**Certification**

I, Paul H. Werthman, certify that I am currently a NYS registered professional engineer as defined in 6NYCRR Part 375 and that this Remedial Investigation/Interim Remedial Measures/Alternatives Analysis Report (RI/IRM/AAR) was prepared in general accordance with applicable statutes and regulations and in general conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and that activities were performed in general accordance with the DER-approved work plan and any DER-approved modifications.

## 1.0 INTRODUCTION

TurnKey Environmental Restoration, LLC (TurnKey), in association with Benchmark Environmental Engineering and Science, PLLC (Benchmark), has prepared this Remedial Investigation (RI) / Interim Remedial Measure (IRM) / Alternatives Analysis (AA) Report on behalf of Santarosa Holdings, Inc. (Santarosa) for the 1501 College Avenue Site, located in the City of Niagara Falls, Niagara County, New York (Site; see Figures 1 and 2).

Santarosa elected to pursue cleanup and redevelopment of the Site under the New York State Brownfield Cleanup Program (BCP), and executed a Brownfield Cleanup Agreement (BCA) with the New York State Department of January 31, 2011 (BCP Site No. C932134). An RI/AAR Work Plan dated December 2007 was approved by the NYSDEC, with concurrence of the New York State Department of Health (NYSDOH), on January 4, 2008. An IRM Work Plan dated March 2008 was approved by the NYSDEC on June 11, 2008. TurnKey performed initial RI soil and groundwater sampling activities at the Site in September and October 2010. Based on the findings of the RI activities, TurnKey and Santarosa met with the NYSDEC and NYSDOH in November 2010 and prepared an IRM Work Plan letter dated November 12, 2010 further describing the planned IRM activities. The IRM Work Plan letter was approved by NYSDEC on November 18, 2010. IRM activities were conducted at the Site from November 2010 through November 2012.

### 1.1 Background

The BCP Site is an approximate 12.4-acre Site, comprised of two adjoining parcels, identified as:

- 1501 College Avenue - SBL 130-18-2-3.211 (12.25-acre portion of a larger 15.0 acre parcel); and,
- 1655 College Avenue - SBL 130.18-2-3.212 (0.16-acre parcel).

The BCP Site is bordered by a railroad, College Avenue and industrial property to the north, and commercial/industrial property to the south, east, and west (see Figures 1 and 2). The Site was used for heavy industrial manufacturing from at least 1910 to the mid-1980s, and at one time was part of a larger former Union Carbide Co. manufacturing complex encompassing the Site and the eastern and western adjoining parcels.

## 1.2 Previous Investigations

### 1.2.1 September 2007–Phase I Environmental Site Assessment

In August 2007, Benchmark conducted a Phase I Environmental Site Assessment (ESA) of the subject property. Benchmark identified several areas of concern: evidence of illegal dumping was obvious across the site; various debris piles, automobile parts, abandoned automobiles, abandoned tanker trucks, drums of unknown liquid and solid contents, sacks of unknown granular or solid materials, aboveground storage tanks (ASTs), and household debris was located throughout the interior and exterior the site.

### 1.2.2 August 2007–Limited Preliminary Environmental Investigation

Benchmark conducted a limited Preliminary Environmental Investigation at the 1501 College Avenue Site in August 2007. The Limited Preliminary Environmental Investigation involved collecting four surface soil samples, one galbestos roof-covering sample and two debris pile samples. The samples indicated that polycyclic aromatic hydrocarbons (PAHs), metals, and polychlorinated biphenyl (PCBs) were present on-site above NYSDEC Part 375 Industrial soil cleanup objectives (SCOs).

## 1.3 Constituents of Potential Concern (COCs)

The Constituents of Potential Concern (COPCs) at the Site are:

- **Soil:** PAHs, metals, and PCBs
- **Groundwater:** VOCs

## 1.4 Report Organization

This report contains the following nine sections:

- Section 1.0 is the introduction and provides Site background information.
- Section 2.0 presents the investigation approach.
- Section 3.0 describes the Site physical characteristics as they pertain to the investigation findings.

- Section 4.0 presents the investigation results by media.
- Section 5.0 describes the interim remedial measures implemented at the Site.
- Section 6.0 describes the fate and transport of the COPCs.
- Section 7.0 presents the qualitative risk assessment.
- Section 8.0 evaluates remedial alternatives for the Site.
- Section 9.0 presents the project summary and conclusions.
- Section 10.0 provides a list of references for this report.

## 2.0 INVESTIGATION APPROACH

The purpose of the RI field activities was to define the nature and extent of contamination on the BCP Site, and to collect data of sufficient quantity and quality to perform the remedial alternatives evaluation. The field investigation was completed across the BCP Site to supplement previous environmental data and to delineate areas requiring remediation. On-site field activities included: advancement of soil borings; excavation of test pits; surface and subsurface soil sampling; debris pile sampling; monitoring well installation; groundwater sampling; and, collection of hydrogeologic data.

Field team personnel collected environmental samples in accordance with the rationale and protocols described in the Field Sampling Plan (FSP) presented in the Quality Assurance Project Plan (QAPP). USEPA and NYSDEC-approved sample collection and handling techniques were used. Samples for chemical analysis were analyzed in accordance with USEPA SW-846 methodology with an equivalent Category B deliverable package to meet the data requirements. Analytical results were evaluated by a third-party data validation expert in accordance with provisions described in the QAPP.

Soil/fill samples were collected from the test pits and soil borings and field-screened for the presence of VOCs using a field photoionization detector (PID). Soil/fill samples exhibiting elevated PID readings were analyzed for TCL VOCs. RI soil/fill samples were analyzed for Target Compound List (TCL) SVOCs, Target Analyte List (TAL) metals, PCBs and five of the samples were analyzed for herbicides and pesticides. Soil/fill samples were collected using dedicated stainless steel sampling tools. Representative soil samples were placed in pre-cleaned laboratory provided sample bottles, cooled to 4°C in the field, and transported under chain-of-custody command to Test America Laboratory, located in Amherst, New York, a NYSDOH ELAP-certified analytical laboratory.

The investigation activities are described below. Figures 3, 4, and 5 present the RI sample locations, including historic sample locations. Appendix A contains photographs of field activities.

### 2.1 Surface Soil/Fill

Fifteen (15) surface soil/fill samples, identified as SS-1, SS-2, SS-4 through SS-6, SS-7A, SS-10 through SS-15, SS-18, SS-19 and SS-23, were collected across the Site (see Figure 3). RI surface samples were analyzed for Target Compound List (TCL) SVOCs, Target

Analyte List (TAL) metals, and PCBs. SS-2, SS-14, and SS-15 were analyzed for TCL plus STARS VOCs; and, SS-2, SS-10, and SS-11 were also analyzed for pesticides and herbicides for site characterization purposes. Surface soil/fill results are discussed in Section 4.0 below.

Six historic surface soil/fill and debris pile samples were collected prior to the BCP RI activities, locations are presented on Figure 3. Historic sample were analyzed for TCL SVOCs, TAL Metals, and PCBs.

## 2.2 Sub-Surface Soil/Fill

The subsurface investigation included the excavation of 24 test-pits, identified as TP-1 through TP-25 (TP-8 designation was not used), and the advancement of five soil borings identified as BCP MW-1 through BCP MW-5 (see Figures 3 and 4). Test pits were excavated utilizing an excavator, and were completed to refusal or one foot into the native clay with no evidence of visual or olfactory impacts. Soil borings were completed utilizing a direct-push drill rig and were typically advanced to a depth between 16 fbs and 20 fbs. Field logs are included in Appendix B.

Subsurface soil/fill samples (TP-1 through TP-25; and BCP MW-1 through BCP MW-5) were analyzed for TCL SVOCs, PCBs and TAL Metals. TP-1, TP-2, TP-6, TP-10, TP-15, TP-16, TP-17, BCP MW-1, and BCP MW-5 were also analyzed for TCL plus STARS VOCs. TP-1, TP-2, and TP-10 were also analyzed for herbicides and pesticide. Laboratory analytical results are presented on Table 3, and discussed on Section 4 below.

## 2.3 Groundwater Investigation

### 2.3.1 Monitoring Well Installation

Five monitoring wells, identified as BCP-MW-1 through MW-5, were advanced through unconsolidated overburden soil/fill material to facilitate well installation. Monitoring wells were installed using a direct-push drill rig capable of advancing hollow-stem augers to install two-inch inside diameter monitoring wells in accordance with the approved RI/AAR/IRM Work Plan. Monitoring well construction details are presented on the Field Borehole Logs in Appendix B. Locations of the monitoring wells are presented on Figure 5. An isopotential map showing the groundwater elevations is presented on Figure 6.

### ***2.3.2 Groundwater Sample Collection***

Newly installed monitoring wells were developed prior to sampling to remove residual sediments and ensure good hydraulic connection with the water-bearing zone. A minimum of three well volumes were removed from each well. Prior to sample collection, static water levels were measured and recorded from all on-site monitoring wells. Following water level measurement, Benchmark personnel purged and sampled monitoring wells MW-1 through MW-5 using a peristaltic pump and dedicated pump tubing via low-flow/minimal drawdown purge and sample collection procedures. Prior to sample collection, groundwater was evacuated from each well at a low-flow rate (typically less than 0.1 L/min). Field measurements for pH, specific conductance, temperature, dissolved oxygen (DO), turbidity, and water level as well as visual and olfactory field observations were periodically recorded and monitored for stabilization. Purging was considered complete when pH, specific conductivity, and temperature stabilized, and when turbidity measurements fell below 50 Nephelometric Turbidity Units (NTU) or became stable above 50 NTU. Upon stabilization of field parameters, groundwater samples were collected.

Prior to and immediately following collection of groundwater samples, field measurements for pH, specific conductance, temperature, turbidity, dissolved oxygen, and water level as well as visual and olfactory field observations were recorded.

All collected groundwater samples were placed in pre-cleaned, pre-preserved laboratory provided sample bottles, cooled to 4°C in the field, and transported under chain-of-custody command to Test America for analysis.

At the request of the Department additional groundwater sampling was attempted in August 2012. Due to low water levels and insufficient volumes for sample collection, no samples were collected. Future groundwater monitoring is discussed in the Site Management Plan.

### ***2.3.3 Groundwater Sample Analyses***

Groundwater samples collected from wells BCP MW-1 through BCP MW-5 were analyzed for TCL plus STARS list VOCs, TCL SVOCs, TAL metals, PCBs, herbicides, and pesticides in accordance with USEPA SW-846 methodology with equivalent NYSDEC Category B deliverables to allow for independent third-party data usability assessment.

## 2.4 On-Site Catch Basins, Man-holes, and Vaults Investigation

Turnkey personnel inspected a total of 52 subsurface structures, including catch basins, sewer man-holes, sumps, and utility related vaults for potential preferential pathways for contaminant migration. All structures were visually inspected, and scanned with PID for volatile vapors. No visual, olfactory or elevated PID readings were noted in the majority of subgrade structures. One concrete sump, located in the northeast quadrant of the Site (see Figure 5), was excavated and removed approximately 10-cyd of accumulated soil/fill from the sump. Details of the IRM removal are described in Section 5.

Exploratory test-pits were advanced adjacent to structures which had subgrade piping oriented and proximate to the BCP boundary and could potentially terminate off-site. Exploratory test pits were advanced adjacent to CB-1, CB-2, CB-10, and CB-15/CB-16 (see Figure 5). No evidence of contamination, or potential pathway for off-site migration was detected during the exploratory test-pit investigation.

### 2.4.1 *On-Site Sewer Investigation*

In association with pre-redevelopment activities, a sewer evaluation was conducted to investigate sewer connectivity and viability; and potential environmental contamination within the former sewer system. Dye-testing was conducted to determine sewer connectivity by placing tracer dye and flushing the system with on-Site potable water (Valve House). No visual or olfactory evidence of contamination was detected during the sewer investigation.

## 2.5 Railroad Siding

A portion of the Site, located along the northern boundary adjacent to College Avenue (see Figure 7), included an interior subgrade rail line loading area within the former factory building approximately 6 to 8 feet below grade. Four (4) samples were collected, at the request of the Department for documentation purposes during backfilling and placement of the cover system. The rail siding samples were analyzed for TCL VOCs, TCL SVOCs, TAL metals, PCBs, pesticides, and herbicides. Analytical results showed elevated SVOCs, primarily PAHs, and elevated arsenic in Railroad Siding 4 above Industrial Use SCOs (see Table 3; and Figure 7).

## 2.6 Field Specific Quality Assurance/Quality Control Sampling

In addition to the surface soil/fill, subsurface soil/fill and groundwater samples described above, field-specific quality assurance/quality control (QA/QC) samples were collected and analyzed to ensure the reliability of the generated data as described in the QAPP and to support the required third-party data usability assessment effort. Site-specific QA/QC samples included matrix spikes, matrix spike duplicates, blind duplicates, and trip blanks (as required).

## 2.7 Site Mapping

A Site map was developed during the RI field investigation. All sample points and relevant Site features were located on the map. TurnKey employed a Trimble GeoXT handheld GPS unit to identify sample locations relative to State planar grid coordinates. Monitoring well elevations were measured by TurnKey's surveyor. An isopotential map showing the groundwater elevations was prepared based on water level measurements relative to site vertical datum (see Figure 6).

## 3.0 SITE PHYSICAL CHARACTERISTICS

The physical characteristics of the Site observed during the RI are described in the following sections.

### 3.1 Site Topography and Drainage

The Site is generally flat lying with limited distinguishable Site features. At the time of the RI, the surface across the Site is covered with a former industrial buildings, asphalt and concrete, and vegetated areas. Any precipitation (i.e., rain or melting snow) which does not infiltrate through the impermeable surface would move to the storm drains on-Site and in the roadways via overland flow. Surface and shallow groundwater flow are likely impacted by various cycles of development and filling, as well as utility lines and foundations.

### 3.2 Geology and Hydrogeology

#### 3.2.1 Overburden

Based on the U.S. Department of Agriculture Soil Conservation Service soil survey map of Niagara County, the surrounding area surficial soil type, which may extend beneath the Site, includes the Odessa silty clay loam (OdA), with slopes ranging from 0 to 2%. Surficial Geologic Map of New York, Niagara Sheet, presented by NYS Geologic Survey (1988), indicates that the surficial soil type in the vicinity of the Site is a Till, with variable texture (e.g., clay, silt-clay, boulder clay), and a loamy matrix.

The geology at the Site was investigated during the RI and is generally described as fill materials overlying native brown/reddish-brown clay. The fill materials consist of silt, sand, and gravel with varying amounts of slag, metal, and cinder-like materials at depths ranging from surface to 10 feet below ground surface (fbgs). The presence of overburden fill material is widespread and common throughout the City of Niagara Falls. Native materials consist of clay with varying amounts of sand and gravel to depths to 24 fbgs.

