EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) for 407 and 409 William Street located in the City of Buffalo, Erie County, New York (the "subject property") under the written authorization of BFC Towne Gardens North LLC ("Client" and the "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence related to a potential transaction involving the subject property.

Subject Property Layout

The subject property is approximately 220,000-square-feet (5.05-acres) and is identified as the eastern part of Erie County Tax Map Block 00001, Lot 002, Sublots 100 and 200. The subject property is located on the block bound by William Street to the north, Jefferson Avenue to the east, Byrd Way to the south, and residential properties followed by Hickory Street to the west.

The subject property is improved with a one-story slab-on-grade building (Sublot 100) and two one-story slab-on-grade buildings adjoined by a concrete walkway and overhang (Sublot 200) surrounded by landscaping and an asphalt-paved parking lot.

Subject Property Current Use

The building located at Sublot 100 (407 William Street) was built between the late 1990s and early 2000s and is occupied by a McDonalds restaurant. The buildings located at Sublot 200 (409 William Street) are occupied by Towne Gardens Plaza, which is divided into 23 separate commercial units. An operating laundromat, pharmacy, health center, and convenience store occupy five of the commercial units; two of the units are used for landscaping and snow removal equipment storage; and the remaining units were vacated between 2019 and 2022.

Subject Property History

The subject property was occupied by multiple residential, commercial, and manufacturing buildings from at least the late 1880s. Between the late 1880s and 1960s the property was used by various commercial and industrial occupants including a hardware warehouse, multiple garages, auto repair facilities, a bottling works facility, lumber storage, a kindling/wood yard, a tool and metal working machinery manufacturer, a refrigerator manufacturer, a woolen rags manufacturer, a mirror manufacturer, a woodworking and metal machinery manufacturer, and a bag cleaning and repairing company. The present-day one-story commercial plaza buildings located at 409 William Street were constructed in 1969/1970 and have been occupied by various commercial businesses. According to the key-site managers, the buildings has been occupied by Towne Gardens Plaza since 1974. Several drycleaners occupied the subject property between 1950 and 1995. The present-day one-story commercial building located at 407 William Street was constructed between late 1990s and early 2000s.

Conclusions

Langan completed a Phase I ESA of the subject property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

Table ES-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Historical Use of Subject Property - The subject property was occupied by various drycleaning operations from the 1950s to the 1990s and industrial operations (i.e. a hardware warehouse, multiple garages/auto repair facilities, a bottling works facility, a lumber storage yard, a kindling/wood yard, a tool and metal working machinery manufacturer, a refrigerator manufacturer, a woolen rags manufacturer, a mirror manufacturer, a woodworking and metal machinery manufacturer, and a bag cleaning and repair company) from at least the late 1880s to the 1960s. Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with historical drycleaning and industrial operations may have affected soil, groundwater, and/or soil vapor beneath the subject property.
Historical and Current Use of Adjoining and Surrounding Properties - The adjoining and surrounding properties were historically occupied by various drycleaning and industrial operations (i.e., a hardware tin shop, a stamping manufacturer, a paint and oil company, a blacksmith, auto repair, a cap manufactuer, junkyards, a smelting corporation, a bottling company, and a black smith). One of the northern adjoining properties (412 William Street) is presently occupied by a metal stamping manufacturer that is listed as a Resource Conservation and Recovery Act (RCRA) hazardous waste generator. *Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with the adjoining and surrounding historical and present uses may have affected groundwater, and/or soil vapor beneath the subject property.*
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs
De Minimis Conditions
Oily Sheen: Langan observed an oily sheen on the asphalt-paved parking lot of the subject property. Langan did not observe obvious cracking or pathways to the subsurface in the stained area; however, superficial cracks were observed in proximity of the oily sheen and throughout the parking lot. *Langan considers the sheen a de minimis condition.*
Significant Data Gaps
Langan did not identify significant data gaps.
Business Environmental Risks (BER)
Based on the Environmental Data Resources, Inc. (EDR) report, the subject property is likely underlain by a layer of historic fill. Historic fill found in urban environments typically contains ash, demolition debris, and/or municipal waste products and may contain contaminants (e.g., semi-volatile organic compounds [SVOCs] or metals) at concentrations above applicable regulatory standards. The likely occurrence of historic fill does not trigger any regulatory obligations or reporting requirements, but may require implementation of soil handling and management procedures during site redevelopment to address

ASTM E1527-21 Scope Items
excavation, re-use, handling, and off-site disposal, and may result in incremental costs above the baseline development value, specifically associated with transportation and disposal of excess soil generated during foundation excavation.

1. INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. completed a Phase I Environmental Site Assessment (ESA) for 407 and 409 William Street located in the City of Buffalo, Erie County, New York (the "subject property") under the written authorization of BFC Towne Gardens North LLC ("Client" and the "user"). A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with a potential transaction involving the subject property.

1.1 Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (REC) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

1.2 Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

1.2.1 Records Review and Local Government Interviews

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to the Erie County Comptroller, Erie County Health Department, Erie County Environmental and Planning Department, City of Buffalo Fire Department, City of Buffalo City Clerk, New York State Department of Health (NYSDOH), New York State Department of Environmental Conservation (NYSDEC) and US EPA Region 2. Responses have been received from the Erie County Department of Health, Erie County Comptroller, City of Buffalo Fire Department, and the City of Buffalo Clerk's Office and no records were found. Complete responses to the FOIA requests have not yet been received from the NYSDEC, NYSDOH, Erie County Environment and Planning Department. Should pending responses alter the conclusions provided within this report, we will issue the modified conclusions as an addendum.

A copy of the FOIA requests and responses are provided in Appendix B. Langan also reviewed online records including the City of Buffalo Property Viewer, Erie County Real Property, and US EPA databases. Agency FOIA-requested information, where received, is discussed in relevant sections of this report and referenced in Section 7.

1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews

Langan completed the site reconnaissance on November 2, 2023. Myrna Perdono (property manager), Jennifer Colon (assistant property manager), Louis Torres (leasing agent), and Angel Igaravidez (assistant super), are the "key site managers." The key site managers are all employees of Towne Gardens, the company that operate both sublots of the subject property. Towne Gardens is managed by Tarantino Properties, Inc. The key site managers accompanied Meghan Aronica of Langan during the site reconnaissance. The key site managers have been associated with the property since between 2019 to 2022.

Langan walked the periphery of the subject property, observed the subject property from adjoining public thoroughfares, and walked the accessible interiors of structures at the subject property. Langan observed the adjoining properties and the surrounding area from the periphery of the subject property and from public thoroughfares adjoining to or traveled on to access the subject property. The weather at the time of the site reconnaissance was approximately 35-40°F and cloudy/rainy.

Langan interviewed Myrna Perdono during the site reconnaissance.

1.2.3 Evaluation, Report and Parts Used in Concert

Langan evaluated the information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 1.4.

1.2.4 Non-ASTM Scope Services

The scope of services for the Phase I ESA did not include non-scope ASTM considerations, including per- and polyfluoroalkyl substances (PFAS).

1.3 User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AULs) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the user regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the user state the reason the Phase I ESA was requested. A summary of the user's responses is provided in Appendix C and relevant information provided by the user is discussed in applicable sections of this report.

Langan contracted Environmental Data Resources, Inc. (EDR) to conduct an environmental lien and AUL search for the subject property. The result of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, did not reveal environmental liens or AULs. A copy of the environmental lien search is provided in Appendix B.

1.4 Limiting Conditions/Deviations

Langan was unable to view two commercial units and a storage area of the Towne Gardens Plaza located at 409 William Street during the site reconnaissance due to access issues. The key site managers reported that the commercial units are vacant and were most recently occupied by a bank and office space. The storage area contains tools and equipment used and owned by the landscaping and snow removal company that services for the subject property. The key site managers stated that no chemical use or hazardous materials are present or part of operations. Therefore, this limiting condition did not impact Langan's conclusions.

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

1.5 Data Gaps

Data gaps, if encountered, are discussed throughout the report. Significant data gaps, if any, are summarized in Section 5.0.

2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

The following sections describe the subject property location, ownership, physical setting, and current layout and operations.

2.1 Location, Legal Description, and Ownership

The approximately 220,000-square-foot (5.05-acre) subject property is identified as the eastern part of Erie County Tax Map Block 00001, Lot 002, Sublots 100 and 200. The subject property is located on the block bound by William Street to the north, Jefferson Avenue to the east, Byrd Way to the south, and residential properties followed by Hickory Street to the west. According to Erie County Real Property Tax Services, the subject property is owned by MF Blue Valley Apartments LLC

A Subject Property Location Map is included in Appendix A of this report. Property information from Erie County Real Property can be found in Appendix B of this report.

2.2 Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area are discussed below.

2.2.1 Topography

The Subject Property appears on the 2019 United States Geological Survey (USGS) 7.5-minute series topographic quadrangle map for Buffalo. According to the USGS quadrangle map, the elevation of the subject property is about 598 feet above mean sea level (amsl) with a gentle slope towards the south. The regional topography slopes southwest towards the Buffalo River, which is located approximately 1.25 miles southwest of the subject property.

2.2.2 Geology

According to the U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) STATSGO data for Erie County, soils at the subject property are comprised of Urban Land. Urban Land refers to soils that have been altered by human activities thus making them unidentifiable. Typically, these soils have been mixed with other materials, such as brick, concrete, and demolition debris of unknown origin (historic fill). Historic fill found in urban environments typically contains ash, demolition debris, and/or municipal waste products and may contain contaminants (e.g., semi-volatile organic compounds [SVOCs] or metals) at concentrations above current regulatory standards. The likely occurrence of historic fill does not trigger any regulatory obligations or reporting requirements but may require implementation of soil handling and management procedures during site redevelopment to address excavation, re-use, handling, and off-site disposal, and may result in incremental costs above the baseline development value, specifically associated with transportation and disposal of excess soil generated during foundation excavation. The likely presence of historic fill is considered a business environmental risk (BER).

According to a review of the Geologic Map of New York for the Niagara Sheet by Lawrence V. Rickard ad Donald W. Fisher, dated March 1970, the bedrock underlying the subject property is Onondaga Limestone and Bois Blanc Limestones.

2.2.3 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flow towards areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks.

Wetlands were evaluated by reviewing the National Wetlands Inventory and NYSDEC-regulated wetlands map. There are no wetlands or surface water bodies located on the subject property. The nearest wetland and surface water body is the Buffalo River (1.25 miles southwest of the subject property). Based on the local topography and proximity to nearby surface water features, the inferred groundwater flow direction at the subject property is to the southwest towards the Buffalo River. Based on descriptions provided for nearby BCP site (about 2,000 feet north from the subject property) the depth of groundwater is approximately 6 to 9 feet below grade surface (bgs).

Based on a review of Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) No. 36029C0213H (effective date 6/16/2021), the subject property falls within Zone X, which is determined to be outside the 0.2% annual chance floodplain. The FEMA FIRM is provided in Appendix B.

2.3 Subject Property Description

The subject property is a one-story slab-on-grade building (Sublot 100) and two one-story slab-on-grade buildings adjoined by a concrete walkway and overhang (Sublot 200) surrounded by an asphalt paved parking lot and landscaped areas. The subject property is separated into two sublots, Sublot 100 (407 William Street) and Sublot 200 (409 William Street).

The two one-story buildings located at 409 William Street were constructed in 1969/1970, according to the Sanborn fire insurance maps, and are divided into multiple individual commercial units. A concrete walkway with an overhang separates the two buildings. The one-story building located at 407 William Street appears to be constructed between the late 1990s and early 2000 according to aerial photographs.

According to the City of Buffalo Property Viewer, the subject property is located within a D-S (retail strip) district. A copy of the zoning map is included in Appendix B.

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix D.

2.4 Current Subject Property Use

The building located at Sublot 100 (407 William Street) has been occupied by a McDonalds restaurant since its development in late 1990s or early 2000s. The buildings located at Sublot 200 (409 William Street) are occupied by Towne Gardens Plaza, which is divided into 23 separate commercial units. An operating laundromat, pharmacy, health center, and convenience store occupy five of the commercial units; two of the units are used for landscaping and snow removal

equipment storage; and the remaining units were vacated between 2019 and 2022. According to the key site managers previous uses of the vacant units included a grocery store, a bank, a beauty salon, a phone carrier company, a police station, a recycling office, a tax office, a legislative office, and a pediatrician's office. Langan interviewed the laundromat representative who confirmed that the laundromat has been in operation for about six years and has never performed drycleaning operations on-site. As discussed in Section 1.4, Langan was unable to view two vacant, locked commercial units (i.e., the bank and the office space) and a storage area during the site reconnaissance due to access issues. The storage area contains tools and equipment used and owned by the landscaping and snow removal company that services for the subject property. Access was not provided to the subject property roof.

The following table summarizes subject property utility providers.

Table 2-1 Utility Providers

Utility	Providers
Electricity	National Grid
Natural gas	National Fuel
Water	City of Buffalo-provided
Sewer	City of Buffalo-provided

2.5 Hazardous Substances and Petroleum Products

Langan did not observe hazardous substances at the subject property. Petroleum product use at the subject property is primarily related to vehicle fueling from an on-site aboveground storage tank (AST), which is further discussed in Section 2.5.2.

Langan observed an oily sheen on the asphalt-paved parking lot. Langan did not observe obvious cracking or pathways to the subsurface in the stained area, however superficial cracks were observed in proximity of the oily sheen and throughout the parking lot. Langan considers the oily sheen a de minimis condition.

2.5.1 Underground Storage Tanks (USTs)

No evidence of USTs were observed at the subject property.

2.5.2 Aboveground Storage Tanks (ASTs)

Langan observed a double wall horizontal 520-gallon AST in the rear asphalt-paved parking lot of Sublot 200 (409 William Street). A liquid level gauge was observed on top of the AST which indicated the AST was empty during the time of the site reconnaissance. According to the key site managers, the AST was delivered to the subject property last week and the snow removal company will use it to fuel their equipment. Evidence of a release was not observed.

2.5.3 Drums, Totes, and Intermediate Bulk Containers

Langan did not observe drums, totes or bulk containers at the subject property.

2.5.4 Other Chemical Storage, Containers, or Equipment

Langan observed shelves and storage closets containing retail-size containers of maintenance-related products and janitorial products in the convenience store, laundromat, phone provider company office, and McDonalds. A cooking oil container was also observed in McDonalds. A hot water heater and water storage tank was observed in the laundromat.

2.6 Air Emissions

Langan did not observe or identify evidence of air emissions at the subject property.

2.7 Waste Management

The following sections describe current hazardous and non-hazardous waste streams, and observations of fill areas or other solid waste throughout the subject property.

2.7.1 Hazardous Waste

Langan did not observe or identify evidence of hazardous waste at the subject property.

2.7.2 Non-Hazardous Waste

Non-hazardous waste generated at the subject property includes general refuse. According to the key site managers, general refuse is collected in dumpsters observed in the rear asphalt-paved parking lot and transported to a municipal landfill by Modern Disposal Services Inc.

