Former Pratt Oil Works
Long Island City, New York
Consent Order Case No. D2-1002-12-07AM
Document Tracking No. S241115

Dear Mr. Davidson:

ExxonMobil Oil Corporation ("ExxonMobil") is submitting for your review and comment the enclosed Site Status Update Report for the subject site for the period of February 2011 through April 2011. One hard copy and an electronic copy are provided pursuant to Section VIII of the Consent Order (D2-1002-12-07AM) executed between ExxonMobil and New York State Department of Environmental Conservation (NYSDEC) and a letter from NYSDEC dated June 2, 2010. This report has been prepared on behalf of ExxonMobil by Kleinfelder East, Inc. of Bohemia, New York ("Kleinfelder").

Please do not hesitate to contact me at (718) 404-0652 if you have any questions.

Very truly yours,

Steve Trifiletti
Project Manager

Dear Mr. Trifiletti:

Enclosed please find a Site Status Update Report (SSUR) prepared by Kleinfelder East, Inc. (Kleinfelder), on behalf of ExxonMobil Environmental Services Company (ExxonMobil), for the Inland and Waterfront Project Areas listed above, which compose Tract I and II (further referred to as the Inland and Waterfront Project Areas, respectively) of the Former Pratt Oil Works (FPOW), further referred to as the Project Area. This SSUR documents the methods and results of interim remedial measures (IRM) conducted for the period from February 2011 to April 2011 and a quarterly groundwater sampling event at the Project Area conducted from April 22 to April 25, 2011. In addition, the SSUR describes monitoring well (MW-11 and MW-12) replacement activities conducted on March 15, 2011.

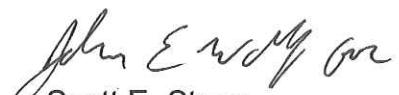

Based on the information included in the SSUR, continued quarterly monitoring and sampling of the monitoring well network, continued weekly LNAPL recovery and weekly bulkhead inspections are proposed.

If you have questions or comments, please contact the undersigned at (631) 218-0612.

Very truly yours,
Kleinfelder East, Inc.

John E. Wolf
Senior Project Manager

1.0 INTRODUCTION

ExxonMobil Environmental Services Company (ExxonMobil), on behalf of ExxonMobil Oil Corporation, contracted Kleinfelder East, Inc. (Kleinfelder) to conduct interim remedial measures (IRMs) and monitoring and sampling at the Inland Project Area and Waterfront Project Area, which compose Tract I and II, respectively, of the Former Pratt Oil Works (Project Area) in Long Island City, New York for the period from February 2011 to April 2011. IRMs to recover light non-aqueous phase liquid (LNAPL) from beneath the Project Area, if present, were conducted on a weekly basis. Bulkhead inspections to visually inspect the integrity of a hard containment boom, as well as condition of absorbent boom, were conducted on a weekly basis, as of April 7, 2011. The purpose of the monitoring and sampling event was an effort to monitor hydraulic characteristics (flow and gradient) and groundwater quality. 35 of 37 monitoring points were gauged and 10 monitoring points were sampled from April 25 to 28, 2011. In addition, monitoring wells MW-11R and MW-12R were installed to replace monitoring wells MW-11 and MW-12 on March 15, 2011 and manholes were installed on 12 of the 96 bulkhead wells on March 15, 2011. This *Site Status Update Report* (SSUR) documents the methods and results of the IRMs conducted, the well replacement, manhole installation activities and the quarterly groundwater sampling event.

The parcels that constitute the Project Area have changed ownership over the years. The addresses of the parcels, as well as current property owners, are listed in the following table:

Inland Project Area

Parcel	Address	Current owner
Parcel A	38-40 Railroad Avenue	Waste Management of New York
Parcel C	38-70 Review Avenue	Keane Realty LLC
Parcel D	38-40 Review Avenue (38-84 Railroad Avenue)	38-40 Review Avenue, LLC
Parcel E	38-50 Review Avenue, 38-54 Railroad Avenue	HP Sherman Co. Inc.
Parcel F	38-98 Review Avenue	DG Properties LLC
Parcel G	38-78 Review Avenue	Werwaiss Realty Co.
Parcel H	39-30 Review Avenue	Pepatoba Corp.
Parcel I	38-20 Review Avenue	Review Associates
Parcel J	37-88 Review Avenue	Up From the Ashes, Inc.
Parcel K	38-60 Review Avenue	Renari LLC

Waterfront Project Area

Parcel	Address	Current owner
Parcel A	38-80, 38-50, 38-30 Newtown Creek	Waste Management of New York
Parcel B	38-42, 39-14 Review Avenue	Apollo Steel

2.0 SITE DESCRIPTION

The following subsections discuss: (1) the Project Area description; (2) historic and current property uses; and (3) geology.

2.1 Site Description

The Project Area is a former wax refinery that operated by a predecessor of ExxonMobil from approximately 1892 to 1949. The Project Area is currently an approximately 18.51 acre commercial/industrial area located within the United States Geological Survey (USGS) 7.5-Minute Topographic Map, Brooklyn, New York, Quadrangle (USGS, 1979). The Project Area is approximately 10 to 25 feet (ft) above mean sea level (msl). The topography and elevation of the Project Area are illustrated on the Locus Plan provided on Figure 1. The current monitoring well network consists of 25 monitoring points (MW-1 to MW-25) including one cluster monitoring well (MW-4S and MW-4D) and 13 bulkhead monitoring points (BW-1 to BW-12 and bulkhead well). Pertinent site features

including, but not limited to, block and lot, parcel identification, property boundaries, Long Island Rail Road (LIRR) train tracks, current buildings, structure layouts and monitoring well locations are illustrated on Figures 2 and 3.

