# 1 Introduction

Groundwater & Environmental Services, Inc. (GES) has prepared this *Soil Vapor Intrusion Investigation Summary* report outlining the Soil Vapor Intrusion (SVI) investigation activities completed at the Carmel ShopRite Plaza located at 180 Gleneida Avenue (Route 52) in Carmel, New York (the site) in December 2024. The site is managed under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Program #V00104. A Site Location Map is included as **Figure 1** and a Site Map showing pertinent site features is included as **Figure 2**.

The SVI investigation activities performed by GES were limited to four (4) tenant spaces (#170, #174, #176, and #178 Route 52, Carmel, New York) that currently have active sub-slab depressurization (SSD) systems installed. SVI investigation activities were completed in accordance with the revised December 22, 2023 SVI Work Plan approved by the NYSDEC on January 9 and 10, 2024. The investigation activities were also completed in accordance with the New York State Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York,* dated October 2006, and Updates to Soil Vapor/Indoor Air Decision Matrices A through C, dated May 2017, for chlorinated constituents of concern, and Matrices D through F, dated February 2024, for petroleum constituents of concern.

A *Soil Vapor Instrusion Investigation Summary Report*, dated July 31, 2024 was submitted to the NYSDEC and NYSDOH following the completion of the first SVI event during the 2023/2024 heating season. A NYSDEC letter, dated October 3, 2024, requested additional sampling during the 2024/2025 heating season. In response, a second SVI event was conducted for the purpose of evaluating current sub-slab vapor and indoor air quality at the four (4) tenant spaces (#170, #174, #176, and #178) at the site as well as evaluating the potential for SVI in the tenant spaces in support of decommissioning the SSD systems. The sub-slab vapor and indoor air sampling locations are shown on **Figure 3**.

Version 1.0 of the *Soil Vapor Intrusion Summary Report (Report)* was submitted to NYSDEC and NYSDOH on January 24, 2025. The NYSDEC, in communication with NYSDOH, disapproved the *Report* in a letter dated April 25, 2025. A copy of the letter is included as **Appendix A**.

On May 27, 2025, GES, Regency Centers, NYSDEC, and NYSDOH discussed the *Report* disapproval and site history. A *SVI Summary Report Follow-up* memo was prepared and submitted to NYSDEC and NYSDOH following the May 27, 2025 discussion, summarizing the historical site data and SSD System performance. Included in the memo were revised recommendations for the operation of the SSD System and future SVI investigation events. A copy of the memo is included as **Appendix A**.

The NYSDEC, in an email dated July 17, 2025, approved the request to shut down and cap the three (3) SSD systems at Europa Pizza, Carmel Nails, and Chinatown Restaurant tenant spaces. Additionally, the NYSDEC confirmed a SVI investigation shall be completed at all four (4) tenant spaces at the site during the 2025/2026 heating season with the one (1) remaining SSD system at Electric Paradise Tanning shut down 30 days prior to sampling. A copy of the email is included as **Appendix A**.

# 2 Site Information

## 2.1 Site Location

The site is located in the Town of Carmel, County of Putnam, State of New York and is identified as Tax Map Number 44.9-1-9 on the Putnam County Tax Map. The site is located on a 19 acre parcel of land developed with three (3) commercial buildings and an asphalt parking lot. The three (3) commercial buildings are comprised of approximately twenty (20) tenant spaces that are primarily utilized as large retail businesses (supermarket, pharmacy), restaurants, salons, and small specialty shops.

The immediate vicinity of the site is predominantly surrounded by undeveloped land and roadways. Other properties in the vicinity of the site include:

- North: Commercial properties, including a monument maker for the neighboring cemetery.
- Northeast: Commercial properties, including a gas station.
- South: Commercial properties, including a strip mall.
- West: Cemetery
- East: Apartment complex

## 2.2 Current Use

The current tenants at the four (4) tenant spaces (#170, #174, #176, and #178 Route 52, Carmel, New York) evaluated as part of the SVI investigation include:

- 170 Route 52 – Chinatown Restaurant – 1,600 square foot tenant space occupied by a restaurant.
- 174 Route 52 – Electric Paradise Tanning – 1,200 square foot tenant space occupied by a tanning salon.
- 176 Route 52 – Carmel Nails – 2,000 square foot tenant space occupied by a nail salon.
- 178 Route 52 – Europa Pizza – 2,000 square foot tenant space occupied by a restaurant.

Each of the four (4) tenant spaces listed above have SSD systems operating utilizing either a RadonAway® HS-5000 fan or a RadonAway® RP-265 Fan.

## 2.3 Remediation History

Lauren's Dry Cleaner and A&A Cleaners are noted as the historic tenants of concern in the shopping center and their historical operations resulted in Tetrachloroethene (PCE) contamination at the site. Site investigation activities were conducted between 1994 and 2004. During the investigation, a source area was identified beneath the concrete slab of the dry cleaner tenant space. The source area dimensions were noted as approximately 8 feet (ft) by 12 ft, to a depth of approximately 3 to 4 feet below grade (fbg). Approximately 49.66 tons of PCE impacted soil was excavated and removed for disposal off-site. Confirmation soil borings were completed subsequent to the excavation activities and indicated the presence of residual PCE contamination

beneath the building slab. A soil vapor extraction (SVE) system was installed to remediate the residual PCE impacted soil. The SVE system was shut down when monitoring of the SVE system indicated that remediation of the PCE impacted soils was complete. Following the SVE system deactivation, SSD systems were installed in 2010 for the purpose of preventing potential residual contamination of PCE beneath the concrete slab from impacting indoor air quality. A deed restriction was executed and recorded to restrict land use and prevent future exposure to any contamination remaining at the site. A Site Management Plan (SMP) is also in place for the long term management of remaining contamination with the SSD systems acting as the engineering control (EC) for the specific tenant spaces.

# 3 Scope of Work

All activities described in this report were completed in accordance with published NYSDOH guidance for evaluating SVI in the State of New York. This effort was undertaken to determine the actions recommended to address current and potential exposures related to SVI as outlined in the Soil Vapor/Indoor Air Matrices A through C (May 2017) and Matrices D through F (February 2024). SVI investigation activities were also completed in accordance with the revised December 22, 2023 SVI Work Plan approved by the NYSDEC on January 10, 2024.

Field activities included SSD system shutdown, verifying the integrity of the existing sub-slab vapor points (which were installed by GES on January 31, and February 1, 2024), building and chemical inventory, and collection of sub-slab soil vapor and indoor air samples over an 8-hour period from designated sampling points within the four (4) designated tenant spaces.

The sub-slab vapor point locations are illustrated on **Figure 3** and summarized in the table below.

**Table 1 – Sub-Slab Vapor Point Locations**

| Tenant Space Location | Sub-Slab Vapor Point ID |
|---|---|
| **178 Route 52 – Europa Pizza** | SS-1 |
| | SS-2 |
| **176 Route 52 – Carmel Nails** | SS-3 |
| | SS-4 |
| **174 Route 52 – Electric Paradise Tanning** | SS-5 |
| | SS-6 |
| **170 Route 52 – Chinatown Restaurant** | SS-7 |
| | SS-8 |

# 4 Pre-Sampling Requirements

## 4.1 SSD System Shutdown

On October 11, 2024, SSD systems in each of the four (4) tenant spaces were temporarily shut down. The electric breaker for each SSD system fan was turned to the off position and the SSD system exhaust ports were capped.

## 4.2 Pre-sampling Inspection and Preparation of Properties

On December 9, 2024, GES conducted a pre-sampling inspection at four (4) tenant spaces (#170, #174, #176, and #178 Route 52, Carmel, New York) to verify the floor layout, physical building conditions, and potential sources of volatile organic compounds (VOCs) that may be present within each tenant space that may affect or interfere with the planned sampling activities. Each of the tenant spaces were screened with a photoionization detector (PID) and inspected for products that potentially contain or are known to contain VOCs.

The NYSDOH *Indoor Air Quality Questionnaire and Building Inventory* Forms are provided in **Appendix B**.

### 4.2.1 Product Inventories

In accordance with the 2006 NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* document, GES completed a product inventory survey to document any potential or known sources of VOCs that may be present within each tenant space during sample collection. Items that were evaluated during the product inventory survey included, although were not limited to, the use and/or storage of chemical products. The NYSDOH *Indoor Air Quality Questionnaire and Building Inventory* includes a Product Inventory Form which is provided in **Appendix B**.

A Product Inventory Form was completed for each tenant space and includes the location product was found, product description, size of the product, condition, chemical ingredients, and field instrumentation reading. Field instrumentation readings were collected with a ppbRAE 3000 PID equipped with a 10.6 eV bulb. The ppbRAE 3000 PID was calibrated prior to use with 10 parts per million (ppm) isobutylene calibration gas and passed calibration. Section 6.1 provides additional field instrument readings/results from the product inventory.

### 4.2.2 Quality Assurance/Quality Control

On December 9, 2024, GES verified the integrity of the sub-slab vapor points using a helium tracer gas to test the seal. Each sub-slab location was then purged three (3) times the volume of the sampling point using a GILIAN personal air sampling system and a flow module (vacuum pump), which was set at a maximum flow rate of 0.2 liters per minute (L/min). Helium tracer gas was subsequently applied to the atmosphere (contained within a helium shroud) to confirm that an adequate seal was in place at all sub-slab vapor points. A helium multi-gas detector (MGD 2002) was used to verify all sub-slab vapor points. Additionally, a ppbRAE 3000 PID was utilized to screen soil gas concentrations via the sub-slab vapor point.

Each tenant space was also screened with a PID to measure background. The screening results are summarized in the table below:

**Table 2 – Screening Results**

| Tenant Space Location | Sample Date | Sample ID | PID Reading (ppb) | Helium Trace Reading (ppm) | Background (ppb) |
|---|---|---|---|---|---|
| **178 Route 52 – Europa Pizza** | 12/9/2024 | SS-1 | 0.0 | 0.0 | 520 |
| | 12/9/2024 | SS-2 | 0.0 | 0.0 | |
| | 12/10/2024 | SS-1 | 0.0 | -- | 0.0 |
| | 12/10/2024 | SS-2 | 26 | -- | |
| **176 Route 52 – Carmel Nails** | 12/9/2024 | SS-3 | 0.0 | 0.0 | 2,005 |
| | 12/9/2024 | SS-4 | 147 | 0.0 | |
| | 12/10/2024 | SS-3 | 0.0 | | 477 |
| | 12/10/2024 | SS-4 | 27 | | |
| **174 Route 52 – Electric Paradise Tanning** | 12/9/2024 | SS-5 | 0.0 | 0.0 | 448 |
| | 12/9/2024 | SS-6 | 0.0 | 0.0 | |
| | 12/10/2024 | SS-5 | 0.0 | -- | 0.0 |
| | 12/10/2024 | SS-6 | 57 | -- | |
| **170 Route 52 – Chinatown Restaurant** | 12/9/2024 | SS-7 | 0.0 | 0.0 | 0.0 |
| | 12/9/2024 | SS-8 | 0.0 | 0.0 | |
| | 12/10/2024 | SS-7 | 0.0 | -- | 0.0 |
| | 12/10/2024 | SS-8 | 187 | -- | |

*Notes:*
*ppb- parts per billion*
*ppm- parts per million*

A photolog illustrating the PID and helium multi-gas detector results is provided in **Appendix C**.

# 5 Soil Vapor Intrusion Sampling

## 5.1 Sampling Event

On December 10, 2024, GES collected eight (8) sub-slab vapor samples, eight (8) indoor air samples, and two (2) outdoor air samples. One (1) duplicate sub-slab vapor sample and one (1) duplicate indoor air sample was also collected. All samples were collected concurrently and indoor air samples were co-located with the same numbered sub-slab sample (i.e., indoor air sample IA-1 was located above the slab adjacent to sub-slab vapor sample SS-1). Samples were collected in accordance with the revised December 22, 2023 SVI Work Plan approved by the NYSDEC on January 10, 2024.