2.7.3 Fill Areas or Solid Waste

Langan did not observe areas that were apparently filled with material of unknown origin or graded by non-natural causes that would suggest the presence of garbage, construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting solid waste disposal; however, the USDA soil records indicate that the subject property is likely underlain by urban fill which is a considered a BER.

2.8 Wastewater

Sanitary and process wastewater are discharged to the Buffalo municipal sanitary sewer system. Langan observed floor drains throughout the bathrooms, storage closet, and on the laundromat's floor.

Langan did not observe or identify evidence of septic systems or cesspools at the subject property.

2.9 Storm Water

Storm drains were observed throughout the asphalt-paved parking lot of the subject property and a storm drain was observed on the concrete walkway located at 409 William Street. The drains connect to the municipal system. No sheen, odors, or other evidence of a release were observed in the vicinity of the drains.

Standing rainwater was observed in the asphalt-paved parking lot.

2.10 Non-ASTM Scope Considerations

A formal survey to identify asbestos containing materials (ACM), lead based paint (LBP), polychlorinated biphenyls (PCB)-containing material and/or mold was not conducted as part of this Phase I ESA. However, water damage and suspect mold was observed on the ceilings, floor, and walls of several of the vacant commercial units of the plaza building located at 409 William Street.

3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

The following sections provide summaries of the historical uses of the subject property, and available information regarding documented environmental conditions associated with the historical uses.

3.1 Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix E.

Table 3-1 Subject Property History

Time Period	Historical Discussion
1889 - 1960s	The subject property is depicted as developed in an urban environment from at least the late-1880s. In the 1889 fire insurance map, residential, institutional, commercial, and manufacturing buildings are observed at the subject property. Randall Street and Spring Street are also observed intersecting the subject property from north to south. According to the fire insurance maps manufacturing uses include a hardware warehouse, garages, bottling works, lumber storage, kindling/wood yard, tool and metal working machinery manufacturer, refrigerator manufacturer, woolen rags manufacturer, mirror manufacturer, woodworking and metal machinery manufacturer, and bag cleaner and repairing company. In the fire insurance maps, the manufacturers have rooms that indicate specific site operations and equipment used including machine shops, blacksmith shop, storage, stamping, casting cleaning, sawing, varnishing, tin shop, foundry, an engine room, boilers, kiln, a 12,000-gallon water tank, carpenter shop, coal storage, pattern shop, furnace, and varnish vault. According to the fire insurance map dated 1950, a drycleaner is observed at the subject property located at the former 268 Spring Street address and a gas tank is observed adjacent to this drycleaning operation.
1960s – 1969/1970	According to the aerial photographs the former buildings were demolished, and the property appears to be vacant in 1962 until 1970.
1969/1970 – Present	According to the fire insurance maps and the aerial photographs, the present day one-story commercial building located at 409 William Street and surrounding parking lot was constructed between 1969 and 1970. This building is labelled as "Library Buffalo Urban League" in 1986. According to the key-site managers it has been occupied by Towne Gardens Plaza since 1974. As discussed previously, many of the commercial spaces located in the buildings were vacated between 2019 and 2022. In the 1970 aerial photograph Randall and Spring Street are no longer present on the subject property. The one-story commercial building located at 407 William Street is first observed in the 2008 aerial photograph. According to the key site managers the one-story building located at 407 William Street has only been operated by a McDonalds, which was developed between the late 1990s or early 2000s underwent renovations in 2022.

Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with some historical operations may have affected soil, groundwater, and/or soil vapor beneath the subject property. Environmental concerns related to historical operations are discussed further in Section 3.3.

3.2 Regulatory Database Review

The subject property is identified on the Resource Conservation and Recovery Act (RCRA) Very Small Quantity Generators (VSQG), Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), EDR Historical Auto, and EDR Historical Cleaners databases. The listings are related to hazardous waste generation and historical uses. The environmental database report is attached as Appendix F.

The EDR Historical Cleaners database is a proprietary database that is a listing of potential drycleaner facilities based on a review of business directories. Drycleaning facilities are associated with the use of tetrachloroethene (PCE), a solvent that has the potential to infiltrate groundwater and can readily migrate to surrounding properties. The subject property was listed at multiple addresses in the EDR Historical Cleaners under five listings between 1955 and 1995.

The EDR Historical Auto Stations database is a proprietary database that is a listing of potential gas station, filling station, and service station sites based on a review of business directories. The subject property was listed in the EDR Historical Auto Station database listing as 'Craig & Allen Inc Auto Repairs in 1940.

Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with the historical operation as an auto repair and drycleaner may have affected groundwater, and/or soil vapor beneath the subject property.

The RCRA generators/transporters database is US EPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. RCRA databases include large quantity generators (LQG), small quantity generators (SQG), VSQG, and Non-Generators (Non-Gen). The Family Dollar located at the subject property was identified in the VSQG database, previously named Conditionally Exempt Small Quantity Generators (CESQG) in 2015. The Family Dollar is listed for generation of ignitable waste (D001), arsenic (D004), barium (D005), chromium (D007), lead (D008), mercury (D009), selenium (D010), silver (D011), 2,4-dichlorophenoxyacetic acid (D016), m-cresol (D024), methyl ethyl ketone (D035), and acetone (U002). It is listed with a NAICS code 45299 (general merchandise store). No violations were reported for this listing. The site was also listed in the FINDS and ECHO databases. Based on the absence of violations, it is unlikely to represent an environmental concern to the subject property.

3.3 Prior Report Review

Langan was provided with prior reports related to the southern adjoining property and mold and asbestos inspections. The reports are referenced in Section 7 and summarized below. Previous reports are provided in Appendix B.

Mold Assessment and Remediation Plan, dated August 5, 2021 and September 8, 2022

Stohl Environmental, LLC (Stohl) prepared two mold assessments and remediation plans for various units located in the one-story building located at 409 William Street dated August 5, 2021

and September 8, 2022. The mold assessments were performed in response to the discovery of mold contamination created by condensation/high relative humidity conditions and building envelope failure. Stohl recommended that the business units within the plaza maintain operation Heating, Ventilation, and Air Conditioning (HVAC) systems and make repairs to building envelope failures.

Pre-Renovation Asbestos Inspection, dated September 6, 2022

Stohl prepared a Pre-Renovation Asbestos Inspection Report, dated September 6, 2022. According to the report, Stohl inspected the former grocery store located at 409 William Street for presence of asbestos containing building materials in area of planned renovations. ACM was observed in residual black mastic beneath the tole floor of the former grocery store. According to the inspection there is not regulatory requirement to remove the ACM if it is not otherwise planned to be disturbed by renovations.

US EPA Pollution/Situation Report – Lake Erie Smelting Corp Removal Action, dated September 28, 2020 and US EPA Notice of Termination and Satisfaction, dated October 7, 2020.

A portion of the southern adjoining property was historically occupied by a junkyard (1925 to 1940) and Lake Erie Smelting Corp. (1941 to 1964) at the historical address of 29 Superior Street. Superior Street was demapped in 1966. The Lake Erie Smelting Corp. conducted secondary lead smelting operations. Soil samples collected from within the footprint of the former smelter facility indicated a release of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) designed hazardous substances including lead, cobalt, and copper. Due to the release of CERCLA hazardous substances, the US EPA entered into an Administrative Settlement Agreement and Order of Consent (AOC) with the court-appointed receiver responsible for site remediation. Remediation activities occurred between September 19, 2019 and September 8, 2020 and included excavation, installation of security bollards, completion of an elevation survey, and installation of a vegetative cap. About 3,805.78 tons of metals-impacted soil was exported to the Town of Tonawanda Landfill for off-site disposal. The US EPA conducted a final site visit on September 8, 2020 and activities required under the AOC were satisfactorily performed.

Due to the proximity to the subject property, and absence of analytical data to confirm the release of hazardous substances did not migrate off-site, the historical uses as a junk yard and smelting company at the southern adjoining property may have impacted groundwater and/or soil vapor beneath the subject property.

4. ADJOINING PROPERTIES AND SURROUNDING AREA

The following sections describe current and historical uses of and database listings for adjoining properties and the surrounding area.

4.1 Current Use of Adjoining Properties and Surrounding Area

The current use of adjoining and surrounding properties is summarized in Table 4-1.

Table 4-1 Current Use of Adjoining Properties and Surrounding Area

Direction	Address and Block/Lot	Adjoining Properties	Surrounding Area
North	William Street		Park, and commercial, residential, and mixed-use buildings
	412 William Street	Metal stamping manufacturer (The Crosby Company)	
	414 William Street	Vacant land	
	416 William Street	Four One Six bar and residential building	
	422, 426, and 430 William Street	Vacant land	
	442 William Street	Convenience store and residential building	
	450 William Street	Parking lot and Greater Matthews Missionary Church	
	456 and 458 William Street	Vacant land	
East	Jefferson Street		Mixed-use and residential buildings
	467 Jefferson Street	First Calvary Missionary Church and parking lot	
	319, 323, and 329 Jefferson Street	Residential buildings	
South	Byrd Way		Residential buildings
	460 William Street/161 Hickory Street	Towne Gardens Apartments	
West	401 William Street	Residential building	Residential buildings
	403 William Stret	Vacant land	

Langan did not observe obvious conditions likely to represent environmental concerns for the subject property from current uses of adjoining or surrounding properties.

4.2 Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix E.

Table 4-2 Historical Use of Adjoining Properties

Direction	Adjoining Properties
North	The northern adjoining properties are depicted as commercial and manufacturing buildings in the 1889 fire insurance map. Known manufacturing uses observed in the fire insurance maps dated between 1889 and 1986 include a hardware tin shop (1889), paint and oils company (1899 – 1926), blacksmith (1899), sausage factory (1899), malt distillery (1889 – 1899), stamping manufacturer (1926 – present). Gas tanks were also observed on the William Street sidewalk adjacent to 322 William Street (1926) and on the Spring Street sidewalk adjacent to 308 Spring Street (1986).
East	The eastern adjoining properties are depicted as commercial and residential buildings in the 1889 fire insurance map. By 1981 multiple commercial and residential eastern adjoining properties are no longer present and are now vacant land. Known uses depicted on the fire insurance maps include auto repair at 347 Jefferson Avenue (1950 – 1986) and cap manufacturing at 323 Jefferson Avenue (1981 – 1986).
South	The southern adjoining properties are depicted as commercial, residential and/or institutional buildings in the 1889 and 1899 fire insurance maps. As discussed previously, a portion of the southern adjoining property was historically occupied by a junkyard (1925 – 1940) and Lake Erie Smelting Corp. (1941 – 1964) at the former 29 Superior Street. A gas tank is depicted at the former 25 Superior Street in the 1950 fire insurance map. According to the aerial photographs the former buildings were demolished, and the property appears to be vacant in 1962 until 1970. Superior Street is no longer present in the 1966 aerial photograph. In 1970, the present-day Towne Garden Apartments appear to be partially constructed.
West	The western adjoining properties are depicted as a residential building, commercial, manufacturing, and/or institutional buildings in the fire insurance maps dated 1889 and 1950. Manufacturing uses include a bottling company (1889 – 1899), black smith (1926), and a junk yard (1926 – 1950). According to the aerial photographs the former buildings were demolished, and the property appears to be vacant in 1962 until 1995. The present-day residential building is present in the 1995 aerial photographs.

The surrounding area was shown as developed in the fire insurance maps, aerial maps, and topographic maps in the late 1800s. Residential, commercial, institutional, and industrial developments were identified in the aerial photographs and fire insurance maps between the late 1800s and 1950s. In the 1960s to 1970s, former structures and roadways were demolished and demapped, as the neighborhood was redeveloped for primarily residential use. The surrounding area appears depicted from the 1990s to the present appears to be similar to observations made during the site reconnaissance . Historical city directory listings of surrounding properties included residential, commercial, institutional, and manufacturing uses.

According to the fire insurance maps surrounding property use included a sugar manufacturing, a coal and wood company, a lumber yard, a private garage, junkyards, and a tool manufacturer.

The historical manufacturing use of the adjoining and surrounding properties may have resulted in inadvertent releases of petroleum products, solvents and/or hazardous substances which may have impacted soil vapor or groundwater at the subject property.

Database listings associated with the adjoining properties are discussed in Section 4.3.

4.3 Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property (see Section 8.2). Langan did not consider review of regulatory agency files necessary to evaluate potential RECs for the subject property unless discussed in Section 4.3.1 or 4.3.2 below.

4.3.1 Adjoining Properties

Database listings for adjoining properties are summarized as follows.

EDR Historical Drycleaners – Multiple Listings

There are ten listings that were identified on the EDR Historical Drycleaners database. These listings are located at the northern, eastern, and southern adjoining properties and are between 45 and 250 feet away from the subject property. The adjoining properties are listed as various drycleaners with dates ranging between 1925 and 1960. Due to the proximity to the subject property and potential for unreported spills or releases to impact groundwater and/or soil vapor at the subject property, these listings are considered to be a REC.

EDR Historical Auto Stations – Multiple Listings - (eastern adjoining, inferred cross-gradient)

There are five listings that were identified on the EDR Historical Auto Stations database. These listings are located at the eastern adjoining properties and are between 75 and 260 feet away from the subject property. The adjoining properties are listed as various auto repairs, gasoline and oil statins, and garages with dates ranging between 1930 and 1992. Due to the proximity to the subject property and potential for unreported spills or releases to impact groundwater and/or soil vapor at the subject property, these listings are considered to be a REC.

Crosby Co - Pratt Street (northern adjoining, inferred cross-gradient)

This facility was identified on the RCRA VSQG, FINDS, ECHO, and MANIFEST databases. The site is identified under US EPA ID NYD002100246 and is listed for the generation of a not defined waste (X002). The facility was identified in the SQG database in 1988, the Non-Gen database in 1999, and the VSQG database, previously named CESQG, in 2006 and 2007. A general violation was determined by the US EPA listed in the RCRA Generators database in 1994; however, compliance was reported in 1995.

The facility is identified on the FINDS database under the Toxic Release Inventory System (TRIS), which is a publicly available US EPA database reported annually by certain covered industry groups, as well as federal facilities. The facility is registered for metal stamping.

Based on the reported violations, the proximity and hydraulic relationship to the subject property and potential for unreported spills or releases to impact groundwater and/or soil vapor at the subject property, this listing is considered a REC.

BMHA – AD Price Extension Group 1 – Block Bounded by William Street (inferred upgradient)

This facility was identified on the RCRA Non-Gen database in 1999, 2006, and 2007. The facility was also listed as a SQG in 1994 is identified under US EPA ID NY0000098665 and is listed for the generation of a not defined waste (D000), corrosive waste (D002), and lead (D008). No violated were reported and the exact address could not be verified. Due to the absence of

violations and information to identify this listing's address, it is unlikely to represent an environmental concern to the subject property.

