APPENDICES

1.0 INTRODUCTION

Walden Environmental Engineering, PLLC (Walden) has prepared this Soil Vapor Extraction System Closure Report on behalf of 218 Lakeville Road Associates, the owner of the property located at 218 Lakeville Road, Lake Success, New York, herein identified as the site. Walden implemented a closure sampling program between May 2006 and January 2008, collecting soil, soil gas and indoor air samples for analysis to document that the soil vapor extraction (SVE) system has effectively met the remedial objectives for the site. The closure sampling results provide the justification for system shutdown as presented in this report. This report satisfies the remedial system closure report requirements outlined in the New York State Department of Environmental Conservation (NYSDEC) December 2002 Draft DER-10 Technical Guidance for Site Investigation and Remediation.

The site is a commercial center occupying approximately 4,900 square feet, with three active tenants (Imperial Cleaners & Grace Custom Tailor, Tobacco Plaza, Ltd., and Lake Success Gourmet Delicatessen and Caterers) and one vacant space as shown on Figure 1. The site owner and the NYSDEC entered into Voluntary Cleanup Agreement (VCA) #D1-30001-01-03 effective April 18, 2001. The site was assigned Voluntary Cleanup Program (VCP) Site No. V-00244-1.

A release of tetrachloroethylene (PCE or perc) at the site was first noted in 1995. A site investigation followed to identify source areas and determine the extent of contaminated soil and perched groundwater at the site (note that the site investigations summarized in Section 2.1 identified a perched water table underlying the site at approximately 30 feet below grade). Contaminated sediments were removed from the source areas (dry wells and leaching pools) to the extent possible without undermining the structures. Post-excavation soil sampling results indicated that volatile organic compounds (VOCs) remained in the subsurface following the source area removal actions. A SVE system was installed to remove VOC vapors remaining in the soil and improve soil and groundwater quality. A soil, soil gas, groundwater and indoor air monitoring program was implemented to track the reductions in VOC concentrations achieved over time by continued operation of the SVE system.

This report describes the site investigation and remedial measures that have been completed at the site and provides the basis for permanent SVE system shutdown. System closure sampling consisted of soil, soil gas, and indoor air sample collection and analysis in accordance with various work plan submittals approved by the NYSDEC. The soil, soil gas and air sampling results are summarized in this closure report to document that the SVE system has effectively removed VOCs from the soil and achieved the remedial objectives for the site.

This closure report further presents an evaluation of the closure sampling results, which indicate that the site remediation goals have been met, supporting a final determination that the SVE system can be shut down permanently. Section 2 of this report describes the site investigation and remediation work completed in the past. Section 3 summarizes the work completed in accordance with the NYSDEC-approved closure sampling work plan submittals. Section 4 summarizes the SVE system closure sampling analytical results. Section 5 evaluates the results and recommends permanent SVE system shutdown.

2.0 COMPLETED SITE-RELATED WORK

This section summarizes the investigation and remediation activities completed at the site, including source area removal actions, and SVE system installation and operation.

2.1 Site Investigation Results and Source Area Removal Actions (1995 – 2003)

In 1995, PCE contamination in soil and perched groundwater (see Section 2.1.2) at the site was discovered. Floor drains in the Imperial Cleaners space were the suspected source of PCE contamination. After the PCE contamination was discovered, on-site dry cleaning operations ceased, and the business was converted to a 'drop-off only' facility. Following the discovery of the contamination, the site owner undertook an extensive investigation to determine the nature and extent of the contamination at the 218 Lakeville Road site.

Anson Environmental, Ltd. (AEL) was retained by the site owner to conduct site investigation and remediation tasks in 1995. Walden was retained in December 2000 to implement further investigation and remediation tasks under the direction of the NYSDEC. Walden's April 2003 "On-site & Off-site Investigation Report" summarizes the analytical results obtained by AEL from September 1995 through November 2000.

The data collected under the scope of these investigations includes groundwater sampling data collected from site related monitoring wells and piezometers, perched groundwater (encountered approximately 30 feet below grade during the investigations as discussed below) data, soil vapor data, perc badge sampling data, and endpoint sampling data for source area excavations. The investigations assessed and evaluated the risk to human health posed by contamination attributable to the site. Source area excavation and the installation and operation of a SVE system have been the principal means of site remediation.