The approximate locations of each sample are depicted on **Figure 3** and summarized on the table below:

**Table 3 – Sampling Summary**

| Tenant Space Location | Sample Date | Sample ID | Sample Type |
|---|---|---|---|
| **178 Route 52 – Europa Pizza** | 12/10/2024 | SS-1 | Soil Vapor |
| | 12/10/2024 | IA-1 | Indoor Air |
| | 12/10/2024 | SS-2 | Soil Vapor |
| | 12/10/2024 | IA-2 | Indoor Air |
| **176 Route 52 – Carmel Nails** | 12/10/2024 | SS-3 | Soil Vapor |
| | 12/10/2024 | IA-3 | Indoor Air |
| | 12/10/2024 | SS-4 | Soil Vapor |
| | 12/10/2024 | IA-4 | Indoor Air |
| **174 Route 52 – Electric Paradise Tanning** | 12/10/2024 | SS-5 | Soil Vapor |
| | 12/10/2024 | IA-5 | Indoor Air |
| | 12/10/2024 | SS-6 | Soil Vapor |
| | 12/10/2024 | IA-6 | Indoor Air |
| | 12/10/2024 | DUP (SS-5) | Soil Vapor |
| | 12/10/2024 | DUP (IA-5) | Indoor Air |
| **170 Route 52 – Chinatown Restaurant** | 12/10/2024 | SS-7 | Soil Vapor |
| | 12/10/2024 | IA-7 | Indoor Air |
| | 12/10/2024 | SS-8 | Soil Vapor |
| | 12/10/2024 | IA-8 | Indoor Air |
| **Outdoor** | 12/10/2024 | OA-1 | Ambient Air |
| | 12/10/2024 | OA-2 | Ambient Air |

## 5.2 Sample Collection

All sub-slab, indoor, and outdoor air samples were collected over an 8-hour period using laboratory supplied, batch-certified, 6-liter SUMMA canisters equipped with 8-hour regulators. Upon completion of the 8-hour sampling period, each sample collection apparatus was stored according to the sample collection methodology set by the laboratory and delivered to SGS North America, Inc. of Dayton, New Jersey under proper chain of custody for analysis of VOCs via United States Environmental Protection Agency (EPA) Method TO-15.

### 5.3 Sample Integrity

Duplicate samples were collected for both sub-slab and indoor air samples. Sub-slab vapor sample SS-5 and indoor air sample IA-5 both had duplicate samples collected. All summa canister samples were received by the laboratory in good condition and within sample holding time.

### 5.4 SSD System Restart

The SSD system in each of the four (4) tenant spaces was restarted on December 10, 2024 following the completion of sample collection activities.

## 6 Results

### 6.1 Product Inventory

GES identified a number of products stored within the tenant spaces, some of which screened positive for the presence of VOCs which may have affected the SVI results. Background screening results prior to the SVI test ranged from 0.0 to 2,005 parts per billion (ppb). Background screening results during the SVI test ranged from 0.0 to 477 ppb.

The following products were identified with measured PID results:

#### 6.1.1 178 Route 52 – Europa Pizza

- Restaurant Saver, Green Dishwashing Liquid – PID response of 35 ppb

#### 6.1.2 176 Route 52 – Carmel Nails

- Acetone – PID response of 11.15 ppm
    - High background readings measured on December 9th and 10th were sourced from the nail salon operations, which were also sensed through olfactory observation.

#### 6.1.3 174 Route 52 – Electric Paradise Tanning

- Australian Gold Disinfectant Sanitizer – PID response of 150 ppb
- Berkely Jenson dryer sheets – 160 ppb
- The dryer vent, which exhausts into the tenant space – PID response of 150 ppb
    - The dryer vent exhaust may be skewing results of the indoor air data.

#### 6.1.4 170 Route 52 – Chinatown Restaurant

- So-Kleen Green Premium cleaner – PID response of 75 ppb

The NYSDOH *Indoor Air Quality Questionnaire and Building Inventory* includes a Product Inventory Form which is provided in **Appendix B**. Additional photos of the products included in the Product Inventory Form are included in the photographic log in **Appendix C**.

## 6.2 Analytical Results

Laboratory analytical results indicated the presence of individual VOCs above laboratory reporting limits and/or above regulatory guidelines in sub-slab vapor samples, indoor air samples, and outdoor air samples. The analytical data is summarized on **Table 4** and the laboratory analytical reports are included in **Appendix D**. In addition, a data usability summary report (*DUSR*) was completed by Groundwater and Environmental Services Environmental Informatics Group, of Blacksburg, Virginia. The data usability evaluation verified all results acceptable for use. Data validation qualifiers were assigned to various analytes due to compliance issues as outlined on Table 1 of the Data Validation Report. A copy of the DUSR is provided in **Appendix E.**

The following compounds exceeded regulatory guidelines in one (1) or more indoor air samples, based on the upper fence indoor air values in Appendix C of the NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* document.

- Acetone
- Chloroform
- Methylmethacrylate

Compounds for all indoor air samples were below the NYSDOH Air Guideline Values (AGVs) from Table 3.1 of the NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* document.

The upper fence indoor air values and AGVs pertain to indoor air samples only, not sub-slab vapor samples.

Laboratory analytical results for select constituents of concern (COCs) were then compared to the Updates to Soil Vapor/Indoor Air Decision Matrices A through C, dated May 2017, and Matrices D through F (attached as **Appendix F**).

A summary of the constituents of concern and the matrix recommendation by tenant space are detailed below:

### 6.2.1 178 Route 52 – Europa Pizza

#### 6.2.1.1 SS-1 and IA-1

- Concentrations of Matrix A COCs [1,1-dichloroethene (1,1-DCE), carbon tetrachloride, cis-1,2-dichloroethene (c12-DCE), and TCE) ranged from non-detect to 0.56 micrograms per cubic meter (µg/$m^3$) (carbon tetrachloride, IA-1) and result in a *No Further Action* recommendation.
- Concentrations of Matrix B COCs [1,1,1-trichloroethane (1,1,1-TCA), methylene chloride, and PCE] ranged from non-detect to 12 µg/$m^3$ (PCE, SS-1) and result in a *No Further Action* recommendation.
- Concentrations of Matrix C COC (vinyl chloride) were non-detect and result in a *No Further Action* recommendation.
- Concentrations of Matrix D COCs (benzene, cyclohexane, ethylbenzene, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene,

2,2,4-trimethylpentane, and o-xylene) ranged from non-detect to 6.4 µg/m$^3$ (benzene, IA-1) and result in a *No Further Action* recommendation.

- Concentrations of Matrix E COCs (heptane, hexane, and m,p-xylene) ranged from non-detect to 51.6 µg/m$^3$ (heptane, IA-1) and result in an *Identify Source, Resample or Mitigate* recommendation.
    - The recommendation outcome is the result of heptane present in the IA-1 sample at more than 20 µg/m$^3$. However, heptane was not detected in the corresponding sub-slab sample and was present at low levels in one outdoor air sample. Therefore, the presence of heptane is not considered the result of vapor intrusion. Furthermore, heptane may be sourced from the adjoining nail salon operations.
- Concentrations of Matrix F COC (toluene) ranged from non-detect to 3.4 µg/m$^3$ (IA-1) and result in a *No Further Action* recommendation.

#### 6.2.1.2 SS-2 and IA-2

- Concentrations of Matrix A COCs ranged from non-detect to 0.57 µg/m$^3$ (carbon tetrachloride, IA-2) and result in a *No Further Action* recommendation.
- Concentrations of Matrix B COCs ranged from non-detect to 26 µg/m$^3$ (PCE, SS-2) and result in a *No Further Action* recommendation.
- Concentrations of Matrix C COC were non-detect and result in a *No Further Action* recommendation.
- Concentrations of Matrix D COCs ranged from non-detect to 12 µg/m$^3$ (benzene, IA-2) and result in an *Identify Source, Resample or Mitigate* recommendation.
    - The recommendation outcome is the result of benzene present in the IA-2 sample at more than 10 µg/m$^3$. However, benzene was detected at 2.7 µg/m$^3$ at SS-2 and was present in the outdoor air samples. Therefore, the presence of benzene is not considered the result of vapor intrusion.
- Concentrations of Matrix E COCs ranged from non-detect to 11 µg/m$^3$ (heptane, IA-2) and result in a *No Further Action* recommendation.
- Concentrations of Matrix F COC ranged from 2.8 µg/m$^3$ (SS-2) to 3.4 µg/m$^3$ (IA-2) and result in a *No Further Action* recommendation.

The constituent of concern analytical data for Europa Pizza tenant space (#178 Route 52, Carmel, NY) is summarized on **Table 5**, **Table 6**, and **Figure 4**.

### 6.2.2 176 Route 52 – Carmel Nails

#### 6.2.2.1 SS-3 and IA-3

- Concentrations of Matrix A COCs ranged from non-detect to 0.63 µg/m$^3$ (carbon tetrachloride, IA-3) and result in a *No Further Action* recommendation.

- Concentrations of Matrix B COCs ranged from non-detect to 164 µg/m$^3$ (PCE, SS-3) and result in a *No Further Action* recommendation.
- Concentrations of Matrix C COC were non-detect and result in a *No Further Action* recommendation.
- Concentrations of Matrix D COCs ranged from non-detect to 2.1 µg/m$^3$ (benzene, IA-3) and result in a *No Further Action* recommendation.
- Concentrations of Matrix E COCs ranged from non-detect to 64.8 µg/m$^3$ (heptane, IA-3) and result in an *Identify Source, Resample or Mitigate* recommendation.
    - The presence of heptane is not the result of vapor intrusion considering its low level detection in the corresponding sub-slab sample. Furthermore, heptane may be sourced from the nail salon operations.
- Concentrations of Matrix F COC ranged from non-detect to 9.4 µg/m$^3$ (IA-3) and result in a *No Further Action* recommendation.

#### 6.2.2.2 SS-4 and IA-4

- Concentrations of Matrix A COCs ranged from non-detect to 0.50 µg/m$^3$ (TCE, SS-4) and result in a *No Further Action* recommendation.
- Concentrations of Matrix B COCs ranged from non-detect to 10 µg/m$^3$ (Methylene Chloride, SS-4) and result in a *No Further Action* recommendation.
- Concentrations of Matrix C COC were non-detect and result in a *No Further Action* recommendation.
- Concentrations of Matrix D COCs were non-detect and result in a *No Further Action* recommendation.
- Concentrations of Matrix E COCs ranged from non-detect to 65.6 µg/m$^3$ (heptane, IA-4) and result in an *Identify Source, Resample or Mitigate* recommendation.
    - The presence of heptane is not the result of vapor intrusion considering its low level detection in the corresponding sub-slab sample. Furthermore, heptane may be sourced from the nail salon operations.
- Concentrations of Matrix F COC ranged from non-detect to 2.1 µg/m$^3$ (SS-4) and result in a *No Further Action* recommendation.

The laboratory reporting limit (RL) was elevated on sample IA-4. SGS reports that the initial acetone result exceeded the linear dynamic calibration range with dilutions made accordingly. Nail salon operations include the use of acetone, which was identified present during the product inventory review. The constituent of concern analytical data for Carmel Nails tenant space (#176 Route 52, Carmel, NY) is summarized on **Table 5**, **Table 6**, and **Figure 4**.

### 6.2.3 174 Route 52 – Electric Paradise Tanning

#### 6.2.3.1 SS-5 and IA-5

- Concentrations of Matrix A COCs ranged from non-detect to 24 µg/m$^3$ (TCE, SS-5) and result in a ***Monitor*** recommendation.
    - The recommendation outcome is the result of TCE present in the IA-5 sample at more than 0.2 µg/m$^3$. However, the duplicate sample collected [IA-5 (DUP)] collected from the same location had an indoor air concentration of TCE below a method detection limit of 0.17 µg/m$^3$ and therefore would result in a No Further Action recommendation.
- Concentrations of Matrix B COCs ranged from non-detect to 12 µg/m$^3$ [PCE, SS-5 and SS-5 (DUP)] and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix C COC were non-detect and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix D COCs ranged from non-detect to 2.3 µg/m$^3$ [benzene, IA-5 and IA-5 (DUP)] and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix E COCs ranged from 1.3 µg/m$^3$ [m,p-xylene, SS-5 (DUP)] to 3.9 µg/m$^3$ (hexane, SS-5) and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix F COC ranged from 2.5 µg/m$^3$ [SS-5 (DUP)] to 4.1 µg/m$^3$ (IA-5) and result in a ***No Further Action*** recommendation.

#### 6.2.3.2 SS-6 and IA-6

- Concentrations of Matrix A COCs ranged from non-detect to 0.75 µg/m$^3$ (TCE, IA-6) and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix B COCs ranged from non-detect to 1,040 µg/m$^3$ (PCE, SS-6) and result in a ***Mitigate*** recommendation.
- Concentrations of Matrix C COC were non-detect and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix D COCs ranged from non-detect to 2.2 µg/m$^3$ (benzene, IA-6) and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix E COCs ranged from non-detect to 3.6 µg/m$^3$ (heptane, IA-6) and result in a ***No Further Action*** recommendation.
- Concentrations of Matrix F COC ranged from non-detect to 4.1 µg/m$^3$ (IA-6) and result in a ***No Further Action*** recommendation.

The constituent of concern analytical data for Electric Paradise Tanning tenant space (#174 Route 52, Carmel, NY) is summarized on **Table 5**, **Table 6**, and **Figure 4**.

