 JFO MET WITH THE OWNER OF MARCOS. THOSE DRUMS ARE NOT HIS. HIS 2 DRUMS ARE ON THE SIDEWALK MARKED BIO-FUEL. JFO HIRED OP-TECH TO SAMPLE, OVERPACK AND DISPOSE OF THE DRUMS. 01/08/08 JFO MET WITH GARY HOUSE AND SEAN HALLEY WITH OP-TECH. THEY SAMPLED AND OVERPACKED THE 2 DRUMS AND WILL STAGE AT THE BSA UNTIL APPROVAL FOR DISPOSAL. 01/23/08 JFO REC'D A COPY OF THE SAMPLE RESULTS. CONTENTS ARE NON-HAZARDOUS. 02/07/08 JFO REC'D PAYMENT PACKAGE FROM THE LAB FOR $161.25. SUBMITTED TO FG. 02/13/08 JFO REC'D PAY PACK FROM OP-TECH FOR WORK DONE JAN 8, 2008 FOR $497.49. SUBMITTED TO FG. 03/31/08 JFO REC'D PAY PACK FROM OP-TECH FOR PREPARING SHIPPING PAPERS AND LABELS FOR DISPOSAL. ($41.15). SUBMITTED TO FG. 06/06/08 JFO REC'D THE PAY PACK FROM OP-TECH FOR $125.86 FOR DISPOSAL. ALSO ATTACHED IS THE DISPOSAL RECEIPT. SUBMITTED TO FG. 06/17/08 JFO CALL TO GARY HOUSE WITH OP-TECH. ALL PAY PACKS WERE SUBMITTED AND PAID. NO FURTHER ACTION REQUIRED. CLOSED
Remarks:	TWO DRUMS WERE ABANDONED AT 1095 NIAGARA STREET, AT THE CORNER W/ALBANY STREET. ONE DRUM WAS LABELED AS ANTIFREEZE AND THE OTHER APEARS TO BE LEAKING A GASOLINE/OILY SUBSTANCE.

DEC Memo:	5/4/05 FG SITE INSPECTION. MET BUFFALO FIRE DEPT ON SCENE. ANHYDROUS AMMONIA HAD BEEN RELEASED FROM THE COILS ON THE FREEZER TO THE BUILDING. THE WORK AREA HAD BEEN EVACUATED AND THE FIRE DEPT CLOSED OFF NIAGARA ST IN FRONT OF RICH. THEY DON'T KNOW HOW MUCH AMMONIA HAS BEEN RELEASED. THEY WILL DETERMINE THAT LATER. THE FIRE DEPT INDICATED THAT MOLLENBERG BETZ HAS REPAIRED THE LEAK. THE FIRE DEPT ALONG WITH MOLLENBERG BETZ WILL RELEASE THE AMMONIA FROM THE BLDG BY OPENING THE DOOR AND DRAWING OUT THE AMMONIA. BOTH THE FIRE DEPT AND MB WILL MONITOR AT THE DOOR. THEY DO NOT PLAN TO DISCHARGE MORE THAN 50PPM. 5/6/05 FG SPOKE TO TOM FITZPATRICK WITH THE BUFFALO FIRE DEPT. HE SAID WHILE THEY WERE MONITORING THE RELEASE, LEVELS OF AMMONIA WENT UP TO 500 PPM. YESTERDAY LEVELS WERE BELOW 50PPM AND THE FIRE DEPT LEFT THE SCENE. HE SAID NIAGARA ST WAS OPENED BACK UP BEFORE 9PM THE NIGHT OF THE INCIDENT AND THEY RECD NO COMPLAINTS WHILE THE DISCHARGE WAS OCCURRING. FG SPOKE TO DARRYL BURGESS WITH RICH PRODUCTS SAID THAT THE AMOUNT OF AMMONIA RELEASED WAS 55 POUNDS. THE FREEZER IS BACK IN OPERATION AND THEY ARE BACK TO WORK. THEY ARE DESTROYING 40 TRUCKLOADS OF PRODUCT DUE TO POTENTIAL AMMONIA CONTAMINATION. SPILL SITE IS CLOSED WITH NO FURTHER WORK REQUIRED.
Remarks:	BFD hazmat is on scene, contained inside of a freezer.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was RJJ 08/29/2000: RJJ SITE INVESTIGATION AT 1330...MEET WITH DAVID MEGASON, PLANT MANAGER, AND A

ISLAND OASIS MFG LLC (Continued) **1000546172**

GROUP OF WORKERS FROM THE
BUFFALO SEWER AUTHORITY...DAVE TOOK US UP TO ON THE ROOF OF RICH PRODUCTS, WHERE ABOUT 50-70 GAL.
OF PCB TRANSFORMER OIL SLOWLY LEAKED INTO THEIR SECONDARY CONTANIMENT AREA...THEY FIRST NOTICED
THIS ON 8/26/2000, THEY HIRED DRAIN DOCTOR TO CONTAIN THE SPILL, THEY PUT SPEEDI-DRY ALL OVER THE
AREA...THEY ALSO WILL BE HIRING AN ENVIRONMENTAL FIRM TO COMPLETE THE CLEAN UP AND DISPOSAL OF THE
243 PPM PCB OIL, SINCE IT IS OVER 50 PPM, IT IS HAZARDOUS...SINCE IT DIDN'T RAIN, IT DOESN'T APPEAR
THAT ANY OIL RAN DOWN THE ROOF DRAIN, HOWEVER THEY WILL PUT AN ABSORBANT AROUND THE DRAIN,TO MAKE
SURE THAT NO PRODUCT DOES GO DOWN THE DRAIN...THE TRANSFORMER IS OUT-OF-SERVICE AND THEY HAVE
ALREADY CONNECTED A NEW ONE TO RUN THEIR COOLING SYSTEM...THEY COVERED THE LEAKING ONE WITH
PLASTIC, SO THAT IF IT RAINS, NO OIL WILL BE ABLE TO WASH AWAY...AFTER THEY CLEAN UP THE ROOF AND
DRAIN, THEY WILL TAKE SWAB TESTS TO DETERMINE IF ANY PCB'S ARE STILL PRESENT, IF THEY ARE, THEN
MORE CLEAN UP WILL HAVE TO BE DONE...DAVE WILL SEND ME ALL THE TEST RESULTS AND THE DISPOSAL
RECEIPTS...THE BUFFALO SEWER AUTHORITY WAS SATISFIED WITH THE ACTIONS TAKEN, THEY DO NOT SEE ANY
PROBLEMS WITH THE SEWER LINES...I WILL DRAFT AND SEND A 'RESPONSIBLE PARTY NOTIFICATION' LETTER.
08/30/2000: DAVE MEGASON E-MAILED RJJ STATING ME THAT THEY WILL BE USING THE DRAIN DOCTOR FOR THE
GENERAL CLEANUP, AND THEN THE CONTAMINATES WILL BE HANDED OFF TO CHEMICAL WASTE MANAGEMENT FOR
DISPOSAL...HE ALSO CALLED EPA AND THE EPA REPORT # IS 540365.
09/07/2000: RJJ SITE INVESTIGATION AT
1300...MEET WITH DAVE MEGASON ON THE ROOF...HE GAVE ME THE PCB-IN-WIPES ANALYSIS THAT CHOPRA-LEE
DID...OF THE 25 PCB-IN-WIPES TESTED, THE HIGHEST RESULTS WERE 2.36 PPB...THIS WAS BEFORE THEY
CLEANED UP THE AREA, THEY WILL RETEST AFTER CLEAN UP...ALSO, THE EAST SIDE DRAIN CAME BACK
ND...DAVE ALSO SAID THAT THEY WILL GET A LARGE CRANE TO REMOVE THE CLEANED AND EMPTY TRANSFORMER IN
NOVEMBER...I TOLD HIM THAT THIS WOULD BE ACCEPTABLE...THEY PLAN TO HAVE THE TRANSFORMER
INCINERATED...DAVE WILL KEEP ME INFORMED OF ANY OTHER ACTIONS.
11/02/2000: RJJ RECEIVED THE
ANALYTICAL RESULTS FROM THE TRANSFORMER AREA TAKEN 9/15 AND 10/25...THE PCB LEVELS WERE ALL BELOW
OUR ACCEPTABLE LIMITS...THE WILL REMOVE THE TRANSFORMERS AROUND THANKSGIVING,AND SEND ME ALL
CERTIFICATES OF DESTRUCTION. 12/08/2000: RJJ TELECON DAVE MEGASON, HE SAID THAT DUE TO THE STORM,
THEY COULDN'T REMOVE THE TRANSFORMERS, BUT THEY WILL AS SOON AS THE SNOW MELTS IN THEIR PARKING
LOT...HE WILL CALL ME WHEN THEY DO THIS. 04/24/2001: RJJ RECEIVED THE DISPOSAL RECEIPTS FOR THE
TRANSFORMERS WHICH WERE TAKEN TO WASTE MANAGEMENT,INC...NO FURTHER ACTION NEEDED...SPILL CLOSED OUT.

ISLAND OASIS MFG LLC (Continued) **1000546172**

	Not reported
Remarks:	CALLER SAID THAT THEY HAD A SLOW PCB TRANSFORMER LEAK,ON THEIR ROOF,AND SOME OF THE OIL MIGHT HAVE RAN DOWN THE DRAIN INTO THE STREET SEWER...SPILL HAS BEEN CONTAINED AND BUFFALO SEWER HAS BEEN NOTIFIED.

Date Record Added:	04/14/2022
Date Rec Updated:	02/20/2024
Updated By:	AECAPRIO
Site Description:	"Location: The 1155 Niagara Street Site is an approximately 3.64-acre site, located in a highly developed urban area, at 1155 Niagara Street in the City of Buffalo, Erie County. The site is bordered by West Ferry Street to the north, residential, commercial, and industrial properties to the south, Niagara Street to the West, and West Avenue to the east. Site Features: The site has been redeveloped with a media production studio building and associated parking. Zoning and Land Use: The site is zoned N-1S, mixed-use employment center, and is currently occupied by a media production studio. Past Use of the Site: The site was developed with numerous commercial and industrial properties from at least 1899 until 1981. Specific operations included a vehicle garage/storage, a contractor yard, and

1155 NIAGARA STREET SITE (Continued) **S123663584**

a blacksmith from 1925 to at about 1951. Uses from 1951 until about 1981 included a factory, pipe shop, garage, storage facility, and a dairy food processing operation. Non-dairy food processing occurred on the site from 1981 until 2018. Several storage tanks were removed from the site at various times, including two former gasoline underground storage tanks (USTs), one former No. 2 fuel oil UST, one former refrigerant UST, and five former chemical aboveground storage tanks (ASTs). Site Geology and Hydrogeology: The site is located within the Erie-Ontario Lowlands, which is typified by little topographic relief, and gently slopes westward towards Lake Erie. According to the United States Department of Agriculture (USDA) Web soil survey, the majority of the site soils are characterized as Urban Land and Urban Land-Lima Complex (UrA). Previous investigations have identified fill material on-site ranging from 1 to 9 feet below ground surface (fbgs), underlain by native clays ranging in depth from 3 to 12.5 fbgs. Limestone bedrock was encountered at depths ranging from 8.5 to 12.5 fbgs during previous investigations. Regional and local groundwater gradient trends west toward the Niagara River, located approximately 300 feet west of the site boundary. Local groundwater flow however may be influenced by subsurface features such as excavations, utilities, and localized fill conditions. Groundwater was encountered between 5 and 6 fbgs during previous investigations. "

Env Problem:	"Remediation of the site is complete. Prior to remediation, the primary contaminants of concern were degraded petroleum products in soil, and polycyclic aromatic hydrocarbons (PAHs), metals, and trace chloro-fluoro refrigerant compounds in groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site."

Site Description:	"Location: The 1155 Niagara Street Site is an approximately 3.64-acre site, located in a highly developed urban area, at 1155 Niagara Street in the City of Buffalo, Erie County. The site is bordered by West Ferry Street to the north, residential, commercial, and industrial properties to the south, Niagara Street to the West, and West Avenue to the east. Site Features: The site has been redeveloped with a media production studio building and associated parking. Zoning and Land Use: The site is zoned N-1S, mixed-use employment center, and is currently occupied by a media production studio. Past Use of the Site: The site was developed with numerous commercial and industrial properties from at least 1899 until 1981. Specific operations included a vehicle garage/storage, a contractor yard, and a blacksmith from 1925 to at about 1951. Uses from 1951 until about 1981 included a factory, pipe shop, garage, storage facility, and a dairy food processing operation. Non-dairy food processing occurred on the site from 1981 until 2018. Several storage tanks were removed from the site at various times, including two former gasoline underground storage tanks (USTs), one former No. 2 fuel oil UST, one former refrigerant UST, and five former chemical aboveground storage tanks (ASTs). Site Geology and Hydrogeology: The site is located within the Erie-Ontario Lowlands, which is typified by little topographic relief, and gently slopes westward towards Lake Erie. According to the United States Department of Agriculture (USDA) Web soil survey, the majority of the site soils are characterized as Urban Land and Urban Land-Lima Complex (UrA). Previous investigations

1155 NIAGARA STREET SITE (Continued) **S123663584**

	have identified fill material on-site ranging from 1 to 9 feet below ground surface (fbgs), underlain by native clays ranging in depth from 3 to 12.5 fbgs. Limestone bedrock was encountered at depths ranging from 8.5 to 12.5 fbgs during previous investigations. Regional and local groundwater gradient trends west toward the Niagara River, located approximately 300 feet west of the site boundary. Local groundwater flow however may be influenced by subsurface features such as excavations, utilities, and localized fill conditions. Groundwater was encountered between 5 and 6 fbgs during previous investigations. "
Env Problem:	"Remediation of the site is complete. Prior to remediation, the primary contaminants of concern were degraded petroleum products in soil, and polycyclic aromatic hydrocarbons (PAHs), metals, and trace chloro-fluoro refrigerant compounds in groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site."

Site Code: 614458
Site Description: "Location: The 1155 Niagara Street Site is an approximately 3.64-acre site, located in a highly developed urban area, at 1155 Niagara Street in the City of Buffalo, Erie County. The site is bordered by West Ferry Street to the north, residential, commercial, and industrial properties to the south, Niagara Street to the West, and West Avenue to the east. Site Features: The site has been redeveloped with a media production studio building and associated parking. Zoning and Land Use: The site is zoned N-1S, mixed-use employment center, and is currently occupied by a media production studio. Past Use of the Site: The site was developed with numerous commercial and industrial properties from at least 1899 until 1981. Specific

1155 NIAGARA STREET SITE (Continued) **S123663584**

operations included a vehicle garage/storage, a contractor yard, and a blacksmith from 1925 to at about 1951. Uses from 1951 until about 1981 included a factory, pipe shop, garage, storage facility, and a dairy food processing operation. Non-dairy food processing occurred on the site from 1981 until 2018. Several storage tanks were removed from the site at various times, including two former gasoline underground storage tanks (USTs), one former No. 2 fuel oil UST, one former refrigerant UST, and five former chemical aboveground storage tanks (ASTs). Site Geology and Hydrogeology: The site is located within the Erie-Ontario Lowlands, which is typified by little topographic relief, and gently slopes westward towards Lake Erie. According to the United States Department of Agriculture (USDA) Web soil survey, the majority of the site soils are characterized as Urban Land and Urban Land-Lima Complex (UrA). Previous investigations have identified fill material on-site ranging from 1 to 9 feet below ground surface (fbgs), underlain by native clays ranging in depth from 3 to 12.5 fbgs. Limestone bedrock was encountered at depths ranging from 8.5 to 12.5 fbgs during previous investigations. Regional and local groundwater gradient trends west toward the Niagara River, located approximately 300 feet west of the site boundary. Local groundwater flow however may be influenced by subsurface features such as excavations, utilities, and localized fill conditions. Groundwater was encountered between 5 and 6 fbgs during previous investigations. "

Env Problem: "Remediation of the site is complete. Prior to remediation, the primary contaminants of concern were degraded petroleum products in soil, and polycyclic aromatic hydrocarbons (PAHs), metals, and trace chloro-fluoro refrigerant compounds in groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site."

1155 NIAGARA STREET SITE (Continued) **S123663584**

Site Code: 614458
Site Description: "Location: The 1155 Niagara Street Site is an approximately 3.64-acre site, located in a highly developed urban area, at 1155 Niagara Street in the City of Buffalo, Erie County. The site is bordered by West Ferry Street to the north, residential, commercial, and industrial properties to the south, Niagara Street to the West, and West Avenue to the east. Site Features: The site has been redeveloped with a media production studio building and associated parking. Zoning and Land Use: The site is zoned N-1S, mixed-use employment center, and is currently occupied by a media production studio. Past Use of the Site: The site was developed with numerous commercial and industrial properties from at least 1899 until 1981. Specific operations included a vehicle garage/storage, a contractor yard, and a blacksmith from 1925 to at about 1951. Uses from 1951 until about 1981 included a factory, pipe shop, garage, storage facility, and a dairy food processing operation. Non-dairy food processing occurred on the site from 1981 until 2018. Several storage tanks were removed from the site at various times, including two former gasoline underground storage tanks (USTs), one former No. 2 fuel oil UST, one former refrigerant UST, and five former chemical aboveground storage tanks (ASTs). Site Geology and Hydrogeology: The site is located within the Erie-Ontario Lowlands, which is typified by little topographic relief, and gently slopes westward towards Lake Erie. According to the United States Department of Agriculture (USDA) Web soil survey, the majority of the site soils are characterized as Urban Land and Urban Land-Lima Complex (UrA). Previous investigations have identified fill material on-site ranging from 1 to 9 feet below ground surface (fbgs), underlain by native clays ranging in depth from 3 to 12.5 fbgs. Limestone bedrock was encountered at depths ranging from 8.5 to 12.5 fbgs during previous investigations. Regional and local groundwater gradient trends west toward the Niagara River, located approximately 300 feet west of the site boundary. Local groundwater flow however may be influenced by subsurface features such as excavations, utilities, and localized fill conditions. Groundwater was encountered between 5 and 6 fbgs during previous investigations. "
Env Problem: "Remediation of the site is complete. Prior to remediation, the primary contaminants of concern were degraded petroleum products in soil, and polycyclic aromatic hydrocarbons (PAHs), metals, and trace chloro-fluoro refrigerant compounds in groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site."

DEC Memo: 5/8/19 FG site inspection. Excavation had odor of fuel oil and presence of petroleum on water. product lines were present in the excavation. Rich Products Darryl Burgess 878-8106, 864-9094 cell Total Wrecking plans to have their environmental group Sean Reid prepare a remedial work plan to determine the extent of impacts and provide a description of the work to date. 5/9/19 FG spoke to Darryl Burgess with Rich's. He said they discovered a 6000 gal abandoned ust which they removed. petroleum impacts were identified in the water after removal. Rich's will provide the work plan to determine the extent and the closure report. 5/10/19 Total Wrecking submitted the tank closure PBS request. They also provided the workplan and the following comments were provided: Jennifer, I have had an opportunity to review the letter work plan submitted for the work planned at 1155 Niagara St, Buffalo and have the following comments: 1 Please provide the soil sample results completed in the ust excavation Documentation of the quantity and disposal of the tank contents should be provided 3 Was there any contamination associated with the fill pipe removal? Was there any sampling done in that excavation. 4 There is no limit on the quantity of petroleum spilled that is required to be reported. 6 & 8 You need to provide the quantity generated and disposal documentation of the water removed. 10 You need to notify the Department when the excavation is complete so an inspection can be completed. 11 The excavation samples will have to be analyzed for EPA Methods 8260 and 8270 STARS list. Spills does not use the standards for commercial and industrial use. Additional items: When do you plan on completing the excavation work? A closure report will be required including all disposal documentation, sample reports and sampling maps A map of the site and ust and piping location should be provided with this workplan. Please let me know if you have any questions. Thank you, Francine Gallego NYSDEC 270 Michigan Ave Buffalo, NY 14203 Francine.gallego@dec.ny.gov 716-851-7220 5/13/19 Total Wrecking responses: 1 Please provide the soil sample results completed in the ust excavation See the Analytical Report attached Documentation of the quantity and disposal of the tank contents should be provided See CleanHarbors waste material profile sheet attached 3 Was there any contamination associated with the fill pipe removal? The pipes were rusty and clean except for a small section, which is in the tank excavation Was there any sampling done in that excavation. See the CleanHarbors