2.1.1 1995-1996 AEL Investigation Work

In September 1995, October 1995, December 1995 and April 1996, AEL collected soil samples from floor drains (FD-1 and FD-2) at the site. The floor drain locations are shown on Figure 2. On April 12, 1996, Brookside Environmental, Inc. (Brookside) excavated contaminated sediment from floor drains FD-1 and FD-2 (approximately 1.5 tons combined). Endpoint samples were collected from FD-1 and FD-2 with a hand auger. The endpoint samples from FD-1 and FD-2 contained concentrations of PCE above NYSDEC's TAGM 4046 Recommended Soil Cleanup Objective (RSCO) of 1,400 ug/kg as shown in the table below.

Post Remediation Soil Boring ID (Former Soil Sample ID)	Endpoint Sample Depth following Excavation/Source Removal (feet below grade)	Endpoint Sample PCE Concentration following Excavation/Source Removal (ug/kg)
SB-2 (FD-1)	6.5	11,400,000
SB-3 (FD-2)	10	6,200

Data taken from AEL's IRM/Supplemental Investigation Plan dated January 18, 2001.

2.1.2 April 1998 AEL Investigation Work

In April 1998, AEL drilled 14 Geoprobe soil borings (SS#1 – SS#14) and eight Geoprobe soil gas borings (SG-1 – SG-8), installed five monitoring wells (MW-1 – MW-5), and collected groundwater samples from four Geoprobe locations (GP-1 – GP-4). These sampling locations are shown on Figure 2.

Soil borings SS#1 – SS#14 were advanced to a depth of 40 feet below grade. The soil samples collected from borings SS#4, SS#6, SS#7 and SS#10 contained VOCs above the RSCOs. These borings are located within approximately 10 feet of dry well #1 (DW-1) and leaching pool #2 (LP-2). Figure 2 shows the dry well and leaching pool locations. Samples were collected from soil gas borings SG-1 – SG-8 at 20, 25, and 30 feet below grade and screened for relative VOC concentrations. Elevated PID readings were recorded at SG-4, SG-5 and SG-6, which are located in the parking area behind the Imperial Cleaners site near the rear shop entrance.

During the on-site soil investigation, a confining clay layer was identified at the site approximately 50 feet below grade. This confining clay layer creates a perched water table approximately 30 feet below grade. In order to characterize the perched water beneath the site, groundwater samples were collected from five site related monitoring wells (MW-1 – MW-5) and four Geoprobe sample locations (GP-1 – GP-4). The groundwater samples at seven of the nine locations contained PCE at concentrations above the 5 ug/L NYSDEC Class GA groundwater standard.

2.1.3 June 2000 Drywell Remediation Work

On June 4, 2000, Brookside excavated contaminated soil from DW-1 and LP-2 using a VacTruck (approximately 44 tons combined). Endpoint and sidewall samples were collected from the dry well (DW-1), and the PCE concentration in the DW-1 endpoint sample was above the RCSO of 1,400 ug/kg as shown in the table below. DW-1 was later modified into a catch basin. Endpoint samples were collected from the base of the leaching pool (LP-2). The leaching pool was constructed of pre-cast concrete rings so no sidewall samples were collected. The PCE concentration in the LP-2 endpoint sample was slightly above the RSCO as shown in the table below.

Post Remediation Soil Boring ID (Former Soil Sample ID)	Endpoint Sample Depth following Excavation/Source Removal (feet below grade)	Endpoint Sample PCE Concentration following Excavation/Source Removal (ug/kg)
SB-1 (DW-1)	21	5,400,000
SB-4 (LP-2)	17.5	1,600

Data taken from AEL's IRM/Supplemental Investigation Plan dated January 18, 2001.

2.1.4 2000 AEL Off-Site Investigation Work

AEL conducted an off-site soil gas survey in June 2000, installing eight soil gas borings (SGJT-1 through SGJT-8) via Geoprobe, as shown in the table below. The off-site soil gas sampling locations are shown on Figure 3.