### ***3.2.2 Bedrock***

The Niagara Falls region is underlain by Silurian and Devonian age stratified limestone, dolomite, and shale of marine origin. The bedrock is virtually flat lying, with a gentle dip to the south of only about 30 to 40 feet per mile and exhibits only very gentle folding. The bedrock surface was deeply eroded by weathering and stream action prior to glaciation and by glacial scour during glaciation. The carbonate rocks and the shale are nearly impermeable as homogeneous rock; however, due to regional tectonic stresses the bedrock is vertically and horizontally fractured, providing openings for the storage and transmission of groundwater.

The primary bedrock type that forms the bedrock surface in the northern part of the Lake Erie-Niagara River Basin is the fine- to coarse-grained Lockport Dolomite; a white or grey, magnesium-rich sedimentary rock resembling limestone, but harder and more resistant. The Lockport extends into New York for 200 miles from Niagara County to Herkimer County. The Lockport is the lowermost carbonate-rock unit in the region, which overlies the Rochester Shale, a black to gray carbonaceous shale with minor calcareous beds and limestone layers. Gypsum is also present as nodules along some bedding-plane surfaces in the Lockport. The maximum thickness of the Lockport is approximately 150 feet. Bedrock was not encountered on-Site during the RI.

### ***3.2.3 Hydrogeology***

Based on the groundwater gauging completed during the RI, localized groundwater flow was determined to be west/northwest based on the depth to water measurements. The groundwater gauging data collected during this RI was collected from properly installed permanent wells that were developed prior to sampling and gauging. Figure 5 depicts the groundwater isopotential map from the October 2010 data. Groundwater elevation data from the gauging events is shown on Table 5.

## 4.0 INVESTIGATION RESULTS BY MEDIA

The following sections discuss the analytical results of the Remedial Investigation and previous investigation. A summary of the RI sampling program, including historic samples, is presented in Table 1. Tables 2, 3 and 4 summarize the surface soil/fill, subsurface soil/fill, and groundwater analytical data, respectively. Appendix C includes the laboratory analytical data packages. Figures 3, 4, and 5 present the sample locations.

For discussion purposes, the data is compared with Standards, Criteria and Guidance values (SCGs) applicable to each medium as follows:

- Tables 2 and 3 present a comparison of the detected surface soil/fill, and subsurface soil/fill parameters to 6NYCRR Part 375 Industrial Use SCOs (December 2006).
- Table 4 presents a comparison of the detected groundwater parameters to the Class GA Groundwater Quality Standards (GWQS) per NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998).

Sample results compared to SCGs are described below according to media and contaminant class.

### 4.1 Surface Soil/Fill

#### 4.1.1 *Volatile Organic Compounds*

The majority of samples analyzed for VOCs were reported as non-detectable or at trace (estimated) concentrations below the laboratory sample quantitation limit. No VOCs were detected above Part 375 Industrial SCOs.

#### 4.1.2 *Semi-Volatile Organic Compounds*

The majority of samples analyzed for SVOCs were reported as non-detectable or at trace (estimated) concentrations below the laboratory sample quantitation limit (see Table 2). Sample locations across the site were slightly above Industrial SCOs. The constituents detected above SCOs are primarily polycyclic aromatic hydrocarbons (PAHs) which tend to

be ubiquitous in soils at historic industrial properties. Based on the sample locations (different areas across the Site) and the lack of visual and/or olfactory evidence of contamination at those locations, the elevated constituents do not appear to be attributable to a point-source release (e.g. petroleum spill or chemical release).

#### ***4.1.3 Inorganic Compounds***

The majority of samples analyzed for inorganic compounds (metals) were detected below Industrial SCOs. Only one inorganic compound, Arsenic, was detected above its Industrial SCO at historic sample locations SS-1 and SS-3; and RI sample locations SS-11 and SS-15 (see Table 2).

#### ***4.1.4 Pesticides, Herbicides and Polychlorinated Biphenyls***

Pesticides, herbicides, and PCBs were reported as non-detectable, at trace (estimated) concentrations below the sample quantitation limit, and/or below Industrial SCOs. Only one PCB, Aroclor 1268, was detected above the Industrial SCO at RI sample location SS-6 as an estimated value (see Table 2).

#### ***4.1.5 Surface Soil/Fill Summary***

As described above, concentrations of VOCs, pesticides, and herbicides were below Part 375 Industrial SCOs in surface soil/fill. Sample locations across the site were slightly above Industrial SCOs for select PAHs; however, these compounds tend to be ubiquitous in soils at historic industrial properties, and do not appear to be attributable to a specific release. Arsenic was detected above its Industrial SCO at historic sample locations SS-1 and SS-3; and RI sample locations SS-11 and SS-15. Aroclor 1268 was detected above its Industrial SCO at RI sample location SS-6 (see Table 2). The soil from the area of SS-6 was excavated during the IRM and a soil cover system was placed across the Site.

## 4.2 Subsurface Soil/Fill

### 4.2.1 *Volatile Organic Compounds*

The majority of samples analyzed for VOCs were reported as non-detectable or at trace (estimated) concentrations below the laboratory sample quantitation limit (see Table 3). No VOCs were detected above Part 375 Industrial Use SCOs.

### 4.2.2 *Semi-Volatile Organic Compounds*

The majority of samples analyzed for SVOCs were reported as non-detectable or at trace (estimated) concentrations below the sample quantitation limit (see Table 3). Several SVOC constituents, primarily PAHs were detected slightly above Part 375 Industrial Use SCOs at sample locations across the Site. Elevated SVOCs in the area of sample locations TP-15, TP-16 and TP-17 are attributable to apparent petroleum contamination in that area [that area was excavated during IRM activities, as described in Section 5 below]. Based on the lack of visual and/or olfactory evidence of contamination at other sample locations across the Site, the elevated constituents do not appear to be attributable to a point-source release (e.g., petroleum spill or chemical release).

### 4.2.3 *Inorganic Compounds*

The majority of samples analyzed for inorganic compounds (metals) results were detected at levels below Industrial Use SCOs. Only one inorganic compound, Arsenic, was detected slightly above the Industrial Use SCOs at TP-15 during the RI (see Table 3); that area was excavated during the IRM.

### 4.2.4 *Pesticides, Herbicides and Polychlorinated Biphenyls*

Pesticides, herbicides, and PCBs were reported as non-detectable, at trace (estimated) concentrations below the sample quantitation limit or below Industrial SCOs (see Tables 3).

### 4.2.5 *Subsurface Soil/Fill Summary*

As described above, concentrations of VOCs, pesticides, herbicides, and PCBs were below Industrial SCOs. Sample locations across the site were slightly above Industrial SCOs for SVOCs, primarily PAHs, which tend to be ubiquitous in soils at historic industrial properties, and do not appear to be attributable to a specific release. Elevated SVOCs in the

area of sample locations TP-15, TP-16 and TP-17 are attributable to apparent petroleum contamination in that area. Arsenic was detected above the Industrial SCOs at TP-15 and Railroad Siding 4. The soil in the area of TP-15 was excavated and disposed off-Site at a commercial landfill during the IRM. A soil cover system was installed across the Site during the IRM.

### 4.3 Groundwater

The sampling results for groundwater monitoring completed in October 2010 are discussed in the following sections. At the request of the Department additional groundwater sampling was attempted in August 2012. Due to low water levels and insufficient volumes for sample collection, no samples were collected at that time.

#### 4.3.1 *Volatile Organic Compounds*

The majority of samples analyzed for VOCs were reported as non-detectable or at trace (estimated) concentrations below the laboratory sample quantitation limit. No VOCs were detected above GWQS.

#### 4.3.2 *Semi-Volatile Organic Compounds*

The majority of samples analyzed for SVOCs were reported as non-detectable or at trace (estimated) concentrations below the laboratory sample quantitation limit. Several PAHs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, and chrysene were detected slightly above GWQS in monitoring well MW-4. It should be noted that all the constituents detected above GWQS were flagged as estimated values by the laboratory.

#### 4.3.3 *Inorganic Compounds*

The majority of samples analyzed for inorganic compounds were reported as non-detectable or at trace (estimated) concentrations below the laboratory sample quantitation limit. Total metals detected at concentrations above GWQS were limited to iron, magnesium, manganese and sodium, which are naturally occurring minerals commonly encountered in uncontaminated natural environments.

#### ***4.3.4 Pesticides, Herbicides and Polychlorinated Biphenyls***

The majority of analytes were reported as non-detectable or trace (estimated) concentrations below the laboratory quantitation limit for herbicides and PCBs. Select pesticides were detected at concentrations slightly above GWQS including 4,4'-DDT, endrin, and heptachlor epoxide in monitoring wells MW-1, MW-3, and MW-4 (see Table 5). It should be noted that these constituents were flagged as estimated values by the laboratory.

#### ***4.3.5 Groundwater Summary***

As described above and shown on Table 4, no VOCs were detected above GWQS. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, and chrysene were detected slightly above GWQS in monitoring well MW-4; and select pesticides were detected at concentrations slightly above GWQS including 4,4'-DDT, endrin, and heptachlor epoxide in monitoring wells MW-1, MW-3, and MW-4. It should be noted that the constituents detected above GWQS were flagged as estimated values by the laboratory. Metals detected above GWQS are all naturally occurring minerals commonly encountered in uncontaminated natural environments.

### **4.4 Data Usability Summary**

In accordance with the Work Plan, the laboratory analytical data from the 1501 College Avenue Site investigation was assessed and, as required, submitted for independent review. Data Validation Services located in North Creek, New York performed the data usability summary assessment, which involved a review of the summary form information and sample raw data, and a limited review of associated QC raw data. Specifically, the following items were reviewed:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate Recoveries
- Field Duplicate Correlation
- Preparation/Calibration Blanks
- Control Spike/Laboratory Control Samples
- Instrumental IDLs

- Calibration/CRI/CRA Standards
- ICP Interference Check Standards
- ICP Serial Dilution Correlations
- Sample Results Verification

The Data Usability Summary Report (DUSR) was conducted using guidance from the USEPA Region 2 validation Standard Operating Procedures, the USEPA National Functional Guidelines for Data Review, as well as professional judgment.

#### ***4.4.1 DUSR Summary***

In summary, sample analyses were primarily conducted in compliance with the required analytical protocols, and no data were rejected, but some data were further qualified during the data validation. The DUSR notes non-homogeneity for multiple PCB analyses, which required additional result qualification. Any additional qualifications of the data have been incorporated to the summary data tables. Appendix D includes the DUSR.

## 5.0 INTERIM REMEDIAL MEASURES (IRM)

In accordance with the NYSDEC-approved IRM Work Plan, immediately following the RI fieldwork, the RI surface soil/fill, subsurface soil/fill and groundwater data was reviewed with the NYSDEC and NYSDOH to evaluate which areas of the Site required remediation. Based on the nature and extent of the impacts identified during the RI, as well as previously known conditions (e.g., demolition of the existing buildings and smoke stacks, galbestos building materials, former manufacturing materials, debris piles, and abandoned oil tankers) requiring removal, IRMs summarized below were discussed with and approved by NYSDEC and NYSDOH.

As stated in the approved Work Plan, Santarosa's intent was for the IRM to substantially or completely constitute the final NYSDEC-approved BCP remedy for the Site. Figure 6 presents the location of IRM excavation areas.

Specific elements of the IRM, as implemented, included:

- Approximately 153 tons of galbestos roofing and building materials was collected and transported off-site by Buffalo Fuel Corp. (BFC) for disposal at Chemical Waste Management (CWM) landfill, located in Model City, New York
- Collection and removal of seven (7) roll-off containers of abandoned drums and containers of off-spec former carbon electrode manufacturing materials. Four roll-offs were transported by BFC for disposal at Modern Landfill , located in Model City, NY; and, three roll-offs were transported by BFC for disposal at Allied Waste (Republic), located in Niagara Falls, NY;
- Approximately 7,851 gallons of waste petroleum oil was vacuumed out of two abandoned tanker trucks by Green Environmental Specialists, Inc. (GES), and transported for stabilization at Environmental & Industrial Contracting Services, Inc. (EICS) in Niagara Falls, New York, prior to final disposal at Modern Landfill in Model City, NY;
- Cleaning and collection of steel ASTs, empty drums and two (2) abandoned tanker trucks and transported off-site with other on-Site scrap metals (i.e. building demolition metals), by BFC for recycling as scrap at Niagara Metals, located in Niagara Falls, NY;
- Approximately 2,607 tons of non-friable ACMs C&D debris was collected and transported off-site by BFC for disposal, including: 735 tons was disposed of at Waste Management, Chaffee Landfill, located in Chaffee, New York; 855 tons was disposed at Minerva Enterprises, LLC landfill located in Waynesburg, Ohio; and 1,016 tons was disposed at Modern Landfill, located in Model City, New York;

- Approximately 1,340 tons of C&D debris and intermingled soil/fill was removed from the former Bldg. 49 and transported off-site by BFC for disposal at Minerva Enterprises, LLC landfill located in Waynesburg, Ohio;
- Excavation of approximately 2,975 tons of non-hazardous petroleum-impacted soil/fill from the TP-15 area. Excavated material was transported off-site by BFC for disposal at Allied Waste (Republic) landfill located in Niagara Falls, New York. Confirmatory samples were collected and analytical results were below Part 375 Industrial Use SCOs with exception of several PAHs, of which the majority are located along the southern property boundary;
- Excavation of approximately 645-tons of non-hazardous petroleum stained soil/fill from the TP-5 area. The excavation continued until limited by former concrete foundations. Excavated material was transported off-site by BFC for disposal at Allied Waste (Republic) landfill located in Niagara Falls, New York. Confirmatory samples were collected and analytical results were below Part 375 Industrial Use SCOs with the minor exception;
- Excavation of approximately 411 tons of PCB-impacted soil/fill from the SS-6 area. Excavated soil/fill was transported off-site by BFC for disposal at CWM, located in Model City, New York;
- Extraction and temporary storage of approximately 20,000 gallons of potentially impacted water removed from the excavation. The collected excavation water was subsequently analyzed, and transported off-site by GES to EICS in Niagara Falls, NY for solidification and final disposal at Modern Landfill, in Model City, NY;
- Completion of a subgrade manhole, electrical vault and former factory sump/pit investigation was conducted during the RI. No evidence of impacts was noted during the investigation. During demolition and remedial activities, it was noted that sporadic C&D debris (i.e., brick and concrete) had entered several manholes/sumps. The accumulated C&D debris was removed by Santarosa and placed beneath the demarcation layer within the on-Site berms. Sumps and manholes were then decommissioned and covered in accordance with the cover system; and/or surface covers were restored or replaced;
- Placement of approved on-Site reuse of concrete block and brick building materials for sub-grade backfill. Backfill materials were analyzed to confirm they met NYSDEC on-Site re-use criteria and/or were pre-approved by NYSDEC; and, Construction of a composite cover system, including areas of the Site covered by existing concrete and asphalt areas, and placement of a minimum 12-inch thick approved soil and/or recycled concrete over the orange plastic mesh demarcation layer. Soil covered berms were constructed along the Site boundaries utilizing on-Site material, with NYSDEC approval, with a minimum 12-inchs of

approved soil placed above the demarcation layer. No soil/fill from the BCP Site was utilized as material for berms constructed on the adjacent redevelopment parcel (former Hazorb Site). Approximately 4,737 tons of soil, originating from the Lewiston Road (Rt. 104 / 10<sup>th</sup> Street) and approximately 3,158 tons of soil-clay, originating from the Witmer Road municipal road upgrade projects was used in the cover system; and, approximately 2,842 tons of recycled concrete block, originating from the Center Court complex, and approximately 4,800 tons of recycled concrete from Swift River Associates, Inc. – Tonawanda (Facility ID 15W01) was transported on-Site by BFC and placed by Santarosa across the Site as a component of the cover system including berm surface cover material.