2.2 Current Property Use

The Project Area has been subdivided into 16-lots of Block 312. Properties north of the LIRR comprise the Inland Project Area (Tract I) and properties south of the LIRR comprise the Waterfront Project Area (Tract II). Each tract is further subdivided into parcels (Parcels A through K) based on property ownership. Current uses of properties within the Project Area include, but are not limited to, the following: New York City Department of Sanitation (DSNY) waste transfer station; warehouse and/or office space; vehicle storage; restaurant oil and grease recovery and recycling; cesspool services; valve manufacturing; lumber and building materials distributors; commercial refrigeration supply distributor; cleaning and maintenance products manufacturing; and wholesale beverage distributor.

2.3 Site Geology

The geology observed in soil samples collected from the Project Area is generally heterogeneous. The deposits observed in soil samples collected beneath the Inland Project Area are predominantly composed of sand of unknown thickness, observed to the maximum depth of investigation (25 to 37 feet below grade [fbg]). Sporadic lenses of silt, gravel and cobbles were additionally observed.

Heterogeneity of the subsurface deposits observed in samples increases from the center of the southern Inland Project Area towards the south-southwest. Layers of urban fill containing coal ash were observed in shallow soil samples (1 to 18 fbg). A deposit of peat/organic silt, ranging in thickness from less than 1 foot to 4 ft, was observed in samples beneath the fill material throughout the northern section of Waterfront Parcel A and onto the western section of Parcel B. A silt layer is present in

the south central portion of the Inland Project Area (MW-15), extending to the southwestern portion of the Waterfront Project Area. The silt layer ranges from 2 to 5 ft thick. A sand deposit of unknown thickness underlies the silt layer. On the northern portion of Waterfront Parcel B, the sand deposit is located immediately beneath the fill material in areas where the peat/organic silt are not present.

3.0 METHODS

The following subsections describe the monitoring well replacement and IRM and quarterly activities performed at the Project Area from February to April 2011.

3.1 Equipment Decontamination

During the monitoring well replacement, IRMs and groundwater monitoring and sampling activities, groundwater sampling equipment including, but not limited to, electronic interface probes (EIP), flow through cells, pumps and hand tools were decontaminated using an Alconox® cleaning solution, followed by a potable water rinse and a deionized water rinse between groundwater samples. Rinseate collected from the decontamination activities was transferred using 5-gallon buckets to United States Department of Environmental Transportation (USDOT) rated 55-gallon drums. The drums were stored and managed as described in Section 4.0, pending characterization and disposal.

3.2 Monitoring Well Replacement

Monitoring wells MW-11 and MW-12 were destroyed during bulkhead replacement activities on Parcel B between January 2010 and 2011. The wells were replaced with MW-11R and MW-12R on March 15, 2011.

3.2.1 Monitoring Well Installation

Land, Air, Water Environmental Services of Center Moriches, New York (LAWES), under contract with and supervision of Kleinfelder, replaced monitoring wells MW-11 and MW-12. Prior to drilling, the monitoring well locations were pre-cleared on March 14, 2011 to a minimum depth of approximately 5 fbg using an air-knife and air compressor due to the potential for shallow underground utility lines. Figure 2 illustrates the monitoring well locations.

The monitoring wells were drilled using a track-mounted, Geoprobe® model 7720DT direct push rig equipped with 3-inch outside diameter drive casings. Soil samples were not collected during the monitoring well replacement.

The monitoring wells were completed as 2-inch diameter groundwater monitoring wells to approximately 17 fbg. The wells were constructed of approximately 15-feet of threaded flush-joint 0.02-inch slot polyvinyl chloride (PVC) well screen and 2-feet of PVC casing.

The annulus around the monitoring well screens was backfilled with a Morie No. 2 sand/gravel pack to approximately 0.5-feet above the well screen. Approximately 1-foot bentonite seal was placed above the gravel pack. The remaining annulus was backfilled with grout. Monitoring wells were completed at the surface with the installation of a 2-foot square concrete pad surrounding an 8-inch diameter, flush-mount manhole cover clearly embossed with the words "Monitoring Well." The concrete pad was raised slightly above surface grade and sloped to facilitate storm water runoff away from the monitoring well. Details of well construction are illustrated in soil boring/monitoring well construction diagrams provided as Appendix A. Decontamination water and personal protective equipment (PPE) were drummed as discussed in Section 4.0. No drill cuttings were generated during the installation of monitoring wells MW-11R and MW-12 R.

3.2.2 Monitoring Well Development

On March 15, 2011, monitoring wells MW-11R and MW-12R were surged and developed with a submersible pump in an effort to remove suspended particulates and establish hydraulic communication with the surrounding formation. The wells were developed until the well was reasonably free of sediment (less than 50 nephelometric turbidity units [NTU] if possible). Development water was contained in 55-gallon drums, pending characterization and disposal. PPE, tubing and other disposable well development materials were containerized in 55-gallon drums, pending disposal.

3.2.3 Bulkhead Well Manhole Installation

Between May 21 and June 1, 2010, Kleinfelder installed 96 PVC wells between the newly installed bulkhead along Parcel B and the previous timber bulkhead, prior to the space being backfilled. The wells were spaced approximately 9-feet apart and alternated 2 and 4-inch diameter along the length of the bulkhead. The wells were constructed of 10 to 20-feet of 0.05 slot schedule 40 PVC well screen and 2-feet of schedule 40 PVC riser. The wells were capped with PVC slip caps prior to being backfilled during the steel bulkhead installation.

On March 16 and 17, 2011, Kleinfelder supervised LAWES' installation of manholes on 12 of the 96 bulkhead monitoring wells, spaced approximately 50-feet apart. Manholes were installed on accessible wells, not pressed against the steel bulkhead, with available space for a manhole. The bulkhead wells were labeled BW-1 to BW-12 as illustrated on Figures 2 and 3.