Soil Gas Sample ID	Distance and Direction from DW-1	Depth of Sample (feet below grade)	PCE (ug/m3)	TCE (ug/m3)	cis-1,1-DCE (ug/m3)
SGJT-1	20 feet south	24	1,440,000	61,000	329,000
SGJT-2	30 feet south	24	1,280,000	30,200	131,000
SGJT-3	40 feet south	15	397,000	13,500	41,600
SGJT-4	50 feet south	15	135,000	3,970	14,700
SGJT-5	60 feet south	15	49,300	1,150	2,550
SGJT-6	70 feet south	15	7,780	170	284
SGJT-7	51 feet east	15	535,000	8,470	24,100
SGJT-8	40 feet north	15	29,800	3,560	6,460
Field Blank			309	Not detected by laboratory	Not detected by laboratory

Data taken from AEL's IRM/Supplemental Investigation Plan dated January 18, 2001.

In November 2000, AEL conducted an off-site soil investigation, installing 17 Geoprobe soil borings at depths ranging from 14-26 feet below grade. AEL also conducted an off-site perched groundwater investigation in November 2000, collecting 42 samples using a Geoprobe. These sampling locations are shown on Figure 3. The highest PCE concentrations in soil, soil gas and groundwater were detected in samples collected near and downgradient of the source areas.

2.1.5 November 2000 AEL On-Site Investigation Work

AEL re-sampled on-site monitoring wells MW-1 through MW-5 in November 2000 and installed six piezometers (P1-P6) in the parking lot behind 218 Lakeville Road to assess the extent of PCE contamination in the perched groundwater table. The piezometer locations are shown on Figure

2. PCE was detected at concentrations above the 5 ug/L Class GA groundwater standard in the groundwater samples from four of the monitoring wells and three of the piezometers.

2.1.6 Walden Supplemental Work Plan and 2002 - 2003 Investigation

Walden presented a Supplemental Work Plan dated March 22, 2002 to the NYSDEC, and the State approved the work plan with modifications in a letter dated June 10, 2003. The supplemental work plan tasks completed by Walden from July 2002 – August 2003 included sampling on-site groundwater monitoring wells and the Upper Glacial Aquifer (UGA), characterizing the clay layer underlying the site, and surface water sampling. Walden submitted letters to the NYSDEC dated March 17, 2003 and February 12, 2004 presenting the supplemental investigation results. The supplemental work completed by Walden is discussed below.

Laboratory analysis of groundwater monitoring well samples collected in 2003 indicated non-detectable levels of PCE. Depth to water measurements recorded in July 2003 confirmed previous findings that groundwater flow at the site varies from west to west-northwest. In August 2003, a cone penetrometer (CPT) unit was used to advance one off-site boring located hydraulically downgradient from 218 Lakeville Road to 165 feet below grade in order to characterize the clay layer underlying the site and determine if PCE had migrated vertically from the perched aquifer to the UGA. The CPT results indicated that a shallow clay layer exists from approximately 34 to 50 feet below grade, which corresponds to the clay layer identified on-site by AEL at approximately 50 feet below grade. Non-detectable VOC concentrations were reported for the groundwater sample collected from the UGA. The CPT and laboratory analytical results indicated that PCE had not migrated vertically through the clay layer. Off-site surface water samples collected in May and August 2003 contained trace concentrations of PCE.

2.2 SVE Remedial System Installation and Operation

Based on the investigation and remediation activities conducted at the site, it was determined that installation of an SVE system would be required to remove residual PCE remaining in soils at the site. AEL conducted a SVE pilot test in May 1998 to determine the SVE well radius of

influence for a full-scale SVE system. The SVE system was laid out by AEL, installed by Land, Air, Water Environmental Services in November through December 2000, and started up in January 2001. The complete SVE system consists of eight soil vapor extraction wells, as shown on Figure 4 and described below.

RW-1, RW-2, RW-3, RW-4 and RW-10 were installed in November through December 2000. RW-1 and RW-2 are located just east of the property line between 4 University Place and the Imperial Cleaners site. RW-3 was installed in the vicinity of former dry well DW-1, at the southwest corner of the Imperial Cleaners site. RW-1, RW-2 and RW-3 are 25 feet deep and screened 15 to 25 feet below grade. RW-4 (13 feet deep with 10 feet of slotted pipe) is located along the western boundary of 220 Lakeville Road, adjacent to the residence at 2 University Place, and its designed radius of influence covers portions of these two properties. RW-10 (25 feet deep with 10 feet of slotted pipe) was installed along the south side of the residence at 4 University Place, and its designed radius of influence extends to a portion of the property at 2 University Place.