1155 NIAGARA STREET SITE (Continued) **S123663584**

contract change order and
Safetykleen waste material profile sheet attached 4 There is no limit on the quantity of petroleum
spilled that is required to be reported. 6 & 8 You need to provide the quantity generated and
disposal documentation of the water removed. See the CleanHarbors contract change order attached 10
You need to notify the Department when the excavation is complete so an inspection can be
completed. Dan Gonzalez will notify you when this is complete 11 The excavation samples will have
to be analyzed for EPA Methods 8260 and 8270 STARS list. Spills does not use the standards for
commercial and industrial use. We will sample for this. Additional items: When do you plan on
completing the excavation work? Dan will contact you when he starts, weather permitting, since we
keep getting rain. A closure report will be required including all disposal documentation, sample
reports and sampling maps A map of the site and ust and piping location should be provided with
this workplan. Dan Gonzalez will provide this to you. 6/11/19 From: Jennifer Grandinetti Sent:
Wednesday, June 12, 2019 8:20 AM To: Gallego, Francine (DEC) Cc: loop.stephen@cleanharbors.com;
Frank Bodami ; dburgess@rich.com; Sean Reed Subject: Clean Harbor Francine, Per our conversation
yesterday, we will continue with our plan and will have Clean Harbors on site to assist with PID
sampling during excavation and disposition and final closure. We will contact you as early as we
can, depending upon weather and Clean Harbor s availability, to let you know when we start and
complete. If you have any questions, please let me know. Thank you. Jen Grandinetti - Executive
Assistant Total Wrecking & Environmental, LLC PO. Box 326 Buffalo, NY, 14231 P: 716-692-2002 ext
2012 F: 716-945-8002 6/28/19 FG site inspection. Excavation was left open after complete removal of
impacted material. Soil was being loaded out to the landfill. Excavation samples had been collected
by Paradigm. A closure report will be provided. 8/20/19 FG requested a closure report from Total
Wrecking. Jennifer Grandinetti Cc: Frank Bodami 8/30/19 From: Jennifer Grandinetti Sent: Friday,
August 30, 2019 3:24 PM To: Gallego, Francine (DEC) Cc: Frank Bodami ; dburgess@rich.com Subject:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CALL HER. 01/02/04: MF T/C SHARON, SHE HAS PROBLEMS IN HER LIFE. MW SAMPLING WILL BE DONE POSSIBLY
NEXT WEEK. SHE WILL SEND RECEIPTS FOR THE WASTE OIL DISPOSAL. 02/13/04: MF T/C SHARON, LEFT
MESSAGE. 02/18/04: MF RECEIVED DISPOSAL RECEIPT FOR 2600 GALLONS OF WASTE OIL. 05/14/04: MF T/C
SHARON, HAVING MEDICAL PROBLEMS (CANCER, GOING THRU CHEMO). SON SAMPLED WELLS. 05/23/05: MF DRIVE
BY, STATION CLOSED. 02/23/06: MF T/C SHARON SALMONE, SHE IS UNDER GOING TREATMENT. THEY HAVE NOT
SOLD GASOLINE IN YEARS. SHE WILL SEND THE LATEST SAMPLING RESULTS. 03/08/06: MF RECEIVED 8/4/04 MW
SAMPLING RESULTS. IN PPB 8260 STARS TOTAL. MW#1 - 66 + 37 MTBE MW#2 - 193 + 88 MTBE 9/20/07 FG RECD
A REPORT OF A TANK TEST FAILURE IN SPILL 0750746. THAT SPILL CLOSED AND REFERRED TO THIS EXISTING
SPILL. FG SPOKE TO SHARON SALAMONE. SHE SAID SHE IS BATTLING CANCER RIGHT NOW AND CAN'T AFFORD TO
SPEND ANY MONEY AT THIS TIME. SHE SAID THE UST IS EMPTY AND NOT IN USE. SHE REQUESTED THAT WE GIVE
HER ADDITIONAL TIME TO DECIDE WHAT SHE WILL DO WITH THE PROPERTY. MS. SALAMONE INDICATED THAT THIS
IS IN THE PATH WHERE THE NEW PEACE BRIDGE WILL BE BUILT AND SHE IS HOPING TO SELL IT WHEN THE
DECISION IS MADE TO BUILD THE BRIDGE. THE STATION IS CLOSED. MS. SALAMONE WILL UPDATE THE DEPT IN 2
MONTHS TIME. 03/06/09: MF T/C/SHARON 775-0645, LEFT MESSAGE. S/V/EDUARDO PEREZ, 362-8928/830-8181.
DISPENSORS REMOVED. WASTE OIL SPILLAGE BEHIND BUILDING. UST'S OVERDUE FOR TESTING. ADDITIONAL 250
GALLON AGT'S ON SITE. TOLD EDUADRO TO CLEAN UP SPILLAGE. HE IS THE OPERATOR OF STATION. SUPER
UNLEADED 6K UST FAILED ITS TT 9/20/07. 03/10/09: MF T/C SHARON, OTHER 2 UST PASSED TT. SHE CLAIMED
PAPER WORK SENT IN. TANLS CLOSED. SHARON WILL GET ON RENTER TO CLEAN MESS & GET RID OF AGT'S.
10/21/09: MF MEETING/SHARON, SHE HAS STAGE 4 CANCER & IS WAITING FOR THE PEACE BRIDGE AUTHORITY TO
BY PROPERTY. SHE CLAIMS SHE HAS NO MONEY FOR ANY KIND OF SIE WORK. SHE WONT SIGN ROE. 12/30/10 FG
SPOKE WITH SHARON SALAMONE 775-0645. SHE WILL CONSIDER SIGNING A RIGHT OF ENTRY TO COMPLETE THE
CLEANUP. I TOLD HER I WOULD CALL HER BACK IN ONE WEEK. 1/12/11 FG SPOKE TO BILL NAPLES, ATTORNEY
FOR SHARON SALAMONE 884-0077. HE SAID THEY WILL TRY TO DETERMINE EVERYTHING THAT HAS TO BE DONE AND
GET IT TO THE DEPT. HE SAID A MR. JOSEPH KEEFE 683-4222 WILL BE

COSUMA (Continued) **U003079498**

CALLING THE DEPT WITHIN THE NEXT
THREE WEEKS AND ARRANGING FOR WORK TO BE DONE. 1/28/11 FG SPOKE TO FRANK GUZZO, THE SON OF MS.
SALAMONE. HE SAID HE WILL BE TAKING THE PROPERTY OVER AND IT SHOULD BE FINAL NEXT WEEK. HE HAS
CONTACTED WASTE STREAM FOR ASSISTANCE WITH SAMPLING. HIS NUMBER IS 775-0645. 6/2/11 FG CALLED FRANK
GUZZO AND LEFT A MESSAGE REQUESTING AN UPDATE ON THE PROPERTY. 2/7/12 CURRENT PROPERTY OWNER
ACCORDING TO THE CITY OF BUFFALO REAL PROPERTY IS: NIAGARA FARGO SERVICES INC, 2915 FIX RD, GRAND
ISLAND, NY 14072. LETTER SENT REQUESTING AND UPDATE BY 2/23/12.
5/24/12 RIGHT OF ENTRY LETTER SENT
TO FRANK GUZZO NIAGARA FARGO SERVICES 2915 FIX RD, GRAND ISLAND NY WITH A RESPONSE DUE BY 6/6/12.
6/18/12 FRANK GUZZO SENT IN ANALYTICAL RESULTS FROM SAMPLES COLLECTED FROM THE TANK PIT WELLS ON
SITE (2). THE 8260 RESULTS ARE ALL ND EXCEPT FOR MTBE WHICH IS BELOW 1PPB. FG CONTACTED MR. GUZZO
TO NOTIFY HIM THAT THE UST'S MUST BE PROPERLY CLOSED OR REGISTERED. 6/20/12 FG REQUEST TO MR.
GUZZO: Please provide the schedule that the work will be done. You
should not delay registration
due to a failed tightness test. The tanks should be registered if they
are still on site and the
registration should be submitted asap with the necessary tank upgrades
done asap as well. MR.
GUZZO'S RESPONSE TO FG'S REQUEST TO REGISTER THE UST'S: Will
do,Ms.Gallego.I honestly believe that
the 1 tank that didn't pass the tightness test failed due to some sort
of disconnection and not
because of an actual leak.When the pumps were removed in 2006,they had
a tremendous amount of
difficulty removing 1 of them and did an inordinate amount of tugging
on the main pipes under that
paticular pump,or perhaps the disconnect was caused by shifting.There
is a fairly heavy amount of
truck traffic on that stretch of Niagara Street,and the tanks are in
pretty close proximity to the
traffic lanes,due to the odd shape of the property.I would prefer to
keep the tanks,so the
direction I will be heading in,and ultimate goal will be to get all 3
to pass the tightness test so
they can be registered.I will keep you abreast of the situation as it
develops and progresses.I
decided to test both wells this time so it would give some sort of a
picture of the entire tank
field.I really don't know what I'm looking at when reading the
results,but did notice that the
numbers have gone down progressively each time we've had the samples
tested(over a period of 8
years)and was assured by Tony Bogolin(TestAmerica) that these latest
test results showed very low
amounts of contamination.I'm still convinced that the initial higher
readings from years back were
caused by the inexperienced repairman that Reid Petroleum sent out in
August of 2003(3 months

COSUMA (Continued) **U003079498**

before we stopped pumping gas at the location)to change a leak detector that had gone bad and slowed the pumps to a crawl-he neglected to use a catch basin when he was changing the part,and he was working almost directly above one of the monitoring wells.Thank you for getting back to me and I would just like to offer an apology one final time for the delay in getting back to you. FG REQUEST TO MR. GUZZO TO REGISTER UST'S: Thank you for your recent submission of groundwater data from the onsite wells. The data appears to show very minor contamination in the tank pit groundwater wells. Your facility remains unregistered and one of the 3 underground storage tanks failed it's tightness test. The tanks must be closed (removed) or registered. Please contact me to discuss your schedule to complete the work. 9/13/12 LETTER SENT TO FRANK GUZZO AT BOTH 1073 NIAGARA, BUFFALO AND 2915 FIX RD, GI REQUESTING RETESTING OF THE FAILED 6K UST AND REGISTRATION OF THE SITE BY OCTOBER 4, 2012. 10/9/12 FRANK GUZZO PROVIDED THE FOLLOWING UPDATE: Ms. Gallego: I know I was supposed to get the underground tanks tested and licensed by October 5th.Unfortunately,I don't have the financial wherewithal to do it at this time due to problems with my tenant at Niagara-Fargo.The amount of money I'm owed would more than cover most of the options I was given(in reference to the problem the last time my mother had the tanks tested) as I'm still pretty sure that the reason the 1 tank wouldn't hold pressure was due to a pipe disconnect/shift situation.I know this issue isn't really a concern of your office,but it's a reality for me and has had a profound impact on my finances in general.I would really love to get the testing/licensing done so it would be in good standing for 5 years.The only reason I waited this long to get back to you(or take action on the testing/licensing for that matter)is because my tenant keeps promising to pay in full.On September 1st,I issued him a deadline date of October 15th to make good on all his promises.It looks now like I will have to start eviction and civil proceedings instead as I've only received 1 paltry payment since then.I already have another tenant lined up,but will need some time to get the funds together.I don't know what else to do.I,personally,don't have any credit available to me and am going to have to try to scrape together the money to evict/file claim,as well as even pay the taxes on the property.I really appreciate the way you handled this situation with my mother back in 2007,as she has been ill for many years and you have been very fair as well as patient with me.Regretfully,I must ask for more time as I know of no other alternative.As I mentioned previously,I only waited this long to address this because I've been

COSUMA (Continued) **U003079498**

hoping I would get the money
out of my tenant.This actually happened with him 1 other time a few
years back with a similar
amount of money and he did finally pay,so my expectations weren't
completely
unrealistic.Unfortunately,I'm not too optimistic that it's going to
happen this time.I mentioned in
a previous e-mail that I've spent a considerable amount of time out of
town this year as well
tending to a problem with a sick relative and this has also put a
strain on my resources as well as
exacerbated the situation with my tenant,as I wasn't able to keep on
top of him as much as I should
have.I am going to be out of town again from today until the 17th of
October.If I'm paid by any
chance on/before my return,I will IMMEDIATELY commence work on this
project.If not,my next actions
will be along the lines of what I've previously mentioned,much to
my(and I'm sure your)chagrin.Once
again,I apologize for even having to write this,but I don't know what
else to do.Thank You.
frnkguzzo@gmail.com 11/29/12 FG REQUESTED AN UPDATE ON THE STATUS OF
THE SITE. 12/2/12 FRANK GUZZO
PROVIDED THE FOLLOWING UPDATE: Unfortunately,the situation hasn't
improved to the extent(or even
anywhere close to it) to enable me to get the testing/registration
done.I was trying to come to an
amicable solution with my tenant so I wouldn't have to spend
additional money on eviction and
litigation.After issuing him the aforementioned deadline,he made one
small payment and set up a
monthly payment plan which he's failed to adhere to.Faced with no
other option,I now have no choice
but to evict him and find a new tenant.I've actually found a
tenant,but he will be unable to start
renting from me until February 2013 when his current lease expires.I'm
going to barely be able to
pay the taxes on the property when they are due at year's end,let
alone come up with the funds to
do the tank testing/registration.I know it was supposed to be done
back in October,but the soonest
it seems I'll have the financial ability to do it will be the spring
of 2013.As I mentioned
before,I really do want to get it done as soon as I'm able,as then I
won't have to worry about it
for another 5 years.I'm sorry to have to subject you to this tale of
woe,but it is the sole reason
it isn't already done.frnkguzzo@gmail.com 1/17/13 FG REQUESTED AN
UPDATE ON THE STATUS OF THE SITE.
MR. GUZZO PROVIDED THE FOLLOWING RESPONSE: Unfortunately-I hate having
to start every communique
like this,but don't have many other choices for words at this
point-nothing positive.The
prospective tenant I had lined up is embroiled in a dispute with his
soon to be ex-business partner
that has rendered him unable to begin renting from me next month as I
had been planning on.I do

COSUMA (Continued) **U003079498**

have another prospective tenant that has actually coveted the location for quite some time,(he is an ex-employee),but he wouldn't be able to come in until mid-March/early-April due to HIS current lease commitment.There is also one other person interested,but he doesn't have the appropriate equipment(as my shop doesn't come with any) and is trying to secure the financing to aquire it.In summary,while I've had yet another setback,I do have some hope for the near future,but not to the point where I can give you a specific time table/frame yet.When I'm able to do so,I'll let you know immediately.Thanks once again for your patience pertaining to this issue. frnkguzzo@gmail.com
8/21/13 MR. GUZZO PROVIDED THE FOLLOWING UPDATE: I would just like to start by thanking you,as always for your monumental patience with the situation at Niagara-Fargo.You have been very understanding and gracious as you always were in the past with my mother when she had to keep up with all of this.Words cannot aptly describe how much I appreciate this.The financial situation with Niagara-Fargo is still horrendous,as I was unable to procure a new tenant,despite numerous attempts.This has forced me to make yet another deal with the current tenant,as eviction without a replacement occupant is not a viable option for many reasons.While I've tried to use the prospect of eviction as an inspiration for him to pay up,he's well aware of this,hence the threats have rung hollow.I've basically been compelled to agree to dramatically reduce the amount of back rent owed and start a new payment plan with him to get any money at all.So far,I've been able to collect just enough to pay half of last year's tax arrears and catch up on the user's fees.He's promising to pay a larger amount in the next couple of months so I can pay the other half of last year's tax arrears---which is essential,or the property will go into foreclosure----and at least a portion of the water bill.He's also promising to pay the new dramatically reduced amount of back rent he owes by the end of the year,which would allow me to definitely get a start on what I so desperately need to do,as it pertains to the concerns of your office.It's also a concern of mine,as I've told you many times in the past,as I would have tremendous peace of mind not having this situation looming anymore.I'm extremely frustrated and embarrassed to the point of mortification,that I've been unable to resolve this issue for so long now.This is the first time in over a year that I've been able to have even a glimmer of hope though,or any movement in a positive direction whatsoever,so I'm praying that things continue down their current path,as I'm catching a glimpse of the light at the end of the tunnel.If not,I'll have to resort to trying to procure

COSUMA (Continued) **U003079498**

a loan or two through a
couple of different family members,either directly,or as co-signers,as I don't know what else to
do.My personal income is rather paltry and my credit rating is horrific.I have myself to blame for
this solely,and regret even having to relate such things to you,but these facts are also a
detriment.I'm also hoping to procure a much better job this fall(through another relative)and this
would be very helpful too,as far as squaring everything away with what has become the albatross of
my life,Niagara-Fargo.Once again,I profusely apologize for the ludicrously long
delays.Respectfully/Thankfully yours,Frank Guzzo. frnkguzzo@gmail.com 8/21/13 FG PROVIDED THE
FOLLOWING RESPONSE TO MR. GUZZO: Frank, I am sorry to hear of your continued difficulties. As we
have notified you in previous letters, the Department can complete the necessary work at the site.
However, you would be responsible for those costs and repayment. Please let me know if you would
give access to the Department to complete the site work. I have attached the last letter sent to
you explaining your options. Best regards, Francine Francine Gallego NYSDEC 270 Michigan Ave

COSUMA (Continued) **U003079498**

will check the well
periodically. 9/21/21 GES provided the Groundwater sampling summary. A summary of analytical
results for VOCs are as follows: At least one VOC component exhibited concentrations in excess of
TOGS 1.1.1 for ambient groundwater quality standards and guidance values (SGVs) in monitoring wells
MW-101 and MW-102. Total BTEX concentrations were 486 ?g/L at MW-101 and 9.1 ?g/L at MW-102.
Methyl-tert Butyl Ether (MtBE) concentrations were 53 ?g/L at MW-101 and 23 ?g/L at MW-102. It
should be noted that Eurofins flagged these results as biased high due to the laboratory control
sample (LCS) or LCS duplicate (LCSD) being outside the acceptable limits. Total VOC concentrations
were 802 ?g/L at MW-101 and 64 ?g/L at MW-102. 12/2/21 On 11/17/21 GES collected groundwater
samples from the onsite wells. The total 8260 STARS list: MW101 384 ppb MW102 105.42 ppb MW103 ND.
4 quarters of gw sampling was conducted. The results exceed gw standards but at a slight exceedance
only. Due to the nature of the location at the site, surrounded by utilities that no further work
is possible/necessary. Once the final payment packages are received, the site will be closed as
inactive. 6/23/22 GES submitted the well closure/abandonment report. Final payment packages are
expected within the next two months and the site will be closed at that time. 6/30/22 From: Thomas

CALLING THE DEPT WITHIN THE NEXT
THREE WEEKS AND ARRANGING FOR WORK TO BE DONE. 1/28/11 FG SPOKE TO FRANK GUZZO, THE SON OF MS.
SALAMONE. HE SAID HE WILL BE TAKING THE PROPERTY OVER AND IT SHOULD BE FINAL NEXT WEEK. HE HAS
CONTACTED WASTE STREAM FOR ASSISTANCE WITH SAMPLING. HIS NUMBER IS 775-0645. 6/2/11 FG CALLED FRANK
GUZZO AND LEFT A MESSAGE REQUESTING AN UPDATE ON THE PROPERTY. 2/7/12 CURRENT PROPERTY OWNER
ACCORDING TO THE CITY OF BUFFALO REAL PROPERTY IS: NIAGARA FARGO SERVICES INC, 2915 FIX RD, GRAND
ISLAND, NY 14072. LETTER SENT REQUESTING AND UPDATE BY 2/23/12.
5/24/12 RIGHT OF ENTRY LETTER SENT
TO FRANK GUZZO NIAGARA FARGO SERVICES 2915 FIX RD, GRAND ISLAND NY WITH A RESPONSE DUE BY 6/6/12.
6/18/12 FRANK GUZZO SENT IN ANALYTICAL RESULTS FROM SAMPLES COLLECTED FROM THE TANK PIT WELLS ON
SITE (2). THE 8260 RESULTS ARE ALL ND EXCEPT FOR MTBE WHICH IS BELOW 1PPB. FG CONTACTED MR. GUZZO
TO NOTIFY HIM THAT THE UST'S MUST BE PROPERLY CLOSED OR REGISTERED.
6/20/12 FG REQUEST TO MR.
GUZZO: Please provide the schedule that the work will be done. You
should not delay registration
due to a failed tightness test. The tanks should be registered if they
are still on site and the
registration should be submitted asap with the necessary tank upgrades
done asap as well. MR.
GUZZO'S RESPONSE TO FG'S REQUEST TO REGISTER THE UST'S: Will
do,Ms.Gallego.I honestly believe that
the 1 tank that didn't pass the tightness test failed due to some sort
of disconnection and not
because of an actual leak.When the pumps were removed in 2006,they had
a tremendous amount of
difficulty removing 1 of them and did an inordinate amount of tugging
on the main pipes under that
paticular pump,or perhaps the disconnect was caused by shifting.There
is a fairly heavy amount of
truck traffic on that stretch of Niagara Street,and the tanks are in
pretty close proximity to the
traffic lanes,due to the odd shape of the property.I would prefer to
keep the tanks,so the
direction I will be heading in,and ultimate goal will be to get all 3
to pass the tightness test so
they can be registered.I will keep you abreast of the situation as it
develops and progresses.I
decided to test both wells this time so it would give some sort of a
picture of the entire tank
field.I really don't know what I'm looking at when reading the
results,but did notice that the
numbers have gone down progressively each time we've had the samples
tested(over a period of 8
years)and was assured by Tony Bogolin(TestAmerica) that these latest
test results showed very low
amounts of contamination.I'm still convinced that the initial higher
readings from years back were
caused by the inexperienced repairman that Reid Petroleum sent out in
August of 2003(3 months

COSUMA (Continued) **U003079498**

before we stopped pumping gas at the location)to change a leak detector that had gone bad and slowed the pumps to a crawl-he neglected to use a catch basin when he was changing the part,and he was working almost directly above one of the monitoring wells.Thank you for getting back to me and I would just like to offer an apology one final time for the delay in getting back to you. FG REQUEST TO MR. GUZZO TO REGISTER UST'S: Thank you for your recent submission of groundwater data from the onsite wells. The data appears to show very minor contamination in the tank pit groundwater wells. Your facility remains unregistered and one of the 3 underground storage tanks failed it's tightness test. The tanks must be closed (removed) or registered. Please contact me to discuss your schedule to complete the work. 9/13/12 LETTER SENT TO FRANK GUZZO AT BOTH 1073 NIAGARA, BUFFALO AND 2915 FIX RD, GI REQUESTING RETESTING OF THE FAILED 6K UST AND REGISTRATION OF THE SITE BY OCTOBER 4, 2012. 10/9/12 FRANK GUZZO PROVIDED THE FOLLOWING UPDATE: Ms. Gallego: I know I was supposed to get the underground tanks tested and licensed by October 5th.Unfortunately,I don't have the financial wherewithal to do it at this time due to problems with my tenant at Niagara-Fargo.The amount of money I'm owed would more than cover most of the options I was given(in reference to the problem the last time my mother had the tanks tested) as I'm still pretty sure that the reason the 1 tank wouldn't hold pressure was due to a pipe disconnect/shift situation.I know this issue isn't really a concern of your office,but it's a reality for me and has had a profound impact on my finances in general.I would really love to get the testing/licensing done so it would be in good standing for 5 years.The only reason I waited this long to get back to you(or take action on the testing/licensing for that matter)is because my tenant keeps promising to pay in full.On September 1st,I issued him a deadline date of October 15th to make good on all his promises.It looks now like I will have to start eviction and civil proceedings instead as I've only received 1 paltry payment since then.I already have another tenant lined up,but will need some time to get the funds together.I don't know what else to do.I,personally,don't have any credit available to me and am going to have to try to scrape together the money to evict/file claim,as well as even pay the taxes on the property.I really appreciate the way you handled this situation with my mother back in 2007,as she has been ill for many years and you have been very fair as well as patient with me.Regretfully,I must ask for more time as I know of no other alternative.As I mentioned previously,I only waited this long to address this because I've been

COSUMA (Continued) **U003079498**

hoping I would get the money
out of my tenant.This actually happened with him 1 other time a few
years back with a similar
amount of money and he did finally pay,so my expectations weren't
completely
unrealistic.Unfortunately,I'm not too optimistic that it's going to
happen this time.I mentioned in
a previous e-mail that I've spent a considerable amount of time out of
town this year as well
tending to a problem with a sick relative and this has also put a
strain on my resources as well as
exacerbated the situation with my tenant,as I wasn't able to keep on
top of him as much as I should
have.I am going to be out of town again from today until the 17th of
October.If I'm paid by any
chance on/before my return,I will IMMEDIATELY commence work on this
project.If not,my next actions
will be along the lines of what I've previously mentioned,much to
my(and I'm sure your)chagrin.Once
again,I apologize for even having to write this,but I don't know what
else to do.Thank You.
frnkguzzo@gmail.com 11/29/12 FG REQUESTED AN UPDATE ON THE STATUS OF
THE SITE. 12/2/12 FRANK GUZZO
PROVIDED THE FOLLOWING UPDATE: Unfortunately,the situation hasn't
improved to the extent(or even
anywhere close to it) to enable me to get the testing/registration
done.I was trying to come to an
amicable solution with my tenant so I wouldn't have to spend
additional money on eviction and
litigation.After issuing him the aforementioned deadline,he made one
small payment and set up a
monthly payment plan which he's failed to adhere to.Faced with no
other option,I now have no choice
but to evict him and find a new tenant.I've actually found a
tenant,but he will be unable to start
renting from me until February 2013 when his current lease expires.I'm
going to barely be able to
pay the taxes on the property when they are due at year's end,let
alone come up with the funds to
do the tank testing/registration.I know it was supposed to be done
back in October,but the soonest
it seems I'll have the financial ability to do it will be the spring
of 2013.As I mentioned
before,I really do want to get it done as soon as I'm able,as then I
won't have to worry about it
for another 5 years.I'm sorry to have to subject you to this tale of
woe,but it is the sole reason
it isn't already done.frnkguzzo@gmail.com 1/17/13 FG REQUESTED AN
UPDATE ON THE STATUS OF THE SITE.
MR. GUZZO PROVIDED THE FOLLOWING RESPONSE: Unfortunately-I hate having
to start every communique
like this,but don't have many other choices for words at this
point-nothing positive.The
prospective tenant I had lined up is embroiled in a dispute with his
soon to be ex-business partner
that has rendered him unable to begin renting from me next month as I
had been planning on.I do

