CERTIFICATION

I, Jason Brydges, certify that I am currently a New York State registered professional engineer as defined in 6 NYCRR Part 375 and that this Remedial Investigation/Alternative Analysis Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Department of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10) and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.

Jason M. Brydges, PE

1.0 INTRODUCTION

Community Services for Every1, Inc. and Community Services Seventh Housing LLC have executed a Brownfield Cleanup Agreement (BCA) Index No. C932183-10-23 with the New York State Department of Environmental Conservation (NYSDEC) as volunteers for The Nest Site (Site) NYSDEC #C932183 located in Niagara Falls, New York. A remedial investigation (RI) has been completed, and the results of the RI in addition to a remedial alternatives analysis (AA) are presented in this document as required by the Brownfield Cleanup Agreement (BCA). A site location map is provided as **Figure 1.**

The RI/AAR was completed in accordance with BCP requirements as defined in Section 375-3.8 of the NYSDEC 6 New York Codes, Rules and Regulations (NYCRR) Part 375 Environmental Remediation Program Regulations. It is anticipated that the remedial measure selected will lead to a site remedy as defined in Part 375-1.8(g)(2)(ii); achieve soil cleanup objectives (SCOs) as defined in Part 375-6.8(b); and mitigate environmental impacted media issues at the site.

1.1 SITE BACKGROUND

The parcels that comprise the Site consist of a portion of the two parcels; SBL #159.09-1-2.11 and #159.09-1-2.12 located at 333 1st Street and 217 Old Falls Street, respectively, in the City of Niagara Falls. The acreage for the portion of these two parcels that compose the BCP site total approximately 0.985 acres. The Site is bound by 1st Street to the west, Old Falls Street to the south, a commercial building to the east, and a large parking lot to the north.

Approximately 95 percent of the Site contains a concrete building slab from a recently demolished two-story commercial building known as the Smokin' Joe's Native Center and was formerly used as a retail store and graphics center. The Site is generally flat and gently sloping towards city streets and the Niagara River to the west. Surface and shallow groundwater flow have most likely been impacted over time by the various developments and fills as well as foundations, street beds, and utility lines. Surface water is directed to adjacent streets and storm drains within the building. In general, groundwater most likely flows west-northwest towards the Niagara River. It should be noted that an easement for the Hydraulic Tunnel or Sewer – Adams station Tunnel runs diagonally through the center of the Site which diverted water from Niagara River to generate hydroelectric power. Completed in 1893, the brick tunnel is over a mile long and runs from Adams Power Plant approximately 180 feet underground to below Niagara Falls. This may impact local groundwater flow.

Historical records including street directories and Sanborn Maps suggest that the site was mixed use residential and commercial. In 1892, the northern portion of the site was occupied by multiple independent residences, stables and shared dwellings including the American House and Temperance House. The southeastern portion of the site was occupied by Western Hotel and the northwestern portion by Hotel Nassau. In 1914, the northwestern portion of the site was occupied by stables, dwellings and the Converse House, the northeastern portion by Wayne Hotel and American Express Company, the eastern portion by Temperance Hotel, the southwestern portion by Hotel Imperial and Hotel Nassau. The site was occupied as follows in 1950: Converse Hotel, J.N. Adams and Co. staging floor and auto parking in the northwest, Wayne Hotel and auto parking in the northeast, Temperance Hotel in the east, New Imperial Hotel and J.N. Adams and Co., a department store, and multiple storefronts in the southeast, and various stores in the southwest. In 1955, the site remains relatively unchanged with the exception of the renaming of Temperance Hotel to Henry Hubbs Hotel. 1950 through 1970 Sanborn maps indicated the

presence of two gas tanks of unknown size in the northwest corner of the site. These gas tanks are not identified on subsequent maps and no removal records were identified, thus presenting a potential vapor intrusion concern. In 1969, J.N. Adams and Co. department store was converted into a leather goods manufacturer. All storefronts located in the southwestern portion of the site were demolished between 1969 and 1970. In 1971, the one- and two-story masonry building, and garage were demolished. The site appears as vacant land from 1979 to 1985. The site was under the ownership of Niagara Heritage Group and Niagara County Industrial Development Agency (IDA) in 1995 and 1996, respectively. Since 1995, the site was occupied by a large, U-shaped structure which was demolished in September through November 2024.

1.2 Previous Environmental Assessments/Investigations

Various Environmental assessments have occurred on the Site including the following:

- Hazardous Materials Inspections were performed on the Site prior to demolition by Stohl Environmental, Inc in September 2011 and by Watts Architecture and Engineering in October 2018. Various materials were identified as asbestos containing material (ACM) including HVAC tar, curbs, vent pipes and access hatch. Lead-based paint (LBP) was identified on structural steel.
- A Phase I Environmental Site Assessment (ESA) was performed on the Site by LiRo Engineers Inc. in October 2018 to identify the presence or likely presence of recognized environmental conditions (RECs). Two gasoline tanks historically located on-site in the northwest corner from 1950 to 1970 were identified as a REC.
- A subsequent Phase II was performed by LiRo Engineers Inc. in February 2019 to investigate potential impacts in soil and soil gas on the subject property. The Phase II ESA focus was associated with the two possible gasoline tanks and potential impacts from adjacent property history of commercial and railroad use. Phase II ESA observations indicated urban fill conditions from 0-8 feet below ground surface (bgs). Laboratory soil sample analytical results indicated metals and SVOCs above NYSDEC restricted residential and industrial SCOs.
- BE3/AMD completed a Phase II ESA for Brownfield application purposes in April 2023. The assessment found that fill exists across the Site at depths to about 0-8 feet in most locations. Laboratory results of the fill showed elevated levels of metals and SVOCs, mostly polycyclic aromatic hydrocarbons (PAHs). While some VOCs were detected in the fill materials none were above Residential SCOs.
- Concurrently with the BE3/AMD Phase II ESA, a Geotechnical Evaluation was performed by Foundation Design P.C. which confirmed the fill depth ranging from 0-7 feet and depth to bedrock of approximately 11 feet below ground surface. It was also noted that the existing fill is not suitable structural material for the proposed structure.

1.3 Identification of Standards, Criteria, and Guidance

Standards, criteria, and guidance (SCGs) are promulgated requirements (“standards” and “criteria”) and non-promulgated guidance (“guidance”) that govern activities that may affect the environment and are used by the NYSDEC at various stages in the investigation and remediation of a site. The following are the primary SCGs for this project:

- NYSDEC 6 NYCRR Part 375 Environmental Remediation Programs, December 2006.
- NYSDEC DER-10 Technical Guidance for Site Investigations and Remediation, May 2010.

- NYSDEC Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, June 1998.
- NYSDEC Policy CP-51 Soil Cleanup Guidance, October 2010.
- NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS), Under NYSDEC's Part 375 Remedial Programs, April 2023.
- NYSDEC 6 NYCRR 360 Solid Waste Management Facilities General Requirements, August 2020.
- NYSDOH Final Guidance for Evaluating Soil Vapor in The State of New York (2006) with updates (SVI Guidance).

2.0 REMEDIAL INVESTIGATION

Investigation activities were performed in accordance with the requirements of the Remedial Investigation Work Plan (RIWP) *(Remedial Investigation Work Plan,* The Nest Site, *Site* #C932183*, August 2024)* that was approved by NYSDEC Region 9 as part of the BCP process. The existing building located on the BCP portion was demolished and a building environmental assessment was performed prior to RI activities which were completed between October and November 2024. The RI activities included: completing a geophysical survey; test trenching; soil borings; groundwater monitoring well installation; soil and groundwater sampling; and soil vapor investigation.

Field personnel under the direct supervision of a qualified environmental professional (QEP) were present during field activities to identify field investigation locations, log subsurface materials, field screen and sample surface/subsurface soil and groundwater, etc. As noted in the RIWP, John Boyd was identified as the Project Geologist. During the RI, however, Tim Burmier served as the on-site geologist responsible for logging and monitoring well installation, while John Boyd served as the supervising geologist for off-site well installation performed as part of the supplemental RI. This represents a deviation from the RIWP staffing plan. Tim Burmier's resume is provided in **Appendix D.**

A supplemental investigation was also completed as requested by the DEC in May 2025 in accordance with the requirements of the *Supplemental Remedial Investigation Work Plan (RIWP) [revised April 3, 2025]*. The primary purpose of the investigation was to assess potential on- and off-site source locations and migration pathways of contaminants of concern (COCs) found in groundwater and vapor on site. Potential on-site sources included 2 on-site floor drains while potential off-site sources included a historic dry-cleaning operation located in the off-site parking lot northernly adjacent to the BCP site. Investigation activities included 4 soil samples taken from on-site floor drain locations, 2 off-site soil vapor samples, and 1 off-site groundwater sample in approved off-site locations. The results from the on-site floor drain sampling are discussed throughout the report (See **Table 5**). The results from the off-site portion of this investigation are discussed throughout the report. A further discussion is included in the summary of findings letter for this investigation provided in **Appendix J**.

As part of the supplemental investigation, 12 waste characterization samples were also taken across the site strictly for waste disposal purpose to compare to recipient waste disposal facility's acceptance criteria. The results from these samples do not provide any relevant information for characterizing the nature and extent of the presence of COCs at the Site and, therefore, have not been summarized throughout the report but are attached in **Appendix E.**

RI field photographs are included in **Appendix A**. All RI samples were located with a field GPS and all locations are listed in **RI Table 1**.

2.1 DEMOLITION

The existing building was demolished in September and October 2024 prior to RI activities. Hazardous materials inspections of the previously existing building have been conducted multiple times throughout the life of the building including 2011 and 2018 which identified the presence of ACM and LBP. The inspection included a comprehensive ACM, PCB and LBP survey. A certificate of complete removal of ACM was obtained August 1, 2024, prior to demolition and is included in **Appendix C**. Photos of the demolition are included in **Appendix A**. All materials removed from the site have been documented, and upon completion of Site remediation, this information will be included in the Final Engineering Report (FER).

2.2 GEOPHYSICAL SURVEY

Prior ESAs indicated two USTs remained in the northwest corner of the Site. A geophysical survey was conducted by Maddan Geophysics LLC (MADDAN) on October 28, 2024, in the area identified by past ESAs. A Geonics EM61 was used to map the distribution of buried metals at the Site. The EM61 unit is a high sensitivity, high resolution time domain electromagnetic (TDEM) metal detector that can detect both ferrous and nonferrous metallic objects. It has an approximate investigation depth of 10 feet.

Metals were indicated in the subsurface and one anomalous area was identified due to the high geophysical response in the absence of a surface feature (i.e., reinforced pad or debris) that might account for the response. The anomalous area is shown on Figure 1 in the Geophysical Survey Report provided in **Appendix B.** The general location of the survey is provided on **Figure 3.** A test trench was later performed to identify the anomaly and is discussed in Section 2.3.

2.3 SOIL INVESTIGATION

The primary purpose of the surface/subsurface assessment was to visually inspect and describe near surface and subsurface conditions across the Site and to assess the fill/soil by collecting and analyzing soil samples. The intent of the Remedial Investigation, in accordance with DER-10 §3.1(c)(1), is to determine the nature and extent of contamination at the Site.

Phase II investigation data, which was collected prior to the Site's entry into the Brownfield Cleanup Program, was not validated and was not analyzed for all parameters. Therefore, the Phase II data has been used solely as guidance in the design and planning of the RI and is not relied upon as final RI data for any portion of the Site. Some changes were made to the investigation locations provided in the RIWP as follows:

- RI BH-1 was moved a few feet south to avoid the building footers
- RI BH-3 was moved west onto the existing slab due to limited drill-rig access in the northeast corner. A surface soil sample was not collected at this location because the slab prevented direct access to underlying surface soils without concrete removal, which was outside the scope of the RI.
- RI BH-6 was added to the northeast section of the site
- RI BH-9 was moved 10 feet to the east due to refusal and low soil recovery

Test Trenches

One test trench (RI-TT-1) was advanced on November 13, 2024, using a track backhoe in the approximate location shown on **Figure 3**. The test trench focused on the historic UST area where the geophysical assessment identified a subsurface anomaly. The trench was excavated to confirm whether the anomaly was a UST.

The excavated material was temporarily stockpiled adjacent to the trench and field screened for volatiles using a PID as it was removed from the trench. During excavation, one perforated steel UST was uncovered. The tank was oriented horizontally with the base at approximately 6 to 7 feet below ground surface (bgs), an estimated diameter of 4 feet, and an approximate length of 8 feet, corresponding to a capacity of about 1,000 gallons. The UST was uncovered along the top (approximately 2 feet bgs) and sides, exposing roughly two-thirds of the tank to allow inspection while maintaining safe trench conditions.

The UST was visually inspected through multiple perforations (ranging from 0.5 to 1 inch in diameter) in the shell, which allowed for some observation of the interior. Although no liquid product, sludge, or residual petroleum odors were observed inside the tank during inspection, the existence of any material within the tank is still unknown at this time. No staining, sheen, or free products were noted in the excavation below or around the UST. Soil directly beneath the tank consisted of brown to black silty fill with black cinders, crushed rock, some sand, and clayey silt—similar to surrounding fill material. The maximum PID reading recorded in the trench was 4.5 ppm. Photos are included in **Appendix A**.

Piping was encountered on the top of the tank (See photo 103 in the RI Photo log). There were no associated vent lines, or nearby utility interferences encountered. One soil sample was collected from approximately 6–7 feet bgs adjacent to the base of the UST. The sample was selected based on PID readings, visual/olfactory observations, and representativeness of the surrounding soils, and was submitted for laboratory analysis in accordance with the procedures outlined in the RIWP Field Sampling Plan (FSP).

Four additional test trenches were performed on April 3, 2025, to assess potential impacts from two previously identified on site floor drains (See **Figure 14**). Two test trenches were performed on the northern and southern side of each floor drain (i.e., four total trenches). Soil directly beneath the slab consisted of brown to black silty fill with black cinders, crushed rock, some sand, and clayey silt—similar to surrounding fill material. A total of two samples were taken from each floor drain location.

Following screening and sampling, all test trenches were backfilled with the same material removed during excavation, placed in the same order and approximate depth from which it was excavated. The soil was compacted with the excavator bucket during backfilling. The UST will be removed at a later date pursuant to an approved Remedial Action Work Plan.

Soil Borings

A total of 20 soil borings (RI-BH-1 through RI-BH-12, RI VP-1 through RI VP-4 and RI MW-1 through RI MW-4) were completed across the Site from October 17 to November 4, 2024, (see **Figure 3**). RI BH-1 to RI BH-12 were completed using a Geoprobe. In locations where the Geoprobe was refused at shallow depths, an auger was used to investigate the subsurface. RI VP-1 to RI VP-4 were soil borings converted into vapor points. RI MW-1 to RI MW-4 are monitoring

well locations where soil samples were collected using a split spoon and then augured. A total of 20 soil samples and three QA/QC samples were collected from fill and native soils.

Boring locations were selected to provide uniform coverage of the Site in the RI phase and to ensure representative characterization of the site-wide soil/fill conditions. The investigation was conducted in an approximate grid pattern to assess previously unexplored areas, with step-out borings completed in known areas of concern identified during the previous Phase II ESA to further delineate potential impacts. The supplement investigation completed the delineation of the nature and extent of contamination.

Prior to each soil boring, the concrete slab which ranged from 5 to 16 inches thick, was cored and removed. Soil borings were advanced to depths ranging from 6.8 to 9.4 feet bgs using a track mounted Geoprobe® unit which employs direct push technology and truck mounted auger with split spoon attachment where the Geoprobe was refused at shallow depths. Continuous soil sampling was performed using Macro Core soil samplers measuring approximately 48 inches in length and 1½ inches in diameter with acetate liners resulting in approximately 4-foot length distinct sample cores (i.e., 0 to 4 feet, 4 to 8 feet, 8 to 12 feet). Each of the samplers was fitted with a new acetate liner prior to re-use. All soil borings were backfilled with the soil from the boring.

The following was completed during each boring and test pit excavation:

- A description of the soil stratigraphy was made (refer to boring/test trench logs in **Appendix D**);
- Visual observations (staining, odors, etc.) were recorded if noted;
- Total organic vapor monitoring was completed as each boring was installed using a RKI GX 6000, 11.7 eV photoionization detector (PID); and
- Cleaning of equipment between each boring/test pit location.

All soil samples were submitted to Eurofins Buffalo Laboratory a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory and a full Contract Laboratory Program (CLP). Samples were analyzed in accordance with NYSDEC Category B, with full CLP-type analytical data package deliverables. Analytical results for all soil samples are discussed in Section 4.0.

See Section 4.3.1 for a summary of each compound exceedance, corresponding exceedance location, applicable SCOs exceeded, and parameters sampled for.

2.4 GROUNDWATER INVESTIGATION

Four groundwater monitoring wells were installed during the RI as per the approved RIWP. One well (RI MW-4) was installed in the overburden at the historic UST area. The three remaining wells were installed in the bedrock; two were installed at 30 feet bgs and one at 50 feet bgs. Groundwater was identified at approximately 21.3 feet bgs. No measurable groundwater was identified in the overburden.

Monitoring Well Installation and Development

Each of the four monitoring wells were installed using a conventional truck drill rig with hollow stem auger drilling techniques through the over burden. A 4.25-inch hollow stem auger was used to drill to depths of up to approximately 12 feet bgs. The overburden well screen for RI-MW-4 was

installed at the top of bedrock. For bedrock wells, RI MW-3 was cored to a depth of 50 feet bgs and RI MW-2 and RI MW-1 were installed at 30 feet bgs using an air hammer. Locations of the wells are shown on **Figure 3.**

All monitoring wells were constructed using 2-inch inside diameter (ID), flush joint, Schedule 40 polyvinyl chloride (PVC), with 0.010-inch slotted screen at 5 to 15 feet in length. A two-inch PVC riser was installed atop the screen to bring the well to just below flush and the well was flush mounted with a cover and grouted in place. For bedrock wells, a roller bit was used to install a steel casing approximately 2 feet into bedrock which was grouted in place and allowed to set prior to coring or air hammer activities.

Well construction diagrams and development logs are provided in **Appendix D**. Monitoring wells were installed and developed in October of 2024.

Monitoring Well Sampling

The well installed in the overburden (RI MW-4) did not produce any appreciable groundwater. Therefore, no groundwater sample was collected from the overburden.

Groundwater sampling of the three bedrock monitoring wells was completed on October 28, 2024. Well sampling was conducted in accordance with the RIWP. One groundwater sample was collected from each of the monitoring wells. A different dedicated weighted high-density polyethylene (HDPE) bailer was used to surge, purge, and sample each of the wells. Sampling was initiated by measuring the depth to groundwater and total well depths using an electronic water level indicator. The water level indicator was decontaminated using an Alcon ox/water mixture and a water rinse prior to insertion in each well. Measurements were taken with respect to the top of the well casings, and depths were determined to an accuracy of 0.01 foot. Water quality parameters (temperature, specific conductivity, DO, pH, ORP, and turbidity) were monitored at logged intervals. Sampling and purging logs are provided in **Appendix D.**

The samples were submitted to a NYSDOH ELAP certified laboratory. Samples were analyzed in accordance with NYSDEC Category B, with full CLP- analytical data package deliverables. Analytical results for all groundwater samples are discussed in Section 4.0.

The following are the measured well depths and water levels from the top of casing at the time of sampling:

- RI MW-1: 29.7 feet to bottom of well – 8.4 feet to standing water from top of well casing.
- RI MW-2: 30.0 feet to bottom of well – 8.1 feet to standing water from top of well casing.
- RI MW-3: 49.7 feet to bottom of well – 26.5feet to standing water from top of well casing.
- RI MW-4: 10.1 feet to bottom of well – no standing water observed.

See Section 4.4 for a summary of each compound exceedance, corresponding exceedance location, applicable SCOs exceeded, and parameters sampled for.

2.5 Soil Vapor Investigation

To assess the potential for vapor intrusion, four soil borings installed through the existing concrete slab were converted into soil vapor sampling points (RI-VP-1 to RI-VP-4). Soil vapor samples were collected in each quadrant of the site at depths ranging from 4 to 7.2 feet bgs. Vapor sample locations are shown on **Figure 3.**

At each vapor probe location, fill that was removed during soil boring installation was placed back into the boring to various depths, then the probes with Teflon tubing attached were installed with two feet of sand pack. The remaining portion of the fill from boring operations was then placed over the sand and the hole was then sealed with bentonite chips. To collect a sample, the 6-liter canisters were connected to the tubing, sealed with swage locks, and allowed to collect for 24 hours.

To collect a sample, the 6-liter canisters were connected to the tubing, sealed with swage locks, and allowed to collect for 24 hours. The four vapor points were sampled per the NYSDOH Final Guidance for Evaluating Soil Vapor in The State of New York (2006) with updates (SVI Guidance).

3.0 PHYSICAL CHARACTERISTICS OF THE STUDY AREA

3.1 Surface Features

The 0.985-acre site includes portions of two parcels (SBL: 159.09-1-2.11 and 159.09-1-2.12) located at 333 1st Street and 217 Old Falls Street. These parcels are part of a larger 3.705-acre property historically held under common ownership, which includes adjacent areas outside the BCP boundary that are not part of this remedial investigation. The 0.985-acre BCP Site encompasses the portion of the property where the former Smokin' Joe's building was located and where the remedial activities described in this report are being performed.

Based on historical records, the 3.705-acre property has been utilized in a commercial/industrial nature since the buildings were initially constructed in 1910. The BCP Site is generally flat, following demolition of the former commercial building, with the concrete slab remaining in place.

A floor drain survey was performed during RI activities and revealed two floor drains on the western portion of the site (Refer to **Figure 4 and Figure 5**). Upon inspection, the drains were found to be filled with demolition debris. No sediment was observed, and no sample could be collected. After clearing the debris and removal of the concrete slab, supplemental soil/sediment samples were collected from directly beneath each drain location to comply with DER-10 requirements. A minimum of two soil samples were collected in proximity to each drain and analyzed for NYSDEC Part 375 Metals, SVOCs, and VOCs.