Photos of IRM activities are included in Appendix A. The Final Engineering Report, submitted as a separate document, includes additional details of the IRMs.

## 6.0 FATE AND TRANSPORT OF COPCs

The surface soil/fill, subsurface soil/fill and groundwater sample analytical results were incorporated with the physical characterization of the Site to evaluate the fate and transport of COPCs in Site media. The mechanisms by which the COPCs can migrate to other areas or media are briefly outlined below. In all instances, the potential pathways are evaluated in the context of post-remedial activities conditions.

### 6.1 Fugitive Dust Generation

Volatile and non-volatile chemicals present in soil can be released to ambient air as a result of fugitive dust generation. Impacted soil/fill was excavated/removed and disposed of off-Site as part of the IRM. Furthermore, the Site is covered by a one-foot thick composite cover system, including asphalt and concrete pavement, and compacted gravel, recycled brick and concrete, and approved soil/fill.

Based on the IRMs completed, the current and future industrial land use, and the majority of the Site being covered by asphalt, concrete, or one-foot of a composite cover system, this migration pathway is not relevant under the current and reasonably anticipated future land use, as long as the surface cover across the Site is maintained in accordance with the Site Management Plan (SMP) for the Site.

### 6.2 Volatilization

Volatile chemicals present in soil/fill and groundwater may be released to ambient or indoor air through volatilization either from or through the soil/fill underlying current or future building structures. Volatile chemicals typically have a low organic-carbon partition coefficient ( $K_{oc}$ ), low molecular weight, and a high Henry's Law constant.

Volatile organic compounds were not detected in surface or subsurface soil /fill above Industrial Use SCOs. In fact, no VOCs were detected above Part 375 Residential Use SCOs. Therefore, the release of VOCs from soils is not considered a relevant pathway in current and future use scenarios for the Site.

No VOCs were detected in Site groundwater above Class GA GWQS. Therefore, the release of VOCs from groundwater is not considered a relevant pathway in current and future use scenarios.

Based on the low concentrations or non-detection of VOC contaminants in soil/fill and groundwater that could potentially contribute to vapor intrusion, it was determined, with concurrence from NYSDEC and NYSDOH, that a Soil Vapor Intrusion (SVI) assessment was not necessary for the Site.

### 6.3 Surface Water Runoff

The potential for soil particle transport with surface water runoff is low, as the majority of the Site is covered by composite cover system, including asphalt and concrete pavement, and compacted gravel, recycled brick and concrete, and approved soil/fill; and is storm water from the vicinity of the Site is serviced by the Niagara Falls wastewater treatment plant (WWTP) sewer collection system. The WWTP sewer system provides a mechanism for controlled surface water transport but will ultimately result in sediment capture in the WWTP's grit chambers followed by disposal at a permitted sanitary landfill. As such, surface water runoff is not considered a relevant migration pathway.

### 6.4 Leaching

Leaching refers to chemicals present in soil/fill migrating downward to groundwater as a result of infiltration of precipitation. Excavation/removal and off-Site disposal of impacted soil/fill from the Site mitigates potential leaching of chemicals to groundwater. Those COPCs remaining on-Site below the composite cover system are not considered highly mobile, with the exception of naturally occurring metals. PAHs tend to sorb to soil particles are not considered highly leachable. As such, leaching is not considered a relevant migration pathway for this Site.

### 6.5 Groundwater Transport

Groundwater underlying the Site migrates to the west/northwest. Chemicals present in groundwater may be transported across the Site via this pathway. Groundwater flows through a relatively low permeability clayey-silt geologic unit, with an estimated hydraulic conductivity of  $1 \times 10^{-5}$  to  $1 \times 10^{-8}$  centimeters per second (cm/s), porosity of 0.3 - 0.4 and a measured hydraulic gradient of approximately 0.008 ft/ft. Darcy's Law velocity calculation

indicates that shallow overburden groundwater migrates to the west/northwest at a rate of approximately  $5.53 \times 10^{-4}$  to  $7.38 \times 10^{-5}$  ft/day.

The Site and surrounding area are serviced by a municipal (supplied) water service, with no evidence of potable wells in the area of the subject property. VOCs were not detected above GWQS in on-Site groundwater. Furthermore, analytes that were detected in on-Site groundwater were slightly above GWQS at estimated concentrations and are relatively immobile. As such, transport off-site via groundwater migration is not a relevant migration pathway.

## 6.6 Exposure Pathways

Based on the analysis of chemical fate and transport provided above, the pathway through which Site COPCs could reach receptors at significant exposure point concentrations is limited to incidental contact with residual contaminants in soil/fill and groundwater during future intrusive activities beneath the cover system. A Site Management Plan, which is a component of the final remedy, that describes procedures to be followed in the event of future intrusive activities, mitigates this concern.

## 7.0 QUALITATIVE RISK ASSESSMENT

### 7.1 Potential Human Health Risks

The 1501 College Avenue Site is currently vacant. This industrial use is consistent with the surrounding property use and Site zoning. Accordingly, the potential exposed receptors for the Site are comprised of the on-Site commercial/industrial worker; and construction worker potentially exposed to contaminated soil/fill and groundwater during intrusive activities on-Site. In both instances, exposure frequency is expected to be minimal. On-Site commercial/industrial and construction workers would be limited to adults; children and adolescents will not be included as potential receptors. The entire site is secured by fencing and an earthen-berm which reduces the likelihood of trespassers. Additionally, a trespasser would need to compromise the cover system, and/or impermeable surfaces (i.e., concrete, asphalt and building foundations) to be potentially exposed to remaining COPCs. Therefore, trespassers will not be included as potential relevant receptors. Based on the media (i.e., soil/fill beneath the cover system) for which contact with site COPCs is relevant, it is highly unlikely that off-site receptors would be exposed, and therefore are not considered relevant receptors.

For soil/fill, extensive remedial activities were conducted as IRMs related to COPCs in the surface and subsurface soil/fill. Certain COPCs were detected above their respective Industrial SCOs in subsurface soil/fill sample locations, indicating a potential unacceptable human health risk for incidental ingestion, dermal contact and/or inhalation of re-suspended particulates. However, those areas exceeding Industrial SCOs are located under the Site cover system, as described above, eliminating the potential exposure pathway and associated health risk. Institutional controls in association with the Site Management Plan (SMP) will be utilized to reduce the potential for exposure during non-routine intrusive activities.

For groundwater, the urban nature of the area and availability of a municipal water source at the Site mitigates the potential for routine direct human contact or ingestion (i.e., as might occur with use of on-Site groundwater water for potable or process purposes). Non-routine contact with Site groundwater is expected to be limited to short durations under specific construction conditions (e.g., a construction worker managing groundwater during deep excavation work). Given the limited frequency and duration of these non-

routine activities, direct groundwater exposure pathways for on-Site receptors are not considered relevant.

The IRMs were completed to reduce/eliminate exposure to COPCs; however, residual contaminants remain in Site subsurface soil/fill and groundwater. Under the future (industrial) use conditions, potential exposure routes are: incidental ingestion and dermal contact of soil/fill, inhalation of re-suspended particulates and/or COPCs in air; and, dermal contact with compounds in groundwater. Based on the presence of these constituents and as discussed with the NYSDEC and the NYSDOH, there will be engineering controls (soil cover system) and institutional controls implemented in the Environmental Easement in accordance with a Site Management Plan for the Site as part of the final remedy. The AAR (section 8.0) includes a discussion of the engineering and institutional controls that may be used at the Site. These controls will serve to eliminate potential human health risks at the Site.

## 7.2 Potential Ecological Risks

The 1501 College Avenue BCP Site is an industrial facility located within a highly developed, urban area in the City of Niagara Falls. The Site is currently vacant, and covered by composite cover system, including asphalt and concrete pavement, and compacted gravel, recycled brick and concrete, and approved soil/fill primarily with asphalt, which provides little or no wildlife habitat or food value. No natural waterways are present on or adjacent to the Site. The reasonably anticipated future use is industrial with the majority of the Site covered by buildings, concrete, asphalt and gravel. As such, no unacceptable ecological risks are anticipated under the current or reasonably anticipated future use scenario.

## 8.0 REMEDIAL ALTERNATIVES EVALUATION

### 8.1 Remedial Action Objectives

The final remedial measures for the 1501 College Avenue Site must satisfy Remedial Action Objectives (RAOs). Remedial Action Objectives are site-specific statements that convey the goals for minimizing or eliminating substantial risks to public health and the environment. Appropriate RAOs for the 1501 College Avenue Site are:

- Removal and off-site disposal of historic drums and containers of former carbon electrode manufacturing raw materials, removal of galbestos building materials, removal of abandoned tanker trailers and contents, and removal of suspect debris piles;
- Removal and off-site disposal of impacted soil/fill to levels protective of human health (Part 375 Industrial Use SCOs);
- Prevention of ingestion or direct contact with soil/fill that contains COPCs above Part 375 Industrial Use SCOs; and,
- Prevention of ingestion or direct contact with groundwater containing concentrations of COPCs above GWQS;

In addition to achieving RAOs, NYSDEC's Brownfield Cleanup Program calls for remedy evaluation in accordance with DER-10 Technical Guidance for Site Investigation and Remediation. Specifically, the guidance states "When proposing an appropriate remedy, the person responsible for conducting the investigation and/or remediation should identify and develop a remedial action that is based on the following criteria..."

- **Overall Protection of Public Health and the Environment.** This criterion is an evaluation of the remedy's ability to protect public health and the environment, assessing how risks posed through each existing or potential pathway of exposure are eliminated, reduced, or controlled through removal, treatment, engineering controls, or institutional controls.
- **Compliance with Standards, Criteria, and Guidance (SCGs).** Compliance with SCGs addresses whether a remedy will meet applicable environmental laws, regulations, standards, and guidance.
- **Long-Term Effectiveness and Permanence.** This criterion evaluates the long-term effectiveness of the remedy after implementation. If wastes or treated residuals remain on-site after the selected remedy has been implemented, the

following items are evaluated: (i) the magnitude of the remaining risks (i.e., will there be any significant threats, exposure pathways, or risks to the community and environment from the remaining wastes or treated residuals), (ii) the adequacy of the engineering and institutional controls intended to limit the risk, (iii) the reliability of these controls, and (iv) the ability of the remedy to continue to meet RAOs in the future.

- **Reduction of Toxicity, Mobility or Volume with Treatment.** This criterion evaluates the remedy's ability to reduce the toxicity, mobility, or volume of Site contamination. Preference is given to remedies that permanently and significantly reduce the toxicity, mobility, or volume of the wastes at the Site.
- **Short-Term Effectiveness.** Short-term effectiveness is an evaluation of the potential short-term adverse impacts and risks of the remedy upon the community, the workers, and the environment during construction and/or implementation. This includes a discussion of how the identified adverse impacts and health risks to the community or workers at the Site will be controlled, and the effectiveness of the controls. This criterion also includes a discussion of engineering controls that will be used to mitigate short term impacts (i.e., dust control measures), and an estimate of the length of time needed to achieve the remedial objectives.
- **Implementability.** The implementability criterion evaluates the technical and administrative feasibility of implementing the remedy. Technical feasibility includes the difficulties associated with the construction and the ability to monitor the effectiveness of the remedy. For administrative feasibility, the availability of the necessary personnel and material is evaluated along with potential difficulties in obtaining specific operating approvals, access for construction, etc.
- **Cost.** Capital, operation, maintenance, and monitoring costs are estimated for the remedy and presented on a present worth basis.
- **Community Acceptance.** This criterion evaluates the public's comments, concerns, and overall perception of the remedy.

## 8.2 Future Land Use Evaluation

In developing and screening remedial alternatives, NYSDEC's Part 375 regulations require that the reasonableness of the anticipated future land be factored into the evaluation. The regulations identify 16 criteria that must be considered. These criteria and the resultant outcome for the 1501 College Avenue Site are presented in Appendix E. As indicated, this evaluation supports industrial use as the reasonably anticipated future use of the Site, which

is consistent with past use. Accordingly, remedial alternatives to clean up the Site to industrial end use are identified and evaluated herein.

Although the Site is intended to be used for industrial purposes, evaluating a more restricted-use scenario is a requirement of the BCP. Therefore, Tables 8a through Table 8d present a comparison of the soil/fill analytical data to Part 375 Unrestricted Use SCOs. Per NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, evaluation of a “no-action” alternative is also required to provide a baseline for comparison against other alternatives. Since an IRM has already been completed for the Site, the alternatives discussed in greater detail in Section 8.3 include:

- No Further Action beyond which was completed as IRMs;
- IRMs and Implementation of a Site Management Plan; and,
- Unrestricted Use Cleanup

## 8.3 Alternatives Evaluation

### 8.3.1 *IRM/No Further Action*

Under this alternative, the Site would remain in its current state, with no additional controls in-place.

***Overall Protection of Public Health and the Environment –*** The Site is not protective of human health and the environment, due to the absence of institutional controls to prevent more restrictive forms of future site use (e.g., unrestricted, residential, and commercial) or export of Site soils to uncontrolled off-Site locations. Accordingly, no further action is not protective of public health and does not satisfy the RAOs.

**Compliance with SCGs –** Under the current and reasonably anticipated future use scenario (industrial), the concentrations of constituents detected in the soil/fill and groundwater generally comply with applicable SCOs and GWQS, with minor exceptions.

***Long-Term Effectiveness and Permanence –*** The no further action alternative involves no additional equipment, institutional controls or facilities subject to maintenance, and provides no long-term effectiveness toward achieving the RAOs. Without the

application of Institution Controls for the Site, this objective does not satisfy the permanence ROA.

***Reduction of Toxicity, Mobility, or Volume with Treatment*** – The IRMs completed at the Site have reduced the toxicity, mobility and volume of COPCs. However, certain COPCs above Industrial SCOs do remain on-Site, and therefore, no further action is not protective of public health and does not satisfy the RAOs.

***Short-Term Effectiveness*** – There would be no short-term adverse impacts and risks to the community, workers, or the environment attributable to implementation of the no further action alternative.

***Implementability*** – No technical or administrative implementability issues are associated with the no further action alternative.

***Cost*** – The capital cost of the IRMs was approximately \$1,800,000. There would be no capital or long-term operation, maintenance, or monitoring costs associated with the no further action alternative.