3.3 Interim Remedial Measures

The following subsections describe the IRM measures implemented at the Project Area.

3.3.1 LNAPL Recovery

LNAPL, that was characterized and approved for recycling by a recycling facility, was recovered using a submersible pump and/or manual methods (bailers, sorbent). Subject to limitations based upon (1) LNAPL thickness present in the monitoring well and (2) issues of access to the well, LNAPL, if present, was recovered during IRM events conducted on an approximate weekly basis from monitoring wells MW-2, MW-4S, MW-5, MW-6, MW-9, MW-14, MW-16, MW-17, MW-18, MW-19, MW-22, MW-23 and MW-24; LNAPL may not have been recovered to allow for additional LNAPL recharge or due to access limitations. No LNAPL recovery was conducted during the period from February to April 2011 from monitoring wells MW-3 and MW-7 because the LNAPL contained therein is classified as hazardous based on waste classification sampling. An EPA hazardous waste ID has been generated and LNAPL recovery from these wells is currently pending permit approval of an IRM system and fenced drum storage area. LNAPL recovery has been conducted on an approximately weekly basis since December 29, 2009. Prior to LNAPL recovery, the depth to LNAPL and depth to groundwater (DTW) were measured within the monitoring wells using an EIP. If present, and if not limited, as provided for above, by access and/or recharge issues, LNAPL was recovered temporarily into a 5-gallon container using a Clean Earth Technology, a Spill Buddy™ pump and then transferred to grounded and vented USDOT-approved, 55-gallon, steel drums staged on spill containment pallets and covered with plastic sheeting, pending off-site disposal. Disposable bailers, adsorbent pads, and PPE used during LNAPL recovery were additionally stored in separate, USDOT-approved, 55-gallon, steel drums, pending disposal.

3.3.2 Bulkhead Sheen Remedial Actions

On April 7, 2011, a sheen was observed on Newtown Creek and on the riprap along bulkhead between Parcel A and B. The NYSDEC was advised of this

observation at that time. The sheen was temporarily contained with containment boom and absorbent boom. On April 15, 2011, approximately 60-feet of 24-inch high PVC belted black boom (hard boom) was installed connecting to the timber bulkhead on Parcel A and to the steel bulkhead on Parcel B. Absorbent boom was placed within the hard boom and inspected on a weekly basis and replaced as necessary. Spent absorbent boom was placed in USDOT-approved, 55-gallon drums, pending off-site disposal.

3.4 Groundwater Gauging and Sampling

The following subsections describe the groundwater gauging and sampling methods implemented at the Project Area.

3.4.1 Groundwater Gauging

The groundwater monitoring well network was gauged on April 25, 2011, during a low neap tide. Gauging during low neap tide was preferred in an effort to minimize tidal fluctuation influence on the gauging data. Neap tides are tides with lower than average tidal fluctuation with longer slack water times. Neap tides occur when the moon is at first or third quarter. The depth to LNAPL, if present, and DTW in the monitoring wells were measured using a decontaminated EIP.

Groundwater gauging data were subtracted from the monitoring well top of casing (TOC) elevation to calculate the groundwater elevation relative to MSL. For monitoring wells with measurable LNAPL, the groundwater elevation was corrected for LNAPL displacement by adding the LNAPL thickness multiplied by the LNAPL specific gravity to the groundwater elevation.

Monitoring well MW-3 was gauged, but the LNAPL in the well was too viscous to obtain accurate measurements. Monitoring well MW-19 was inaccessible due to a parked car on the well, and, therefore, could not be gauged.

3.4.2 Groundwater Sampling

Groundwater samples were collected from monitoring wells without detections of LNAPL, including MW-1, MW-4D, MW-8, MW-10, MW-11R, MW-12R, MW-13, MW-15, MW-20, and MW-21 from April 25 to 28, 2011.

For groundwater samples collected without detections of LNAPL, low flow groundwater sampling was conducted. Groundwater was purged and sampled using a peristaltic pump equipped with 1/4-inch diameter polyethylene tubing and a Horiba® flow-through cell water quality meter. The groundwater sample flow rate was maintained at or below approximately 0.5 liters per minute in an effort to minimize groundwater drawdown to no greater than 0.33 ft during pumping. The following water quality parameters were recorded every three to five minutes on a low-flow groundwater sampling record in an effort to monitor groundwater stabilization:

- Flow rate;
- Purge volume;
- pH recorded in su;
- Temperature recorded in degrees Celsius (°C);
- Conductivity recorded in millSiemens per centimeter (mS/cm);
- Oxidation reduction potential (ORP) recorded in millivolts (mV);
- Dissolved oxygen (DO) recorded in milligrams per liter (mg/L);
- Turbidity recorded in Nephelometric Turbidity Units (NTU); and
- Salinity recorded in parts per thousand (ppt).

Groundwater samples were collected after stabilization of groundwater quality parameters was observed. Stabilization was achieved after three consecutive readings within:

- 0.1 pH;
- 3% temperature;
- 3% conductivity;
- 10 mV for ORP; and
- 10% for DO and turbidity.

Groundwater samples were collected in laboratory-supplied bottleware. If the turbidity of a groundwater sample measured greater than 50 NTU, then a field-filtered and unfiltered sample were collected for metals analysis. Groundwater sample containers were labeled, logged, placed in coolers, preserved with ice, and transported under chain-of-custody procedures via Federal Express or laboratory courier to the laboratory. Laboratory analysis was conducted by Accutest Laboratories located in Dayton, New Jersey (Accutest), a New York State Department of Health (NYSDOH)-approved laboratory (Environmental Laboratory Approval Program [ELAP] No. 10983).