COSUMA (Continued) **U003079498**

have another prospective tenant that has actually coveted the location for quite some time,(he is an ex-employee),but he wouldn't be able to come in until mid-March/early-April due to HIS current lease commitment.There is also one other person interested,but he doesn't have the appropriate equipment(as my shop doesn't come with any) and is trying to secure the financing to aquire it.In summary,while I've had yet another setback,I do have some hope for the near future,but not to the point where I can give you a specific time table/frame yet.When I'm able to do so,I'll let you know immediately.Thanks once again for your patience pertaining to this issue. frnkguzzo@gmail.com
8/21/13 MR. GUZZO PROVIDED THE FOLLOWING UPDATE: I would just like to start by thanking you,as always for your monumental patience with the situation at Niagara-Fargo.You have been very understanding and gracious as you always were in the past with my mother when she had to keep up with all of this.Words cannot aptly describe how much I appreciate this.The financial situation with Niagara-Fargo is still horrendous,as I was unable to procure a new tenant,despite numerous attempts.This has forced me to make yet another deal with the current tenant,as eviction without a replacement occupant is not a viable option for many reasons.While I've tried to use the prospect of eviction as an inspiration for him to pay up,he's well aware of this,hence the threats have rung hollow.I've basically been compelled to agree to dramatically reduce the amount of back rent owed and start a new payment plan with him to get any money at all.So far,I've been able to collect just enough to pay half of last year's tax arrears and catch up on the user's fees.He's promising to pay a larger amount in the next couple of months so I can pay the other half of last year's tax arrears---which is essential,or the property will go into foreclosure----and at least a portion of the water bill.He's also promising to pay the new dramatically reduced amount of back rent he owes by the end of the year,which would allow me to definitely get a start on what I so desperately need to do,as it pertains to the concerns of your office.It's also a concern of mine,as I've told you many times in the past,as I would have tremendous peace of mind not having this situation looming anymore.I'm extremely frustrated and embarrassed to the point of mortification,that I've been unable to resolve this issue for so long now.This is the first time in over a year that I've been able to have even a glimmer of hope though,or any movement in a positive direction whatsoever,so I'm praying that things continue down their current path,as I'm catching a glimpse of the light at the end of the tunnel.If not,I'll have to resort to trying to procure

COSUMA (Continued) **U003079498**

a loan or two through a
couple of different family members,either directly,or as co-signers,as I don't know what else to
do.My personal income is rather paltry and my credit rating is horrific.I have myself to blame for
this solely,and regret even having to relate such things to you,but these facts are also a
detriment.I'm also hoping to procure a much better job this fall(through another relative)and this
would be very helpful too,as far as squaring everything away with what has become the albatross of
my life,Niagara-Fargo.Once again,I profusely apologize for the ludicrously long
delays.Respectfully/Thankfully yours,Frank Guzzo. frnkguzzo@gmail.com 8/21/13 FG PROVIDED THE
FOLLOWING RESPONSE TO MR. GUZZO: Frank, I am sorry to hear of your continued difficulties. As we
have notified you in previous letters, the Department can complete the necessary work at the site.
However, you would be responsible for those costs and repayment. Please let me know if you would
give access to the Department to complete the site work. I have attached the last letter sent to
you explaining your options. Best regards, Francine Francine Gallego NYSDEC 270 Michigan Ave

COSUMA (Continued) **U003079498**

will check the well
periodically. 9/21/21 GES provided the Groundwater sampling summary. A summary of analytical
results for VOCs are as follows: At least one VOC component exhibited concentrations in excess of
TOGS 1.1.1 for ambient groundwater quality standards and guidance values (SGVs) in monitoring wells
MW-101 and MW-102. Total BTEX concentrations were 486 ?g/L at MW-101 and 9.1 ?g/L at MW-102.
Methyl-tert Butyl Ether (MtBE) concentrations were 53 ?g/L at MW-101 and 23 ?g/L at MW-102. It
should be noted that Eurofins flagged these results as biased high due to the laboratory control
sample (LCS) or LCS duplicate (LCSD) being outside the acceptable limits. Total VOC concentrations
were 802 ?g/L at MW-101 and 64 ?g/L at MW-102. 12/2/21 On 11/17/21 GES collected groundwater
samples from the onsite wells. The total 8260 STARS list: MW101 384 ppb MW102 105.42 ppb MW103 ND.
4 quarters of gw sampling was conducted. The results exceed gw standards but at a slight exceedance
only. Due to the nature of the location at the site, surrounded by utilities that no further work
is possible/necessary. Once the final payment packages are received, the site will be closed as
inactive. 6/23/22 GES submitted the well closure/abandonment report. Final payment packages are
expected within the next two months and the site will be closed at that time. 6/30/22 From: Thomas
Palmer Sent: Thursday, June 30, 2022 3:55 PM To: Gallego, Francine (DEC) ; nlindner@gesonline.com
Subject: RE: C100607 GES Petroleum CAP #103 Francine, The final billing CAP will be reviewed
internally starting Tuesday (Includes efforts up to 7/1/22) and the CAP should be to you in July. I
will mark as Final invoice on our end as requested by Contracts division. Thanks, Tom Thomas D.
Palmer Senior Project Manager / Geologist Office: 800.287.7857 ext. 4346 Mobile: 716.866.3590
10/25/22 FG asked GES if all payment packages have been submitted. GES stated that CAP104 was the
final payment. The Department received and processed the CAP 104 payment. Current property owner:
Sabrina Irizarry 99.42-14-12 1073 Niagara St mailing address: 18 WOODBINE PL Cheektowaga, NY 14225
10/28/22 After monitoring the gw for 5 quarters, the results only slightly exceed standards. All
site work is complete. No further action is necessary. The site is inactive.

Remarks: INSPECTION WITH ECO PHELPS REVEALED GASOLINE SATURATION IN NORTH LINE LEAK DETECTOR PIT. MANY DRUMS OF WASTE OIL IN REAR OF PROPERTY WITH SPILLAGE AROUND THEM. OWNER CLAIMS THAT LINE LEAK DETECTOR WORK RECENTLY DONE BY REID PETROLEUM. POOR HOUSEKEEPING; PBS VIOLATIONS; NO LEAK DETECTION OR INVENTORY RECONCILIATION.

Site Description:	"Location: The 1050-1088 Niagara Street site is an approximately 2.7-acre site, located in an urban area, at 1050-1088 Niagara Street in the City of Buffalo, Erie County. Site Features: The site is comprised of two adjoining parcels identified as 1050 and 1088 Niagara Street. Steep embankments, up to 20 feet in height, define the northern and western perimeter of the site. The 1050 Niagara Street parcel is a renovated pre-existing building and parking lot. The 1088 Niagara Street parcel contains a newly constructed building for commercial use and a parking lot. The remaining flat area was paved with asphalt for tenant parking. A vegetated soil cover was placed on the embankments. Current Zoning and Land Use: The site is

1050-1088 NIAGARA STREET SITE (Continued) **S113813704**

currently zoned M1 Light Industrial. Current land use consists of office space at 1050 Niagara Street and commercial and residential at the 1088 Niagara Street building. Past Use of the Site: The 1050 Niagara Street parcel has a history of commercial and manufacturing operations dating back to 1889. The parcel was used for commercial printing businesses from approximately 1930 through 2000. Historic Sanborn records indicate that two 25,000-gallon tanks, most likely containing fuel oil and/or printing related solvents, were located in the basement of the building. Lithographic printing operations historically used volatile organic compound (VOC) based solvents for print machine cleaning, degreasing and ink solvents. The 1088 Niagara Street parcel previously contained a series of buildings and a railroad siding. The International Brewing Company and American Gelatine Corp. operated on site in the early 1900s. Gulf Oil Corporation and Hygrade Petroleum Co. were site operators from approximately the 1920s through 1960. Records from 1925 indicate Hygrade Oil Co. used the site as a service station and fuel distribution facility, including multiple petroleum storage and distribution tanks, gasoline pump house(s), and a tank wagon loading house which abutted the current 1050 Niagara Street building. The buildings were razed sometime during the 1960s. Site Geology: The surface soil on the site is characterized as Urban Land, consisting of level to gently sloping land with 80 percent or more of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. The redeveloped 1088 Niagara Street parcel contains extensive fill with depths up to 35 feet below ground surface, and in some instances down to top of bedrock. The subsurface soil/fill characteristics vary. Distinct layers include crushed concrete, stone, gravel, sandy lean clay layers, and fill with varying amounts and depths of material (i.e., soil, brick, concrete, foundry sand, metal and other debris). The soil below the existing building at 1050 Niagara Street parcel consists of mainly native soils down to bedrock. The native soil is characterized as a lean silty clay and varies in thickness from 9 feet to 21 feet. Bedrock: The site is situated over the Onondaga formation limestone. Limestone bedrock was encountered about 35 to 40 feet below the surface. Hydrogeology: Groundwater depth is approximately 25 feet below ground surface. Based upon area topography and proximity to the Niagara River, the groundwater generally flows to the west/northwest toward the Black Rock Canal/Niagara River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the primary contaminants of concern were degraded petroleum products in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the control the potential for coming in contact with residual contamination at the site."

Site Description:	"Location: The 1050-1088 Niagara Street site is an approximately 2.7-acre site, located in an urban area, at 1050-1088 Niagara Street in the City of Buffalo, Erie County. Site Features: The site is comprised of two adjoining parcels identified as 1050 and 1088 Niagara Street. Steep embankments, up to 20 feet in height, define the northern and western perimeter of the site. The 1050 Niagara Street parcel is a renovated pre-existing building and parking lot. The 1088 Niagara Street parcel contains a newly constructed building for commercial use and a parking lot. The remaining flat area was paved with asphalt for tenant parking. A vegetated soil cover was placed on the embankments. Current Zoning and Land Use: The site is currently zoned M1 Light Industrial. Current land use consists of office space at 1050 Niagara Street and commercial and residential at the 1088 Niagara Street building. Past Use of the Site: The 1050 Niagara Street parcel has a history of commercial and manufacturing operations dating back to 1889. The parcel was used for commercial printing businesses from approximately 1930 through 2000. Historic Sanborn records indicate that two 25,000-gallon tanks, most likely containing fuel oil and/or printing related solvents, were located in the basement of the building. Lithographic printing operations historically used volatile organic compound (VOC) based solvents for print machine cleaning, degreasing and ink solvents. The 1088 Niagara Street parcel previously contained a series of buildings and a railroad siding. The International Brewing Company and American Gelatine Corp. operated on site in the early 1900s. 1050-1088 NIAGARA STREET SITE (Continued) **S113813704**

Site Description: "Location: The 1050-1088 Niagara Street site is an approximately 2.7-acre site, located in an urban area, at 1050-1088 Niagara Street in the City of Buffalo, Erie County. Site Features: The site is comprised of two adjoining parcels identified as 1050 and 1088 Niagara Street. Steep embankments, up to 20 feet in height, define the northern and western perimeter of the site. The 1050 Niagara Street parcel is a renovated pre-existing building and parking lot. The 1088 Niagara Street parcel contains a newly constructed building for commercial use and a parking lot. The remaining flat area was paved with asphalt for tenant parking. A vegetated soil cover was placed on the embankments. Current Zoning and Land Use: The site is currently zoned M1 Light Industrial. Current land use consists of office space at 1050 Niagara Street and commercial and residential at the 1088 Niagara Street building. Past Use of the Site: The 1050 Niagara Street parcel has a history of commercial and manufacturing operations dating back to 1889. The parcel was used for commercial printing businesses from approximately 1930 through 2000. Historic Sanborn records indicate that two 25,000-gallon tanks, most likely containing fuel oil and/or printing related solvents, were located in the basement of the building. Lithographic printing operations historically used volatile organic compound (VOC) based solvents for print machine cleaning, degreasing and ink solvents. The 1088 Niagara Street parcel previously contained a series of buildings and a railroad siding. The International Brewing Company and American Gelatine Corp. operated on site in the early 1900s. Gulf Oil Corporation and Hygrade Petroleum Co. were site operators from approximately the 1920s through 1960. Records from 1925 indicate Hygrade Oil Co. used the site as a service station and fuel distribution facility, including multiple petroleum storage and distribution tanks, gasoline pump house(s), and a tank wagon loading house which abutted the current 1050 Niagara Street building. The buildings were razed sometime during the 1960s. Site Geology: The surface soil on the site is characterized as Urban Land, consisting of level to gently sloping land with 80 percent or more of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. The redeveloped 1088 Niagara Street parcel contains extensive fill with depths up to 35 feet below ground surface, and in some instances down to top of bedrock. The subsurface soil/fill characteristics vary. Distinct layers include crushed concrete, stone, gravel, sandy lean clay layers, and fill with varying amounts and depths of material (i.e., soil, brick, concrete, foundry sand, metal and other debris). The soil below the existing building at 1050 Niagara Street parcel consists of mainly native soils down to bedrock. The native soil is characterized as a lean silty clay and varies in thickness from 9 feet to 21 feet. Bedrock: The site is situated over the Onondaga formation limestone. Limestone bedrock was encountered about 35 to 40 feet below the surface. Hydrogeology: Groundwater depth is approximately 25 feet below ground surface. Based upon area topography and proximity to the Niagara River, the groundwater generally flows to the west/northwest toward the Black Rock Canal/Niagara River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the primary contaminants of concern were degraded petroleum products in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a

Control Type: INST
Dt record added: 12/21/2017
Dt rec updated: 05/09/2024
Updated By: MEKUCZKA
Site Code: 482327
Site Description: "Location: The 1050-1088 Niagara Street site is an approximately 2.7-acre site, located in an urban area, at 1050-1088 Niagara Street in the City of Buffalo, Erie County. Site Features: The site is comprised of two adjoining parcels identified as 1050 and 1088 Niagara Street. Steep embankments, up to 20 feet in height, define the northern and western perimeter of the site. The 1050 Niagara Street parcel is a renovated pre-existing building and parking lot. The 1088 Niagara Street parcel contains a newly constructed building for commercial use and a parking lot. The remaining flat area was paved with asphalt for tenant parking. A vegetated soil cover was placed on the embankments. Current Zoning and Land Use: The site is currently zoned M1 Light Industrial. Current land use consists of office space at 1050 Niagara Street and commercial and residential at the 1088 Niagara Street building. Past Use of the Site: The 1050 Niagara Street parcel has a history of commercial and manufacturing operations dating back to 1889. The parcel was used for commercial printing businesses from approximately 1930 through 2000. Historic Sanborn records indicate that two 25,000-gallon tanks, most likely containing fuel oil and/or printing related solvents, were located in the basement of the building. Lithographic printing operations historically used volatile organic compound (VOC) based solvents for print machine cleaning, degreasing and ink solvents. The 1088 Niagara Street parcel previously contained a series of buildings and a railroad siding. The International Brewing Company and American Gelatine Corp. operated on site in the early 1900s. Gulf Oil Corporation and Hygrade Petroleum Co. were site operators from approximately the 1920s through 1960. Records from 1925 indicate Hygrade Oil Co. used the site as a service station and fuel distribution facility, including multiple petroleum storage and distribution tanks, gasoline pump house(s), and a tank wagon loading house which abutted the current 1050 Niagara Street building. The buildings were razed sometime during the 1960s. Site Geology: The surface soil on the site is characterized as Urban Land, consisting of level to gently sloping land with 80 percent or more of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. The redeveloped 1088 Niagara Street parcel contains extensive fill with depths up to 35 feet below ground surface, and in some instances down to top of bedrock. The subsurface soil/fill characteristics vary. Distinct layers include crushed concrete, stone, gravel, sandy lean clay layers, and fill with varying amounts and depths of material (i.e., soil, brick, concrete, foundry sand, metal and other debris). The soil below the existing building at 1050 Niagara Street parcel consists of mainly native soils down to bedrock. The native soil is characterized as a lean silty clay and varies in thickness from 9

1050-1088 NIAGARA STREET SITE (Continued) **S113813704**

feet to 21 feet. Bedrock: The site is situated over the Onondaga formation limestone. Limestone bedrock was encountered about 35 to 40 feet below the surface. Hydrogeology: Groundwater depth is approximately 25 feet below ground surface. Based upon area topography and proximity to the Niagara River, the groundwater generally flows to the west/northwest toward the Black Rock Canal/Niagara River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the primary contaminants of concern were degraded petroleum products in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the control the potential for coming in contact with residual contamination at the site."

Town:	Buffalo (c)
Record Added Date:	05/24/2013
Record Updated Date:	10/03/2023
Update By:	AECAPRIO
Site Description:	"Location: The 1050-1088 Niagara Street site is an approximately 2.7-acre site, located in an urban area, at 1050-1088 Niagara Street in the City of Buffalo, Erie County. Site Features: The site is comprised of two adjoining parcels identified as 1050 and 1088 Niagara Street. Steep embankments, up to 20 feet in height, define the northern and western perimeter of the site. The 1050 Niagara Street parcel is a renovated pre-existing building and parking lot. The 1088 Niagara Street parcel contains a newly constructed building for commercial use and a parking lot. The remaining flat area was paved with asphalt for tenant parking. A vegetated soil cover was placed on the embankments. Current Zoning and Land Use: The site is currently zoned M1 Light Industrial. Current land use consists of office space at 1050 Niagara Street and commercial and residential at the 1088 Niagara Street building. Past Use of the Site: The 1050 Niagara Street parcel has a history of commercial and manufacturing operations dating back to 1889. The parcel was used for commercial printing businesses from approximately 1930 through 2000. Historic Sanborn records indicate that two 25,000-gallon tanks, most likely containing fuel oil and/or printing related solvents, were located in the basement of the building. Lithographic printing operations historically used volatile organic compound (VOC) based solvents for print machine cleaning, degreasing and ink solvents. The 1088 Niagara Street parcel previously contained a series of buildings and a railroad siding. The International Brewing Company and American Gelatine Corp. operated on site in the early 1900s. Gulf Oil Corporation and Hygrade Petroleum Co. were site operators from approximately the 1920s through 1960. Records from 1925 indicate Hygrade Oil Co. used the site as a service station and fuel distribution facility, including multiple petroleum storage and distribution tanks, gasoline pump house(s), and a tank wagon loading house which abutted the current 1050 Niagara Street building. The buildings were razed sometime during the 1960s. Site Geology: The

1050-1088 NIAGARA STREET SITE (Continued) **S113813704**

surface soil on the site is characterized as Urban Land, consisting of level to gently sloping land with 80 percent or more of the soil surface covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. The redeveloped 1088 Niagara Street parcel contains extensive fill with depths up to 35 feet below ground surface, and in some instances down to top of bedrock. The subsurface soil/fill characteristics vary. Distinct layers include crushed concrete, stone, gravel, sandy lean clay layers, and fill with varying amounts and depths of material (i.e., soil, brick, concrete, foundry sand, metal and other debris). The soil below the existing building at 1050 Niagara Street parcel consists of mainly native soils down to bedrock. The native soil is characterized as a lean silty clay and varies in thickness from 9 feet to 21 feet. Bedrock: The site is situated over the Onondaga formation limestone. Limestone bedrock was encountered about 35 to 40 feet below the surface. Hydrogeology: Groundwater depth is approximately 25 feet below ground surface. Based upon area topography and proximity to the Niagara River, the groundwater generally flows to the west/northwest toward the Black Rock Canal/Niagara River. "

Env Problem:	"Remediation at the site is complete. Prior to remediation the primary contaminants of concern were degraded petroleum products in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the control the potential for coming in contact with residual contamination at the site."