### ***8.3.2 IRM and Implementation of a Site Management Plan***

The IRM achieved removal of the contaminated soil/fill on-Site to below Industrial SCOs, with minor exceptions. The “Implementation of a Site Management Plan” alternative is defined as performing no additional cleanup activities at the Site beyond that which was already performed as an IRM (refer to Section 5.0) with implementation of a Site Management Plan (SMP). The SMP will include:

- **Engineering and Institutional Controls Plan.** Engineering controls include any physical barrier or method employed to actively or passively contain, stabilize, or monitor contaminants; restrict the movement of contaminants; or eliminate potential exposure pathways to contaminants. Institutional controls at the Site will include groundwater use restrictions and a land use restriction allowing industrial use of the Site, but preventing more restrictive land use (i.e., unrestricted, residential or commercial use).
- **Excavation Work Plan** to assure that future intrusive activities and soil/fill handling at the Site are completed in a safe and environmentally responsible manner.

- **Site Monitoring Plan** that includes: provisions for a groundwater monitoring plan and a Site-wide inspection program to assure that the IC/ECs have not been altered and remain effective.
- **Environmental Easement** filed with Niagara County.

***Overall Protection of Public Health and the Environment*** – Since the IRM achieved removal of contaminated materials, including drums, containers, debris, galbestos, contaminated soil/fill and a soil cover system was installed this alternative is fully protective of human health and the environment and successfully achieves all RAOs for the Site. The Site Management Plan will include an excavation work plan to address any impacted soil/fill encountered during post-development maintenance activities and a Site-wide Inspection program to assure that the Engineering and Institutional Controls placed on the Site have not been altered and remain effective.

**Compliance with SCGs** – The IRM was performed in accordance with applicable, relevant, and appropriate standards, guidance, and criteria. The IRM achieved removal of contaminated materials, including drums, containers, debris, galbestos, contaminated soil/fill to Industrial SCOs, with minor exceptions, and a soil cover system was installed; this alternative is fully protective of human health and the environment and successfully achieves all RAOs for the Site. The Site Management Plan will include an excavation work plan to address any impacted soil/fill encountered during post-development maintenance activities and a Site-wide Inspection program to assure that the Engineering and Institutional Controls placed on the Site have not been altered and remain effective.

***Long-Term Effectiveness and Permanence*** – The IRM achieved removal of contaminated materials, including drums, containers, debris, galbestos, grossly contaminated soil/fill to Industrial SCOs, with minor exceptions and a soil cover system was installed. The Site Management Plan will include an excavation work plan to address any impacted soil/fill encountered during post-development maintenance activities, and a Site-wide Inspection program to assure that the Engineering and Institutional Controls placed on the Site have not been altered and remain effective. Furthermore, an Environmental Easement for the Site will be filed with Niagara County, which will limit future site use to industrial

uses, restrict groundwater use and reference the Department-approved Site Management Plan. As such, this alternative provides long-term effectiveness and permanence.

***Reduction of Toxicity, Mobility, or Volume with Treatment*** – Through removal of contaminated materials, including drums, containers, debris, galbestos, and contaminated soil/fill, the IRM permanently and significantly reduced the toxicity, mobility, and volume of Site contamination. The Site Management Plan will include an excavation work plan to address any impacted soil/fill encountered during post-development maintenance activities and a Site-wide Inspection program to assure that the Engineering and Institutional Controls placed on the Site have not been altered and remain effective. Accordingly, this alternative satisfies this criterion.

***Short-Term Effectiveness*** – The short-term adverse impacts and risks to the community, workers, and environment during implementation of the IRM were effectively controlled in accordance with the approved work plans. The potential for chemical exposures and physical injuries were reduced through safe work practices; proper personal protection equipment; environmental monitoring; Site control; and appropriate decontamination procedures. The IRM achieved the RAOs for the Site.

***Implementability*** – No technical or action-specific administrative implementability issues are associated with implementation of the IRM or the SMP. An Environmental Easement will be filed with Niagara County documenting the controls placed on the Site.

***Cost*** – The capital cost of the IRM was approximately \$1,800,000. Annual certification is estimated at approximately \$4,000 per year. Based on an assumed 30 years of annual certifications, the net present value of this alternative is approximately \$1,883,000, as shown on Table 7a. Table 7c presents a summary of costs of each of the alternatives.

***Community Acceptance*** – The remedial work plans and activities were available for public comment and review throughout the project. No comments were received by the NYSDEC related to the planned and completed remedial efforts.

### ***8.3.3 Unrestricted Use Alternative***

An Unrestricted Use alternative would necessitate remediation of all soil/fill where concentrations exceed the Unrestricted Use SCOs per 6NYCRR Part 375 (see Table 8a through Table 8d). For Unrestricted Use scenarios, excavation and off-site disposal of impacted soil/fill is generally regarded as the most applicable remedial measure, because institutional controls cannot be used to supplement the remedy. As such, the Unrestricted Use alternative assumes that those areas which exceed Unrestricted Use SCOs would be excavated and disposed at an off-Site commercial solid waste landfill. Based on the historic use and planned future reuse of the site as an industrial facility, and the results of the RI/IRM, all surface areas (that which are not covered by buildings) of the Site would need to be excavated to an average depth of six fbsgs. Approximately 10.5-acres of surface area exist within the BCP site boundary that has not been previously excavated during IRMs, and would need to be excavated to 6 fbsgs. The estimated total volume of impacted soil/fill that would be removed from these areas is approximately 101,750 cubic yards.

Based on the minor exceedance of groundwater concentrations, as described above, and the removal of an average of 6-ft of soil/fill across the Site; thereby removing any potential source area, this alternative assumes that no groundwater remediation or long-term monitoring would be required.

***Overall Protection of Public Health and the Environment –*** The Unrestricted Use alternative would achieve the corresponding Part 375 SCOs, which are designed to be protective of human health under any reuse scenario.

***Compliance with SCGs –*** Similar to the IRM soil/fill removal activities, the Unrestricted Use alternative would need to be performed in accordance with applicable, relevant, and appropriate standards, guidance, and criteria.

***Long-Term Effectiveness and Permanence –*** The Unrestricted Use alternative would achieve removal of all residual impacted soil/fill; therefore, no soil/fill exceeding the Unrestricted Use SCOs would remain on the Site. As such, the Unrestricted Use alternative would provide long-term effectiveness and permanence. Post-remedial monitoring and certifications would not be required.

**Reduction of Toxicity, Mobility, or Volume with Treatment** – Through removal of all impacted soil/fill, the Unrestricted Use alternative would permanently and significantly reduce the toxicity, mobility, and volume of Site contamination.

**Short-Term Effectiveness** – The short-term adverse impacts and risks to the community, workers, and environment during implementation of the Unrestricted Use alternative are considered significant, though controllable and would significantly increase the duration of time community, workers, and the environment is exposed to fugitive dust and potential off-site exposures during remediation.

**Implementability** – Technical implementability would be a major barrier to construction of the Unrestricted Use alternative. Based on the quantity of soil/fill which would need to be removed; presence of former manufacturing subsurface structures and foundations, coordination of excavation, trucking and disposal would present significant challenges. The large volume of soil/fill would require a significant increase in the amount of truck traffic ingress and egress for the Site, totaling approximately 12,000 dump truck trips for off-site disposal. Excavating the entire Site is not considered a reasonable alternative given the current and reasonably anticipated future use of the Site.

**Cost** – The capital cost of implementing an Unrestricted Use alternative is estimated at approximately \$14,386,000 (see Table 7b), which is the cost of the unrestricted use cleanup plus the capital costs of the IRMs that were completed. Post-remedial groundwater monitoring and annual certification costs would not be incurred. Table 7c is a summary of costs of each of the alternatives.

**Community Acceptance** – Community acceptance will be evaluated based on comments to be received from the public in response to Fact Sheets and other planned Citizen Participation activities.

#### 8.4 Recommended Remedial Measure

Based on the Alternatives Analysis evaluation, the completed IRM and implementation of a Site Management Plan fully satisfies the remedial action objectives and is fully protective of human health and the environment. Accordingly, the completed IRM and implementation of a Site Management Plan is the recommended final remedial approach for the 1501 College Avenue Site.

## 9.0 RI/IRM/AAR SUMMARY AND CONCLUSIONS

Based on the data and analyses presented in the preceding sections, we offer the following summary and conclusions:

- Based on surface soil data, concentrations of VOCs, pesticides, and herbicides were below Part 375 Industrial Use SCOs. Sample locations across the site were slightly above Industrial SCOs for select PAHs; however, these compounds tend to be ubiquitous in soils at historic industrial properties and do not appear to be attributable to a specific release. Arsenic was detected above its Industrial Use SCO at two historic and two RI sample locations. Aroclor 1268 was detected above its Industrial use SCO at RI sample location SS-6, which was subsequently excavated during IRMs. A cover system has been placed across the Site.
- Based on the subsurface soil/fill data, concentrations of VOCs, pesticides, herbicides, and PCBs were below Industrial Use SCOs. Several SVOCs, primarily PAHs were detected across the Site, however, these constituents tend to be ubiquitous in soils at historic industrial properties, and do not appear to be attributable to a specific release. Arsenic was detected above the Industrial Use SCOs at two sample locations. However, soil from area of TP-15 was removed during IRMs and a soil cover system has been placed across the Site.
- Based on the groundwater data collected during the RI, no VOCs were detected above GWQS. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, and chrysene were detected slightly above GWQS (estimated values) in monitoring well MW-4; and select pesticides were detected at concentrations slightly above GWQS (estimated values) including 4,4'-DDT, endrin, and heptachlor epoxide in monitoring wells MW-1, MW-3, and MW-4. Metals detected above GWQS are all naturally occurring minerals commonly encountered in uncontaminated natural environments. Groundwater will be monitored in accordance with the Site Management Plan.
- Following the RI fieldwork, the surface and subsurface soil/fill, and groundwater data was reviewed with the NYSDEC and NYSDOH to evaluate which areas of the Site required remediation. Based on the nature and extent of the impacts identified during the RI, as well as previously known conditions (e.g., drums requiring removal), planned IRMs were discussed with and approved by NYSDEC and NYSDOH.
- Elements of the IRM, as implemented, included:
  - Collection and off-site disposal of historic galbestos building materials;

- Collection and off-site disposal of abandoned drums and containers of off-spec former manufacturing raw materials;
  - Off-site transportation and disposal of miscellaneous debris piles;
  - Off-site recycling as scrap metal of historic aboveground storage tanks, empty drums and two (2) abandoned tanker trucks;
  - Removal and off-site disposal/recycling of petroleum-product from abandoned tanker trailers;
  - Transportation and off-site disposal of non-friable ACMs C&D debris;
  - Transportation and off-site disposal of C&D debris intermingled with soil/fill that was illegally dumped in the former Bldg. 49 prior to Santarosa's ownership of the Site;
  - Excavation and off-Site disposal of grossly contaminated petroleum-impacted non-hazardous soil/fill from the TP-15 excavation area;
  - Excavation and off-Site disposal of petroleum-impacted non-hazardous soil/fill from the TP-5 excavation area;
  - Excavation and off-site disposal of PCB-impacted non-hazardous soil/fill from the SS-6 area;
  - Extraction and temporary storage of approximately 20,000 gallons of excavation related water. The collected excavation water was subsequently analyzed and transported off-site for stabilization and disposal;
  - Placement of approved reuse of on-Site block and brick building materials for sub-grade backfill. Backfill materials were analyzed to confirm they met NYSDEC on-Site re-use criteria and/or were pre-approved by NYSDEC; and,
  - Placement of NYSDEC approved cover system, including berm across the Site.
- 
- As stated in the approved IRM Work Plan, Santarosa's intent was for the IRMs to substantially or completely constitute the final NYSDEC-approved BCP remedy for the Site. Based on the Alternatives Analysis evaluation, the IRM, together with implementation of a Site Management Plan fully satisfies the remedial action objectives and is protective of human health and the environment. Accordingly, the IRM and Implementation of a Site Management Plan is the recommended final remedy for the 1501 College Avenue Site.

**Notes:**

1. Only those parameters detected at a minimum of one sample location are presented in this table; all other compounds were reported as non-detect.

2. Values per NYSDEC Division of Water Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations - GA Class (TOGS 1.1.1)

**Definitions:**

ND = Non-detect; Parameter not detected above laboratory detection limit.

-- = No SCO available for the parameter.

J = Estimated value; result is less than the sample quantitation limit but greater than zero.

B = Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.

D = Compounds were identified in an analysis at the secondary dilution factor.

**Bold** = Result exceeds GWQS.

**TABLE 5**

**Summary of Groundwater Elevations**

**1501 College Avenue Site**

**Niagara Falls, New York**

Location	TOR Elevation <sup>1</sup> (fmsl)	DTW (fbTOR)	Groundwater Elevation (fmsl)
MW-1	106.42	11.15	95.27
MW-2	108.97	7.35	101.62
MW-3	110.01	9.16	100.85
MW-4	109.83	8.46	101.37
MW-5	110.11	10.82	99.29

Notes:

1. Top of riser elevation based upon an assumed datum of 100.00 fmsl; from manhole cover east of access road and south of College Ave. Surveyed on Oct 14, 2010 by TurnKey personnel.
2. DTW = depth to water
3. TOR = top of riser.
4. fmsl = feet above mean sea level.
5. fbgs = feet below ground surface.

J = Estimated value; result is less than the sample quantitation limit but greater than zero.

**Bold** = Result exceeds NYSDEC Part 375 Industrial Use SCOs

**Notes:**

1. Only those parameters detected at a minimum of one sample location are presented in this table; all other compounds were reported as non-detect.
2. Values per 6NYCRR Part 375 Soil Cleanup Objectives (December 2006)

**Definitions:**

ND = Parameter not detected above laboratory detection limit.

**Notes:**

1. Only those parameters detected at a minimum of one sample location are presented in this table; all other compounds were reported as non-detect.
2. Average PCBs via EPA PCB cleanup policy for restricted access outdoor low contact surfaces (>100ug/100cm<sup>2</sup>).