### 6.2.4 170 Route 52 – Chinatown Restaurant

#### 6.2.4.1 SS-7 and IA-7

- Concentrations of Matrix A COCs ranged from non-detect to 0.53 µg/m$^3$ (carbon tetrachloride, IA-7) and result in a *No Further Action* recommendation.
- Concentrations of Matrix B COCs ranged from non-detect to 84.1 µg/m$^3$ (PCE, SS-7) and result in a *No Further Action* recommendation.
- Concentrations of Matrix C COC were non-detect and result in a *No Further Action* recommendation.
- Concentrations of Matrix D COCs ranged from non-detect to 1.4 µg/m$^3$ (benzene, IA-7) and result in a *No Further Action* recommendation.
- Concentrations of Matrix E COCs ranged from non-detect to 5.6 µg/m$^3$ (hexane, SS-7) and result in a *No Further Action* recommendation.
- Concentrations of Matrix F COC ranged from 1.1 µg/m$^3$ (IA-7) to 2.6 µg/m$^3$ (SS-7) and result in a *No Further Action* recommendation.

#### 6.2.4.2 SS-8 and IA-8

- Concentrations of Matrix A COCs ranged from non-detect to 0.52 µg/m$^3$ (carbon tetrachloride, IA-8) and result in a *No Further Action* recommendation.
- Concentrations of Matrix B COCs ranged from non-detect to 14 µg/m$^3$ (PCE, SS-8) and result in a *No Further Action* recommendation.
- Concentrations of Matrix C COC were non-detect and result in a *No Further Action* recommendation.
- Concentrations of Matrix D COCs ranged from non-detect to 0.89 µg/m$^3$ (benzene, IA-8) and result in a *No Further Action* recommendation.
- Concentrations of Matrix E COCs ranged from non-detect to 3.5 µg/m$^3$ (hexane, SS-8) and result in a *No Further Action* recommendation.
- Concentrations of Matrix F COC ranged from 1.7 µg/m$^3$ (SS-8) to 2.1 µg/m$^3$ (IA-8) and result in a *No Further Action* recommendation.

The constituent of concern analytical data for Chinatown Restaurant tenant space (#170 Route 52, Carmel, NY) is summarized on **Table 5**, **Table 6**, and **Figure 4**.

## 7 Summary & Recommendations

On December 9 and 10, 2024, a second SVI sampling event was completed at the Carmel ShopRite Plaza (NYSDEC Site Number V00104) at tenant spaces #170, #174, #176, and #178 Route 52, Carmel, NY in accordance with the NYSDEC letter dated October 3, 2024. This investigation was conducted for the purpose of evaluating current sub-slab soil vapor and indoor air quality as well as evaluating the potential for SVI in the tenant spaces in support of decommissioning the SSD systems.

- Ambient screening results indicate the presence of VOCs measured using a PID, in three (3) of the four (4) tenant spaces during the pre-sampling screening completed on December 9, 2024.
- Ambient screening results indicated the presence of VOCs measured using a PID in one (1) of the four (4) tenant spaces during the SVI event on December 10, 2024
- All four (4) tenant spaces contained at least one (1) product contributing to the presence of VOCs in the indoor air with the highest background observed in Carmel Nails. Typical nail salon products were in use during the pre-sampling and sampling activities; this has affected the results of the SVI event.
    - The detections of acetone and methyl methacrylate were higher than expected. To minimize any exposure to chemicals used in daily business practices, please ensure that all containers are properly seal and stored, and that products are used with adequate ventilation.
- Outdoor control samples contained detections of individual petroleum based VOCs, a number of which were detected in indoor air samples with the highest detections of benzene, hexane and toluene measured at 2.7, 3.5 and 2.4 µg/m$^3$, respectively. These same compounds were also detected in samples collected from each tenant space.
    - The presence of benzene and heptane in indoor air samples located at the Europa Pizza (#178 Route 52, Carmel, NY) tenant space (IA-1) and Carmel Nails (#176 Route 52, Carmel, NY) tenant space (IA-3 and IA-4) resulted in a ***Identify Source, Resample or Mitigate*** recommendation compared to the NYSDEC Soil Vapor/Indoor Air Decision Matrices D through F. As detailed above and in Section 6.2, the presence of benzene and heptane are likely not due to SVI but from tenant space operations (Nail salon).

Based on the NYSDEC Soil Vapor/Indoor Air Decision Matrices A through C comparison, a ***No Further Action*** recommendation for all locations resulted with the exception of Electric Paradise Tanning (#174 Route 52, Carmel, NY). This outcome was based on the detection of PCE at SS-6 (1,040 µg/m$^3$), which is greater than the Matrix B sub-slab vapor concentration threshold of 1,000 µg/m$^3$ which triggers a recommendation of ***Mitigate***, and the detection of TCE at IA-5 and SS-5, which resulted in a recommendation of ***Monitor***.

The following recommendations are proposed at this time based on the results of the two (2) SVI sampling events:

**Table 7 – Recommendations**

| Tenant Space Location | Recommendation |
|---|---|
| **178 Route 52 – Europa Pizza** | Complete an additional SVI sampling event (including sub-slab, indoor air) sample collection, per the approved SVI workplan, during the next heating season. Per the July 17, 2025 email from NYSDEC, the SSD system will be shut down and capped during the 3rd quarter 2025. |
| **176 Route 52 – Carmel Nails** | Complete an additional SVI sampling event (including sub-slab, indoor air) sample collection, per the approved SVI workplan, during the next heating season. Per the July 17, 2025 email from NYSDEC, the SSD system will be shut down and capped during the 3rd quarter 2025. |
| **174 Route 52 – Electric Paradise Tanning Salon** | Complete an additional SVI sampling event (including sub-slab, indoor air) sample collection, per the approved SVI workplan, during the next heating season. Continue SSD operation. |
| **170 Route 52 – Chinatown Restaurant** | Complete an additional SVI sampling event (including sub-slab, indoor air) sample collection, per the approved SVI workplan, during the next heating season. Per the July 17, 2025 email from NYSDEC, the SSD system will be shut down and capped during the 3rd quarter 2025. |

**Notes:**
Results and Regulatory Guidance values are expressed in µg/m$^3$.
- = Not analyzed for that specific compound
µg/m$^3$ = micrograms per cubic meter
[a] = Result is from Run #2
[b] = Result is from Run #3
E = Indicates value exceeds calibration range
J = Result is less than the laboratory reporting limit but greater than or equal to the method detection limit. Concentration is an approximate value.
ND (ND<#) = Not detected. Concentration is less than the laboratory reporting limit.
NS = No Standard
NYSDOH = New York State Department of Health
**BOLD** = Results exceed NYSDOH 2006 Soil Vapor Indoor Upper Fence (1) standard
*ITALIC* = Results exceed NYSDOH 2006 Soil Vapor Intrusion Air Guidance Value (2) standard
**(1)** Upper fence indoor air values from "Table C1. NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes" published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C" (October 2006, revised September 2013 and August 2015). Upper fence indoor air values pertain to indoor air samples only.
**(2)** NYSDOH Air Guideline Values (AGVs) from "Table 3.1 Air guideline values derived by the NYSDOH" presented in the Final Guidance for evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 ("NYSDOH Vapor Intrusion Guidance Document"). AGVs pertain to indoor air samples only.

**Re: Carmel Shop-Rite Plaza**
**Soil Vapor Intrusion Investigation Summary Report and Tenant Notification Letters**
**180 Gleneida Avenue**
**Carmel, New York**
**Site No.: V00104**

Dear Monica Roth,

The New York State Department of Environmental Conservation (the Department), in consultation with the New York State Department of Health (NYSDOH), has reviewed the results from the January 1, 2025, Soil Vapor Intrusion Investigation Summary Report. Please note, the report must be shared with your tenants and when doing so it is clear the report is still under review by the Department and NYSDOH. Based on the Department's review of the information submitted and subsequent communications with NYSDOH staff, the Department disapproves this Soil Vapor Intrusion Investigation Summary Report for the following reasons and deficiencies.

## Reasons for Disapproval

Please respond to the Department within fifteen (15) days of the date of this letter indicating whether the Volunteer shall elect to modify the disapproved Soil Vapor Intrusion Investigation Summary Report.

1. Section 6.2 - Analytical Results: The text states that tetrachloroethene (PCE) and trichloroethene (TCE) exceeded the NYSDOH Air Guideline Values (AGVs) for both compounds. Based on our review of the Report's Data Table 4, there were no exceedances of the AGVs for PCE and TCE. Revise the Report accordingly and clarify that the AGVs (i.e., Table 3.1) pertain to indoor air samples, not sub-slab soil vapor or soil vapor samples.

2. Section 7 - Summary & Recommendations: Modify the text for Bullet 3, add the following text stating that additional volatile organic compounds (VOCs) were detected in the indoor air of all the tenant spaces. Include text stating *"The detections of acetone and methyl methacrylate were higher than expected. To*

*minimize any exposure to chemicals used in daily business practices, please ensure that all containers are properly sealed and stored, and that products are used with adequate ventilation."*

3. Figure 4 - Chemicals of Concern (COC) Summary Map: Please revise the indoor air Method Detection Limits (MDL) Column for Indoor Air, IA-4, the decimal point is missing.

4. Table 4 - Air Analytical Results: Revise the table to remove the bold and italics from all sub-slab soil vapor data results (e.g., acetone, methyl methacrylate, PCE and TCE) where applicable. Sub-slab vapor data is not compared to the NYSDOH 2006 Indoor 95th Percentile Values or the NYSDOH AGV.

5. Table 5 and Table 6 - Sample IA-4: Revise the MDLs (Column 5) to include the correct decimal point.

6. Table 7 – Recommendations: Based on a review of the data, the Department and the NYSDOH recommend all SSDS remain operational.

7. Section 6.1.3, the Report states the dryer vent exhausts into the Paradise Tanning tenant space. This might be skewing results of the indoor air data, too.

**Please provide copies of the final tenant notification letters once they are transmitted. I've provided fact sheets for VOCs, PCE, and TCE from NYSDOH to be transmitted with these tenant notification letters.**

**In accordance with 6 NYCRR Part 375-1.6(d)(3) should the Volunteer elect to revise the Soil Vapor Intrusion Investigation Summary Report, please notify the Department within 15 days of receipt of this letter and provide a revised Report incorporating the above modification within 30 days of receipt of this letter.**

**The revised Soil Vapor Intrusion Investigation Summary Report must be placed in the document repository within five (5) business days of submittal to the Department.**

**I can be reached at (518) 402-9605 or by email at matthew.hubicki@dec.ny.gov to discuss this matter further should you have any questions or comments.**

**Sincerely,**

**Matthew Hubicki,**
**Project Manager**

# Volatile Organic Compounds (VOCs) in Commonly Used Products

**People spend most of their time indoors – at home, school and work. This makes the quality of the indoor air you breathe important. This fact sheet focuses on certain kinds of chemicals called *volatile organic compounds* or *VOCs* that are found in many products that we commonly use. It is designed to help you think about what VOCs may be present in your indoor air and steps you can take to reduce them.**

## What are VOCs?

VOCs are chemicals that easily enter the air as gases from some solids or liquids. They are ingredients in many commonly used products and are in the air of just about every indoor setting. The table to the right shows some examples of products that contain VOCs.

## How do VOCs get into indoor air?

Products containing VOCs can release these chemicals when they are used and when they are stored. Many times you'll notice an odor when using these products. Product labels often list VOC ingredients and recommend that they should be used in well ventilated areas. *Ventilation* means bringing in fresh, outdoor air to mix with indoor air.

When you use a product containing VOCs indoors, the levels of these chemicals in the air increase, then decrease over time after you stop using them. The amount of time the chemical stays in the air depends on how quickly fresh air enters the room and the amount of the chemical used. Levels of VOCs will decrease faster if you open windows or doors, or use exhaust fans.

Building materials and furnishings, such as new carpets or furniture, slowly release VOCs over time. It may be necessary to ventilate areas with new carpeting or furniture for longer time periods because VOC levels can build up again after the windows are closed. If possible, unroll new carpets or store furniture outside your home (in a shed or detached garage) to minimize odors before bringing them in the home. If that's not possible, open windows, close doors and try to stay out of rooms until odors are reduced.

If VOC containing products are used outdoors near your home, you may want to close windows and nearby vents to prevent chemicals from coming inside.