Existing extraction wells B-1, FD-2 and B-3, installed at the site prior to 1998, were connected to the five SVE wells and piping installed in 2000 to complete the SVE remediation system. Soil boring B-1 was converted to a SVE extraction well and is screened from 10 to 25 feet below grade. Floor drain FD-2 was excavated in 1996 and converted to a SVE extraction well screened 4 to 10 feet below the basement floor. Extraction well B-3 is located in the vicinity of LP-2 and is screened 15 to 30 feet below grade.

AEL conducted monthly operation and maintenance (O&M) on the system from January 2001 through February 2004. The SVE system was shut down on March 8, 2004 with approval from the NYSDEC and the New York State Department of Health (NYSDOH) following a series of SVE system well pulsing events conducted by Walden as discussed below.

2.3 SVE System Well Pulsing

Based on diminishing concentrations of VOCs measured in the SVE lines, RW-1, RW-2, RW-4, RW-10 and B-1 were pulsed beginning in December 2002. No rebound effect of increased VOC concentrations were observed in any of the pulsed wells. Perc badge sampling did not detect PCE at concentrations above the NYSDOH standard (background). Given the well pulsing results and the minimal VOC removals (which had reached asymptotic levels) achieved by continued operation of these wells, Walden proposed to turn off RW-1, RW-2, RW-4, RW-10 and B-1 in May 2003. NYSDEC and NYSDOH approved this action, and these wells were shut down on May 28, 2003. RW-3, FD-2 and B-3 remained in operation.

SVE wells RW-3, FD-2 and B-3 were pulsed between June 20 and August 7, 2003, during three, three-week pulsing events, with the SVE system shutdown beginning June 9, 2003. Well pulsing included shutting down the system for a two-week period and then returning the wells to service for one week. Additionally, indoor air perc badge sampling was conducted before the end of each pulsing event in nearby residences and commercial businesses located at and around 218 Lakeville Road. On-site and off-site groundwater sampling was also conducted during each pulsing event.

The well pulsing results reported no increases in VOC concentrations at the individual wells compared to pre-shutdown concentrations. There was no significant rebound of VOC concentrations during the three pulsing events. The groundwater analyses yielded concentrations below reportable limits for all parameters during the three pulsing events. Perc badge sampling results indicated acceptable indoor air quality in the 218 Lakeville Road site spaces and in neighboring residences regardless of whether the SVE system was in operation.

Based on the June through August 2003 well pulsing results, Walden recommended that the remaining legs of the SVE system (extraction wells RW-3, FD-2 and B-3) be shut down. NYSDEC's February 13, 2004 letter to Walden required that the SVE system remain in operation until soil vapor and indoor air sampling confirmed that the system had effectively met the remedial goals. During a follow-up telephone conversation with Walden, NYSDEC and NYSDOH agreed that the SVE system could be shut down pending completion of the closure

sampling described in Section 3 of this report. The SVE system was turned off on March 8, 2004. Due to Nassau County Department of Health concerns about the SVE system being turned off, NYSDEC required that the system be returned to operation, and Walden restarted the system (wells RW-3, FD-2 and B-3) on September 22, 2005. Walden then conducted periodic mechanical maintenance to ensure continuous operation and monitored the carbon influent/effluent with a PID.

2.3.1 SVE System Closure Work Plan

Following the June through August 2003 well pulsing, Walden submitted a SVE system closure sampling plan to drill and sample soil borings in the vicinity of the source areas (originally identified by AEL) in a letter to the NYSDEC dated October 23, 2003. A series of correspondence between Walden and NYSDEC followed, with NYSDEC comments, Walden's submittal of letter work plan revisions, and ultimately NYSDEC approval to move forward with closure sampling. Walden's September 8, 2005 work plan addendum was approved in an October 4, 2005 letter from NYSDEC.

3.0 SVE SYSTEM CLOSURE SAMPLING

This section describes the closure sampling tasks that were completed in order to obtain data needed to support permanent shutdown of the SVE remedial system at 218 Lakeville Road, in accordance with NYSDEC DER-10. The NYSDEC-approved closure sampling work plan includes the installation of soil borings, soil gas sampling points, and perc badges at 218 Lakeville Road and neighboring properties. It should be noted that initiation and completion of closure sampling activities were delayed due to difficulties in obtaining the property access needed to conduct the sampling.