TABLE 7a

## Cost Estimates for Unrestricted Use Alternative

1501 College Avenue Site

Niagara Falls, New York

Item	Quantity	Units	Unit Cost	Total Cost
<b>Impacted Soil/Fill Removal</b>				
Soil/Fill Excavating & Hauling	101750	CY	\$ 25.00	\$ 2,543,750
Disposal at TSDF (1.5 tons per CY)	152625	TON	\$ 30.00	\$ 4,578,750
Post-Excavation Confirmatory Sampling <sup>1</sup>	750	EA	\$ 250.00	\$ 187,500
<b>Subtotal:</b>				<b>\$ 7,310,000</b>
<b>Site Restoration</b>				
Backfill, Place & Compact	101750	CY	\$ 15.00	\$ 1,526,250
Backfill Characterization Sampling	30	EA	\$ 900.00	\$ 27,000
<b>Subtotal:</b>				<b>\$ 1,553,250</b>
<b>Subtotal Capital Cost</b>				<b>\$ 8,863,250</b>
Contractor Mobilization/Demobilization (5%)				\$ 443,163
Health and Safety (2%)				\$ 177,265
Engineering/Contingency (35%)				\$ 3,102,138
<b>Total Unrestricted Cleanup Cost</b>				<b>\$ 12,585,815</b>
<b>Total IRM Cost</b>				<b>\$ 1,800,000</b>
<b>Total Capital Cost</b>				<b>\$ 14,385,815</b>

## Notes:

- Assumes SVOCs and Metals

TABLE 7b

**Cost For IRM and Implementation of a Site Management Plan**

**1501 College Avenue Site**

**Niagara Falls, New York**

Item	Quantity	Units	Unit Cost	Total Cost
<b>Interim Remedial Measures</b>				
	1	EST	\$ 1,800,000.00	\$ 1,800,000
<b>Institutional Controls</b>				
Develop Site Management Plan	1	LS	\$ 15,000.00	\$ 15,000
Environmental Easement	1	LS	\$ 6,500.00	\$ 6,500
Subtotal:				\$ 1,821,500
<b>Total Capital Cost</b>				\$ 1,821,500
<b>Annual Operation Maintenance &amp; Monitoring (OM&amp;M):</b>				
Annual Certifications	1	Yr	\$ 4,000.00	\$ 4,000
<b>Total Annual OM&amp;M Cost</b>				\$ 4,000
Number of Years ( n ):				30
Interest Rate ( I ):				5%
p/A value:				15.37
<b>OM&amp;M Present Worth (PW):</b>				\$ 61,480
<b>Total Present Worth (PW): Capital Cost + OM&amp;M PW</b>				\$ 1,882,980

TABLE 7c

**Summary of Remedial Alternatives Cost**

**1501 College Avenue Site**

**Niagara Falls, New York**

Remedial Alternative	Estimated Cost
<b>No Further Action</b> (Cost of completed IRM)	\$1,800,000
<b>IRM and Implementation of Site Management Plan (SMP)</b> (Cost of completed IRM, plus SMP and future O&M)	\$1,882,980
<b>Unrestricted Use Cleanup</b> (Cost of completed IRM, plus unrestricted use cleanup)	\$14,385,815

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exception to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project manager who has signed this report.

Reported: 09/27/10 14:35

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

For Method 8260 sample BCP-MW-5(4-8)RE was analyzed using medium level techniques due to high concentrations of target analytes. This sample and associated quality control samples were extracted together in an extraction batch, but were analyzed in different batches. The Method Blank 10I1101-BLK1 and the Matrix Spike Blank 10I1011-MSB1 were in an analytical batch 9/16/2010 that was prior to the field sample analysis 9/18/2010.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Reported: 09/27/10 14:35

#### DATA QUALIFIERS AND DEFINITIONS

<b>B</b>	Analyte was detected in the associated Method Blank.
<b>D08</b>	Dilution required due to high concentration of target analyte(s)
<b>D10</b>	Dilution required due to sample color
<b>D12</b>	Dilution required due to sample viscosity
<b>E</b>	Concentration exceeds the calibration range and therefore result is semi-quantitative.
<b>J</b>	Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.
<b>M7</b>	The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
<b>M8</b>	The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
<b>QSU</b>	Sulfur (EPA 3660) clean-up performed on extract.
<b>R2</b>	The RPD exceeded the acceptance limit.
<b>W1</b>	Sample was prepared and analyzed utilizing a medium level extraction.
<b>Z1</b>	Surrogate recovery was above acceptance limits.
<b>Z3</b>	The sample required a dilution, the surrogate spike concentration in the sample are reduced to a level where the recovery calculation does not provide useful information.
<b>Z5</b>	Due to sample matrix effects, the surrogate recovery was outside acceptance limits. Secondary surrogate recovery was within the acceptance limits.
<b>ZX</b>	Due to sample matrix effects, the surrogate recovery was outside the acceptance limits.
<b>NR</b>	Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### ADDITIONAL COMMENTS

Results are reported on a wet weight basis unless otherwise noted.

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exception to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project manager who has signed this report.

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

#### DATA QUALIFIERS AND DEFINITIONS

- B** Analyte was detected in the associated Method Blank.
- C4** Calibration Verification recovery was below the method control limit for this analyte.
- C8** Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- D02** Dilution required due to sample matrix effects
- J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.
- L1** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above acceptance limits.
- M11** The MS and/or MSD were above the acceptance limits.
- M8** The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
- MHA** Due to high levels of analyte in the sample, the MS and /or MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- QSU** Sulfur (EPA 3660) clean-up performed on extract.
- R2** The RPD exceeded the acceptance limit.
- NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

Niagara Falls, NY 14304

Work Order: RTI0609  
Project: 1501 College Ave, Niagara Falls, NY  
Project Number: 1501 College Ave.

Received: 09/08/10  
Reported: 09/24/10 14:15

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

A pertinent document is appended to this report, 1 page, is included and is an integral part of this report.

Reproduction of this analytical report is permitted only in its entirety. This report shall not be reproduced except in full without the written approval of the laboratory.

TestAmerica Laboratories, Inc. certifies that the analytical results contained herein apply only to the samples tested as received by our Laboratory.

#### DATA QUALIFIERS AND DEFINITIONS

- B** Analyte was detected in the associated Method Blank.  
**C** Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected above the laboratory PQL, data not impacted.  
**C8** Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.  
**D02** Dilution required due to sample matrix effects  
**D08** Dilution required due to high concentration of target analyte(s)  
**D10** Dilution required due to sample color  
**D12** Dilution required due to sample viscosity  
**J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.  
**M1** The MS and/or MSD were outside the acceptance limits due to sample matrix interference. See Blank Spike (LCS).  
**M8** The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).  
**MHA** Due to high levels of analyte in the sample, the MS and /or MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).  
**QFL** Florisil clean-up (EPA 3620) performed on extract.  
**QSU** Sulfur (EPA 3660) clean-up performed on extract.  
**R2** The RPD exceeded the acceptance limit.  
**R3** The RPD exceeded the acceptance limit due to sample matrix effects.  
**T10** Sample had an adjusted final volume during extraction due to extract matrix and / or viscosity.  
**W1** Sample was prepared and analyzed utilizing a medium level extraction.  
**Z** Due to sample matrix effects, the surrogate recovery was below the acceptance limits.  
**Z3** The sample required a dilution, the surrogate spike concentration in the sample are reduced to a level where the recovery calculation does not provide useful information.  
**Z5** Due to sample matrix effects, the surrogate recovery was outside acceptance limits. Secondary surrogate recovery was within the acceptance limits.  
**Z6** Surrogate recovery was below acceptance limits.  
**NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### ADDITIONAL COMMENTS

Results are reported on a wet weight basis unless otherwise noted.

## Analytical Report

Work Order: RTI0690

Project Description  
1501 College Ave, Niagara Falls, NY

For:

Thomas O'Malley  
**Santarosa Holdings**  
4870 Packard Road  
Niagara Falls, NY 14304

*Melissa Deyo*

Melissa Deyo For Paul Morrow  
Project Manager  
[melissa.deyo@testamericainc.com](mailto:melissa.deyo@testamericainc.com)  
Thursday, September 23, 2010

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exception to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project manager who has signed this report.

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

A pertinent document is appended to this report, 1 page, is included and is an integral part of this report.

Reproduction of this analytical report is permitted only in its entirety. This report shall not be reproduced except in full without the written approval of the laboratory.

TestAmerica Laboratories, Inc. certifies that the analytical results contained herein apply only to the samples tested as received by our Laboratory.

Reported: 09/23/10 10:57

#### DATA QUALIFIERS AND DEFINITIONS

- B** Analyte was detected in the associated Method Blank.
- D02** Dilution required due to sample matrix effects
- D08** Dilution required due to high concentration of target analyte(s)
- D10** Dilution required due to sample color
- D12** Dilution required due to sample viscosity
- J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.
- L** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits.
- M1** Analyte not detected, data not impacted.
- MHA** The MS and/or MSD were outside the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- QSU** Due to high levels of analyte in the sample, the MS and /or MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- R3** Sulfur (EPA 3660) clean-up performed on extract.
- T10** Analyte not detected, data not impacted.
- W1** The RPD exceeded the acceptance limit due to sample matrix effects.
- W10** Sample had an adjusted final volume during extraction due to extract matrix and / or viscosity.
- Z1** Sample was prepared and analyzed utilizing a medium level extraction.
- Z3** Sample was prepared and analyzed utilizing a low level extraction.
- NR** The sample required a dilution, the surrogate spike concentration in the sample are reduced to a level where the recovery calculation does not provide useful information.
- NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### ADDITIONAL COMMENTS

Results are reported on a wet weight basis unless otherwise noted.

Work Order: RTI0951  
Project: 1501 College Ave, Niagara Falls, NY  
Project Number: 1501 College Ave.

Received: 09/14/10  
Reported: 09/28/10 16:38

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Melissa Deyo For Paul Morrow  
Project Manager

#### DATA QUALIFIERS AND DEFINITIONS

- B** Analyte was detected in the associated Method Blank.  
**C** Calibration Verification recovery was above the method control limit for this analyte. Analyte not detected above the laboratory PQL, data not impacted.  
**D08** Dilution required due to high concentration of target analyte(s)  
**D10** Dilution required due to sample color  
**D12** Dilution required due to sample viscosity  
**J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.  
**M1** The MS and/or MSD were outside the acceptance limits due to sample matrix interference. See Blank Spike (LCS).  
**M7** The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).  
**M8** The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).  
**MHA** Due to high levels of analyte in the sample, the MS and /or MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).  
**QSU** Sulfur (EPA 3660) clean-up performed on extract.  
**R2** The RPD exceeded the acceptance limit.  
**R3** The RPD exceeded the acceptance limit due to sample matrix effects.  
**Z3** The sample required a dilution, the surrogate spike concentration in the sample are reduced to a level where the recovery calculation does not provide useful information.  
**Z5** Due to sample matrix effects, the surrogate recovery was outside acceptance limits. Secondary surrogate recovery was within the acceptance limits.  
**NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### ADDITIONAL COMMENTS

Results are reported on a wet weight basis unless otherwise noted.

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exception to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project manager who has signed this report.

Reported: 09/28/10 15:32

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample T004214-CCB3 for Calcium indicates that the found result is at or above the standard reporting limit of 0.5 mg/L on the form 3 due to rounding; however, the instrument raw value is less than 0.5 mg/L.

For method 8260, 1.05 grams of sample TP-10(5-7) was analyzed instead of the required 5 grams due to sample matrix.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

#### DATA QUALIFIERS AND DEFINITIONS

- B** Analyte was detected in the associated Method Blank.
- B1** Analyte was detected in the associated method / calibration blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
- C8** Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- D02** Dilution required due to sample matrix effects
- D08** Dilution required due to high concentration of target analyte(s)
- J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.
- M4** The sample required a dilution due to matrix interference. Because of this dilution, the matrix spike concentrations in the sample were reduced to a level where the recovery calculation does not provide useful information. See Blank Spike (LCS).
- QFL** Florisil clean-up (EPA 3620) performed on extract.
- QSU** Sulfur (EPA 3660) clean-up performed on extract.
- R2** The RPD exceeded the acceptance limit.
- Z3** The sample required a dilution, the surrogate spike concentration in the sample are reduced to a level where the recovery calculation does not provide useful information.
- Z5** Due to sample matrix effects, the surrogate recovery was outside acceptance limits. Secondary surrogate recovery was within the acceptance limits.
- NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### ADDITIONAL COMMENTS

Results are reported on a wet weight basis unless otherwise noted.

## Analytical Report

Work Order: RTI1079

Project Description  
1501 College Ave, Niagara Falls, NY

For:

Thomas O'Malley  
**Santarosa Holdings**  
4870 Packard Road  
Niagara Falls, NY 14304

*Melissa Deyo*

Melissa Deyo For Paul Morrow  
Project Manager

Thursday, September 30, 2010

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exception to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project manager who has signed this report.

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

#### **DATA QUALIFIERS AND DEFINITIONS**

- B** Analyte was detected in the associated Method Blank.  
**D08** Dilution required due to high concentration of target analyte(s)  
**J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.  
**M1** The MS and/or MSD were outside the acceptance limits due to sample matrix interference. See Blank Spike (LCS).  
**MHA** Due to high levels of analyte in the sample, the MS and /or MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).  
**QSU** Sulfur (EPA 3660) clean-up performed on extract.  
**R3** The RPD exceeded the acceptance limit due to sample matrix effects.  
**T10** Sample had an adjusted final volume during extraction due to extract matrix and / or viscosity.  
**W1** Sample was prepared and analyzed utilizing a medium level extraction.  
**Z3** The sample required a dilution, the surrogate spike concentration in the sample are reduced to a level where the recovery calculation does not provide useful information.  
**NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### **ADDITIONAL COMMENTS**

Results are reported on a wet weight basis unless otherwise noted.

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exception to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project manager who has signed this report.

Reported: 10/04/10 12:13

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample T004214-CCB3 for Calcium indicates that the found result is at or above the standard reporting limit of 0.5 mg/L on the form 3 due to rounding; however, the instrument raw value is less than 0.5 mg/L.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

#### **DATA QUALIFIERS AND DEFINITIONS**

- B** Analyte was detected in the associated Method Blank.  
**B1** Analyte was detected in the associated method / calibration blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.  
**D08** Dilution required due to high concentration of target analyte(s)  
**D12** Dilution required due to sample viscosity  
**J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.  
**QSU** Sulfur (EPA 3660) clean-up performed on extract.  
**T10** Sample had an adjusted final volume during extraction due to extract matrix and / or viscosity.  
**Z** Due to sample matrix effects, the surrogate recovery was below the acceptance limits.  
**Z3** The sample required a dilution, the surrogate spike concentration in the sample are reduced to a level where the recovery calculation does not provide useful information.  
**NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### **ADDITIONAL COMMENTS**

Results are reported on a wet weight basis unless otherwise noted.

#### CASE NARRATIVE

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. field-pH), they were not analyzed immediately, but as soon as possible after laboratory receipt.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverables has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

#### **DATA QUALIFIERS AND DEFINITIONS**

- B** Analyte was detected in the associated Method Blank.
- C8** Calibration Verification recovery was above the method control limit for this analyte. A high bias may be indicated.
- D08** Dilution required due to high concentration of target analyte(s)
- J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.
- M14** The Matrix Spike exhibited results outside of the quality control limits. However, the Matrix Spike Duplicate and Blank Spike (LCS) were acceptable.
- QSU** Sulfur (EPA 3660) clean-up performed on extract.
- R2** The RPD exceeded the acceptance limit.
- NR** Any inclusion of NR indicates that the project specific requirements do not require reporting estimated values below the laboratory reporting limit.

#### **ADDITIONAL COMMENTS**

Results are reported on a wet weight basis unless otherwise noted.

## ANALYTICAL REPORT

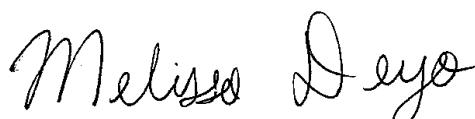

Job Number: 480-7014-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
7/22/2011 10:57 AM

Designee for  
Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
07/22/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

**Job Narrative  
480-7014-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS VOA**

Method 8260B: One surrogate recovery for the following sample was outside control limits: RAILROAD SIDING 4 (480-7014-4). Evidence of matrix interference was present. The samples was re-analyzed with comparable results. Both sets of data have been reported.