**Products used at home or work can release VOCs into the air when used and stored.**

| Examples of Household Products | Possible VOC Ingredients |
|---|---|
| Fuel containers or devices using gasoline, kerosene, fuel oil and products with petroleum distillates: paint thinner, oil-based stains and paint, aerosol or liquid insect pest products, mineral spirits, furniture polishes | BTEX (benzene, toluene, ethylbenzene, xylene), hexane, cyclohexane, 1,2,4-trimethylbenzene |
| Personal care products: nail polish, nail polish remover, colognes, perfumes, rubbing alcohol, hair spray | Acetone, ethyl alcohol, isopropyl alcohol, methacrylates (methyl or ethyl), ethyl acetate |
| Dry cleaned clothes, spot removers, fabric/ leather cleaners | Tetrachloroethene (perchloroethene (PERC), trichloroethene (TCE)) |
| Citrus (orange) oil or pine oil cleaners, solvents and some odor masking products | d-limonene (citrus odor), a-pinene (pine odor), isoprene |
| PVC cement and primer, various adhesives, contact cement, model cement | Tetrahydrofuran, cyclohexane, methyl ethyl ketone (MEK), toluene, acetone, hexane, 1,1,1-trichloroethane, methyl-iso-butyl ketone (MIBK) |
| Paint stripper, adhesive (glue) removers | Methylene chloride, toluene, older products may contain carbon tetrachloride |
| Degreasers, aerosol penetrating oils, brake cleaner, carburetor cleaner, commercial solvents, electronics cleaners, spray lubricants | Methylene chloride, PERC, TCE, toluene, xylenes, methyl ethyl ketone, 1,1,1-trichloroethane |
| Moth balls, moth flakes, deodorizers, air fresheners | 1,4-dichlorobenzene, naphthalene |
| Refrigerant from air conditioners, freezers, refrigerators, dehumidifiers | Freons (trichlorofluoromethane, dichlorodifluoromethane) |
| Aerosol spray products for some paints, cosmetics, automotive products, leather treatments, pesticides | Heptane, butane, pentane |
| Upholstered furniture, carpets, plywood, pressed wood products | Formaldehyde |

VOCs can also get into indoor air from contaminated soils and groundwater under buildings. The chemicals enter buildings through cracks and openings in basements or slabs. When nearby soil or groundwater is contaminated, you might be asked for permission to investigate indoor air at your property. More information can be found at *www.nyhealth.gov/environmental/indoors/vapor_intrusion/.*

## Should I be surprised if VOCs are in the air I breathe?

No. Because they are commonly used, some VOCs are almost always found in indoor air. The New York State Department of Health (DOH) and other agencies have studied typical levels of VOCs that may be present in indoor and outdoor air. Sometimes these levels are called *"background levels".*

The term "background levels" can be confusing because they can vary depending on where an air sample was collected and whether VOCs were used or stored. For example, a study of VOCs in urban areas might find higher levels than another study in rural areas. Some studies look at office environments, others examine residences. Please keep in mind study findings may or may not make sense for your setting.

More information about levels of VOCs collected by DOH is available in Appendix C of the guidance for evaluating vapor intrusion at *www.nyhealth.gov/environmental/investigations/soil_gas/svi_guidance.*

## How can VOCs affect human health?

Chemicals can enter the body through three major pathways (breathing, touching or swallowing). This is referred to as *exposure*. No matter how dangerous a substance or activity is, it cannot harm you without exposure.

Whether or not a person will have health effects after breathing in VOCs depends on:

1. The *toxicity* of the chemical (the amount of harm that can be caused by contact with the chemical).
2. How much of the chemical is in the air.
3. How long and how often the air is breathed.

Differences in age, health condition, gender and exposure to other chemicals also can affect whether or not a person will have health effects.

Short-term exposure to high levels of some VOCs can cause headaches, dizziness, light-headedness, drowsiness, nausea, and eye and respiratory irritation. These effects usually go away after the exposure stops. In laboratory animals, long-term exposure to high levels of some VOCs has caused cancer and affected the liver, kidney and nervous system. In general, we recommend minimizing exposure to chemicals, if possible.

## How can I reduce the levels of VOCs indoors?

- Find out if products used or stored in your home contain VOCs. Information about the chemicals in many household products are listed on the front of this fact sheet and a larger list is on the National Institute of Health's website at *hpd.nlm.nih.gov/products.htm.*
- If you must store products containing VOCs, do so in tightly sealed, original containers in a secure and well-ventilated area. If possible store products in places where people do not spend much time, such as a garage or outdoor shed. Better yet, buy these products in amounts that are used quickly.
- Dispose of unneeded products containing VOCs. Many of these products are considered *household hazardous wastes* and should be disposed of at special facilities or during special household hazardous waste collection programs in your area. Contact your town or visit the New York State Department of Environmental Conservation's website at *www.dec.ny.gov/chemical/8485.html* for more information about disposing of these products.
- Use products containing VOCs in well-ventilated areas or outdoors. Open windows and doors or use an exhaust fan to increase ventilation. Repeated or prolonged ventilation may be necessary for reducing levels from building materials (new carpeting or furniture) that release VOCs slowly over time.
- Carefully read labels and follow directions for use.

December 2007

# New York State Department of Health
# Tenant Notification Fact Sheet for Tetrachloroethene (Perc)

This fact sheet is provided to fulfill New York State Department of Health (NYS DOH) requirements for preparation of generic fact sheets under Article 27 (Title 24, Section 27-2405) of the Environmental Conservation Law.

**Tetrachloroethene (Perc)**

Tetrachloroethene (also known as perchloroethylene or Perc) is a man-made volatile organic chemical that is widely used in the dry-cleaning of fabrics, including clothes, and in manufacturing other chemicals. It was also used for degreasing metal parts and in consumer products, including some paint and spot removers, water repellents, brake and wood cleaners, glues, and suede protectors.

**Sources of Perc in Indoor Air**

Household products containing Perc could be a possible source for Perc in indoor air. Perc also may evaporate from dry-cleaned clothes or dry-cleaning operations into indoor air. Another source could be evaporation from contaminated well water that is used for household purposes. Perc may also enter homes through soil vapor intrusion, which occurs when the chemical evaporates from groundwater, enters soil vapor (air spaces between soil particles), and migrates through building foundations into the building's indoor air. Perc has also been found at low concentrations in outdoor air.

**Levels Typically Found in Air**

The NYS DOH reviewed and compiled information from studies in New York State as well as from homes and office buildings across the United States on typical levels of Perc in indoor and outdoor air. Levels of Perc in the indoor air of homes and office settings and in outdoor air are expected to be below 10 micrograms per cubic meter ($mcg/m^3$).

**Health Risks Associated with Exposure**

An association exists between exposure of people in the workplace to high levels of Perc in air and certain forms of cancer. Perc causes cancer in laboratory animals exposed to high levels over their lifetimes. Overall, the studies of humans and in animals do not prove that Perc causes cancer in people, but are highly suggestive that there may be an increased risk for cancer in people who are exposed to Perc (particularly at high concentrations) over long periods of time

People exposed to high levels of Perc in air had nervous system effects and slight changes to their liver and kidneys. Some studies show a slightly increased risk for some types of reproductive effects among workers (including dry-cleaning workers) exposed to Perc and other chemicals. The reproductive effects associated with exposure included increased risks for spontaneous abortion, menstrual and sperm disorders, and reduced fertility. The data suggest, but do not prove, that the effects were caused by Perc and not by some other factor or factors. Exposure to high levels of Perc has caused liver and kidney damage in laboratory animals and effects on the nervous system. Taken together, the human and animal studies indicate that human exposure to high levels of Perc causes effects on the nervous system, and suggest that human exposure to high levels of Perc may increase the risk for liver and kidney toxicity.

**NYS DOH Air Guideline**

The NYS DOH guideline for Perc in air is 30 $mcg/m^3$. This level is lower than the levels that have caused health effects in animals and humans. The guideline is based on the assumption that people

are continuously exposed to Perc in air all day, every day for as long as a lifetime. This is rarely true for most people who, if exposed, are likely to be exposed for only part of the day and part of their lifetime. In setting this level, the NYS DOH also considered the possibility that certain members of the population (infants, children, the elderly, and those with pre-existing health conditions) may be especially sensitive to the effects of Perc.

The purpose of the guideline is to help guide decisions about the nature of the efforts to reduce Perc exposure. Reasonable and practical actions should be taken to reduce Perc exposure when indoor air levels are above those typically found in indoor air, even when they are below the guideline of 30 $mcg/m^3$. The urgency to take actions increases as indoor air levels increase, especially when air levels are above the guideline. The NYS DOH recommends taking immediate action to reduce exposure when an air level is ten times or more higher than the guideline (that is, when the air level is 300 $mcg/m^3$ or higher).

**Ways to Limit Exposure to Perc in Indoor Air**

In all cases, the specific actions to limit exposure to Perc in indoor air depend on a case-by-case evaluation of the situation. Removing household sources of Perc and maintaining adequate ventilation will usually help reduce indoor air levels of the chemical. A sub-slab depressurization system can reduce the amount of Perc entering indoor air by soil vapor intrusion. Use of an activated carbon filter on the water supply can reduce the amount of the chemical in contaminated well water that could evaporate into indoor air.

**Reportable Detection Level**

The reportable detection level for a chemical can vary depending on the analytical method used, the laboratory performing the analysis, and several other factors. Most laboratories that use the analytical methods recommended by the NYS DOH for measuring Perc in air (and approved by the National Environmental Laboratory Accreditation Conference or New York State's Environmental Laboratory Approval Program) can routinely detect the chemical at concentrations below 1 $mcg/m^3$.

**Additional Information**

Additional information on Perc, ways to reduce exposure, indoor air contamination resulting from soil vapor intrusion, indoor and outdoor air levels and the Environmental Conservation Law can be found on the NYS DOH website at www.health.state.ny.us/environmental/indoors/air/contaminants.

If you have further questions about Perc and the information in this fact sheet, please call the NYS DOH at 1-518-402-7800 or 1-800-458-1158 (extension 2-7800), e-mail to ceheduc@health.state.ny.us, or write to the following address:

**New York State Department of Health**
**Tenant Notification Fact Sheet for Trichloroethene (TCE)**

This fact sheet is provided to fulfill New York State Department of Health (NYSDOH) requirements for preparation of generic fact sheets under Article 27 (Title 24, Section 27-2405) of the Environmental Conservation Law.

## Trichloroethene (TCE)

Trichloroethene (also known as trichloroethylene or TCE) is a human-made chemical. It is volatile, meaning it readily evaporates at room temperature into the air, where you can sometimes smell it. It is used as a solvent to remove grease from metal, a paint stripper, an adhesive solvent, an ingredient in paints and varnishes, and in the manufacture of other chemicals and products (for example, furniture and electric/electronic equipment).

## Exposure to TCE

People may be exposed to TCE in air, water, and food, or when TCE or material containing TCE (for example, soil) gets on the skin. For most people, almost all TCE exposure is from indoor air.

## Sources of TCE in Air

TCE may get into indoor air when TCE-containing products (for example, glues, adhesives, paint removers, spot removers, and metal cleaners) are used. Another source could be evaporation from contaminated well water that is used for household purposes. TCE may enter homes through soil vapor intrusion, which occurs when TCE evaporates from contaminated groundwater, enters soil vapor (air spaces between soil particles), and migrates through cracks or other openings in the foundation and into the building. TCE gets into outdoor air when it is released from industrial facilities and when it evaporates from areas where chemical wastes are stored or disposed.

## Levels Typically Found in Air

The background indoor air levels of TCE in homes and office buildings not near known environmental sources of TCE are almost always 1 microgram per cubic meter of air (1 $mcg/m^3$) or less. Background outdoor air levels also are almost always 1 $mcg/m^3$ or less.

## Health Risks Associated with Exposure to TCE

Most people, if exposed to TCE, are exposed to air levels much lower than those known to cause health effects in humans (for example, workplace air levels 90,000 to 800,000 $mcg/m^3$). TCE exposure can cause effects on the central nervous system, liver, kidneys, and immune system of humans. TCE exposure is associated with reproductive effects in men and women, and may affect fetal development during pregnancy. However, the studies suggest, but do not prove, that the reproductive and developmental effects were caused by TCE, and not by some other factor. The United States Environmental Protection Agency (USEPA) classifies TCE as a chemical that causes cancer in humans by all routes of exposure. Whether a person experiences a

health effect depends on how much of the chemical he or she is exposed to, how often the exposure occurs, and how long the exposures last. Individual characteristics such as age, health, lifestyle, and genetics also play a role.

**NYSDOH Air Guideline**

NYSDOH recommends that TCE levels in air not exceed 2 mcg/$m^3$. This replaces the previous guideline of 5 mcg/$m^3$. The guideline was set at an air level that is lower than levels known to cause, or suspected of causing, health effects in humans, including sensitive populations (for example, children, pregnant women) and animals. The guideline is based on the assumption that people are continuously exposed to TCE in air all day, every day for months or as long as a lifetime. Continuous exposure is rarely true for most people, who, if exposed, are more likely to be exposed for a part of the day, part of a week, or part of their lifetime.

The guideline is used to help guide decisions regarding the urgency of efforts to reduce TCE exposure. At TCE air levels above the guideline, the higher the level, the greater the urgency to take action to reduce exposure. But as with any chemical in indoor air, the NYSDOH always recommends taking action to reduce exposure when the air concentration of a chemical is above background, even if it is below the guideline.