Transformer – 432 William Gaiter Parkway (inferred upgradient)

According to the SPILLS database, a spill of about 10 gallons of transformer oil was reported for 432 William Gaiter Parkway (i.e. William Street) in August 2020. The address is related to an adjoining property, although the release appears to have occurred in the roadway when a bulldozer broke a utility pole, causing the attached transformer to leak oil onto the roadway. National Grid cleaned up the spill and the spill was closed the next day. Based on the nature of the spill, the former spill is unlikely to represent an environmental concern for the subject property.

Pavement/Drain – 467 William Street (inferred upgradient)

According to the SPILLS database, a spill of about 50 gallons diesel was reported for 467 William Street in April 2019. The address is related to an adjoining property, although the release occurred in the roadway when a car accident resulted in a pick-up truck leaking diesel fluid. The spill was cleaned using absorbent pads and a vacuum truck, and closed the same day. Based on the nature of the spill, the former spill is unlikely to represent an environmental concern for the subject property.

Abandoned Drums – 440 Clinton Street (inferred downgradient)

According to the SPILLS database, 105 gallons of paint cans were reported to have been abandoned in a dumpster located at 440 Clinton Street on June 17, 1993. The spill was closed on June 24, 1993, after the paint was disposed of off-site. Based on the nature of the spill, the former spill is unlikely to represent an environmental concern for the subject property.

4.3.2 Surrounding Area

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). Surrounding properties did not warrant further discussion in the context of potential to represent an environmental concern for the subject property and therefore are not discussed below.

Based on information in the environmental database report, Langan did not consider submitting FOIA requests to supplement the database listings for adjoining or surrounding area properties necessary.

5. CONCLUSIONS, FINDINGS AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the subject property at 407 and 409 William Street in the City of Buffalo, New York. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report.

This assessment has revealed the following RECs, BERs, and de minimis conditions, in connection with the subject property as presented in Table 5-1.

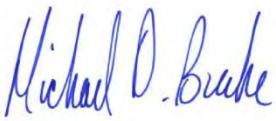

Table 5-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Historical Use of Subject Property - The subject property was occupied by various drycleaning operations from the 1950s to the 1990s and industrial operations (i.e. a hardware warehouse, multiple garages/auto repair facilities, a bottling works facility, a lumber storage yard, a kindling/wood yard, a tool and metal working machinery manufacturer, a refrigerator manufacturer, a woolen rags manufacturer, a mirror manufacturer, a woodworking and metal machinery manufacturer, and a bag cleaner and repairing company) from at least the late 1880s to the 1960s. Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with historical drycleaning and industrial operation may have affected soil, groundwater, and/or soil vapor beneath the subject property.
Historical and Current Use of Adjoining and Surrounding Properties - The adjoining and surrounding properties were occupied by various drycleaning and industrial operations (i.e. a hardware tin shop, stamping manufacturer, a paint and oil company, a blacksmith, an auto repair facility, a cap manufacturer, junkyards, a smelting corporation, a bottling company, and a black smith). One of the northern adjoining properties (412 William Street) is presently occupied by a metal stamping manufacturer that is listed as a RCRA hazardous waste generator. *Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with the adjoining and surrounding historical and present uses may have affected groundwater, and/or soil vapor beneath the subject property.*
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs
De Minimis Conditions
Oily Sheen: Langan observed an oily sheen on the asphalt-paved parking lot. Langan did not observe obvious cracking or pathways to the subsurface in the stained area; however, superficial cracks were observed in proximity of the oily sheen and throughout the parking lot. *Langan considers the sheen a de minimis condition.*
Significant Data Gaps
Langan did not identify significant data gaps.
Business Environmental Risks (BER)
Based on the EDR report, the subject property is likely underlain by a layer of historic fill. Historic fill found in urban environments typically contains ash, demolition debris, and/or municipal waste products and may contain contaminants (e.g., SVOCs or metals) at concentrations above applicable regulatory standards.

ASTM E1527-21 Scope Items
The likely occurrence of historic fill does not trigger any regulatory obligations or reporting requirements, but may require implementation of soil handling and management procedures during site redevelopment to address excavation, re-use, handling, and off-site disposal, and may result in incremental costs above the baseline development value, specifically associated with transportation and disposal of excess soil generated during foundation excavation.

6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Michael D. Burke, PG, CHMM
Principal/Vice President (Environmental Professional)

Resumes outlining the qualifications of the project team and the Environmental Professional are included in Appendix G.

8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

8.1 ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager

, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use

limitations).A historical recognized environmental condition is not a recognized environmental condition.

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

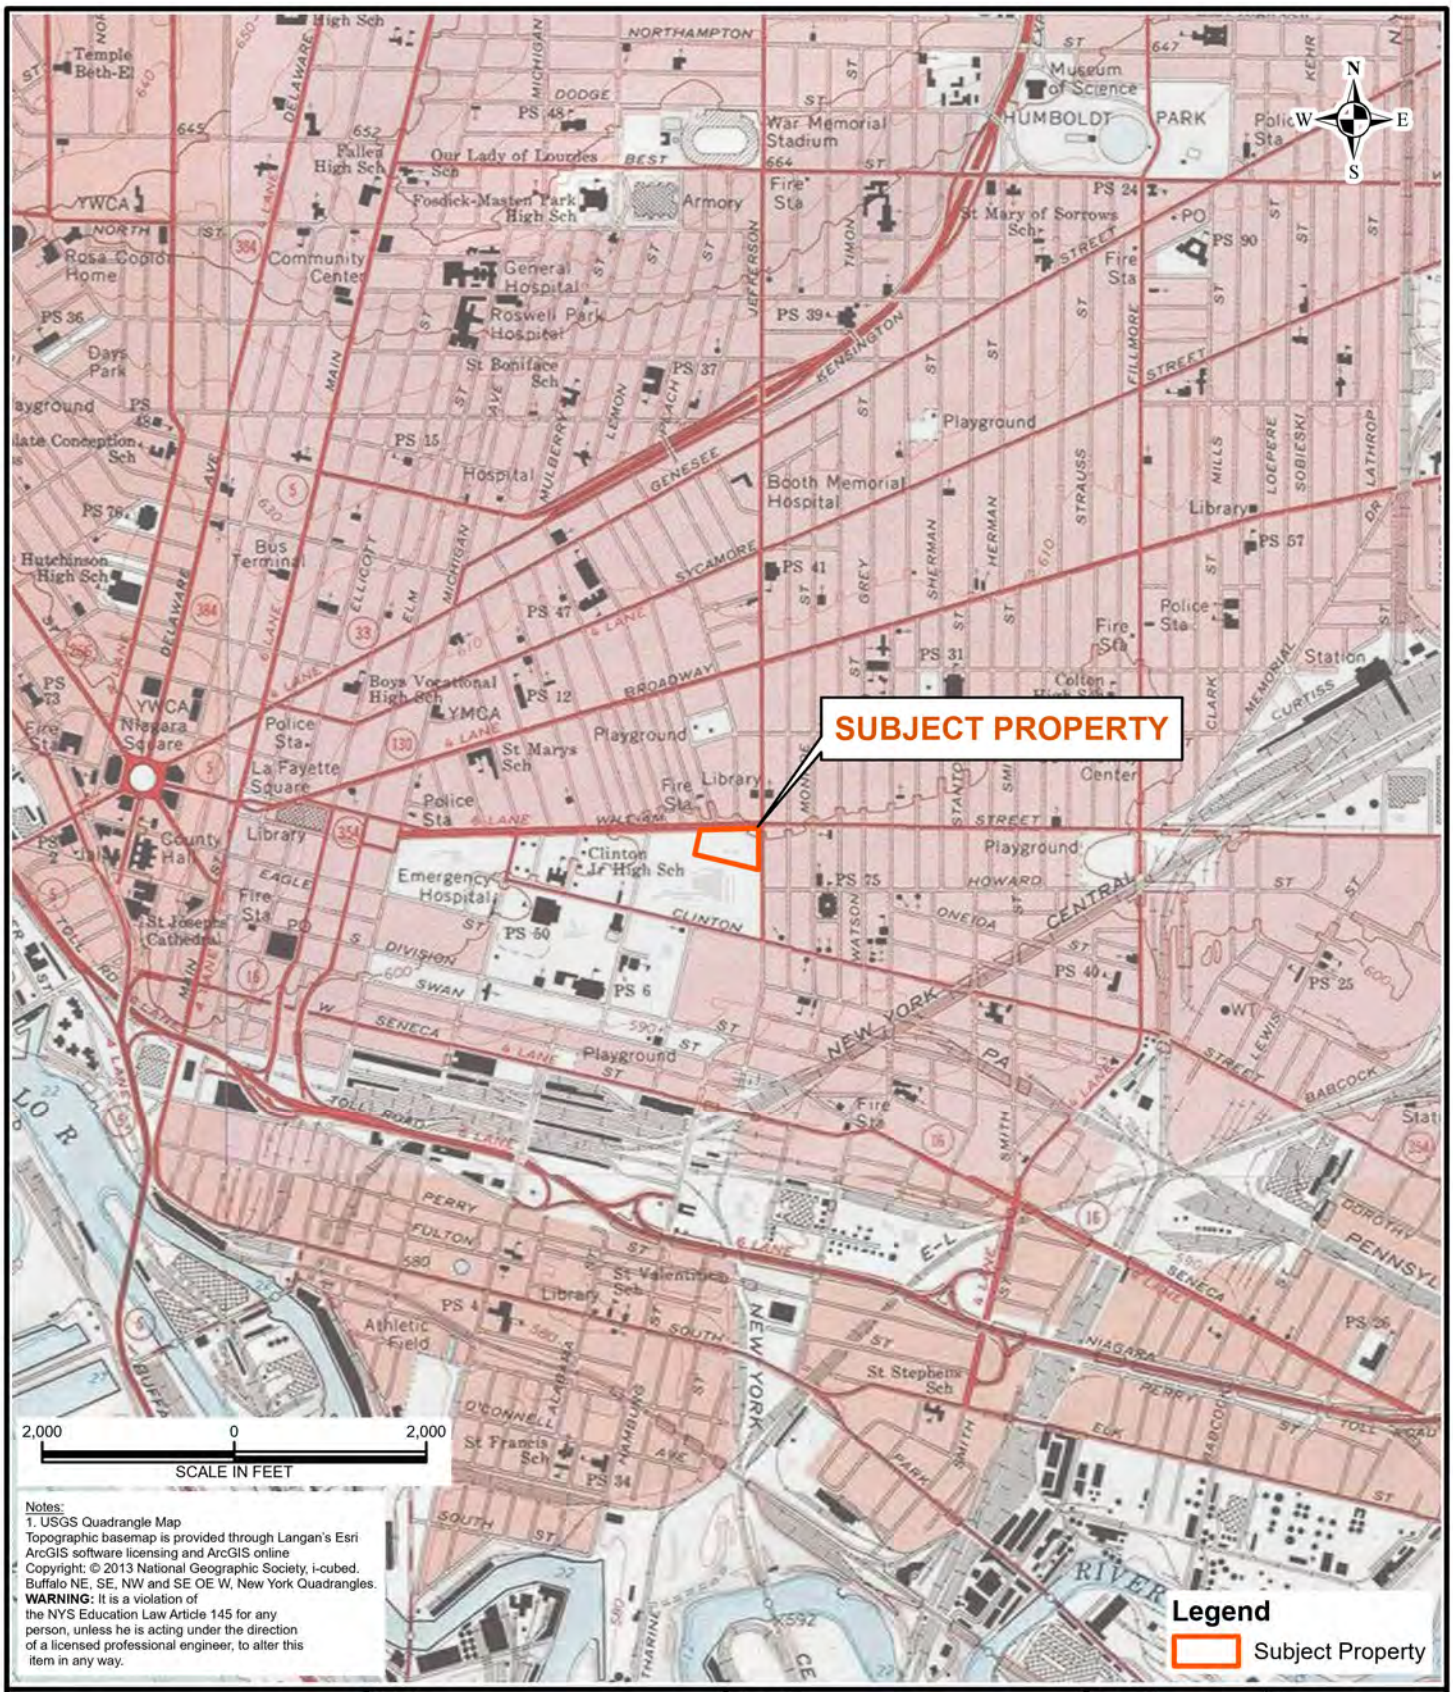
Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.



Subject property: the property that is the subject of the environmental site assessment described in this practice.

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

8.2 Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix F contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

THIS INDENTURE, made effective as of the 11th day of August, 2021
BETWEEN

FEDERAL NATIONAL MORTGAGE ASSOCIATION, a corporation organized and existing under the laws of the United States whose address is 5600 Granite Parkway, Plano, Texas 75024, Attn: Director – Multifamily Loss Mitigation, Attention: Director – Multifamily Loss Mitigation

party of the first part, and

MF BLUE VALLEY APARTMENTS, LLC, a Delaware limited liability company, whose address is 1100 15th Street NW, Washington, DC 20005, Attn: Vice President, Multifamily Legal

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten ($10.00) Dollars and other good and valuable consideration, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL right, title and interest of the said party of the first part of, in and to all that certain plot, piece or parcel of land, with the buildings and improvements thereon, erected, situate, lying and being in the City of Buffalo, County of Erie, State of New York, and more particularly bounded and described as follows:

See Schedule "A" attached hereto and made a part hereof

BEING and intended to be the same premises conveyed to the party of the first part by Referee's Deed in Foreclosure dated the 11th day of August, 2021 and recorded on the 1st day of September, 2021 at Book 11386, Page 4693.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

SUBJECT TO any and all prior liens, unpaid taxes, special assessments, restrictions, easements of record, and other encumbrances, if any, insofar as they lawfully affect said premises, and all applicable building, zoning and health enactments.

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs, or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payments of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

[Signature Page Follow]

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

Mold Assessment and Remediation Plan – Unit 451

Dear Mr. Sutton:

On July 28, 2022, upon your request, Stohl Environmental, LLC (Eric Henderson, Jr., NYS Mold Assessor) performed a Mold Assessment at a commercial property located at 409 William Street in Buffalo, New York. The mold assessment was performed in response to the discovery of mold contamination created by condensation/high relative humidity conditions and building envelope failures.

A survey of the building revealed the following conditions as of the date of the Assessment (7/28/2022):

Moisture Event:
A lack of proper heat and air conditioning along with moisture intrusion through building envelop failures, have created conditions favorable for microbial growth. Installed building components within the unit were dry, on the date of the assessment. However, elevated relative humidity conditions were present.

Moisture Generating Repair/Contractor Recommendation: It is recommended that business units within the plaza, regardless of occupancy status, maintain operational HVAC systems and make repairs to building envelope failures.