3.2 Geology/Hydrogeology

Shallow subsurface conditions generally consisted of fill with some construction and demolition debris including brick, concrete and cinder material. Fill depths ranged from 0.5 to 10 feet bgs across the Site. Beneath the fill in some locations was stiff, tight, brown silty clay. Bedrock was identified ranging from 8 to 10 feet below ground surface consisting of grey dolomite with multiple fractures.

Groundwater levels were measured in the three bedrock monitoring wells at the depths noted in Section 2.4. Slug tests were performed at the bedrock monitoring well locations using a weighted HDPE bailer to determine permissivity in the subsurface. The data was analyzed using Aqtesolv software and the results are included in **Appendix D**.

3.3 Demography and Land use

The re-development of the Nest Site will be a six-story mixed use structure with the first floor being primarily commercial and the upper floors residential. Additional development features will include asphalt parking, a playground area, plant bedding and sod lawn areas, and hardscape sidewalks throughout the site.

4.0 NATURE AND EXTENT OF CONTAMINATION

4.1 Introduction

This section discusses the results of the RI activities and the nature and extent of contaminants detected in the media investigated. The assessment is based on the RI program combined with the data obtained in previous investigations to provide an overview of the nature and extent of impacts at the Site.

All soil and groundwater samples were submitted for analysis to Eurofins Analytical Laboratory, a New York State certified laboratory. Air samples were submitted for analysis to PACE Labs, also, a New York State certified laboratory. A New York State licensed firm, ACP Buffalo, Inc. of Buffalo, New York, conducted the asbestos abatement prior to demolition.

All soil, groundwater and air analytical data were validated by Environmental Data Usability (EDU), an independent certified data validator. Data from previous Phase II investigations were reviewed and used for informational and planning purposes; this data was not validated to NYSDEC requirements and is therefore not relied upon as definitive RI data. Complete laboratory analytical results and DUSRs are provided in **Appendix E**.

4.2 Potential Sources

The history and use of the Site suggest there was potential contaminants of concern associated with fill material and past commercial and manufacturing use as well as petroleum use and storage. Potential contaminants include metals, polycyclic aromatic hydrocarbons (PAHs), petroleum related compounds, solvents and PCBs. Contaminants of concern were associated with historic Site operations that include:

- In 1969, J.N. Adams and Co. department store located on the site was converted into a leather goods manufacturer. These operations often include the use of chemicals and solvents in the tanning process which may have impacted the subsurface.
- 1950 through 1970 Sanborn maps indicated the presence of two gas tanks of unknown size in the northwest corner of the site. These gas tanks are not identified on subsequent maps and no removal records were identified, thus presenting a potential vapor intrusion concern.
- In the 1970's the site was significantly redeveloped including demolition of the several structures on the Site resulting in reworked subsurface fill materials and construction and demolition debris.
- An offsite historic dry cleaner was identified in Sanborn Maps from the 1950's to the 1970's

located approximately 100 feet upgradient from the Site representing a potential offsite source of contamination.

During the May 2025 off-site investigation, a bedrock monitoring well and vapor point were installed to investigate an upgradient off-site historic dry cleaner identified in Sanborn Maps from the 1950's to the 1970's. Concentrations of COCs, primarily PCE, TCE, and PFAS, were identified, but the levels were below those found on Site for CVOCs and above for PFAS. The maximum concentrations of COCs found on-site versus off-site in the upgradient northern parking lot were as follows:

Bedrock Groundwater Wells

Contaminant of Concern	Maximum On-Site	Maximum Off-Site
Tetrachloroethene	12 ppb (RI-MW-3)	4.6 ppb (OW-1)
Trichloroethene	ND	2.2 ppb (OW-1)
PFOA	42 ppt (RI-MW-1)	49 ppt (OW-1)
PFOS	13 ppt (RI-MW-1)	16 ppt (OW-1)

Note: Only results from the 5/30/2025 resampling event of the off-site well (OW-1) are considered for maximum concentrations as the well was not considered adequately developed during the initial round of sampling.

Vapor Points

Contaminant of Concern	Maximum On-Site	Maximum Off-Site Upgradient
Tetrachloroethene	184 ug/m3 (RI-VP-1)	51 ug/m3 (Off Site RI-VP-2)
Trichloroethene	155 ug/m3 (RI-VP-1)	8.5 ug/m3 (Off Site RI-VP-2)

Additionally, there was a second off-site vapor point installed in the downgradient southern parking lot adjacent to the Site. The concentrations of COCs were as follows:

Contaminant of Concern	Off-Site RI-VP-1 Downgradient
Tetrachloroethene	51 ug/m3
Trichloroethene	ND

Based on a comparison of the on-site vapor points and the location of the off-site RI-VP-1 in a downgradient location from the BCP site, there is a low possibility that PCE may be migrating off of the BCP site.

The findings of the RI sampling analytical program are further described below.

4.3 Soil Sample Analytical Results

The following provides a summary of the results of the RI soil sample analytical program. The soil analytical results were compared to the NYSDEC Unrestricted, Residential, and Restricted Residential Soil Cleanup Objectives (SCO) listed in Table 375-6.8(a) and (b) of 6 NYCRR Part 375 (December 2006). Analytical results for per-and-polyfluoroalkyl substances (PFAS) in soil

were compared to NYSDEC-Sampling, Analysis, and Assessment of PFAS Under NYSDEC Part 375 Remedial Programs-April 2023 SCO.

The following data qualifiers exist for some of the results received from the laboratory

F1 indicates that the reported result was flagged as an estimated value due to a minor quality control issue (e.g., low surrogate recovery, minor blank contamination, or other qualifier as defined in the Data Usability Summary Report)

F2 indicates that the reported result was flagged due to a minor quality control issue observed in the MS/MSD or Relative Percent Difference in QA/QC samples.

J indicates that the reported value is approximate.

All data qualifiers are further assessed in the attached DUSRs.

4.3.1 Soil Test Trench and Borehole Samples

Soil test trench and borehole sample compounds detected during the RI are summarized in **Table 2.**

The summary below of soil compound exceedances are for reference, compared to Unrestricted, Residential, and Restricted Residential SCOs. **Figure 4** provides the exceedances above Unrestricted SCOs and Restricted Residential SCOs.

Semi-Volatile Organic Compounds (SVOCs)

Test Trench Soil Samples

One test trench sample was collected RI TT-1. No detections above Unrestricted SCOs were observed for SVOCs.

No detections above Unrestricted SCOs were observed in any of the four test trench samples taken to characterize the soils proximate to the onsite floor drains (Drain 1 through Drain 4) for SVOCs.

Borehole Soil Samples

A summary of RI borehole soil samples with SVOC concentrations exceeding Unrestricted, Residential and/or Restricted Residential SCO follows (RRSCO exceedances are in **BOLD**:

RI MW-1	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Benzo[a]anthracene	**2.2**	1	1	1
Benzo[a]pyrene	**2.2**	1	1	1
Benzo[b]fluoranthene	**2.5**	1	1	1
Benzo[k]fluoranthene	0.94 J	0.8	1	3.9

Chrysene	2.3	1	1	3.9
Dibenz(a,h)anthracene	**0.39 J**	0.33	0.33	0.33
Indeno[1,2,3-cd]pyrene	**1.2**	0.5	0.5	0.5

RI BH-3	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Benzo[a]anthracene	**7.3**	1	1	1
Benzo[a]pyrene	**8.3**	1	1	1
Benzo[b]fluoranthene	**9.8**	1	1	1
Benzo[k]fluoranthene	3.4	0.8	1	3.9

Benzo[a]anthracene	**2.5 J F1 F2**	1	1	1

Pesticides/PCBs

Test Trench Soil Samples

There were no pesticides or PCBs detected in the test trench soil samples collected near the floor drains or near the UST.

Borehole Soil Samples

No PCBs were detected in the soil samples collected from soil borings operations. No pesticides were detected in the soil samples collected above Restricted Residential SCOs, however the following Pesticides were detected above Unrestricted SCOs.

RI MW-2	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
4,4'-DDT	0.011 JB	0.0033	1.7	7.9

RI BH-7	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
4,4'-DDT	0.0086 J	0.0033	1.7	7.9

Metals

Test Trench Soil Samples

There were no metal detections above restricted residential SCOs with the exception of Lead, Cadmium, and Manganese. The RI test trench soil samples containing metal concentrations exceedances are as follows:

RI TT-1 (Tank Location)	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Zinc	521	109	2200	10000

Drain 1	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Arsenic	13.6	13	16	16
Cadmium	**4.7**	2.5	2.5	4.3
Chromium	46.9	30	36	180
Copper	54.9	50	270	270
Lead	**552**	63	400	400
Manganese	**3180**	1600	2000	2000
Nickel	31.8	30	140	310
Zinc	1260	109	2200	10000

Drain 2	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	144	63	400	400
Zinc	373	109	2200	10000

Drain 3	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	148	63	400	400
Mercury	0.25	0.18	0.81	0.81

Zinc	267	109	2200	10000

Drain 4	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	113	63	400	400
Zinc	316	109	2200	10000

Borehole Soil Samples

Metals exceeding Unrestricted were detected in all RI soil borehole samples and only Lead in RI-BH-6, Barium in RI BH-8 and Mercury in RI-VP-3 exceeded the Restricted Residential SCOs. The RI soil samples with Metal concentrations exceeding Unrestricted and/or Restricted Residential SCOs include the following:

RI MW-3	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	144	63	400	400
Zinc	229 F1 F2	109	2200	10000

RI MW-1	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	105	63	400	400
Zinc	335	109	2200	10000

RI MW-4	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	66.4	63	400	400
Zinc	147	109	2200	10000

RI MW-4	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	76.9	63	400	400
Zinc	175	109	2200	10000

RI MW-2	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Zinc	643	109	2200	10000

RI BH-1	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Zinc	149	109	2200	10000

RI BH-2	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	119	63	400	400
Zinc	303	109	2200	10000

RI BH-3	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Lead	291	63	400	400

Mercury	**4.5**	0.18	0.81	0.81
Zinc	177 F1 F2	109	2200	10000

RI VP-4 QA/QC	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Zinc	386	109	2200	10000

RI VP-4	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Zinc	395	109	2200	10000

Volatile Organic Compounds (VOC)

Test Trench Soil Samples

There were no RI test trench soil samples with VOC concentrations that exceeded Unrestricted and/or Restricted Residential SCOs.

Borehole Soil Samples

A summary of RI borehole soil samples with VOC concentrations exceeding Unrestricted SCOs include the following:

RI MW-1	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
Methylene Chloride	0.073 JB	0.05	51	100
Tetrachloroethene	1.8	1.3	5.5	19
Trichloroethene	1.7	0.47	10	21

4.3.2 Per- and Polyfluoroalkyl Substances (PFAS) Soil Samples

Per-and polyfluoroalkyl Substances (PFAS) were detected in several test trench and borehole soil samples, however, no concentrations exceeded the guidance level Restricted Residential or Commercial SCOs as presented in NYSDEC – Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs – April 2023 guidance document.

RI BH-1	Result (ppm)	Unrestricted SCO (ppm)	Residential SCO (ppm)	Restricted Residential SCO (ppm)
PFOS	0.0009	0.00088	0.0088	0.044

4.3.3 Soil Results Summary

The results of the RI soils investigation indicated the following:

- SVOCs compounds (primarily PAHs) and metal compounds (most notably, lead, mercury, barium, cadmium, and zinc) were detected throughout soil/fill material at variable concentrations above Restricted Residential and/or Unrestricted SCOs.
- PCBs and herbicides were “non-detect” in the test trench and borehole soil samples.
- One pesticide (4,4-DDT) was detected above Unrestricted SCOs in RI MW-2 and RI BH-7 locations.
- VOC compounds (methylene chloride, tetrachloroethylene, and trichloroethylene) were detected above Unrestricted SCOs in RI MW-1.
- The PFAS compound PFOS concentration exceeded Unrestricted SCO in RI BH-1.

Waste Characterization Data

Twelve disposal samples (D1 through D12) were also taken across the site strictly for recipient facility acceptance criteria. The results of these samples are located in **Appendix E** and do not provide any relevant information regarding contaminants of concern on-site.

4.4 Groundwater Sample Analytical Results

The following provides a summary of the results of the RI groundwater sample analytical program. Compound concentration levels detected in groundwater samples collected during the RI are compared to Class GA Groundwater Quality Standards (NYSDEC TOGS 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations - June 1998) in the following tables and figures.

- **Table 4** – Groundwater Sample Analytical Results.
- **Figure 5b** – Groundwater Sample Analytical Results.

All groundwater samples were analyzed for TCL VOCs, SVOCs, pesticides, PCBs, and TAL metals+cyanide and Per & Polyfluoroalkyl Substances (PFAS). Due to lack of water observed in the overburden, only groundwater from bedrock monitoring wells was able to sampled.

Semi-Volatile Organic Compounds (SVOC)

SVOCs were not detected in any of the groundwater samples.

Pesticides/PCBs

PCB compounds were “non-detect” in all RI groundwater samples collected. Pesticides were detected but below TOGs guidance values.

Volatile Organic Compounds (VOCs)

VOCs were detected in the following samples above TOGS guidance values:

RI MW-3	Result (ppb)	TOGS Guidance (ppb)
Tetrachloroethylene (PCE)	12 F1	5

RI MW-3 DUP	Result (ppb)	TOGS Guidance (ppb)
Tetrachloroethylene (PCE)	11	5

RI MW-1	Result (ppb)	TOGS Guidance (ppb)
Tetrachloroethylene (PCE)	7	5

Metals

Metals were detected in all groundwater samples and one Metal compounds exceeded their TOGs guidance values as follows:

RI MW-3	Result (ppb)	TOGS Guidance (ppb)
Sodium	267000	20000

RI MW-3 DUP	Result (ppb)	TOGS Guidance (ppb)
Sodium	263000	20000

RI MW-2	Result (ppb)	TOGS Guidance (ppb)
Sodium	345000	20000

RI MW-1	Result (ppb)	TOGS Guidance (ppb)
Sodium	297000	20000

Per & Polyfluoroalkyl Substances (PFAS)

Per-and polyfluoroalkyl Substances (PFAS) were detected in all groundwater samples, with concentrations exceeding guidance values as presented in NYSDEC – Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs – April 2023 guidance document.

RI MW-3	Result (ppt)	Sampling, Analysis and Assessment of PFAS Guidance (ppt)
PFOA	16	6.7
PFOS	5.2	2.7

RI MW-2	Result (ppt)	Sampling, Analysis and Assessment of PFAS Guidance (ppt)
PFOA	21	6.7
PFOS	8.8	2.7

RI MW-3 DUP	Result (ppt)	Sampling, Analysis and Assessment of PFAS Guidance (ppt)
PFOA	16	6.7
PFOS	5.2	2.7

RI MW-1	Result (ppt)	Sampling, Analysis and Assessment of PFAS Guidance (ppt)
PFOA	42	6.7
PFOS	13	2.7

4.4.1 Groundwater Results Summary

There was no groundwater observed in the overburden on-site. All results are related to groundwater sampled from the bedrock monitoring wells. The groundwater analytical results indicate the following.

- No SVOCs, PCBs or Herbicides were detected in any of the groundwater samples collected.
- One VOC (PCE) was detected in RI MW-3 and RI MW-1 samples at concentrations exceeding TOGS guidance value of 5 ppb. PCE was also detected in RI MW-2 but below the associated TOGS value.
- No pesticide compounds were detected above TOGs guidance values.
- Several metal compounds were detected at concentrations below their TOGS guidance values apart from sodium which was detect above TOGS guidance in all groundwater samples collected.
- Per-and polyfluoroalkyl Substances (PFAS) were detected in all groundwater samples. PFOA and PFOS concentrations in all groundwater samples exceeded NYSDEC – Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs – April 2023 guidance document values.

4.5 Soil Vapor Sample Analytical Results

The following provides a summary of the results of the RI soil vapor sample analytical program. All soil vapor samples were collected in accordance with the NYSDOH Final Guidance for Evaluating Soil Vapor in The State of New York (2006) with updates (SVI Guidance)

A total of four sub-slab soil vapor samples were analyzed for TCL VOCs by EPA method TO-15 and the results are provided on **Table 3** and **Figure 5a**. New York State does not establish standards, criteria, or guidance values for contaminants in soil vapor. The NYSDOH Air Guideline Values (AGVs) pertain to indoor air, and the decision matrices are intended to be applied using paired indoor air and sub-slab vapor data to assess potential exposure to building occupants. Because only sub-slab vapor samples were collected during the RI, the decision matrices and AGVs are not directly applied here.

The following summarizes detected VOCs of interest from the TO-15 analyte list:

- **Methylene chloride** – Detected in three samples (RI VP 1, RI VP-3, and RI VP-4) with the highest concentration of 4.93 ug/m3.
- **Tetrachloroethylene** – Detected in all samples. The highest detection was 184 ug/m3 in RI VP-1 location.
- **Trichloroethene** – Detected in three samples (RI VP 1, RI VP-3, and RI VP-4).The highest detection was 155 ug/m3 in RI VP-1 location.
- **Trichlorofluoromethane (Freon-11)** – Detected in all samples, with the highest concentration at RI-VP-4 (1360 ug/m3), which was significantly greater than concentrations measured at the other sampling locations (**Table 3**).
- ***Cis*-1,2-Dichloroethene (*c*-1,2-DCE)** – Detected in one sample (RI VP-1), with a concentration of 0.642 ug/m3 versus a mitigation value of 60 ug/m3.
- **1,1-Dichloroethene (1,1-DCE)** – Not detected in any sample.
- **Carbon Tetrachloride** – Detected in three samples (RI VP-1, RI VP-3, RI VP-4) with the highest concentration of 2.54 ug/m3 versus a mitigation value of 60 ug/m3.
- **Tetrachloroethene (PCE)** – Detected in all samples, with three samples detected at a concentration that requires mitigation without the need for indoor air samples (RI VP-1, RI VP-3, RI VP-4). The highest detection was 184 ug/m3 in RI VP-1 location.
- **1,1,1-Trichloroethane (1,1,1-TCA)** – Not detected in any sample.
- **Vinyl Chloride** – Not detected in any sample.
- **Benzene** – Detected in two samples (RI VP-1 and RI VP-4), with the highest concentration of 37.1 ug/m3 versus a mitigate value of 600 ug/m3.

- **Ethylbenzene** – Detected in one sample (RI VP-4), with a concentration of 1.43 ug/m3 versus a mitigate value of 600 ug/m3.

- **Naphthalene** – Not detected in any sample.

- **Cyclohexane** – Detected in two samples (RI VP-1 and RI VP-4), with the highest concentration of 198 ug/m3 versus a mitigation value of 600 ug/m3.

- **Isooctane (2,2,4-trimethylpentane)** – Not detected in any sample.

- **1,2,4-trimethylbenzene** – Detected in one sample (RI VP-4), with a concentration of 2.36 ug/m3 versus a mitigation value of 600 ug/m3.

- **1,3,5-trimethylbenzene** – Detected in one sample (RI VP-4), with a concentration of .579 ug/m3 versus a mitigation value of 600 ug/m3.

- **o-xylene** – Detected in one sample (RI VP-4), with a concentration of 1.94 ug/m3 versus a mitigation value of 600 ug/m3.

- **m,p-xylene** – Detected in one sample (RI VP-4), with a concentration of 4.6 ug/m3 versus a mitigation value of 2000 ug/m3.

- **Heptane** – Detected in two samples (RI VP-2 and RI VP-4), with the highest concentration of 39.2 versus a mitigation value of 2000 ug/m3.

- **Hexane** – Detected in three samples (RI VP-1, RI VP-2, and RI VP-4), with the highest concentration of 258 ug/m3 versus a mitigation value of 2000 ug/m3.

- **Toluene** – Detected in one sample (RI VP-4), with a concentration of 14 ug/m3 versus a mitigation value of 3000 ug/m3.

Trichloroethene was detected at a concentration that requires mitigation without the need for indoor air samples in RI VP-1 with a concentration of 155 ug/m3.

5.0 FATE AND TRANSPORT OF CONTAMINANTS OF CONCERN

The soil, groundwater, and soil vapor sample analytical results were evaluated in conjunction with physical Site conditions to assess the fate and transport of COC in Site media. The mechanisms by which the COCs can migrate to other areas or media are briefly outlined below. Potential pathways are evaluated in the context of pre-remedial conditions, as discussed in Section 7.0

5.1 FUGITIVE DUST

Chemicals present in soil can be released to ambient air through fugitive dust generation. Currently, the majority of the Site is covered with concrete floor slabs and foundations from former structures. Fugitive dust could result from disturbance of cracked or broken slabs and dry, friable impacted surface soils.

At present, this pathway is limited by the existing hardscape cover. However, if the surface cover is disturbed, fugitive dust migration could become a more significant pathway. During potential remedial work, fugitive dust may be generated. A health and safety plan along with a community air monitoring plan will be prepared as required by the Remedial Action Work Plan (RAWP) under the BCP, which will minimize fugitive dust concerns during this period.

5.2 Surface Water

There are no surface water bodies directly on the Site. The potential for transport of impacted soil particles with surface water runoff is currently low due to the extensive building and hardscape coverage. Presently, most site runoff is collected in municipal storm water collection systems located in the streets bordering the Site. During remediation and new Development, surface water runoff/collection will be controlled through a Community and Environmental Response Plan (CERP) that will be developed and appended to the RAWP.

5.3 Volatilization

Solvent-related VOCs were detected in soil, soil vapor, and groundwater samples. The VOCs detected in the RI soil samples were at low concentrations with three compounds (TCE, PCE and Methylene Chloride) exceeding Unrestricted SCOs only in one soil sample, RI MW-1. No soil sample VOC results exceeded Restricted Residential SCOs.