Indoor air concentrations substantially above the guideline clearly indicate a significant TCE source and the need for action to reduce exposure. In particular, NYSDOH has concerns about exposure during pregnancy, particularly during the first trimester, to air concentrations higher than 20 mcg/$m^3$ because the major steps of heart development occur during this period and TCE may be a risk factor for fetal heart defects in humans. Thus, NYSDOH recommends taking immediate and effective action to reduce exposure when an air concentration is equal to, or above 20 mcg/$m^3$.

**Ways to Limit Exposure to TCE in Indoor Air**

In all cases, the specific recommended actions to limit exposure to TCE in indoor air depend on a case-by-case evaluation of the situation. Removing household sources of TCE and maintaining adequate ventilation will usually help reduce indoor air levels of the chemical. A sub-slab depressurization system can reduce the amount of TCE entering indoor air by soil vapor intrusion. Use of an activated carbon filter on the water supply can reduce the amount of the chemical in contaminated well water that evaporates into indoor air.

**Concerns about Exposure to TCE**

Most people, if exposed to TCE, are exposed to air levels much lower than those known to cause health effects in humans. However, if you are concerned that you, your children, or others have been exposed to TCE, discuss your symptoms/signs with your health care provider. There are special tests to measure TCE and related chemicals in your blood, breath, or urine, and your health care provider can compare the results to those of people without known exposure to TCE or to workers with high exposure to TCE.

**Reportable Detection Level**

The reportable detection level for a chemical can vary depending on the analytical method used, the laboratory performing the analysis, and several other factors. Most laboratories that use the analytical methods

recommended by the NYSDOH for measuring TCE in air (and approved by the National Environmental Laboratory Accreditation Conference or New York State's Environmental Laboratory Approval Program) can routinely detect the chemical at levels below 1 mcg/$m^3$.

**Additional Information**

Additional information on TCE, ways to reduce exposure, indoor air contamination resulting from soil vapor intrusion, indoor and outdoor air levels and the Environmental Conservation Law can be found on the NYSDOH website at www.health.state.ny.us/environmental/indoors/air/contaminants/.

If you have further questions about TCE and the information in this fact sheet, please call the NYSDOH at 1-518-402-7800 or 1-800-458-1158, e-mail to ceheduc@health.state.ny.us, or write to the following address:

Re: Sub-slab and Ambient Air Sampling at Chic Nail & Spa
Carmel ShopRite
176 Route 52 Carmel, New York

Dear Tenant:

Available on the New York State Department of Environmental Conservation (NYSDEC) website or available upon request is the Soil Vapor Intrusion Summary Report summarizing soil vapor and indoor air sampling at Carmel Nails located at the Carmel ShopRite Plaza, 176 Route 52, Carmel, New York. This report, prepared by our consultant, Groundwater Environmental Services (GES), summarizes the results of recent indoor air sampling efforts at Carmel Nails and other tenant spaces. This report is also under review by the NYSDEC and New York State Department of Health (NYSDOH).

NYSDEC Website: https://extapps.dec.ny.gov/data/DecDocs/V00104/

As shown in the report, detections of tetrachloroethene (PCE), carbon tetrachloride, and methylene chloride were reported in one or more sample locations. None of the detections identified were at actionable concentrations. As expected, o~~O~~ther volatile organic compounds were also detected as they may be found in products used in your daily business ~~practices.The~~practices. The concentrations of most of the other volatile organic compounds (VOCs) found in your indoor air were within typical background levels. ~~However, the~~However, the concentrations of acetone and methyl methacrylate were higher than expected. To minimize any exposure to chemicals used in your business, please ensure that all containers are properly sealed and stored. When using these items, please properly ventilate the area. ~~. None of the detections identified were at actionable concentrations~~. The report also explains that GES reactivated the previously installed sub-slab depressurization (SSD) systems; these systems will continue to operate until the ~~New York State Department of Environmental Conservation~~NYSDEC and ~~New York State Department of Health~~ (NYSDOH) approve shutdown.

Environmental Conservation Law 27-2405 requires property owners or owners' agents (such as landlords) to notify all of their tenants and occupants of any test results related to indoor air contamination associated with soil vapor intrusion (SVI) that they receive from certain persons and entities. The law applies to both residential and non-residential properties. More information regarding the tenant notification law and your obligations can be found at:

Electric Paradise Tanning II, Inc.
131 Manhattan Avenue
Hawthorne, NY 10532
Attn: Michael Poli

Re: Sub-slab and Ambient Air Sampling at Electric Paradise Tanning
Carmel ShopRite Plaza
172 Route 52 Carmel, New York

Dear Mr. Poli:

Available on the New York State Department of Environmental Conservation (NYSDEC) website or available upon request is the Soil Vapor Intrusion Summary Report summarizing soil vapor and indoor air sampling at Electric Paradise Tanning located at the Carmel ShopRite Plaza, 172 Route 52, Carmel, New York. This report, prepared by our consultant, Groundwater Environmental Services (GES), summarizes the results of recent indoor air sampling efforts at Electronic Paradise Tanning and other tenant spaces. This report is also under review by the NYSDEC and New York State Department of Health (NYSDOH).

NYSDEC Website: https://extapps.dec.ny.gov/data/DecDocs/V00104/

As shown in the report, detections of tetrachloroethene (PCE), trichloroethene (TCE), methylene chloride, carbon tetrachloride, and/or cis-1,2-dichloroethene (cis 1,2-DCE) were identified in one or more sample locations. As expected, o~~O~~ther volatile organic compounds (VOCs) were also detected in the indoor air. The concentrations of most of the other VOCs found in your indoor air were within typical background levels. However, the concentrations of acetone and methylmethacrylate were higher than expected. To minimize any exposure to chemicals used in your business, please ensure that all containers are properly sealed and stored. When using these items, please properly ventilate the area. The elevated~~detected~~ PCE concentration collected from sub-slab sample SS-6 (utility room) from underneath the building, requires the continued operation of the sub-slab depressurization (SSD) system. GES reactivated the SSD system on December 10, 2024 and; the system will continue to operate to control the potential for vapor intrusion. Also these SSD systems will continue to operate until the NYSDEC and NYSDOH approve shutdown.

Environmental Conservation Law 27-2405 requires property owners or owners' agents (such as landlords) to notify all of their tenants and occupants of any test results related to indoor air contamination associated with soil vapor intrusion (SVI) that they receive from certain persons and entities. The law applies to both residential and non-residential properties. More information regarding the tenant notification law and your obligations can be found at:

http://www.dec.ny.gov/regulations/55739.html

# Memo

| | |
|---|---|
| **To:** | Matthew Hubicki (NYSDEC), Renata Ockerby (NYSDOH), and Melissa Doroski (NYSDOH) |
| **From:** | Jessica Montaldo (GES) and Michael DeGloria (GES) |
| **cc:** | Monica Roth (Regency Centers) |
| **Date:** | June 13, 2025 |
| **Re:** | NYSDEC Site Number V00104<br>Carmel Shop-Rite Center<br>SVI Summary Report Follow-up |

The purpose of this draft memorandum (memo) is to document Groundwater & Environmental Services', Inc. (GES') review of applicable historical data and report files related to the soil vapor intrusion investigations at the Carmel ShopRite Plaza (NYSDEC Site Number V00104) located at 180 Gleneida Avenue (Route 52) in Carmel, New York (the site).

GES, Regency Centers, New York State Department of Environmental Conservation (NYSDEC), and New York State Department of Health (NYSDOH) had a conference call on May 27, 2025 to discuss the next steps and recommendations included in the *Soil Vapor Intrusion Investigation Summary* dated January 24, 2025. As discussed on the call, NYSDEC and NYSDOH requested a review of the historical data for Tetrachloroethene (PCE) and Trichloroethene (TCE) at the site. Additionally, GES reviewed the radius of influence (ROI) testing that was historically completed to evaluate if there are sub-slab pathways between each tenant space.

A Site Map and Sub-Slab Depressurization System Layout is included as **Figure 1** and **Figure 2**, respectively.

## Historical PCE and TCE Data

The historical data for indoor air and soil gas presented in the February 2012 *Site Management Plan* and the recent soil vapor intrusion investigation data collected in March 2024 and December 2024 were reviewed and compared. The data is presented in **Table 1** and **Table 2** for indoor air and soil gas/sub-slab vapor, respectively.

### Indoor Air

The Pre-Remediation data collected, prior to the excavation of impacted PCE soil and installation of a soil vapor extraction (SVE) system, has indoor air samples collected at the tenant spaces that are currently Electric Paradise Tanning (former dry cleaners), Carmel Wine & Spirits, Chic Nail & Spa, and Chinatown Restaurant. The Electric Paradise Tanning tenant space is the source

location, and the Carmel Wine & Spirits, Chic Nail & Spa, and Chinatown Restaurant are the adjacent tenant locations to the North (Chic Nail & Spa) and South (Carmel Wine & Spirits and Chinatown Restaurant) of the former dry cleaners. During the Pre-Remediation phase, concentrations of PCE were detected at all sample locations. The PCE concentrations ranged from 5 micrograms per cubic meter (µg/m$^3$) at the outdoor sample location to 7,900 µg/m$^3$ in the storage area of the former dry cleaners. Concentrations of TCE were non-detect (unknown reporting limit) at all sample locations or was not analyzed.

The Post Remediation data collected, after excavation of 36 tons of PCE impacted soil and operation of the SVE system, has indoor air samples collected at the tenant spaces that are now Electric Paradise Tanning (former dry cleaners), Chic Nail & Spa, Carmel Wine & Spirits, and Chinatown Restaurants. During the Post Remediation phase, concentrations of PCE were detected at the Electric Paradise Tanning, Chic Nail & Spa, and Carmel Wine & Spirits tenant locations. PCE was not identified in the indoor air at the Chinatown Restaurant or the outdoor sample location. The PCE concentrations ranged from 10.8 µg/m$^3$ at the Carmel Wine & Spirits sample location to 1,030.56 µg/m$^3$ in the storage area of the former dry cleaners. Concentrations of TCE were non-detect (unknown reporting limit) at all sample locations or was not analyzed.

The recent data collected in 2024, after operation of the sub-slab depressurization system (SSDS) that was installed in 2005 at the Electric Paradise Tanning (former dry cleaners) and modified in 2010 to include individual operating SSDS fans in neighboring tenant spaces at Chic Nail & Spa, Europa Pizza, and Chinatown Restaurant, has indoor air samples collected at the tenant spaces that are now Electric Paradise Tanning (former dry cleaners), Chic Nail & Spa, Chinatown Restaurants, and Europa Pizza. The recent concentrations of PCE in indoor air samples from March 2024 and resampled in June 2024 were detected at Electric Paradise Tanning and Chinatown Restaurant. The indoor air concentrations in March 2024 for PCE ranged from non-detect to 74.6 µg/m$^3$ (Electric Paradise Tanning at sample location IA-5) and for TCE ranged from non-detect to 60.7 µg/m$^3$ (Electric Paradise Tanning at sample location IA-5). The results at sample location IA-5 in March 2024 are presumed to be erroneous and all sample locations at the Electric Paradise Tanning tenant location were resampled in June 2024. The indoor air concentrations in June 2024 for PCE ranged from non-detect to 0.39 µg/m$^3$ (Electric Paradise Tanning at sample location IA-6) and the TCE concentrations were non-detect at both sample locations (IA-5 and IA-6). The recent concentrations of PCE in indoor air samples from December 2024 were detected at Electric Paradise Tanning, Chic Nail & Spa, and Chinatown Restaurant. The indoor air concentrations in December 2024 for PCE ranged from non-detect to 1.2 µg/m$^3$ (Chinatown Restaurant at sample location IA-8) and for TCE ranged from non-detect to 0.30 µg/m$^3$ (Electric Paradise Tanning at sample location IA-5).

## Soil Gas/Sub-slab Vapor

GES was unable to identify if sub-slab vapor or soil gas samples were collected during the Pre-Remediation phase in the available historical reports. During the Post Remediation phase of the project (active SVE operation), a SVE influent sample (SVEIN) was collected. The SVEIN sample had concentrations of PCE at 49.6 µg/m$^3$ and TCE at 54.9 µg/m$^3$. Additionally, a sub-slab soil gas sampling event was conducted on October 19, 2004 at the tenant spaces that are now Carmel

Wine & Spirits, Magic Clippers, Europa Pizza, and Chinatown Restaurant. Sub-slab soil gas concentrations of PCE ranged from 15.8 µg/m$^3$ at the Magic Clippers sample location to 7,490 µg/m$^3$ at the Carmel Wine & Spirits tenant space (in the rear storage area). The sub-slab soil gas concentrations of TCE ranged from non-detect (Europa Pizza, Magic Clippers, and entrance of Carmel Wine & Spirits) to 276 µg/m$^3$ at the Chinatown Restaurant tenant space (behind service counter).