The closure sampling activities began in May 2006, and the SVE system (extraction wells RW-3, FD-2 and B-3 which remained in operation) was shut down on May 1, 2006, two weeks before the scheduled start of closure soil sampling to allow the site to reach equilibrium conditions. Soil samples SB-1, SB-2, and SB-4 were collected at that time; however, the remainder of the required SVE system closure sampling, including off-site soil gas sampling at 220 Lakeville Road, could not be completed because the property owner at 220 Lakeville Road denied Walden access to their property. Once an access agreement was obtained for the 220 Lakeville Road property, the remaining closure sampling (consisting of soil sampling SB-3 in the basement of 218 Lakeville Road, soil gas sampling at SG-1, SG-2, SG-3 and SG-4, and indoor air quality sampling at 2 University Place, 4 University Place, 216 Lakeville Road, 218 Lakeville Road and 220 Lakeville Road) was completed in November 2007 through January 2008.

3.1 Soil Borings

Walden proposed to collect seven soil samples from four NYSDEC-approved boring locations in order to confirm that the PCE concentrations in the soil had been remediated to below applicable regulatory concentrations. Post-remediation soil borings SB-1, SB-2, SB-3 and SB-4 correspond to source areas DW-1, FD-1, FD-2 and LP-2, originally identified by AEL as shown on Figure 5. Three of these locations (SB-1, SB-2 and SB-4) are on the exterior of 218 Lakeville Road. The

fourth location (SB-3) is on the interior, adjacent to a former floor drain (FD-2) in the basement of the on-site building.

Walden contracted Associated Environmental Services (AES) to drill the four soil borings. On May 23, 2006, borings SB-1, SB-2 and SB-4 were advanced to 30 feet below grade using a Geoprobe. Continuous samples were collected in two foot cores every five feet until the perched water table was reached. Encore sampling devices were used to collect the soil samples, along with plastic percent moisture bottles. Soil samples were screened using a calibrated PID. Two samples from each boring [SB-1 (20-22', 23-25'), SB-2 (6-8', 23-25') and SB-4 (16-18', 18-10')] were submitted to Severn Trent Laboratories, Inc. (STL) of Shelton, Connecticut, a New York State certified laboratory and part of the NYSDOH's Environmental Laboratory Approval Program for VOC analysis, specifically PCE via EPA Method 8260. The first sample depth was selected based on the concentrations detected during the original site investigation/source excavation (i.e. – the sample depths where VOCs exceeded the NYSDEC TAGM 4046 RSCOs) as described in Section 2.1 of this report. The second sample from each boring was chosen based on PID field screening results.

At boring location SB-3, located in the basement of Imperial Cleaners, Walden used a concrete core drill to cut a 4-inch diameter hole in the floor and then hand-augered to refusal at four feet below the basement floor, so no soil sample was collected at this location at this time. Real time air monitoring was conducted to ensure that building occupants were not exposed to vapors released during soil sampling in the basement. Biosolve, a product used to suppress VOC vapors, was applied to the excavated soil cuttings to reduce volatile emissions from the excavated soil into the air.

Walden again contracted AES to retry SB-3 in the basement of Imperial Cleaners on January 10, 2008. A concrete core drill was used to cut a 4-inch diameter hole in the floor. SB-3 was then hand-augered to a depth of ten feet below the basement floor and a sample was collected, as requested by the NYSDEC. Encore sampling devices were used to collect the soil sample, along with a plastic percent moisture bottle. The soil sample was collected, screened using a calibrated PID, and submitted for laboratory analysis. Real time air monitoring was conducted, and VOC

vapors were suppressed using Biosolve as described above. The soil samples were submitted to TestAmerica Laboratories, Inc (TAL), formerly STL of Shelton, Connecticut, for VOC analysis, specifically PCE via EPA Method 8260.

3.2 Soil Gas Sampling

Walden proposed to install four soil gas sampling points at the locations shown on Figure 5 to determine PCE vapor concentrations. The proposed soil gas sampling locations were placed in areas that initially displayed elevated concentrations. The soil gas survey was to be conducted after soil sampling was completed.