PCE and TCE concentrations were also detected in soil vapor at elevated concentrations. It appears that PCE and TCE may be present in sections of former building sub-slab fill material that is most likely due to historical former on-site leather manufacturing operations, which may have released contaminants through deteriorated floor slabs to the bedding and shallow fill material. Based on the groundwater sample results, low levels of PCE and TCE has reached bedrock groundwater which is at a depth of + 21 feet bgs. Bedrock depth was variable but on average was observed at approximately 10 feet bgs.

Impacted fill material may be excavated and exposed during remediation which may create a pathway for volatiles to reach outside air. During this time, VOC monitoring will be undertaken utilizing an RKI GX 6000, 11.7 eV photoionization detector (PID) and perimeter air monitors in accordance with the requirements of a site-specific Health and Safety Plan (HASP) and Community Air Monitoring Plan (CAMP) included in the RAWP.

5.4 Leaching

Leaching refers to contaminants in soil migrating into groundwater due to infiltration of precipitation. As noted above, solvent related VOCs were detected in soils, soil vapor, and groundwater beneath remaining floor slabs and into the subsurface. Based on the results of the RI, VOC contaminants have leached from the soil through bedrock into the groundwater. Depth to groundwater is greater than 21.3 feet bgs and bedrock exists at an average depth of 10 feet bgs.

Both SVOCs (PAHs) and metals were detected in the site fill soils, however, these compounds are not very mobile in soils, in that they have low solubility with water and tend to adsorb to the soil grains. These compounds do not readily breakdown in the environment and PAHs deposited from combustion of coal or other fuels years ago would most likely still be present today. Also, no SVOCs were detected in the groundwater samples.

One metal, sodium, was detected in the groundwater samples at concentrations above TOGs guidance values. While sodium is known to exist naturally in the groundwater and may be produced from natural weathering of rock and soil, the observed elevated levels at the site may be attributed to the heavy use of rock salt in the area.

PFAS compounds (PFOS and PFOA) were detected in the groundwater samples in exceedance of NYSDEC PART 375 Guidance values. The highest concentration was detected in the upgradient RI MW-1 sample indicating the source may be offsite. A historic dry cleaner was noted on Sanborn Maps from 1950 to 1970 at a location approximately 100 feet to the north of the Site. Historically, in the 1950's, PFAS chemicals were manufactured to replace PCE based systems in dry cleaners. It is possible that this nearby historic use has impacted the groundwater and migrated to the site.

The off-site upgradient dry cleaner related investigation did reveal some PCE detections that were lower than the on-site detections. However, PFAS was found to be higher in the same off-site location. Therefore, there may have been some contribution on site from the off-site dry cleaner but the on-site PCE contamination may have also been from the former leather manufacturing operations on the Site.

5.5 Groundwater Transport

No SVOCs or pesticides/PCBs were detected in the groundwater above TOGs guidelines. One metal, sodium, was detected in the groundwater samples at concentrations above TOGs guidance values. Metallic mineral compounds in groundwater are common under natural conditions and New York State is known to contain Balmat zinc deposits which may affect the water quality. PCE was detected in groundwater monitoring wells at concentrations slightly exceeding TOGS guidance values, while PFOA and PFOS were detected at concentrations above NYSDEC Part 375 guidance values.

Since the Site and surrounding area are serviced by municipal water, which will also be used for the new development, significant exposure to any chemicals in the groundwater are minimal at this site.

5.6 Exposure Pathway Summary

Under current site conditions, the pathways through which COCs could reach receptors at significant exposure concentrations are limited. The most potentially complete pathways include fugitive dust generation if the existing hardscape cover is disturbed (i.e., during remediation), which could trigger volatilization of VOCs from impacted subsurface materials, and leaching of VOCs and PFAS compounds to groundwater.

6.0 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT

Qualitative Human Health Exposure Assessment was completed to evaluate the pathways, intensity, frequency, and duration of actual or potential human exposures to COCs under current and reasonably anticipated future conditions, both on-site and off-site. The assessments were completed in accordance with DER-10 Sections 3.14(c)(17) and 3.3(c)(4) and NYSDOH Qualitative Human Health Exposure Assessment (**Appendix B**).

- In accordance with DER-10 Appendix 3B, the five elements of an exposure pathway were evaluated for this Site. The five elements of an exposure pathway were evaluated as follows:
- source – contaminated fill, soil, groundwater, and soil vapor containing VOCs, SVOCs, metals, and PFAS from historical industrial use;
- media/transport – soil, groundwater, and vapor with potential migration via groundwater flow, vapor migration, or soil disturbance;
- points of exposure – on-site soils, indoor air, and groundwater (if accessed);
- routes of exposure – incidental ingestion, dermal contact, and inhalation; and
- receptors – current workers and potential future occupants on-site, and nearby off-site populations.

On-Site Soil Results Summary

The results of the RI soils investigation indicated that several SVOCs compounds (primarily PAHs) and metal compounds (most notably zinc, lead, mercury, barium, and cadmium) were detected throughout soil/fill material at variable concentrations above Restricted Residential and/or Unrestricted SCOs. VOCs (methylene chloride, PCE, and TCE), one pesticide (4,4'-DDT) and PFOS were detected in site soils above Unrestricted SCOs.

No PCBs, herbicides or cyanide were detected in site soils.

On-Site Groundwater Results Summary

The bedrock groundwater analytical results indicate concentrations of VOCs (PCE and TCE) and one metal (sodium) above TOGS guidance values. PFOA and PFOS were also detected above guidance values as presented in NYSDEC – Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs – April 2023 guidance document.

No SVOCs, PCBs, or herbicides were detected in site groundwater samples.

On Site Soil Vapor Results Summary

The following provides a summary of the results of the RI soil vapor sample analytical program. All sub-slab vapor and soil vapor samples were collected in accordance with the NYSDOH Final Guidance for Evaluating Soil Vapor in The State of New York (2006) with updates (SVI Guidance). A total of four subsurface vapor samples were analyzed for TCL VOCs by EPA method TO-15. The results were compared to the three VOC guidance values referenced in the above guidance document. Even though other CVOCs and Petroleum related VOCs were detected, the most significant analytical results for the TO-15 list of VOCs are as follows:

- **Tetrachloroethylene** – Detected in all samples. The highest detection was 184 ug/m3 in

RI VP-1 location.

Trichloroethene – Detected in three samples (RI VP 1, RI VP-3, and RI VP-4). The highest detection was 155 ug/m3 in RI VP-1 location.

During the May 2025 off-site investigation, a bedrock monitoring well and two vapor points were installed to investigate the potential impact of an upgradient off-site historic dry cleaner identified in Sanborn Maps from the 1950's to the 1970's. Concentrations of COCs, primarily PCE, TCE, and PFAS, were identified, with the CVOCs below those found on-site and the PFAS substances higher than the on-site concentrations. The maximum concentrations of these contaminants of concern (COCs) found on-site versus off-site in the upgradient northern parking lot in groundwater and soil vapor were as follows:

Bedrock Groundwater Wells

Contaminant of Concern	Maximum On-Site	Maximum Off-Site
Tetrachloroethene	12 ppb (RI-MW-3)	4.6 ppb (OW-1)
Trichloroethene	ND	2.2 ppb (OW-1)
PFOA	42 ppt (RI-MW-1)	49 ppt (OW-1)
PFOS	13 ppt (RI-MW-1)	16 ppt (OW-1)

Note: Only results from the 5/30/2025 resampling event of the off-site well (OW-1) are considered for maximum concentrations as the well was not considered adequately developed during the initial round of sampling.

Vapor Points

Contaminant of Concern	Maximum On-Site	Maximum Off-Site Upgradient
Tetrachloroethene	184 ug/m3 (RI-VP-1)	51 ug/m3 (Off Site RI-VP-2)
Trichloroethene	155 ug/m3 (RI-VP-1)	8.5 ug/m3 (Off Site RI-VP-2)

The results of the off-site investigation indicate that the historic dry cleaner may have contributed to some contamination on the Site since the PFAS contamination off-site is higher than the on-site contamination, but since the on-site CVOC exceedances are higher onsite it is equally plausible that the on-site contamination is from former on-site leather manufacturing operations.

Additionally, there was an off-site vapor point installed in the downgradient southern parking lot adjacent to the Site. The concentrations of COCs were as follows:

Contaminant of Concern	Off-Site RI-VP-1 Downgradient
Tetrachloroethene	51 ug/m3
Trichloroethene	ND

Based on a comparison of the on-site vapor points and the location of the off-site RI-VP-1 in a downgradient location from the BCP site, there is a low possibility that COCs are migrating off of the BCP site.

6.1 Human Exposure Risks

Surficial soils: The Site is unoccupied, and the majority covered with concrete slabs/foundations from removed superstructures. Therefore, human exposure to these soils is minimal except for potential windblown dust from loose material and possible nominal erosion.

Soil vapor: PCE and TCE, as well as several other VOCs were detected in all soil vapor samples collected. PCE and TCE concentrations were detected at elevated concentrations in vapor samples RI VP-1, RI VP-3, and RI VP-4. These samples were collected 4 to 7.2 ft bgs beneath concrete floor slabs in the subsurface fill material. With the Site unoccupied, the direct exposure pathway is very minimal.

Groundwater: The RI indicates that groundwater is at depth (>21.3 feet bgs) at the site and bedrock exists at an average depth of 10 feet bgs across the Site. No overburden groundwater was observed. PCE, PFOA and PFOS compounds were detected above TOGs/PART 375 guidance values. In addition, sodium was found to be elevated potentially due to naturally occurring sodium mineral deposits. The Site is currently on municipal water supply as will the new development, thereby eliminating any future direct human exposure via groundwater.

The Site in its present condition provides minimum human exposure risks as related to COCs in the Site soils and groundwater. Human exposure to soil vapors will be assessed under the final remedy. As part of the new development, a passive SSDS will be incorporated into the proposed new building regardless of the anticipated remedial alternative. The system will be activated if the post construction soil vapor evaluation deems it necessary.

During Site remediation, which will include removing deteriorated concrete slabs in order to enable removing impacted soils thereunder. in addition to source removal, workers can be exposed. However, all ground-intrusive activities will be conducted in accordance with a Site-specific HASP and a CAMP. Implementation of the HASP will prevent worker exposure. CAMP data will be submitted to NYSDEC and NYSDOH on at least a weekly basis during ground-intrusive work, and any exceedances of CAMP action levels, along with corrective measures taken, will be reported to the Departments within 24 hours. If exceedances are documented, work must cease until the dust or VOC exposure pathway is mitigated. These measures, combined with HASP protocols, will minimize exposure risks to construction workers and the surrounding community during remediation activities.

Under post remediation conditions, the site will be safe for reuse because the source of soil contamination will be remediated and the soil vapor exposure pathway will be mitigated either through the soil vapor evaluation which will determine if active soil vapor mitigation is required or by an active SSDS engineering control if deemed necessary.

6.2 Ecological Exposure Risks

The property in its current condition is not a habitat to wildlife. Site erosion is minimal as nearly all of the site consists of remaining building floor slabs and other hardscape. Surface run-off flows off-site to the surrounding street stormwater collection system.

The DER-10 Appendix 3C Fish and Wildlife resources Impact Analysis (FWRIA) Decision Key is provided in **Appendix F**. Based on the completed decision key process; further information is needed based on Section 3.10.1 of DER-10. Based on available NYSDEC documents, the site is

in the vicinity of Calcareous talus slope woodland and Calcareous cliff community and is in the vicinity of rare freshwater mussels not listed by NYS. The Site does not have a habitat of an endangered, threatened or special concern species. Therefore, no unacceptable ecological risks are anticipated.

Any future intrusive work will be conducted in accordance with a Health and Safety Plan (HASP) and a Community Air Monitoring Plan (CAMP). CAMP reports will be submitted to NYSDEC and NYSDOH on at least a weekly basis while ground-intrusive activities are ongoing. Exceedances of CAMP action levels and any corrective measures taken will be reported to the Departments within 24 hours of occurrence.

7.0 REMEDIAL ALTERNATIVES ANALYSIS

7.1 Remedial Action Objectives

The final remedial measures for the Site must satisfy Remedial Action Objectives (RAOs), which are site-specific statements that convey the goals for minimizing or eliminating substantial risks to human health and the environment. The primary RAOs identified for the Site are the following:

Soil

Human Health Protection RAOs

- Prevent ingestion or direct contact with contaminated soil.
- Prevent inhalation exposure to contaminants volatilizing from soil.

Environmental Protection RAOs

- Prevent migration of contaminants in Site soil to surrounding areas that could result in groundwater or surface water contamination.

Soil Vapor

Human Health Protection RAOs

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a site.

Groundwater

Human Health Protection RAOs

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of volatiles, from contaminated groundwater.

Environmental Protection RAOs

- Remove the source of groundwater contamination

The off-site data collected during the Supplemental RIWP suggested that it is possible there is some contribution of off-site contamination on to the site, such as PFAS which was higher off-site than on-site, the on-site CVOC contamination was slightly higher on-site than off-site. As a result, the primary source of the low-level on-site soil and groundwater contamination may just as well be the result of the historical leather goods manufacturer located on-site. Operations of this nature are known to have utilized degreasers, such as TCE and PCE, and PFAS containing products during finishing. These source materials will be mitigated through excavation and removal of impacted fill/soils and USTs. See section 7.4.

7.2 Alternatives Selection Factors

In addition to achieving RAOs, NYSDEC's BCP requires an evaluation of remedial alternatives in accordance with 6 NYCRR Part 375-3 and DER-10 Technical Guidance for Site Investigation and Remediation. This alternatives analyses evaluates the remedial options developed for the site against the following selection factors:

1. **Overall Protection of Public Health and the Environment**. This criterion evaluates a remedy's ability to achieve the public health and environmental RAOs through the assessment of existing and potential exposure pathways to be eliminated, reduced, or mitigated through removal, treatment, or engineering/institutional controls (ECs/ICs).
2. **Compliance with Standards, Criteria, and Guidance (SCGs)**. This criterion addresses whether a remedy will meet applicable environmental regulations, standards, and guidance. The SCGs applicable to this site are listed in Section 1.2.
3. **Long-Term Effectiveness and Permanence**. This criterion evaluates the long-term effectiveness and permanence of an alternative or remedy after implementation.
4. **Reduction of Toxicity, Mobility or Volume with Treatment**. This criterion evaluates the remedy's ability to reduce the toxicity, mobility, or volume of Site contamination through treatment. Preference is given to remedies that permanently and significantly reduce the toxicity, mobility, or volume of the contamination at the Site.
5. **Short-Term Effectiveness**. This criterion evaluates the potential short-term impacts to human health and the environment during remediation, including control measures of adverse conditions and their effectiveness (e.g., stormwater controls, dust controls, etc.). The length of time needed to achieve the RAOs, and sustainability is also evaluated.
6. **Implementability**. This criterion evaluates the technical and administrative feasibility of implementing the remedy including the difficulties associated with construction and monitoring the effectiveness of the remedy. The availability of labor, equipment, and material is evaluated in addition to operational approvals, logistics, permitting, etc.
7. **Cost**. This criterion evaluates the overall cost effectiveness of an alternative.
8. **Community Acceptance**. This criterion evaluates the public's comments, concerns, and overall perception of the alternative.

7.3 Land Use Evaluation

In developing and screening remedial alternatives that are achieving an Unrestricted Use cleanup, NYSDEC's Part 375 regulations require that the reasonableness of the anticipated future land use be factored into the evaluation. The re-development of the former commercial operations at the site will be for mixed use including a new building with commercial office space on the ground floor and residential units on the upper 5 floors.

7.4 Selection of Alternatives for Evaluation

The results of the RI and previous environmental assessments indicate the following:

- Soils (mostly fill) beneath concrete floor slabs were found to contain SVOC (PAHs) and metal compounds in concentrations that exceed Part 375 Unrestricted Use SCOs. One RI soil sample also contained three VOC solvent compounds with concentrations that slightly exceeded Unrestricted Use SCOs.
- One abandoned UST in the northwest corner of the site was uncovered during the RI that will require removal/closure in accordance with DER-10 -Section 5.5 – Underground

Storage Tank closure.
- Groundwater samples indicated PCE concentrations above TOGs guidance and PFOS and PFOA concentrations above PART 375 guidance.
- Sub-slab soil vapors containing the VOCs, PCE and TCE have been identified beneath exposed building concrete slabs that exceed the NYSDOH Vapor Intrusion Guidance values.

Given the investigation results listed above, the following two remedial alternatives have been selected for evaluation:

1. Alternative 1 – Track 4: NYSDEC Restricted Residential Use
2. Alternative 2 – Conditional Track 1: NYSDEC Unrestricted Use

7.4.1 Alternative 1 – Track 4: Restricted Residential Use

Alternative 1 is a Track 4 cleanup that relies on impacted soil removal and cover system. The Alternative 1 remediation is based on the surface features of the planned development which is depicted on **Figure 9**. The details of this alternative include:

1 – Concrete slabs and other hardscape are to be removed within the BCP boundary to accommodate new development. The top two feet of surface soils beneath the removed slabs or in the remaining open areas that are not otherwise to be covered by components of the new development (e.g. buildings, pavement) shall not exceed Restricted Residential SCOs. All removed impacted soils, building materials and hardscape will be disposed offsite at an approved disposal and/or recycling facility. All intrusive work will be performed in accordance with a site-specific HASP and CAMP. CAMP data will be submitted to NYSDEC and NYSDOH on at least a weekly basis during ground-intrusive activities, and any exceedances of CAMP action levels and corrective measures taken will be reported to the Departments within 24 hours.

2 –Future greenspace areas of the Site will be backfilled with a minimum of two foot of clean fill. One foot of hardscape (concrete sidewalks, asphalt parking, building foundations) and subbase will be placed over the remainder of the Site to meet new development requirements all in accordance with Part 375-3.8 Track 4 - Part 375-6.8 Restricted Residential SCOs. Backfill will be imported clean fill material that meets the requirements of DER-10 Table 5.4(e)10 and DER-10 Appendix 5-Allowable Constituent Levels.

3 - One abandoned UST in the northwest corner of the Site will be uncovered and removed along with any impacted soil exceeding Restricted Residential SCOs. Removal/closure will be in accordance with DER-10 -Section 5.5 – Underground Storage Tank closure. CAMP and HASP protocols will be implemented during this work with reporting per the requirements above.

4 – After to the construction of the building as part of the new development, when the lower level is enclosed with an active HVAC system, an SVI investigation will be performed during the heating season to assess for potential soil vapor intrusion concerns. A sub-slab depressurization system (SSDS) will be installed prior to construction. If the System has to be activated based on the SVI investigation, effectiveness will be verified prior to future occupancy.

5 - This alternative also includes provisions for managing the Site upon completion of remediation through implementation of an Environmental Easement (EE) with Institutional Controls (ICs) and Engineering Controls (ECs) as follows:

Imposition of an IC in the form of an environmental easement for the controlled property that:

- Requires the remedial party or site owner to complete and submit to the NYSDEC a periodic certification of IC/EC in accordance with NYSDEC Part 375-1.8(h)(3);
- Allows the use and development of the controlled property for restricted residential and commercial, as defined by Part 375-1.8(g)., although land use is subject to local zoning laws;
- Restricts the use of Groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH or County DOH;
- Monitoring of sub-slab vapor extraction, if required, for a set period of time; and
- Requires compliance with the approved Site Management Plan.

A Site Management Plan (SMP) is required that includes the following:

- An IC/EC plan that identifies all use restrictions and ECs for the Site and details the steps and media specific requirements necessary to ensure the IC and/or ECs remain in place and effective. The ICs are as discussed above, and the EC's include developed soil cover system and groundwater monitoring;
- An Excavation Plan which details provisions for management of future excavations in areas of remaining contamination;
- A monitoring plan for the vapor mitigation systems;
- A monitoring plan for bedrock monitoring wells to ensure natural attenuation of target VOC site contamination;
- Descriptions of the provisions of the environmental easement including any land use or groundwater use restrictions;
- Provisions for the management and inspection of the identified ECs;
- Maintaining site access controls and NYSDEC notifications; and,
- The steps necessary for the periodic reviews and certifications of the IC/ECs.

Overall Protection of Public Health and the Environment – Alternative 1 is protective of human health and the environment with: the removal of existing concrete slab foundations in addition to the removal of a minimum of one foot of impacted soil and backfilling with two feet of clean soil or hardscape; the removal of an abandoned UST and associated impacted soil; and the mitigation of potential soil vapors through the installation of a passive SSDS in the proposed new building construction. These actions will eliminate the primary source material above bedrock, allowing residual groundwater contamination to naturally attenuate over time.

The clean soil and hardscape covered areas will be incorporated into the SMP as an engineering control for the Site and Institutional and engineering controls will be implemented to prevent more restrictive forms of future site use (e.g., unrestricted, residential) and restrict any use of the groundwater at the Site. Under ICs/ECs SSDS will be monitored and the cover system will be inspected, monitored and maintained. The SMP Excavation Work Plan will apply to any future disturbance of soils beneath the cover system. The SMP also requires the implementation of an approved health and safety plan for all future work.

Compliance with SCGs – Alternative 1 is a Part 375 track 4 remedy with some soils exceeding the Restricted Residential SCOs remaining below an approved cover system. The installation of SSDS in the new building will mitigate the potential for soil vapor intrusion. The existing abandoned UST will be removed to meet regulatory closure requirements.

Long-Term Effectiveness and Permanence – The removal of the impacted fill soils and UST to meet Restricted Residential SCOs and backfilling with clean fill and hardscape meets the RAOs for soil in this area. The installation of SSDS in the building with ongoing monitoring through the SMP will meet the RAOs for soil vapor. There will be a restriction on the use of groundwater at the Site.

The SMP requires periodic inspection and monitoring of the cover system for the Site to assure its integrity and the SMP excavation work plan will apply to any future disturbance of the remaining impacted soils including the requirement to prepare an approved health and safety plan for all work.

Reduction of Toxicity, Mobility, or Volume with Treatment – The remedial measure will either permanently or significantly reduce the mobility of contamination in the soils at the Site through the cover systems and UST removal. The volume of impacted soil will be reduced at the property by excavation and offsite disposal of the top two (2) feet of impacted soils across open areas and one foot in areas to be hardscaped. The volatilization from impacted soils remaining below the proposed new building will be treated by the SSDS installed beneath the building.