Purge water was containerized in USDOT approved 55-gallon steel drums, pending characterization and disposal. In addition, PPE, tubing and other disposable groundwater sampling materials were containerized in separate, USDOT-approved, 55-gallon, steel drums, pending disposal.

3.4.3 Groundwater Sample Analysis

Laboratory analysis was conducted in accordance with United States Environmental Protection Agency (USEPA) SW-846 methods and submitted under NYSDEC Analytical Services Protocol (ASP) Category B data deliverables. The groundwater samples were submitted for laboratory analysis as follows:

- Target Compound List (TCL) volatile organic compounds (VOCs) in accordance with USEPA Method 8260B;
- TCL semivolatile organic compounds (SVOCs) in accordance with USEPA Method 8270C;
- Target Analyte List (TAL) metals, including cyanide, in accordance with USEPA Methods 6010B, 7470A and 335.4.

A summary of laboratory samples and analyses is provided as Table 1.

4.0 WASTE MANAGEMENT

Investigation-derived waste (IDW) generated during the monitoring well replacement, IRM activities and monitoring and sampling were containerized in labeled, 55-gallon, USDOT-approved drums, pending disposal. A drum inventory was maintained documenting the number of drums stored, the contents of the drums, and drum identification information. The following is a summary of the IDW:

Plastic sheeting, used adsorbent pads, and disposable bailers were consolidated into one, open-top, 55-gallon, steel, USDOT-approved drum.

Fluids generated from decontamination and groundwater sampling were placed in two, 55-gallon, steel, USDOT-approved fluid drums with closed tops. One drum of purge water generated from Parcel A was stored on Parcel A prior to disposal. One drum of purge water and one drum of PPE generated from the remaining parcels were stored on Parcel B prior to disposal.

- Two drums of PPE, plastic tubing, sorbent pads and bailers were transported to CWM Chemical Services L.L.C., located at 1550 Balmer Road in Model City, New York on June 22, 2011.

- One drum of water generated from monitoring wells MW-11R and MW-12R's well development was transported and disposed of by LORCO Petroleum Services Inc. (LORCO) of Elizabeth, New Jersey on April 11, 2011.
- One drum of groundwater generated from monitoring well purging from Parcel A was transported to CWM Chemical Services L.L.C., located at 1550 Balmer Road in Model City, New York on June 22, 2011.
- One drum of groundwater generated from monitoring well purging from the remaining parcels was transported and disposed of by LORCO Petroleum Services Inc. (LORCO) of Elizabeth, New Jersey on June 20, 2011.

LORCO removed LNAPL from temporary, USDOT-approved, 55-gallon, LNAPL storage drums via vacuum truck on February 15, 2011, March 21, 2011, April 18, 2011, and May 9, 2011. Copies of the drum disposal documentation are provided as Appendix B.

5.0 FINDINGS AND RESULTS

The following subsections describe the findings and results of the monitoring and sampling events conducted between April 25 and 28, 2011.

5.1 Site Hydrogeology

On April 25, 2011, groundwater beneath the Project Area was detected in water table and semi-confined conditions. Monitoring wells MW-5 and MW-6 are screened beneath a semi-confining silty/clay layer and monitoring well MW-4D is screened beneath a peat layer. The depth to water ranged from approximately 4.31 fbg (MW-13) to approximately 28.04 fbg (MW-22). Groundwater flow direction was generally towards the south. The average water table gradient between the northern (MW-20) and southern (MW-9) boundaries of the Project Area was calculated to be approximately 0.0066 feet per foot (ft/ft). Monitoring well gauging data are summarized on Table 2 and a NAPL Distribution and Groundwater Elevation Contour map is provided as Figure 4.

5.2 LNAPL Distribution and Recovery

LNAPL was detected in monitoring wells MW-2, MW-3, MW-4S, MW-5, MW-6, MW-7, MW-9, MW-14, MW-16, MW-17, MW-18, MW-22, MW-23, and MW-24 on April 25, 2011. LNAPL thickness ranged from 0.05 ft in MW-7 to 11.45 ft in MW-5. Monitoring wells MW-5 and MW-6 were screened beneath a semi-confining layer and, therefore, LNAPL thickness detected in these wells on April 25, 2011 may not be indicative of actual levels across the water-table interface. A summary of LNAPL thicknesses observed in monitoring wells during groundwater gauging is provided in Table 2.

Approximately 3,282 gallons of LNAPL were recovered during IRM activities from September 4, 2009 to April 26, 2011. Table 3 summarizes the LNAPL recovery.

5.3 Groundwater Analytical Data

The following subsections summarize the groundwater sampling field parameters and laboratory analytical results. Groundwater sample laboratory analytical results are summarized in Tables 4 through 6 and compared to NYSDEC Water Quality Standards (WQS), as published in the Division of Water, *Technical and Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Guidance Values Memorandum* dated June 1998 (Addendum June 2000). Laboratory analytical reports and chain-of-custody documentation are provided in Appendix C.

5.3.1 Field Parameters

Table 2 summarizes the results of the groundwater field parameters measured in the monitoring wells sampled using a flow through cell prior to groundwater sampling.

5.3.2 Volatile Organic Compounds

Laboratory analysis reported TCL VOCs above groundwater standards and/or guidance values in samples collected from MW-1, MW-4D, MW-13, MW-15, and MW-21. Chlorinated VOCs were detected above groundwater standards and/or guidance values in samples collected from MW-1, MW-4D, MW-15 and MW-21. VOC groundwater analytical results are summarized on Table 4. The spatial distributions of dissolved VOCs are illustrated on Figure 5.