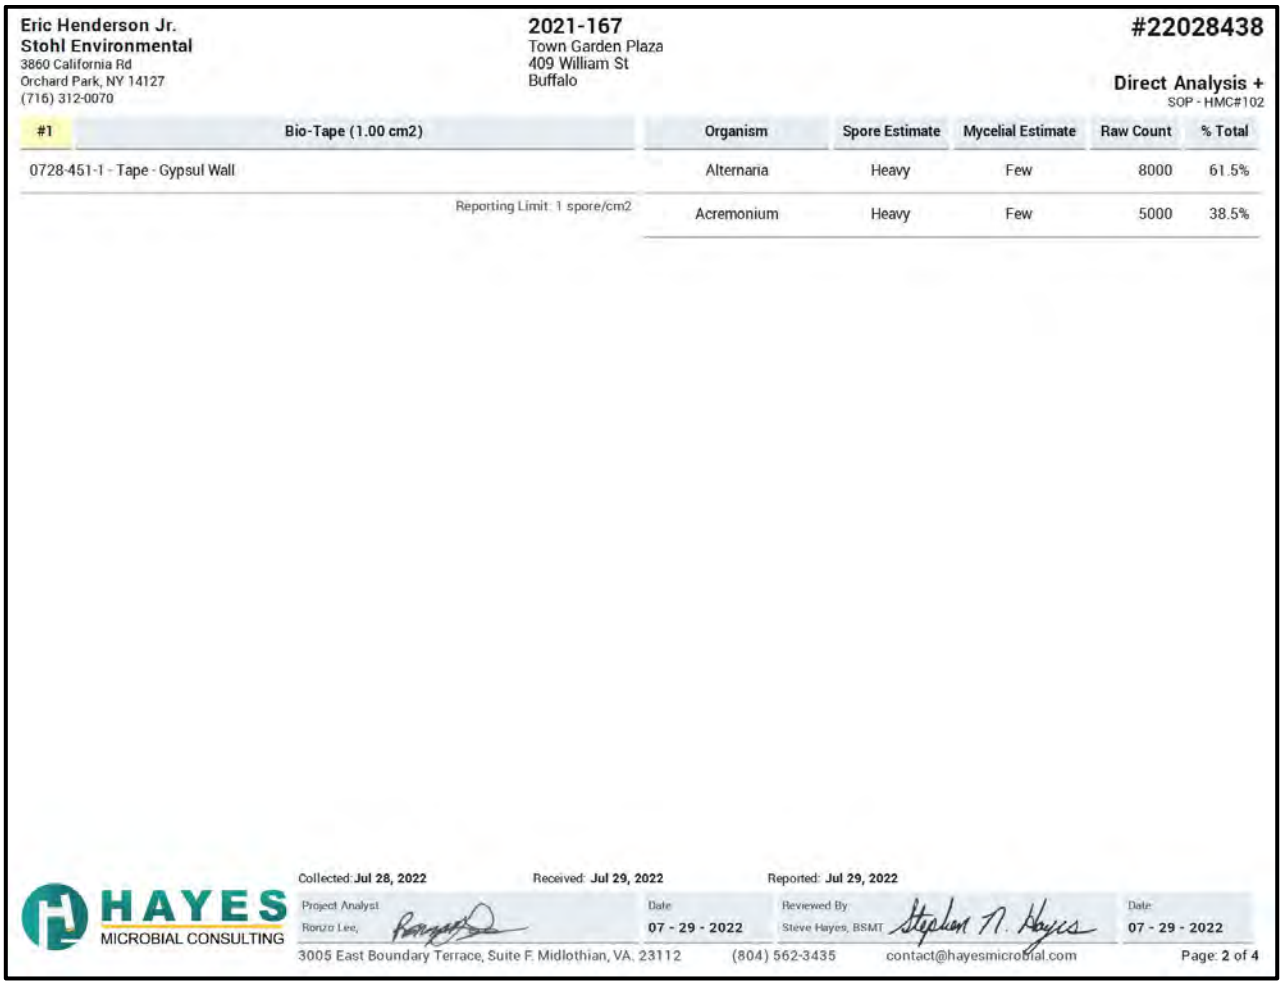
Description of Wet Areas and Mold Contamination (as shown in accompanying photos), on the date of the assessment:

Unit 451:
Gypsum/plaster/wood wall sheathing within the unit was moisture damaged and covered with visible mold growth, on the date of the assessment. Additionally, shelving units, wood wall framing and display stands were covered with areas of mold growth. **Approximately 500 square feet of component removal/cleaning.**

Stohl ENVIRONMENTAL

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

NOTE: The visual mold assessment was limited to accessible interior areas of the residence within client defined areas of the scope of work. **There is a probability that mold contamination exists in interstitial areas and may be exposed during interior demolition/ deconstruction. Should areas of mold contamination be discovered by the remediation contractor, suspect contamination should be inspected/documented.**



Bulk/Bio-Tape Lift Sampling:

One (1) confirmatory Bio-Tape Lift samples of suspect mold growth were collected by Stohl Environmental on July 28, 2022 and submitted to an independent accredited laboratory for analysis.

- **Bulk/Bio-Tape Lift samples were collected from:**
  - Bio-Tape : Unit 451 Gypsum Wall
  -
- **Interpretation of Laboratory Analysis:**
  - **Laboratory analysis of the sample collected revealed positive confirmation of microbial growth. See following page for results.**

Mold Remediation Plan

Property Address: 409 William Street, Buffalo, New York 14222

In accordance with Article 32 of the New York State Labor Law, the following Mold Remediation Plan is included below:

1. **Areas affected:** Unit 451

   Remediation areas shall be dried completely in accordance with IICRC S500 recommended drying goal of "with 10% of the dry standard". The "Dry Standard" is defined as "a reasonable approximation of the moisture content or level of a material prior to a water intrusion. An acceptable method is to determine the moisture content or levels of similar materials in unaffected areas or use historical data for the region". Additionally, relative humidity conditions should be reduced to below 60%.

2. **Estimated Quantities:**

   Unit 451:
   Gypsum/plaster/wood wall sheathing within the unit was moisture damaged and covered with visible mold growth, on the date of the assessment. Additionally, shelving units, wood wall framing and display stands were covered with areas of mold growth. **Approximately 500 square feet of component removal/cleaning.**

   I. **Mold Impacted Gypsum/Plaster/Wood Walls and Front Shelving Display Units – Remove and dispose of from the building.**

   II. **Exposed Framing/Structure/OSB Shelving Units – Scrub/clean/treat using EPA registered sanitizer/disinfectant. Treat surfaces with EPA registered antimicrobial encapsulant, white in color.**

   III. **General Clean – See Section 6 (c)**

3. **Personal Protective Equipment (PPE):** PPE shall be utilized in accordance with OSHA SHIB 03-10-10 and OSHA 1910.134 (Respirator Protection).

4. **Clearance:** Following remediation activities, all affected areas shall be subject to a thorough visual inspection for the absence of visible mold growth by a NYS licensed Mold Assessor. Additionally, Spore-Trap air samples shall be collected from all affected work areas with comparison to ambient locations.

5. **Notification:** At the entrance to the work area(s), a warning sign(s) and barrier tape shall be placed to warn building occupants of potential hazards.

6. **Time, Cost and Procedures:** Determination of a mold remediation budget for removal, disposal, and cleaning of mold contaminated building components at 409 William Street in Buffalo, New York recommended to include the following:

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

a. **Containment:** Containment of the work area is necessary to assure that other areas of the residence are not cross-contaminated by remediation activities. The estimated cost associated with this task will range between $250 to $500 for each large scale mold remediation project, and is to include negative pressurization of the work area.

    i. **Preparation of the work areas: Establish HEPA filtered negative air pressure equipment installed within the unit suitable to achieve a minimum of -0.02 column inches of water pressure differential, relative to pressure outside the work area and 4 air changes per hour. Install an air lock system at the entrance to each work area.**

b. **Removal of Contaminated Porous Materials and Other Materials Considered Not Salvageable**: Removal and disposal of most mold contaminated porous materials is estimated at between $6/SF to $16/SF (cost estimate only for physical removal of identified materials), assuming the materials are not classified as hazardous or regulated materials. Consistent with Federal and State regulations, suspect asbestos containing materials, and materials suspected to be covered with lead-based paint should be tested before disturbance, and if determined to be positive, a budget provision should be provided for removal or disturbance in a manner that is consistent with regulatory requirements.

    i. Removal and disposal of damp and or potentially mold contaminated porous materials (Gypsum/Wood, Debris, etc.) must be performed in a manner to prevent debris and building materials from becoming airborne.

c. **Final Cleaning, HEPA vacuuming, sanitizing/disinfecting and encapsulation** of surfaces that will remain in the affected area(s) including subfloor components, wall surfaces, etc. is estimated at $1/SF to $2.50/SF for an extensive mold remediation project, depending upon the size of the remediation area and the materials/surfaces to remain.

    i. Final cleaning of all remaining surfaces that will remain inside the work area - Thoroughly clean utilizing HEPA equipped vacuums and perform a general clean with an EPA registered sanitizer/disinfectant. In addition to cleaning, an EPA registered antimicrobial coating, white in color, shall be utilized where indicated in section 2 above.

7. **Moisture Generating Repair/Contractor Recommendation:** It is recommended that business units within the plaza, regardless of occupancy status, maintain operational HVAC systems and make repairs to building envelope failures.

Organism Descriptions

Acremonium

Habitat: Found in soil and decaying plant debris. Asexual state of Emericellopsis sp. and Chaetomium sp.

Effects: Type I and III allergen. It may cause mycetomas, infections of the nails, corneal ulcers, meningitis, and endocarditis, especially in immunocompromised people.

Alternaria

Habitat: Commonly found outdoors in soil and decaying plants. Indoors, it is commonly found on window sills and other horizontal surfaces.

Effects: A common allergen and has been associated with hypersensitivity pneumonitis. Alternaria is capable of producing toxic metabolites which may be associated with disease in humans or animals. Occasionally an agent of onychomycosis, ulcerated cutaneous infection and chronic sinusitis, principally in the immunocompromised patient.

Mold Assessment and Remediation Plan – Various Units

Dear Mr. Sutton:

On July 26, 2021, upon your request, Stohl Environmental, LLC performed a Mold Assessment at a commercial property located at 409 William Street in Buffalo, New York. The mold assessment was performed in response to the discovery of mold contamination created by condensation/high relative humidity conditions and building envelope failures.

A survey of the building revealed the following conditions as of the date of the Assessment (7/26/2021):

Moisture Event:
A lack of proper heat and air conditioning within various units of the plaza have created conditions favorable for microbial growth. Installed building components within the units inspected were found to be wet in condition and covered with extensive areas of visible mold growth, on the date of the assessment.

Moisture Generating Repair/Contractor Recommendation: It is recommended that business units within the plaza, regardless of occupancy status, maintain operational HVAC systems and make repairs to building envelope failures.

Description of Wet Areas and Mold Contamination (as shown in accompanying photos), on the date of the assessment:

Unit 421:
Gypsum/plaster wall sheathing and ceiling tiles throughout the unit were wet in condition and covered with visible mold growth on the date of the assessment. **Approximately 2,000 square feet of gypsum/plaster wall sheathing and ceiling tile removal. Approximately 1,000 square feet of wall framing/CMU wall cleaning/encapsulation including building contents.**

Unit 425:
Gypsum/plaster wall sheathing throughout the unit was wet in condition and covered with visible mold growth on the date of the assessment. **Approximately 1,500 square feet of gypsum/plaster wall sheathing removal. Approximately 1,500 square feet of wall framing/CMU wall cleaning/encapsulation including building contents.**

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

Unit 429/431:
There was no visible mold present on the date of the assessment. However, some moisture damaged ceiling tiles and gypsum wall board at the entrance was present and Relative Humidity levels were in excess of 70%. Additionally, air sample results were elevated, potentially due to mold growth in the adjacent units.

Unit 435:
Gypsum/wood wall sheathing throughout the unit was covered with visible mold growth up to a height of approximately 4 feet. Additionally there was visible mold growth present on the ceiling of the Men's Bathroom. **Approximately 1,500 square feet of gypsum wall sheathing removal. Approximately 1,000 square feet of wall framing cleaning/encapsulation including building contents.**

Central Hallway and Bathrooms:
Gypsum wall sheathing, insulation and wood trim throughout the Hallway and Bathrooms were covered with visible mold growth up to a height of approximately 3 feet. **Approximately 275 square feet of gypsum wall sheathing and insulation removal. Approximately 200 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 447A:
There was no visible mold present on the date of the assessment. However, Relative Humidity levels were in excess of 75% and air sample results were elevated, potentially due to mold growth in the adjacent units.

Unit 447B:
Gypsum wall sheathing (on the shared wall with Unit 447F) was covered with visible mold growth and Relative Humidity levels were in excess of 75%. **Approximately 200 square feet of gypsum wall sheathing and insulation removal. Approximately 200 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 447F:
Gypsum wall sheathing, insulation, wood trim and ceiling tiles throughout the unit were covered with visible mold growth and Relative Humidity levels were in excess of 80%. **Approximately 2,500 square feet of gypsum wall sheathing, ceiling tile and insulation removal. Approximately 2,000 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 447G:
Gypsum wall sheathing and insulation throughout the unit were covered with visible mold growth and Relative Humidity levels were in excess of 75%. **Approximately 1,500 square feet of gypsum wall sheathing and insulation removal. Approximately 1,000 square feet of wall framing cleaning/encapsulation including building contents.**