Method 8260B: Internal standard (ISTD) response for the following samples was outside control limits: RAILROAD SIDING 4 (480-7014-4). The sample was re-analyzed with comparable results. Both sets of data have been reported.

No other analytical or quality issues were noted.

**GC/MS Semi VOA**

Method 8270C: The following samples were diluted due to the nature of the sample matrix: RAILROAD SIDING 1 (480-7014-1), RAILROAD SIDING 2 (480-7014-2), RAILROAD SIDING 3 (480-7014-3) and RAILROAD SIDING 4 (480-7014-4). Elevated reporting limits (RLs) are provided.

Method 8270C: Due to the level of dilution required for the following samples, surrogate recoveries were reduced to a level where the recovery calculation does not provide useful information: RAILROAD SIDING 1 (480-7014-1) and RAILROAD SIDING 2 (480-7014-2).

No other analytical or quality issues were noted.

**GC Semi VOA**

Method 8081A: The following samples were diluted due to the nature of the sample matrix (color): RAILROAD SIDING 1 (480-7014-1), RAILROAD SIDING 2 (480-7014-2), RAILROAD SIDING 3 (480-7014-3), (480-7014-3 MS), (480-7014-3 MSD) and RAILROAD SIDING 4 (480-7014-4). As such, surrogate and spike recoveries are not representative and elevated reporting limits (RLs) are provided.

Method 8082: The following samples had one surrogate recovery outside of control limits: RAILROAD SIDING 1 (480-7014-1) and RAILROAD SIDING 4 (480-7014-4). Since the secondary surrogate was acceptable, no corrective action was necessary.

Method 8151A: The following samples were diluted due to nature of the sample matrix: RAILROAD SIDING 1 (480-7014-1), RAILROAD SIDING 2 (480-7014-2), RAILROAD SIDING 3 (480-7014-3), (480-7014-3 MS), (480-7014-3 MSD) and RAILROAD SIDING 4 (480-7014-4). As such, surrogate and spike recoveries are not representative and elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Metals**

Method 6010B: The following sample was diluted due to the abundance of the target analyte Manganese: RAILROAD SIDING 4 (480-7014-4). Elevated reporting limits (RLs) are provided.

Method 6010B: The method blank for preparation batch 23193 contained Cadmium, Calcium and Zinc above the method detection limits. These target analytes had concentrations that were less than the reporting limits (RLs); therefore, re-extraction and/or re-analysis of the associated samples was not performed.

Method 7471A: The following sample was diluted due to the abundance of target analytes: RAILROAD SIDING 4 (480-7014-4). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

Method 3550B: Due to the matrix, the following samples could not be concentrated to the final method required volume for analysis by 8270C: RAILROAD SIDING 1 (480-7014-1), RAILROAD SIDING 2 (480-7014-2), RAILROAD SIDING 3 (480-7014-3) and RAILROAD SIDING 4 (480-7014-4). The reporting limits (RLs) are elevated proportionately.

Method 3550B: The following samples required a Florisil clean-up to reduce matrix interferences prior to analysis by method 8081A: RAILROAD SIDING 1 (480-7014-1), RAILROAD SIDING 2 (480-7014-2), RAILROAD SIDING 3 (480-7014-3), (480-7014-3 MS), (480-7014-3 MSD) and RAILROAD SIDING 4 (480-7014-4).

No other analytical or quality issues were noted.

## DATA REPORTING QUALIFIERS

Client: Santarosa Holdings

Job Number: 480-7014-1

Lab Section	Qualifier	Description
GC/MS VOA	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC/MS Semi VOA	*	LCS or LCSD exceeds the control limits
	E	Result exceeded calibration range.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC Semi VOA	F	MS or MSD exceeds the control limits
	4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
Metals	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Login Sample Receipt Checklist

Client: Santarosa Holdings

Job Number: 480-7014-1

**Login Number: 7014**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Janish, Carl**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

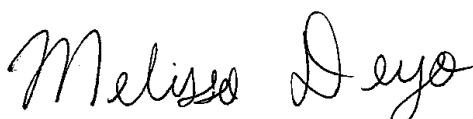

Job Number: 480-7340-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
7/19/2011 1:42 PM

Designee for  
Denise Giglia  
Project Manager I  
denise.giglia@testamericainc.com  
07/19/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

Tel (716) 691-2600 Fax (716) 691-7991 [www.testamericainc.com](http://www.testamericainc.com)

**Job Narrative**  
**480-7340-1**

**Comments**

No additional comments.

**Receipt**

All samples were received in good condition within temperature requirements.

**GC Semi VOA**

Method 8082: The following samples were diluted due to the abundance of target analytes: SS-6-N-18 (480-7340-1), SS-6-N-19 (480-7340-2), SS-6-N-20 (480-7340-3), SS-6-E-13 (480-7340-4), SS-6 CONFIRMATORY SAMPLE 2 (480-7340-6), SS-6 CONFIRMATORY SAMPLE 3 (480-7340-7) and SS-6 CONFIRMATORY SAMPLE 7 (480-7340-11). As such, surrogate recoveries are not representative and elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-7697-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings

4870 Packard Road

Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Denise Giglia  
Project Manager I  
8/23/2011 12:13 PM

Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
08/23/2011  
Revision: 1

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC

**Job Narrative  
480-7697-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC Semi VOA**

Method 8082: The following samples were diluted due to the nature of the abundance of target analytes: SS-6 CONFIRMATORY SAMPLE 10 (480-7698-2) and SS-6 CONFIRMATORY SAMPLE 11 (480-7698-3). As such, surrogate recoveries are not representative, and elevated reporting limits (RLs) are provided.

Method 8082: The following sample was diluted due to the nature of the sample matrix: SS-6 CONFIRMATORY SAMPLE 12 (480-7698-4), SS-6 CONFIRMATORY SAMPLE 13 (480-7698-5), SS-6 CONFIRMATORY SAMPLE 13 (480-7698-5 MS) and SS-6 CONFIRMATORY SAMPLE 13 (480-7698-5 MSD). Elevated reporting limits (RLs) are provided.

Method 8082: One surrogate recovery for the following sample was outside control limits: SS-6 CONFIRMATORY SAMPLE 12 (480-7698-4). Evidence of matrix interference was present; therefore, re-extraction and re-analysis was not performed.

Method 8082: Surrogate recoveries for the following samples were outside control limits: SS-6 CONFIRMATORY SAMPLE 10R (480-8629-1), SS-6 CONFIRMATORY SAMPLE 11R (480-8629-2). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	False	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

**Job Narrative  
480-6021-1**

**Comments**

No additional comments.

**Receipt**

All samples were received in good condition within temperature requirements.

**GC Semi VOA**

Method 8082: The following samples and matrix spikes were diluted due to the abundance of target analytes: BLIND (480-6021-6), SS-6-E-7 (480-6021-1), SS-6-E-8 (480-6021-2), SS-6-E-9 (480-6021-3), SS-6-N-10 (480-6021-4), SS-6-N-11 (480-6021-5), SS-6-N-11 (480-6021-5 MS), SS-6-N-11 (480-6021-5 MSD), SS-6-N-12 (480-6021-7), SS-6-N-13 (480-6021-8). Spike and Surrogate recoveries are not representative, and elevated reporting limits (RLs) are provided.

Method 8082: The following sample was diluted due to the abundance of target analytes: SS-6-N-14 (480-6021-9). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

**Login Number: 6021**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Kinecki, Kenneth**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-5437-1

Job Description: 1501 College Avenue

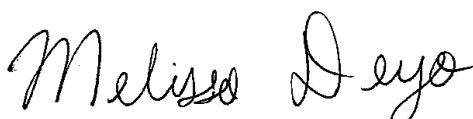

For:

Santarosa Holdings

4870 Packard Road

Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
6/2/2011 3:44 PM

Designee for  
Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
06/02/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC

**Job Narrative  
480-5437-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC Semi VOA**

Method 8082: The following samples were diluted due to the abundance of target analytes: SS-6-S1 (480-5437-1), SS-6-S2 (480-5437-2), SS-6-N5 (480-5437-3), SS-6-N6 (480-5437-4), SS-6-N7 (480-5437-5), SS-6-N8 (480-5437-6), SS-6-N9 (480-5437-7), SS-6-E5 (480-5437-8), SS-6-E6 (480-5437-9), SS-6-W5 (480-5437-10) and SS-6-W6 (480-5437-11). As such, surrogate recoveries are not representative and elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

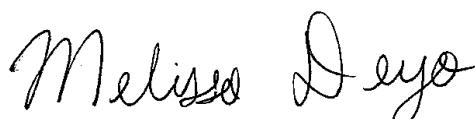

Job Number: 480-2794-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
3/24/2011 3:37 PM

Designee for  
Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
03/24/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report.

TestAmerica Laboratories, Inc.

TestAmerica Buffalo 10 Hazelwood Drive, Amherst, NY 14228-2298

Tel (716) 691-2600 Fax (716) 691-7991 [www.testamericainc.com](http://www.testamericainc.com)

**Job Narrative  
480-2794-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The following sample was diluted due to the abundance of target analytes: SW-1 (480-2794-2 DL). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	False	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

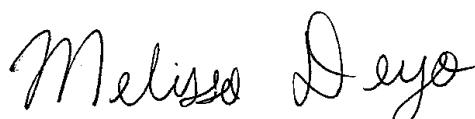

Job Number: 480-3116-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
4/14/2011 8:37 AM

Designee for  
Denise Giglia  
Project Manager I  
denise.giglia@testamericainc.com  
04/14/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report.

TestAmerica Laboratories, Inc.

TestAmerica Buffalo 10 Hazelwood Drive, Amherst, NY 14228-2298

Tel (716) 691-2600 Fax (716) 691-7991 [www.testamericainc.com](http://www.testamericainc.com)

**Job Narrative  
480-3116-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The following samples were diluted due to viscosity: SW-8 (480-3116-2). As such, surrogate recoveries are reduced to a level where the recovery calculation does not provide useful information. Elevated reporting limits (RLs) are provided.

Method 8270C: The following samples were diluted due to viscosity: SW-9 (480-3116-3). Elevated reporting limits (RLs) are provided.

Method 8270C: The following sample was diluted due to the nature of the sample matrix: F-5 (3.5) (480-3116-4). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## Login Sample Receipt Checklist

Client: Santarosa Holdings

Job Number: 480-3116-1

**Login Number: 3116**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Szymanski, Andrew**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	Turnkey
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-3190-1

Job Description: 1501 College Avenue

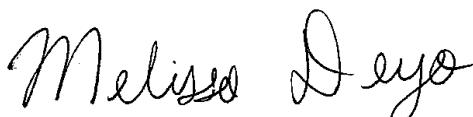

For:

Santarosa Holdings

4870 Packard Road

Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
4/13/2011 2:21 PM

Designee for  
Denise Giglia  
Project Manager I  
denise.giglia@testamericainc.com  
04/13/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report.

TestAmerica Laboratories, Inc.

TestAmerica Buffalo 10 Hazelwood Drive, Amherst, NY 14228-2298

Tel (716) 691-2600 Fax (716) 691-7991 [www.testamericainc.com](http://www.testamericainc.com)

**Job Narrative**  
**480-3190-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS VOA**

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	SANTAROSA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

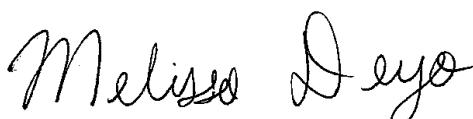

Job Number: 480-4627-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
5/19/2011 3:39 PM

Designee for  
Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
05/19/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

**Job Narrative**  
**480-4627-1**

**Receipt**

All other samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The following sample was diluted due to the abundance of target analytes: SW-10 (480-4627-2). Elevated reporting limits (RLs) are provided.

Method(s) 8270C: The following samples were received and prepared outside of preparation holding time: F-6 (3.5) (480-4627-1) and SW-10 (480-4627-2).

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## Login Sample Receipt Checklist

Client: Santarosa Holdings

Job Number: 480-4627-1

**Login Number: 4627**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Rabb, Mike**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	santarosa
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

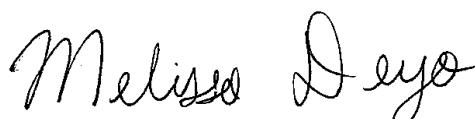

Job Number: 480-3712-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator

**Job Narrative**  
**480-3712-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: Due to a contamination issue associated with the internal standard spike mix, recoveries of Chrysene-d12 and Perylene-d12 were below acceptable limits in the following samples: F-7 (5-7) (480-3712-1), F-8 (5-7) (480-3712-2), (MB 480-12017/1-A) and (LCS 480-12017/2-A). As a result, the associated analyte and surrogate recoveries are to be considered biased high. In the laboratory control sample (LCS 12017/2-A), the surrogate recovery for p-Terphenyl-d14 and the spike recovery for Pyrene were both above control limits. Re-extraction and re-analysis was not performed since samples exceed acceptable hold times.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	Santarosa Holdings
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-7016-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
7/12/2011 4:11 PM

Designee for  
Denise Giglia  
Project Manager I  
denise.giglia@testamericainc.com  
07/12/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. ## Login Sample Receipt Checklist

Client: Santarosa Holdings

Job Number: 480-7016-1

**Login Number: 7016**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Janish, Carl**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-16057-1

Job Description: 1501 College Avenue

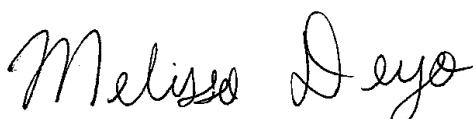

For:

Santarosa Holdings

4870 Packard Road

Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Manager I  
2/22/2012 11:23 AM

Melissa L Deyo  
Project Manager I  
[melissa.deyo@testamericainc.com](mailto:melissa.deyo@testamericainc.com)  
02/22/2012

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

**Job Narrative  
480-16057-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC Semi VOA**

Method 8082: All primary data was reported from the ZB-35 column.

Method 8082: The following sample was diluted due to the abundance of target analytes: PCB Wipe 7 (480-16057-2). Elevated reporting limits (RLs) are provided.

Method 8082: One surrogate recovery for the following sample was outside control limits: PCB Wipe 7 (480-16057-2). Evidence of matrix interference was present; therefore, re-extraction and re-analysis was not performed.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Drinking Water? Yes  No

**DISTRIBUTION:** WHITE - Returned to Client with Report; CANARY - Stays with the Sample; PINK - Field Copy

## Login Sample Receipt Checklist

Client: Santarosa Holdings

Job Number: 480-16057-1

**Login Number: 16057**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Robison, Zachary**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	Turnkey
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-5168-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings

4870 Packard Road

Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Denise Giglia  
Project Manager I  
5/25/2011 5:05 PM

Denise Giglia

**Job Narrative**  
**480-5168-1**

**Comments**

No additional comments.