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated

SALE NIAGARA INC (Continued) **1000206819**

Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

NOW AND NEXT WEEK. THEY ARE
TRYING TO GET THE BACKUP POWER GOING FIRST. THE CONTAMINATION LEVEL OF THE PCB OIL IS 550,000 PPM
PCB'S. AN ORDER WAS APPARENT IN THE AREAS OF THE SPILLAGE. GE, WHO RECENTLY REPAIRED THE UNIT, IS
RESPONSIBLE FOR THE SPILL BECAUSE THE SPILL CAME FROM AN IMPROPER REPAIR. GE, ACCORDING TO DAN
BENTIVOGLI, AGREES AND THEY WILL COMPLETE THE REMEDIATION. MR. BENTIVOGLI SAID THAT THEY WILL
SUBMIT A PLAN OF THE WORK THEY INTEND ON HAVING DONE SOMETIME NEXT WEEK. THE TRANSFORMER IS TO BE
REMOVED IN APPROX 6 MONTHS ONCE THE BID PROCESS TO REMOVE IT IS FINAL.
12/5/00 LINDA SCOTT FROM OP
TECH CALLED AND SAID THAT THE PANELS WERE TAKEN OFF THE BUSBAR AND EVERYTHING WAS WIPED DOWN. THE
TRANSFORMER WAS WIPED DOWN AND THE SPILL PADS ON THE ROOF WERE CHANGED. THE BASEMENT WAS ALSO WIPED
DOWN. THEY ARE CONSIDERING WHAT NEEDS TO BE DONE AT THE BASEMENT CEILING. THEY MAY EPOXY OR CHIP
OUT THE CONTAMINATION. GE IS TO REPLACE THE INSULATION AFTER OP TECH IS DONE WITH THEIR CLEANUP.
12/7/00 DAN BENTIVOGLI CALLED AND UPDATED THIS OFFICE ON THE STATUS OF THE REMEDIATION. HE SAID
THAT OP TECH HAS COMPLETED ALL THE WORK THEY CAN RIGHT NOW. THEY ARE LETTING THE CEILING IN THE
BASEMENT LEAK AND THEN WILL CHIP IT OUT THEN EPOXY IT. THEY WILL DO THIS WORK SOME TIME NEXT WEEK.
THE ELECTRICAL BUSBARS AND RAILS IN THE DUCT WILL HAVE THE INSULATION REMOVED BY NEXT TUESDAY BY
GE. DAN SAID THEY WILL THEN GET THE TRANSFORMER RUNNING AGAIN. HE WILL SUBMIT A REPORT NEXT WEEK.
12/28/00 MARTY BORZAK WITH BSA CALLED AND SAID THAT DAN BENTIVOGLI HAS RETIRED. MARTY BORZAK WILL
BE THE CONTACT NOW. HE REQUESTED AN ON SITE MEETING TO DECIDE ON WIPE SAMPLE LOCATIONS. WE AGREED
TO INCLUDE THE NYSDOH IN THIS MEETING. 1/3/00 FG, CAMERON OCONNOR - NYSDOH, MARTY BORZAK, SAL
LOTEMPIO - BSA AND LINDA SCOTT - OP TECH, MET ON SITE AND DECIDED ON WIPE SAMPLE LOCATIONS. THERE
WILL BE ONE TAKEN INSIDE THE BUS BAR, 6 IN THE BASEMENT AND 2 ON THE 1ST FLOOR, ONE ON THE FLOOR
AND ONE ON THE PANEL. MR. LOTEMPIO SAID THAT THE TRANSFORMERS WILL BE REPLACED IN AUGUST OR
SEPTEMBER 2001. AT THAT TIME, THE ROOF AND DRAIN WILL BE REMEDIATED.
1/9/01 RECD WIPE SAMPLES FROM
BSA. THREE OF THE SAMPLES WERE ABOVE 100 UG/WIPE AND FOUR WERE BELOW. 1 OUTSIDE COVER 1ST FLOOR 512
UG/WIPE 2 FLOOR IN FRONT OF BUSBAR 594 3 INSIDE BUSBAR 949 4 CRACK#3 (BASEMENT) 5.1 5 INSIDE AIR
VENT 7.0 6 TOP OF HIGHER AIR VENT 6.0 7 TOP OF LOWER AIR 17.4 FG SPOKE TO LINDA SCOTT WITH OP TECH
WHO SAID SHE WILL TRY TO CLEAN AT #'S 1,2 & 3 AND RESAMPLE. 8/30/01
MARTY BORYZAK WITH BSA CALLED
AND SAID THAT THEY WILL BEGIN WORK ON THE TRANSFORMERS. HE WILL SENT OVER A WORK PLAN FOR THE
DRAINING AND REMOVAL OF THE TRANSFORMERS THEMSELVES. A REMEDIATION PLAN FOR THE ROOF FLOOR AND

BUFFALO SEWER AUTHORITY WASTEWATER TREATMENT PLANT (Continued) **U003317934**

DRAIN WILL BE SUBMITTED AT A LATER DATE. 8/31/01 THE WORK PLAN FOR THE REMOVAL OF THE TRANSFORMERS
HAS BEEN SUBMITTED. BSA WILL NOTIFY JOHN OTTO WHEN WORK WILL BEGIN. BSA WILL SUBMIT THE WORK PLAN
FOR THE ROOF REMEDIATION BY 9/5/01. 09/07/01 JFO ON SITE WITH MARTY BORYZAK. HE SHOWED ME WHERE THE
PROBLEM IS AND EXPLAINED WHAT THEY ARE GOING TO DO. THEY WILL BE REMOVING THE TRANSFORMERS NEXT
WEEK. THEY WILL THEN REMOVE THE STONE AND FLOOR DOWN TO THE CONCRETE. AFTER THIS IS COMPLETE THEY
WILL EXCAVATE AROUND THE DOWNSPOUT. 09/14/01 JFO ON SITE MET WITH MARTY BORYSZAK AND WAYNE CAMERON
OF R&D ENGINEERING. THE ROOF FLOOR IS BEING REMOVED AND PLACED IN PLASTIC BAGS FOR DISPOSAL IN THE
ROLLOFF ON SITE. WHEN IT IS REMOVED THEY WILL TAKE SWIPE TESTS FROM THE CONCRETE. 09/20/01 JFO CALL
FROM MARTY BORYSZAK. 80% OF THE SWIPE TESTS FAILED FOR PCB'S. HE WANTS TO MEET MONDAY THE 24TH @
10:00 WITH FG AND REPRESENTATIVES FROM STERLING ENVIRONMENTAL AND R & D ENGINEERING. STERLING AND
R&D WILL PRESENT OPTIONS TO BSA. MARTY B. WANTS TO BE SURE THEY ARE ACCEPTABLE TO DEC. 09/24/01 JFO
MEETING WITH REPS. FROM BSA, FERGUSON ELECTRIC, R&D & STERLING. SINCE THIS IS A RESTRICTED AREA
THAT GETS VERY LITTLE TRAFFIC, MR LANG OF FURGUSON ELECTRIC WANTS TO INCAPSULATE THE CONTAMINATED
FLOOR. I WILL CONVEY THIS TO PJB AND MLD AND GET BACK TO HIM TODAY OR TOMORROW WITH AN ANSWER.
OPTION 2, WILL BE TO TRY TO CLEAN THE FLOOR AGAIN TO REDUCE THE PCB LEVELS BUT THIS MAY SPREAD THE
CONTAMINATION TO CLEAN AREAS ON THE FLOOR. 09/25/01 JFO SPOKE WITH MLD. HE SAID IF THE BSA FOLLOWED
THE TSCA REQUIREMENTS IT WOULD NOT BE NECESSARY TO DO FURTHER WORK ON THE FLOOR OF THE ROOF. HE
WILL CONTACT MR LANG TODAY AND EXPLAIN THIS TO HIM. I SPOKE WITH MARTY BORYSZAK OF BSA AND INFORMED
HIM. NOW THEY WILL BE RINSING THE DOWN SPOUT WITH A SOLVENT TO CLEAN IT AND THEN RINSE WITH WATER.
THEY WILL BE RECOVERING THE SOLVENT AND WATER AS THEY RINSE. EXCAVATION OF THE SOIL WILL TAKE PLACE
WHEN THE DRAIN IS CLEAN. MARTY B WILL NOTIFY ME WHEN THE WORK WILL BEGIN. 09/25/01 MLD SPOKE WITH
ANDREW ENGLISH, BILL YEMAN AND DAVID GREENLAW (EPA-TSCA) AND CONCLUDED THAT THE CLEANUP RESULTS
PROVIDED BY BSA (9/24/01) ARE HIGHER THAN EPAs PCB SPILL CLEANUP POLICY. HOWEVER, EPA DOES GIVE
WAIVERS ON ROOFTOPS ETC. WHERE EXPOSURE IS LIMITED. THEREFORE, MLD CALLED TIM LANG OF FERGUSON
ELECTRIC AND EXPLAINED THAT STERLING ENV. MUST CERTIFY THAT THEIR REMEDIATION EFFORT IS IN
COMPLIANCE WITH EPA TSCA POLICY (PART 761.61...). ONCE THEY FORWARD EPA'S CONCURRENCE THEN DEC WILL
BE FINISHED WITH THE ROOF PORTION OF THE SPILL. LANG WILL DISCUSS WITH WAYNE CAMERON (STERLING).
MLD TELCON WITH WAYNE CAMERON. HE UNDERSTANDS THAT STERLING WILL CONTACT EPA AND GET WAIVER. HE
WILL FORWARD CONCURRENCE AND CERTIFICATION REPORT TO OUR ATTENTION.

BUFFALO SEWER AUTHORITY WASTEWATER TREATMENT PLANT (Continued) **U003317934**

Remarks:	10/22/01 JFO REC'D A COPY OF THE WAIVER REQUEST FROM THE BSA TO EPA DATED OCT 18,2001. 05/29/02 JFO CALL FROM DAN KOKEMAN OF R&D ENGINEERING. THEY WILL BE DIGGING TODAY AND TOMORROW. 06/07/02 JFO ON SITE THE SOIL IS REMOVED AND THE HOLE LOOKS OK NO ODORS. THEY WILL SAMPLED THE EAST WALL AND SOUTH WALL FOR PCB'S, NO SAMPLES FOR THE NORTH AND WEST WALLS THEY ARE CONCRETE OR THE BOTTOM IT IS BEDROCK. RESULTS TO FOLLOW. 07/09/02 JFO REC'D THE PCB REPORT: THE EAST WALL TOTAL PCB 1ppm THE SOUTH WALL TOTAL PCB <0.1ppm NEED RECEIPTS TO CLOSE 08/08/02 JFO CALL TO WAYNE CAMERON OF STERLING. I TOLD HIM WE NEED THE RECEIPTS. 08/12/02 JFO RECEIVED THE DISPOSAL RECEIPT FOR 7.5 TONS OF PCB CONTAMINATED SOIL. NO FURTHER ACTION REQUIRED. CLOSED TRANSFORMER FAILED ON ROOF OF SETTLE WASTE WATER BUILDING, SOME OIL MAY HAVE ENTERED A STORM DRAIN TO THE NIAGARA RIVER

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
CEDRI is a web application used by EPA programs and various stakeholders to manage environmental data transmitted to EPA in order to meet EPA's reporting requirements.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D005
Waste Description:	Barium
Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent

RICH PRODUCTS CORP (Continued) **1004760583**

Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P106
Waste Description: Sodium Cyanide (Or) Sodium Cyanide Na(Cn)

Waste Code: P119
Waste Description: Ammonium Vanadate (Or) Vanadic Acid, Ammonium Salt

Waste Code: U012
Waste Description: Aniline (I,T) (Or) Benzenamine (I,T)

Waste Code: U196
Waste Description: Pyridine

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was FG 4/2/97 SITE VISIT. SITE IS AN EXISTING SPILL. OWNER IS G&G PETROLEUM. MET MICHAEL GEIGER ON SITE, STATION OWNER. HE SAID CARMEN COSTA IS CLEANING UP SOIL STAGED BEHIND STATION. SOIL PILE IS MASSIVE AND LOOKS VERY OLD. DOES NOT LOOK LIKE ANY WORK HAS BEEN DONE ON SITE FOR A LONG TIME. WENT TO SPEAK TO THE CALLER, ARTHUR SMITH. HE SAID THAT GASOLINE WAS RUNNING OFF THE PILE THAT BUTTS UP ALONG THE BACK OF HIS PROPERTY. HIS CHILDREN WERE IN THE YARD PLAYING. mR. SMITH SAID THAT HIS CHILDREN'S CLOTHES SMELLED LIKE GASOLINE WHENEVER THEY WENT OUT

PRATT AND LAMBERT (Continued) **S102175298**

TO PLAY. HE SAID HE MAY CALL CALL 4 ACTION BECAUSE HE IS CONCERNED ABOUT HIS CHILDREN'S WELFARE AND HIS PROPERTY. HE IS UNHAPPY ABOUT A SHED BEING PUT UP ON THE SOIL PILES. 4/3/97 SITE REFERRED TO SPILL # 9400660. SITE CAN BE CLOSED.

Remarks: CALLER STATES THAT CONTAMINATED SOIL IS BEHIND HIS PROPERTY AND IS RUNNING OFF INTO HIS PROPERTY CALLER STATED THAT MOBIL REPLACED UST'S LAND THE SOIL WAS AFFECTED AT THAT TIME

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

990 NIAGARA STREET (Continued) **S120706196**

Record Updated Date: 12/08/2023
Update By: AECAPRIO
Site Description: "Location: The 990 Niagara Street site is an approximately 1.05-acre site, located in a highly developed urban area, at 990 Niagara Street in the City of Buffalo, Erie County. The site is bordered by Niagara Street to the east, commercial and industrial properties to the north, an electrical substation to the south, and railroad tracks to the west. Site Features: The site is currently improved with a two-story commercial building with asphalt, concrete and gravel covered areas north of the building and vegetated areas to the east and west. Zoning and Land Use: The site is zoned M1 Light Industrial District and is currently vacant. The City of Buffalo is in the process of revising the building and zoning ordinances and the anticipated new zoning for the site is Urban Core (N-1). Urban Core areas are described as mixed-use centers of high intensity in strategic locations on the edges of downtown or proximate light rail, and often featuring mid-rise buildings. Past Use of the Site: Historical site uses include manufacturing and automotive repair facilities. Past site occupants include Hewitt Rubber, Buffalo Niagara Hudson Company, Buffalo General Electric Company, International Railway Co., Multiform Dessicants and Trico Products Corp. Site Geology and Hydrogeology: Subsurface soil/fill is generally fill material consisting of brick and glass fragments, sand, gravel, and native sandy lean clay, or combinations of silt and sand, to depths of at least 16 feet below ground surface (fbgs). Groundwater flows in the westerly direction towards the Niagara River, located approximately 150 feet west of the site. "
Env Problem: "Nature and Extent of Contamination: Based on investigations completed to date, contamination at the site consists of metals, semi-volatile organic compounds (SVOCs), and polychlorinated biphenyls (PCBs) above unrestricted soil clean up objectives(USCOs). A Remedial Investigation (RI) conducted in 2018 consisted of surface soil, subsurface soil/fill, and groundwater investigation. Soil: Metals detected in soil above unrestricted SCOs included arsenic up to 45 parts per million (ppm) (USCO 13 ppm), cadmium up to 53 ppm (USCO 2.5 ppm), mercury up to 1.2 ppm (USCO 0.18 ppm), lead up to 560 ppm (USCO 63 ppm), and zinc up to 1020 ppm (USCO 109 ppm). SVOCs detected in soil above unrestricted SCOs included acenaphthene up to 100 ppm (USCO 20 ppm), anthracene up to 240 ppm (USCO 100 ppm), benzo(a)anthracene up to 260 ppm (USCO 1 ppm), benzo(a)pyrene up to 230 ppm (USCO 1 ppm), benzo(b)fluoranthene up to 280 ppm (USCO 1 ppm), benzo(g,h,i)perylene up to 120 ppm (USCO 100 ppm), benzo(k)fluoranthene up to 61 ppm (USCO 0.8 ppm), chrysene up to 240 ppm (USCO 1.0 ppm), dibenzo(a,h)furan up to 26 ppm (USCO 0.33 ppm), fluoranthene up to 620 ppm (USCO 100 ppm), fluorene up to 120 ppm (USCO 30 ppm), indeno(1,2,3-cd)pyrene up to 140 ppm (USCO 0.5 ppm), naphthalene up to 74 ppm (USCO 12 ppm) phenanthrene up to 690 ppm (USCO 100 ppm) and pyrene up to 500 ppm (USCO 100 ppm). Groundwater: Groundwater samples were analyzed for Volatile Organic Compounds (VOCs), SVOCs, metals, PCBs, and pesticides. Groundwater monitoring identified low level PCBs which were present above their respective Ground Water Quality Standards (GWQS). The concentration of PCBs were up to: 0.67 ppm PCB (GWQS: 0.09 ppm) "
Health Problem: "Access is restricted by a fence. People who enter the site may come into contact with site-related soil and groundwater contamination if they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that

990 NIAGARA STREET (Continued) **S120706196**

	is not affected by this contamination."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Feature Description: The Site Was Purchased By The Navy For An Expansion Of The Sterling Engine Company.
Latitude: 42.9179
Longitude: -78.900299

FUDS Detail as of Jan 2015:
Fiscal Year: 2013
Federal Facility ID: NY9799F1307
RAB: Not reported
NPL Status: Not Listed
Description: The Navy used 1 acre of land at the Naval Industrial Reserve Plant, Sterling Engine Plant, in Buffalo, New York. The building constructed on the site was used for testing marine engines. The buildings on the site are beneficially used by the current owner. There is a vault with three 5,000-gal. tanks in the northern portion of the site. The tanks are no longer in use. The current owner uses the area of the vault

STERLING ENGINE CO (Continued) **1007211355**

(and possibly inside the vault as well) for waste disposal.

History: On 18 June 1943, the Navy purchased 1.00 acre of unimproved land for expansion of the Sterling Engine Company. On 8 February 1960, the site was transferred to the General Services Administration. On 20 October 1960, the GSA conveyed the site to a private party with no restrictive, recapture, or restoration clauses.

7-ELEVEN (Continued) **S117535336**

September 24, 2015 2:17 PM To: Gallego, Francine (DEC) Subject: RE: Spills updates It is acceptable for them repair the cracks, but they still have to be able to pass a tightness test before the tank can be put back into service. So if the repairs don t make the tank tight they will have to look at other options. Andrea Andrea E. Skalski, P.E. Environmental Engineer 2, Division of Environmental Remediation Bulk Storage Unit New York State Department of Environmental Conservation 270 Michigan Ave., Buffalo, NY 14203 P: (716) 851-7220 - F: (716) 851-7252 - andrea.skalski@dec.ny.gov www.dec.ny.gov - - From: Gallego, Francine (DEC) Sent: Thursday, September 24, 2015 11:26 AM To: Skalski, Andrea (DEC) Subject: FW: Spills updates Andrea, Do you have any comments on repairing the tank with 2 2 inch cracks. A picture is attached. They are asking for our input. Thanks, Francine From: Steve Warren [mailto:SWarren@reidpetroleum.com] Sent: Monday, September 21, 2015 11:22 AM To: Gallego, Francine (DEC) Subject: Spills updates Hi Francine, I hope all is well. I have some notes on two open spills. Spill 1410821 - 959 Niagara Street, Buffalo, NY Upon further examination of the line, the line was sound. We then stuck a tank camera into the tank and noticed that it had been damaged. (photo attached). There are 2 2 cracks. We are exploring the option of repairing the tank, but wanted to get your input. Please let me know. Spill 1504606 - 131 West State Street, Olean, NY We have decided to close the tank in place by filling it with a concrete slurry mixture. Time frame is TBD, but that is our plan. Please contact me with any comments, questions, or concerns. Thanks, and have a great day! Steven Warren Reid Petroleum Corp. Service Supervisor Office 716-434-2885 ext 320 Cell 716-512-4223 swarren@reidpetroleum.com 10/20/15 FG REQUESTED AN UPDATE ON THE STATUS FROM STEVE WARREN: From: Gallego, Francine (DEC) Sent: Tuesday, October 20, 2015 2:04 PM To: 'swarren@reidpetroleum.com' Subject: Spill 1410821 959 Niagara St, Buffalo Steve, Please provide an update on the status of the tank repair or closure by November 2, 2015. Please call me if you have any questions. Best Regards, Francine 10/28/15 REID PROVIDED THE FOLLOWING UPDATE: From: Steve Warren [mailto:SWarren@reidpetroleum.com] Sent: Tuesday, October 20, 2015 5:11 PM To: Gallego, Francine (DEC) Subject: RE: Spill 1410821 959 Niagara St, Buffalo Hi Francine, We have uncovered the tank top and located the damaged area. The repair company has been notified and, while we do not have a time frame, they will be here soon. Let me know if you have any more questions. -Steve 10/29/15 REID PROVIDED THE FOLLOWING UPDATE: From: Steve Warren [mailto:SWarren@reidpetroleum.com] Sent: Wednesday, October 28, 2015 3:51 PM To: Gallego, Francine (DEC) Subject: RE: Spill 1410821 959 Niagara St, Buffalo The contractor quoted a start date of 11/3. If that changes, I will let you know. Steven Warren Reid Petroleum Corp. Service Supervisor Office 716-434-2885 ext 320 Cell 716-512-4223 swarren@reidpetroleum.com 12/28/15 REID PROVIDED THE FOLLOWING UPDATE: I have attached the proposed boring locations for the spill at 959 Niagara Street, Buffalo, NY. The drilling was scheduled for today, however, unfortunately due to an illness; the drilling is now scheduled for 1/7 or 1/8. Please let me know of any questions or concerns. Thanks, Francine. I hope you have a great day. Steven Warren Reid Petroleum Corp. Service Supervisor Office 716-434-2885 ext 320 Cell 716-512-4223 swarren@reidpetroleum.com 1/29/16 ERIC WARREN WITH NATURES WAY PROVIDED THE ANALYSIS FROM THE BORINGS. NONE OF THE RESULTS EXCEED CP51. THE UST WILL BE CLOSED IN PLACE. 2/11/16 STEVE WARREN INDICATED THE UST WILL BE CLOSED IN PLACE ON 2/22/16. NO

7-ELEVEN (Continued) **S117535336**

FURTHER WORK BY SPILLS IS REQUIRED. THE SPILL IS CLOSED. ELECTRONIC FILE ONLY.

Remarks: Failed tank tightness test. Lines tested with tank. They think the problem is the piping. They have shut down the tank and will retest.

WIESMORE REQUESTING REMEDIATION. A RESPONSE IS DUE 9/30/99. 12/13/00 LTR SENT TO MR. WIESMORE REQUESTING A RESPONSE TO THE 9/9/99 LTR BY 12/20/99. 1/31/00 LTR SENT TO MR. WIESMORE REQUESTING REMEDIATION OR SUBMISSION OF A SIGNED RIGHT OF ENTRY BY 2/18/00. 7/11/00 RECEIVED RIGHT OF ENTRY FROM CAROL WIESMORE, PROPERTY OWNER. RECEIVED A COPY OF THE DEED WHICH INDICATES THAT TEXACO WAS THE PREVIOUS OWNER AND OPERATOR. CONTACTED MR. ROGER HADLEY OF TEXACO, (713)752-3162, MANAGER ENVIRONMENTAL PROJECT MANAGEMENT SERVICES, POB 1404, HOUSTON, TEXAS 77251. HE SAID TO SEND HIM THE INFORMATION WE HAVE AND HE WILL SEARCH HIS RECORDS FOR INFORMATION. I TOLD HIM WE HAVE THE SIGNED RIGHT OF ENTRY. HE SAID HE WILL LOOK AT HIS RECORDS AN OURS AND GET BACK TO US ON REMEDIATION. LTR SENT REQUESTING HIS RESPONSE BY 8/2/00. 7/19/00 RECD THE LCS PHASE I/II WHICH SHOWS SOILS AND BEDROCK GROUNDWATER CONTAMINATION. NO ANALYTICAL WAS COMPLETED. COPY OF THE