5.3.3 Semi-Volatile Organic Compounds

Laboratory analysis reported TCL SVOCs above groundwater standards and/or guidance values in samples collected from MW-12R. SVOC groundwater analytical results are summarized on Table 5. The spatial distributions of dissolved SVOCs are illustrated on Figure 6.

5.3.4 Metals and Cyanide

Turbidity measurements were observed below 50 NTU during groundwater sampling; therefore, no field-filtered samples were collected. Laboratory analysis reported TAL metals above groundwater standards and/or guidance values in samples collected from MW-4D, MW-8, MW-10, MW-11R, MW-12R, MW-13, MW-15, MW-20, and MW-21. Cyanide was not detected. Total metals and cyanide groundwater analytical results are summarized on Table 6. The spatial distributions of metals detected in groundwater samples are illustrated on Figure 7.

6.0 SUMMARY AND RECOMMENDATIONS

The following is a summary of the quarterly activities conducted from February to April 2011.

- Monitoring wells MW-11 and MW-12 were replaced on March 14 and 15, 2011.
- Manholes were installed on bulkhead wells BW-1 to BW-12.
- Weekly LNAPL recovery events were continued from February 2, 2011 through April 26, 2011. Approximately 3,282 gallons of LNAPL were recovered during IRM activities from September 4, 2009 to April 26, 2011.
- The hard boom and absorbent boom were inspected on a weekly basis and absorbent boom was replaced as necessary.
- Depth to groundwater on April 25, 2011 ranged from 4.31 fbg (MW-13) to approximately 28.04 fbg (MW-22).
- Groundwater flow on April 25, 2011 was measured toward the south at a hydraulic gradient of approximately 0.0066 ft/ft.
- LNAPL was detected in 14 monitoring wells on April 25, 2011, ranging from 0.05 ft in MW-7 to 11.42 ft in MW-5.
- Concentrations of VOCs were detected above groundwater standards and/or guidance values in samples collected from MW-1, MW-4D, MW-13, MW-15 and MW-21 during the April 25-28 sampling event.
- SVOCs were detected above groundwater standards and/or guidance values in samples collected from MW-12R during the April 25-28, 2011 sampling event.
- Metals were detected above groundwater standards and/or guidance values in samples collected from MW-4D, MW-8, MW-10, MW-11R, MW-12R, MW-13, MW-15, MW-20, and MW-21.
- Cyanide was not detected in samples collected.

Based on the information gathered during the monitoring and sampling event, continued quarterly monitoring and sampling of the monitoring well network and continued weekly LNAPL recovery are proposed. In addition, continued weekly bulkhead inspections of the hard boom and absorbent boom are proposed.

7.0 LIMITATIONS

Kleinfelder performed the services for this project under the Standard Procurement Agreement with Procurement, a division of ExxonMobil Global Services Company (signed on June 21, 2007). Kleinfelder states that the services performed are consistent with professional standard of care defined as that level of services provided by similar professionals under like circumstances. This SSUR is based upon the regulatory standards in effect on the date of the SSUR. It has been produced for the primary benefit of ExxonMobil Global Services Company and its affiliates.

Notes:

~ - no standard or guidance value exists

<1.0 - Not detected at or above the laboratory reporting limit shown

°C - degrees Celsius

BW - Bulkhead well

F - degrees Fahrenheit

Corrected GW Elevation - calculated using the following formula:

(top of casing elevation - depth to water) + (LNAPL thickness * LNAPL specific gravity)

Depth to Water - measured in feet below land surface from top of casing

fbg - feet below grade

GW - Groundwater

LNAPL - Light non-aqueous phase liquid

mg/L - milligrams per liter (parts per million)

mS/cm - millSiemens per centimeter

mV - millivolts

N/A - Not applicable

NA - Not analyzed

ND - Not detected

NM - Not monitored

NS - Not sampled

NSVD - Not surveyed to vertical datum

ntu - nephelometric turbidity units

ppmv - parts per million by volume

ppt - parts per thousand

s.u. - standard units

* - equipment malfunction

** - estimated value based on surrounding wells

*** - Dissolved Oxygen (DO) readings recorded on July 22, 2010 with an in-situ DO meter

Field Parameters - Measured from monitoring wells without LNAPL detections during groundwater sampling

Date on table reflects gauging date and may not reflect actual measurement date

TOTALS:								3282.82		9.10	3291.92		

Notes:

LNAPL - light Non-aqueous phase liquid

g/cm³ - grams per centimeter cubed

** - estimated value based on surrounding wells

EFR - enhanced fluid recovery

G&B - Gauge and bail

Pas. Bailer - Passive Bailer

Port. Pump - Portable Pump

Specific gravity based on a one time sampling event

Notes:

~ - no standard or guidance value exists

<1.0 - Not detected at or above the laboratory reporting limit shown

Concentrations are reported in micrograms per liter.

BRL - below laboratory reporting limits

J - Indicates an estimated value

*FD - field duplicate sample

LNAPL - light non-aqueous phase liquid

NS - Not sampled

NYSDEC Standards and Guidance Values - New York State Department of

Environmental Conservation Technical and Operational Guidance Series

(TOGS) 1.1.1, Ambient Water Quality Standards and Guidance Values,

June 1998 and Addendum April 2000

Shading - Reported concentration detected above the applicable standard(s) or guidance value(s)

a - Result is from Run #2

Notes:

~ - no standard or guidance value exists

<1.0 - Not detected at or above the laboratory reporting limit shown

Concentrations are reported in micrograms per liter

BRL - below laboratory reporting limits

J - Indicates an estimated value

* FD - Field duplicate sample

LNAPL - Light non-aqueous phase liquid

NS - Not sampled

NYSDEC Standards and Guidance Values - New York State Department of

Environmental Conservation Technical and Operational Guidance Series

(TOGS) 1.1.1, Ambient Water Quality Standards and Guidance Values,

June 1998 and Addendum April 2000

Shading - Reported concentration detected above the applicable standard(s) or guidance value(s)