**Receipt**

All samples were received in good condition within temperature requirements.

**GC Semi VOA**

No analytical or quality issues were noted.

**Organic Prep**

Method 3550B: A significant amount of liquid was present in the following sample: PCB WIPE 2 (SS-6AREA) (480-5168-2). This sample was decanted prior to preparation

No other analytical or quality issues were noted.

## Login Sample Receipt Checklist

Client: Santarosa Holdings

Job Number: 480-5168-1

**Login Number: 5168**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Rabb, Mike**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	wipes, not required
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-4930-1

Job Description: 1501 College Avenue

For:

Turnkey Environmental Restoration, LLC  
2558 Hamburg Turnpike  
Suite 300  
Lackawanna, NY 14218  
Attention: Brock Greene

Approved for release.  
Denise Giglia  
Project Manager I  
5/24/2011 10:06 AM

Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
05/24/2011

cc: Mr. Michael Lesakowski  
Thomas O'Malley

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

TestAmerica Laboratories, Inc.

TestAmerica Buffalo 10 Hazelwood Drive, Amherst, NY 14228-2298

**Job Narrative  
480-4930-1**

**Comments**

No additional comments.

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The following samples was diluted due to the nature of the sample matrix: BOTTOM 1 (PIPE TRENCH) (480-4930-1), PIPE TRENCH AREA NORTHWALL (480-4930-2). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**GC Semi VOA**

Method 8082: The following samples were diluted due to color: SS-6-3E (480-4930-4), SS-6-3W (480-4930-6). Elevated reporting limits (RL) are provided.

Method 8082: Surrogate recovery for the following samples were outside control limits: SS-6-3E (480-4930-4), SS-6-3W (480-4930-6). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed.

Method 8082: The following sample was diluted due to the nature of the abundance of target analytes: SS-6-4W (480-4930-9). As such, surrogate recoveries are not representative, and elevated reporting limits (RLs) are provided.

Method 8082: The laboratory control sample (LCS) for batch 480-16332 exceeded control limits for the surrogate, Tetrachloro-m-xylene. The recovery of the secondary surrogate is within quality control criteria; no corrective action is required

Method 8082: The following samples were diluted due to the abundance of target analytes: SS-6-3N (480-4930-5), SS-6-4E (480-4930-7), SS-6-4N (480-4930-8). As such, surrogate recoveries are not representative, and elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## DATA REPORTING QUALIFIERS

Client: Turnkey Environmental Restoration, LLC

Job Number: 480-4930-1

Lab Section	Qualifier	Description
GC/MS Semi VOA	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA	F	MS or MSD exceeds the control limits
	X	Surrogate is outside control limits

# **QUALITY CONTROL RESULTS**

## Quality Control Results

Client: Turnkey Environmental Restoration, LLC

Job Number: 480-4930-1

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	False	
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

## Login Sample Receipt Checklist

Client: Santarosa Holdings

Job Number: 480-5974-1

**Login Number: 5974**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Janish, Carl**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-4262-1

Job Description: 1501 College Avenue

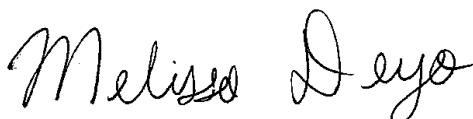

For:

Santarosa Holdings

4870 Packard Road

Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
5/19/2011 4:47 PM

Designee for  
Denise Giglia  
Project Manager I  
denise.giglia@testamericainc.com  
05/19/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

Tel (716) 691-2600 Fax (716) 691-7991 [www.testamericainc.com](http://www.testamericainc.com)

**Job Narrative  
480-4262-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC Semi VOA**

Method 8082: The following samples were diluted due to the abundance of target analytes: SS-6N2 (480-4262-1), SS-6E2 (480-4262-2) and SS-6W2 (480-4262-3). As such, surrogate recoveries are not representative and elevated reporting limits (RLs) are provided.

Method 8082: The surrogate recovery for Tetrachloro-m xylene in the following samples were outside control limits: (MB 480-15144/1-A), (LCS 480-15144/2-A) and (LCSD 480-15144/3-A). The surrogate recovery for Decachlorobiphenyl was within quality control criteria; therefore, no corrective action was required

Method 8082: For the secondary results, the laboratory control sample / laboratory control sample duplicate (LCS/LCSD) for preparation batch 15144 exceeded control limits for both of the surrogates. The recovery of the spiked Aroclors were within control limits indicating a successful extraction. no corrective action was taken.

Method 8082: All primary data is reported from the ZB-35 column.

The percent difference in a PCB continuing calibration verification is assessed on the basis of the PCB total amount, individual peak calculations are only listed for completeness.

Method 8082: The surrogate percent difference in the associated continuing calibration verifications (CCVRT 480-15289/2) and (CCV 480-15289/14) for Tetrachloro-m-xylene exceeded 15% on the ZB-35 column, indicating a high bias. The recovery of surrogate Decachlorobiphenyl is within quality control criteria.

Method 8082: The continuing calibration verifications (CCVRT 480-15289/2) and (CCV 480-15289/14) for Aroclor 1016 recovered above the upper control limit. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data has been reported.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## EXECUTIVE SUMMARY - Detections

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	SANTAROSA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

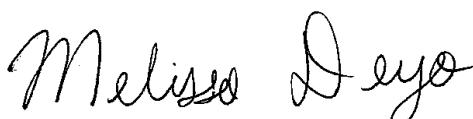

Job Number: 480-3765-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
4/20/2011 7:52 AM

Designee for  
Denise Giglia  
Project Manager I  
denise.giglia@testamericainc.com  
04/20/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

**Job Narrative  
480-3765-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The following samples were diluted due to the nature of the sample matrix: SW-11 (480-3765-1) and SW-12 (480-3765-2). Elevated reporting limits (RLs) are provided.

Method 8270C: The following sample had double the amount of required internal standard added to the sample: (LCS 480-12209/2-A). Therefore, the area counts on the form VIII are twice the amount they should be. The internal standard recoveries and the sample detection have been calculated according to the amount of standard added to the sample.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	SANTAROSA
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

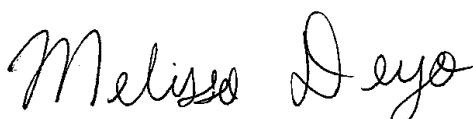

Job Number: 480-3847-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
4/21/2011 2:28 PM

Designee for  
Denise Giglia  
Project Manager I  
denise.giglia@testamericainc.com  
04/21/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

Tel (716) 691-2600 Fax (716) 691-7991 [www.testamericainc.com](http://www.testamericainc.com)

**Job Narrative**  
**480-3847-1**

**Comments**

No additional comments.

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS VOA**

Method 8260B: The method blank for analytical batch 12620 contained Naphthalene, Methylene Chloride and Toluene above the method detection limit. These target analytes had concentrations that were less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No other analytical or quality issues were noted.

**GC/MS Semi VOA**

Method 8270C: The matrix spike duplicate (MSD) recoveries for preparation batch 12420 were outside control limits for Hexachloroethane. The associated laboratory control sample (LCS) recovery met acceptance criteria. Therefore, the data has been qualified and reported.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## DATA REPORTING QUALIFIERS

Client: Turnkey Environmental Restoration, LLC

Job Number: 480-3847-1

Lab Section	Qualifier	Description
GC/MS VOA	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA	F	MS or MSD exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Job Number: 480-3847-1

**Login Number: 3847**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Szymanski, Andrew**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	Turnkey
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

**Job Narrative**  
**480-4117-1**

**Comments**

No additional comments.

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS VOA**

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 13617 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) precision for batch 13617 was outside control limits.

No other analytical or quality issues were noted.

**GC/MS Semi VOA**

No analytical or quality issues were noted.

**GC Semi VOA**

Method 8082: The percent difference in the continuing calibration verification exceeded 15% on the ZB-5 column; (CCVRT 480-13685/2). This data is flagged as Secondary, and all Primary Data is reported from the ZB-35 column.

Method 8082: The percent difference in the continuing calibration verification exceeded 15% on the ZB-5 column; (CCV 480-13685/29). This data is flagged as Secondary, and all Primary Data is reported from the ZB-35 column.

Method 8082: The percent difference in the continuing calibration verification exceeded 15% for several individual Aroclor peaks, though the total amount is compliant. (CCV 480-13685/29)

Method 8082: The following samples were diluted due to the abundance of target analytes: SS-6E1 (480-4117-4), SS-6N1 (480-4117-3), SS-6W1 (480-4117-5). As such, surrogate recoveries are not representative, and elevated reporting limits (RLs) are provided.

Method 8082: The percent difference in the continuing calibration verification exceeded 15% on the ZB-5 column; (CCV 480-13685/37). This data is flagged as Secondary, and all Primary Data is reported from the ZB-35 column.

Method 8082: The percent difference in the continuing calibration verification exceeded 15% for several individual Aroclor peaks, though the total amount is compliant (CCV 480-13685/37). Also the surrogate percent difference in this continuing calibration verifications (CCV) for Tetrachloro-m-xylene and Decachlorobiphenyl exceeded 15% on the ZB-35 column, indicating a high bias.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## DATA REPORTING QUALIFIERS

Client: Santarosa Holdings

Job Number: 480-4117-1

Lab Section	Qualifier	Description
GC/MS VOA	F	MS or MSD exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	F	RPD of the MS and MSD exceeds the control limits
GC/MS Semi VOA	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA	X	Surrogate is outside control limits

**Creator: Rabb, Mike**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	SANATOSA HOLDINGS
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-2954-1

Job Description: 1501 College Avenue

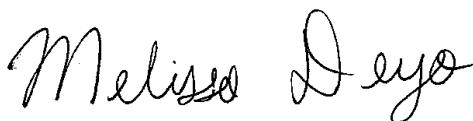

For:

Santarosa Holdings

4870 Packard Road

Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
4/13/2011 12:39 PM

Designee for  
Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
04/13/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report.

**TestAmerica Laboratories, Inc.**

TestAmerica Buffalo 10 Hazelwood Drive, Amherst, NY 14228-2298

Tel (716) 691-2600 Fax (716) 691-7991 [www.testamericainc.com](http://www.testamericainc.com)

**Job Narrative  
480-2954-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The following sample was diluted due to the abundance of target analytes: SW-6 (480-2954-1). Elevated reporting limits (RLs) are provided.

Method 8270C: The following samples were diluted due to viscosity: SW-7 (480-2954-2), SW-7 (480-2954-2 MS) and SW-7 (480-2954-2 MSD). As such, spiking and surrogate recoveries are reduced to a level where the recovery calculation does not provide useful information. Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## DATA REPORTING QUALIFIERS

Client: Santarosa Holdings

Job Number: 480-2954-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	F	MS or MSD exceeds the control limits
	4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	F	RPD of the MS and MSD exceeds the control limits
	X	Surrogate is outside control limits

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	santarosa holdings
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

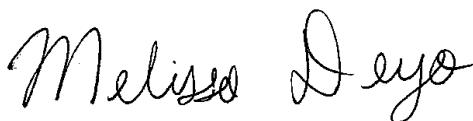

Job Number: 480-5438-1

Job Description: 1501 College Avenue

For:

Santarosa Holdings  
4870 Packard Road  
Niagara Falls, NY 14304

Attention: Thomas O'Malley

Approved for release.  
Melissa L Deyo  
Project Administrator  
6/2/2011 3:52 PM

Designee for  
Denise Giglia  
Project Manager I  
[denise.giglia@testamericainc.com](mailto:denise.giglia@testamericainc.com)  
06/02/2011

cc: Mr. Michael Lesakowski

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report. TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NHDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

**Job Narrative  
480-5438-1**

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The following sample was diluted due to the abundance of target analytes: TP-5 AREA NORTHWALL 2 (480-5438-1). Elevated reporting limits (RLs) are provided.

Method 8270C: The method blank for preparation batch 18027 contained Naphthalene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of the associated samples was not performed.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Job Number: 480-4693-1

Job Description: 1501 College Avenue

For:

Turnkey Environmental Restoration, LLC  
2558 Hamburg Turnpike  
Suite 300  
Lackawanna, NY 14218

Attention: Brock Greene

Approved for release.  
Denise Giglia  
Project Manager I

**Job Narrative  
480-4693-1**

**Comments**

No additional comments.

**Receipt**

All samples were received in good condition within temperature requirements.

**GC/MS Semi VOA**

Method 8270C: The matrix spike duplicate (MSD) recoveries for preparation batch 15322 were outside control limits. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method 8270C: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 15322 was outside control limits. The associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision met acceptance criteria.

Method 8270C: The following sample was diluted due to the nature of the sample matrix: BLIND (480-4693-1). Elevated reporting limits (RLs) are provided.

Method 8270C: The following samples were diluted due to the abundance of target analytes: TP-5 AREA SOUTH WALL 1 (3-5) (480-4693-3), TP-5 AREA BOTTOM 1 (480-4693-2), TP-5 AREA BOTTOM 1 MS (480-4693-2 MS) and TP-5 AREA BOTTOM 1 (480-4693-2 MSD). Elevated reporting limits (RLs) are provided.

Method 8270C: The following sample was diluted due to the nature of the sample matrix: TP-5 AREA EAST WALL 1 (480-4693-5). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

**Organic Prep**

No analytical or quality issues were noted.

## DATA REPORTING QUALIFIERS

Client: Turnkey Environmental Restoration, LLC

Job Number: 480-4693-1

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	F	MS or MSD exceeds the control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	F	RPD of the MS and MSD exceeds the control limits

# **QUALITY CONTROL RESULTS**

## Login Sample Receipt Checklist

Client: Turnkey Environmental Restoration, LLC

Job Number: 480-4693-1

**Login Number: 4693**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Szymanski, Andrew**

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	Turnkey
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A	

## ANALYTICAL REPORT

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TURNKEY
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Buffalo, NY 14218

RE: Data Usability Summary Report for the 1501 College Avenue site  
TAL-Buffalo SDG Nos. RTI0690, RTI0862, RTI0950, RTI09512, RTI1017, RTI1079,  
and RTI1178

Dear Mr. Lesakowski:

Review has been completed for the data package generated by TestAmerica Laboratory that pertains to samples collected between 09/08/10 and 09/16/10 at the 1501 College Avenue site. Thirty-four soil samples, one oil waste sample, and two field duplicates were processed for TCL semivolatiles, PCBs, and TAL metals. Nine of the samples were also processed for TCL and STARS volatiles; two of these were also processed for TCL pesticides and TCL herbicides. The analytical methods utilized are those of the USEPA SW846 6000/7000/8000.

The data packages submitted contain full deliverables for validation, but this usability report is generated from review of the summary form information, with review of sample raw data, and limited review of associated QC raw data. Full validation has not been performed. However, the reported summary forms have been reviewed for application of validation qualifiers, using guidance from the USEPA Region 2 validation SOPs, the USEPA National Functional Guidelines for Data Review, the specific laboratory methodologies, and professional judgment, as affects the usability of the data. The following items were reviewed:

- \* Laboratory Narrative Discussion
- \* Custody Documentation
- \* Holding Times
- \* Surrogate and Internal Standard Recoveries
- \* Matrix Spike Recoveries/Duplicate Correlations
- \* Preparation/Calibration Blanks
- \* Control Spike/Laboratory Control Samples
- \* Instrumental Tunes
- \* Calibration/Low Level Standards
- \* ICP Serial Dilution
- \* Instrument IDLs
- \* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review.