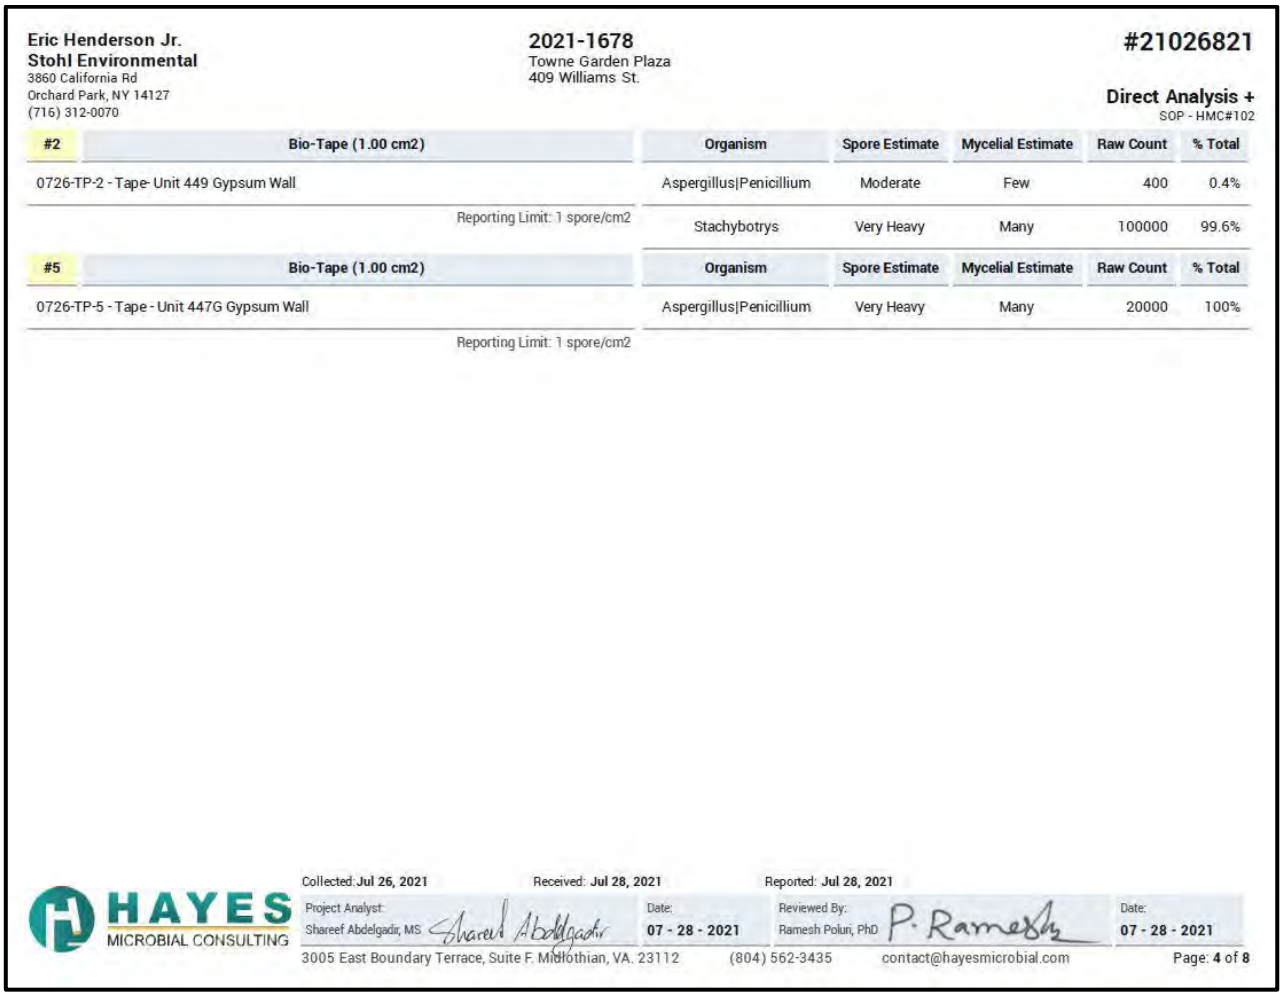
Unit 447H:
Gypsum wall sheathing, insulation, wood trim and ceiling tiles throughout the unit were covered with visible mold growth and Relative Humidity levels were in excess of 75%. **Approximately 2,000 square feet of gypsum wall sheathing, ceiling tiles and insulation**

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

removal. Approximately 1,000 square feet of wall framing cleaning/encapsulation including building contents.

Unit 449:
Standing water and wet building components covered with excessive visible mold growth were present, on the date of the assessment. Additionally, gypsum/paneling/plywood wall sheathing, ceiling tiles and insulation were covered with extensive mold growth throughout the entire area with Relative Humidity levels in excess of 80%. **Approximately 16,000 square feet of gypsum/paneling/plywood wall sheathing, ceiling tiles and insulation removal. Approximately 3,000 square feet of CMU wall and remaining wall framing cleaning/encapsulation including building contents.**

NOTE: The visual mold assessment was limited to accessible interior areas of the residence within client defined areas of the scope of work. **There is a probability that mold contamination exists in interstitial areas and may be exposed during interior demolition/ deconstruction. Should areas of mold contamination be discovered by the remediation contractor, suspect contamination should be inspected/documented.**



Bulk/Bio-Tape Lift Sampling:

Two (2) confirmatory Bio-Tape Lift samples of suspect mold growth were collected by Stohl Environmental on July 26, 2021 and submitted to an independent accredited laboratory for analysis.

- **Bulk/Bio-Tape Lift samples were collected from:**
  - Bio-Tape : Unit 449 Gypsum Wall
  - Bio-Tape : Unit 447G Gypsum Wall
- **Interpretation of Laboratory Analysis:**
  - **Laboratory analysis of the samples collected revealed positive confirmation of microbial growth. Additionally, many mycelial were identified on the samples collected, an indication that these areas are active growth sites. See following page for results.**

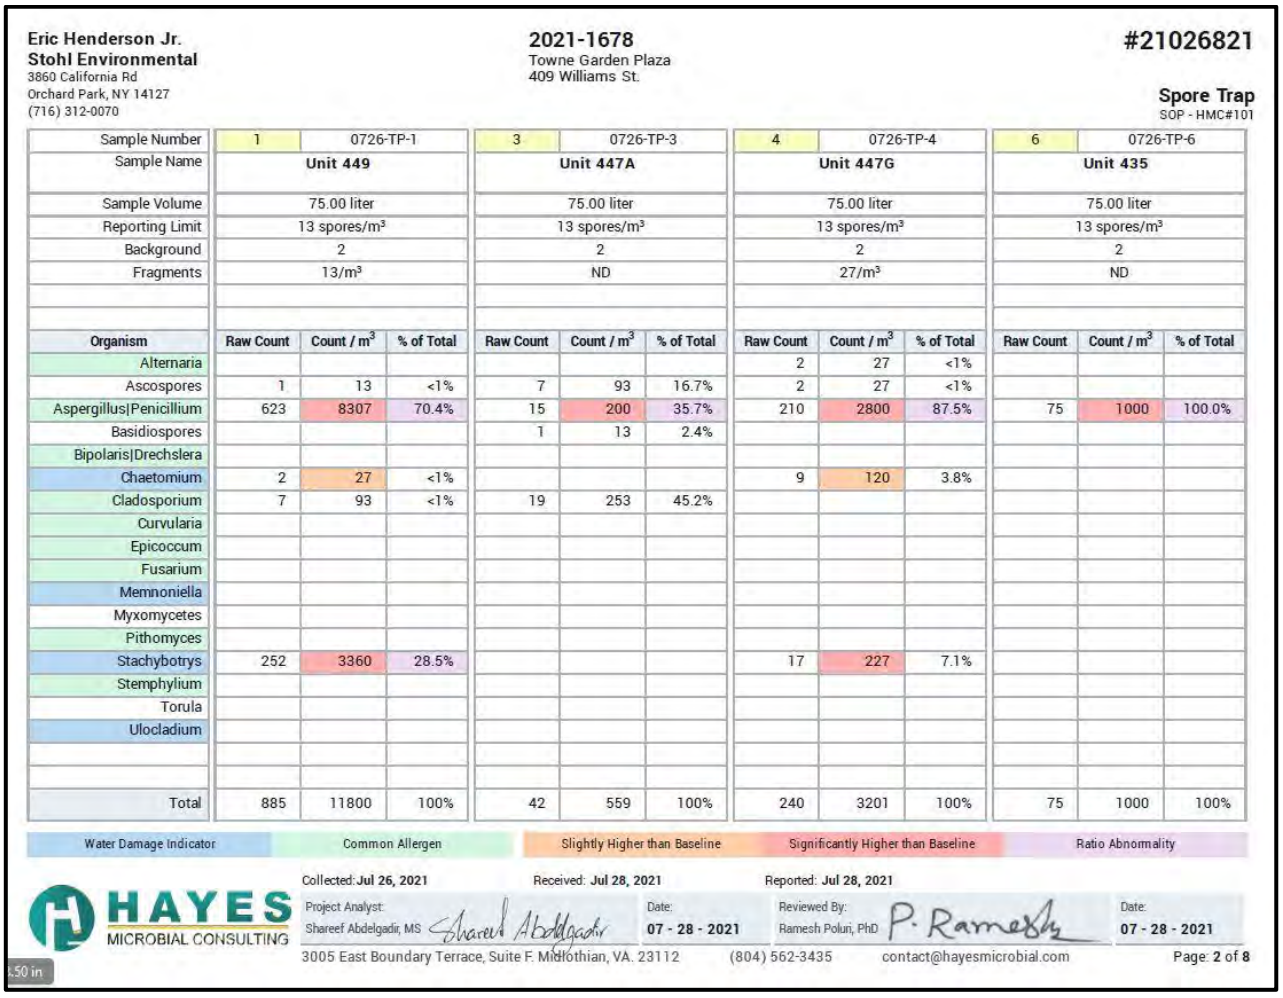
Spore-Trap Air Sampling:

Eight (8) Spore-Trap Air samples were collected by Stohl Environmental on July 26, 2021 and submitted to an independent accredited laboratory for analysis.

- **Air samples were collected from:**
  - Unit 449
  - Unit 447A
  - Unit 447G
  - Unit 435
  - Unit 431
  - Unit 425
  - Unit 421
  - Exterior Ambient – Front of Plaza



- Air samples were collected on Air-O-Cell Mold sampling cassettes, using a high volume vacuum pump at a rate of 15 liters per minute. A sampling duration of 5 minutes was followed for samples collected from both interior and exterior spaces. Spore traps are a unique sampling device designed for the rapid collection and analysis of a wide range of airborne particulates, including fungal spores. Samples are analyzed via light microscopy at 600X magnification, with the entire trace (100% of the sample) being analyzed. The results are reported as total, meaning they include both viable and non-viable fungal spores. This technique does not allow for the differentiation between *Aspergillus* and *Penicillium* spores. Small (~1-3µ) spherical fungal spores that cannot be identified and which may include *Aspergillus, Penicillium, Trichoderma* or other genuses, are grouped together as ascospores. Additionally, depending on morphology, other non-distinctive spores will be reported in categories such as ascospores or basidiospores (including mushrooms and other microfungi).

- **Interpretation of Laboratory Analysis:**
  - **Laboratory analysis of Spore-Trap air sample collected from inside the units revealed substantially elevated concentrations of airborne fungal spores when compared to that of Exterior Ambient conditions, on the date of the sampling. See following page for results.**

Mold Remediation Plan

Property Address: 409 William Street, Buffalo, New York 14222

In accordance with Article 32 of the New York State Labor Law, the following Mold Remediation Plan is included below:

1. **Areas affected:** Various Units

   Remediation areas shall be dried completely in accordance with IICRC S500 recommended drying goal of "with 10% of the dry standard". The "Dry Standard" is defined as "a reasonable approximation of the moisture content or level of a material prior to a water intrusion. An acceptable method is to determine the moisture content or levels of similar materials in unaffected areas or use historical data for the region". Additionally, relative humidity conditions should be reduced to below 60%.

2. **Estimated Quantities:**

   Unit 421:
   Gypsum/plaster wall sheathing and ceiling tiles throughout the unit were wet in condition and covered with visible mold growth on the date of the assessment. **Approximately 2,000 square feet of gypsum/plaster wall sheathing and ceiling tile removal. Approximately 1,000 square feet of wall framing/CMU wall cleaning/encapsulation including building contents.**

   Unit 425:
   Gypsum/plaster wall sheathing throughout the unit was wet in condition and covered with visible mold growth on the date of the assessment. **Approximately 1,500 square feet of gypsum/plaster wall sheathing removal. Approximately 1,500 square feet of wall framing/CMU wall cleaning/encapsulation including building contents.**

   Unit 429/431:
   There was no visible mold present on the date of the assessment. However, some moisture damaged ceiling tiles and gypsum wall board at the entrance was present and Relative Humidity levels were in excess of 70%. Additionally, air sample results were elevated, potentially due to mold growth in the adjacent units.

   Unit 435:
   Gypsum/wood wall sheathing throughout the unit was covered with visible mold growth up to a height of approximately 4 feet. Additionally there was visible mold growth present on the ceiling of the Men's Bathroom. **Approximately 1,500 square feet of gypsum wall sheathing removal. Approximately 1,000 square feet of wall framing cleaning/encapsulation including building contents.**

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

Central Hallway and Bathrooms:
Gypsum wall sheathing, insulation and wood trim throughout the Hallway and Bathrooms were covered with visible mold growth up to a height of approximately 3 feet. **Approximately 275 square feet of gypsum wall sheathing and insulation removal. Approximately 200 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 447A:
There was no visible mold present on the date of the assessment. However, Relative Humidity levels were in excess of 75% and air sample results were elevated, potentially due to mold growth in the adjacent units.

Unit 447B:
Gypsum wall sheathing (on the shared wall with Unit 447F) was covered with visible mold growth and Relative Humidity levels were in excess of 75%. **Approximately 200 square feet of gypsum wall sheathing and insulation removal. Approximately 200 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 447F:
Gypsum wall sheathing, insulation, wood trim and ceiling tiles throughout the unit were covered with visible mold growth and Relative Humidity levels were in excess of 80%. **Approximately 2,500 square feet of gypsum wall sheathing, ceiling tile and insulation removal. Approximately 2,000 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 447G:
Gypsum wall sheathing and insulation throughout the unit were covered with visible mold growth and Relative Humidity levels were in excess of 75%. **Approximately 1,500 square feet of gypsum wall sheathing and insulation removal. Approximately 1,000 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 447H:
Gypsum wall sheathing, insulation, wood trim and ceiling tiles throughout the unit were covered with visible mold growth and Relative Humidity levels were in excess of 75%. **Approximately 2,000 square feet of gypsum wall sheathing, ceiling tiles and insulation removal. Approximately 1,000 square feet of wall framing cleaning/encapsulation including building contents.**

Unit 449:
Standing water and wet building components covered with excessive visible mold growth were present, on the date of the assessment. Additionally, gypsum/paneling/plywood wall sheathing, ceiling tiles and insulation were covered with extensive mold growth throughout the entire area with Relative Humidity levels in excess of 80%. **Approximately 16,000 square feet of gypsum/paneling/plywood wall sheathing, ceiling tiles and insulation removal. Approximately 3,000 square feet of CMU wall and remaining wall framing cleaning/encapsulation including building contents.**

I. **Mold Impacted Gypsum Walls/Sheathing, Ceiling Tiles, Insulation and Wood/Trim Moldings – Remove and dispose of from the building.**

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

II. **Exposed Framing/Structure/CMU-Concrete Components – Scrub/clean/treat using EPA registered sanitizer/disinfectant. Treat CMU/Concrete surfaces with EPA registered antimicrobial encapsulant, white in color.**

III. **General Clean – See Section 6 (c)**

3. **Personal Protective Equipment (PPE):** PPE shall be utilized in accordance with OSHA SHIB 03-10-10 and OSHA 1910.134 (Respirator Protection).

4. **Clearance:** Following remediation activities, all affected areas shall be subject to a thorough visual inspection for the absence of visible mold growth by a NYS licensed Mold Assessor. Additionally, Spore-Trap air samples shall be collected from all affected work areas with comparison to ambient locations.

5. **Notification:** At the entrance to the work area(s), a warning sign(s) and barrier tape shall be placed to warn building occupants of potential hazards.