Two soil gas points (SG-1 and SG-4) were installed in the same borehole as post-remediation borings SB-1 and SB-4, respectively. SG-1 and SG-4 were installed on May 23, 2006. Each of the soil gas sampling points was constructed from eight feet of ½ inch, Schedule 40 PVC, followed by two feet of 0.020-inch slotted PVC screen. The 10-foot total depth corresponds to the depth of the basements located at 218 Lakeville Road and the residences at 2 and 4 University Place. The borehole annulus consists of #1 Morie well gravel from 11 feet to 7 feet below grade, followed by a two-foot bentonite seal and a bentonite/grout mix to grade. Prior to installation, the SG-1 and SG-4 boreholes were backfilled to 12.5 feet with clean sand followed by a two-foot bentonite seal and six inches of clean sand.

The two remaining soil gas points (SG-2 and SG-3) were installed in separate boreholes on the 220 Lakeville Road property on November 29, 2007 after site access issues were resolved. All soil gas sampling points were fitted with a hose barb cap to facilitate sample collection. Walden followed the well construction specifications described in the NYSDEC-approved work plan and corresponding addenda. Soil gas samples were collected one week and three weeks after completion of the sampling point installations following the procedures outlined in the approved work plan. The soil gas samples (SG-1, SG-2, SG-3 and SG-4) were collected using Summa® canisters and sent to Test America Laboratories (TAL, formerly STL of Connecticut), for VOC analysis by EPA Method T014.

3.3 Indoor Air Sampling

Walden proposed to conduct perc badge sampling one week and three weeks after the soil borings were installed. NYSDEC and NYSDOH approved perc badge sampling locations in 2 University Place, 4 University Place, 216 Lakeville Road, 218 Lakeville Road, and 220 Lakeville Road. Perc badges were used for indoor air sampling, consistent with previous indoor air quality sampling associated with this project.

Perc badge samples were collected at all of the approved locations over a 24-hour period on December 6-7, 2007 and December 20-21, 2007 in accordance with the Final NYSDOH CEH BEEI Soil Vapor Intrusion Guidance (October 2006). Perc badge samples were also collected in the Imperial Cleaners space on January 10-11, 2008 to monitor indoor air quality during soil sampling in the basement at SB-3. The perc badge samples were submitted to Galson Laboratories for analysis of PCE and its breakdown components (TCE, 1,1,1-TCA, 1,1,2-TCA, 1,2-DCE, 1,1-DCA, and Vinyl Chloride).

4.0 ANALYTICAL RESULTS

This section summarizes the closure sampling analytical results. Appendix A contains the laboratory analytical reports for the soil, soil gas and indoor air samples.

4.1 Soil Sample Analytical Results

Soil samples collected from SB-1 (20-22', 23-25'), SB-2 (6-8', 23-25') and SB-4 (16-18', 18-10') on May 23, 2006 and SB-3 (10') on January 10, 2008 were analyzed for VOCs by EPA Method 8260. The analytical results are summarized and compared to the NYSDEC TAGM 4046 RSCOs in Table 1. The analytical data confirm that the soil samples from these borings meet the RSCOs.

4.2 Soil Gas Sample Analytical Results

Soil gas samples SG-1, SG-2, SG-3 and SG-4 were collected on December 6-7 and 20-21, 2007 and analyzed by EPA Method TO14. The soil gas sampling results are summarized in Table 2. It should be noted that since there are no published guidance values for soil gas, the soil gas analytical results were conservatively compared to the NYSDOH guidance values for indoor air.

Off-site soil gas samples SG-2 and SG-3 met the NYSDOH indoor air guidance values for all of the analyzed compounds. Soil gas point SG-1 located in the rear parking area at 218 Lakeville Road contained PCE and TCE above NYSDOH guidance values for indoor air for both the December 6 and 20, 2007 sampling events. Soil gas point SG-4 located in the front parking area at 218 Lakeville Road contained both PCE and TCE in the December 6, 2007 sample and TCE in the December 20, 2007 sample above NYSDOH guidance values for indoor air.