The recent data collected in 2024 of the sub-slab vapor points illustrate a continued decrease in concentrations over time following operation of the SVE system (which was terminated in 2005). In March 2024, sub-slab vapor concentrations for PCE ranged from 0.41 µg/m$^3$ (SS-5 at Electric Paradise Tanning) to 136 µg/m$^3$ (SS-6 at Electric Paradise Tanning) and concentrations of TCE ranged from non-detect to 0.33 (SS-6 at Electric Paradise Tanning). In December 2024, sub-slab vapor concentrations for PCE ranged from 7.5 µg/m$^3$ (SS-4 at Chic Nail & Spa) to 1,040 µg/m$^3$ (SS6 at Electric Paradise Tanning) and concentrations of TCE ranged from non-detect to 23 µg/m$^3$ (SS5 at Electric Paradise Tanning).

### Historic Data Summary

In summary, recent concentrations of indoor air and sub-slab vapor collected in March 2024 and December 2024 indicate a decrease at all tenant spaces in comparison to Post-Remediation data. The Post Remediation data was collected during operation of the SVE System between 2002 and 2005.

The data collected in December 2024, that was most recently reported in the Soil Vapor Intrusion Investigation Summary dated January 24, 2025, was compared to the NYSDOH Updates to Soil Vapor/Indoor Air Decision Matrices A through C, dated May 2017, for chlorinated constituents of concern (COC). Based on the comparison of December 2024 indoor air and sub-slab vapor data to Matrices A through C, a No Further Action recommendation for all tenant locations, with the exception of Electric Paradise Tanning, was determined.

## SSDS Operation

The SVE system operated between 2002 and 2005, then was modified to operate as an SSDS in 2005, and again modified in 2010 to include individual operating SSDS fans in neighboring tenant spaces. The SSDS is utilized at the site to create a pressure differential below the slab and prevent soil vapor intrusion, the SSDS is considered an engineering control and not a remedial action.

SSDS performance testing was documented in the October 2006 *Sub-Slab Soil Gas Sampling Results, SSDS Performance Test Results, and Work Plan for Upgrade of SSDS* document prepared by Vertex Environmental Services. Performance testing of the SSDS took place in October 2005, January 2006, and March 2006 to confirm the SSDS, which consisted of lateral piping installed only in the current Electric Paradise Tanning tenant space, was creating negative pressure beneath the slab.

The results of the SSDS Performance Testing are included below:

| Summary of SSDS Performance Testing Results | | | |
|---|---|---|---|
| **Testing Date** | **Sampling Location** | | |
| | Sunscape Tan (now Electric Paradise Tanning) | Rendendo's Pizza (now Europa Pizza) | Chinatown Restaurant |
| 10/18/2005 | -0.7 | 0 | 0 |
| 1/5/2006 | -0.777 | -0.007 | 0 |
| 3/23/2006 | -0.4 | 0 | 0 |

Note: results in inches of water column (i.w.)

The results presented above indicate that there is little to no sub-slab communication between tenant spaces. Vacuum was only observed at the Electronic Paradise Tanning tenant space during all three (3) SSDS performance tests. Vertex Environmental Services concludes that the site geology or building footers prevent flow of air beneath the building slab.

## Recommendations

Based on the overall reduction of COCs observed over time, the NYSDOH Matrice Outcome recommendations, and the apparent lack of sub-slab interaction between tenant spaces, GES recommends the following:

- The continued operation of the SSDS fan located at the Electric Paradise Tanning tenant space
- Temporarily shut down the SSDS fans at the Europa Pizza, Chic Nail & Spa, and Chinatown Restaurant.
- Conduct an additional SVI investigation during the next heating season at the four (4) tenant spaces, in accordance with the revised December 22, 2023 SVI Work Plan, to confirm SSDS operation is not required.

If you have any questions or comments regarding this memo, please contact Jessica Montaldo of GES at (800) 360-9405, extension 4328.

Sincerely,
Groundwater & Environmental Services, Inc.

Jessica Montaldo

Jessica –

Based on our review of the 6/13/25 Soil Vapor Investigation (SVI) Summary Report Follow-up Memo and historical information provided by GES, we find the request to shut down and cap the 3 sub-slab depressurization (SSDS) systems at the Europa Pizza, Nail Spa, and Chinatown Restaurant tenant spaces during this summer/fall to be reasonable.
The SSDS located at the Electric Tanning SSDS should operate for several months, and then it should be shut down/capped for 30 days prior to SVI sampling.

All 4 tenant spaces should be sampled during the 2025-2026 Heating Season. Submit follow-up SVI Report in 2026 for review and comment.

Please proceed with finalizing Section 1.0 of the January 2025 SVI Report based on this memo, Department's/NYSDOH Comment Letter dated April 25, 2025, and these recommendations.

Thanks
Matt

Hi Jessica – I was out of the office today, and we haven't had time to fully review this memo and discuss internally based upon on our last meeting with GES before submitting the final SVI Report.

Let me follow-up with DOH, and get back to GES after the holiday if another meeting/discussion is necessary.

Thanks
Matt

Good morning – I wanted to check in on the status of the Memo that GES submitted in response to the SVI Summary Report disapproval letter. Please let us know if you have any questions or would like to discuss. GES will then submit SVI Summary Report Revision 1.0, based on the discussion.

Thanks,
Jessica

**Subject:** NYSDEC Site Number V00104 - Carmel Shop-Rite Center - SVI Summary Report Follow-up Memo

Good afternoon,

Following the disapproval received by the NYSDEC for the SVI Summary Report (dated January 24, 2025) and the May 27, 2025 conference call with NYSDEC and NYSDOH, GES has drafted the attached Memo for the subject site to discuss historic conditions and resubmit recommendations. Please review the attached memo and let us know if you have any questions and/or comments.

The SVI Summary Report Revision 1.0 will be finalized and submitted once we receive feedback on the memo.

Thank you,
Jessica

# Appendix B – NYSDOH Indoor Air Quality Questionnaire and Building Inventory Forms

**NEW YORK STATE DEPARTMENT OF HEALTH**
**INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING**
**INVENTORY CENTER FOR ENVIRONMENTAL HEALTH**

This form must be completed for each residence involved in indoor air testing.

Preparer's Name: Liam Maher Date/Time Prepared: 12/09/2024 / 13:00

Preparer's Affiliation: GES Phone No.: 866-839-5195

Purpose of Investigation: Indoor air test

**1. OCCUPANT:**

**Interviewed:** Y ✔ / N

Last Name: Na First Name: Na

Address: 178 Route 52 – Europa Pizza

County: Putnam

Home Phone: Office Phone:

Number of Occupants/persons at this location 3 Age of Occupants 30

**2. OWNER OR LANDLORD:** (Check if same as occupant )

**Interviewed:** Y / N ✔

Last Name: First Name:

Address:

County:

Home Phone: Office Phone:

**3. BUILDING CHARACTERISTICS**

**Type of Building:** (Circle appropriate response)

| | | |
|---|---|---|
| Residential | School | Commercial/Multi-use ✔ |
| Industrial | Church | Other: |

**If the property is residential, type?** (Circle appropriate response)

| | | |
|---|---|---|
| Ranch | 2-Family | 3-Family |
| Raised Ranch | Split Level | Colonial |
| Cape Cod | Contemporary | Mobile Home |
| Duplex | Apartment House | Townhouses/Condos |
| Modular | Log Home | Other:_____ |

**If multiple units, how many?** ___

**If the property is commercial, type?**

Business Type(s) Restaurant

Does it include residences (i.e., multi-use)? Y / N ✔ If yes, how many? ___

**Other characteristics:**

Number of floors 1 Building age 42

Is the building insulated? Y ✔ / N

How air tight? Tight / Average ✔ / Not Tight

## 4. AIRFLOW

**Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:**

Airflow between floors
Na

Airflow near source
Na

Outdoor air infiltration
Through front/rear doors

Infiltration into air ducts
Na

**5. BASEMENT AND CONSTRUCTION CHARACTERISTICS** (Circle all that apply)

| | | | | |
|---|---|---|---|---|
| **a. Above grade construction:** | wood frame | concrete ✔ | stone | brick |
| **b. Basement type:** | full | crawlspace | slab | other Na |
| **c. Basement floor:** | concrete | dirt | stone | other Na |
| **d. Basement floor:** | uncovered | covered | covered with Na | |
| **e. Concrete floor:** | unsealed | sealed | sealed with Unknown | |
| **f. Foundation walls:** | poured | block ✔ | Stone _ | other _ |
| **g. Foundation walls:** | unsealed | sealed ✔ | sealed with _Paint_ | |
| **h. The basement is:** | wet | damp | dry | moldy |
| **i. The basement is:** | finished | unfinished | partially finished | |
| **j. Sump present?** | Y / N ✔ | | | |
| **k. Water in sump?** | Y / N / not applicable | | | |

**Basement/Lowest level depth below grade**: ___(feet)

**Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)**

None observed.

**6. HEATING, VENTING and AIR CONDITIONING** (Circle all that apply)

**Type of heating system(s) used in this building: (circle all that apply – note primary) Primary:** Na

| | | | |
|---|---|---|---|
| Hot air circulation ✔ | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other |

**The primary type of fuel used is**:

| | | |
|---|---|---|
| Natural Gas ✔ | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

**Domestic hot water tank fueled by:** Gas

**Boiler/furnace located in:** Basement / Outdoors / Main Floor / Other Separate room

**Air conditioning:** Central Air ✔ / Window units / Open Windows / None

**Are there air distribution ducts present?** Y ✔ / N

**Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.**

Good

---

---

## 7. OCCUPANCY

**Is basement/lowest level occupied?** Full-time / Occasionally / Seldom / Almost Never

| **Level** | **General Use of Each Floor (e.g., family room, bedroom, laundry, workshop, storage)** |
|---|---|
| Basement | Na |
| 1st Floor | Restaurant |
| 2nd Floor | Na |
| 3rd Floor | Na |
| 4th Floor | Na |

## 8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

| | |
|---|---|
| **a. Is there an attached garage?** | Y / N ✔ |
| **b. Does the garage have a separate heating unit?** | Y / N ✔ / NA |
| **c. Are petroleum-powered machines or vehicles stored in the garage** (e.g., lawnmower, atv, car) | Y / N ✔ / NA<br>Please specify: ___ |
| **d. Has the building ever had a fire?** | Y / N ✔ When? ___ |
| **e. Is a kerosene or unvented gas space heater present?** | Y / N ✔ Where? ___ |
| **f. Is there a workshop or hobby/craft area?** | Y / N ✔<br>Where & Type? __ – ___ |
| **g. Is there smoking in the building?** | Y / N ✔ How frequently? ___ |
| **h. Have cleaning products been used recently?** | Y ✔ / N<br>When & Type? Daily – General cleaning supplies |
| **i. Have cosmetic products been used recently?** | Y / N ✔<br>When & Type? __ – __ |

**j. Has painting/staining been done in the last 6 months?** Y / N ✔
Where & When? –

**k. Is there new carpet, drapes or other textiles?** Y / N ✔
Where & When? –

**l. Have air fresheners been used recently?** Y / N ✔
When & Type? –

**m. Is there a kitchen exhaust fan?** Y ✔ / N
If yes, where vented? Roof

**n. Is there a bathroom exhaust fan?** Y / N ✔
If yes, where vented?

**o. Is there a clothes dryer?** Y / N ✔
If yes, is it vented outside? Y / N

**p. Has there been a pesticide application?** Y / N ✔
When & Type? –

**Are there odors in the building?** Y / N ✔

If yes, please describe: _____

**Do any of the building occupants use solvents at work?** Y / N ✔
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / N

**Do any of the building occupants regularly use or work at a dry-cleaning service?** (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) — No
Yes, use dry-cleaning infrequently (monthly or less) — Unknown
✔ Yes, work at a dry-cleaning service

**Is there a radon mitigation system for the building/structure?** Y ✔ / N Date of Installation: 2007
**Is the system active or passive?** Active ✔ / Passive

**9. WATER AND SEWAGE**

**Water Supply:** Public Water ✔ Drilled Well Driven Well Dug Well Other: _____

**Sewage Disposal:** Public Sewer ✔ Septic Tank Leach Field Dry Well Other: _____

**10. RELOCATION INFORMATION (for oil spill residential emergency)**

**a. Provide reasons why relocation is recommended:** _____

**b. Residents choose to:** remain in home / relocate to friends/family / relocate to hotel/motel

**c. Responsibility for costs associated with reimbursement explained?** Y / N

**d. Relocation package provided and explained to residents?** Y / N

## 11. FLOOR PLANS

**Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.**

**Basement:**

| |

**NEW YORK STATE DEPARTMENT OF HEALTH**
**INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY**
**CENTER FOR ENVIRONMENTAL HEALTH**

This form must be completed for each residence involved in indoor air testing.