The SMP will include: an excavation work plan to address any impacted soil/fill encountered during future development and/or maintenance activities and include a site-wide Inspection program to assure that the ICs/ECs placed on the Site have not been altered and remain effective. This alternative will not, however, reduce the toxicity of the soil contaminants left in place upon completion of the remedial measure. Therefore, this alternative partially satisfies this criterion.

Short-Term Effectiveness – Potential short-term adverse impacts and human exposures may occur during construction (remediation and new development). However, any adverse impacts should be minimal. A Remedial Action Work Plan (RAWP) will be implemented prior to remediation which will require the contractor to prepare and implement a site-specific health and Safety plan to cover all workers. A CAMP will be implemented during all ground-intrusive activities, with weekly reporting to NYSDEC and NYSDOH, and 24-hour notification for any action level exceedances and corrective actions taken.

The SSDS to be installed in the new building will adhere to the remedial objective for this media of protection of public health by eliminating the potential for soil vapor intrusion into the building. Periodic inspections of the cover system per the SMP requirements will prevent ingestion/direct contact with contaminated soil and prevent inhalation of contaminants in soil that may remain below the cover system. This alternative is sustainable through the environmental easement and the implementation of the SMP.

Implementability – There are no implementation issues related to the proposed remediation or related to the Institutional and Engineering Controls placed on the Site under this alternative.

Community Acceptance – Community acceptance will be evaluated based on comments to be received from the public in response to Fact Sheets, public comment periods on documents and other planned Citizen Participation activities. Public comments indicate overall project approval but have expressed concerns about work surrounding the adjacent historic church. Precautions during demolition were taken to ensure the safety of adjacent properties and structures.

Cost – The values used in estimating alternatives are order-of-magnitude estimates for comparing alternatives and are not meant to be a specific remedial criterion. The estimated cost for this Alternative is $1.28 million. The cost summary for this alternative is provided in **Appendix G.**

7.4.2 Alternative 2 – Conditional Track 1: Unrestricted Use

The details of this alternative include:

- An Unrestricted Use alternative would necessitate removal of all soil/fill across the Site where soil concentrations exceed the Unrestricted SCOs or to bedrock whichever is shallower. Based on RI results, exceedances of Unrestricted Use SCOs were identified in shallow soils and fill materials at RI MW-1 when this well location was installed and select borings within the central and northern portions of the Site, primarily for SVOCs and metals. Based on RI data it is estimated that this would require soil removal to a depth of approximately seven (7) feet (approximate fill and natural soil or bedrock interface) across the entire Site, with localized deeper excavation as required where exceedances are encountered. The proposed excavation footprint would therefore encompass the entire BCP site boundary, with removal extending laterally across open areas and beneath former slab/foundation footprints. The estimated volume of soil required to be removed for this remedy would be 12,480 cubic yards**.** The removal of impacted soil will include the removal of all existing building slabs and hardscape areas and backfill all areas with clean soil to meet new development grades. Approximately 2,340 tons of existing slab and subbase would be removed in order to implement the remedy. The anticipated surface features of the new development and remedial plan are depicted on **Figure 9**. Refer to **Appendix H** for site civil plans. Confirmation soil sampling would be conducted to verify compliance with Unrestricted SCOs prior to placement of the clean fill.

- Groundwater impacts, including solvent-related VOCs and PFAS compounds (PFOA and PFOS), have been documented in bedrock monitoring wells RI MW-1, MW-2, and MW-3, with detections above TOGS and Part 375 standards. These impacts are attributed to possible historical releases from former leather manufacturing operations possibly some contribution from off-site sources. By removing the overlying contaminated fill and sub-slab material to bedrock, the principal source of groundwater contamination will be eliminated, enabling natural attenuation of residual groundwater impacts. Post soil removal groundwater monitoring will be implemented to document that natural attenuation is occurring, which should be able to be documented within less than 5 years post Certificate of Completion. Soil vapor impacts are expected to be addressed through the removal of impacted soils and the eventual cleanup of Site groundwater. All intrusive work will be performed in accordance with an approved HASP and CAMP. CAMP results will be submitted weekly to NYSDEC and NYSDOH during intrusive activities, with exceedance notifications and corrective action reports provided within 24 hours.

- The UST would be closed in accordance with applicable NYSDEC regulations. However, unlike Alternative 1, the site would be remediated to achieve Unrestricted SCOs rather than Restricted Residential SCOs at a greater cost with longer short-term impacts.

- Assuming that the groundwater and soil vapor impacts are not resolved prior to Certificate of Completion, the conditional Track 1 remedy would include an EE and SMP for post remediation monitoring of contaminants in the groundwater and soil vapor on a quarterly basis for the first year following remediation and post construction SVI Investigation once the lowest level of the building is enclosed with active HVAC. At that time an assessment will be conducted regarding the condition of both media and the need for further monitoring or treatment. A passive SSDS will be installed as a green remediation precautionary measure in the event the SSDS needs to be activated. Soil vapor will be addressed through the complete removal of impacted Site soils followed by the placement of clean soil and the monitored natural attenuation and treatment (if required) of Site groundwater for five years. It should also be noted that if parcel occupancy occurs prior to meeting Unrestricted Site conditions, soil vapor contamination will be addressed through the activation and operation of an SSDS in the new building which will protect human health during the conditional period.

- Should Unrestricted Use conditions not be met at the Site over a 5-year conditional period for groundwater and soil vapor, only a Track 2 Residential Use cleanup track would be achieved even though the soil met Unrestricted SCOs because the Site would still be subject to Site use restrictions due to the remaining groundwater contamination and associated soil vapor.

Overall Protection of Public Health and the Environment – The Unrestricted Use alternative would achieve the corresponding Part 375 SCOs, which are designed to be protective of human health under any reuse scenario. At this Site, the primary source of groundwater contamination is soil containing low level VOCs associated with historic industrial operations or possible contribution of an off-site drycleaner. Under Alternative 2, this source will be mitigated through complete removal of all soil and fill exceeding Unrestricted Use SCOs or down to bedrock, along with removal of the abandoned UST and any associated impacted soils that may be identified under the UST. This removal will eliminate the source material contributing to groundwater impacts, enabling natural attenuation to restore groundwater quality over time.

Compliance with SCGs – Alternative 2 meets Part 375 1.8(g)(1)(i) for having the entire Site for Unrestricted Use and meet the RAOs for the Site.

Long-Term Effectiveness and Permanence – Long term effectiveness will be met by removal of the UST and all impacted soil from the Site that exceeds Unrestricted Use SCOs and backfilling with clean soil or hardscape.

Reduction of Toxicity, Mobility, or Volume with Treatment – The remedial measure will either permanently or significantly reduce the mobility of contamination in the soils at the Site by removal of all impacted soil that exceeds Unrestricted Use SCOs and backfilling with clean soil or hardscape.

Short-Term Effectiveness – Potential short-term adverse impacts and human exposures may occur during construction (remediation and new development). Adverse impacts will be greater in the short term than alternative 1 as a result of the added time to remove all impacted soils exceeding Unrestricted SCOs. A Remedial Action Work Plan (RAWP) will be implemented prior to remediation which will require the contractor to prepare and implement a site-specific health and Safety plan to cover all workers. A CAMP will be implemented during all ground-intrusive activities, with weekly reporting to NYSDEC and NYSDOH, and 24-hour notification for any action level exceedances and corrective actions taken.

Implementability – Technical implementability of the Unrestricted Use alternative would be slightly more difficult compared to alternative 1 as a result of having to remove a greater amount of soil from the Site.

Community Acceptance – Community acceptance will be evaluated based on comments to be received from the public in response to Fact Sheets, public comment periods on documents and other planned Citizen Participation activities. Public comments indicate overall project approval but have expressed concerns about work surrounding the adjacent historic church. Precautions during demolition were taken to ensure the safety of adjacent properties and structures.

Cost – The values used in estimating alternatives are order-of-magnitude estimates for comparing alternatives and are not meant to be a specific remedial criterion. The estimated cost for this Alternative is $2.62 Million. The cost summary for this alternative is provided in **Appendix G.**

7.5 Recommended Remedial Alternative

Based on the alternatives' evaluation Alternative 2 satisfies the remedial action objectives and is fully protective of human health and the environment and would be acceptable to the community.

8.0 CONCLUSIONS AND RECOMMENDATIONS

8.1 Remedial Investigation

The RI tasks were completed in accordance with a defined scope of work and approved RIWP. The following provides a summary of the investigation activities:

- A geophysical survey was conducted in the area identified by past ESAs as UST locations;
- Assessment of fill/native soil material by installing 20 soil borings and 1 test trench across the Site and collecting a total of 24 soil samples;
- Assessment of groundwater conditions by installing four (4) on-site groundwater monitoring wells in soil boring locations (three into bedrock and one in the overburden) and collecting a total of four (4) groundwater samples including a duplicate sample of RI MW-3;
- Performed laboratory analysis on all soil/water samples. Analysis included Part 375 metals (including hexavalent chromium), TCL VOCs plus TICs, TCL SVOCs plus TICs, pesticides/PCBs, herbicides (silvex), total cyanide, and 1,4-Dioxane/PFAS compounds;
- Assessment of sub-slab soil vapor intrusion by collecting four (4) subsurface soil vapor samples. Performed laboratory analysis on all air samples for TO-15 VOCs.

Soil Results Summary

The results of the RI soils investigation indicated that several SVOCs compounds (primarily PAHs) and metal compounds (most notably zinc, lead, mercury, barium, and cadmium) were detected throughout soil/fill material at variable concentrations above Restricted Residential and/or Unrestricted SCOs. VOCs (methylene chloride, PCE, and TCE), one pesticide (4,4'-DDT) and PFOS were detected in site soils above Unrestricted SCOs.

No PCBs, herbicides or cyanide were detected in site soils.

Groundwater Results Summary

The groundwater analytical results indicate concentrations of VOCs (PCE and TCE) and one metal (sodium) above TOGS guidance values. PFOA and PFOS were also detected above guidance values as presented in NYSDEC – Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs – April 2023 guidance document.

No SVOCs, PCBs, or herbicides were detected in site groundwater samples.

Soil Vapor Results Summary

The following provides a summary of the results of the RI soil vapor sample analytical program. All sub-slab vapor and soil vapor samples were collected in accordance with the NYSDOH Final Guidance for Evaluating Soil Vapor in The State of New York (2006) with updates (SVI Guidance). A total of four subsurface vapor samples were analyzed for TCL VOCs by EPA method TO-15.. While other CVOC and petroleum related contaminants were identified compared to the three VOCs guidance values from the TO-15 list of VOCs, the most notable concentrations are as follows:

- **Tetrachloroethylene** – Detected in all samples. The highest detection was 184 ug/m3 in RI VP-1 location.

  Trichloroethene – Detected in three samples (RI VP 1, RI VP-3, and RI VP-4). The highest detection was 155 ug/m3 in RI VP-1 location.

8.2 ALTERNATIVES ASSESSMENT

Based on the alternative's analysis evaluation, Alternative 2 – Conditional Track 1 Unrestricted Use remediation satisfies the remedial action objectives and is fully protective of human health and the environment. Therefore, Alternative 2 is the recommended final remedy for the Site.

Alternative 2 is a Conditional Track 1 cleanup that relies on the removal of all impacted soils exceeding Unrestricted SCOs and monitored natural attenuation and potential treatment of impacted groundwater. The Alternative 2 remediation and anticipated site surface features are depicted on **Figure 10**. The details of this alternative include:

- An Unrestricted Use alternative would necessitate removal of all soil/fill across the Site where soil concentrations exceed the Unrestricted SCOs or to bedrock whichever is shallower. Based on RI results, exceedances of Unrestricted Use SCOs were identified in shallow soils and fill materials at RI MW-1 when this well location was installed and select borings within the central and northern portions of the Site, primarily for SVOCs and metals. Based on RI data it is estimated that this would require soil removal to a depth of approximately seven (7) feet (approximate fill and natural soil or bedrock interface) across the entire Site, with localized deeper excavation as required where exceedances are encountered. The proposed excavation footprint would therefore encompass the entire BCP site boundary, with removal extending laterally across open areas and beneath former slab/foundation footprints. The estimated volume of soil required to be removed for this remedy would be 12,480 cubic yards. The removal of impacted soil will include the removal of all existing building slabs and hardscape areas and backfill all areas with clean soil to meet new development grades. Approximately 2,340 tons of existing slab and subbase would be removed in order to

implement the remedy. The anticipated surface features of the new development and remedial plan are depicted on **Figure 10**. Refer to **Appendix H** for site civil plans. Confirmation soil sampling would be conducted to verify compliance with Unrestricted SCOs prior to placement of the clean fill.

- Groundwater impacts, including solvent-related VOCs and PFAS compounds (PFOA and PFOS), have been documented in bedrock monitoring wells RI MW-1, MW-2, and MW-3, with detections above TOGS and Part 375 standards. These impacts are attributed to possible historical releases from former leather manufacturing operations possibly some contribution from off-site sources. By removing the overlying contaminated fill and sub-slab material to bedrock, the principal source of groundwater contamination will be eliminated, enabling natural attenuation of residual groundwater impacts. Post soil removal groundwater monitoring will be implemented to document that natural attenuation is occurring, which should be able to be documented within less than 5 years post Certificate of Completion. Soil vapor impacts are expected to be addressed through the removal of impacted soils and the eventual cleanup of Site groundwater. All intrusive work will be performed in accordance with an approved HASP and CAMP. CAMP results will be submitted weekly to NYSDEC and NYSDOH during intrusive activities, with exceedance notifications and corrective action reports provided within 24 hours.

- The UST would be closed in accordance with applicable NYSDEC regulations. However, unlike Alternative 1, the site would be remediated to achieve Unrestricted SCOs rather than Restricted Residential SCOs at a greater cost with longer short-term impacts.

- Assuming that the groundwater and soil vapor impacts are not resolved prior to Certificate of Completion, the conditional Track 1 remedy would include an EE and SMP for post remediation monitoring of contaminants in the groundwater and soil vapor on a quarterly basis for the first year following remediation and post construction SVI Investigation once the lowest level of the building is enclosed with active HVAC. At that time an assessment will be conducted regarding the condition of both media and the need for further monitoring or treatment. A passive SSDS will be installed as a green remediation precautionary measure in the event the SSDS needs to be activated. Soil vapor will be addressed through the complete removal of impacted Site soils followed by the placement of clean soil and the monitored natural attenuation and treatment (if required) of Site groundwater for five years. It should also be noted that if parcel occupancy occurs prior to meeting Unrestricted Site conditions, soil vapor contamination will be addressed through the activation and operation of an SSDS in the new building which will protect human health during the conditional period.

- Should Unrestricted Use conditions not be met at the Site over a 5-year conditional period for groundwater and soil vapor, only a Track 2 Residential Use cleanup track would be achieved even though the soil met Unrestricted SCOs because the Site would still be subject to Site use restrictions due to the remaining groundwater contamination and associated soil vapor.

Buffalo, New York, 14213

Transmitted via email to: Jacob Cox <jcox@be3corp.com>

Dear Mr. Cox:

Re: Geophysical Survey Results, 333 1st Street, Niagara Falls, NY

1.0 INTRODUCTION

This letter report presents the results of the geophysical investigation performed for BE3 Corp in support of their environmental investigation of a portion of the property located at 333 1st Street in Niagara Falls, NY (the Site). The primary purpose of the investigation was to explore for anomalies indicative of underground storage tanks (UST's).

The geophysical investigation was designed to geophysically characterize the subsurface and focus a follow-up intrusive investigation, if warranted. The information provided herein is intended to assist BE3Corp with their assessment of potential environmental concerns at the Site. Maddan Geophysics LLC (MADDAN) performed data acquisition on October 28, 2024.

2.0 METHODOLOGY

A reference grid was installed at the Site to facilitate data acquisition along parallel survey lines spaced 3 feet apart. The grid was marked with orange and white spray paint with select coordinates labeled to aid in the reoccupation of stations if necessary. Grid coordinate 0N,0E was established at the southwest corner of the survey area with grid north taken as the direction parallel to the western edge of concrete pad in the area.

Time Domain Electromagnetic Survey Methodology (EM61)

The Geonics EM61 was used to map the distribution of buried metals at the Site. The EM61 unit is a high sensitivity, high resolution time domain electromagnetic (TDEM) metal detector that can detect both ferrous and nonferrous metallic objects. It has an approximate investigation depth of 10 feet. The processing console is contained in a backpack worn by the operator which

is interfaced to a digital data logger. The transmitter and two receiver coils are located on a two-wheeled cart that is pulled by the operator.

EM61 in use (Photo not from this site)

The device's transmitter coil generates a pulsed primary EM field at a rate of 150 pulses per second, inducing eddy currents into the subsurface. The decay rates of these eddy currents are measured by two, 3.28 foot by 1.64 foot (1 meter by ½ meter) rectangular receiver coils. By taking the measurements at a relatively long time frame after termination of the primary pulse, the response is practically independent of the survey area's terrain conductivity. Specifically, the decay rates of the eddy currents are much longer for metals than for normal soils allowing the discrimination of the two.

Data are collected from the EM61's two receiver coils. One of the receiver coils is located coincident to the transmitter coil. The other receiver coil is located 1.31 feet (0.4 meters) above the transmitter coil. Data from the top receiver coil are stored on Channel 1 of a digital data logger. Data from the bottom receiver coil are stored on Channel 2 of the data logger. Channel 1 and Channel 2 data are simultaneously recorded at each station location. The instrument responses are recorded in units of milliVolts (mV). Data were recorded digitally by a data logger at a rate of approximately 2 measurements per foot along the survey lines which were spaced 3 feet apart.

3.0 RESULTS

The EM61 data for the Site are shown in Figure 1. Areas suspected to be free of buried metals are shown as color shades of blue. All areas exhibiting a response greater than background (0 to ~40 mVolts) likely contain buried metals. Surface features that may create anomalous responses (I-beams, monitoring wells, pipes, etc) are noted on the figure.

One anomaly is identified for potential further investigation and is labelled A on Figure 1.

Anomaly A is a buried metal anomaly located in the northwest area of the survey area. Anomaly A may represent a UST or remnants of USTs and associated appurtenances, items of potential environmental significance, or miscellaneous buried metals.

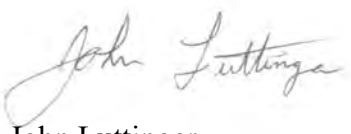
Any of the above background responses may be significant from an environmental perspective and these geophysical data should be viewed with recognition of the limitations of the technology employed.

4.0 LIMITATIONS

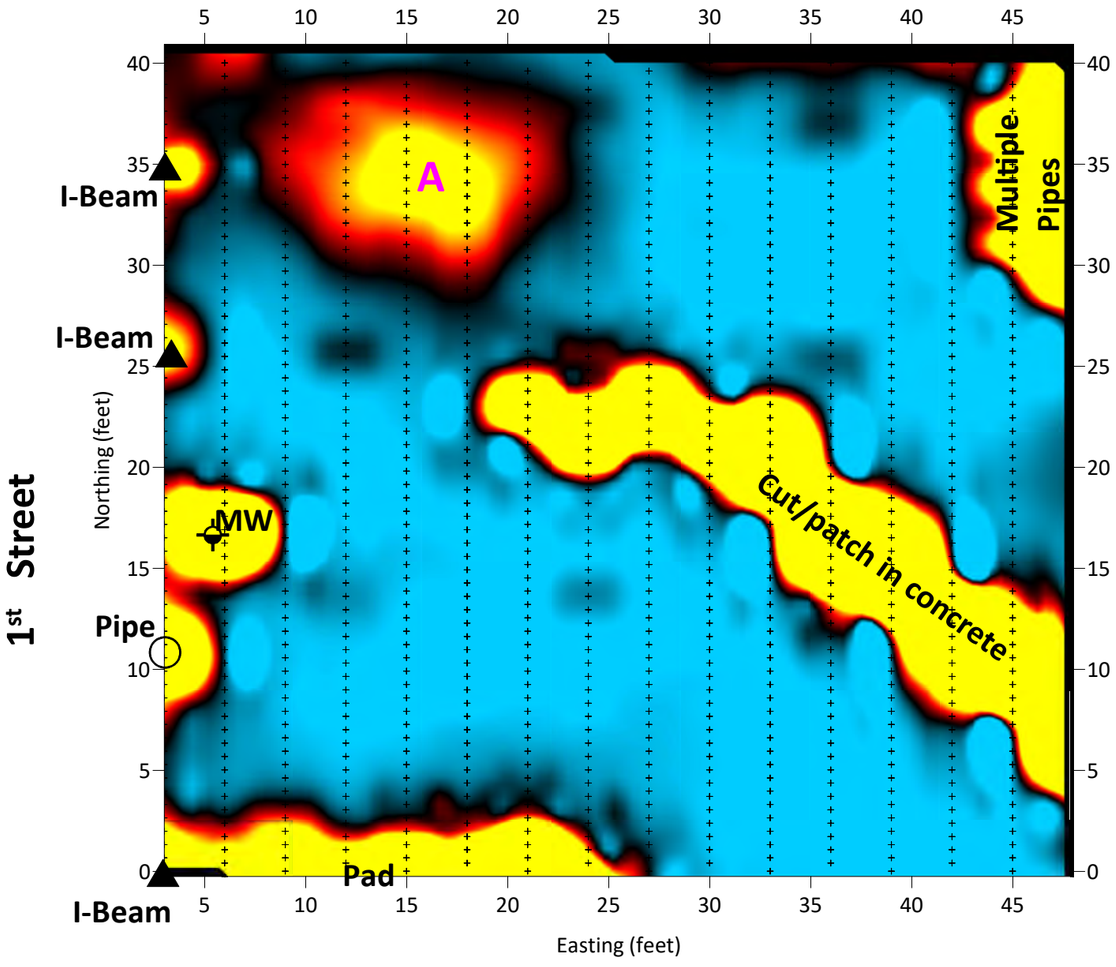
The geophysical methods used during this survey are established, indirect techniques for non-destructive subsurface reconnaissance exploration. As these instruments utilize indirect methods, they are subject to inherent limitations and ambiguities. Metallic surface features (electrical wires, scrap metal, etc.) preclude reliable non-invasive data/results beneath, and in the immediate vicinity of, the surface features. Targets such as buried drums, buried tanks, conduits, etc. are detectable only if they produce recognizable anomalies or patterns against the background geophysical data collected. As with any remote sensing technique, the anomalies identified during a geophysical survey should be further investigated by other techniques such as historical aerial photography, test pit excavation and/or test boring, if warranted.