4.3 Indoor Air Sample Analytical Results (Perc Badges)

The indoor air quality sampling results from the perc badge sampling at 2 and 4 University Place and 216, 218 and 220 Lakeville Road are summarized in Table 3. All of the indoor air sampling results confirmed acceptable indoor air quality, with PCE concentrations below the 100 ug/m^3 NYSDOH air guidance value, except for one sample (I-3) collected in the main floor work space of Imperial Cleaners. This sample was collected during the basement soil sampling; however, the PCE concentration detected in this sample (I-3) is likely attributable to the dry cleaned items stored in this space. The PID readings in the basement during the excavation work were non-detectable, and the perc badge samples taken in the basement resulted in concentrations less than the 100 ug/m^3 NYSDOH air guidance value for PCE. Note that the so-called 'drag out' PCE is often recorded in the indoor air at 'drop-off' dry cleaning establishments as a result of PCE originating from newly delivered dry cleaned goods.

5.0 EVALUATION OF RESULTS & REQUEST FOR CLOSURE

5.1 Soil Sampling

The soil closure sampling results confirm that the SVE remedial system has effectively removed previously detected concentrations of VOCs in soil exceeding the NYSDEC RSCOs (specifically, the RSCO of 1,400 ug/kg for PCE) in the on-site source areas identified by AEL. Refer to soil endpoint sampling results for these locations following source removal, as shown in report sections 2.1.1 and 2.1.3. The soil closure samples taken from these same source areas, including the depth intervals referenced above, demonstrate that the VOC concentrations remaining in soil on-site meet the applicable NYSDEC TAGM 4046 RSCOs.

5.2 Soil Gas Sample Analytical Results

The soil gas closure sampling results confirm that the SVE remedial system has effectively reduced on-site and off-site concentrations of VOCs in the subsurface, previously identified by AEL. Off-site soil gas samples SG-2 and SG-3, located on 220 Lakeville Road, met the NYSDOH indoor air guidance values for all of the analyzed compounds. Although on-site soil gas samples SG-1 (located in the rear parking area on-site) and SG-4 (located in the front parking area on-site) had detectable concentrations of PCE and TCE, these concentrations were significantly less than soil gas concentrations previously reported in the vicinity of these sampling locations. Refer to soil gas sampling locations SGJT-7 and SGJT-8 in report section 2.1.4. Additionally, the perc badge sampling results meet the NYSDOH guidance value for PCE, demonstrating that residual PCE and TCE concentrations in soil gas do not adversely impact indoor air quality.

5.3 Indoor Air Sample Analytical Results (Perc Badges)

Indoor air concentrations (other than the PCE attributable to storage of dry cleaned items on the main floor of Imperial Cleaners) meet the applicable NYSDOH guidance values. The perc badge sampling results confirm acceptable indoor air quality and compare favorably with the NYSDOH guidance value for PCE, despite residual VOC concentrations remaining in soil gas in the rear (SG-1) and front (SG-4) parking areas at 218 Lakeville Road. The perc badge samples were collected during the heating season, representing the worst case scenario indoor air conditions. Further, historical perc badge sampling results in the buildings on and surrounding the site had concentrations which required AEL to install vapor mitigation systems in several of the buildings. The most recent perc badge sampling results confirm that the previous indoor air quality issues identified with respect to PCE concentrations exceeding the 100 ug/m^3 NYSDOH air guidance value are no longer an issue for these buildings.

5.4 Conclusions

The closure sampling results presented in this report and the system pulsing events/SVE system monitoring trends previously reported in the monthly O&M Reports and the September 2003 SVE Well Pulsing Report verify that continued operation of the SVE remedial system is no longer technically necessary or economically feasible for the 218 Lakeville Road site. Continued SVE operation will not result in appreciable VOC removals (which have reached asymptotic levels) and residual concentrations meet applicable NYSDEC and NYSDOH criteria. The soil, soil gas and indoor air closure sampling results presented in this report, in conjunction with the SVE system O&M reports and the well pulsing reports demonstrate the following in compliance with DER-10:

- Concentrations of VOCs in groundwater have reached asymptotic levels below the laboratory reported detection limits;
- Continued operation of the SVE system is no longer effective since VOC removals have reached asymptotic levels;

- Well pulsing has shown that post-shutdown removal concentrations are the same as pre-shutdown concentrations;
- The NYSDEC TAGM 4046 RSCOs have been met for soil samples in the identified source areas; and
- The perc badge sampling results meet the NYSDOH guidance value for PCE (except for PCE attributable to storage of dry cleaned items) and confirm acceptable indoor air quality, demonstrating that residual PCE and TCE concentrations in soil gas do not adversely impact indoor air quality.

