1.0 INTRODUCTION

The following report presents the results of the Fourth Quarter 2000 monitoring at the Alaskan Oil, Inc. (AOI) property located at Route 13 and Cemetery Street in Altmar, New York. The site is part of the Multi-Site Response Program/Voluntary Cleanup Agreement, between AOI and the New York State Department of Environmental Conservation (NYSDEC), and monitoring is conducted for a drinking water treatment system, installed groundwater monitoring wells, and a HiVac product recovery system.

2.0 GROUNDWATER MONITORING

Groundwater samples were collected from eight monitoring wells on November 21, 2000 by personnel from Clemett and Co. The samples were submitted to Certified Environmental Services for analysis of volatile petroleum hydrocarbons (EPA Method 8021). Five of the nine wells sampled exhibited volatile organic compounds (VOC's) in exceedence of DEC STARS Guidance Values. Table 1 summarizes the detected VOC's and the complete CES laboratory report is attached in Appendix A. Historical ground water data is attached in Appendix D.

Clemett and Co. personnel also measured the static water level of each well sampled on November 21, 2000. Table 3 illustrates the measured water levels and the groundwater elevations based on well surveying data conducted by CES. The groundwater elevations are also depicted on Figure 1. In general, groundwater appears to be flowing over a shallow gradient from east to west towards the wetland west of the site. As mentioned in the previous 2000 report some of the monitoring points at the site may be influenced by the storm water drains at the facility. Due to the shallow gradient at the site, the possibility of storm drain influence upon water levels, and the uncertainty of the well casing survey data, groundwater contours were not delineated on Figure 1.

3.0 RECOVERY SYSTEM MONITORING

Influent, mid, and effluent samples were collected from the carbon treatment system by Barton & Loguidice, P.C. personnel on October 23, November 27, and December 28, 2000. All samples were submitted to CES for analysis of volatile petroleum hydrocarbons by EPA Method 502.2. No compounds were detected in any of the samples submitted. The method detection limits ranged from 0.7 to 5.0 ug/l. The results are summarized in Table 2 and the complete CES laboratory reports are presented in Appendix B. Historical recovery system data is attached in Appendix D.

4.0 HIVAC MONITORING

Clemett and Co., Inc. restarted operation of a HIVAC groundwater treatment system in November 2000. Personnel from Clemett and Company collected influent, mid and effluent samples from the system on November 21, 2000 and December 22, 2000. Five compounds in the effluent sample were observed to be in exceedance of State guidance values during the November monitoring. No compounds were detected (0.7-5.0 ug/g detection limit) in the effluent sample during the December monitoring. Continued monitoring of the treatment system should be conducted while in operation. The results of the HIVAC monitoring are discussed in Table 4 and the complete CES laboratory reports are attached in Appendix C.

5.0 CONCLUSIONS AND RECOMMENDATIONS

As stated during the Third Quarter 2000 Report, an activated carbon treatment system has been in operation on the site's drinking water supply since August 1998. Since sampling of the system commenced in September 1998, no volatile organic compounds have been detected in the influent. The location of the drinking water supply well is up gradient from the spill, and therefore, is not impacted by the spill. Given the above, we recommend that:

- The current monthly sampling of the treatment system be modified. Since the site's water source is from the well and Alaskan Oil is currently remediating the site, the treatment system should be continued to be operated. Sampling of the system's influent only (EPA Method 502.2) should be conducted on a semi-annual basis to ensure supply water quality during remediation efforts at the site.
- The current quarterly monitoring of the groundwater wells should be reduced to semi-annual (EPA 8021). A sufficient background data set has been acquired, and semi-annual monitoring will allow for the assessment of remedial practices. Influent, mid, and effluent samples will continue to be collected from the carbon treatment system until NYSDEC approval of the above.

The HIVAC groundwater treatment system should continue to be monitored (EPA 8021) on a monthly basis during operation. Barton & Loguidice, P.C. will survey the elevations of the existing monitoring wells in April 2001.

31-May-00	53,900	22,800	ND	12	46	ND	18,175	15	50,400	
08-Aug-00	51,700	25,000	ND	359	6	ND	32,875	ND	51,300	
21-Nov-00	--	5	ND	ND	92	ND	34,050	1,806	42,100	

Notes

BTEX Concentrations are the summed concentrations of Benzene, Toluene, Ethylbenzene and Total Xylenes.

ND - None Detected

MW-1 was not sampled when free product was observed.

DRH: 639.002