Preparer's Name: Liam Maher Date/Time Prepared: 12/09/2024 / 11:00

Preparer's Affiliation: GES Phone No.: 8668395195

Purpose of Investigation: Indoor air test

**1. OCCUPANT:**

**Interviewed:** Y ✔ / N

Last Name: _____ First Name: _____

Address: 176 Route 52 – Carmel Nails

County: Putnam

Home Phone: _____ Office Phone: ___

Number of Occupants/persons at this location 5 Age of Occupants 30

**2. OWNER OR LANDLORD:** (Check if same as occupant )

**Interviewed:** Y / N ✔

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: ___ Office Phone: ___

**BUILDING CHARACTERISTICS**

**If the property is commercial, type?**

Business Type(s) Nail salon

Does it include residences (i.e., multi-use)? Y / N ✔ If yes, how many? ___

**Other characteristics:**

Number of floors 1 floor at grade Building age 42

Is the building insulated? Y ✔ / N

How air tight? Tight / Average ✔ / Not Tight

## 3. AIRFLOW

**Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:**

Airflow between floors

Na

Airflow near source

Na

Outdoor air infiltration

Na

Infiltration into air ducts

Na

**4. BASEMENT AND CONSTRUCTION CHARACTERISTICS** (Circle all that apply)

| | | | | |
|---|---|---|---|---|
| **a. Above grade construction:** | wood frame | concrete ✔ | stone | brick |
| **b. Basement type:** | full | crawlspace | slab | other _____ |
| **c. Basement floor:** | concrete | dirt | stone | other _____ |
| **d. Basement floor:** | uncovered | covered | covered with _ _____ | |
| **e. Concrete floor:** | unsealed | sealed | sealed with _ _____ | |
| **f. Foundation walls:** | poured | block ✔ | Stone _ _____ | other _ |
| **g. Foundation walls:** | unsealed | sealed ✔ | sealed with _Paint_ _____ | |
| **h. The basement is:** | wet | damp | dry | moldy |
| **i. The basement is:** | finished | unfinished | partially finished | |
| **j. Sump present?** | Y / N ✔ | | | |
| **k. Water in sump?** | Y / N / not applicable | | | |

**Basement/Lowest level depth below grade**: ___(feet)

**Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)**

None observed

**5. HEATING, VENTING and AIR CONDITIONING** (Circle all that apply)

**Type of heating system(s) used in this building: (circle all that apply – note primary) Primary: Na**

| | | | |
|---|---|---|---|
| Hot air circulation ✔ | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

**The primary type of fuel used is**:

| | | |
|---|---|---|
| Natural Gas ✔ | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

**Domestic hot water tank fueled by:** Gas

**Boiler/furnace located in:** Basement / Outdoors / Main Floor / Other Separate room

**Air conditioning:** Central Air ✔ / Window units / Open Windows / None

**Are there air distribution ducts present?** Y ✔ / N

**Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.**

Good condition

## 6. OCCUPANCY

**Is basement/lowest level occupied?** Full-time / Occasionally / Seldom / Almost Never

| **Level** | **General Use of Each Floor (e.g., family room, bedroom, laundry, workshop, storage)** |
|---|---|
| Basement | Na |
| 1st Floor | Nail salon |
| 2nd Floor | Na |
| 3rd Floor | Na |
| 4th Floor | Na |

## 7. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

| | |
|---|---|
| **a. Is there an attached garage?** | Y / N ✔ |
| **b. Does the garage have a separate heating unit?** | Y / N / NA ✔ |
| **c. Are petroleum-powered machines or vehicles stored in the garage** (e.g., lawnmower, atv, car) | Y / N / NA ✔<br>Please specify: ___ |
| **d. Has the building ever had a fire?** | Y / N ✔ When? ___ |
| **e. Is a kerosene or unvented gas space heater present?** | Y / N ✔ Where? ___ |
| **f. Is there a workshop or hobby/craft area?** | Y / N ✔<br>Where & Type? ___ |
| **g. Is there smoking in the building?** | Y / N ✔ How frequently? ___ |
| **h. Have cleaning products been used recently?** | Y ✔ / N<br>When & Type? Daily – General cleaning |
| **i. Have cosmetic products been used recently?** | Y ✔ / N<br>When & Type? Daily – Nail polish, acetone |

**j. Has painting/staining been done in the last 6 months?** Y / N ✔
Where & When? –

**k. Is there new carpet, drapes or other textiles?** Y / N ✔
Where & When? –

**l. Have air fresheners been used recently?** Y / N ✔
When & Type? –

**m. Is there a kitchen exhaust fan?** Y / N ✔
If yes, where vented?

**n. Is there a bathroom exhaust fan?** Y / N ✔
If yes, where vented?

**o. Is there a clothes dryer?** Y / N ✔
If yes, is it vented outside? Y / N

**p. Has there been a pesticide application?** Y / N ✔
When & Type? –

**Are there odors in the building?** Y ✔ / N

If yes, please describe: Nail salon smell, nail polish, acetone, background reading 2005ppb

**Do any of the building occupants use solvents at work?** Y ✔ / N
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? Acetone, other nail salon type products

If yes, are their clothes washed at work? Y / N ✔

**Do any of the building occupants regularly use or work at a dry-cleaning service?** (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) — No
Yes, use dry-cleaning infrequently (monthly or less) — Unknown
✔ Yes, work at a dry-cleaning service

**Is there a radon mitigation system for the building/structure?** Y ✔ / N Date of Installation: 2007
**Is the system active or passive?** Active ✔ / Passive

**8. WATER AND SEWAGE**

**Water Supply:** Public Water ✔ Drilled Well Driven Well Dug Well Other: _____

**Sewage Disposal:** Public Sewer ✔ Septic Tank Leach Field Dry Well Other: _____

**9. RELOCATION INFORMATION (for oil spill residential emergency)**

**a. Provide reasons why relocation is recommended:** _____

**b. Residents choose to:** remain in home / relocate to friends/family / relocate to hotel/motel

**c. Responsibility for costs associated with reimbursement explained?** Y / N

**d. Relocation package provided and explained to residents?** Y / N

**10. FLOOR PLANS**

**Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.**

**Basement:**

AVAILABLE

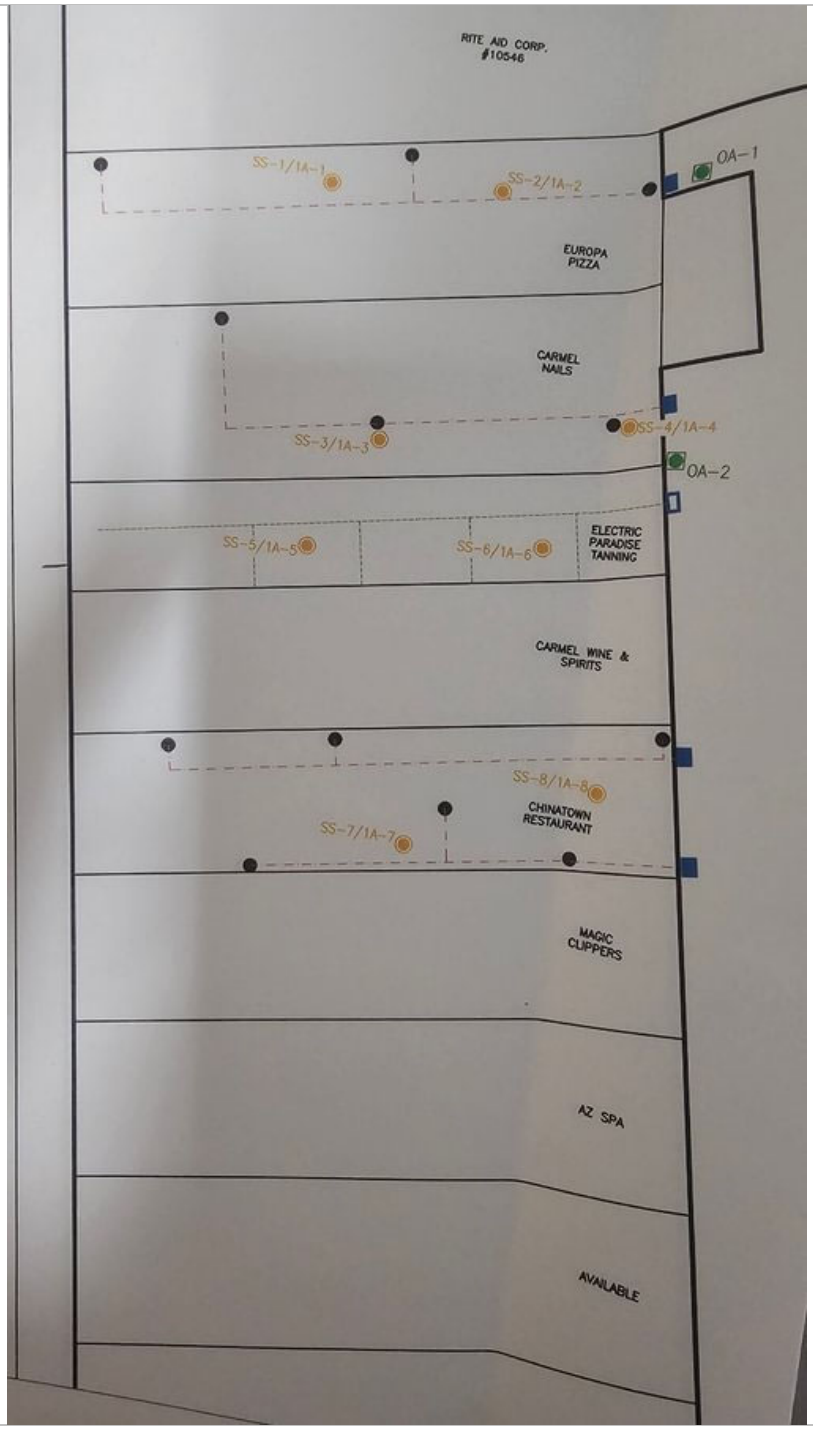
**12. OUTDOOR PLOT**

**Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.**

**Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.**



**13. PRODUCT INVENTORY FORM**

**Make & Model of field instrument used**: PID-ppbRAE 3000 10.6eV PGM-7340

**List specific products found in the residence that have the potential to affect indoor air quality.**

| **Location** | **Product Description** | **Size (units)** | **Condition*** | **Chemical Ingredients** | **Field Instrument Reading (units)** | **Photo ** Y / N** |
|---|---|---|---|---|---|---|
| Storage Room | So-Kleen | 1 gallon | U | dodecyl benzenesulphonate; Amines, coco alkyldimethyl, N-oxides and (R)-p-mentha-1,8-diene | 75 ppb | Y |

Organics ND = Not detected above the RL

# CASE NARRATIVE / CONFORMANCE SUMMARY

| | | | |
|---|---|---|---|
| **Client:** | Groundwater & Environmental Services | **Job No:** | JE2488 |
| **Site:** | Regency Center Carmel ShopRite Plaza, Carmel, NY | **Report Date** | 12/23/2024 7:57:30 A |

On 12/12/2024, 2 sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. The samples were intact and properly preserved, unless noted below. An SGS Job Number of JE2488 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

## MS Volatiles By Method TO-15

**Matrix:** AIR **Batch ID:** V5W2135

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE2666-1DUP were used as the QC samples indicated.
- The blank spike (BS) recovery(s) of 1,2-Dichloroethane, Bromoform, Hexachlorobutadiene, Methyl Tert Butyl Ether, Tetrahydrofuran, Ethyl Acetate, Methyl ethyl ketone, Methylmethacrylate, Tertiary Butyl Alcohol, Vinyl Acetate are outside control limits.
- V5W2135-BS for Ethyl Acetate: Outside in house control limits.
- JE2488-1 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for Bromoform: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for 1,2-Dichloroethane: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.
- V5W2135-BS for Vinyl Acetate: Outside in house control limits.
- V5W2135-BS for Tertiary Butyl Alcohol: Outside in house control limits.
- JE2488-1 for Methyl Tert Butyl Ether: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- V5W2135-BS for Methyl ethyl ketone: Outside in house control limits.
- JE2488-1 for Methylmethacrylate: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- V5W2135-BS for Tetrahydrofuran: High percent recovery and no associated positive reported in the QC batch.
- V5W2135-BS for Methyl Tert Butyl Ether: High percent recovery and no associated positive reported in the QC batch.
- V5W2135-BS for Hexachlorobutadiene: High percent recovery and no associated positive reported in the QC batch.
- V5W2135-BS for Bromoform: High percent recovery and no associated positive reported in the QC batch.
- V5W2135-BS for 1,2-Dichloroethane: High percent recovery and no associated positive reported in the QC batch.
- V5W2135-BS for Methylmethacrylate: Outside in house control limits.
- JE2488-2 for Bromoform: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Tertiary Butyl Alcohol: This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Heptane: This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Methyl ethyl ketone: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Ethyl Acetate: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.