Monitoring Well Construction Diagrams

One Corporate Drive, Suite 201
Bohemia, NY 11716
(631) 218-0612

Monitoring Well Construction Diagram

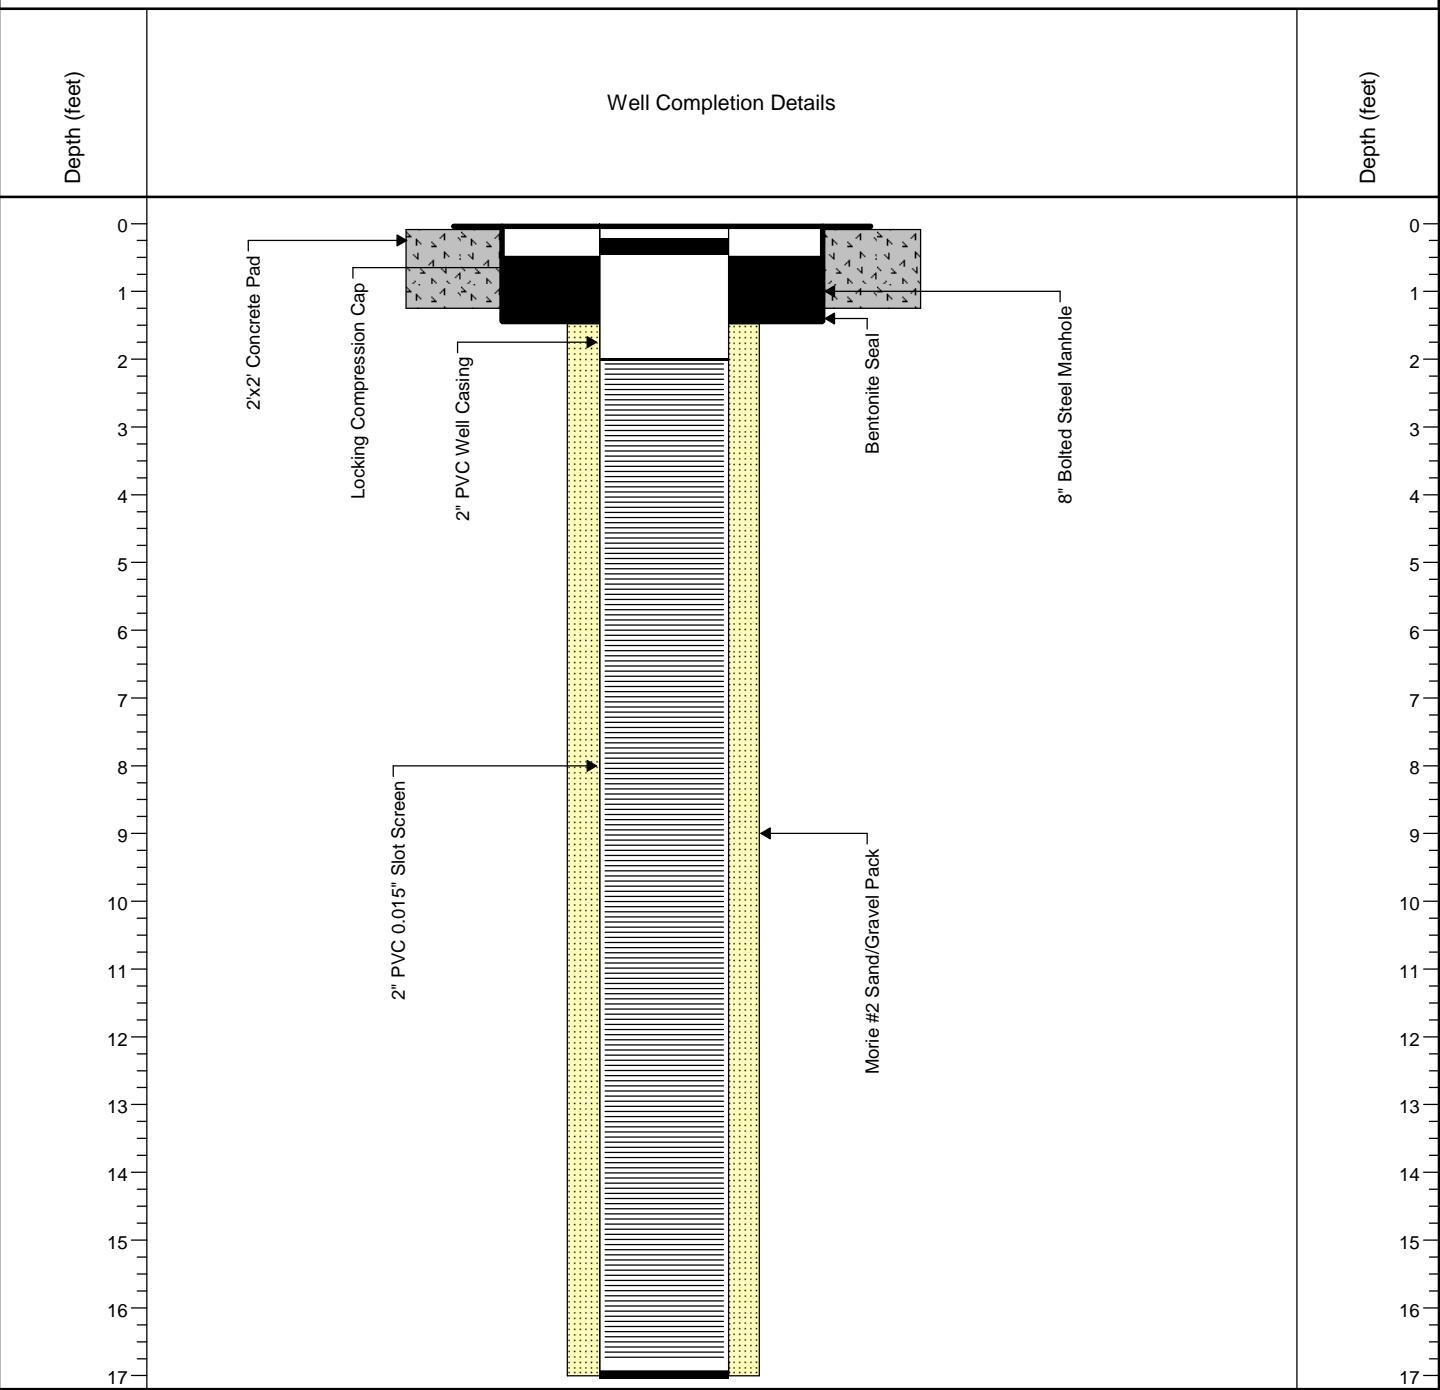

Well No. MW-11R

Project Name: Former Pratt Oil Works
Site Location: 39-14 Review Avenue, Long Island City, New York
Kleinfelder Project No: 116669
Client: ExxonMobil Environmental Services
Start Date: 3/15/2011
End Date: 3/15/2011
Logged By (Geol.): Scott Strom
Checked By: Scott Strom

Drilling Company: Land Air Water Inc.
Driller: Scott Pederson
Drill Rig Type: Geoprobe 7720 DT
Drilling Method: Direct Push
Total Hole Depth: 17 fbg
Depth to Bedrock:
Borehole Diameter: 3 inches
Sampling Method: NA

Surface Elevation: 6.70
Initial Water Level: NA
Notes: Installed to replace former MW-11 which was destroyed during bulkhead construction activities.

WELL COMPLETION DETAILS

BDL - below instrument detection limit
fbg - feet below grade
msl - mean sea level
NA - not applicable
NM - not measured

NR - no soil recovered
NS - not sampled
PID - photoionization detector
ppmv - parts per million by volume
PVC - polyvinyl chloride

Colors approximated using Munsell Color Chart, 2000.
Geologic descriptions based on ASTM D 2488.
* - sample collected for laboratory analysis

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Kleinfelder

Job No JA74266

Site: Former Pratt Oil Works, Long Island City, NY

Report Date 5/14/2011 11:43:17 A

On 04/27/2011, 5 Sample(s), 1 Trip Blank(s) and 1 Field Blank(s) were received at Accutest Laboratories at a temperature of 1.9 C. Samples were intact and properly preserved, unless noted below. An Accutest Job Number of JA74266 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ

Batch ID: V2E2885

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74266-1MS, JA74266-1MSD were used as the QC samples indicated.

Matrix: AQ

Batch ID: V2E2888

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74204-7MS, JA74204-7MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270C

Matrix: AQ

Batch ID: OP49436

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74266-1MS, JA74266-1MSD were used as the QC samples indicated.

Metals By Method SW846 6010B

Matrix: AQ

Batch ID: MP58077

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74266-1MS, JA74266-1MSD, JA74266-1SDL were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Selenium are outside control limits. Spike recovery indicates possible matrix interference.