6. **Time, Cost and Procedures:** Determination of a mold remediation budget for removal, disposal, and cleaning of mold contaminated building components at 409 William Street in Buffalo, New York recommended to include the following:

   a. **Containment:** Containment of the work area is necessary to assure that other areas of the residence are not cross-contaminated by remediation activities. The estimated cost associated with this task will range between $250 to $500 for each large scale mold remediation project, and is to include negative pressurization of the work area.

      i. **Preparation of the work areas: Establish HEPA filtered negative air pressure equipment installed within the units suitable to achieve a minimum of -0.02 column inches of water pressure differential, relative to pressure outside the work area and 4 air changes per hour. Install an air lock system at the entrance to each work area.**

   b. **Removal of Contaminated Porous Materials and Other Materials Considered Not Salvageable**: Removal and disposal of most mold contaminated porous materials is estimated at between $6/SF to $16/SF (cost estimate only for physical removal of identified materials), assuming the materials are not classified as hazardous or regulated materials. Consistent with Federal and State regulations, suspect asbestos containing materials, and materials suspected to be covered with lead-based paint should be tested before disturbance, and if determined to be positive, a budget provision should be provided for removal or disturbance in a manner that is consistent with regulatory requirements.

      i. **Removal and disposal of damp and or potentially mold contaminated porous materials (Gypsum/Paneling/Plywood wall sheathing, Wood Trim, Insulation, Ceiling Tiles and Debris) must be performed in a manner to prevent debris and building materials from becoming airborne.**

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

c. **Final Cleaning, HEPA vacuuming, sanitizing/disinfecting and encapsulation** of surfaces that will remain in the affected area(s) including subfloor components, wall surfaces, etc. is estimated at $1/SF to $2.50/SF for an extensive mold remediation project, depending upon the size of the remediation area and the materials/surfaces to remain.

   i. **Final cleaning of all remaining surfaces that will remain inside the work area - Thoroughly clean utilizing HEPA equipped vacuums and perform a general clean with an EPA registered sanitizer/disinfectant. In addition to cleaning, an EPA registered antimicrobial coating, white in color, shall be utilized where indicated in section 2 above.**

7. **Moisture Generating Repair/Contractor Recommendation:** It is recommended that business units within the plaza, regardless of occupancy status, maintain operational HVAC systems and make repairs to building envelope failures.

If after reviewing this report, you have any questions or suggestions as to how Stohl Environmental can be of further assistance, please do not hesitate to call.

Sincerely,
Stohl Environmental, LLC

Eric Henderson Jr.

#21026821

Spore Trap Information

Reporting Limit	The Reporting Limit is the lowest number of spores that can be detected based on the total volume of the sample collected and the percentage of the slide that is counted. At Hayes Microbial, 100% of the slide is read so the LOD is based solely on the total volume. Raw spore counts that exceed 500 spores will be estimated.
Blanks	Results have not been corrected for field or laboratory blanks.
Background	The Background is the amount of debris that is present in the sample. This debris consists of skin cells, dirt, dust, pollen, drywall dust and other organic and non-organic matter. As the background density increases, the likelihood of spores, especially small spores such as those of Aspergillus and Penicillium may be obscured. The background is rated on a scale of 1 to 5 and each level is determined as follows: **NBD:** No background detected due to possible pump or cassette malfunction. Recollect sample. (Field Blanks will display NBD) **1 :** <5% of field occluded. No spores will be uncountable. **2 :** 5-25% of field occluded. **3 :** 25-75% of field occluded. **4 :** 75-90% of field occluded. **5 :** >90% of field occluded. Suggested recollection of sample.
Fragments	Fragments are small pieces of fungal mycelium or spores. They are not identifiable as to type and when present in very large numbers, may indicate the presence of mold amplification.
Control Comparisons	There are no national standards for the numbers of fungal spores that may be present in the indoor environment. As a general rule and guideline that is widely accepted in the indoor air quality field, the numbers and types of spores that are present in the indoor environment should not exceed those that are present outdoors at any given time. There will always be some mold spores present in "normal" indoor environments. The purpose of sampling and counting spores is to help determine whether an abnormal condition exists within the indoor environment and if it does, to help pinpoint the area of contamination. Spore counts should not be used as the sole determining factor of mold contamination. There are many factors that can cause anomalies in the comparison of indoor and outdoor samples due to the dynamic nature of both of those environments.
Water Damage Indicator Common Allergen Slightly Higher than Baseline Significantly Higher than Baseline Ratio Abnormality	**Blue:** These molds are commonly seen in conditions of prolonged water intrusion and usually indicate a problem. **Green:** Although all molds are potential allergens, these are the most common allergens that may be found indoors. **Orange:** The spore count is slightly higher than the outside count and may or may not indicate a source of contamination. **Red:** The spore count is significantly higher than the baseline count and probably indicates a source of contamination. **Violet:** The types of spores found indoors should be similar to the ones that were identified in the baseline sample. Significant increases (more than 25%) in the ratio of a particular spore type may indicate the presence of abnormal levels of mold, even if the total number of spores of that type is lower in the indoor environment than it was outdoors.
Color Coding	Fungi that are present in indoor samples at levels lower than 200 per cubic meter are not color coded on the report, unless they are one of the water damage indicators.

#21026821

Organism Descriptions

Alternaria

Habitat: Commonly found outdoors in soil and decaying plants. Indoors, it is commonly found on window sills and other horizontal surfaces.

Effects: A common allergen and has been associated with hypersensitivity pneumonitis. Alternaria is capable of producing toxic metabolites which may be associated with disease in humans or animals. Occasionally an agent of onychomycosis, ulcerated cutaneous infection and chronic sinusitis, principally in the immunocompromised patient.

Ascospores

Habitat: A large group consisting of more than 3000 species of fungi. Common plant pathogens and outdoor numbers become very high following rain. Most of the genera are indistinguishable by spore trap analysis and are combined on the report.

Effects: Health affects are poorly studied, but many are likely to be allergenic.

Aspergillus|Penicillium

Habitat: The most common fungi isolated from the environment. Very common in soil and on decaying plant material. Are able to grow well indoors on a wide variety of substrates.

Effects: This group contains common allergens and many can cause hypersensitivity pneumonitis. They may cause extrinsic asthma, and many are opportunistic pathogens. Many species produce mycotoxins which may be associated with disease in humans and other animals. Toxin production is dependent on the species, the food source, competition with other organisms, and other environmental conditions.

Basidiospores

Habitat: A common group of Fungi that includes the mushrooms and bracket fungi. They are saprophytes and plant pathogens. In wet conditions they can cause structural damage to buildings.

Effects: Common allergens and are also associated with hypersensitivity pneumonitis.

Chaetomium

Habitat: Ascomycete fungus, commonly isolated from soil and decaying plant materials. It is cellulolytic and grows well indoors on damp sheetrock and other paper substrates. It is often found growing with Stachybotrys.

Effects: It is reported to be allergenic and may produce toxins.

Cladosporium

Habitat: One of the most common genera worldwide. Found in soil and plant debris and on the leaf surfaces of living plants. The outdoor numbers are lower in the winter and often relatively high in the summer, especially in high humidity. The outdoor numbers often spike in the late afternoon and evening. Indoors, it can be found growing on textiles, wood, sheetrock, moist window sills and in HVAC supply ducts.

Effects: A common allergen, producing more than 10 allergenic antigens and a common cause of hypersensitivity pneumonitis.

Organism Descriptions

Epicoccum

Habitat: It is found in soil and plant litter and is a plant pathogen. It can grow indoors on a variety of substrates, including paper and textiles and is commonly found on wet drywall.

Effects: It is a common allergen. No cases of infection have been reported in humans.

Stachybotrys

Habitat: Commonly found in soil and on decaying plant material. It is cellulolytic, and can be found indoors on wet materials containing cellulose, such as wallboard, ceiling tile, and other paper-based materials. It is found outdoors on decaying plant material although it is rarely detected on outdoor air samples.

Effects: Allergenic properties are poorly studied and no cases of infection have been reported in humans. They do however produce potent tricothecene mycotoxins. The toxins produced by this fungus can suppress the immune system affecting the lymphoid tissue and the bone marrow. The mycotoxin is also reported to be a liver and kidney carcinogen.

Re: Pre-Renovation Asbestos Inspection
Towne Gardens Plaza
409 William Street
Buffalo, New York 14204
Grocery Store

Dear Mr. Sutton:

Enclosed please find a copy of the Pre-Renovation Asbestos Inspection Report for the above-referenced property. Consistent with the requirements of NYS Industrial Code Rule 56; Subpart 56-5.1(g)(1), if a building permit is required for the planned Renovations/Addition, a copy of the Inspection Report must be forwarded as follows:

> *"One (1) copy of the completed asbestos survey shall be sent by the owner or their agent to the local government entity charged with issuing a permit for such demolition, renovation, remodeling or repair work under applicable State or local laws."*

Thank you for the opportunity to be of service to Tarantino Properties.

Sincerely,
Stohl Environmental, LLC.

1. Introduction

Stohl Environmental, LLC was retained by the Tarantino Properties to inspect the grocery store located at 409 William Street in Buffalo, New York, for the presence of asbestos containing building materials (ACBM) in areas of planned renovations.

Stohl Environmental, LLC was charged with locating suspect asbestos containing materials, sampling of these materials to ascertain asbestos content, and identifying the locations and estimated quantities of the confirmed asbestos containing materials.

Stohl Environmental, LLC is prepared to develop a specification and contract documents for the removal of these materials at the request of the client. The information following this introduction details the amount of asbestos present in this facility and the location of the asbestos containing building materials (ACBM).

Although the report is a comprehensive analysis of the asbestos inspection work performed, it would be helpful to review all applicable federal, state and local rules, laws and regulations regarding the handling and treatment of asbestos containing building materials (ACBM). The following is a list of suggested reading and information sources relating to asbestos:

* New York State Department of Labor Industrial Code Rule 56

* National Emission Standard for Hazardous Air Pollutants (NESHAPS)

* Occupational Safety and Health Administration (OSHA 1926.1101, 1910.134, 1910.1020, 1910.1200, 1910.145, 1910.95, 1926.58)

* Environmental Protection Agency rule CFR 763.46 Asbestos Hazard Emergency Response Act

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

2. Executive Summary

The scope of services included the identification of suspect asbestos containing building materials in preparation for building renovation, sampling and analysis of the suspect materials, and approximate quantity of confirmed asbestos containing materials.

The inspection was conducted on 8/19/2022 and revealed the following materials as suspected of containing asbestos:

Bulk sampling and laboratory analysis of the suspect asbestos containing materials by the Polarized Light Microscopy (PLM) and, where necessary, Transmission Electron Microscopy (TEM) methods, revealed the following materials as asbestos containing building materials (ACBM):

HAN	Material Description and Approximate Location	Friability / Condition (Note 1)	Approximate Quantity (Note 2)
313	Residual Black Mastic – Located Under Quarry Floor Tile in SID 2012 and SID 2014	NF/I	1,300 ft^2

The asbestos-containing material identified is not exposed within the spaces indicated and does not pose a risk to human health or safety in its current condition. There is no regulatory requirement to remove this material if it is not otherwise planned to be disturbed by renovation.

Any future renovation planning should include a review of this report. Any removal of asbestos-containing materials should be indicated by contract documents. This report does not constitute a standalone contract document for asbestos abatement.

Notes to Executive Summary

Note 1: Friability/Condition:
F=Friable: a material that when dry, can be crumbled, pulverized, or reduced to powder by hand pressure, or is capable of being released into the air by hand pressure.
NF=Non Friable: a material that when dry cannot be crumbled, pulverized, or reduced to hand pressure, and is not capable of being released into the air by hand pressure.
I=Intact: Asbestos material that has not crumbled, been pulverized, or otherwise been damaged or disturbed, and the material's matrix has not noticeably deteriorated.
D=Damaged: Asbestos material that has deteriorated or sustained physical injury demonstrated by separation of the ACM into layers, separation of the ACM from the substrate, flaking, blistering, crumbling, water damage, scrapes, gouges, or other signs of physical injury.
SD=Significantly Damaged: Damaged asbestos where the damage is extensive and severe.

Note 2: Quantities are approximate, and are only associated with the areas of planned renovation. Additional asbestos containing materials may be located outside areas of planned renovation that were not surveyed, assessed or quantified during this inspection.

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

3. Purpose

The purpose of the asbestos inspection was to identify and quantify the types of asbestos containing building materials (ACBM) in the facility in areas of planned renovations. Samples of the suspect materials were collected for analysis by an independent laboratory and the condition of each material noted in relation to its potential to be disturbed during normal operations. The potential for fiber release was also considered.

The report is generated for the exclusive use of Tarantino Properties and/or/its representatives or agents and documents the inspection work, sampling and analysis performed. The report is not designed to serve as a specification for abatement.

4. Methodology for Inspection

All work performed by Stohl Environmental was conducted in accordance with applicable regulations including New York State Department of Labor standards 12 NYCRR Part 56, National Emission Standards for Hazardous Air Pollutants (NESHAPS), and Occupational Safety and Health Administration regulations 29 CFR 1910.1101 and 29 CFR 1910.134. All Stohl Environmental personnel assigned to conduct inspections have completed the Environmental Protection Agency (EPA) required training and New York State Department of Labor Division of Safety and Health certification program.

The floor plan maps that accompany this report were drawn by Stohl Environmental and provided to assist in identifying the locations of asbestos containing materials.

Each suspect asbestos containing building material (ACBM) was assigned a HOMOGENEOUS AREA NUMBER (HAN). Homogeneous areas are materials of like composition, color (in some instances), texture and appearance. As an example, homogeneous area #101 Drywall.

3860 California Road
Orchard Park, New York 14127
(P) 716-312-0070 (F) 716-312-8092
www.stohlenvironmental.com

4. Methodology for Inspection (Continued)

Based on the homogeneous areas, samples of suspect materials were collected. Techniques used for sample collection were designed to minimize damage to suspected areas, reduce any potential for fiber release, and ensure the safety of the sampling team and building occupants. Samples were collected by Stohl Environmental using the following procedures:

1. The surface to be sampled was sprayed with amended water (detergent and water) as necessary

2. A plastic sample bag was held to the surface sampled

3. The sample was collected using tools appropriate to the friability of the material sampled

4. Sample bags were labeled with a unique sample identification number

5. Samples were recorded on a Chain of Custody form, and submitted under strict chain-of-custody procedures to an ELAP and NYSDOH approved and certified laboratory for analysis.

Samples were first analyzed using PLM, Polarized Light Microscopy in accordance with US Environmental Protection Agency Interim Method, 40 CFR Pt 763, Supt F, App A(7-1-87). For the sample results not considered definitive, additional analysis was performed under Transmission Electron Microscopy (TEM) in accordance with NYS DOH ELAP Item #198.4, for Non-friable Organically Bound Bulk Material (NOB). The results of this analysis confirmed whether or not a suspect material actually contained asbestos. The confirmed materials are listed in **SECTION 2 Executive Summary.**

Notes to Inspection Report Table 5.:

Note 1: PLM= Analysis by Polarized Light Microscopy
Note 2: TEM = Transmission Electron Microscopy. NYSDOH requires Non-friable Organically Bound (NOB) bulk materials be additionally analyzed by TEM if negative under PLM.