## MS Volatiles By Method TO-15

**Matrix:** AIR **Batch ID:** V5W2135

- JE2488-2 for trans-1,3-Dichloropropene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Tetrahydrofuran: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Methylmethacrylate: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for Methyl ethyl ketone: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Vinyl Acetate: This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for 1,2-Dichloroethane: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND.
- JE2488-1 for Vinyl Acetate: This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for Tertiary Butyl Alcohol: This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for Heptane: This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for Ethyl Acetate: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for trans-1,3-Dichloropropene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-1 for Tetrahydrofuran: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2488-2 for Methyl Tert Butyl Ether: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.

SGS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting SGS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by SGS indicated via signature on the report cover.

**VOA TO15 List**

| CAS No. | Surrogate Recoveries | Run# 1 | Run# 2 | Limits |
|---|---|---|---|---|
| 460-00-4 | 4-Bromofluorobenzene | 109% | | 65-128% |

(a) Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
(b) Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
(c) This compound in blank spike is outside in house QC limits bias high.
(d) Associated CCV outside of control limits high, sample was ND.

ND = Not detected
RL = Reporting Limit
E = Indicates value exceeds calibration range
J = Indicates an estimated value
B = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound

# Manual Integration Approval Summary

**Sample Number:** V5W2135-BSD
**Lab FileID:** 5W55754.D
**Injection Time:** 12/19/24 18:00
**Method:** TO-15
**Analyst approved:** 12/20/24 11:54 Geralyn Gomez
**Supervisor approved:** 12/20/24 13:22 Kanya Veerawat

| Parameter | CAS | Sig# | R.T. (min.) | Reason |
|---|---|---|---|---|
| n-Butylbenzene | 104-51-8 | | 20.85 | Missed peak |

# Manual Integration Approval Summary

**Sample Number:** V7W305-IC305 **Method:** TO-15
**Lab FileID:** 7W07975.D **Analyst approved:** 08/19/24 10:01 Benjamin Kim
**Injection Time:** 08/18/24 21:40 **Supervisor approved:** 08/19/24 10:53 Kanya Veerawat

| Parameter | CAS | Sig# | R.T. (min.) | Reason |
|---|---|---|---|---|
| TVHC As Equiv Pentane | | | 2.31 | Poor instrument integration |
| Bromoform | 75-25-2 | | 11.32 | Split peak |
| m,p-Xylene | | | 11.50 | Split peak |
| 4-Ethyltoluene | 622-96-8 | | 15.72 | Split peak |

### CANISTER SECONDARY DILUTION LOG

| Pressure Gauge ID: TG - | | 5 | Original Canister Dilution | | | | Secondary Canister Dilution | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Date** | **Initial** | **Sample ID** | **Canister SN** | **Vacuum at Time of Dilution (inHg)** | **Final Pressure (psig)** | **Dilution Factor** | **Canister SN** | **Canister Volume (cc)** | **Sample Volume Added (cc)** | **Final Pressure (psig)** | **Equivalent Total Volume (cc)** | **Dilution Factor** | **Final Canister Dilution Factor** |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |

**Definition:** Final Canister Dilution Factor (DF) = (Original Canister DF) x (Secondary Canister DF)
Dilution Factor at Instrument = Final Canister Dilution Factor x [Nominal Sampling Volume (cc) / Sample Volume Injected (cc)]

**Example:** Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig (750cc equivalent volume). This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister, 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20 (from canister dilution) and 20 (from instrument dilution) = 400.

**Notes:**

### CANISTER SECONDARY DILUTION LOG

| Pressure Gauge ID: TG - | | 5 | Original Canister Dilution | | | | Secondary Canister Dilution | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Date** | **Initial** | **Sample ID** | **Canister SN** | **Vacuum at Time of Dilution (inHg)** | **Final Pressure (psig)** | **Dilution Factor** | **Canister SN** | **Canister Volume (cc)** | **Sample Volume Added (cc)** | **Final Pressure (psig)** | **Equivalent Total Volume (cc)** | **Dilution Factor** | **Final Canister Dilution Factor** |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |

**Definition:** Final Canister Dilution Factor (DF) = (Original Canister DF) x (Secondary Canister DF)
Dilution Factor at Instrument = Final Canister Dilution Factor x [Nominal Sampling Volume (cc) / Sample Volume Injected (cc)]

**Example:** Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig (750cc equivalent volume). This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister, 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20 (from canister dilution) and 20 (from instrument dilution) = 400.

# MS AIR by GCMS ANALYSIS LOG

| Standard Information | | | | |
|---|---|---|---|---|
| **Description** | **SN** | **Lot Number** | **Expiration Date** | **Concentration (ppbv)** |
| Internal/Surrogate | 1738 | AS10298 | 5/31/2025 | 100 |
| TO-15 STD | a1805 | AS10476 | 11/28/2024 | 50 |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| TO-15 STD (Stock) | CC-267282 | AS10351 | 6/12/2025 | 1000 |

**Batch ID:** **V7W387**
**Date:** **11/18//2024**
**Laboratory Analyst:** **Thomas Hilbig**
Column DB-1: 30m x 0.25mm x 0.5um
GCMS Method: 7WTO15SPLIT.M
Sequence File: 7W20241118.S
Initial Calibration Method: M7W305.M
Concentrator Method: 7WTO15C.7200A.CTD
**Data Validator(s):** **Lucky Carandang**
**Data Validator(s):** **Kristel Valladolid**

Manually integrated chromatographic peaks in the following reportable files have been reviewed and verified to comply with the criteria of SGS SOP EQA044.

| ALS | Sample ID | Data File ID | MS Code | TEST CODE | | Canister SN | Injection Volume (cc) | Dilution | TICS | Areas IS | Areas SS | STATUS | COMMENTS | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | |

| | |
|---|---|
| **Definition:** | Final Canister Dilution Factor (DF) = (Original Canister DF) x (Secondary Canister DF)<br>Dilution Factor at Instrument = Final Canister Dilution Factor x [Nominal Sampling Volume (cc) / Sample Volume Injected (cc)] |
| **Example:** | Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig (750cc equivalent volume). This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister, 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20 (from canister dilution) and 20 (from instrument dilution) = 400. |
| **Notes:** | |

The results set forth herein are provided by SGS North America Inc.

# CASE NARRATIVE / CONFORMANCE SUMMARY

| | | | |
|---|---|---|---|
| **Client:** | Groundwater & Environmental Services | **Job No:** | JE2490 |
| **Site:** | Regency Center Carmel ShopRite Plaza, Carmel, NY | **Report Date** | 12/26/2024 9:31:12 A |

On 12/12/2024, 4 sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. An SGS Job Number of JE2490 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

## MS Volatiles By Method TO-15

**Matrix:** AIR **Batch ID:** V5W2133

- All samples were analyzed within the recommended method holding time.
- Sample(s) JE2488-2DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- The blank spike (BS) recovery(s) of 1,2,4-Trichlorobenzene, Bromoform, Hexachlorobutadiene, Methyl ethyl ketone are outside control limits.
- The duplicate RPD(s) for Methyl ethyl ketone are outside control limits for sample JE2488-2DUP. RPD acceptable due to low DUP and sample concentrations.
- JE2490-4 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-4 for Methyl ethyl ketone: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2490-4 for Ethyl Acetate: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2490-4 for Tetrahydrofuran: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-4 for Bromoform: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- V5W2133-BS for Methyl ethyl ketone: Outside in house control limits.
- V5W2133-BS for Hexachlorobutadiene: High percent recovery and no associated positive reported in the QC batch.
- V5W2133-BS for 1,2,4-Trichlorobenzene: High percent recovery and no associated positive reported in the QC batch.
- V5W2133-BS for Bromoform: High percent recovery and no associated positive reported in the QC batch.
- JE2490-4 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.

**Matrix:** AIR **Batch ID:** V5W2136

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE2665-1DUP were used as the QC samples indicated.
- Sample(s) JE2490-3, JE2490-4 have compounds reported with "E" qualifiers indicating estimated value exceeding calibration range.
- The blank spike (BS) recovery(s) of Bromoform, Hexachlorobutadiene, 1,2,4-Trichlorobenzene, 1,3-Butadiene, Acetone (2-Propanone), Methyl ethyl ketone, Tetrahydrofuran are outside control limits.
- The duplicate RPD(s) for 1,2,4-Trichlorobenzene, Naphthalene, o-Dichlorobenzene, Trichloroethylene are outside control limits for sample JE2665-1DUP. RPD acceptable due to low DUP and sample concentrations.
- V5W2136-BS for Bromoform: High percent recovery and no associated positive reported in the QC batch.

## MS Volatiles By Method TO-15

**Matrix:** AIR **Batch ID:** V5W2136

- JE2490-1 for Tetrahydrofuran: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-1 for Bromoform: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-1 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- V5W2136-BS for Tetrahydrofuran: Outside in house control limits.
- V5W2136-BS for Methyl ethyl ketone: Outside in house control limits.
- V5W2136-BS for Acetone (2-Propanone): Outside in house control limits.
- V5W2136-BS for 1,3-Butadiene: Outside in house control limits.
- V5W2136-BS for Hexachlorobutadiene: High percent recovery and no associated positive reported in the QC batch.
- JE2490-4 for Ethanol: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-1 for Ethyl Acetate: Associated CCV outside of control limits high.
- V5W2136-BS for 1,2,4-Trichlorobenzene: Outside in house control limits.
- JE2490-3 for Acetone (2-Propanone): Associated CCV outside of control limits low. This compound in blank spike is outside in house QC limits bias low.
- JE2490-2 for Ethanol: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-1 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-3 for Bromoform: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-3 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-3 for Tetrahydrofuran: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-1 for Methyl ethyl ketone: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2490-3 for Methyl ethyl ketone: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2490-2 for Acetone (2-Propanone): Associated CCV outside of control limits low. This compound in blank spike is outside in house QC limits bias low.
- JE2490-3 for Vinyl Acetate: This compound in blank spike duplicate is outside in house QC limits bias high.
- JE2490-3 for Bromomethane: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-3 for Chloroethane: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-3 for Ethanol: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-3 for 1,3-Butadiene: This compound in blank spike is outside in house QC limits bias low.
- JE2490-4 for Acetone (2-Propanone): Associated CCV outside of control limits low. This compound in blank spike is outside in house QC limits bias low.
- JE2490-3 for Ethyl Acetate: Associated CCV outside of control limits high.
- JE2490-2 for Hexachlorobutadiene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-1 for Acetone (2-Propanone): Associated CCV outside of control limits low. This compound in blank spike is outside in house QC limits bias low.
- JE2490-1 for Vinyl Acetate: This compound in blank spike duplicate is outside in house QC limits bias high.
- JE2490-1 for Bromomethane: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-1 for Chloroethane: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-1 for Ethanol: This compound in blank spike duplicate is outside in house QC limits bias low.

## MS Volatiles By Method TO-15

**Matrix:** AIR **Batch ID:** V5W2136

- JE2490-1 for 1,3-Butadiene: This compound in blank spike is outside in house QC limits bias low.
- JE2490-3 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-2 for Bromoform: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.
- JE2490-2 for 1,3-Butadiene: This compound in blank spike is outside in house QC limits bias low.
- JE2490-2 for Ethyl Acetate: Associated CCV outside of control limits high.
- JE2490-2 for Methyl ethyl ketone: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2490-2 for Tetrahydrofuran: Associated CCV outside of control limits high. This compound in blank spike is outside in house QC limits bias high.
- JE2490-2 for Vinyl Acetate: This compound in blank spike duplicate is outside in house QC limits bias high.
- JE2490-2 for Bromomethane: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-2 for Chloroethane: This compound in blank spike duplicate is outside in house QC limits bias low.
- JE2490-2 for 1,2,4-Trichlorobenzene: Associated CCV outside of control limits high, sample was ND. This compound in blank spike is outside in house QC limits bias high.

**Matrix:** AIR **Batch ID:** V5W2138

- All samples were analyzed within the recommended method holding time.
- Sample(s) JE2315-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

SGS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting SGS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by SGS indicated via signature on the report cover.

## MS Volatiles

### QC Data Summaries

Includes the following where applicable:

- Method Blank Summaries
- Blank Spike Summaries
- Matrix Spike and Duplicate Summaries
- Instrument Performance Checks (BFB)
- Internal Standard Area Summaries
- Initial Calibration RT/ISTD Area Summaries
- Surrogate Recovery Summaries
- Initial and Continuing Calibration Summaries
- Run Sequence Reports