SOIL BORINGS (Continued) **S104191906**

REPORT WAS SENT TO ROGER HADLEY WITH TEXACO. 8/7/00 RECD TEXACO RESPONSE. THEY INDICATED THAT THEY WILL COMPLETE A SITE ASSESSMENT AND EXPECT A WORK PLAN TO BE SUBMITTED BY EARLY SEPTEMBER 2000. 9/21/00 JUDSON POLIKOFF WITH TEXACO CALLED AND SAID THAT MRS. WIESMORE RECEIVED THE RIGHT OF ENTRY BUT HASN'T RETURNED IT TO THEM YET. HE SAID TEXACO IS READY TO BEGIN WORK AS SOON AS SHE DOES. 10/20/00 RECD THE SIGNED AGREEMENT WITH TEXACO. CAROL WIESMORE SIGNED IT AND IT NOW NEEDS TEXACO'S SIGNATURE. THIS DOCUMENT WAS MAILED TO TEXACO AND THEY WILL SIGN IT AND PROVIDE AN INVESTIGATION PLAN FOR THE SITE. 11/6/00 RECD A LTR FROM TEXACO STATING THAT THEY SIGNED THE AGREEMENT AND RETURNED IT TO THE WIESMORE'S. TEXACO WILL PROVIDE A WORK PLAN BY 11/6/00. 12/12/00 FG SPOKE TO DOUG LIDDELL WITH GES. HE SAID THAT HE BEGAN THE SITE INVESTIGATION YESTERDAY. THEY COMPLETED A BORING INTO ROCK AND DIDN'T FIND WATER AFTER DRILLING 35 FT. THEY LET THE BORING SIT OVERNIGHT AND DISCOVERED WATER AT 18 FT WHEN THEY CHECKED IT THIS MORNING. 2/20/01 JUDSON POLIKOFF CALLED AND SAID THAT HE WILL HAVE AN UPDATE REPORT IN BY THE END OF NEXT WEEK. 3/7/01 RECD SITE ASSESSMENT. 11 BORINGS COMPLETED ON SITE. 3 BEDROCK WELLS AND ONE OVERBURDEN WELL INSTALLED. THE ONLY STARS EXCEEDANCE FOR SOIL IS AT SB6. ALL 4 WELLS HAVE SLIGHT EXCEEDANCES OF STARS/GROUNDWATER STANDARDS. TEXACO HAS PROPOSED TO SAMPLE THE WELLS QUARTERLY FOR A YEAR TO DETERMINE IF THESE LEVELS REMAIN STABLE. 11/03/01: MF FOR FG, LETTER TO TEXACO REQUESTING QUARTERLY MONITORING, RESPONSE BY 12/3/01. 11/20/01: MF FOR FG RECEIVED QUARTERLY MONITORING REPORT. GW MW'S SAMPLED 6/28/01, MW'S-3,4,5 & 6 WERE DRY. THE REST IN TOTAL 8021 PPB. MW#3 - 870.5 MW#4 - 737.4 MW#5 - 1114.3 12/17/01: MF FOR FG RECEIVED QUARTERLY REPORT. SAMPLING DONE 10/1/01. IN TOTAL 8021, PPB. MW#3 - 700 MW#4 - 1047 MW#5 - 1394 MW#6 - DRY 06/11/02: MF FOR FG LETTER TO RP REQUESTING SUBMISSION OF THE QUARTERLY REPORT BY 7/3/02. CHEVRON HAS TAKEN OVER TEXACO & THE NEW CONTACTS ARE: MR. W.D. HOWARD MS. CARON S. KOLL CHEVRON ENV. MANAGEMENT COMPANY BLASLAND BOUCK & LEE INC. 2300 WINDY RIDGE PKY, SUITE 800S 6723 TOWPATH ROAD ATLANTA, GEORGIA 30339-5673 SYRACUSE, N.Y. 13214-0066 770-984-3085 FAX 770-984-4107 315-446-2570 x 148 07/05/02: MF RECEIVED 7/1/02 BBL'S LETTER. BBL IS IN THE PROCESS OF SECURING ALL SITE FILES SINCE SITE WAS RECENTLY TRANSFERRED FROM TEXACO TO CHEVRON. TWO ROUNDS OF SAMPLING WILL BE PERFORMED THIS YEAR (2002). 08/23/02: MF T/C CARON KOLL, SHE HAS 2 REPORTS TO BE SENT TO US. MW#6 DRY. WILL GET REPORTS TO US IN 2 WEEK. 09/17/02: MF T/C CARON KOLL, REPORT COMPLETED. ADDITIONAL GW SAMPLED. BED ROCK VERY SHALLOW. MW#6 DRY OTHER 3 MW'S SCREENED AT DIFFERENT DEPTHS. MW#3 - 510 PPB MW#4 - 332 PPB MW#5 - 972 REPORT SHORTLY. WILL RESAMPLE IN 2 WEEKS. 10/11/02: MF RECEIVED 10/8/02 REPORT. MW'S SAMPLED 6/19/02, IN PPB TOTAL, 8021. MW#3 - 700 MW#4 - 332 MW#5 - 972 MW#6 - NS (DRY) NEXT SAMPLING SCHEDULED 9/02. 5/5/03 SAIC HAS SUBMITTED A LETTER INDICATING THEY ARE THE CONTRACTOR FOR THIS SITE AND ALL CORRESPONDENCE SHOULD BE DIRECTED TO THEM. 11/26/03 SAIC SUBMITTED THE QUARTERLY REPORT FOR THIS SITE. SAMPLES WERE COLLECTED FROM THE ONSITE GROUNDWATER WELLS ON 7/29/03. MW3 EXCEEDED STANDARDS FOR BENZENE, ISOPROPYLBENZENE, AND NPROPYLBENZENE. MW4 EXCEEDED STANDARDS FOR BENZENE, TOLUENE, ETHYLBENZENE, XYLENES, NBUTYLBENZENE, SECBUTYLBENZENE ISOPROPYLBENZENE, NPROPYLBENZENE AND 124TRIMETHYLBENZENE. MW 5 EXCEEDED STANDARDS FOR BENZENE, TOLUENE, ETHYLBENZENE, XYLENE, SEC BUTYLBENZENE, ISOPROPYLBENZENE, NPROPYLBENZENE, 124TRIMETHYLBENZENE, AND M,PXYLENE. MW6 WAS CLOSED IN PLACE AND A NEW WELL MW6A WAS INSTALLED. MW6A HAD NO CONTAMINATION DETECTED ABOVE STANDARDS. 1/30/04 SAIC SUBMITTED THE QUARTERLY REPORT FOR THE SITE. THE GROUNDWATER SAMPLES WERE COLLECTED ON 10/21/03. THE

SOIL BORINGS (Continued) **S104191906**

RESULTS EXCEEDED GROUNDWATER STANDARDS IN MW3, MW4 & MW5. 7/15/04 RECD THE SAIC LETTER REPORT REQUESTING SITE INACTIVATION. THE GROUNDWATER RESULTS SLIGHTLY EXCEED GROUNDWATER STANDARDS. NONE OF THE SOIL SAMPLES EVER EXCEEDED TAGM 4046 LEVELS. THE SITE IS INACTIVE WITH NO FURTHER WORK REQUIRED.

Remarks: UPON INTRUSIVE INVESTIGATION SOIL CONTAMINATION WAS DETECTED. GROUND WATER CONTAMINATION MAY ALSO BE PRESENT.

DEC Memo:	10/15/2012- GPS: REC'D COPY OF PHASE II REPORT FROM PANAMERICAN FOR REVIEW VIA EMAIL. DISCUSSED WITH P. GORTON FROM PA. THEY NEED TO KNOW IF DEC WILL REQUIRE ADDITIONAL REMEDIATION ON SITE SINCE NO ADDITIONAL PETROLEUM HANDLING WAS CONDUCTED ON SITE SINCE FORMER SPILL #9906604 WAS CLOSED IN 2004 WITH NO SOIL EXCEEDANCES AND ONLY SLIGHLY ELEVATED GW VALUES. 10/16/12 TDJ SENT E-MAIL TO PETE AT PANAMERICAN STATING THAT FURTHER WORK IS NOT WARRANTED DUE TO THE LACK OF CONCLUSIVE GEOPHYSICAL SURVEY RESULTS AND THE SAMPLE RUN WITH ELEVATED PETROLEUM CONTAMINANTS WAS NEAR THE SIDEWALK. THE SITE WILL REMAIN INACTIVE AND THE DEPARTMENT WILL NOT REQUIRE FURTHER WORK. 06/06/14 TDJ SITE WAS CLASSIFIED AS INACTIVE FROM FORMER SPILL #9906604. NO WORK WILL BE REQUIRED UNLESS PROPERTY DEVELOPMENT LEADS TO SOIL REMOVAL. NO FURTHER ACTION FILE CLOSED AS INACTIVE
Remarks:	CALLER STATES THAT BORINGS TAKEN FROM INACTIVE SITE #9906604 HAD CONTAMINANT HITS OVER REGULATORY LIMITS. PHASE II WILL BE SUBMITTED.

Date Record Added: 01/26/2016
Date Rec Updated: 03/09/2023
Updated By: BWRUNG
Site Description: "Location: The 1318 Niagara Street Site is located in an urban area in the City of Buffalo, Erie County. The site is across from the intersection of Niagara Street and Lafayette Avenue. Site Features: The site is a vacant lot that slopes to the west, and is covered with 2-3 inches of crushed stone. The site is bordered to the west by Penn Central Railroad and beyond that by NYS I-90 and the Black Rock Canal. Current Zoning and Land Use: The site is currently inactive, and is zoned for commercial use. The surrounding parcels are a rail corridor to the west, and mixed commercial/residential properties along Niagara Street to the north, south, and east. The nearest residential area is 150 feet east of the site. Past Use of the Site: From 1909 to 1987 the site was used as a brewery, and from 1987 to 2004 utilized by private owners for unknown purposes. Prior uses that appear to have led to site contamination include two 20,000 gallon underground storage tanks (USTs), a furnace pit, and storage of 55 gallon drums containing PCBs and waste oil. In 2004 the City of Buffalo obtained the property through tax foreclosure. Demolition of the site buildings began in May of 2006. Residual oil in the USTs was removed using a vacuum truck and the USTs were excavated in February 2007. The tanks were staged and subsequently removed from the site in 2010. Upon UST excavation, it was found that one of the USTs had leaked into the subsurface, impacting the surrounding soil. As a result of the UST leak, the New York State Department of Environmental Conservation assigned Spill Number 0651726 to the site. Underground piping associated with the USTs was also discovered and removed prior to 2009. A former furnace was discovered in January 2007. The furnace contained PCB sludge (23,700 mg/kg) and TCLP organics/metals. The furnace and sludge were subsequently removed. Site Geology and Hydrogeology: The site is overlain by 8-10 feet of fill underlain by 8-12 feet of silty clay to limestone bedrock.

BUFFALO CITY OF - FORMER STROH BREWERY (Continued) **1004762974**

Shallow groundwater is at 20-25 feet, and generally flows to the west southwest. "

Env Problem: "Nature and Extent of Contamination On-site Areas: Based upon investigations conducted to date, the primary contaminant of concern is polychlorinated biphenyls (PCBs) in soil. The only metals in soil exceeding commercial SCOs are copper (8,770 ppm) and zinc (70,000 ppm) at MW-03, 18-20 feet below ground surface. The SVOC indeno(1,2,3-cd)pyrene was noted in two samples (530 and 600 ppb), slightly exceeding the unrestricted SCO of 500 ppb. No VOCs exceeded restricted residential in soil. On-site groundwater also indicated the presence of PCBs at trace levels, in addition to VOCs and metals. Soil - In general, soil contamination is limited to PCBs in fill but extends to native clay at depths of 12 feet below ground surface (fbgs) or greater in the former UST and furnace pit areas. Based on sample results from further investigation in 2015, PCB-contaminated fill material from 1 ppm to 1300 ppm still remains in various areas of the site. The known areas of elevated PCB soil contamination (>50 ppm) are located south and east of Excavation Area C, south of Excavation Area A, north of Excavation Area D, and on the south wall of Excavation Area B. Groundwater - Groundwater contamination slightly exceeding groundwater standards was noted in monitoring wells MW-03, MW-04, and MW-05 and consisted of several volatile organic compounds (VOCs) and associated degradation products (e.g., trichloroethylene at 350 ppb). PCB impacts to groundwater were limited to one well, MW-03, with total PCBs at 1.3 ug/l and 8.7 ug/l respectively, exceeding the AWQSGVs standard of 0.09 ug/l. Off-Site Areas: Soil - Contamination was found off-site at Excavation Area E, located in the sidewalk along Niagara Street adjacent to the northeastern portion of the site. This area was addressed by the IRM and no exceedences of the PCB SCO (1 ppm) were evident in the sidewall and bottom endpoint samples. The final excavation was approximately 295 sq. ft. The excavation was backfilled with crushed stone and the sidewalk repaired. Contamination was also found off-site outside the western fence line on CSX railroad property. PCB concentrations range from 11 to 860 ppm in this area. Groundwater - There is no evidence of site-related contaminated groundwater migrating off-site. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. "

Site Description: "Location: The 1318 Niagara Street Site is located in an urban area

BUFFALO CITY OF - FORMER STROH BREWERY (Continued) **1004762974**

in the City of Buffalo, Erie County. The site is across from the intersection of Niagara Street and Lafayette Avenue. Site Features: The site is a vacant lot that slopes to the west, and is covered with 2-3 inches of crushed stone. The site is bordered to the west by Penn Central Railroad and beyond that by NYS I-90 and the Black Rock Canal. Current Zoning and Land Use: The site is currently inactive, and is zoned for commercial use. The surrounding parcels are a rail corridor to the west, and mixed commercial/residential properties along Niagara Street to the north, south, and east. The nearest residential area is 150 feet east of the site. Past Use of the Site: From 1909 to 1987 the site was used as a brewery, and from 1987 to 2004 utilized by private owners for unknown purposes. Prior uses that appear to have led to site contamination include two 20,000 gallon underground storage tanks (USTs), a furnace pit, and storage of 55 gallon drums containing PCBs and waste oil. In 2004 the City of Buffalo obtained the property through tax foreclosure. Demolition of the site buildings began in May of 2006. Residual oil in the USTs was removed using a vacuum truck and the USTs were excavated in February 2007. The tanks were staged and subsequently removed from the site in 2010. Upon UST excavation, it was found that one of the USTs had leaked into the subsurface, impacting the surrounding soil. As a result of the UST leak, the New York State Department of Environmental Conservation assigned Spill Number 0651726 to the site. Underground piping associated with the USTs was also discovered and removed prior to 2009. A former furnace was discovered in January 2007. The furnace contained PCB sludge (23,700 mg/kg) and TCLP organics/metals. The furnace and sludge were subsequently removed. Site Geology and Hydrogeology: The site is overlain by 8-10 feet of fill underlain by 8-12 feet of silty clay to limestone bedrock. Shallow groundwater is at 20-25 feet, and generally flows to the west southwest. "

Env Problem: "Nature and Extent of Contamination On-site Areas: Based upon investigations conducted to date, the primary contaminant of concern is polychlorinated biphenyls (PCBs) in soil. The only metals in soil exceeding commercial SCOs are copper (8,770 ppm) and zinc (70,000 ppm) at MW-03, 18-20 feet below ground surface. The SVOC indeno(1,2,3-cd)pyrene was noted in two samples (530 and 600 ppb), slightly exceeding the unrestricted SCO of 500 ppb. No VOCs exceeded restricted residential in soil. On-site groundwater also indicated the presence of PCBs at trace levels, in addition to VOCs and metals. Soil - In general, soil contamination is limited to PCBs in fill but extends to native clay at depths of 12 feet below ground surface (fbgs) or greater in the former UST and furnace pit areas. Based on sample results from further investigation in 2015, PCB-contaminated fill material from 1 ppm to 1300 ppm still remains in various areas of the site. The known areas of elevated PCB soil contamination (>50 ppm) are located south and east of Excavation Area C, south of Excavation Area A, north of Excavation Area D, and on the south wall of Excavation Area B. Groundwater - Groundwater contamination slightly exceeding groundwater standards was noted in monitoring wells MW-03, MW-04, and MW-05 and consisted of several volatile organic compounds (VOCs) and associated degradation products (e.g., trichloroethylene at 350 ppb). PCB impacts to groundwater were limited to one well, MW-03, with total PCBs at 1.3 ug/l and 8.7 ug/l respectively, exceeding the AWQSGVs standard of 0.09 ug/l. Off-Site Areas: Soil - Contamination was found off-site at Excavation Area E, located in the sidewalk along Niagara Street adjacent to the

BUFFALO CITY OF - FORMER STROH BREWERY (Continued) **1004762974**

northeastern portion of the site. This area was addressed by the IRM and no exceedences of the PCB SCO (1 ppm) were evident in the sidewall and bottom endpoint samples. The final excavation was approximately 295 sq. ft. The excavation was backfilled with crushed stone and the sidewalk repaired. Contamination was also found off-site outside the western fence line on CSX railroad property. PCB concentrations range from 11 to 860 ppm in this area. Groundwater - There is no evidence of site-related contaminated groundwater migrating off-site. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. "

Site Code: 382479
Site Description: "Location: The 1318 Niagara Street Site is located in an urban area in the City of Buffalo, Erie County. The site is across from the intersection of Niagara Street and Lafayette Avenue. Site Features: The site is a vacant lot that slopes to the west, and is covered with 2-3 inches of crushed stone. The site is bordered to the west by Penn Central Railroad and beyond that by NYS I-90 and the Black Rock Canal. Current Zoning and Land Use: The site is currently inactive, and is zoned for commercial use. The surrounding parcels are a rail corridor to the west, and mixed commercial/residential properties along Niagara Street to the north, south, and east. The nearest residential area is 150 feet east of the site. Past Use of the Site: From 1909 to 1987 the site was used as a brewery, and from 1987 to 2004 utilized by private owners for unknown purposes. Prior uses that appear to have led to site contamination include two 20,000 gallon underground storage tanks (USTs), a furnace pit, and storage of 55 gallon drums containing PCBs and waste oil. In 2004 the City of Buffalo obtained the property through tax foreclosure. Demolition of the site buildings began in May of 2006. Residual oil in the USTs was removed using a vacuum truck and the USTs were excavated in February 2007. The tanks were staged and subsequently removed from the site in 2010. Upon UST excavation, it was found that one of the USTs had leaked into the subsurface, impacting the surrounding soil. As a result of the UST leak, the New York State Department of Environmental Conservation assigned Spill Number 0651726 to the site. Underground piping associated with the USTs was also discovered and removed prior to 2009. A former furnace was discovered in January 2007. The furnace contained PCB sludge (23,700 mg/kg) and TCLP organics/metals. The furnace and sludge were subsequently removed. Site Geology and Hydrogeology: The site is overlain by 8-10 feet of fill underlain by 8-12 feet of silty clay to limestone bedrock. Shallow groundwater is at 20-25 feet, and generally flows to the west

BUFFALO CITY OF - FORMER STROH BREWERY (Continued) **1004762974**

southwest. "

Env Problem: "Nature and Extent of Contamination On-site Areas: Based upon investigations conducted to date, the primary contaminant of concern is polychlorinated biphenyls (PCBs) in soil. The only metals in soil exceeding commercial SCOs are copper (8,770 ppm) and zinc (70,000 ppm) at MW-03, 18-20 feet below ground surface. The SVOC indeno(1,2,3-cd)pyrene was noted in two samples (530 and 600 ppb), slightly exceeding the unrestricted SCO of 500 ppb. No VOCs exceeded restricted residential in soil. On-site groundwater also indicated the presence of PCBs at trace levels, in addition to VOCs and metals. Soil - In general, soil contamination is limited to PCBs in fill but extends to native clay at depths of 12 feet below ground surface (fbgs) or greater in the former UST and furnace pit areas. Based on sample results from further investigation in 2015, PCB-contaminated fill material from 1 ppm to 1300 ppm still remains in various areas of the site. The known areas of elevated PCB soil contamination (>50 ppm) are located south and east of Excavation Area C, south of Excavation Area A, north of Excavation Area D, and on the south wall of Excavation Area B. Groundwater - Groundwater contamination slightly exceeding groundwater standards was noted in monitoring wells MW-03, MW-04, and MW-05 and consisted of several volatile organic compounds (VOCs) and associated degradation products (e.g., trichloroethylene at 350 ppb). PCB impacts to groundwater were limited to one well, MW-03, with total PCBs at 1.3 ug/l and 8.7 ug/l respectively, exceeding the AWQSGVs standard of 0.09 ug/l. Off-Site Areas: Soil - Contamination was found off-site at Excavation Area E, located in the sidewalk along Niagara Street adjacent to the northeastern portion of the site. This area was addressed by the IRM and no exceedences of the PCB SCO (1 ppm) were evident in the sidewall and bottom endpoint samples. The final excavation was approximately 295 sq. ft. The excavation was backfilled with crushed stone and the sidewalk repaired. Contamination was also found off-site outside the western fence line on CSX railroad property. PCB concentrations range from 11 to 860 ppm in this area. Groundwater - There is no evidence of site-related contaminated groundwater migrating off-site. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. "

Site Code: 382479
Site Description: "Location: The 1318 Niagara Street Site is located in an urban area in the City of Buffalo, Erie County. The site is across from the intersection of Niagara Street and Lafayette Avenue. Site Features: The site is a vacant lot that slopes to the west, and is covered with

BUFFALO CITY OF - FORMER STROH BREWERY (Continued) **1004762974**

2-3 inches of crushed stone. The site is bordered to the west by Penn Central Railroad and beyond that by NYS I-90 and the Black Rock Canal. Current Zoning and Land Use: The site is currently inactive, and is zoned for commercial use. The surrounding parcels are a rail corridor to the west, and mixed commercial/residential properties along Niagara Street to the north, south, and east. The nearest residential area is 150 feet east of the site. Past Use of the Site: From 1909 to 1987 the site was used as a brewery, and from 1987 to 2004 utilized by private owners for unknown purposes. Prior uses that appear to have led to site contamination include two 20,000 gallon underground storage tanks (USTs), a furnace pit, and storage of 55 gallon drums containing PCBs and waste oil. In 2004 the City of Buffalo obtained the property through tax foreclosure. Demolition of the site buildings began in May of 2006. Residual oil in the USTs was removed using a vacuum truck and the USTs were excavated in February 2007. The tanks were staged and subsequently removed from the site in 2010. Upon UST excavation, it was found that one of the USTs had leaked into the subsurface, impacting the surrounding soil. As a result of the UST leak, the New York State Department of Environmental Conservation assigned Spill Number 0651726 to the site. Underground piping associated with the USTs was also discovered and removed prior to 2009. A former furnace was discovered in January 2007. The furnace contained PCB sludge (23,700 mg/kg) and TCLP organics/metals. The furnace and sludge were subsequently removed. Site Geology and Hydrogeology: The site is overlain by 8-10 feet of fill underlain by 8-12 feet of silty clay to limestone bedrock. Shallow groundwater is at 20-25 feet, and generally flows to the west southwest. "

Env Problem: "Nature and Extent of Contamination On-site Areas: Based upon investigations conducted to date, the primary contaminant of concern is polychlorinated biphenyls (PCBs) in soil. The only metals in soil exceeding commercial SCOs are copper (8,770 ppm) and zinc (70,000 ppm) at MW-03, 18-20 feet below ground surface. The SVOC indeno(1,2,3-cd)pyrene was noted in two samples (530 and 600 ppb), slightly exceeding the unrestricted SCO of 500 ppb. No VOCs exceeded restricted residential in soil. On-site groundwater also indicated the presence of PCBs at trace levels, in addition to VOCs and metals. Soil - In general, soil contamination is limited to PCBs in fill but extends to native clay at depths of 12 feet below ground surface (fbgs) or greater in the former UST and furnace pit areas. Based on sample results from further investigation in 2015, PCB-contaminated fill material from 1 ppm to 1300 ppm still remains in various areas of the site. The known areas of elevated PCB soil contamination (>50 ppm) are located south and east of Excavation Area C, south of Excavation Area A, north of Excavation Area D, and on the south wall of Excavation Area B. Groundwater - Groundwater contamination slightly exceeding groundwater standards was noted in monitoring wells MW-03, MW-04, and MW-05 and consisted of several volatile organic compounds (VOCs) and associated degradation products (e.g., trichloroethylene at 350 ppb). PCB impacts to groundwater were limited to one well, MW-03, with total PCBs at 1.3 ug/l and 8.7 ug/l respectively, exceeding the AWQSGVs standard of 0.09 ug/l. Off-Site Areas: Soil - Contamination was found off-site at Excavation Area E, located in the sidewalk along Niagara Street adjacent to the northeastern portion of the site. This area was addressed by the IRM and no exceedences of the PCB SCO (1 ppm) were evident in the sidewall and bottom endpoint samples. The final excavation was

BUFFALO CITY OF - FORMER STROH BREWERY (Continued) **1004762974**

	approximately 295 sq. ft. The excavation was backfilled with crushed stone and the sidewalk repaired. Contamination was also found off-site outside the western fence line on CSX railroad property. PCB concentrations range from 11 to 860 ppm in this area. Groundwater - There is no evidence of site-related contaminated groundwater migrating off-site. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. "

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated By:	BWRUNG
Site Description:	"Location: The 1318 Niagara Street Site is located in an urban area in the City of Buffalo, Erie County. The site is across from the intersection of Niagara Street and Lafayette Avenue. Site Features: The site is a vacant lot that slopes to the west, and is covered with 2-3 inches of crushed stone. The site is bordered to the west by Penn Central Railroad and beyond that by NYS I-90 and the Black Rock Canal. Current Zoning and Land Use: The site is currently inactive, and is zoned for commercial use. The surrounding parcels are a rail corridor to the west, and mixed commercial/residential properties along Niagara Street to the north, south, and east. The nearest residential area is 150 feet east of the site. Past Use of the Site: From 1909 to 1987 the site was used as a brewery, and from 1987 to 2004 utilized by private owners for unknown purposes. Prior uses that appear to have led to site contamination include two 20,000 gallon underground storage tanks (USTs), a furnace pit, and storage of 55 gallon drums containing PCBs and waste oil. In 2004 the City of Buffalo obtained the property through tax foreclosure. Demolition of the site buildings began in May of 2006. Residual oil in the USTs was

Actual:
598 ft.