**In summary**, sample analyses were primarily conducted in compliance with the required analytical protocols. Sample results are usable either as reported or with qualification. There is evidence of a non-homogenous matrix as regards the subsurface soil PCB concentrations.

Copies of the sample identification summaries and the laboratory case narratives are attached to this text, and should be reviewed in conjunction with this report. Also included with the report are client results tables annotated to reflect the qualifications recommended within this report.

The following text discusses quality issues of concern.

Some of the sample IDs referenced below also include the prefix “BCP-”.

#### **Chains-of-Custody**

There are no final laboratory receipt entries on the custody for samples collected 09/14/10.

The down-arrow is missing from the collection dates in SDGs RTI0690, RTI0862, and RTI1017.

#### **Blind Duplicate Evaluations**

Blind field duplicates were collected at the locations of TP-5(0.5-1.5) and SS-23.

There was significant non-homogeneity for the PCBs and some of the metals in the former, with correlations for Aroclor 1268 (133%RPD), cadmium ( $>2X \pm CRDL$ ), and chromium, iron, lead, magnesium, and zinc (falling between 51%RPD and 91%RPD). Results for those analytes in the parent sample TP-05(0.5-1.5) and its duplicate have been qualified as estimated in value.

SS-23 shows an outlying correlation only for bis(2-ethylhexyl)phthalate, which was not detected at a reporting limit of 930 ug/kg in the parent sample, but detected at 7900 ug/kg in the blind duplicate. External contamination of the blind duplicate is suspected. The results for that compound in the parent sample and its duplicate have been qualified as estimated in value.

#### **General**

The laboratory has created their own flags and definitions, some of which are not consistent with those of the NYSDEC ASP, utilizing the ASP flags with alternate definitions.

#### **STARS and TCL Volatile Analyses by EPA 8260B**

The results for n-butylbenzene in TP-10(5-7) and TP-16(0.5-1.5) are edited to reflect non-detection due to very poor mass spectral quality.

The results for isopropylbenzene, n-propylbenzene, and n-butylbenzene in TP-17(2-4) are qualified as tentative in identification and estimated in value due to poor spectral quality.

Results for analytes initially reported with an "E" laboratory flag are derived from the dilution analyses of those samples.

Surrogate recoveries are within required range, unless diluted. Internal standard responses meet protocol requirements.

The matrix spikes of TP-6(1-2) show consistent outlying low recoveries, generally about 70%. The recoveries of surrogate standards d4-1,2-dichloroethane and d8-toluene in the matrix spikes show very good recoveries, whereas their corresponding non-deuterated target analytes did not. Because the deuterated surrogates should behave identically to the non-deuterated analogs, a spiking solution or spiking error is suspected, and no qualification is made to the parent sample.

Calibrations standards showed acceptable responses, with the following exceptions, results for which are to be qualified as estimated in the indicated samples:

- 1,2-dibromo-3-chloropropane and naphthalene (33%D and 21%D) in SS-14, SS-15, TP-15(0-2)
- 1,2-dibromo-3-chloropropane, dichlorodifluoroethane, bromoform, and naphthalene (24%D to 35%D) in MW-4(8-11.5) and MW-5(4-8)
- bromoform (21%D) in TP-6(1-2)
- 1,2-dibromo-3-chloropropane (23%D) in TP-10(5-7)
- 1,2-dibromo-3-chloropropane (low RRF) in TP-16(0.5-1.5) and TP-17(2-4)

Some of the samples were analyzed at dilution due to either target or non-target analyte responses. Reporting limits for undetected analytes in those samples are elevated in proportion to the dilution factor.

### **TCL Semivolatiles by EPA 8270C**

Results for analytes initially reported with an "E" laboratory flag are derived from the dilution analyses of those samples.

Matrix spikes on TP-3(1-4) and TP-5 Oil show acceptable recoveries and duplicate correlations.

The matrix spikes of MW-1(0-4) and TP-6(1-2) show outlying recoveries, but they were performed at dilution, so the evaluation is not applicable.

Surrogate recoveries are within required range, unless diluted. Internal standard responses meet protocol requirements.

The results for 2,4-dinitrophenol in the samples collected 09/16/10 are qualified as estimated due to low response (39%D) in the associated calibration standard.

Some of the samples were analyzed at dilution due to either target or non-target analyte responses. Reporting limits for undetected analytes in those samples are elevated in proportion to the dilution factor.

Standard mass spectra provided in SDG RTI0950 are not accurate. There is no effect on the associated reported results.

## **PCB and TCL Pesticide Analyses by EPA 8081A 8082, and 8151**

The following results have been qualified as estimated in value due to elevated dual column quantitative correlations:

- Aroclor 1242 in TP-13(1-3), SS-14
- Aroclors 1254 and 1262 in SS-4
- Aroclor 1262 in TP-4(1-2)
- 4,4-DDT and endrin in SS-10\
- Aroclor 1254 in TP25(1-7)

The following results have been qualified as estimated in value and tentative in identification due to poor pattern match to the standards, and/or very poor dual column quantitative correlation, possibly due to contributions from alternate Aroclor mixtures or matrix interferences in the samples:

- Aroclor 1268 in TP-13(1-3), TP-5 Oil, SS-5, TP-6(1-2), TP-25(1-7), and BLIND3
- Aroclors 1254, 1260, and 1268 in SS-23
- Aroclor 1260 in TP-23(1-5) and TP-24(1-7)
- Endrin ketone in TP-10(5-7)

Results for detected Aroclors in the following samples have been qualified as estimated due to outlying responses in the associated calibration standards: SS-4, SS-6, SS-18, TP-4(1-2), and TP-18(0.5-1.5)

Due to elevated surrogate recoveries, results for detected Aroclors in TP-5(1-2.5) have been qualified as estimated in value.

Matrix spikes of Aroclors 1016 and 1260 in MW-1(0-4), TP-3(1-6), and TP-6(1-2), and of herbicides in SS-10 show acceptable accuracy and precision. The Aroclor matrix spikes of TP-9(0.5-1.5) were diluted (as was the parent sample), and the evaluation is not therefore applicable.

Holding times and surrogate recoveries (when not diluted) meet validation protocol guidelines.

MW-5(4-8) appears to have been processed at excessive dilution, resulting in unnecessarily elevated reporting limits.

Some of the QC summary form entries are incomplete. In those instances, the raw data were reviewed to verify compliance. The report Form 1 for TP-5 Oil should state that 0.11 g were used, not 0.11 mL. The reporting units are accurate.

## **TAL Metals Analyses by EPA 6010B, 7470, and 7471**

Matrix spikes (MS/MSD) for TAL metals were performed on SS-15 (except mercury), TP-6(1-2), TP-17(2-4), and TP-3(1-4).

The matrix spikes of TP-3(1-4) show outlying recoveries for all elements in the MS, but acceptable recoveries in the MSD. No qualification is made.

The matrix spike recoveries in both spikes and/or spike duplicate correlations for the following elements are outside the recommended limits, and results for the affected elements are qualified as estimated in the indicated associated samples (all within the given delivery groups):

<u>Parent Sample</u>	<u>Element</u>	<u>Recoveries, %</u>	<u>%RPD</u>	<u>Associated Samples</u>
SS-15	antimony	54 and 61		RTI0690, RTI0862
	lead	61 and 54		"
	zinc	166 and 127		"
TP-6(1-2)	antimony	30 and 29		RTI0951
	barium		72	"
TP-17(2-4)	antimony	37 and 34		RTI1017, RTI1079, RTI1178
	barium	72 and 209	43	"
	nickel	49 and 52		"

The ICP serial dilution evaluation for TAL metals on TP-17(2-4) shows acceptable correlations.

The ICP serial dilution correlations for the following elements are above the recommended limit, and detected results for the affected elements are qualified as estimated in the indicated associated samples (all within the given delivery groups):

<u>Parent Sample</u>	<u>Element</u>	<u>%D</u>	<u>Associated Samples</u>
SS-15	cadmium	20	RTI0690, RTI0862
TP-3(1-4)	aluminum	12	RTI0951
	barium	12	"
	calcium	13	"
	chromium	18	"
	copper	15	"
	iron	12	"
	lead	17	"
	magnesium	11	"
	manganese	12	"
	nickel	14	"
	sodium	19	"
	vanadium	12	"
	zinc	13	"

The results for selenium in the samples collected 09/14/10 are qualified as estimated due to low recovery (64%) in the associated low level standard.

Analytical sequence logs should denote the elements reported from each sequence.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Very truly yours,

  
Judy Harry

## **VALIDATION DATA QUALIFIER DEFINITIONS**

- U** The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
- J** The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ** The analyte was not detected. The associated reported quantitation limit is an estimate and may be inaccurate or imprecise.
- NJ** The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
- R** The data are unusable. The analyte may or may not be present.
- EMPC** The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

## APPENDIX E

---

### LAND USE EVALUATION

## APPENDIX E

### LAND USE EVALUATION

NYSDEC's Part 375 regulations require that the reasonableness of the anticipated future land be factored into the evaluation of remedial alternatives. The regulations identify 16 criteria that must be considered. These criteria and the resultant outcome for the 1501 College Avenue Site are presented below.

1. *Current use and historical and/or recent development patterns:* The 1501 College Avenue Site was formerly a part of the Union Carbide industrial complex, and is located in a historically industrialized area in the City of Niagara Falls. **Accordingly, industrial site redevelopment would be consistent with historic site use.**
2. *Applicable zoning laws and maps:* The Site is located in an area of the City zoned industrial. **Continued use in an industrial capacity is therefore consistent with current zoning.**
3. *Brownfield opportunity areas as designated set forth in GML 970-r:* The Brownfield Opportunity Area (BOA) Program provides municipalities and community based organizations with assistance to complete revitalization plans and implementation strategies for areas or communities affected by the presence of brownfield sites, and site assessments for strategic sites. **The subject property lies within the Highland Community Brownfield Opportunity Area Project. The Highland Community BOA is currently in “Step 2 – Nomination Study” phase.**
4. *Applicable comprehensive community master plans, local waterfront revitalization plans as provided for in EL article 42, or any other applicable land use plan formally adopted by a municipality:* The 1501 College Avenue Site does fall within the boundaries of the Highland Area Redevelopment Plan. The Plan seeks to create an environment attractive to new private investment and proposes a series of improvements to the area's street, rail and pedestrian networks. **Site redevelopment will be consistent with the Highland Area Redevelopment Plan.**
5. *Proximity to real property currently used for residential use, and to urban, commercial, industrial, agricultural and recreational areas:* The surrounding land is mixed use, including commercial, industrial, residential, and public use parcels. **Nearby and adjacent property mixed use, including industrial. Maintaining use of the Site in an industrial capacity is consistent with the surrounding property.**

## APPENDIX E

### LAND USE EVALUATION

6. *Any written and oral comments submitted by members of the public on the proposed use as part of the activities performed pursuant to the citizen participation plan:* **No comments have been received from the public relevant to Site use concerns.**
7. *Environmental justice concerns, which include the extent to which the proposed use may reasonably be expected to cause or increase a disproportionate burden on the community in which the site is located, including low-income minority communities, or to result in a disproportionate concentration of commercial or industrial uses in what has historically been a mixed use or residential community:* **Nearby and adjacent property is actively used in industrial, commercial and residential capacity. Maintaining use of the site in an industrial capacity does not pose environmental justice issues.**
8. *Federal or State land use designations:* The property is designated Urban Land (U2) by the Soil Conservation Service. Urban land typically contains ubiquitous contaminants. **Reuse in a restricted capacity (industrial) is typical in areas where background conditions preclude achieving unrestricted use soil cleanup objectives.**
9. *Population growth patterns and projections:* The City of Niagara Falls, encompassing 14.0 square miles, has a population of 55,593 persons (2000 U.S. Census Bureau), a decrease of 6,247 from the 1990 U.S. census. A declining population indicates a surplus housing market. **Reuse of the Site in a non-residential capacity does not materially affect opportunities for residential growth.**
10. *Accessibility to existing infrastructure:* Access to the Site is from College Avenue and 15<sup>th</sup> Street. Surrounding roadways include Highland Avenue and Hyde Park. Utilities (sewer, water, electric) are present along all of these neighboring streets. The site is accessible by rail. **Existing infrastructure supports reuse in an industrial capacity.**
11. Proximity of the site to important cultural resources, including federal or State historic or heritage sites or Native American religious sites: **No such resources or sites are known to be present on or near the property.**
12. *Natural resources, including proximity of the site to important federal, State or local natural resources, including waterways, wildlife refuges, wetlands, or critical habitats of endangered or threatened species:* The Erie County Internet Mapping System (host of the Niagara County Internet Mapping Site) shows that State or Federal wetlands do not exist on

## APPENDIX E

### LAND USE EVALUATION

the subject property. The Niagara River is located approximately 1.0 miles west of the Site. **The absence of significant ecological resources on or adjacent to the Site indicates that cleanup to restricted use conditions will not pose an ecological threat.**

13. *Potential vulnerability of groundwater to contamination that might emanate from the site, including proximity to wellhead protection and groundwater recharge areas and other areas identified by the Department and the State's comprehensive groundwater remediation and protection program established set forth in ECL article 15 title 31:* Groundwater at the Site is assigned Class "GA" by 6NYCRR Part 701.15. Regionally, groundwater in the area has not been developed for industrial, agriculture, or public supply purposes. Potable water service is provided off-site and on-site by the local municipal water authority. **The absence of potable wells, wellhead protection and groundwater recharge areas indicates that cleanup to restricted use conditions will not pose a drinking water threat.**
14. *Proximity to flood plains:* The Erie County Internet Mapping System (host of the Niagara County Internet Mapping Site) indicates that the Niagara River, located approximately 1.0 miles west of the Site, is a FEMA-designated and 500-year flood zone. No flood zones are present on the property; there is no risk of significant soil erosion due to flooding. **As such, cleanup to industrial standards does not pose a threat to surface water.**
15. *Geography and geology:* The Site is located within the Erie-Ontario lake plain physiographic province, which is typified by little topographic relief and gentle slope toward the Niagara River/Lake Erie, except in the immediate vicinity of major drainage ways. Surface soils within the City are characterized as urban land with level to gently sloping land in which 80 percent or more of the soil surface is covered by asphalt, concrete, buildings, or other impervious structures typical of an urban environment. **Geography and geology are consistent with an industrial re-use.**
16. *Current institutional controls applicable to the site:* **No institutional controls are currently present that would affect redevelopment options.**

## **APPENDIX E LAND USE EVALUATION**

Based on the above analysis, reuse of the Site in an industrial capacity is consistent with past and current development and zoning on and around the Site, and does not pose additional environmental or human health risk.