NAD = No Asbestos Detected
N/A = Not Applicable
NA/PS = Not Analyzed / Positive Stop
Trace = Less than 1% asbestos, material considered non-ACM
Chr = Chrysotile Asbestos

Appendix C General Conditions of the Inspection

1. The results of the laboratory analytical reports that may be contained herein are the product of the knowledge, experience and expertise of the laboratory retained to perform such services. Stohl Environmental, LLC neither accepts nor implies any liability for the sample analysis reports.

2. Stohl Environmental, LLC cannot be held responsible or liable for the misrepresentation of fact, misstatements or withholding of relevant information of those parties interviewed during this inspection.

3. This report is based on the condition and contents present at the site on the day of the inspection. Stohl Environmental, LLC is not liable for materials, chemicals or other substances of concern that may have been removed from the site, cleaned or disposed of prior to the inspection date or subsequent to that date.

4. Stohl Environmental, LLC cannot be held responsible or liable for the misrepresentation of fact, misstatements or withholding of relevant information of those parties interviewed during this inspection.

5. This report is based on the condition and contents present at the site on the day of the inspection. Stohl Environmental, LLC is not liable for materials, chemicals or other substances of concern that may have been removed from the site, cleaned or disposed of prior to the inspection date or subsequent to that date.

6. An asbestos inspection relies heavily upon identification of homogeneous building areas (materials of like kind), with sampling and laboratory analysis then determined by the quantity of each suspect homogenous material, generally accepted inspection protocols, regulatory requirements, and the asbestos inspector's judgment. Specific sample locations are determined with the objective of selecting representative samples. As with any type of sampling, the possibility of obtaining a false positive or false negative does exist, is inherent in the sampling process, and can at times result from the fact that asbestos fibers are not always uniformly distributed throughout suspect materials. Although Stohl Environmental attempts to minimize the risk of a false positive or false negative result through a comprehensive inspection protocol, the possibility does exist, and could only be completely eliminated through laboratory analysis of 100% of each suspect material, which of course is not practical.

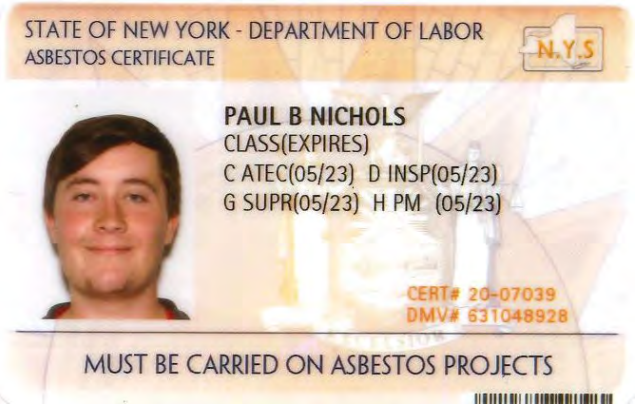
Duly Authorized Representative – Christopher C Stohl:

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.



This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

Note 1 *Due to limitations of the EPA PLM method, floor tiles may yield false negative (<1%) results by this method. As such, the EPA recommends further analysis by electron microscopy. Batta recommends the NY 198.4 over the Chatfield method.*

Note 2 Unless otherwise specified, Tr=Trace and correlates to <0.25% (based on a 400-point EPA point count).

Note 3 Materials containing vermiculite are not good candidates for analysis using standard EPA 600 PLM protocol. Results may be low-biased due to inherent limitations caused by the material. The EPA recommends that vermiculite attic insulation (VAI) be prepped and analyzed using EPA 600/R-04/004, known as "The Cincinnati Method".

Document Security Note: *Due to the unsecure nature of electronic files, it is the responsibility of the client (herein defined as the recipients of this or these electronic files) to verify the authenticity and accuracy of data included in the attached electronic file(s). Batta Laboratories, LLC is not liable for any discrepancies, alternations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.*

*This report does not constitute endorsement by NVLAP and/or any other US government agencies.

*The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories, LLC assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment.

*Organically-bound, nonfriable material may interfere with the accurate and reproducible quantification of asbestos. In these cases, the EPA recommends further analysis by a matrix-reduction method. Batta recommends the NY ELAP Item 198.6/198.4 over the Chatfield method. When point count techniques are utilized on organically-bound, nonfriable materials without the EPA-recommended matrix reduction steps, Batta Laboratories assumes no responsibility regarding the accuracy or precision associated with these results. In these cases, Batta employs a modified version of the EPA point count method.

*WRTA refers to a group of fibrous Amphiboles typically associated with 'Libby Amphibole'. Within this classification are: winchite, richterite, tremolite, and actinolite.

Document Security Note: Due to the unsecure nature of electronic files, it is the responsibility of the client (herein defined as the recipients of this or these electronic files) to verify the authenticity and accuracy of data included in the attached electronic file(s). Batta Laboratories, LLC is not liable for any discrepancies, alternations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.

[1] Unless otherwise specified in the report, contents of non-asbestos inorganic fibers are not given.

[2] Results reported are based on final residue through matrix reduction. Due to resolution differences, discrepancies between TEM results and PLM results are expected. Based on a possible analytical conditions within published methodology, method detection limits (MDL) of 0.05% (for TEM) and 0.20% (for PLM) have been determined.

This report does not constitute endorsement by NVLAP and/or any other U.S. government agencies. The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment. Due to the general inhomogeneity of asbestos-containing materials (ACM), EPA and OSHA have recommended submission of at least three samples of each type of materials for analysis. Submission of fewer samples may compromise the accuracy of ACM determination.

Batta Laboratories, LLC is not liable for any discrepancies, alternations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.

[1] Unless otherwise specified in the report, contents of non-asbestos inorganic fibers are not given.

[2] Results reported are based on final residue through matrix reduction. Due to resolution differences, discrepancies between TEM results and PLM results are expected. Based on a possible analytical conditions within published methodology, method detection limits (MDL) of 0.05% (for TEM) and 0.20% (for PLM) have been determined.

This report does not constitute endorsement by NVLAP and/or any other U.S. government agencies. The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment. Due to the general inhomogeneity of asbestos-containing materials (ACM), EPA and OSHA have recommended submission of at least three samples of each type of materials for analysis. Submission of fewer samples may compromise the accuracy of ACM determination.

1.1.1 Incident Category

Due to the release of CERCLA hazardous substances, a time-critical removal action is necessary to address threats associated with the conditions at the Lake Erie Smelting Corp. Site (Site). The United States Environmental Protection Agency (EPA) entered into an Administrative Settlement Agreement and Order on Consent (AOC) with a court-appointed receiver, who is facilitating the removal of contaminated soil identified in the AOC and associated work plans. Contractors for the receiver mobilized to the Site on September 16, 2019 to begin the work specified in the AOC. Field operations were temporarily suspended for the winter/cold season on November 26, 2019. Personal and resources returned to the Site and excavations re-commenced on April 20, 2020. All remaining field operations were completed by September 8, 2020 and all resources, including EPA personnel, were demobilized from the Site. No additional field activities are planned for the removal action.

1.1.2 Site Description

The Site was included on a list of hundreds of locations nationwide where secondary lead smelting or alloying may have been conducted between 1931 and 1964, according to entries in historical trade publications. The list was originally compiled by William P. Eckel in a doctoral dissertation for George Mason University, and the research was summarized in the article entitled, “Discovering Unrecognized Lead-Smelting Sites by Historical Methods” (Eckel et al, 2001). In total, 89 of the sites on this list are in New York State. The New York State Department of Environmental Conservation (NYSDEC) assessed the majority of these sites and ultimately referred 40 of these sites, including the Lake Erie Smelting Corp. Site, to EPA for further assessment.

Samples collected as part of the Removal Site Evaluation (RSE) and further delineation activities, indicate a release of lead, cobalt and copper, all CERCLA designated hazardous substances, has occurred at the Site. Based on available information, a removal action is warranted to mitigate threats to public health or welfare or the environment associated with the release of hazardous substances.

The property historically located at 29 Superior Street was occupied by a junkyard owned and operated by Hyman Goldman in 1925. By 1930 the business changed names to Goldman and Sons junkyard. Goldman and Sons Smelter operated from approximately 1935 to 1940 and Lake Erie Smelting operated from 1941 to 1959. By the mid-1960s all businesses and residences had been removed and the area was leveled. Lake Erie Smelting moved operations to 127 Fillmore Avenue and 29 Superior Street no longer exists.

Lake Erie Smelting conducted secondary lead smelting operations at 29 Superior Street. Secondary lead smelting is the recovery of lead metal and alloys from scrap, including lead-acid batteries, lead cable coverings, plumbing and wheel weights. The chief alloy recovered by secondary smelters was antimonial lead. In addition to batteries, sources of scrap potentially included Babbitt metal, which are a group of lead-tin-antimony alloys used as antifriction metals in wheel bearings. Secondary lead smelting produced a number of wastes that may have become environmental contaminants, including air emissions and solid waste. Concentrations of lead in soil near stationary smelting sources can be elevated and may persist in surface soils. Given the past workings of the land, elevated concentrations of lead could be found at deeper locations as well.

1.1.2.1 Location
The Site includes the location of a former secondary lead smelter known as Lake Erie Smelting Corporation that occupied approximately 13,000 square feet at the historical address of 29 Superior Street in Buffalo, Erie County, New York. The facility was in operation from approximately 1935 through approximately 1959. The smelter was surrounded by residential properties until the neighborhood was razed, leveled and redeveloped for residential apartment living. Superior Street was removed and no longer exists. The footprint of the former facility lies north of Clinton Street and west of Jefferson Street, within the Towne Gardens apartment complex. The footprint of the former smelter is now occupied by two residential apartment buildings.

The Town Gardens apartment complex is located at 440 Clinton Street (Tax Map ID: 111.15-1-3) and consists of 36 buildings on approximately 18 acres of land. With the exception of a rental office, all buildings are for residential use. Approximately 360 individual apartment units house people of varying demographics including infants, children, women of child-bearing age and the elderly. Housing stock varies as the turnover rate is relatively high. The housing units are surrounded by grass-covered lawns, concrete sidewalks and asphalt-paved parking lots. The Towne Gardens apartment complex is bounded to the south by Clinton Street, to the east by Jefferson Street and to the west by Hickory Street. Residential properties line all of these streets. Byrd and McNeely Way bound the property to the north, beyond which is a partially vacant shopping center and residential properties.

1.1.2.2 Description of Threat
Findings of the removal assessment field work indicate that there has been a release of CERCLA-designated hazardous substances as defined in Section 101(14) of CERCLA, 42 U.S.C. § 9601(14), in several locations on and near the Site. The Site is a “facility” as defined under Section 101(9) of CERCLA.

It should be noted that because secondary smelter facilities typically only process a limited number of metals to generate specialized alloy products, rather than a wide variety of metals, it is characteristic for secondary lead smelter emissions to contain lead, antimony, tin and arsenic. Because the former smelting facility potentially utilized, manufactured, recycled or retort solder and battery plates, it is likely that any emissions related to the former operations at this facility would also include the constituents of other metals including cobalt, copper, lead, antimony and tin.

The historic footprint of the smelter facility includes residential dwellings with soil that contains lead levels which exceed the EPA Removal Management Level (RML) in every depth interval that was sampled. In the 12 sample locations at or near the footprint of the historic facility, lead was present in samples at concentrations up to 4,100 mg/kg in the 0-1 inch interval, up to 570 mg/kg in the 1-6 inch interval, up to 7,400 in the 6-12 inch interval, up to 76,000 mg/kg in the 12-18 inch interval and up to 10,000 in the 18-24 inch interval. In addition, elevated concentrations of cobalt were detected in samples collected at or near the former smelter footprint. Cobalt was detected at a concentration of 180 mg/kg in sample location SS010 in the 0-1 inch interval and 220 mg/kg in the 1-6 inch interval. Concentrations of cobalt were also detected at 220 mg/kg at location SS009 in the 6-12 inch interval. Exposed soil was observed throughout the Towne Gardens apartment complex during the September 2015 Site visit and sampling event. During the sampling event, children and other sensitive populations were observed walking, playing and sitting in bare soil throughout the apartment complex, including the footprint of the former smelting facility.

Direct contact with elevated levels of heavy metals within the upper 12 inches of soil may occur through common recreational activities, gardening and when children touch or dig into contaminated soil. Contaminated soil may be ingested or tracked inside the apartments on footwear or clothing. Soil may also be transported off-site when residents traverse the complex to go to the shopping center, stores, bus stops or school buses. In addition, contaminated soil may be disturbed and become airborne and available for inhalation as a result of gardening, recreational activities or general disturbance of the material.

Contact with the contaminated soil, or inhalation of contaminated soil particles, may present a health risk to those utilizing the outdoor areas of the apartment complex, particularly young children. The effects of exposure to lead are the same whether it enters the body through breathing or swallowing. The main target for lead toxicity is the nervous system, both in adults and children. Lead is a cumulative poison where increasing amounts can build up in the body, eventually reaching a point where symptoms and disability occur. Particularly sensitive populations are children and women of child-bearing age, because of the fetal transfer of lead. Cognitive deficits are associated with fetal and childhood exposure to lead. An increase in blood pressure is the most sensitive, adverse health effect from lead exposure in adults.

1.1.3 Preliminary Removal Assessment/Removal Site Inspection Results
EPA’s Pre-remedial Site files, which included a Pre-Comprehensive Environmental Response, Compensation and Liability Information System Screening Form for the Site as well as historic city directories and Sanborn maps, were reviewed as part of the RSE. In addition, an internet search for historic articles, maps and photographs was conducted, and historic aerial photographs and online Erie County property records were reviewed. On September 15, 2015, the Removal Action Branch (RAB) conducted an

initial Site reconnaissance. Exposed soil was observed throughout the apartment complex, including directly in front of apartment entrance areas. Vegetable gardens were observed in front of several apartments. School buses pickup and drop-off children along Clinton and Jefferson Streets, causing kids to traverse the apartment complex. Following school hours, children were observed playing in the grassy areas, dirt patches, along the sidewalks and within the parking areas. Pregnant women and those of childbearing age were observed walking the grounds and relaxing on stoops. Elderly people were also observed relaxing in chairs outside and along the entrance stoops. People and children of all ages were observed to be playing, relaxing and picnicking outside throughout the morning and afternoon hours.

On September 22 and 23, 2015, EPA RAB collected samples to determine whether operations of the former smelting facility resulted in a release of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) designated hazardous substances to the surrounding residential neighborhood at levels above EPA RMLs. Fifty-two soil boring locations were selected throughout the Towne Gardens apartment complex, including the location of the former smelter. A total of 260 grab soil samples were collected, including quality assurance/quality control samples. Samples were collected at the following five intervals in the upper two feet of soil within each boring: 0-1 inch, 1-6 inches, 6-12 inches, 12-18 inches and 18-24 inches below grade surface (bgs).

