Subject: Submittal of Soil Vapor Data
CooperVision Scottsville Facility, Scottsville, NY

Dear Frank:

In accordance with the CooperVision Soil Vapor Workplan dated 27 March 2008 and your approval dated 22 April 2008, please find attached the analytical results from the soil vapor sampling performed at the CooperVision Scottsville facility during the week of 28 April 2008. Please also find attached the analytical data from the semi-annual groundwater monitoring event that was collected during the same week.

In summary, seven soil vapor samples were obtained with two in the source area (SV-1 and SV-2), three along the eastern property edge (SV-3, SV-4, SV-5) and three along the right of way along the eastern edge of Briarwood Lane (SV-6, SV-7). SV-8 was not sampled due to high groundwater elevations. We have completed preliminary review of the data in conjunction with other existing site information and have the following preliminary findings and follow-up plans:

- While many of the soil vapor results correlate well with the groundwater results, a few of the samples appear anomalous. For example, the results for the soil vapor samples that are located down the approximate mid-line of the groundwater plume (SV-2, SV-4 and SV-7) appear to correlate well with the results from the paired groundwater wells. In addition, the soil vapor concentrations at these three locations appear to attenuate with increasing distance from the source – an expected result. In contrast, samples SV-3 and SV-6 appear to be anomalous for two reasons: (1) they are located in a portion of the site with non-detect to very low historic groundwater concentrations, and (2) the concentrations in SV-6 (the location further away from source area) are higher than the concentrations in SV-3 and higher than soil vapor in the source area. A possible explanation for these anomalous results is that two or more samples may have been inadvertently switched during sampling and/or analysis. Another possible explanation is the presence of an east-west trending utility line in the vicinity of these two samples which may be acting as a preferential migration pathway.

- Source area samples SV-1 and SV-2 do not correlate well with one another, an unexpected result as both of these samples are located relatively near one another in the source area and are paired with groundwater wells that exhibit similar groundwater concentrations. A possible explanation for these anomalous results is that two or more samples may have been inadvertently switched during sampling and/or analysis. Another possible explanation is that SV-1 may be within an area of influence of the sub-slab depressurization system installed within the building.

- Because of the elevated concentrations observed at some of the locations, combined with the anomalous nature of the dataset, we are currently planning, and will diligently follow, the actions below to gather additional data to assist the team with figuring out the next appropriate steps:

    1. Perform a re-sampling event to evaluate the current results and the chance that two or more samples were inadvertently switched. We are attempting to arrange this sampling as soon as possible, preferably within the next one to two weeks. We plan to request rapid turn around on the analytical results from the laboratory to facilitate a quick determination of the validity of the first round of data.

    2. Further evaluate the possible utility line as a preferential pathway for vapor migration. In this regard, we are arranging for a surveyor to identify the coordinates of each of the soil vapor points, plus survey the elevations of the following: selected ground surface elevations, soil vapor sampling locations. This information will be coupled with utility line invert information from the municipality to better understand the configuration and consistency between this feature and sample results.

Depending on results of the resampling and additional data collection, we would plan next steps and provide them to NYSDEC. We would be pleased to review this plan of action with you and representatives of the NYSDOH as may be needed. Once specific resample dates have been confirmed they will be provided to you and we will make all reasonable attempts to allow 5-days notice ahead of the sampling.

Please do not hesitate to contact us with any questions or comments, or if you desire additional information.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

LABORATORY REPORT

May 20, 2008

Susan Boyle
Haley & Aldrich, Incorporated
200 Town Centre Drive Suite 2
Rochester, NY 14623-4264

RE: Cooper Vision / 70665-012

Dear Susan:

Enclosed are the results of the samples submitted to our laboratory on May 5, 2008. For your reference, these analyses have been assigned our service request number P0801298.

All analyses were performed in accordance with our laboratory's quality assurance program. Results are intended to be considered in their entirety and apply only to the samples analyzed and reported herein. Your report contains 21 pages.

Columbia Analytical Services, Inc. is certified by the California Department of Health Services, NELAP Laboratory Certificate No. 02115CA; Arizona Department of Health Services, Certificate No. AZ0694; Florida Department of Health, NELAP Certification E871020; New Jersey Department of Environmental Protection, NELAP Laboratory Certification ID #CA009; New York State Department of Health, NELAP NY Lab ID No: 11221; Oregon Environmental Laboratory Accreditation Program, NELAP ID: CA20007; The American Industrial Hygiene Association, Laboratory #101661; Department of the Navy (NFESC); Pennsylvania Registration No. 68-03307. Each of the certifications listed above have an explicit Scope of Accreditation that applies to specific matrices/methods/analytes; therefore, please contact me for information corresponding to a particular certification.

If you have any questions, please call me at (805) 526-7161.

Respectfully submitted,

Columbia Analytical Services, Inc.

Kate Aguilera

CASE NARRATIVE

The samples were received intact under chain of custody on May 5, 2008 and were stored in accordance with the analytical method requirements. Please refer to the sample acceptance check form for additional information. The results reported herein are applicable only to the condition of the samples at the time of sample receipt.

Volatile Organic Compound Analysis

The samples were analyzed for selected volatile organic compounds in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999. The analytical system was comprised of a gas chromatograph / mass spectrometer (GC/MS) interfaced to a whole-air preconcentrator.

The results of analyses are given in the attached laboratory report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for utilization of less than the complete report.