- Matrix Spike Duplicate Recovery(s) for Selenium are outside control limits. Spike recovery indicates possible matrix interference.
- RPD(s) for Serial Dilution for Beryllium, Chromium, Copper, Nickel, Silver, Vanadium are outside control limits for sample MP58077-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 7470A

Matrix: AQ

Batch ID: MP58158

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74266-1MS, JA74266-1MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 335.4/LACHAT

Matrix: AQ

Batch ID: GP58548

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74266-1DUP, JA74266-1MS were used as the QC samples for Cyanide.
- Matrix Spike Recovery(s) for Cyanide are outside control limits. Spike recovery indicates possible matrix interference.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Technical Report for

Kleinfelder

Former Pratt Oil Works, Long Island City, NY

PO#4513474233 WBS#08

Accutest Job Number: JA74531

Sampling Dates: 04/27/11 - 04/28/11

Report to:

Kleinfelder

jwolf@kleinfelder.com

ATTN: John Wolf

Total number of pages in report: **38**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Conference and/or state specific certification programs as applicable.

David N. Speis
VP, Laboratory Director

Client Service contact: Matt Cordova 732-329-0200

Certifications: NJ(12129), NY(10983), CA, CT, DE, FL, IL, IN, KS, KY, LA, MA, MD, MI, MT, NC, PA, RI, SC, TN, VA, WV

This report shall not be reproduced, except in its entirety, without the written approval of Accutest Laboratories.
Test results relate only to samples analyzed.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Kleinfelder

Job No JA74531

Site: Former Pratt Oil Works, Long Island City, NY

Report Date 5/19/2011 6:42:42 PM

On 04/29/2011, 4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 5.2 C. Samples were intact and properly preserved, unless noted below. An Accutest Job Number of JA74531 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ	Batch ID: VE7830
-------------------	-------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74652-13MS, JA74652-13MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270C

Matrix: AQ	Batch ID: OP49488
-------------------	--------------------------

- All samples were extracted within the recommended method holding time.
- Sample(s) JA74605-1MS, JA74605-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- OP49488-MSD for 2-Fluorophenol: Outside of in house control limits, but within reasonable method recovery limits.