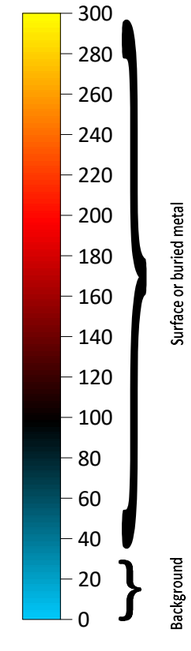
Please do not hesitate to contact us if you have any questions or require additional information.

Sincerely yours,
Maddan Geophysics, LLC



John Luttinger
President





A **Geophysical Anomaly for discussion**

The geophysical methods used during this survey are established, indirect techniques for non-destructive subsurface reconnaissance exploration. As these instruments utilize indirect methods, they are subject to inherent limitations and ambiguities. Metallic surface features preclude reliable non-invasive data/results beneath, and in the immediate vicinity of, the surface features. Targets such as buried drums, buried tanks, conduits, etc. are detectable only if they produce recognizable anomalies or patterns against the background geophysical data collected. As with any remote sensing technique, the anomalies identified during a geophysical survey should be further investigated by other techniques such as historical aerial photography, test pit excavation and/or test boring, if warranted.

CERTIFICATE OF COMPLETION FOR REMOVAL OF ASBESTOS CONTAINING MATERIAL

Project: USA Niagara Development Corporation
217 Old Falls Street and 333 First Street Demo

Building Address: 217 Old Falls Street and 333 First Street
Niagara Falls, NY 14303

Asbestos Contractor: ACP Buffalo
1231 Delaware Ave.
Buffalo, NY 14209

Dates of ACM Removal Work: June 24, 2024 – August 1, 2024

Asbestos work area(s): Roof (mechanical penetrations and various areas – roofing tar) and South Elevation (Windows - Glazing)

Final Clearance Achieved on: July 23. 2024 (Windows) and August 1, 2024 (Roof Mechanical Penetrations)

The undersigned, Raymond Cich of LiRo Engineers Inc., hereby certifies that:

All identified Asbestos Containing Material (ACM) has been satisfactorily removed from the structures located at the above noted address. Removal of the ACM was conducted in accordance with the regulations of the New York State Department of Labor (NYSDOL), United States Environmental Protection Agency (USEPA), and the Occupational Safety and Health Administration (OSHA).

All asbestos work areas have achieved satisfactory completion of a Project Monitor Visual Inspection as per ASTM Standard E1368 (Standard Practice for Visual Inspection of Asbestos Abatement Projects) in accordance with Part 56 of Title 12 of the Official Compilation of Codes, Rules and Regulations of the State of New York (12 NYCRR Part 56). ACM at the facility was limited to type and locations shown on design drawings AA-101 and AA-102, and were Exterior Non-Friable materials, therefore no air sampling was required to be conducted by applicable regulations.

Should you have any questions, please feel free to contact me at (716) 882-5476 ext. 462.

Sincerely,
LiRo Engineers, Inc.

Raymond Cich

1.0 - EXECUTIVE SUMMARY

1.0 EXECUTIVE SUMMARY

Watts Architecture & Engineering (Watts) was retained by USA Niagara Development Corporation (USA Niagara) to perform a pre-renovation survey for lead-based paint (LBP) at the Smokin Joes Native Center located at 333 First Street and 217 Old Falls Street in Niagara Falls, New York.

Per information provided by the City of Niagara Falls, USA Niagara and representatives from Smokin Joes, the subject property consists of an approximate 85,423 square foot pre-engineered steel building that was used as a Native American Indian center and theater, buffet, coffee shop, souvenir store and as a small graphics art studio and clothing manufacturing operation. The structure consists of U-shaped building that wraps around the Niagara Falls First Presbyterian Church. The facility was reportedly built in approximately 1987 and was formerly a telecommunications/call center. The southwest wing was reportedly renovated in approximately 1996. The facility was renovated in approximately 2015 and was converted to the Smokin Joes Native center with a buffet, bar, kitchen, indoor miniature golf course, coffee shop, souvenir store and theater.

The purpose of the survey was to identify LBP at the facility as part of due diligence. LBP is defined, when analyzed by portable X-Ray Fluorescence (XRF) methods, as paint that contains lead at 1.0 milligram per square centimeter (1 mg/cm^2) or greater.

The field work for the lead-based paint (LBP) investigation included the following:

- A review of existing drawings with respect to the project limits and the proposed scope of work.
- A visual site inspection of the subject building to test representative surfaces for suspect lead-based paint (LBP).
- Utilization of a portable XRF analyzer to test representative surfaces for the presence of LBP or lead-containing materials (i.e. ceramic wall tile); and
- Documentation of tested areas with reference drawings.

TESTING METHODOLOGY

Painted building components were grouped by testing combinations. A testing combination is characterized by location, component type, substrate, and visible color. Refer to Section 2.1 for a complete listing of all XRF readings that were taken for this project.

For a typical lead-based paint evaluation, each XRF reading is identified by the side of the room it was collected from (North, East, South and West), the component analyzed, the substrate and the paint color of the visible paint film. Sides East, South and West progress in a clockwise direction from the North side. Watts utilized directional coordination for this evaluation. Refer to the reference drawings in Section 3.0 for floor plans referencing the different areas that were

tested as part of this project.

For the purposes of this project, the Occupational Safety & Health Administration's (OSHA) Lead in Construction Standard (29 CFR 1926.62) applies. This standard applies to all construction work where an employee may be occupationally exposed to lead. Construction work is defined as work for construction, alteration and/or repair, including painting and decorating. It includes but is not limited to the following:

- Demolition or salvage of structures where lead or materials containing lead are present;
- Removal or encapsulation of materials containing lead;
- New construction, alteration, repair, or renovation of structures, substrates, or portions thereof, that contain lead, or materials containing lead;
- Installation of products containing lead;
- Lead contamination/emergency cleanup;
- Transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed, and
- Maintenance operations associated with the construction activities.

XRF CALIBRATION

In order to field verify the calibration and accuracy of the XRF equipment, "calibration checks" are made both by the equipment itself and by the operator. Before the XRF will allow any testing for lead-based paint, it requires a "standardization" reading. This is accomplished by placing the standardization clip over the end of the XRF when prompted by the XRF. Upon the completion of the standardization reading, the XRF will display a Pass or Fail result. If the standardization is successful, the operator checks the calibration of the XRF against National Institute of Standards and Technology (NIST) lead samples that were provided by the manufacturer. The operator's calibration checks are taken at the beginning and the end of the testing period, and approximately every four hours, if necessary. The calibration checks are acceptable if the average of the readings is between 1.0 and 1.1 mg/cm^2. All standardization and calibration readings were within the acceptable limits for the readings collected for this project.

FINDINGS

Representative XRF readings were taken on representative surfaces of all building components throughout the facility and exterior.

None of the building components at the Smokin Joes Native Center were identified to be lead-containing or to be coated with lead-based paint.

The following building components at the Smokin Joes Native Center were determined to be coated with non-lead-based paint:

- Interior and exterior window frames.
- Window sills.
- Interior and exterior door frames.
- Wood, metal and fiberglass doors.
- Drywall surfaces with a variety of colors on walls, soffits, ceilings and the circular ceiling detail in the buffet area, all office areas, buffet, theater, displays and corridors.
- Ceramic wall tiles in bathrooms (non-lead glazing).
- Ceramic floor tiles in bathrooms (non-lead glazing).
- Painted exterior stucco walls and columns.
- Handrails.
- Painted murals on the concrete floor.
- Concrete floors in the buffet area, south display area and theater.
- Painted 12″ x 12″ floor tiles.
- Wood platforms on the theater stage.
- Paint on support steels to roof-mounted components.
- Metal caps on the roof parapets.
- Metal foil membrane on the roof decks.
- Metal roof decks.

This report is based primarily on the results of visual site observations and a general survey of the conditions at the Smokin Joes Native Center in Niagara Falls, New York. Watts did not perform a comprehensive inspection (room by room) of all interior and exterior building components. Representative XRF readings were taken from each distinct type of building component associated with each building in order to be able to determine if those components were covered with lead-based paint.

The lead-based paint survey was performed by Watts' personnel on October 10, 2018.

1.0 – EXECUTIVE SUMMARY

1.0 EXECUTIVE SUMMARY

Watts Architecture & Engineering (Watts) was retained by USA Niagara Development Corporation (USA Niagara) to perform a pre-renovation survey for asbestos-containing materials (ACM) at the Smokin Joes Native Center located at 333 First Street and 217 Old Falls Street in Niagara Falls, New York.

The purpose of the survey was to identify ACM at the facility and as part of the due diligence process as part of property acquisition. Watts was not authorized to perform destructive testing such as but not limited to: disassembly/cutting of equipment and utilities; demolition of walls/ceilings to inspect for concealed suspect ACM; coring of floor slabs and sub floors; excavation of perimeter concrete/asphalt to expose foundation walls; etc.. Suspect ACM that may be associated with destructive methods such as these is not represented in this report. Prior to any renovation or demolition activities, it is recommended that testing of this nature be performed to ensure that ACM is not disturbed.

Per information provided by the City of Niagara Falls, USA Niagara and representatives from Smokin Joes, the subject property consists of an approximate 85,423 square foot pre-engineered steel building that was used as a Native American Indian center and theater, buffet, coffee shop, souvenir store and as a small graphics art studio and clothing manufacturing operation. The structure consists of U-shaped building that wraps around the Niagara Falls First Presbyterian Church. The facility was reportedly built in approximately 1987 and was formerly a telecommunications/call center. The southwest wing was reportedly renovated in approximately 1996. The facility was renovated in approximately 2015 and was converted to the Smokin Joes Native center with a buffet, bar, kitchen, indoor miniature golf course, coffee shop, souvenir store and theater. At the time of the Watts' site visits the coffee shop and souvenir store were open seasonally and the graphic arts operation was in the process of re-locating to another off-site location. The theater, buffet, bar and kitchen operations had ceased and equipment associated with operations was in the process of being sold or moved off-site.

Field survey work for this asbestos survey was conducted by Watts' personnel on October 3 - 16, 2018 and included the following:

- A visual site inspection to identify suspect ACM within the proposed project limits.
- Collection and laboratory analysis of bulk samples from each identified suspect material within the proposed project limits for ACM.
- Documentation of bulk sample locations on site drawings and chain-of-custody forms; and
- Photographs.

ASBESTOS-CONTAINING MATERIALS

The inspection included the collection of one hundred-forty (140) bulk samples of suspect ACM materials identified at the subject property. ACM is defined as any material containing more than one percent (1%) of asbestos.

Based on the laboratory analysis and visual observations, **the following materials at the Smokin Joes Native Center have been identified as ACM:**

- **Gray-black tar at the base of roof-mounted HVAC components, curbs, vent pipes and access hatch.** The tar was observed on the support bases for the roof-mounted heating and air conditioning units, ventilation fans, elevated curbs (former component locations) and at the base of vent pipes across the roofs (both the main north-south roof and the separate but attached southwest building roof). There are approximately 34 HVAC components, 11 round vents with square curbs and 23 vent pipes/support pipes on the roof. The tar was observed or assumed to be present beneath metal foil jackets at the base of all roof mounted air conditioning units, heating equipment, vents, pipes and curbs and extending onto the adjacent metal roof. A total of approximately 965 square feet of asbestos-containing tar is present. The tar was observed to be non-friable and to be to be in fair condition.

- **Gray-black tar on the south parapet cap for the north-south wing.** The tar was limited to the west half of the far south end parapet cap, extending to but not past the roof peak. Approximately 32 square feet of asbestos-containing tar was observed at this location. The tar was observed to be non-friable and to be in fair condition.

- **Gray-black tar along the east edge of the southwest roof and extending onto the adjacent north-south roof**. The tar extended approximately 2 feet along the roof edge and along the roof drain along the east edge of the southwest roof. The same tar continued as patches on the southwest edge of the adjacent north-south roof. Approximately 130 square feet of tar was observed along the east edge of the southwest roof and approximately 120 square feet was observed on the adjacent west edge of the north-south roof, totaling approximately 250 square feet. The tar was observed to be non-friable and to be in fair condition.

NON-ASBESTOS-CONTAINING MATERIALS

The following materials have been determined to be non-ACM:

- 12″ x 12″ beige floor tiles and associated mastic.
- 12″ x 12″ tan floor tiles (lower layer beneath 12″ x 12″ floor tiles in vestibule/lobby areas) and associated mastic.
- Leveling compound beneath 12″ x 12″ beige floor tiles.

Non-ACM Materials (Continued)

- 12″ x 12″ beige floor tiles with multi-colored streaks and associated mastic.
- 12″ x 12″ yellow floor tiles and associated mastic.
- 4″ black cove base and associated mastic.
- Drywall, joint compound and paper tape on ceilings.
- Drywall, joint compound and paper tape on walls.
- Glazing compound on door and windows of storefront entrance.
- Glazing compound on 2nd floor storefront windows.
- Caulk on exterior metal door frames.
- 2′ x 2′ rough finish ceiling tile.
- Carpet adhesive on concrete.
- Grout and thin set associated with 4″ ceramic wall tiles.
- Grout and set coat associated with 8″ x 8″ gray ceramic floor tiles.
- Bathroom caulk (Men's and Women's Bathrooms.)
- 2′ x 4′ pin hole and slot pattern ceiling tile.
- 2′ x 4′ ceiling tiles with faux 2′ x 2′ pattern.
- 2′ x 2′ hard suspended ceiling tile.
- Yellow epoxy coating on concrete floor.
- Gaskets at water supply line valves and gasket flanges.
- Butt end sealant on fiberglass insulated piping.
- Paper and foil jackets on fiberglass insulation on piping.
- Wall panel adhesive on drywall.
- Gray flange sealant on sheet metal HVAC ducts.
- Black tar sealant on the metal deck beneath metal foil.
- Brown tar patch on screw heads of roof peak.
- Black tar and rubber 12″ x 12″ patches on the metal roof*.
- Black caulk on screw heads-southwest roof.
- Black tar and rubber patches-far west parapet southwest roof.
- Black tar seam on the west concrete parapet north-south wing roof.

Non-ACM Materials (Continued)

- Black window frame caulk-exterior windows.
- Exterior stucco.
- Spray-on fireproofing on columns and beams.
- Soft black window glazing compound in windows set in fire doors*.
- Soft gray caulk beneath the metal cap on roof edges.

*All Contractors shall note these materials had detectable levels of asbestos present but were found to be less than or equal to less than 1% total asbestos. Therefore, these materials are classified as Non-ACM. Contractors shall follow Federal regulations including those established for OSHA for work involving such non-ACM asbestos materials.

OBSERVATIONS

The circa 2015 renovations for the Smokin Joes Cultural center included repainting of existing walls, new floor tiles, ceiling tiles, renovations to bathrooms and the theater, kitchen, bar and native Indian cultural display areas. The building materials associated with the renovations were sampled separately from earlier materials and were determined to be non-ACM. Building materials associated with the original building materials (such as drywall, joint compound and 12" x 12" beige floor tiles and suspended ceiling tiles) were also determined to be non-ACM.

Spray-on fireproofing was collected from beams and columns from first floor areas and from the unfinished second floor. No asbestos or vermiculite was detected in samples of the spray-on fireproofing.

The facility does not have a basement. Hand-dug test excavations at the foundation did not reveal evidence of suspect ACM waterproofing on the foundation.

The windows on the facility were of similar style and materials. No asbestos was detected in window or storefront-style window/door system sealanats.

Steel fire doors were located in the facility. The fire doors did not have any suspect ACM fill. The fire doors were steel with cardboard interiors.

Included in this report are: drawings indicating approximate bulk sample locations, chain-of-custody forms, laboratory results, laboratory accreditations, and consultant's license and certification.

It is the belief of Watts that this investigation has sampled all readily accessible materials associated with the building. However, if additional suspect materials are identified that have not been tested, it is recommended that samples of each material be collected and analyzed for asbestos as appropriate.

2.0 – ASBESTOS-CONTAINING MATERIALS

2.0 ASBESTOS-CONTAINING MATERIALS

Sampling and Laboratory Methodology

A NYSDOL-certified asbestos inspector from Watts collected bulk samples of all readily accessible suspect ACM that was identified associated with the facility. Bulk samples were collected using simple hand tools from each matrix identified as a potential ACM.

Samples were delivered with the proper chain-of-custody forms to AmeriSci Richmond located in Richmond, VA a New York State accredited laboratory that is a participant in the Environmental Laboratory Approval Program (ELAP) and National Voluntary Laboratory Approval Program (NVLAP). All materials, except ceiling tiles and non-friable organically bound (NOB) materials, were analyzed using Polarized Light Microscopy (PLM) using Method 198.1. Ceiling tiles and NOBs, which include, but are not limited to, flooring materials, mastics, and caulks underwent gravimetric reduction and were analyzed by Polarized Light Microscopy (PLM) Method 198.6. Any ceiling tiles or NOB materials that were found to be negative under PLM were then analyzed by Transmission Electron Microscopy (TEM) Method 198.4. The New York State Department of Health (NYSDOH) protocol requires analysis by TEM if the PLM analysis does not confirm the presence of asbestos.

This section includes information on all suspect ACM sampled. This section contains the following: A Homogeneous Materials List containing the homogeneous materials identified, their corresponding sample numbers, and whether or not they are ACM, as well as a drawing identifying the approximate locations of asbestos bulk samples.

Where possible, Watts visually inspected the identified ACM to assess its condition. The condition of the ACM was classified as good, fair or poor. The requirement for each designation is as follows:

Good: Material with no visible damage or deterioration or showing very limited damage or deterioration.

Fair: The surface of the material is crumbling, blistering, water-stained, gouged, punctured or otherwise damaged with the damage covering less than one tenth of the surface if the damage is evenly distributed or up to 25% of the material if the damage is localized.

Poor: The surface of the material is crumbling, blistering, water-stained, gouged, punctured or otherwise damaged with the damage covering more than one tenth of the surface if the damage is evenly distributed or more than 25% of the material if the damage is localized. Material with large areas hanging from the substrate, delaminated, heavily gouged, crushed, etc.