1318 NIAGARA STREET (Continued) **S108925384**

removed using a vacuum truck and the USTs were excavated in February 2007. The tanks were staged and subsequently removed from the site in 2010. Upon UST excavation, it was found that one of the USTs had leaked into the subsurface, impacting the surrounding soil. As a result of the UST leak, the New York State Department of Environmental Conservation assigned Spill Number 0651726 to the site. Underground piping associated with the USTs was also discovered and removed prior to 2009. A former furnace was discovered in January 2007. The furnace contained PCB sludge (23,700 mg/kg) and TCLP organics/metals. The furnace and sludge were subsequently removed. Site Geology and Hydrogeology: The site is overlain by 8-10 feet of fill underlain by 8-12 feet of silty clay to limestone bedrock. Shallow groundwater is at 20-25 feet, and generally flows to the west southwest. "

Env Problem: "Nature and Extent of Contamination On-site Areas: Based upon investigations conducted to date, the primary contaminant of concern is polychlorinated biphenyls (PCBs) in soil. The only metals in soil exceeding commercial SCOs are copper (8,770 ppm) and zinc (70,000 ppm) at MW-03, 18-20 feet below ground surface. The SVOC indeno(1,2,3-cd)pyrene was noted in two samples (530 and 600 ppb), slightly exceeding the unrestricted SCO of 500 ppb. No VOCs exceeded restricted residential in soil. On-site groundwater also indicated the presence of PCBs at trace levels, in addition to VOCs and metals. Soil - In general, soil contamination is limited to PCBs in fill but extends to native clay at depths of 12 feet below ground surface (fbgs) or greater in the former UST and furnace pit areas. Based on sample results from further investigation in 2015, PCB-contaminated fill material from 1 ppm to 1300 ppm still remains in various areas of the site. The known areas of elevated PCB soil contamination (>50 ppm) are located south and east of Excavation Area C, south of Excavation Area A, north of Excavation Area D, and on the south wall of Excavation Area B. Groundwater - Groundwater contamination slightly exceeding groundwater standards was noted in monitoring wells MW-03, MW-04, and MW-05 and consisted of several volatile organic compounds (VOCs) and associated degradation products (e.g., trichloroethylene at 350 ppb). PCB impacts to groundwater were limited to one well, MW-03, with total PCBs at 1.3 ug/l and 8.7 ug/l respectively, exceeding the AWQSGVs standard of 0.09 ug/l. Off-Site Areas: Soil - Contamination was found off-site at Excavation Area E, located in the sidewalk along Niagara Street adjacent to the northeastern portion of the site. This area was addressed by the IRM and no exceedences of the PCB SCO (1 ppm) were evident in the sidewall and bottom endpoint samples. The final excavation was approximately 295 sq. ft. The excavation was backfilled with crushed stone and the sidewalk repaired. Contamination was also found off-site outside the western fence line on CSX railroad property. PCB concentrations range from 11 to 860 ppm in this area. Groundwater - There is no evidence of site-related contaminated groundwater migrating off-site. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. "

Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

SHWS:
Name: CHEMCORE
Address: 1382 NIAGARA STREET
City,State,Zip: BUFFALO, NY 14213
Program: HW
Site Code: 57566
Classification: Site is properly closed - requires continued management.
Region: 9
Acres: 0.460
HW Code: 915176
Record Add: 07/14/2004
Record Upd: 01/09/2024
Updated By: MJCRUDEN
Site Description: "Location: The ChemCore Site is the location of a former chemical wholesale facility located at 1382 Niagara Street in the City of Buffalo, Erie County, NY. Situated on a historically industrial corridor, the Site is in close proximity to residential neighborhoods to the east and a rail corridor to the west with both the Interstate I-190 highway and the Black Rock Canal (which leads from Lake Erie to the Niagara River) farther to the west. West Delevan Avenue, at the north end of the Property, dead-ends at the rail line and is used as a parking area/driveway. South of the Site is the former location of the Garrett Leather Corporation. This adjacent property has a warehouse building with enclosed loading docks at the north end abutting southern boundary of the Site. Site Features: The Site is occupied by a 1,000 square foot groundwater treatment system building on approximately 0.5 acres. All other facilities and buildings associated with the historic Site use (chemical wholesaler) have been demolished and removed. The remaining surface features of the Site are unused are covered by imported crushed stone. Smaller areas of the Site are covered by asphalt parking and driveway areas and various concrete slabs, foundations, and sidewalks. A large storm sewer line passes beneath the adjacent street, through the Site and discharges into the Black Rock Canal. Current Zoning and Land Use: The Site is currently inactive and is zoned for commercial use. The Site is in close proximity to residential neighborhoods with mixed commercial properties to the north, south, and east. The land use must be in conformance with the deed restriction and the associated site management plan. Past Use of the Site: Since its original development, the property has been used for commercial operations. Initial operation of the property involved supplying acids to metal fabrication industries. In the early 1930s, operations included a chemical handling facility, with several business and commercial tenants operating from rented portions of the former Site building. During the 1950s, operations involved sales of chlorinated solvents for dry cleaning industries. In the 1970s and 1980s, the company sold chlorinated degreasing solvents. Another large percentage of sales involved inert materials such as diatomaceous earth, Fullers earth, and bentonite clay. The company also marketed propylene glycol and glycerin to the hand lotion industry and primary alcohol to the printing industry. Until 1980, ChemCore received diatomaceous earth via a rail spur located directly west of the former building. During

CHEMICAL SALES CORP (Continued) **1000299192**

	the 1970s and until 1988, the company received bulk liquid materials at a receiving station on the north side of the former building. The materials were transferred from trucks into 55-gallon drums by a gravity operated drum filling machine connected to the truck with a hose. The company had a United States Environmental Protection Agency (USEPA) hazardous waste identification number and was classified as a RCRA small quantity generator. There are no documented releases or disposal of hazardous waste into the subsurface at the Site. It is believed that improper handling of chemicals in the past contributed to the subsurface soil and groundwater contamination at the Site. ChemCore ceased operations at the Site in approximately 1999 after declaring bankruptcy. The Site was listed on the Registry of Inactive Hazardous Waste Sites as a Class 2 site in 2000. Site Geology/Hydrogeology: Overburden geology at the Site consists of a fill layer ranging from 1 to 8 feet thick underlain by a silty clay layer above bedrock. The thickness of the silty clay layer ranges from 9 to 17.5 feet. The bedrock was found at depths ranging from 12.8 to 30 feet below the surface. Groundwater is not consistently encountered in the overburden, and the primary water bearing unit at the Site is the unconfined water table aquifer in the bedrock. The groundwater table is approximately 30 feet below the surface. Groundwater flow direction is primarily to the south, towards the Black Rock Canal. A localized southwesterly component in the groundwater flow was also observed in the shallow bedrock zone. Groundwater flow in the shallow bedrock zone is likely redirected to the southwest by a wedge of lacustrine silts and clays that drape over the sloping bedrock surface beneath the I-190 corridor. "
Env Problem:	"Remediation at the Site is complete. Prior to remediation, the primary contaminants of concern (COCs) for groundwater, soil, and soil vapor were tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride, and other daughter products of PCE. Remedial actions have successfully achieved soil cleanup objectives for commercial/industrial use. Remaining contamination in the on and off-site groundwater are being managed by a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

During the 1950s, operations involved sales of chlorinated solvents for dry cleaning industries. In the 1970s and 1980s, the company sold chlorinated degreasing solvents. Another large percentage of sales involved inert materials such as diatomaceous earth, Fullers earth, and bentonite clay. The company also marketed propylene glycol and glycerin to the hand lotion industry and primary alcohol to the printing industry. Until 1980, ChemCore received diatomaceous earth via a rail spur located directly west of the former building. During the 1970s and until 1988, the company received bulk liquid materials at a receiving station on the north side of the former building. The materials were transferred from trucks into 55-gallon drums by a gravity operated drum filling machine connected to the truck with a hose. The company had a United States Environmental Protection Agency (USEPA) hazardous waste identification number and was classified as a RCRA small quantity generator. There are no documented releases or disposal of hazardous waste into the subsurface at the Site. It is believed that improper handling of chemicals in the past contributed to the subsurface soil and groundwater contamination at the Site. ChemCore ceased operations at the Site in approximately 1999 after declaring bankruptcy. The Site was listed on the Registry of Inactive Hazardous Waste Sites as a Class 2 site in 2000. Site Geology/Hydrogeology: Overburden geology at the Site consists of a fill layer ranging from 1 to 8 feet thick underlain by a silty clay layer above bedrock. The thickness of the silty clay layer ranges from 9 to 17.5 feet. The bedrock was found at depths ranging from 12.8 to 30 feet below the surface. Groundwater is not consistently encountered in the overburden, and the primary water bearing unit at the Site is the unconfined water table aquifer in the bedrock. The groundwater table is approximately 30 feet below the surface. Groundwater flow direction is primarily to the south, towards the Black Rock Canal. A localized southwesterly component in the groundwater flow was also observed in the shallow bedrock zone. Groundwater flow in the shallow bedrock zone is likely redirected to the southwest by a wedge of lacustrine silts and clays that drape over the sloping bedrock surface beneath the I-190 corridor. "

Env Problem: "Remediation at the Site is complete. Prior to remediation, the primary contaminants of concern (COCs) for groundwater, soil, and soil vapor were tetrachloroethene (PCE), trichloroethene (TCE), vinyl

CHEMICAL SALES CORP (Continued) **1000299192**

chloride, and other daughter products of PCE. Remedial actions have successfully achieved soil cleanup objectives for commercial/industrial use. Remaining contamination in the on and off-site groundwater are being managed by a Site Management Plan. "
Health Problem: "Measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 57566
Site Description: "Location: The ChemCore Site is the location of a former chemical wholesale facility located at 1382 Niagara Street in the City of Buffalo, Erie County, NY. Situated on a historically industrial corridor, the Site is in close proximity to residential neighborhoods to the east and a rail corridor to the west with both the Interstate I-190 highway and the Black Rock Canal (which leads from Lake Erie to the Niagara River) farther to the west. West Delevan Avenue, at the north end of the Property, dead-ends at the rail line and is used as a parking area/driveway. South of the Site is the former location of the Garrett Leather Corporation. This adjacent property has a warehouse building with enclosed loading docks at the north end abutting southern boundary of the Site. Site Features: The Site is occupied by a 1,000 square foot groundwater treatment system building on approximately 0.5 acres. All other facilities and buildings associated with the historic Site use (chemical wholesaler) have been demolished and removed. The remaining surface features of the Site are unused are covered by imported crushed stone. Smaller areas of the Site are covered by asphalt parking and driveway areas and various concrete slabs, foundations, and sidewalks. A large storm sewer line passes beneath the adjacent street, through the Site and discharges into the Black Rock Canal. Current Zoning and Land Use: The Site is currently inactive and is zoned for commercial use. The Site is in close proximity to residential neighborhoods with mixed commercial properties to the north, south, and east. The land use must be in conformance with the deed restriction and the associated site management plan. Past Use of the Site: Since its original development, the property has been used for commercial operations.

CHEMICAL SALES CORP (Continued) **1000299192**

Initial operation of the property involved supplying acids to metal fabrication industries. In the early 1930s, operations included a chemical handling facility, with several business and commercial tenants operating from rented portions of the former Site building. During the 1950s, operations involved sales of chlorinated solvents for dry cleaning industries. In the 1970s and 1980s, the company sold chlorinated degreasing solvents. Another large percentage of sales involved inert materials such as diatomaceous earth, Fullers earth, and bentonite clay. A large storm sewer line passes beneath the adjacent street, through the Site and discharges into the Black Rock Canal. Current Zoning and Land Use: The Site is currently inactive and is zoned for commercial use. The Site is in close proximity to residential neighborhoods with mixed commercial properties to the north, south, and east. The land use must be in conformance with the deed restriction and the associated site management plan. Past Use of the Site: Since its original development, the property has been used for commercial operations. Initial operation of the property involved supplying acids to metal fabrication industries. In the early 1930s, operations included a chemical handling facility, with several business and commercial tenants operating from rented portions of the former Site building. During the 1950s, operations involved sales of chlorinated solvents for dry cleaning industries. In the 1970s and 1980s, the company sold chlorinated degreasing solvents. Another large percentage of sales involved inert materials such as diatomaceous earth, Fullers earth, and bentonite clay. The company also marketed propylene glycol and glycerin to the hand lotion industry and primary alcohol to the printing industry. Until 1980, ChemCore received diatomaceous earth via a rail spur located directly west of the former building. During the 1970s and until 1988, the company received bulk liquid materials at a receiving station on the north side of the former building. The materials were transferred from trucks into 55-gallon drums by a gravity operated drum filling machine connected to the truck with a hose. The company had a United States Environmental Protection Agency (USEPA) hazardous waste identification number and was classified as a RCRA small quantity generator. There are no documented releases or disposal of hazardous waste into the subsurface at the Site. It is believed that improper handling of chemicals in the past contributed to the subsurface soil and groundwater contamination at the Site. ChemCore ceased operations at the Site in approximately 1999 after declaring bankruptcy. The Site was listed on the Registry of Inactive Hazardous Waste Sites as a Class 2 site in 2000. Site Geology/Hydrogeology: Overburden geology at the Site consists of a fill layer ranging from 1 to 8 feet thick underlain by a silty clay layer above bedrock. The thickness of the silty clay layer ranges from 9 to 17.5 feet. The bedrock was found at depths ranging from 12.8 to 30 feet below the surface. Groundwater is not consistently encountered in the overburden, and the primary water bearing unit at the Site is the unconfined water table aquifer in the bedrock. The groundwater table is approximately 30 feet below the surface. Groundwater flow direction is primarily to the south, towards the Black Rock Canal. A localized southwesterly component in the groundwater flow was also observed in the shallow bedrock zone. Groundwater flow in the shallow bedrock zone is likely redirected to the southwest by a wedge of lacustrine silts and clays that drape over the sloping bedrock surface beneath the I-190 corridor. "

Env Problem: "Remediation at the Site is complete. Prior to remediation, the primary contaminants of concern (COCs) for groundwater, soil, and soil vapor were tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride, and other daughter products of PCE. Remedial actions have successfully achieved soil cleanup objectives for commercial/industrial use. Remaining contamination in the on and

Site Description: "Location: The ChemCore Site is the location of a former chemical wholesale facility located at 1382 Niagara Street in the City of Buffalo, Erie County, NY. Situated on a historically industrial corridor, the Site is in close proximity to residential neighborhoods to the east and a rail corridor to the west with both the Interstate I-190 highway and the Black Rock Canal (which leads from Lake Erie to the Niagara River) farther to the west. West Delevan Avenue, at the north end of the Property, dead-ends at the rail line and is used as a parking area/driveway. South of the Site is the former location of the Garrett Leather Corporation. This adjacent property has a warehouse building with enclosed loading docks at the north end abutting southern boundary of the Site. Site Features: The Site is occupied by a 1,000 square foot groundwater treatment system building on approximately 0.5 acres. All other facilities and buildings associated with the historic Site use (chemical wholesaler) have been demolished and removed. The remaining surface features of the Site are unused are covered by imported crushed stone. Smaller areas of the Site are covered by asphalt parking and driveway areas and various concrete slabs, foundations, and sidewalks. A large storm sewer line passes beneath the adjacent street, through the Site and discharges into the Black Rock Canal. Current Zoning and Land Use: The Site is currently inactive and is zoned for commercial use. The Site is in close proximity to residential neighborhoods with mixed commercial properties to the north, south, and east. Site Description: "Location: The ChemCore Site is the location of a former chemical wholesale facility located at 1382 Niagara Street in the City of Buffalo, Erie County, NY. Situated on a historically industrial corridor, the Site is in close proximity to residential neighborhoods to the east and a rail corridor to the west with both the Interstate I-190 highway and the Black Rock Canal (which leads from Lake Erie to the Niagara River) farther to the west. West Delevan Avenue, at the north end of the Property, dead-ends at the rail line and is used as a parking area/driveway. South of the Site is the former location of the Garrett Leather Corporation. This adjacent property has a warehouse building with enclosed loading docks at the north end abutting southern boundary of the Site. Site Features: The Site is occupied by a 1,000 square foot groundwater treatment system building on approximately 0.5 acres. All other facilities and buildings associated with the historic Site use (chemical wholesaler) have been demolished and removed. The remaining surface features of the Site are unused are covered by imported crushed stone. Smaller areas of the Site are covered by asphalt parking and driveway areas and

CHEMICAL SALES CORP (Continued) **1000299192**

various concrete slabs, foundations, and sidewalks. A large storm sewer line passes beneath the adjacent street, through the Site and discharges into the Black Rock Canal. Current Zoning and Land Use: The Site is currently inactive and is zoned for commercial use. The Site is in close proximity to residential neighborhoods with mixed commercial properties to the north, south, and east. The land use must be in conformance with the deed restriction and the associated site management plan. Past Use of the Site: Since its original development, the property has been used for commercial operations. Initial operation of the property involved supplying acids to metal fabrication industries. In the early 1930s, operations included a chemical handling facility, with several business and commercial tenants operating from rented portions of the former Site building. During the 1950s, operations involved sales of chlorinated solvents for dry cleaning industries. In the 1970s and 1980s, the company sold chlorinated degreasing solvents. Another large percentage of sales involved inert materials such as diatomaceous earth, Fullers earth, and bentonite clay. The company also marketed propylene glycol and glycerin to the hand lotion industry and primary alcohol to the printing industry. Until 1980, ChemCore received diatomaceous earth via a rail spur located directly west of the former building. During the 1970s and until 1988, the company received bulk liquid materials at a receiving station on the north side of the former building. The materials were transferred from trucks into 55-gallon drums by a gravity operated drum filling machine connected to the truck with a hose. The company had a United States Environmental Protection Agency (USEPA) hazardous waste identification number and was classified as a RCRA small quantity generator. There are no documented releases or disposal of hazardous waste into the subsurface at the Site. It is believed that improper handling of chemicals in the past contributed to the subsurface soil and groundwater contamination at the Site. ChemCore ceased operations at the Site in approximately 1999 after declaring bankruptcy. The Site was listed on the Registry of Inactive Hazardous Waste Sites as a Class 2 site in 2000. Site Geology/Hydrogeology: Overburden geology at the Site consists of a fill layer ranging from 1 to 8 feet thick underlain by a silty clay layer above bedrock. The thickness of the silty clay layer ranges from 9 to 17.5 feet. The bedrock was found at depths ranging from 12.8 to 30 feet below the surface. Groundwater is not consistently encountered in the overburden, and the primary water bearing unit at the Site is the unconfined water table aquifer in the bedrock. The groundwater table is approximately 30 feet below the surface. Groundwater flow direction is primarily to the south, towards the Black Rock Canal. A localized southwesterly component in the groundwater flow was also observed in the shallow bedrock zone. Groundwater flow in the shallow bedrock zone is likely redirected to the southwest by a wedge of lacustrine silts and clays that drape over the sloping bedrock surface beneath the I-190 corridor. "

Env Problem: "Remediation at the Site is complete. Prior to remediation, the primary contaminants of concern (COCs) for groundwater, soil, and soil vapor were tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride, and other daughter products of PCE. Remedial actions have successfully achieved soil cleanup objectives for commercial/industrial use. Remaining contamination in the on and off-site groundwater are being managed by a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System

CHEMICAL SALES CORP (Continued) **1000299192**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/07/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/05/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

12635986-02 - BUFFALO, NEW YORK
1106, 1110, 1112, AND 1114 NIAGARA STREET
BUFFALO, NY 14213

TARGET PROPERTY COORDINATES

Latitude (North):	42.913635 - 42° 54' 49.09''
Longitude (West):	78.900909 - 78° 54' 3.27''
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	671340.6
UTM Y (Meters):	4753147.0
Elevation:	602 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14123515 BUFFALO NW, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

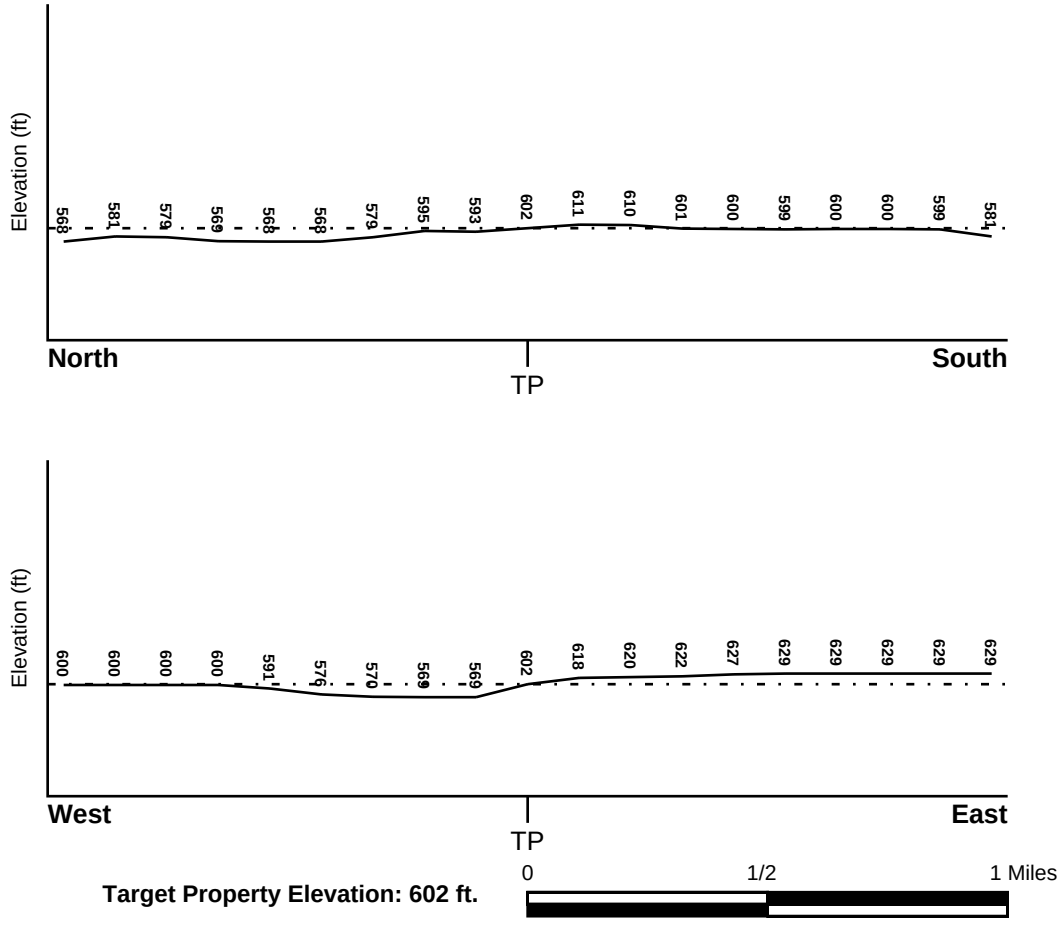
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3602300015B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BUFFALO NW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Udorthents

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

No Layer Information available.