Metals By Method SW846 6010B

Matrix: AQ	Batch ID: MP58120
-------------------	--------------------------

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74533-1MS, JA74533-1MSD, JA74533-1SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Chromium, Nickel, Selenium, Vanadium, Zinc are outside control limits for sample MP58120-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 7470A

Matrix: AQ	Batch ID: MP58178
-------------------	--------------------------

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74531-1MS, JA74531-1MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 335.4/LACHAT

Matrix: AQ

Batch ID: GP58600

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74430-11DUP, JA74430-11MS were used as the QC samples for Cyanide.
- Matrix Spike Recovery(s) for Cyanide are outside control limits. Spike recovery indicates possible matrix interference.
- RPD(s) for Duplicate for Cyanide are outside control limits for sample GP58600-D1. RPD acceptable due to low duplicate and sample concentrations.

Matrix: AQ

Batch ID: GP58702

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74765-3DUP, JA74765-3MS were used as the QC samples for Cyanide.
- Matrix Spike Recovery(s) for Cyanide are outside control limits. Spike recovery indicates possible matrix interference.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Airbill #'s:

Cooler Security Y or N

- | | | | | | |
|---------------------------|-------------------------------------|--------------------------|-----------------------|-------------------------------------|--------------------------|
| 1. Custody Seals Present: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 3. COC Present: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Custody Seals Intact: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 4. Smpl Dates/Time OK | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

Cooler Temperature Y or N

- | | | |
|------------------------------|-------------------------------------|--------------------------|
| 1. Temp criteria achieved: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Cooler temp verification: | Infrared gun | |
| 3. Cooler media: | Ice (bag) | |

Quality Control Preservatio Y or N N/A

- | | | | |
|---------------------------------|-------------------------------------|-------------------------------------|--------------------------|
| 1. Trip Blank present / cooler: | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Trip Blank listed on COC: | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 3. Samples preserved properly: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 4. VOCs headspace free: | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

Sample Integrity - Documentation

- | | | |
|--|-------------------------------------|--------------------------|
| 1. Sample labels present on bottles: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Container labeling complete: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 3. Sample container label / COC agree: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

Sample Integrity - Condition

- | | | |
|----------------------------------|-------------------------------------|--------------------------|
| 1. Sample recvd within HT: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. All containers accounted for: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 3. Condition of sample: | Intact | |

Sample Integrity - Instructions

- | | | |
|---|-------------------------------------|-------------------------------------|
| 1. Analysis requested is clear: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 2. Bottles received for unspecified tests | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 3. Sufficient volume recvd for analysis: | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| 4. Compositing instructions clear: | <input type="checkbox"/> | <input type="checkbox"/> |
| 5. Filtering instructions clear: | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

Sample Summary

Kleinfelder

Job No: JA74532

Former Pratt Oil Works, Long Island City, NY
Project No: PO#4513474233 WBS#08

Sample Number	Collected Date	Time By	Matrix Received	Code Type	Client Sample ID	
JA74532-1	04/28/11	12:15 SP	04/29/11	AQ	Ground Water	MW-20(9.5-29.5)

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Kleinfelder

Job No JA74532

Site: Former Pratt Oil Works, Long Island City, NY

Report Date 5/19/2011 6:45:19 PM

On 04/29/2011, 1 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 5.2 C. Samples were intact and properly preserved, unless noted below. An Accutest Job Number of JA74532 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ

Batch ID: VE7830

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74652-13MS, JA74652-13MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270C

Matrix: AQ

Batch ID: OP49488

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74605-1MS, JA74605-1MSD were used as the QC samples indicated.
- OP49488-MSD for 2-Fluorophenol: Outside of in house control limits, but within reasonable method recovery limits.

Metals By Method SW846 6010B

Matrix: AQ

Batch ID: MP58120

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74533-1MS, JA74533-1MSD, JA74533-1SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Chromium, Nickel, Selenium, Vanadium, Zinc are outside control limits for sample MP58120-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 7470A

Matrix: AQ

Batch ID: MP58178

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74531-1MS, JA74531-1MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 335.4/LACHAT

Matrix: AQ

Batch ID: GP58702

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74765-3DUP, JA74765-3MS were used as the QC samples for Cyanide.
- Matrix Spike Recovery(s) for Cyanide are outside control limits. Spike recovery indicates possible matrix interference.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Kleinfelder

Job No JA74533

Site: Former Pratt Oil Works, Long Island City, NY

Report Date 5/19/2011 5:35:00 PM

On 04/29/2011, 1 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 5.2 C. Samples were intact and properly preserved, unless noted below. An Accutest Job Number of JA74533 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ

Batch ID: VE7830

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74652-13MS, JA74652-13MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270C

Matrix: AQ

Batch ID: OP49488

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74605-1MS, JA74605-1MSD were used as the QC samples indicated.
- OP49488-MSD for 2-Fluorophenol: Outside of in house control limits, but within reasonable method recovery limits.

Metals By Method SW846 6010B

Matrix: AQ

Batch ID: MP58120

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74533-1MS, JA74533-1MSD, JA74533-1SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Chromium, Nickel, Selenium, Vanadium, Zinc are outside control limits for sample MP58120-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 7470A

Matrix: AQ

Batch ID: MP58178

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74531-1MS, JA74531-1MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 335.4/LACHAT

Matrix: AQ

Batch ID: GP58702

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74765-3DUP, JA74765-3MS were used as the QC samples for Cyanide.
- Matrix Spike Recovery(s) for Cyanide are outside control limits. Spike recovery indicates possible matrix interference.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Kleinfelder

Job No JA74534

Site: Former Pratt Oil Works, Long Island City, NY

Report Date 5/17/2011 11:13:21 A

On 04/29/2011, 0 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 5.2 C. Samples were intact and properly preserved, unless noted below. An Accutest Job Number of JA74534 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ

Batch ID: VE7830

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA74652-13MS, JA74652-13MSD were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover.