	Roof Southwest Wing, Beneath Metal Cap on East Roof Edge Southeast Corner		18165-13-140	NAD	NAD	

Abbreviations:
NA = Not analyzed
NAD = No asbestos detected
NA/PS = Not Analyzed Positive Stop
Non-ACM: Remaining residue less than 1% of original sample after processing. Material is material is Non-ACM

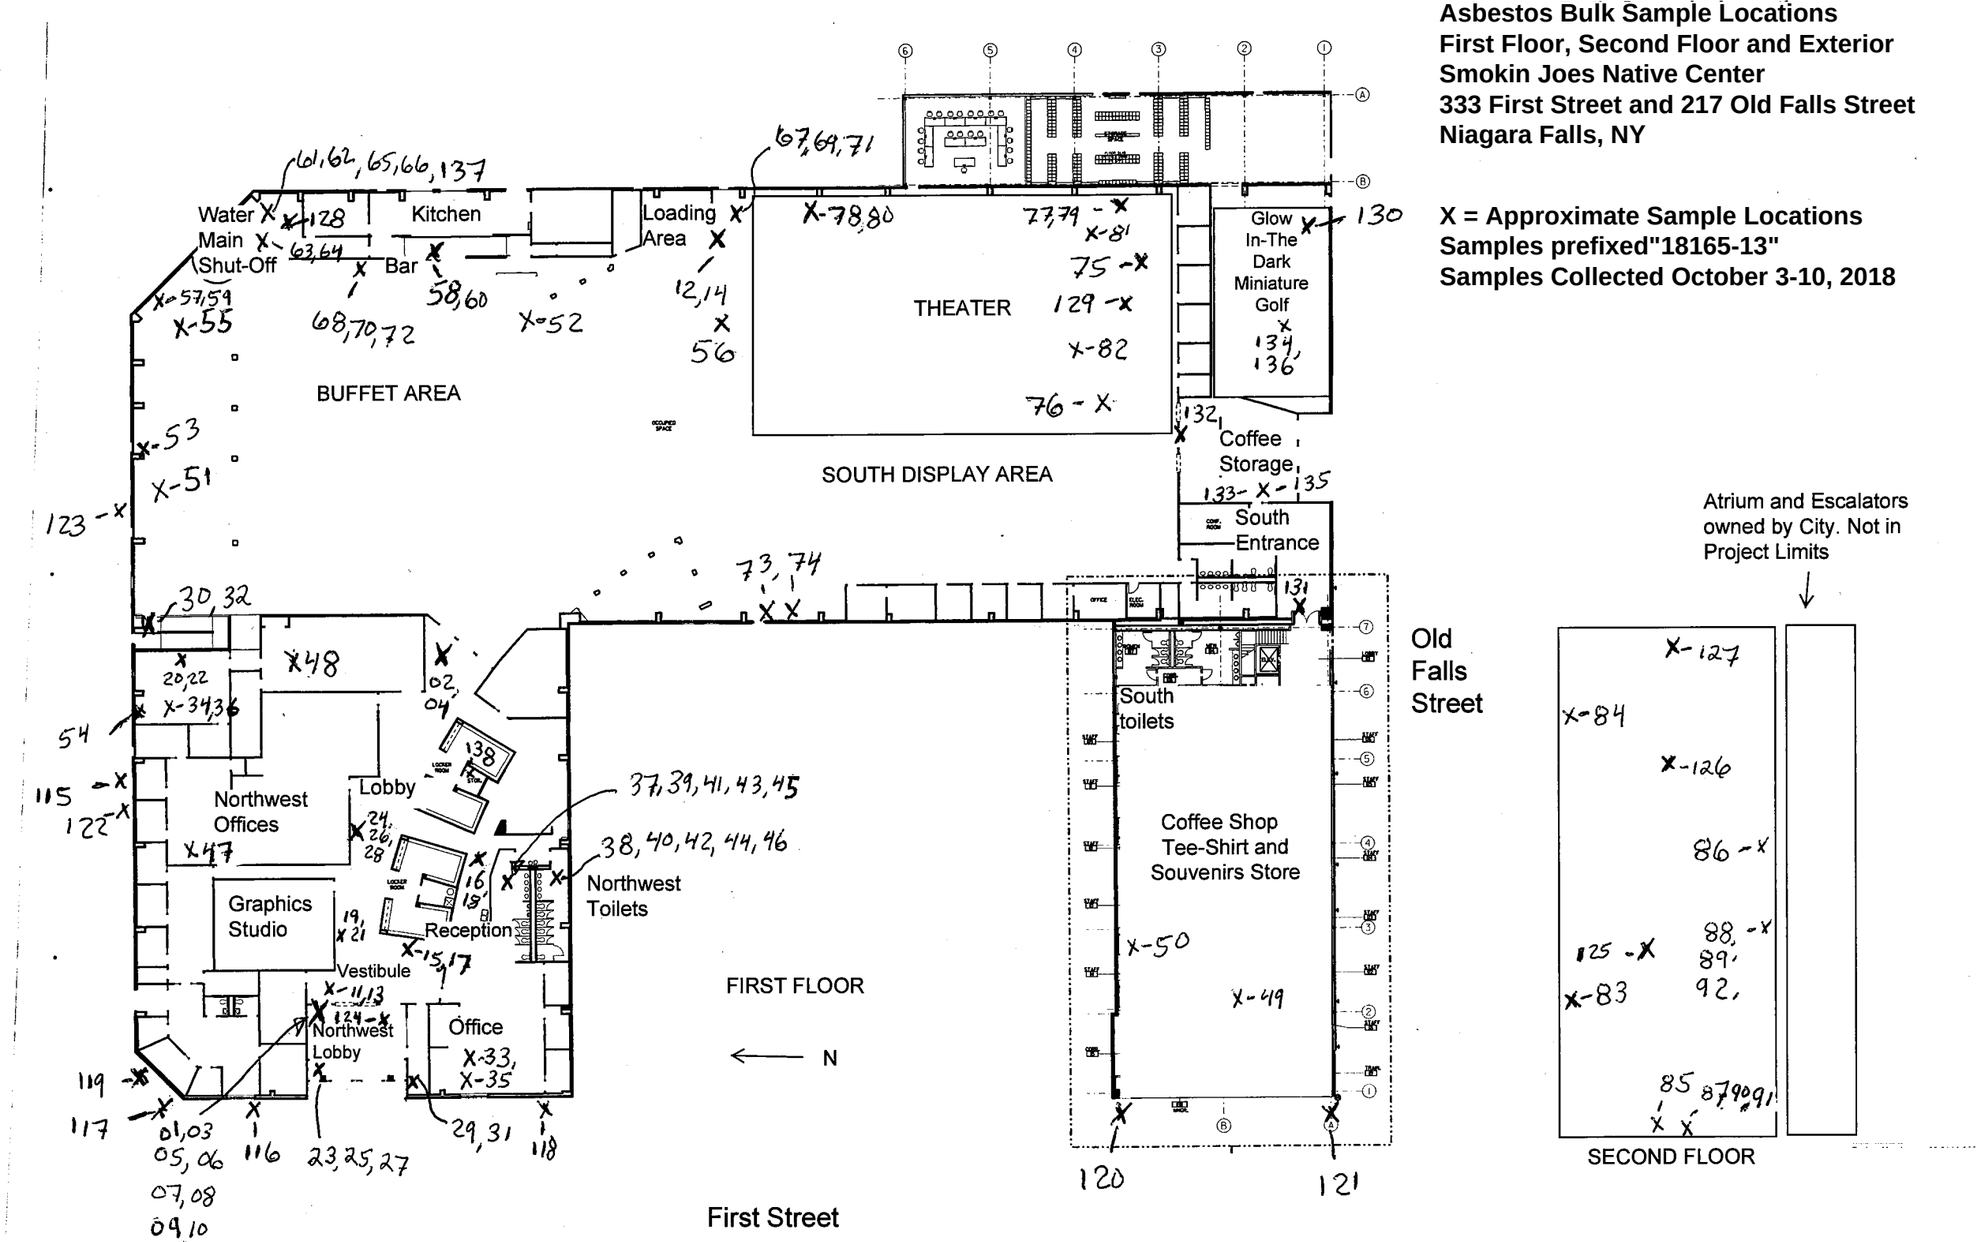
Type
T = Thermal
S = Surfacing

ACM
Y = Yes
N = No
M = Miscellaneous

2.1 – ASBESTOS SAMPLE LOCATION DRAWINGS

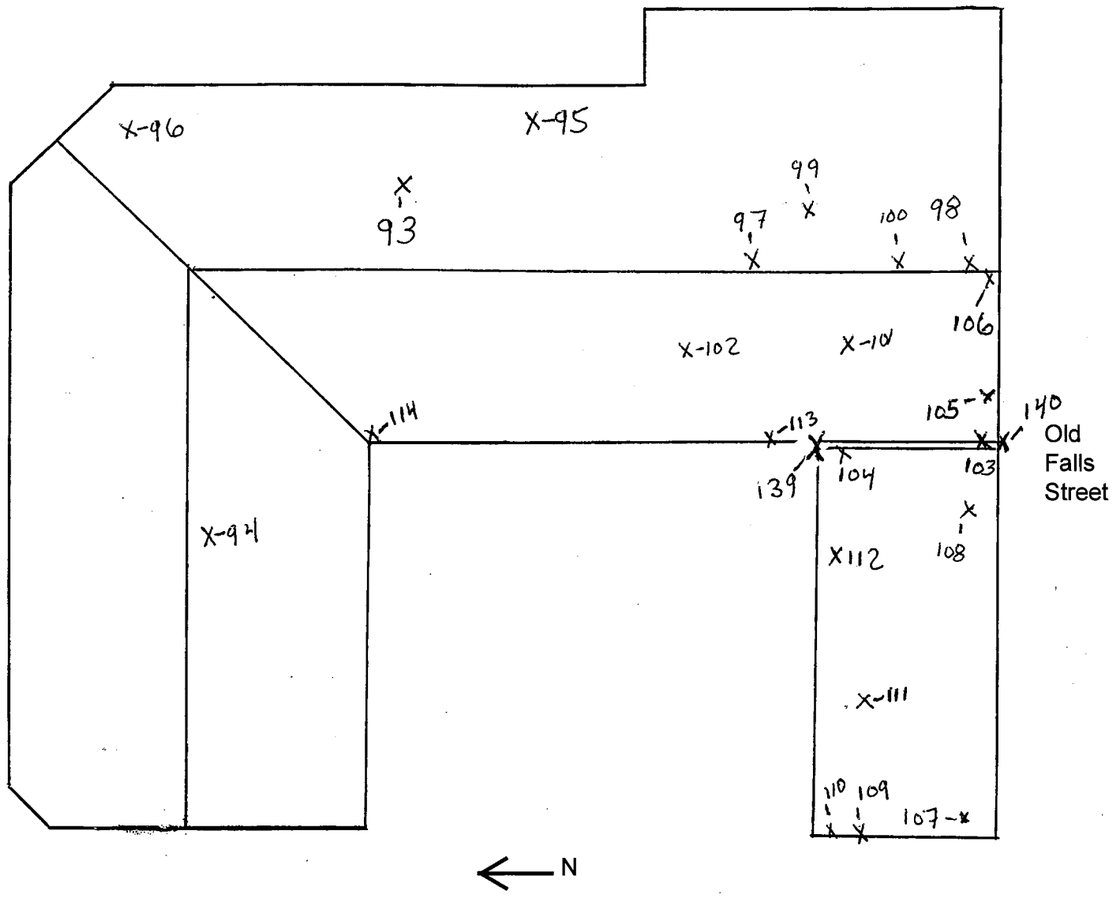
Asbestos Bulk Sample Locations
First Floor, Second Floor and Exterior
Smokin Joes Native Center
333 First Street and 217 Old Falls Street
Niagara Falls, NY

X = Approximate Sample Locations
Samples prefixed"18165-13"
Samples Collected October 3-10, 2018



Asbestos Bulk Sample Locations
Roof
Smokin Joes Native Center
333 First Street and 217 Old Falls Street
Niagara Falls, NY

X = Approximate Sample Locations
Samples Prefixed "18165-13"
Samples Collected October 3 - 10, 2018



2.2 – PHOTOGRAPHS

Photo 1 – View of the northwest entrance lobby. No asbestos was detected in samples of drywall, joint compound, tape, floor tiles or floor tile mastic in the facility.

Photo 2 – View of the buffet seating area and bar. No asbestos was detected in samples of drywall, joint compound, flooring, ceiling tiles or spray-on fireproofing.

Photo 3 – View of the northwest entrance and vestibule. No asbestos was detected in samples of floor tiles, floor tile mastic, drywall, joint compound or ceiling mastic.

Photo 4 – View of spray-on fireproofing on beams and columns. No asbestos or vermiculite was detected in samples of the spray-on fireproofing.

Photo 5 – View of the theater area. No asbestos was detected in samples of drywall, joint compound, ceiling tiles, carpet adhesive or spray-on fireproofing.

Photo 6 – View of northwest Men's Restroom. No asbestos was detected in samples of ceramic wall tile grout or thin set or in the ceramic floor tile grout or set coat in the various bathrooms.

Photo 7 – View of insulation on piping. No asbestos was detected in gaskets, pipe insulation or end sealant.

Photo 8 – View of floor tiles in the southeast former indoor miniature golf area and coffee shop. No asbestos was detected in samples of floor tiles or the associated mastic.

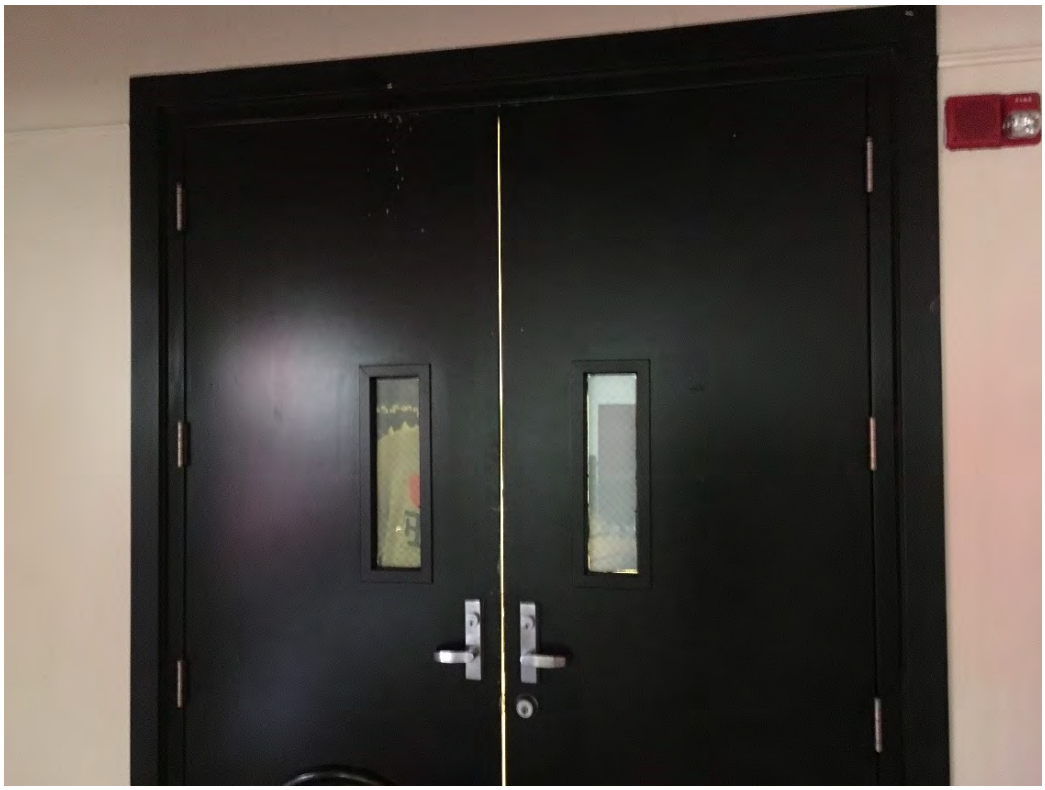


Photo 9 – View of a set of fire doors at the southwest corridor leading to the Smokin Joes Coffee Shop and souvenir store. No asbestos was detected in the window glazing compound in the fire doors. No suspect ACM was observed in the door interior packing.

Photo 10– View of the unfinished second floor level. No asbestos was detected in samples of drywall, joint compound, tape, window glazing compound, duct sealant or spray-on fireproofing.

Photo 11 –Exterior view of the north wall of the facility. No asbestos was detected in samples of window glazing compound or window frame caulk, door glazing compound or door frame caulk.

Photo 12 – Exterior view of the southwest elevation. No asbestos was detected in samples of stucco, window glazing compound or caulk.

Photo 13 – View of the metal foil and tar surface covering the majority of the metal deck to the roof. ACM black tar was observed at the base of roof mounted components, vents and pipes.

Photo 14 – Close-up view of a section of the metal foil and underlying non-ACM tar across the majority of the roof metal deck. The foil was not observed on the southern portion of the north-south roof or the southwest wing roof.

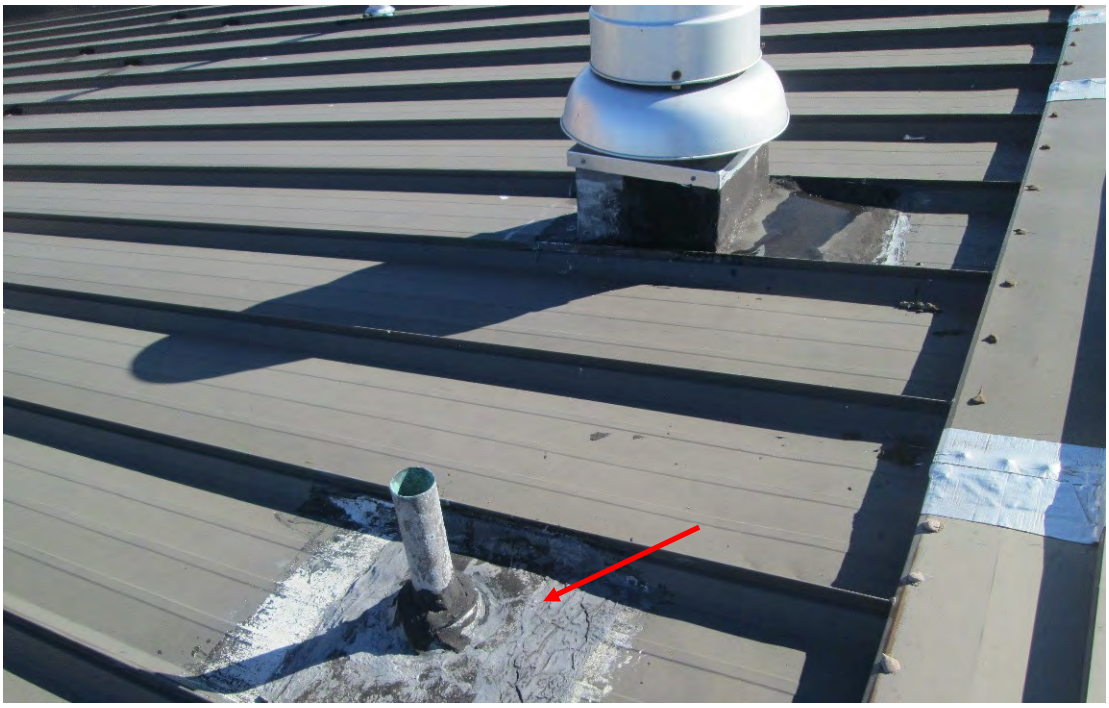

Photo 15 – View of ACM black tar at the base of a vent pipe and on the metal deck at the southern portion of the north-south roof (arrow).

Photo 16 – View of ACM gray-black tar along the eastern edge of the southwest roof (arrow). The same tar was observed as patches along the southwest edge of the adjacent north-south wing roof.

Photo 17 – View of ACM tar along the south parapet of the north-south wing roof (arrow). The tar was observed along the western half of the south parapet only.

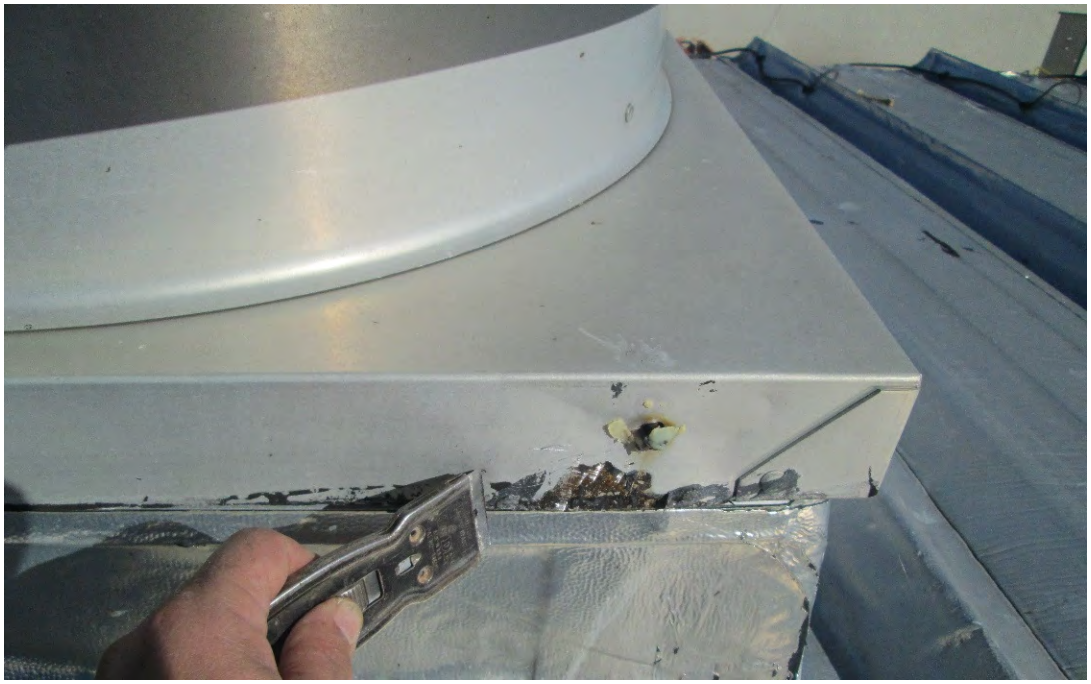

Photo 18 – View of ACM tar at the base to a roof mounted vent. The tar extended beneath the metal foil on the vent base.

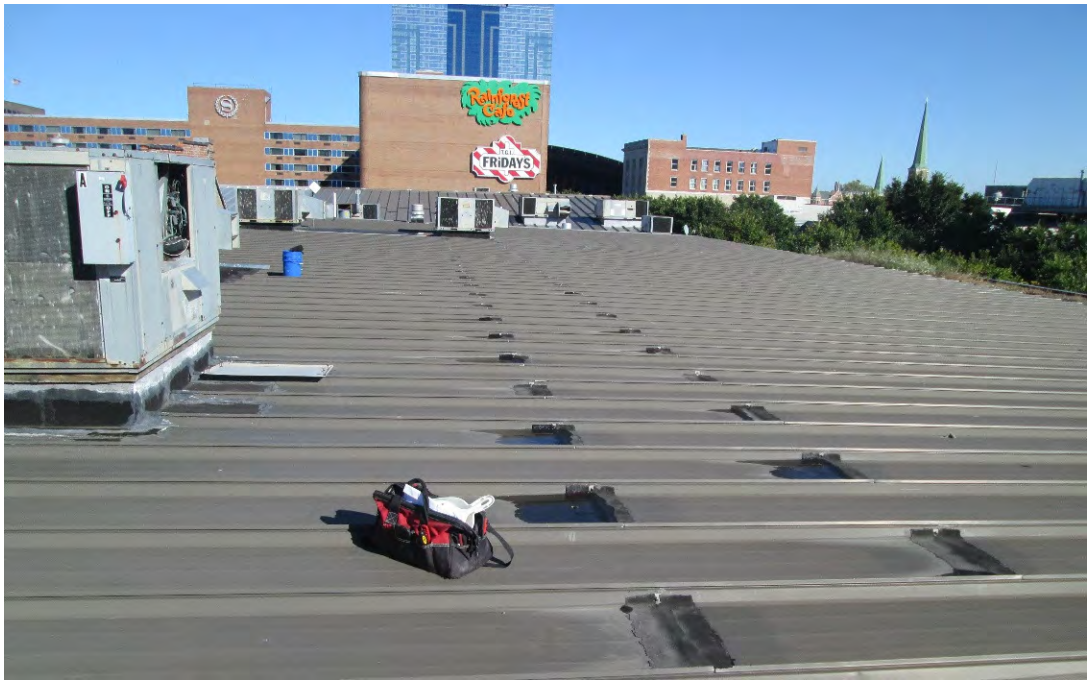

Photo 19 – View of rubber and tar patches observed in an orderly pattern on the southern portion of the north-south roof and the southwest roof. The tar and patches were determined to be non-ACM.