Soil Map ID: 4

Soil Component Name: Urban

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

No Layer Information available.

Soil Map ID: 5

Soil Component Name: Urban

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 54 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GHD were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1925 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Niagara, Falls 14304

11/15/2024
RE: Case # 11/15/2024-13860
1112 and 1114 Niagara Street - Buffalo

To Whom It May Concern:

This letter serves to acknowledge receipt of your Freedom of Information request as referenced above. Please refer to the FOIL # in any future correspondence.

The County of Erie is commencing a search of its files for the requested documents. The completed document(s) will be ready and available for pickup or delivery within a period of time, up to 6 months from the date of this letter.

Upon completion of the search, we will contact your office and advise of the cost. There is a charge of $0.75 per page for lead and medical files covered under the Health Insurance Portability and Accountability Act of 1996 (HIPAA), and $0.25 per page for all other types. Postage and shipping costs may also apply.

If there are any other questions or concerns please do not hesitate to contact me at the number below, by fax at 716-961-6880, or via email at Health.FOIL@erie.gov.

Sincerely,

Thomas P. Muscarella

Re: Freedom of Information Law Request – All Files for 1112 & 1114 Niagara St. in Buffalo, NY Pertaining to the Following: Historical Tax Cards, Historical Permits, Environmental Reports, Storage Tanks, Also Requesting Files for 1092-1120 Niagara St. Associated with the Addresses Listed Previously.

Dear Ms. Popek,

The City of Buffalo Clerk's Office is in receipt of your attached Freedom of Information Law request.

This department does not maintain any records related to the above issues for the City of Buffalo, NY, which you seek access to. For information of City of Buffalo departments, please see our website at www.buffalony.gov

You may choose to direct this FOIL request to Ron Draffin, 304 City Hall, Permits & Inspection Services for City of Buffalo, #716-851-4921 and Office of Strategic Planning, 920 City Hall, Angela Webber @ awebber@buffalony.gov or phone # 716-851-4769 and the Public Works Department.

Very truly yours,

Property was Former Oliver Gear & Machine Company, Modern Heat Treating & Forging, and Co-Operative Grange League Federation Exchange Mills. Also requesting files for historical addresses 1092-1120 Niagara Street associated with this property.

Dear Ms. Popek:

Per your request, please find attached for your review the documentation that you requested through the Freedom of Information Law Request regarding "1112 & 1114 Niagara Street". However, please note we did not have any historic preservation records. Also note no underground/aboveground storage tank records were on file in the Fire Department records. Any information pertaining to sewers/stormwater systems will need to be requested by you from the Buffalo Sewer Authority.

Should you desire any further information, please contact the Office of Strategic Planning at (716) 851-4769.

Very truly yours,

Angela Webber

You don't often get email from depcompliance.foil@erie.gov. Learn why this is important

Dear Margaret,

In response to your Freedom of Information request regarding properties located at **1112 and 1114 Niagara Street in Buffalo, New York**:

1. In an effort to streamline the process of obtaining environmental records from the Erie County (New York) Division of Environmental Compliance, attached is a PDF file (Erie County NY Combined Complaints – Industrial) containing a summary of our complaint response activities and a list of our industrial files. Pages 1-3 contain an INDUSTRIAL FILE, which is sorted (alphabetically) by company name. This INDUSTRIAL FILE lists industries/companies where multiple incidents of complaints have occurred. Pages 4-102 contain an ENVIRONMENTAL COMPLAINT SUMMARY, which is sorted (alphabetically) by municipality and by address.

    a. The file summaries will provide sufficient information for review to determine the applicability and relevance of archived Erie County Department of Environment and Planning files toward site investigations conducted by your firm. Please use this information to determine whether this Department has any pertinent records regarding your property investigation.
    b. The FOIL Records Description document (attached) provides information on these files as well as procedural information that you/your staff should follow in the event you want to review/obtain a specific complaint card or an industrial file.
    c. The attached Application for Public Access to Records should be submitted with all requests to review/obtain information.
    c. Please retain these documents for future reference and distribute to others within your organization.
    d. Because our office relinquished the environmental complaint, spill response and the industrial inspection program to the NYSDEC in 1985, the Erie County Department of Environment and Planning's records are dated. No updates or new information will be added to those records.

2. The NYSDEC Region 9 office, located at 700 Delaware Avenue, Buffalo, NY 14209 would likely have the majority information you seek.

NYSDEC Website: https://www.dec.ny.gov/about/558.html#region9
NYSDEC Reg 9 telephone: 716-851-7201

If I can be of further assistance, please contact me.

Sincerely yours,

Buffalo,NY 14203

Site Description

Site Location: The Curtiss Malt House Project site is an approximate 1.559-acre site located in the highly developed commercial and residential Niagara St. corridor in the City of Buffalo, Erie County.

The site is located just northwest of the intersection of Albany and Niagara Streets and about 720 feet southwest of the corner of West Ferry and Niagara Streets. The site is also situated within the Tonawanda Street Corridor Brownfield Opportunity Area (BOA). The site is bordered by Niagara Street to the east, I-190 and an active rail line to the west, commercial and light industrial facilities to the north and the Albany St. paper street to the south. Site Features: The site is comprised of 3 adjoining parcels with existing structures. The site straddles the edge of a ridge that slopes westerly toward the Niagara River. The 1100 Niagara St. parcel contains a 2-story brick structure (formerly the Curtiss Malt House) with a 3-story brick addition to the rear facing the railroad tracks (western side of the site). A reinforced concrete grain elevator is attached to the southwest corner of the building. A portion of the area adjoining the southern side of the building is covered with remnants of building floors and foundations from a former structure. The remainder of this parcel is covered with a mix of scrub vegetation. The 1106 and 1110 Niagara St. parcels contain an interconnected masonry building that adjoins the 1100 Niagara St. building. The front area of the parcels facing Niagara St. are partially paved. Current Zoning and Land Use: The current zoning for the site is defined as N-1S Urban Core Secondary Employment Center, defined as mixed-use mid-rise development clusters with large footprint structures. The buildings and property are currently vacant. Future redevelopment will be in accordance with the local zoning. The surrounding parcels are commercial to the north, commercial and residential to the south, residential to the east and railroad and highway to the west. Residential and commercial properties are immediately adjacent to the site. Past Use of the Site: The property has used as an industrial facility since 1899. The C.G. Curtiss Malting Drum House processed grain for local breweries using a series of large malting drums to process the malt. In 1925 the facility was sold to the Co-Operative Grange League Federation (GLF) Exchange, Inc. (Agway, Inc. successor) for grain storage. In 1927 part of the structure was destroyed by a fire. GLF/Agway operated the site until 1982 and sold the property to Gear Motions, Inc. In 1988, 1100 Niagara Street was purchased by Niagara View Properties, Inc. and housed an art gallery for much of the 1990s. The 1100 Niagara St. parcel was foreclosed on by the County in 1996 and subsequently changed owners several times before 2012 when it was purchase by current owner and BCP applicant. The adjoining building at 1106 and 1110 Niagara St. was previously used for metal heat treating from 1984 until as recent as 2022. Prior to 1984, the building used by GLF/Agway. Site Geology and Hydrogeology: The site is located within the Lake Erie-Niagara River major drainage basin, which is typified by little topographic relief that gently slope westwards towards the Niagara River, except in the immediate vicinity of the major drainage ways. The surficial geology of the Lake Erie Plain consists of a thin glacial till, glacio-lacustrine deposits, recent alluvium, and the soils derived from these deposits. Site soils are characterized as Urban Land (Ud). Soils within the City of Buffalo are characterized as urban land (Ud) with surface covered by asphalt, concrete, buildings, or other impervious structures, typical of an urban environment. Based on recent investigations, on-site overburden soil-fill consists of concrete, brick, cinders, ash, wood, and gravely silt to depths averaging approximately 1-6 feet below ground surface (fbgs) with one boring indicating fill to 15 feet. Underlying native materials consists of reddish-brown silty clay to depths up to 14 fbgs with some borings indicating some sand and gravel just above

the bedrock interface. Bedrock was encountered at each location, ranging in depth from approximately 9 to 16 fbgs. Groundwater was encountered at the soil/bedrock interface at only one location during borings. Regional groundwater gradient is westward towards the Niagara River located approximately 600 feet west of the site. Local groundwater flow, however, may be influenced by subsurface features, such as utilities and localized fill conditions.

Site Environmental Assessment

The information below was submitted with the BCP application regarding the environmental condition at the site. The summary below will be revised as additional information becomes available. The operational site history mainly involved malting, and grain storage and distribution that would not result in recognized environmental concerns. Recent site uses would result in recognized environmental concerns (i.e motor vehicle repair or light industrial or commercial business use). There is nominal contamination from metals and semi volatile organic compounds (SVOCs) in a shallow urban soil fill layer. There is nominal chlorinated VOC contamination in groundwater that is likely emanating from an upgradient former commercial plating site (BCP Site C915364) east of this site across Niagara St. There have been no remedial measures completed on the site and contaminants found during recent investigations are a result of impacted fill from historic operations and initial construction practices and influences from adjacent offsite sources. Additional information for the environmental assessment will be provided upon completion of the remedial investigation.

Site Health Assessment

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Buffalo,NY 14201

Site Description

Location: The 1130 Niagara Street site is a 2.62-acre site, located in an urban area, at 1130 Niagara Street in the City of Buffalo, Erie County. The site is south of the intersection of West Ferry and Niagara Streets. The site is bordered by an active railroad track and NYS I-190 to the west, Niagara

Street to the east, and commercial properties to the north and south. Site Features: The site is comprised of three separate parcels with two parcels contiguous, and the other separated by Gull Street. Parcel 1 (1144 Niagara Street) is an L shaped lot that is currently vacant but formerly contained a 63,000 sq. ft. one story L-shaped masonry warehouse/manufacturing building that covered most of the parcel. The building was demolished in early 2016, but the concrete floor slab remains and has been partially repurposed for parking. The ground surface on the western side of the parcel abruptly drops off near the railroad tracks with an embankment. The embankment is supported by a limestone block wall at the base. Due to the sloping topography toward the Niagara River, the back side of the former building has a built-up foundation to maintain a level floor elevation from the front side facing Niagara Street. The building had a small basement area which was used to house boiler equipment. The basement area has been filled in with hard fill. Parcel 2 (17 Gull Street) is a vacant open lot contiguous with Parcel 1. It formerly contained a three-story masonry building that was destroyed by a fire in 2008. The eastern third of the lot is paved with asphalt and several loading docks for the former 1144 Niagara Street building. The balance of the parcel is vacant and is covered with a mix of soil, gravel and small pieces of hard demolition debris. The parcel slopes westerly toward the railroad tracks. Parcel 3 (103 West Ferry Street - currently named Robert Rich Way) is covered by an approximately 38,000 sq. ft. asphalt paved parking lot and a 1,500 sq. ft. one story masonry building located at the southwest corner of the parcel. This parcel is separated from the other two parcels by Gull Street and is bounded by Robert Rich Way to the north, railroad tracks to the west, and Haggert Alley to the east. The parking lot is nearly level with Niagara Street and is built up with fill resulting in embankments that drop off to north, west and south. Current Zoning and Land Use: The site is zoned M-1, light industrial. Zoning across Niagara Street to the east is commercial. Part of the site is currently being used for parking and the remainder of the site is vacant. Past Use of the Site: The three parcels that comprise this site have been used for residential and commercial/industrial operations since the late 1880s. Parcel 1: 1144 Niagara Street has been occupied by several industrial and commercial businesses since approximately 1925, including a medical equipment manufacturing company, a bowling alley, an auto parts supplier and service station, a contractor yard area, a screw machine parts manufacturer, and warehousing for a swimming pool supply products distribution company. Curtis Screw operated the facility as a manufacturing facility from 1906 to 2005. Various lubricants and solvents were used in the manufacturing of screws and small machine components during that time. The building was demolished in 2017, but the building floor slab and foundation remain. The eastern section of the floor slab was paved for parking. Parcel 2: Prior to 1906, a typewriter manufacturer occupied the west side of the 17 Gull Street parcel. Prior to 1925, the mid-section of this parcel contained residential dwellings, and until 1951, residential dwellings occupied the east side of the parcel. Curtis Screw occupied parts of this site from 1906 to 2005. In approximately 1940, Curtis Screw expanded their facilities by the addition of a building that occupied the mid-section of this parcel and was interconnected with the building on the 1140 Niagara Street parcel. A pool equipment supplier used these buildings from 2005 until 2008 when the complex was destroyed by a fire. The fire damaged building was demolished in 2008, and the ground surface was graded with

imported fill. The parcel has remained vacant since the fire. Parcel 3: 103 West Ferry Street was occupied from the late 1880s. Prior to 1925, a foundry-iron works facility occupied the southern half of the parcel. Sometime before 1951, the foundry facility was demolished and a smaller factory building for annealing steel occupied the southeast section of the parcel. This building has since been demolished. Prior to 1925, a boarding house and several residential dwellings occupied the northern half of the parcel. By 1951, some of these dwellings had been demolished and the area was filled and paved for parking. Site Geology: The overburden geology in the immediate vicinity of the site is classified as urban land and is mostly covered by streets, parking lots, and buildings. The native regional overburden consists of glacial till and glacial lacustrine deposits, predominately silts and clays. The site overburden geology was found to be generally consistent with the regional overburden geology. The overburden consists of the following materials listed from the ground surface to bedrock: • Ground surface covering consisting of concrete, asphalt, or soil; • Fill material consisting of a mixture of sand and gravel with brick fragments, wood, and cinders. This material is typical of historic urban fill; • Native clay with fine gravel and sand; and • Discontinuous sand with silt was observed in a few soil boring/well locations at the bedrock interface. The overburden at the site ranges in thickness from approximately 4.5 feet thick on Parcel 2 to 18 feet thick on Parcel 3. In general, the overburden is thinnest on Parcel 2, the location of a building that was destroyed by fire in 2008. The fill material within the overburden at the site ranges in thickness from approximately 4.5 feet thick on Parcel 3 to 7.5 feet thick on Parcel 1. The bedrock at the site is encountered at depths ranging from 4.5 feet below ground surface (fbgs) on Parcel 2 to 18 fbgs on Parcel 3. The bedrock encountered during the remedial investigation (RI) is consistent with the regional bedrock, with the upper unit consisting of limestone. Hydrology: Groundwater was encountered in the overburden and in bedrock. The groundwater in both units flows generally in a westerly direction towards the Blackrock Canal/Niagara River.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type

1,1 dichloroethene
1,1,1-trichloroethane
1,1-dichloroethane
arsenic
barium
benzo(a)pyrene
benzo(b)fluoranthene
chloroethane
dibenz[a,h]anthracene
lead
petroleum products
phenol

trichloroethene (TCE)

Site Environmental Assessment

Based upon investigations conducted to date, the primary contaminants of concern include chlorinated volatile organic compounds (VOCs) in soil and groundwater, petroleum impacted soil and, to a limited extent, groundwater, and chlorinated VOCs in sub-slab soil vapor and indoor air in a building that was subsequently demolished after the remedial investigation (RI). Several metals and semi-volatile organic compounds (SVOCs) were detected in a fill layer present across the site. Surface and Near Surface Soil/Fill Surface (0-1 feet below ground surface (fbgs)) and near surface (1-2 fbgs) soil samples from across the site were analyzed for SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides and herbicides. Several SVOCs, mainly polycyclic aromatic hydrocarbons (PAHs), were detected above commercial use soil cleanup objectives (CUSCOs) in surface and near surface soils, including: • benzo (a) pyrene at up to 7.6 parts per million (ppm)(CUSCO 1 ppm); and • benzo (b) fluoranthrene at up to 20 ppm (CUSCO 5.6 ppm). The only metal detected above CUSCOs in surface and near surface soils was barium at 411 ppm (CUSCO 400 ppm) found beneath the asphalt paving on Parcel 3. There were no PCBs or pesticides and herbicides in surface and near surface soil/fill detected above CUSCOs. Subsurface Overburden Soil/Fill (greater than 2 fbgs) Fill was identified across the site varying in thickness from 2 to 8 feet, mostly on Parcel 3. Fill on Parcel 3 consists of distinct and mixed layers, lenses and pockets of sandy lean clay fill soil, foundry sand, ash, stained soil-like fill, and construction and demolition debris. Parcel 2 fill consists mostly of imported fill soil with some hard demolition debris fragments. Fill was also encountered below the floor slab of the former building on Parcel 1. Subsurface overburden soil/fill samples from across the site were analyzed for VOCs, SVOCs, metals, PCBs and pesticides and herbicides. SVOCs detected above CUSCOs in subsurface overburden soils included: • benzo (a) pyrene at up to 20 ppm (CUSCO 1 ppm); • benzo (b) fluoranthene at up to 23 ppm (CUSCO 5.6 ppm); and • dibenzo (ah) anthracene at up to 3.5 ppm (CUSCO 0.56 ppm). Metals detected above CUSCOs in subsurface overburden soils included: • arsenic at up to 38.0 ppm (CUSCO 16 ppm); • barium at up to 3,230 ppm (CUSCO 400 ppm); • lead at up to 3,880 ppm (CUSCO 1000 ppm); • a single exceedance of cadmium at 230 ppm (CUSCO 9.3 ppm); and • a single exceedance of mercury at 10.4 ppm (CUSCO 2.8 ppm). There were no PCBs or pesticides and herbicides detected in subsurface overburden soil/fill that exceeded CUSCOs. A pre-remediation design source delineation investigation was completed in which soil samples were field screened for the presence of separate phase solvent contamination in the form of dense non-aqueous phase liquid (DNAPL). Out of 177 samples collected for field screening, 16 exhibited results indicating potential for the presence of DNAPL. A total of 121 soil samples were analyzed for VOCs, which were detected above CUSCOs in 8 of those samples. Since groundwater has been impacted by VOCs, the results were compared with protection of groundwater SCOs (POGWSCOs) which have significantly lower threshold values. There were several more soil sample locations that had values exceeding POGWSCOs. Detected VOC compounds exceeding both POGWSCOs and CUSCOs include: • Trichloroethene (TCE) at up to 3,400 ppm (CUSCO 200 ppm)

(0.47 ppm POGWSCO); and • 1,1,1-Trichloroethane (TCA) at up to 1,400 ppm (CUSCO 500 ppm) (0.68 ppm POGWSCO). Only one additional detected VOC compound exceeding POGWSCOs includes 1,1-dichloroethane (DCA) in several additional soil sampling points at up to 130 ppm (0.33 ppm POGWSCO). All exceedances for VOCs in soil occurred in the vicinity of the former degreaser. Waste and Source Materials (pre-interim remedial measure (IRM)): Trace amounts of petroleum were observed during the RI as a sheen on silt material located within micro-fractures in the clay matrix in the southeast corner of the site. These micro-fractures are discontinuous, thus limiting the potential for mobility. Free petroleum product was encountered at an initial location for a monitoring well in the former chip removal corridor. During drilling, fill was encountered throughout the entire boring and refusal was encountered at 11 fbgs, shallower than the approximate 14 to 17-foot depth to bedrock at other borings in the immediate vicinity. The 8 to 11-foot interval was saturated with what appeared to be free petroleum product. The borehole location was re-designated and abandoned, and a new monitoring well was moved approximately 20 feet west. No petroleum was observed at the new well and encountered soils consisted of a shallow layer of fill below the floor slab, underlain by native clay. The data also indicated the presence of chlorinated VOCs in groundwater hydraulically upgradient from the primary source area surrounding the former degreaser. This suggested that a secondary source may be present in the overburden beneath the former chip removal corridor area. This potential secondary source area could account for the variation in chlorinated VOC concentrations observed in the southeast portion of the site. Post-Petroleum IRM Following the IRM to remove petroleum impacted soil, a limited groundwater sampling event took place. Groundwater samples were collected from several overburden wells, a standpipe installed during the IRM and a bedrock well, and analyzed for VOCs. No exceedances of groundwater quality standards were observed in any of the overburden locations. In addition, all the observation standpipes were inspected for the presence of free phase petroleum product. Only one of the four standpipes exhibited a sheen layer of oil which was less than 0.01 feet in thickness. Groundwater - Overburden Chlorinated VOCs are the predominant groundwater contaminants at the site. The greatest concentrations of chlorinated VOCs were in the degreaser area on Parcel 1 and consisted mainly of TCE, and its degradation compounds. TCE was found in the greatest concentrations in the most widespread area. The highest TCE concentrations observed were at a monitoring well in close proximity to the former degreaser area. VOC concentrations have decreased from earlier sampling events. VOCs in overburden groundwater from the most recent sampling include: • TCE at up to 67,000 parts per billion (ppb) (GWQS 5 ppb); • 1,1,1 trichloroethane (TCA) at up to 20,000 ppb (GWQS 5 ppb); • 1,1 dichloroethene (DCE) at up to 4,600 ppb (GWQS 5 ppb); • Chloroethane at up to 15 ppb (GWQS 5 ppb); and • Cis-1,2 DCE at up to 1,700 ppb (GWQS 5 ppb); Petroleum related VOCs (benzene, toluene, ethylbenzene, xylenes) were detected above groundwater quality standards (GWQS) in overburden groundwater. There were limited detections of petroleum related VOCs and acetone in the former chip storage area. SVOCs were detected at concentrations above GWQS at four of the overburden monitoring wells. The compounds showing exceedances included: • 4-methylphenol at up to 10 ppb (GWQS 1 ppb) at two wells; • Benzo (b) fluoranthene at up to 0.33 ppb (GWQS 0.002 ppb) at one well; and • Phenol at up to

22 ppb (GWQS 1 ppb) at two wells. Dissolved metals contamination in groundwater was limited to manganese, sodium and zinc at concentrations above GWQSs. The presence of manganese and zinc is likely due to the mineral content of the soil and the sodium may be from pavement deicing. Emerging Contaminants were sampled and analyzed from four overburden groundwater wells (one upgradient perimeter wells and three downgradient perimeter wells) sampled for these compounds and included: • Perfluorooctanoic acid (PFOA) at up to 13 parts per trillion (ppt) (10 ppt drinking water maximum contaminant level MCL) in one well; and • Perfluorooctanesulfonic acid (PFOS) at an estimated concentration of 10 ppt (10 ppt MCL) in one other well. 1,4-dioxane was not detected above applicable water quality criteria in any of the sampled wells. Groundwater - Bedrock There are site-wide detections of VOCs in bedrock groundwater, consisting mainly of TCE, 1,1,1 TCA, and their degradation compounds. TCE was detected in all but three bedrock monitoring wells at concentrations above criteria. VOC compounds in bedrock groundwater from the most recent sampling include: • TCE at up to 65,000 ppb (GWQS 5 ppb); • 1,1,1 TCA at up to 42,000 ppb (GWQS 5 ppb); • 1,1 dichloroethane (DCA) at up to 3,700 ppb (GWQS 5 ppb); • 1,1 DCE at up to 12,000 ppb (GWQS 5 ppb); • Chloroethane at up to 140 ppb (GWQS 5 ppb); • Cis-1,2 DCE at up to 82,000 ppb (GWQS 5 ppb); • Trans-1,2 DCE at up to 11 ppb (GWQS 5 ppb); and • Vinyl chloride at up to 150 ppb (GWQS 5 ppb). Low level SVOC concentrations were detected in three of the bedrock monitoring wells. Dissolved metals contamination was limited to manganese and sodium at concentrations above respective GWQSs. Similar to the overburden wells, the presence of manganese and zinc is likely due to the mineral content of the soil and the sodium may be from pavement deicing. Groundwater Contaminant Migration Contaminants of concern (COCs) are present in site groundwater. TCE levels as high as 18,000 ppb were found in bedrock at the western edge of Parcel 1. The groundwater is flowing westward toward the Black Rock Canal. The hydraulic conductivity of site overburden and bedrock was evaluated and found to be relatively low (on the order of 10-5 cm/sec and 10-6 cm/sec, respectively). Groundwater flow and transport modeling was also completed to evaluate the potential transport of TCE, the most prevalent of the site COCs, to the Black Rock Canal and determine potential impacts to surface water quality, aquatic life, and human health. In summary, a TCE concentration of 1.3 ppb is predicted to reach the Black Rock Canal, below applicable regulatory criteria. Sub-Slab Vapor and Indoor Air Five sub-slab soil vapor samples and four indoor air samples were collected at various locations within and below the former 1130 Niagara Street structure prior to demolition. One outdoor air sample was collected for comparison. TCE was detected at five of the sub-slab samples, ranging from 240 micro-grams/cubic meter (ug/m3) to 56,000 ug/m3. TCE was detected in three indoor air samples ranging from 1.8 to 10 ug/m3. 1,1,1-TCA was found in four of the sub-slab samples ranging from 10 to 7,000 ug/m3 and in three indoor air samples ranging from 1.9 to 13 ug/m3. Following the demolition of the 1130 Niagara Street building, a supplemental sub-slab vapor sample was collected below the remaining concrete floor slab along the southern property boundary to assess potential offsite vapor migration. TCE was detected at a concentration of 7,600 ug/m3. The sub-slab vapors in this location are confined by the concrete floor slab and building footer, and are not directly relatable to potential impacts from soil vapors located off-site to the south.

