FACT SHEET

Dexter Chemical Site
845 Edgewater Road
Bronx, New York
VCP No: V00186-2

July 2007

NYSDEC Region 2

REMEDIAL ACTION IMPLEMENTATION

The New York State Department of Environmental Conservation (DEC), in cooperation with the New York State Department of Health (NYSDOH) have approved the Remedial Action Workplan (RAW) and amendments for the Dexter Chemical Site. This document was released for Public review in 2005.

This fact sheet is being prepared pursuant to New York State Environmental Conservation Law and the NYSDEC's policies under the Voluntary Cleanup Program (VCP).

Project Background: The Dexter Chemical Site is less than approximately two (2) acres in size, located in the Hunt's Point area of the Bronx, New York. The facility has operated as a specialty chemical manufacturer since the 1940's. During the sites' historical operation, releases of various chemical constituents to the subsurface environment have resulted in the need to mitigate the property utilizing an active remedial system followed by institutional and engineering controls. Dexter Chemical, L.L.C., entered into the NYSDEC's Voluntary Cleanup Program (VCP) to implement site remediation.

Remediation System: Due to the nature of the subsurface pollutants at the site, the NYSDEC recommended Soil Vapor Extraction (SVE) and Air Sparging (AS) technology be implemented. Contaminant mass is removed from the subsurface via SVE and AS piping where it is treated via adsorption media above-grade for subsequent disposal.

Remedial Action Implementation: Final system construction is anticipated during the fall of 2007 at which time the remediation system operation is anticipated to commence.

The public is strongly encouraged to participate in the remedial process. Any comments should be directed to the NYSDEC case manager for the site, at the address shown below.