Photo 20 – View of black tar on the north-south roof west concrete parapet (arrow). The tar was determined to be non-ACM.

2.3 – LABORATORY REPORTS

BULK SAMPLE CHAIN-OF-CUSTODY FORMS

The purpose of the chain-of-custody form is to reduce the possibility of misidentifying individual samples, to help trace any samples that may be lost, and to provide a record certifying that the samples were delivered to and received by the analytical laboratory.

An important feature of this form is the signature section at the bottom, identifying all persons who handled the samples.

PLM Bulk Asbestos Report

18165; Niagara Falls Due Diligence Reports - Downtown Properties; 333 1st St/217 Old Falls St Smokin' Joe's Native Center

---

Reporting Notes:

(1) Vermiculite was not detected during analysis.

Analyzed by: Jean L. Mayes Date: 10/11/2018 Reviewed by:

*NAD = no asbestos detected, Detection Limit <1%, Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; "Present" or NVA = "No Visible Asbestos" are observations made during a qualitative analysis; NA = not analyzed; NA/PS = not analyzed / positive stop; PLM Bulk Asbestos Analysis by EPA 600/R-93/116 per 40 CFR 763 (NVLAP Lab Code 101904-0) and ELAP PLM Analysis Protocol 198.1 for New York friable samples which includes quantitation of any vermiculite observed (198.6 for NOB samples) or EPA 400 pt ct by EPA 600/M4-82-020 (NYSDOH ELAP Lab # 10984); CA ELAP Lab # 2508; Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. NAD or Trace results by PLM are inconclusive, TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full without the approval of the laboratory. This PLM report relates ONLY to the items tested.

Table I
Summary of Bulk Asbestos Analysis Results

18165; Niagara Falls Due Diligence Reports - Downtown Properties; 333 1st St/217 Old Falls St Smokin' Joe's Native Center

AmeriSci Sample #	Client Sample#	HG Area	Sample Weight (gram)	Heat Sensitive Organic %	Acid Soluble Inorganic %	Insoluble Non-Asbestos Inorganic %	** Asbestos % by PLM/DS	** Asbestos % by TEM
129	18165-13-129	61	----	----	----	----	NAD	NA
Location:	Spray-On Fireproofing; Theater - on Beams Above Suspended Ceiling Tiles							
130	18165-13-130	61	----	----	----	----	NAD	NA
Location:	Spray-on Fireproofing; 1st Floor - SE Miniature Golf, on Column							

TEM Analyzed By: T. Brian Keith_____ Date Analyzed: 10/12/2018 Reviewed By: _____ Date Reviewed: 10/12/2018

Semi-Quantitative Analysis: NAD = no asbestos detected; NA = not analyzed; NA/PS = not analyzed due to positive stop; Trace = <1%;
PLM analysis by EPA 600/R-93/116 per 40 CFR 763 (NVLAP Lab Code 101904-0) or NY ELAP 198.1 for New York friable samples which includes quantitation of any vermiculite observed (198.6 for NOB samples) or EPA 400 pt ct by EPA 600/M4-82-020 (NY ELAP Lab # 10984);
TEM prep by EPA 600/R-93/116 Section 2.3 (analysis by Section 2.5, not covered by NVLAP Bulk accreditation); or NY ELAP 198.4 for New York NOB samples (NY ELAP Lab # 10984);

** Warning Notes: Consider PLM fiber diameter limitation, only TEM will resolve fibers <0.25 micrometers in diameter. TEM bulk analysis is representative of the fine grained matrix material and may not be representative of non-uniformly dispersed debris, soils or other heterogeneous materials for which a combination PLM/TEM evaluation is recommended; Quantitation for beginning weights of <0.1 grams should be considered as qualitative only.

Table I
Summary of Bulk Asbestos Analysis Results

18165; Niagara Falls Due Diligence Reports - Downtown Properties; 333 1st St/217 Old Falls St Smokin' Joe's Native Center

AmeriSci Sample #	Client Sample#	HG Area	Sample Weight (gram)	Heat Sensitive Organic %	Acid Soluble Inorganic %	Insoluble Non-Asbestos Inorganic %	** Asbestos % by PLM/DS	** Asbestos % by TEM

TEM Analyzed By: Jean L. Mayes _____ Date Analyzed: 10/15/2018 Reviewed By: _____ Date Reviewed: 10/15/2018

Semi-Quantitative Analysis: NAD = no asbestos detected; NA = not analyzed; NA/PS = not analyzed due to positive stop; Trace = <1%;
PLM analysis by EPA 600/R-93/116 per 40 CFR 763 (NVLAP Lab Code 101904-0) or NY ELAP 198.1 for New York friable samples which includes quantitation of any vermiculite observed (198.6 for NOB samples) or EPA 400 pt ct by EPA 600/M4-82-020 (NY ELAP Lab # 10984);
TEM prep by EPA 600/R-93/116 Section 2.3 (analysis by Section 2.5, not covered by NVLAP Bulk accreditation); or NY ELAP 198.4 for New York NOB samples (NY ELAP Lab # 10984);

** Warning Notes: Consider PLM fiber diameter limitation, only TEM will resolve fibers <0.25 micrometers in diameter. TEM bulk analysis is representative of the fine grained matrix material and may not be representative of non-uniformly dispersed debris, soils or other heterogeneous materials for which a combination PLM/TEM evaluation is recommended; Quantitation for beginning weights of <0.1 grams should be considered as qualitative only.

Reporting Notes:

Analyzed by: William M. Dunstan Wm M Dunstan Date: 10/15/2018 Reviewed by: Wm M Dunstan

*NAD = no asbestos detected, Detection Limit <1%, Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; "Present" or NVA = "No Visible Asbestos" are observations made during a qualitative analysis; NA = not analyzed; NA/PS = not analyzed / positive stop; PLM Bulk Asbestos Analysis by EPA 600/R-93/116 per 40 CFR 763 (NVLAP Lab Code 101904-0) and ELAP PLM Analysis Protocol 198.1 for New York friable samples which includes quantitation of any vermiculite observed (198.6 for NOB samples) or EPA 400 pt ct by EPA 600/M4-82-020 (NYSDOH ELAP Lab # 10984); CA ELAP Lab # 2508; Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. NAD or Trace results by PLM are inconclusive, TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full without the approval of the laboratory. This PLM report relates ONLY to the items tested.

3.0 – LABORATORY ACCREDITATIONS

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER

Expires 12:01 AM April 01, 2019
Issued April 01, 2018

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

DR. THOMAS R. MCKEE
AMERISCI RICHMOND
13635 GENITO RD
MIDLOTHIAN, VA 23112

NY Lab Id No: 10984

is hereby APPROVED as an Environmental Laboratory for the category
ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved subcategories and/or analytes are listed below:

Miscellaneous

Asbestos in Friable Material	Item 198.1 of Manual
	EPA 600/M4/82/020
Asbestos in Non-Friable Material-PLM	Item 198.6 of Manual (NOB by PLM)
Asbestos in Non-Friable Material-TEM	Item 198.4 of Manual
Asbestos-Vermiculite-Containing Material	Item 198.8 of Manual

Serial No.: 57653

Property of the New York State Department of Health. Certificates are valid only at the address shown, must be conspicuously posted, and are printed on secure paper. Continued accreditation depends on successful ongoing participation in the Program. Consumers are urged to call (518) 485-5570 to verify the laboratory's accreditation status.

United States Department of Commerce
National Institute of Standards and Technology

Certificate of Accreditation to ISO/IEC 17025:2005

NVLAP LAB CODE: 101904-0

AmeriSci Richmond

Midlothian, VA

is accredited by the National Voluntary Laboratory Accreditation Program for specific services, listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communique dated January 2009).

2018-07-01 through 2019-06-30

Effective Dates

Appendix D

DRILLING SUMMARY

Geologist: Tim Burmier

Contractor: Atlantic Testing Laboratories

Operator: Steve Wolcawicz & Alex Delude

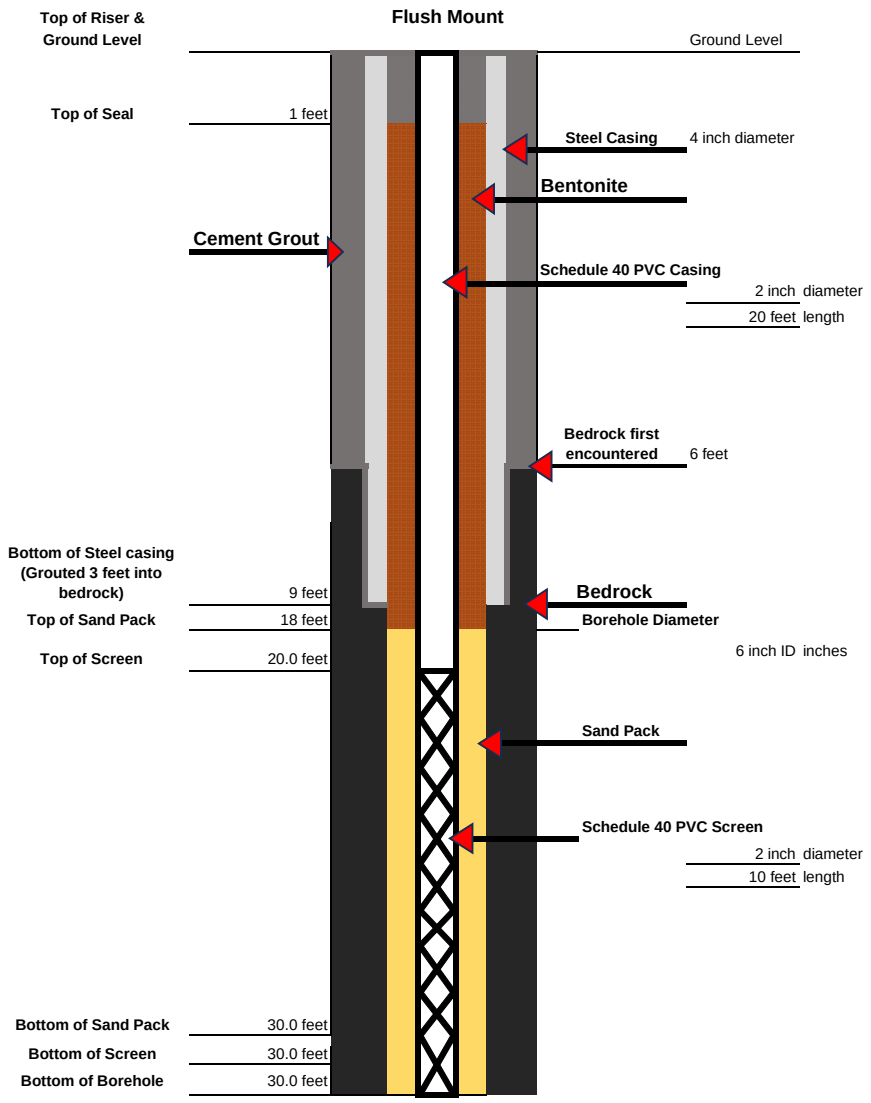
Model: Tire Mounted Drill Rig

Start Date: 10/17/2024

Steel Casing: 10/17/2024

Bedrock Advancement: 10/23/2024

WELL DESIGN



CASING MATERIAL

0-9' bgs: 4" Steel casing (Flush Mount and Cover)

Monitor: 2" Schedule 40 PVC

SCREEN MATERIAL

Type: 2" Schedule 40 PVC

Slot Size: 0.010"

Setting: 20' - 30' bgs

FILTER MATERIAL

Type: Sand Pack #0

Setting: 18-30'

SEAL MATERIAL

Type 1: Bentonite

Setting: 1-18'

Type 1: Grout

Setting: 0-1'

COMMENTS:

Truck mounted drill rig augered through fill material approximately 2 feet into bedrock (12' bgs)
Steel casing grouted two feet into bedrock and allowed to set prior to air hammer operations

Air hammer attachment used down to 30' bgs

Poor recovery was observed in split spoon cores collected from 0-10' bgs due to obstructions such as rock, concrete, crushed stone, and brick.

Red arrowhead designates a line identifying a type of material or items.

MW-3 Bedrock Coring log

Run	Depth	fracture	Rock Quality Designation (RQD)	Lithology
1	14-16.5	numerous	20%	finely crystalline, medium gray brown Lockport Group dolostone, hard, numerous fractures, 6'' vuggy zone.
	17			
	17.1			
	17.6			
	17.9-19.0	mechanical breaks		
2	19.5		62%	
	19.8			
	20.7			
	21.2			
	21.9			
	22.5			
	24			
3	24.7		0%	as above with horizontal hackly fractures, core block
	25			
	25.5			
4	26		92%	as above with trace gypsum patches, trace vugs, calcite, and thin shaly partings, medium gray brown with one 2.5 ' long piece of core. Horizontal fractures
	26.7			
	27			
	27.5			
	28.5			
	30.5			
5	30.8		64%	as above some 1'' brown banding. Measured water level at 19.0 feet below grade, dropping to 19.7 feet
	31.1			
	31.54			
	33.2			
	33.4			
	34.9			
	35.5			
6	35.6-36.9	numerous fractures	40%	Hard, medium gray brown finely crystalline dolostone becoming dark gray at 39-40.5 feet. Water at 17.3 feet, then 21.5 feet BGS after 45 minutes
	37.5			
	37.9			
	38.2			
	38.8			
	39.4			
	39.8			
	40-41	numerous fractures		
7	42		66%	Hard, medium gray brown finely crystalline dolostone, trace gypsum and calcite patches, horizontal fractures
	45.5			
8	46		40%	as above some thin light gray patches and banding
	49.5			
	50			
	50.5	Total depth		

BRYDGES ENGINEERING
IN ENVIRONMENT AND ENERGY, DPC

333 1st Street, Niagara Falls, NY

Date: October 22, 23 2024

DRILLING SUMMARY

Geologist: Tim Burmier

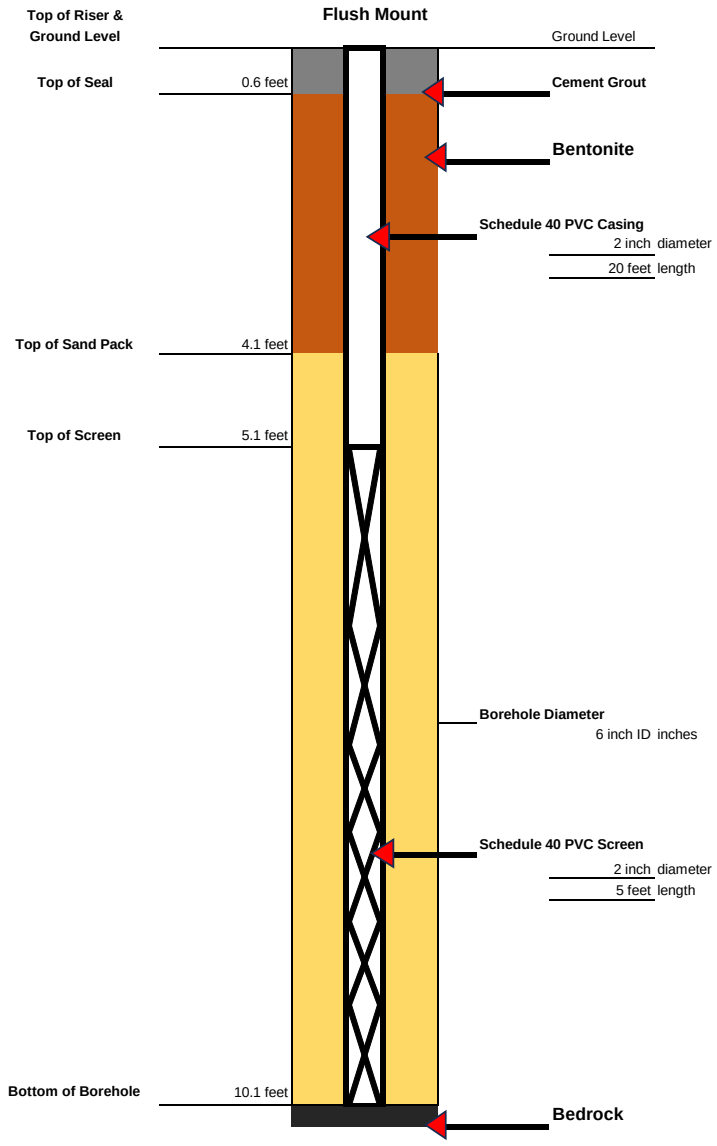
Contractor: Atlantic Testing Laboratories

Operator: Steve Wolcawicz & Alex Delude

Model: Tire Mounted Drill Rig

Date: 10/18/2024

WELL DESIGN



CASING MATERIAL

Surface Flush Mount and Cover

Monitor: 2" Schedule 40 PVC

SCREEN MATERIAL

Type: 2" Schedule 40 PVC

Slot Size: 0.010"

Setting: 5.1' - 10.1' bgs

FILTER MATERIAL

Type: Sand Pack #0
Setting: 4.1-10.1'

SEAL MATERIAL

Type 1: Grout
Setting: 0.6-1'

Type 1: Bentonite
Setting: 0.6-4.1'

COMMENTS:

Truck mounted drill rig augured through fill material to top of bedrock (10.1' bgs)

Well set at top of bedrock, screened in the overburden (no bedrock advancement date or extra date of installed steel casing).

Poor recovery was observed in split spoon cores collected from 0-10' bgs, especially beyond 7' bgs, due obstructions such as rock, concrete, crushed stone, and brick.

Flush mounted curb box installed at surface

Red arrowhead designates a line identifying a type of material or items.

LEGEND

- Cement Grout
- Bentonite Seal
- Sand Pack
- Bedrock
- PVC Riser Pipe
- PVC Screen

Client: Edgemere Development

2015-Present Consultant

Allegany and Cattaraugus Counties Orphan Oil Well Plugging Program- oversight of field operations (2015-2021). Field inspection and documentation of well plugging operations. Locate oil wells and plot with GPS instrument. Submit forms to obtain plugging permits from NYSDEC. Submit plugging report to State. Interact with State and Federal employees and landowners. Find historic oil lease documents and current surface owner information at Allegany Court House

1996-2015 URS / AECOM

New York City Transit: field operations coordinator of sampling crews and drilling, laboratory, survey, and disposal subcontractors at approximately 100 sites in New York City, (as well as preparation of investigation plans and reports). Additional responsibilities included approval of invoices and tracking costs associated with the contracts. The primary objectives are site investigations to evaluate and remediate petroleum contamination resulting from leaking USTs at New York City Department of Design and Construction (NYCDDC) and New York City Transit (NYCT) facilities throughout New York City. Duties include issuance of work plans and Health and Safety Plans to all concerned parties, and preparation of schedules for submittal to URS field staff, subcontractors, key facility staff, and the regulators.

Additional experience with URS includes the participation in investigations of petroleum product spills and active and inactive hazardous waste sites. Projects have included drilling, well installation, and other field activities on numerous New York State Superfund Phase I, Phase II, remedial investigations/feasibility studies (RI/FSs), and geotechnical pre-design investigations. Primary and contributing author of various geotechnical and environmental reports.

Key Projects

New York Power Authority, Groundwater Study: Participated in an extensive nested monitoring well installation project along the length of a buried water conduit in Niagara Falls. Examined rock cores and prepared detailed lithology logs, performed pressure tests on core holes at 17 well locations to determine hydraulically conductive fracture intervals, and used lithologic data and groundwater analytical data to construct geologic cross sections showing extent of saline groundwater within a fractured bedrock aquifer. Liaison with Tuscarora environmental group. Responsible for detailed geologic characterization portion of the report submitted for the re-licensing of the Niagara Power Project.

Stuart Olver Holtz, Supplemental Investigation, Henrietta, NY: Field coordinator of pre-design investigation of metals and solvent source area at the site. The soil and groundwater data from the investigation was used to evaluate an in-situ chemical oxidation remediation proposed for the site. Primary author of Supplemental Investigation report.

Dinaburg Site Remedial Investigation, Rochester, NY: Field coordinator of drilling crews and technicians at a former dry cleaning distributor located in a dense urban neighborhood. Activities included: geoprobe and auger drilling in residential yards, sidewalks and inside the facility, soil gas survey, water and soil sample collection, and public relations.

DuPont Necco Park, O&M Supervisor, Niagara Falls, NY: Responsibilities included assisting in tracking subcontractor costs, maintaining pumping wells, and coordinated activities of sampling contractors, analytical labs, drillers and surveyors at a hazardous waste site in Niagara Falls, NY. Coordinated DNAPL collection and disposal. Provided oversight of perimeter exploratory borings delineating the extent of DNAPL contamination, top of 'gumbo' clay and depth to bedrock prior to siting recovery wells.

Searsport Pipeline, Maine: Assisted on a Phase I environmental site assessment along a decommissioned 160 mile jet fuel pipeline for Air Force Center for Environmental Excellence (AFCEE). Functioned as the field lead on Phase II soil gas survey, contamination delineation at three pumping stations with geoprobe rig and test pit investigations at pipeline valves. Also functioned as the Phase III field lead with activities involving monitoring well installation and soil and groundwater sampling. Hired construction crew to cut access roads for well installations. Assisted in preparation and presentation of the results to Air Force.

Shallow Land Disposal Area- Armstrong County, PA provided oversight of well installations at 44 acre radioactive waste disposal site- a US Army Corps of Engineers FUSRAP site.

Bethlehem Steel- Lackawanna, NY- participated in a geotechnical investigation for capping the solid waste management units (SWMUs). Primary author of Phase 1 ESA of the galvanizing mill for a potential buyer.

Rose Valley Landfill- Poland NY. Field coordinator of preliminary investigation prior to capping dump site. Investigation included determining the extent of uncontrolled waste disposal, thickness of waste, depth to native soil, installation of bedrock and overburden wells, well development and sampling. Wrote the report submitted to the NYSDEC.

Previous Employment

Phillips Petroleum development geologist in the Texas Panhandle and exploration geologist in offshore California. Contract well site geologist in offshore Pearl River Basin, China.