Site Health Assessment

Access to the site is unrestricted. However, human contact with contaminated soil or groundwater is unlikely unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, environmental sampling indicates soil vapor intrusion is a concern for off-site buildings.

Location

DEC Region: 9
Address: 1130 Niagara Street
City: Buffalo Zip: 14213
County: Erie
Latitude: 42.914270668
Longitude: -78.900511887
Site Type:
Estimated Size: 0 Acres

Site Owner(s) and Operator(s)

Site Description

Location: The area of concern subject to this work is considered off-site from BCP site C915284 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. The off-site area is located south and west of the intersection of Ferry and Niagara Streets and borders the western side of the BCP site. Site Features: The off-site area consists of industrial use properties and road and railway rights-of-way adjacent to the BCP site. The ground surface on the western side of the off-site area abruptly drops off near the railroad tracks with an embankment to I-190 roadway. The topography slopes toward the Blackrock Canal/Niagara River which is further west of the site. Current Zoning and Land Use: The general site area is zoned is M-1, light industrial use, along the west side of Niagara Street and zoning along the east side of Niagara Street is commercial.

Past Use of the Site: The off-site area consists of several parcels that were used for commercial and industrial uses. There is an active rail line that has been in use since the early 1900s, a portion of the I-190 expressway constructed in the 1960s, a portion of the Black Rock Canal constructed in the 1820s, and a portion of the Niagara River included in the off-site area. Site Geology and Hydrogeology: The overburden geology in the immediate vicinity of the site is classified as urban land and is mostly covered by streets, parking lots, and buildings. The native regional overburden consists of glacial till and glacial lacustrine deposits, predominately silts and clays. The overburden geology on the adjoining BCP site was found to be generally consistent with the regional overburden geology. The overburden consists of the following materials listed from the ground surface to bedrock. • Ground surface covering consisting of concrete, asphalt, or topsoil • Fill material consisting of a mixture of varying amounts of sand and gravel with brick fragments, wood, and cinders. This material is consistent with the types of material that would be classified as Urban Land using the soil systematic naming convention • Native clay with fine gravel and sand • Discontinuous sand with silt was observed in a few soil boring/well locations at the bedrock interface. The bedrock encountered during the remedial investigation of the adjoining BCP site is consistent with the regional bedrock with the upper unit consisting of limestone. Groundwater was encountered in the overburden and in bedrock. The groundwater gradient in both units flows generally in a westerly direction towards the Blackrock Canal/Niagara River.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type
trichloroethene (TCE)

Site Environmental Assessment

Groundwater Contaminant Migration Contaminants of concern (COC) are present in the groundwater emanating from the adjacent BCP site. TCE levels as high as 18,000 parts per billion (ppb) were found in bedrock at the western edge of the BCP site. The groundwater flow is westward, toward the Black Rock Canal. The hydraulic conductivity of the overburden and bedrock from the adjoining BCP site was evaluated and found to be relatively low, on the order of 10-5 cm/sec and 10-6 cm/sec respectively. Groundwater flow and transport modeling was also completed to evaluate the potential transport of TCE to the Black Rock Canal and determine potential impacts to surface water quality, aquatic life, and human health. In summary, a TCE concentration of 1.3 ppb is predicted to reach the Black Rock Canal, below applicable regulatory criteria. Although COC transport due to groundwater flow is possible from the BCP site, the projected concentration at the first viable exposure point would not exceed regulatory criteria. Following the demolition of the 1130 Niagara Street building on the associated BCP site, supplemental sub-slab vapor samples were collected below the remaining concrete floor slab along the southern property boundary to assess potential offsite vapor migration. TCE was detected at a concentration of 7,600 ug/m3. The sub-slab vapors in this location are

confined by the concrete floor slab and building footer and are not directly relatable to potential impacts from soil vapors located off-site to the south. In-situ thermal desorption of chlorinated VOCs in the adjoining BCP site C915284 was completed in 2022. Post treatment data for soil indicated that the thermal desorption effective in treating contaminated oil lowering the chlorinated VOCs in soil down to or below the site-specific action levels. Post treatment groundwater monitoring data has not been submitted to date.

Site Health Assessment

As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

OVERVIEW – ENVIRONMENTAL RECORDS

During the time period of 1973 - 1985, the Erie County Department of Environment and Planning contracted with the New York State Department of Environmental Conservation to investigate/respond to environmental problems and to citizen complaints concerning alleged violations of environmental laws, rules, and regulations that occurred within Erie County. Examples of the types of complaints follow:

- Excessive emissions/releases of contaminants to the atmosphere (i.e. smoke, dust, and/or odor complaints);
- Discharges/spills of liquids and/or solids to the land and/or to water bodies (i.e. creeks, rivers, ditches);
- Illegal disposal (i.e. dumping, burial) of wastes onto land.

The responses to these occurrences were handled by the staff of the Erie County Department of Environmental Quality (no longer in existence) and the Erie County Division of Environmental Compliance. Each complaint (and the associated response activity) was recorded on numbered *Complaint Cards***.** The complaint cards are filed in the Erie County Office Building, 95 Franklin St., Room 1077, Buffalo, N.Y. 14202.

To comply with the Freedom of Information Law, our office is providing you with a PDF file (**Erie County NY Combined Complaints-Industrial.pdf**) which contains 2 documents. Pages 1-3 contain an ***INDUSTRIAL FILE***, which is sorted (alphabetically) by company name. This ***INDUSTRIAL FILE*** lists industries/companies where multiple incidents of complaints have occurred. Pages 4-102 contain an ***ENVIRONMENTAL COMPLAINT SUMMARY,*** which is sorted (alphabetically) by municipality and by address. If the information provided within the PDF file is not comprehensive enough for your needs, you can review/obtain copies of specific complaint records and/or industrial files by completing the **APPLICATION FOR PUBLIC ACCESS TO RECORDS** form and by submitting that document to our office.

If you need to review/obtain a specific complaint card or an industrial file, you must complete page 1 of the **APPLICATION FOR PUBLIC ACCESS TO RECORDS** form (attached) and return it to the current Freedom of Information Officer, John Hood via John.Hood@erie.gov , or regular mail to Department of Environment and Planning, 95 Fr Street, Buffalo New York 14202. If you have any questions please contact John at (716) 858-7897.

1 Robert Rich Way
Buffalo, NY 14213

Hazardous Materials and Environmental Survey Report

Dear Mr. Kane:

GHD Services, Inc. (GHD) was retained by Rich Products Corporation (Rich Products) to perform a Hazardous Materials (HAZMAT) and Environmental Survey (Survey) at the Oliver Gear building located at 1120 Niagara Street, Buffalo, NY 14213 (Site). A site location map is provided as Figure 1. The purpose of the Survey was to determine if certain building materials were asbestos-containing materials (ACM) and if certain painted surfaces at the Site were lead-containing. ACM is defined as a material containing greater than 1 percent (>1 percent) asbestos. This report summarizes the sampling that was performed at the Site, including sample descriptions, sample locations, the analyses performed, and sampling results.

1. Sampling Summary

During the Survey activities, samples were collected of both bulk samples of possible ACM and paint chip samples to be analyzed for lead. A summary of the survey and sampling activities is below.

1.1 Asbestos-Containing Materials Sampling

The sampling activities were conducted on May 14, 2024. Samples were collected by a State of New York certified Asbestos Inspector, Mr. Shaun McEvoy (Certificate #03-18547). A copy of Mr. McEvoy's current Asbestos Inspector certificate is included as Appendix A.

GHD collected and analyzed bulk samples to confirm the presence and quantity of ACM. The samples included thermal system insulation (TSI) and miscellaneous materials (e.g., flooring, window caulk, siding materials). The sampling was performed in accordance with industry standards, including EPA's Guidance for Controlling Asbestos-Containing Materials in Buildings. Sampling protocols conformed with the State of New York and EPA NESHAPS Renovation/Demolition standards and requirements. Suspect homogeneous materials were sampled to confirm the presence or absence of ACM. A minimum of two samples of each suspect ACM was collected.

Flooring and walls were sampled down to the substrate for asbestos sample collection. The profile of the material was inspected for multiple layers. For multi-layered materials (e.g., plaster, drywall, joint compound), GHD collected samples from each discrete layer.

A total of 52 individual samples were collected from 24 distinct homogenous materials, which were identified in the east office area, the east basement, and throughout the entire structure of the Oliver Gear building. A list of the samples collected for ACM analysis (including a description of the materials and their locations) is presented in Table 1. The individual sample locations are presented in Figures 2 through 4. The samples were collected from the following building sections:

– Fifteen samples were collected from seven distinct homogeneous materials in the floors, walls, and ceiling of the main warehouse area. The locations of the samples from the main warehouse area are presented on Figure 2.
– Four samples were collected from two distinct homogeneous materials in the walls of the west garage area. The locations of the samples from the garage are presented on Figure 2.
– Twenty Five samples were collected from 12 distinct homogeneous materials in the floors, walls, and ceiling of the east office area. The locations of the samples from the east office area are presented on Figure 3 .
– Eight samples were collected from three distinct homogeneous materials in the walls and ceiling of the east basement. The locations of the samples from the east basement are presented on Figure 4.

The following assumptions were made during the ACM sampling activities:

– An estimated 250 linear feet of TSI was present around three pipes that were located in the basement ceiling. For the purposes of the Survey, all three lengths of TSI were considered to be one homogeneous material, due to the similarities in appearance and texture.
– An estimated 560 linear feet of TSI was present around three pipes that were located in the main warehouse ceiling. For the purposes of the Survey, all three lengths of TSI were considered to be one homogeneous material, due to the similarities in appearance and texture.
– An estimated 50 linear feet of TSI was observed in the former grinding room that was labeled as “Caution: Asbestos Hazard.” This material was, therefore, not sampled as part of this Survey. The location of the labeled TSI is presented on Figure 2. A photo of the labeled TSI is presented in Appendix B.

Samples were analyzed for asbestos content using Polarized Light Microscopy (PLM) with dispersion staining techniques in accordance with USEPA report number 600/R-93/116–"Method for the Determination of Asbestos in Bulk Building Materials" (available from the National Technical Information Service [NTIS], Publication #PB93-218576). The samples were analyzed by EMSL Analytical (EMSL) of Depew, New York. For materials that were determined to be non-friable, organically bound (NOB), sample results that EMSL reported as "inconclusive; no asbestos detected" utilizing PLM analysis were subject to further analysis by Transmission Electron Microscopy (TEM), since PLM is not consistently reliable for the detection of small asbestos fibers. The National Voluntary Laboratory Accreditation Program (NVLAP) accredits EMSL to perform asbestos analyses.

1.2 Lead-Based Paint (LBP) Sampling

Testing of paint chip samples for the presence of lead-based paint was performed by collecting composite paint chip samples from similar areas within (or on) the building structure. A total of nine paint chip samples were collected during the survey to be analyzed for lead. A list of the samples collected for LBP analysis (including a description of the materials and their locations) is presented in Table 2. The locations of the LBP samples are presented on Figures 2 through 3. Samples were sent to EMSL to be analyzed via Flame Atomic Absorption Spectrophotometry.

2. Sample Results

Table 1 provides a list of all the bulk materials that were sampled for ACM analysis as part of the Survey, as well as the sample results. Table 2 provides a list of all paint chip samples that were analysed for LBP, as well as the sample results. The laboratory reports for both ACM and LBP samples (including the chain of custody) are included as Appendix C.

2.1 ACM Sample Results

As shown in Table 1, of the 24 homogeneous materials that were sampled for ACM analysis, a total of 6 materials are considered to be ACM (meaning that they have > 1% asbestos fibers). These six homogeneous materials are described below:

- HM-002: 9” x 9” floor tile, gray/black. Located in the east office area. Estimated quantity = 680 square feet.
- HM-012: TSI around ceiling pipe. Located above the drop ceiling in the east office area. Estimated quantity = 40 linear feet.
- HM-015: Brown paneling material. Located along north and west wall of west garage area. Estimated quantity = 1500 square feet.
- HM-021: TSI around ceiling pipe, green/black. Located in the basement ceiling. Estimated quantity = 250 linear feet.
- HM-022: TSI on elbows of ceiling pipe, green/black. Located in the basement ceiling. Estimated quantity = 6 linear feet.
- HM-024: TSI around ceiling pipe, black. Located in the main warehouse ceiling. Estimated quantity = 560 linear feet.

Of the six homogenous materials that were found to be ACM, four of the materials (HM-012, HM-021, HM-022, HM-024) are considered to be “friable” (meaning the material can be crumbled, pulverized, or reduced to powder by ordinary hand pressure). The other two materials (HM-002 and HM-015) are considered to be “non-friable.”

Photos of the homogenous materials that were found to be ACM are presented in Appendix B. A photo of a section of the TSI in the former grinding room, that was already labeled as ACM, is also included in Appendix B.

2.2 LBP Sample Results

As shown in Table 2, of the nine paint chip samples that were analysed for LBP, only one sample had a lead result of more than 1% weight. Sample PC-06 (light gray paint in the south men’s bathroom) had a lead result of 1.1% weight. An estimated 90 square feet of light gray paint is present in the south men’s bathroom. The other eight paint chip samples all had lead results of less than 1% weight, with three of the samples having results that were below the reporting limit.

GHD is pleased to provide this summary of the Hazardous Materials and Environmental Survey that was performed on behalf of Rich Products. Please consider us should any upcoming sampling or health and safety needs arise. Should you have any questions regarding this report, or the results presented, please do not hesitate to contact Shaun McEvoy or Katherine Galanti.

Regards,

Katherine Galanti
Project Manager

			024B	Positive Stop	Not analyzed		
			024C	Positive Stop	Not analyzed		

Notes:

NA - Non Applicable
ACM - Asbestos Containing Material (a material containing >1% asbestos)
NAD - No Asbestos Detected
TEM - Transmission Electron Microscopy
PLM - Polarized Light Microscopy
Positive Stop - Sample was not analyzed due to the fact that a previous sample of the same Homogenous Material contained >1% asbestos.
Friable ACM - Any material containing more than 1 percent asbestos as determined using PLM, that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure
Nonfriable ACM - Any material containing more than 1 percent asbestos as determined using PLM, that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure
* = sample result indicated "< 1% asbestos"

Certified Analyses included in this Report

Analyte	Certifications
SW 846-7000B in Chips	
Lead	06-NYSDOH

List of Certifications

Code	Description	Number	Expires
06-AIHA LAP	EMSL Analytical, Inc. Carle Place, NY AIHA-LAP, LLC-ELLAP Accredited	102344	06/01/2024
06-NYSDOH	New York State Department of Health	11469	04/01/2025
06-NYSELAP	NY NYS ELAP	11469	04/01/2025
06-California ELAP	California Water Boards	2339	04/01/2025
06-CTDPH	Connecticut Department of Public Health	PH-0249	03/31/2025

Please see the specific Field of Testing (FOT) on www.emsl.com <http://www.emsl.com> for a complete listing of parameters for which EMSL is certified.

Notes and Definitions

Item	Definition
D	Analyte was reported from a dilution run.
(Dig)	For metals analysis, sample was digested.
[2C]	Reported from the second channel in dual column analysis.
DF	Dilution Factor
MDL	Method Detection Limit.
ND	Analyte was NOT DETECTED at or above the detection limit.
Q	Qualifier
RL	Reporting Limit
	For paint chips, the RL is 0.008% by wt. (equiv. to 80 mg/kg, or ppm) based upon the minimum sample weight required. For soils, the RL is 40 mg/kg (ppm) based upon the minimum sample weight required. For dust wipes, the RL is 10 µg/wipe; reporting units of µg/sq. ft. are not validated by the lab based upon data provided by non-lab personnel.
Wet	Sample is not dry weight corrected.

Measurement of uncertainty and any applicable definitions of method modifications are available upon request. Per EPA NLLAP policy, sample results are not blank corrected.

EMSL maintains liability limited to coast of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. QC sample results are within quality control criteria and met method specifications unless otherwise noted.

Analysis following EMSL SOP for the Determination of Environmental Lead by FLAA. The laboratory has a reporting limit of 0.008% by wt., based upon a minimum sample weight of 0.25g submitted to the lab, and is not responsible for any result or reporting limit provided in mg/cm2 since it is dependent upon an area value provided by non-lab personnel. A "<" (less than) result signifies that the analyte was not detected at or above the reporting limit. Measurement of uncertainty and definitions of modifications are available upon request. Results in this report are not blank corrected unless specified.

Test Report: Asbestos Analysis of Non-Friable Organically Bound Materials by PLM via the NY State ELAP 198.6 Method

Sample ID	Description	Appearance	Matrix Material	% Non-Asbestos Fibers	% Asbestos Types
001A *142401903-0001*	East Office Area - Yellow Mastic over 9"x9" Gray/Black Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
001B *142401903-0002*	East Office Area - Yellow Mastic over 9"x9" Gray/Black Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
002A *142401903-0003*	East Office Area - 9"x9" Floor Tile, Gray/Black	Gray/Black Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
002B *142401903-0004*	East Office Area - 9"x9" Floor Tile, Gray/Black	Gray/Black Non-Fibrous Homogeneous	94.4% Other	None	**5.6% Chrysotile** **5.6% Total**
003A *142401903-0005*	East Office Area - Mastic under 9"x9" Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
003B *142401903-0006*	East Office Area - Mastic under 9"x9" Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
004A *142401903-0007*	East Office Area - Black Felt Material under 9"x9" Floor Tile	Black Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
004B *142401903-0008*	East Office Area - Black Felt Material under 9"x9" Floor Tile	Black Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
005A *142401903-0009*	East Office Area - 12"x12" Floor Tile, Light Blue	Blue Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
005B *142401903-0010*	East Office Area - 12"x12" Floor Tile, Light Blue	Blue Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
006A *142401903-0011*	East Office Area - Window Sealant around Interior Windows, Dark Grey	Gray Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**

EMSL maintains liability limited to cost of analysis . Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations . The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. Polarized Light Microscopy (PLM) is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative Transmission Electron Microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing. Inconclusive is defined as none detected or trace asbestos at 1% or less. All samples have been examined for the presence of vermiculite.This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government . Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Quantitative Transmission Electron Microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing. Inconclusive is defined as none detected or trace asbestos at 1% or less. All samples have been examined for the presence of vermiculite.This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government . Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Test Report: Asbestos Analysis of Non-Friable Organically Bound Materials by PLM via the NY State ELAP 198.6 Method

Sample ID	Description	Appearance	Matrix Material	% Non-Asbestos Fibers	% Asbestos Types
017A *142401903-0034*	West Production Office - Baseboard Molding, Gray	Gray Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
017B *142401903-0035*	West Production Office - Baseboard Molding, Gray	Gray Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
018A *142401903-0036*	West Production Office - Mastic behind Baseboard Molding	White Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
018B *142401903-0037*	West Production Office - Mastic behind Baseboard Molding	White Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
019A *142401903-0038*	Inspection Area - 12"x12" Floor Tile, Light Blue	Blue Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
019B *142401903-0039*	Inspection Area - 12"x12" Floor Tile, Light Blue	Blue Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
020A *142401903-0040*	Inspection Area - Mastic under 12"x12" Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
020B *142401903-0041*	Inspection Area - Mastic under 12"x12" Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
023A *142401903-0048*	Basement - Interior Window Caulk	White Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**
023B *142401903-0049*	Basement - Interior Window Caulk	White Non-Fibrous Homogeneous	100% Other	None	**Inconclusive: No Asbestos Detected**

EMSL maintains liability limited to cost of analysis . Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations . The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. Polarized Light Microscopy (PLM) is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative Transmission Electron Microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing. Inconclusive is defined as none detected or trace asbestos at 1% or less. All samples have been examined for the presence of vermiculite.This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government . Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

018A *142401903-0036*	West Production Office - Mastic behind Baseboard Molding	White Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. Inconclusive is defined as none detected or trace asbestos at 1% or less. EMSL recommends that samples reported as none detected or <1% undergo additional analysis via PLM to avoid the possibility of false negatives.

Test Report:Asbestos Analysis of Non-Friable Organically Bound Materials by Transmission Electron Microscopy via NYS ELAP Method 198.4

Sample ID	Description	Appearance	Matrix Material	% Non-Asbestos Fibers	% Asbestos Types	% Total Asbestos
018B *142401903-0037*	West Production Office - Mastic behind Baseboard Molding	White Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected
019A *142401903-0038*	Inspection Area - 12"x12" Floor Tile, Light Blue	Blue Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected
019B *142401903-0039*	Inspection Area - 12"x12" Floor Tile, Light Blue	Blue Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected
020A *142401903-0040*	Inspection Area - Mastic under 12"x12" Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected
020B *142401903-0041*	Inspection Area - Mastic under 12"x12" Floor Tile	Yellow Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected
023A *142401903-0048*	Basement - Interior Window Caulk	White Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected
023B *142401903-0049*	Basement - Interior Window Caulk	White Non-Fibrous Homogeneous	100% Other	None	No Asbestos Detected	None Detected