From September 24 through September 26, 2015, all samples were field screened for metals, particularly lead, utilizing X-Ray Fluorescence (XRF) technology. Each sample was screened a minimum of 4 times for a minimum of 60 seconds per screen. An average concentration of lead was calculated for each sample. Of the 260 samples that were field screened using XRF, 83 had average lead concentrations above the EPA RML of 400 mg/kg for lead in residential soil. The range of concentrations above 400 mg/kg was between 403 and 28,096 mg/kg. Of the 83 samples with average lead concentrations above 400 mg/kg, 38 of these samples are located in or near the former smelter footprint (defined as SS009-SS018, SS020 and SS023).

A subset of the samples screened using XRF were sent for laboratory analysis to confirm data results. Samples were selected based on lead average, distance from the former smelter footprint, and observed use by the residents. A total of 91 samples, from 43 locations, were submitted to the EPA Region 2 Laboratory for TAL Metals, plus tin, analysis.

The analytical results indicate that lead is present at levels above the applicable EPA RML of 400 mg/kg at varying depths in 32 samples from 19 locations. RMLs are generic, chemical-specific concentrations for individual contaminants that may be used to support the decision for EPA to undertake a removal action. All sampling results were compared to the respective EPA RMLs. All sample locations and the associated lead results exceeding the EPA RML by depth are depicted in Attachment A of the RSE.

A total of 28 samples, from 12 locations in or near the former smelter footprint, were identified for sample collection and laboratory analysis, SS009-SS018, SS020 and SS023. Lead was detected at concentrations greater than 400 mg/kg in a total of 17 samples, representing 11 out of the 12 locations. Concentrations of lead within the former smelter footprint were detected between 660 and 76,000 mg/kg. In the 0-1 inch interval at location SS016, concentrations of lead were detected at 4,100 mg/kg. Lead was detected in the 1-6 inch interval, at 570 mg/kg, from sample location SS018. Lead was detected at a concentration of 7,400 mg/kg within the 6-12 inch interval at location SS011. All other lead exceedances were detected in the 12-18 or 18-24 inch intervals.

Lead was detected at concentrations ranging from 540 to 2,200 mg/kg in a total of 8 samples, from 5 locations west of the former smelter footprint, SS041, SS046, SS048, SS049 and SS052. Elevated concentrations of lead were found in samples from 3 locations east of the former smelter footprint, SS005, SS006 and SS019. At these locations, a total of 5 samples had lead concentrations detected between 470 and 4,700 mg/kg. All samples collected south of the former smelter footprint had concentrations of lead below the 400 mg/kg threshold.

In addition to the elevated lead detections, there were 4 antimony detections, 1 copper detection and 11 cobalt detections that exceeded the respective EPA RML. All exceedances of the antimony EPA RML of 94 mg/kg were from locations within the footprint of the former smelter, SS012 – SS014 and SS018 at intervals of 12-18 and 18-24 inches bgs. Concentrations of antimony exceedances were detected between 130 and 2,700 mg/kg. All exceedances for cobalt and copper were located outside of the former smelter footprint. With the exception of location SS034, cobalt exceedances were found in samples located downwind of the former smelter footprint, at locations SS001-SS003, SS009 and SS010. All exceedances of the cobalt EPA RML of 70 mg/kg were found within all interval depths at these locations and detected between 95 and 220 mg/kg. Copper was detected in one sample at a concentration in excess of the EPA RML of 9,400. This was in the 1-6 inch interval at location SS019 which is located to the east and downwind of the former smelter footprint. No other metal detections exceeded EPA RMLs.

Elemental correlation analysis was utilized to assess whether any of the elevated detections could be related to the former smelter facility. This analysis determines whether contaminant detections are from a singular source, are characteristic of a release from the historic, former smelter facility or are a result of the presence of exogenous (i.e., non-native) fill material. The main premise of the analysis is that soil from the same parental material has similar elemental correlations which group together, whereas non-native fill material would show varying degrees of dissimilar elemental relationships and exhibit scattered, ungrouped distributions. Elemental correlation analysis was completed for the 12 locations that are in or near the footprint of the former facility in addition to the upwind/downwind locations. This analysis indicated that there are strong correlations between lead, tin and antimony, as would be expected from historic smelting emissions, in numerous locations within or near the facility footprint and at several upwind and downwind locations.

To further delineate the soils at the apartment complex for heavy metals, in November 2016 EPA collected additional samples. Focus was placed on areas to the west and southwest of the former smelter footprint. Concentrations of lead were found as high at 1100 mg/kg within the first 12 inches of soil. Additionally, concentrations of lead were found as high as 4500 mg/kg within the 12 - 24 inch interval.

Working with the property owner to develop a cleanup strategy, a third-party consultant was obtained, and additional soil samples were collected in April 2018. This sampling event was performed to further delineate the Site for lead and generate a conceptual proposal for removal of contaminated soils. The results of this supplemental sampling event aided in the design of the removal strategy.

2. Current Activities

2.1 Operations Section

2.1.1 Narrative

All field operations, including restoration activities, have been completed and no additional field work is scheduled. EPA has assessed the Site with operational partners and all tasks identified in the AOC and associated Work Plan have been completed. All resources were demobilized from the Site by September 8, 2020.

2.1.2 Response Actions to Date

Excavation activities, installation of security bollards along the northern staging area and elevation surveys were completed by May 26, 2020. Concurrently, contractor personnel removed all resources located in the support zone, including the work trailer, remaining raw materials and equipment. Time was alloted for the vegetative cap to grow and establish roots prior to a final field inspection.

On June 25, 2020, EPA met with the Receiver, environmental contractors and the property management company to perform an inspection of the completed work and determine the progress of the vegetative cap. Several sections of sod were observed to be stressed due to lack of water, foot traffic or impacts from vehicular traffic. Additional sections of sod were observed to be missing or dead. Further, masonry work associated with the replacement of sidewalks had not been completed. A list of observations and recommendations were delivered to the Receiver which included: implementation of a watering program, installation of additional sod, placement of seed in stressed areas and communication with tenants regarding vehicular travels.

On July 9, 2020, EPA was notified that sod replacement and installation had been completed in the identified locations. Further, the property management company indicated that a water management program had been implemented to aid in the successful growth of the sod and seed, which had also been placed in recommended areas. On July 20, 2020 EPA received photographic evidence that all sidewalk masonry repairs had been completed.

On August 19, 2020, EPA received a final report as required by the AOC. The report detailed the work that had been completed at the Site.

On September 8, 2020, EPA conducted a final Site walkthrough. Originally planned with other parties, due to an outbreak of COVID-19 amongst the Towne Gardens staff, the inspection was performed independently by the EPA OSC. The inspection indicated that activities had been sufficiently performed and Site conditions are being left in a satisfactory manner. All resources, including EPA assets, were demobilized by September 8, 2020. All requirements of the AOC have been met and the OSC deems that oversight of the removal has been completed. The removal action is complete as of September 8, 2020. The property owner is responsible for the upkeep of all capping and barrier materials, including sod, installed as part of the removal action.

For actions that occurred prior to this reporting period, please refer to previous POLREPs.

2.1.3 Enforcement Activities, Identity of Potentially Responsible Parties (PRPs)

EPA has identified PRPs for the Site. The current property owner is a PRP by default of ownership and worked with EPA to provide an interim measure to limit exposure of contaminants. EPA generated 104e Information Request letters to the current property owner, a successor company to Lake Erie Smelting Co. and the City of Buffalo. The City of Buffalo owned the property when redevelopment of the neighborhood took place around 1959. The smelting company moved operations when the City acquired the neighborhood and had all structures demolished and streets altered.

The court-appointed receiver is not being viewed as a PRP.

2.1.4 Progress Metrics

Waste Stream	*Medium*	*Quantity*	*Manifest #*	*Treatment*	*Disposal*
Heavy Metals	Soil	3,805.78 tons	Various	Landfill	Town of Tonawanda Landfill

2.2 Planning Section

2.2.1 Anticipated Activities

No additional field work is scheduled for the purposes of the removal action.

2.2.1.1 Planned Response Activities

No additional response activities are planned for this removal action.

2.2.2 Issues

Additional health and safety precautions were implemented due to COVID-19.

2.3 Logistics Section

All logistics were monitored by the appropriate contractor or agency.

2.4 Finance Section

2.4.1 Narrative

An Action Memorandum was not generated for this project. The receiver is performing a voluntary removal action through a CERCLA Section 106 Administrative Settlement Agreement and Order on Consent

2.5 Other Command Staff

2.5.1 Safety Officer

Safety will be everyone's responsibility. Contractors for the property owner or the receiver will be responsible for their own personnel during the activities discussed herein. Andrew Benkleman has been designated as the Site Safety Officer and can be reached at 716-551-6281.

An addendum to the HASP was finalized on April 13, 2020. Specific to COVID-19, the addendum highlighted social distancing, sanitation practices, disinfection of materials, dedicated use of supplies, individual ownership of hand tools, car-pooling practices, use of barriers and other preventative and protective measures.

2.5.2 Liaison Officer

The EPA OSC is performing the activities of a Liaison Officer. The OSC is coordinating operations between the receiver, contractors, Erie County Department of Health, New York State Department of Health and New York State Department of Environmental Conservation.

2.5.3 Information Officer
Michael Basile is the designated Community Involvement Coordinator for the Site and can be reached at 716-551-4410.

The CIC and the OSC will prepare a statement to share with interested parties regarding the completion of field operations.

3. Participating Entities

3.1 Unified Command
Unified Command has not been activated for this action.

3.2 Cooperating Agencies
Court-appointed receiver
Property management contractor for the receiver
Environmental consultant for the receiver
United States Environmental Protection Agency
Erie County Department of Health
New York State Department of Environmental Conservation
New York State Department of Health
Department of Housing and Urban Development

4. Personnel On Site

All personnel have been demobilized from the Site.

5. Definition of Terms

Definition of Terms

AOC - Administrative Settlement Agreement and Order on Consent

AM – Action Memorandum, the decision document requesting funding for a removal action

CAMP – Community Air Monitoring Plan
CERCLA - Comprehensive Environmental Response, Compensation and Liability Act, commonly known as Superfund

CIC – Community Involvement Coordinator
EPA - United States Environmental Protection Agency
ECDoH - Erie County Department of Health

HASP – Health and Safety Plan

HUD – Housing and Urban Development, a federal agency

ICS – Incident Command System that establishes a unified response between organizations
NYSDEC - New York State Department of Environmental Conservation

POLREP – Pollution Report that documents the activities taking place per the removal action

QAPP – Quality Assurance Project Plan

RAB – Removal Action Branch located within EPA Region
Receiver - A court-appointed entity to run the daily operations of the property

RML – Removal Management Levels for Chemicals used for determining removal action eligibility

RSE – Removal Site Evaluation is the assessment performed to determine removal eligibility
Site - Lake Erie Smelting Corp. Site which encompasses the Towne Garden apartment complex

SO – Safety Officer designated for the project

U.S.C. – United States Code citation of a specific law

XRF - X-Ray Fluorescence field instrument for measuring heavy metals, particularly in soil

6. Additional sources of information

6.1 Internet location of additional information/report
response.epa.gov/LESRemovalAction

6.2 Reporting Schedule
No additional Pollution Reports will be generated.

7. Situational Reference Materials

For additional information relating to this event, refer to the Pollution Reports at https://response.epa.gov/LakeErieSmelting.

Re: Lake Erie Smelting Corp. Site, Buffalo, New York, Administrative Settlement Agreement and Order on Consent for Removal Action, CERCLA-02-2019-2027

Dear Mr. Fink:

As you know, the United States Environmental Protection Agency ("EPA") entered into a Settlement Agreement and Order on Consent for Removal Action ("Agreement and Order") with you, as the court-appointed Receiver in the mortgage foreclosure action relating to 161 Hickory Street, for the performance of a removal action at the Lake Erie Smelting Corp. Site in Buffalo, New York.

Your consultant, LaBella Associates, submitted a Final Report summarizing the actions taken to comply with the Agreement and Order, as required under Paragraph 31 of the Agreement and Order. EPA approved that submission on August 19, 2020. On September 8, 2020, EPA conducted a final site visit to ensure that all Work and activities required under the Agreement and Order were satisfactorily performed.

Pursuant to Paragraph 65 of the Agreement and Order, EPA has determined that all Work has been fully performed in accordance with the Agreement and Order. This letter constitutes the Notice of Termination and Satisfaction. This Notice does not affect any continuing obligations of Receiver.

If you have any questions, please contact me at (212) 637-3197 or via email at leshak.andrea@epa.gov. Thank you for your cooperation in this matter.

Sincerely,

Andrea Leshak
Assistant Regional Counsel

cc: Keith Glenn, EPA On-Scene Coordinator
David Quigley, Counsel for Fannie Mae

APPENDIX C
User Provided Information

Clear Form

ASTM E1527-21 User Questionnaire

Please complete the below form and return to Langan.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the Landowner Liability Protections (LLP) offered under CERCLA. Missing or incomplete information for questions 1 through 6 could result in a determination that "all appropriate inquiry" is not complete. Additional information should be provided for "Yes" answers where relevant.

General Information

User/Client Names: BFC Towne Gardens North LLC

Reason for the Phase I ESA: Potnetial acquisition of property

Type of property: Retail shopping center

Type of property transaction (e.g. sale, purchase, exchange): Purchase

Subject property address (provide documentation of subject property boundary):
407/409 William Street, Buffalo, NY 14204 (the entirety of shopping center at this location)

Site Contact and Contact Information: Win Wharton, (646)530-0389

Relying Party(ies): BFC Towne Gardens North LLC (+future lenders)

Required Information

(1.) Environmental liens that are filed or recorded against the subject property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

(2.) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property (40 CFR 312.26(a)(1)(v) and (vi)).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ○ No ◉

(4.) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the subject property?

Yes ◉ No ○

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes ○ No ◉

(5.) Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30).

	Yes	No
Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases?	◉	○
For example,	Yes	No
(a.) Do you know the past uses of the subject property?	◉	○
(b.) Do you know of specific chemicals that are present or once were present at the subject property?	○	◉
(c.) Do you know of spills or other chemical releases that have taken place at the subject property?	○	◉
(d.) Do you know of any environmental cleanups that have taken place at the subject property?	○	◉

(6.) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

	Yes	No
Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property?	○	◉
Do you have knowledge or experience with the subject property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition)?	◉	○

(7.) Proceedings Involving the Subject Property Questions (Section 10.9 of ASTM E1527-21 and Section 10.10 of ASTM E2247-16)

Do you know of:	Yes	No
(a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property?	○	◉
(b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	○	◉
(c) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	○	◉

Signature

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1925 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.