Education

MA, Geology, State University of New York at Buffalo, 1978
Thesis: Field mapping of volcanic neck on Hopi Indian Reservation outlining eruptive history and petrography of xenolith inclusions.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-224373-1 Eurofins Buffalo

Job Narrative
480-224373-1

Receipt
The sample was received on 10/15/2024 4:35 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 16.2° C.

GC/MS VOA
Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-728699 and analytical batch 480-728670 were outside control limits for one or more analytes. See QC Sample Results for detail.

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-728699 and analytical batch 480-728670 was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 1633: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported. The following sample is impacted: R1 MW-3 (2-4') (480-224373-1).

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 240-631763 recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit in the opening CCB for the following sample: R1 MW-3 (2-4') (480-224373-1). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples are non detect for associated target analytes.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method 9012B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-729538 and analytical batch 480-729607 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Accreditation/Certification Summary

Client: Brydges Engineering in Environment & Energy DPC
Job ID: 480-224373-1
Project/Site: The Nest Site Analysis

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Cleveland

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	BE3
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
N	This flag indicates the presumptive evidence of a compound.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
^5-	Linear Range Check (LRC) is outside acceptance limits, low biased.
^5+	Linear Range Check (LRC) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-224492-1 Eurofins Buffalo

Job Narrative
480-224492-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The sample was received on 10/17/2024 4:10 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.0°C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-728936 recovered above the upper control limit for Chloromethane and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: R1 MW-1 (2-4') (480-224492-1).

Method 8260C: The following sample was analyzed using medium level soil analysis to bring the concentration of target analytes within the calibration range: R1 MW-1 (2-4') (480-224492-1). Elevated reporting limits (RLs) are provided.

Method 8260C: The method blank for analytical batch preparation batch 480-728938 and analytical batch 480-728936 contained Methylene Chloride below the reporting limit (RL). This compound is considered a common laboratory contaminant. The associated sample(s) was not re-extracted and/or re-analyzed because the concentration of the common lab contaminant in the samples was similar to the concentration in the method blank. The following sample is impacted: R1 MW-1 (2-4') (480-224492-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: The following sample was diluted due to color, appearance, and viscosity: R1 MW-1 (2-4') (480-224492-1). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-729241 recovered above the upper control limit for 2-Nitroaniline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: R1 MW-1 (2-4') (480-224492-1).

Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: Atrazine. The laboratory control sample (LCS) associated with preparation batch 480-728928 and analytical batch 480-729241 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Herbicides
Method 8151A: Insufficient sample volume was provided for the following sample for the analysis: R1 MW-1 (2-4') (480-224492-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
Method 8081B: The following sample required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: R1 MW-1 (2-4') (480-224492-1).

Eurofins Buffalo

Job ID: 480-224492-1 (Continued) Eurofins Buffalo

Method 8081B: The following sample was diluted due to the nature of the sample matrix: R1 MW-1 (2-4') (480-224492-1). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The method blank for preparation batch 480-728929 and analytical batch 480-729100 contained 4,4'-DDT, alpha-BHC, delta-BHC and Lindane above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS

Method 1633: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported. The following sample is impacted: R1 MW-1 (2-4') (480-224492-1).

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 240-631763 recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported.

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit in the closing CCB for the following sample: R1 MW-1 (2-4') (480-224492-1). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries, samples are non detect for associated target analytes.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-224566-1 Eurofins Buffalo

Job Narrative
480-224566-1

Receipt
The samples were received on 10/18/2024 4:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.9º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-729066 recovered above the upper control limit for Chloromethane, Cyclohexane, Trichlorofluoromethane and Vinyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: 12I-MW-4 (1-3') (480-224566-1), 12I-MW-4 (10-12') (480-224566-2) and 12I-MW-2 (2-4') (480-224566-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to color, appearance, and viscosity: 12I-MW-4 (10-12') (480-224566-2) and 12I-MW-2 (2-4') (480-224566-3). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-729559 recovered above the upper control limit for 2-Nitroaniline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: 12I-MW-4 (1-3') (480-224566-1), 12I-MW-4 (10-12') (480-224566-2) and 12I-MW-2 (2-4') (480-224566-3).

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: 12I-MW-2 (2-4') (480-224566-3). These results have been reported and qualified.

Method 8270D: The following compound has been spiked at a level above the upper range of the initial calibration: Atrazine. The laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) associated with preparation batch 480-729224 and analytical batch 480-729434 recovered within acceptable limits for this analyte and has been qualified with an "E" flag.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The following samples were diluted due to the nature of the sample matrix: 12I-MW-4 (10-12') (480-224566-2) and 12I-MW-2 (2-4') (480-224566-3). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: (480-224566-B-3-G MS) and (480-224566-B-3-H MSD). As such, spike and surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The method blank for preparation batch 480-729364 and analytical batch 480-729407 contained 4,4'-DDT above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method 9012B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-729538 and analytical batch 480-729607 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 480-224566-1 (Continued) Eurofins Buffalo

Organic Prep
Method 3550C: Insufficient sample volume was provided for the following sample for the analysis: 12I-MW-4 (1-3') (480-224566-1).

Method 3550C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: 12I-MW-4 (10-12') (480-224566-2), 12I-MW-2 (2-4') (480-224566-3), (480-224566-B-3 MS) and (480-224566-B-3 MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	be3
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
^5-	Linear Range Check (LRC) is outside acceptance limits, low biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-224894-1 Eurofins Buffalo

Job Narrative
480-224894-1

Receipt
The samples were received on 10/28/2024 4:38 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to color, appearance, and viscosity: BH-2 (2-4') (480-224894-1), BH-4 (2-4') (480-224894-2), BH-7 (2-4') (480-224894-3), (480-224894-A-1-B MS) and (480-224894-A-1-C MSD). Elevated reporting limits (RL) are provided.

Method 8270D: The following samples required a dilution due to the nature of the sample matrix: BH-2 (2-4') (480-224894-1) and BH-7 (2-4') (480-224894-3). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-730417 recovered above the upper control limit for 2-Nitroaniline and Di-n-octyl phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: BH-2 (2-4') (480-224894-1), BH-4 (2-4') (480-224894-2) and BH-7 (2-4') (480-224894-3).

Method 8270D: The following samples were diluted due to the nature of the sample matrix: (480-224894-A-1-B MS) and (480-224894-A-1-C MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The following samples were diluted due to the nature of the sample: (480-224894-A-1-F MS) and (480-224894-A-1-G MSD). As such, surrogate and spike recoveries are below the calibration range,estimated, and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The following samples were diluted due to the nature of the sample: BH-2 (2-4') (480-224894-1), BH-4 (2-4') (480-224894-2) and BH-7 (2-4') (480-224894-3). As such, surrogate recoveries are below the calibration range, estimated, and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The method blank for preparation batch 480-730372 and analytical batch 480-730567 contained alpha-BHC, delta-BHC and Lindane above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed. The following associated samples are impacted: BH-2 (2-4') (480-224894-1), BH-4 (2-4') (480-224894-2) and BH-7 (2-4') (480-224894-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 240-633666 recovered above the upper control limit for. The samples associated with this CCV were below the RL for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 3550C: The following samples required a Florisil clean-up, via 3620C, to reduce matrix interferences: BH-2 (2-4') (480-224894-1), BH-4 (2-4') (480-224894-2), BH-7 (2-4') (480-224894-3), (480-224894-A-1 MS) and (480-224894-A-1 MSD).

Job ID: 480-224894-1 (Continued) Eurofins Buffalo

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Brydges Engineering in Environment & Energy DPC
Job ID: 480-224894-1
Project/Site: The Nest Site Analysis - Soil

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Cleveland

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
N	This flag indicates the presumptive evidence of a compound.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-224950-1 Eurofins Buffalo

Job Narrative
480-224950-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/30/2024 4:22 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.2°C.

Receipt Exceptions
COC lists MS for sample 5 and MSD for sample 7. Lab assigned MS/MSD to both sample points pending client/PM resolutuon.

VP-1 (2-4') (480-224950-5), VP-1 (2-4') (480-224950-5[MS]), VP-1 (2-4') (480-224950-5[MSD]), VP-3 (2-4') (480-224950-7), VP-3 (2-4') (480-224950-7[MS]) and VP-3 (2-4') (480-224950-7[MSD])

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-731001 recovered above the upper control limit for 4-Methyl-2-pentanone (MIBK). The samples associated with this CCV were non-detect for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BH-10 (2-4') (480-224950-1), VP-4 (2-4') (480-224950-2), VP-4 QA/QC (2-4') (480-224950-3), VP-2 (2-4') (480-224950-4), VP-1 (2-4') (480-224950-5) and VP-3 Native (8-9') (480-224950-9).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-731000 recovered above the upper control limit for Cyclohexane. The sample(s) associated with this CCV were non-detect for the affected analyte; therefore, the data have been reported. The associated sample is impacted: VP-3 (2-4') (480-224950-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: Due to the matrix, the following samples could not be concentrated to the final method required volume: VP-3 (2-4') (480-224950-7), VP-3 (2-4') (480-224950-7[MS]) and VP-3 (2-4') (480-224950-7[MSD]). The reporting limits (RLs) are elevated proportionately.

Method 8270D: The following samples were diluted due to color, appearance, and viscosity: BH-10 (2-4') (480-224950-1), VP-4 (2-4') (480-224950-2), VP-1 (2-4') (480-224950-5), VP-1 (2-4') (480-224950-5[MS]), VP-1 (2-4') (480-224950-5[MSD]), VP-3 (2-4') (480-224950-7), VP-3 (2-4') (480-224950-7[MS]) and VP-3 (2-4') (480-224950-7[MSD]). Elevated reporting limits (RL) are provided.

Method 8270D: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: VP-4 QA/QC (2-4') (480-224950-3). These results have been reported and qualified.

Method 8270D: The following samples were diluted due to the nature of the sample matrix: VP-1 (2-4') (480-224950-5[MSD]), VP-3 (2-4') (480-224950-7[MS]) and VP-3 (2-4') (480-224950-7[MSD]). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-730560 and analytical batch 480-730591 was outside control limits. The following samples were diluted due to the nature of the sample matrix: VP-1 (2-4') (480-224950-5[MS]), VP-1 (2-4') (480-224950-5[MSD]), VP-3 (2-4') (480-224950-7[MS]) and VP-3 (2-4')

(480-224950-7[MSD]). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The following samples required a dilution due to the nature of the sample matrix: BH-10 (2-4') (480-224950-1) and VP-1 (2-4') (480-224950-5). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The following sample was diluted due to the nature of the sample matrix: VP-3 (2-4') (480-224950-7). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-730591 recovered above the upper control limit for 1,4-Dioxane and 2-Nitroaniline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: BH-10 (2-4') (480-224950-1), VP-4 (2-4') (480-224950-2), VP-4 QA/QC (2-4') (480-224950-3), VP-2 (2-4') (480-224950-4), VP-1 (2-4') (480-224950-5), VP-3 (2-4') (480-224950-7) and VP-3 Native (8-9') (480-224950-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Herbicides
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
Method 8081B: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: BH-10 (2-4') (480-224950-1), VP-4 (2-4') (480-224950-2), VP-4 QA/QC (2-4') (480-224950-3), VP-1 (2-4') (480-224950-5), VP-1 (2-4') (480-224950-5[MS]), VP-1 (2-4') (480-224950-5[MSD]), VP-3 (2-4') (480-224950-7), VP-3 (2-4') (480-224950-7[MS]) and VP-3 (2-4') (480-224950-7[MSD]).

Method 8081B: The following samples were diluted due to the nature of the sample matrix: BH-10 (2-4') (480-224950-1), VP-4 (2-4') (480-224950-2), VP-4 QA/QC (2-4') (480-224950-3), VP-1 (2-4') (480-224950-5) and VP-3 (2-4') (480-224950-7). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: VP-1 (2-4') (480-224950-5[MS]), VP-1 (2-4') (480-224950-5[MSD]), VP-3 (2-4') (480-224950-7[MS]) and VP-3 (2-4') (480-224950-7[MSD]). As such, spike and surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

Method 8081B: The method blank for preparation batch 480-730565 and analytical batch 480-730754 contained 4,4'-DDT above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed. The following associated samples are impacted: BH-10 (2-4') (480-224950-1), VP-4 (2-4') (480-224950-2), VP-4 QA/QC (2-4') (480-224950-3), VP-2 (2-4') (480-224950-4), VP-1 (2-4') (480-224950-5), VP-3 (2-4') (480-224950-7) and VP-3 Native (8-9') (480-224950-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 240-633665 recovered above the upper control limit for Perfluoroheptanesulfonic acid (PFHpS), Perfluorononanesulfonic acid (PFNS) and Perfluorodecanesulfonic acid (PFDS). The samples associated with this CCVL were below the reporting limit for the affected analytes; therefore, the data have been reported.

Method 1633: The low level continuing calibration verification (CCVL) associated with batch 240-633665 recovered above the upper control limit for Perfluorooctanesulfonic acid (PFOS). The samples associated with this CCVL were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Job ID: 480-224950-1 (Continued) Eurofins Buffalo

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 9012B: The following samples ms/msd recovery is ND due to the samples reporting limit being 1.1.Due to this reanalysis was not performed.

VP-1 (2-4') (480-224950-5) and VP-3 (2-4') (480-224950-7)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Brydges Engineering in Environment & Energy DPC
Job ID: 480-224950-1
Project/Site: The Nest Site Analysis

Client Sample ID: BH-10 (2-4')
Lab Sample ID: 480-224950-1

480-224950 Chain of Custody

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☒ Unknown ☐ Radiological

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ Return To Client ☒ Disposal By Lab ☐ Archive For _____ Months

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-224998-1 Eurofins Buffalo

Job Narrative
480-224998-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/30/2024 3:55 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 2.2º C, 2.8º C, 3.0º C and 3.3º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-730795 recovered above the upper control limit for 2-Hexanone. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: RI MW-3 DUP (480-224998-2), RI MW-1 (480-224998-3) and RI MW-2 (480-224998-4).

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-730914 recovered above the upper control limit for Carbon tetrachloride and Trichlorofluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: RI MW-3 (480-224998-1).

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 480-730914 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The following associated samples are impacted: RI MW-3 (480-224998-1[MS]) and RI MW-3 (480-224998-1[MSD])

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The continuing calibration verification (CCV) associated with batch 480-730787 recovered outside acceptance criteria, low biased, for Hexachlorobenzene and Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The following associated sample is impacted: RI MW-3 (480-224998-1).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-730787 recovered above the upper control limit for bis (2-chloroisopropyl) ether, 2-Nitroaniline, 4-Nitrophenol and Bis(2-ethylhexyl) phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: RI MW-3 (480-224998-1).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-731032 recovered outside acceptance criteria, low biased, for Hexachlorocyclopentadiene. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The following associated samples are impacted: RI MW-3 DUP (480-224998-2), RI MW-1 (480-224998-3) and RI MW-2 (480-224998-4).

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-731032 recovered above the upper control limit for bis (2-chloroisopropyl) ether, 2-Nitroaniline, 4-Nitrophenol and Bis(2-ethylhexyl) phthalate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: RI MW-3 DUP (480-224998-2), RI MW-1 (480-224998-3) and RI MW-2 (480-224998-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Eurofins Buffalo

Job ID: 480-224998-1 (Continued) Eurofins Buffalo

GC Semi VOA
Method 8081B: The method blank for preparation batch 480-731202 and analytical batch 480-731303 contained 4,4'-DDT, delta-BHC, Endosulfan II and Lindane above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed. The following associated samples are affected: RI MW-3 (480-224998-1), RI MW-3 DUP (480-224998-2), RI MW-1 (480-224998-3) and RI MW-2 (480-224998-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 1633: Dilution performed due to high amount of particulate matter per analyst visual inspection. Aliquot taken. Laboratory proceeded with analysis.

RI MW-2 (480-224998-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 3510C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: RI MW-3 (480-224998-1), RI MW-3 (480-224998-1[MS]), RI MW-3 (480-224998-1[MSD]), RI MW-3 DUP (480-224998-2), RI MW-1 (480-224998-3) and RI MW-2 (480-224998-4).

Method 3510C: After solvent exchange, the color of the extract changed while concentrating due to some kind of reaction with the vapors from 225074-1.

RI MW-3 (480-224998-1), RI MW-3 (480-224998-1[MS]), RI MW-3 (480-224998-1[MSD]), RI MW-3 DUP (480-224998-2), RI MW-1 (480-224998-3) and RI MW-2 (480-224998-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Brydges Engineering in Environment & Energy DPC
Job ID: 480-224998-1
Project/Site: The Nest Site Analysis - GW

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
335.4		Water	Cyanide, Total

Laboratory: Eurofins Cleveland

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	BE3
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
^5-	Linear Range Check (LRC) is outside acceptance limits, low biased.
^5+	Linear Range Check (LRC) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-225023-1 Eurofins Buffalo

Job Narrative
480-225023-1

Receipt
The samples were received on 10/31/2024 4:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.8º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-731000 recovered above the upper control limit for Cyclohexane. The sample(s) associated with this CCV were non-detect for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BH-1 (4-6`) (480-225023-1), BH-11 (0-2`) (480-225023-2) and BH-12 (2-4`) (480-225023-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Methods 8270C, 8270D: The following samples were diluted due to color, appearance, and viscosity: BH-11 (0-2`) (480-225023-2) and BH-12 (2-4`) (480-225023-3). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-731034 recovered above the upper control limit for 2-Nitroaniline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: BH-1 (4-6`) (480-225023-1), BH-11 (0-2`) (480-225023-2) and BH-12 (2-4`) (480-225023-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The following samples were diluted due to the nature of the sample matrix: BH-11 (0-2`) (480-225023-2) and BH-12 (2-4`) (480-225023-3). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 1633: The low level continuing calibration verification (CCVL) associated with batch 240-634034 recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported.

Method 1633: The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported. The following samples are impacted: BH-1 (4-6`) (480-225023-1), BH-11 (0-2`) (480-225023-2), BH-12 (2-4`) (480-225023-3), (CCVIS 240-634034/3), (240-214084-A-2-A) and (240-214084-A-2-B DU).

Method 1633: Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the WDM associated with prep batch 240-633740. Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The WDM associated target analyte(s) will be not affected by the IDA; therefore, the associated samples are reported. The following samples are affected:BH-1 (4-6`) (480-225023-1), BH-11 (0-2`) (480-225023-2), BH-12 (2-4`) (480-225023-3), (WDM 240-634034/4), (240-214084-A-2-A) and (240-214084-A-2-B DU).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method 9012B: The following samples ms/msd recovery is ND due to the samples reporting limit being 1.1.Due to this reanalysis was not performed.

(480-224950-A-5-P)

Eurofins Buffalo

Job ID: 480-225023-1 (Continued) Eurofins Buffalo

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3550C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: BH-11 (0-2`) (480-225023-2) and BH-12 (2-4`) (480-225023-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Brydges Engineering in Environment & Energy DPC
Job ID: 480-225023-1
Project/Site: The Nest Site Analysis

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Laboratory: Eurofins Cleveland

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.8 ICE IR# SC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	BE3
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

GC/MS VOA TICs

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-225073-1 Eurofins Buffalo

Job Narrative
480-225073-1

Receipt
The samples were received on 11/1/2024 5:45 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 8.9º C.

Receipt Exceptions
The following samples were received at the laboratory outside the required temperature criteria: BH-6 (2-4') (480-225073-1), BH-6 (7-8') NATIVE (480-225073-2), BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4), BH-5 (2-6') (480-225073-5) and BH-9 (4-6') (480-225073-6). The sample(s) is considered acceptable since it was collected and submitted to the laboratory on the same day and there is evidence that the chilling process has begun.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 480-731454 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analyte is detected. Since the associated samples were non-detect for the analyte(s), the data are reported. The associated samples are: BH-6 (2-4') (480-225073-1), BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4), BH-5 (2-6') (480-225073-5) and BH-9 (4-6') (480-225073-6).

Method 8260C: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 480-731419 and analytical batch 480-731454 recovered outside control limits for the following analytes: Acetone. The following associated samples are impacted: BH-6 (2-4') (480-225073-1), BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4), BH-5 (2-6') (480-225073-5) and BH-9 (4-6') (480-225073-6)

Method 8260C: The method blank for preparation batch 480-731419 and analytical batch 480-731454 contained Methylene Chloride above the reporting limit (RL). This compound is considered a common laboratory contaminant. The associated sample(s) were not re-analyzed because the concentration of the common lab contaminant in the method blank was less than 5 times the RL. The following samples are affected: BH-6 (2-4') (480-225073-1), BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4), BH-5 (2-6') (480-225073-5) and BH-9 (4-6') (480-225073-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270D: The following samples were diluted due to color, appearance, and viscosity: BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4) and BH-5 (2-6') (480-225073-5). Elevated reporting limits (RL) are provided.

Method 8270D: The continuing calibration verification (CCV) associated with batch 480-731322 recovered above the upper control limit for 2-Nitroaniline. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: BH-6 (2-4') (480-225073-1), BH-6 (7-8') NATIVE (480-225073-2), BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4), BH-5 (2-6') (480-225073-5) and BH-9 (4-6') (480-225073-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The following samples were diluted due to the nature of the sample matrix: BH-6 (2-4') (480-225073-1), BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4) and BH-5 (2-6') (480-225073-5). As such, surrogate recoveries are below the calibration range, estimated and not representative. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010C: The low level continuing calibration verification (CCVL) for analytical batch 480-731385 recovered above the upper control limit for (Lead). The sample associated with this CCVL contained this analyte at a concentration greater than 10X the value found in the CCVL; therefore, re-analysis of samples (LCSSRM 480-731094/2-A) was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 480-225073-1 (Continued) Eurofins Buffalo

Organic Prep
Method 3550C: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: BH-6 (2-4') (480-225073-1), BH-3 (2-4') (480-225073-3), BH-8 (2-6') (480-225073-4) and BH-5 (2-6') (480-225073-5).

Method 8151A: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparations BH-6 (7-8') NATIVE (480-225073-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