Based on the information presented in this closure report, Walden recommends permanent shutdown of the SVE system upon NYSDEC approval. All of the remediation system equipment remains in place and will continue to be maintained in operating condition until NYSDEC approves final system shutdown.

* = Result greater than RL
Bold values are those above standards
Highlighted values are above the upper concentration range listed in the USEPA BASE Indoor Air database.

Notes:
RL = Reporting limit
U = Analyte was not detected at or above the reporting limit.
J = Result is an estimate value below the reporting limit or a tentatively identified compound (TIC)
B = Compound was found in the blank
H = Alternate peak selection upon analytical review

Shelton, CT 06484

This Report Contains (228) Pages

SEVERN TRENT STL®

STL Report : 212962
WALDEN ASSOCIATES

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

Volatile Organics – Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 5030B/8260B.

The spike compound percent recoveries were within the laboratory generated guidelines in the independent source quality control samples except for styrene in 66589-2LCS.

Sample SB-4 16-18 was analyzed twice due to results exhibiting internal standard area suppression and surrogate recoveries outside QC limits. One set of data was reported since matrix interference was proven.

Sample Calculation:

Sample ID-SB-1 20-22
Compound- Methylene Chloride

$$\frac{(166665 \text{ area})(125\text{ng})(1)}{(2288286 \text{ area})(.346 \text{ area/ng})(5.14 \text{ g})(.941)} = 5.44 = 5.4 \text{ ug/Kg.}$$

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

QUALITY ASSURANCE METHODS
REFERENCES AND NOTES

REPORT COMMENTS

1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.

3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

U	Analyte was not detected at or above the reporting limit.
<	Not detected at or above the reporting limit.
J	Result is less than the RL, but greater than or equal to the method detection limit.
B	Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
S	Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

^	ICV,CCV,ICB,CCB,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed th upper or lower control limits.
*	LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
+	MSA correlation coefficient is less than 0.995.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
E	SD: Serial dilution exceeds the control limits.
H	MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
N	MS, MSD: Spike recovery exceeds the upper or lower control limits.
W	PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

U	Analyte was not detected at or above the reporting limit.
ND	Compound not detected.
J	Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
Q	Result was qualitatively confirmed, but not quantified.
C	Pesticide identification was confirmed by GC/MS.
Y	The chromatographic response resembles a typical fuel pattern.
Z	The chromatographic response does not resemble a typical fuel pattern.
E	Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

^	MB,EB, MLE: Batch QC is greater than reporting limit.
*	LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.
A	Concentration exceeds the instrument calibration range or below the reporting limit.
B	Compound was found in the blank.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
H	Alternate peak selection upon analytical review
I	Indicates the presence of an interfence, recovery is not calculated.
M	Manually integrated compound.
P	The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

STL-Connecticut
Certification Summary (as of May 2006)

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

State	Responsible Agency	Certification	Expiration Date	Lab Number
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/06	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/07	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/06	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/06	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/06	CT410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste **NELAC**	04/01/07	10602
Rhode Island	Department of Health	Chemistry...Non- Potable Water and Wastewater	12/30/06	A43
Utah	Department of Health	RCRA	05/31/07	2032614458

"PASSED RAD SCREEN"

Possible Hazard Identification
☒ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal
☐ Return To Client ☒ Disposal By Lab ☒ Archive For 1 Months
(A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required (business days)
☐ 24 Hours ☐ 48 Hours ☐ 5 Days ☐ 10 Days ☐ 15 Days ☒ Other Normal

QC Requirements (Specify) Cat 'B' deliverables

	Date	Time		Date	Time
1. Relinquished By	5-24-06	1500	1. Received By	5-27-06	13:00
2. Relinquished By			2. Received By	5-24-06	20:00
3. Received By			Cooler Temps		

Comments: As requested, each sample has three (3) En Core Samples & one (1) % solids jar

DISTRIBUTION: WHITE – Stays with the Samples; CANARY – Returned to Client with Report; PINK – Field Copy

SDG NARRATIVE

SEVERN TRENT STL®

STL Report : 212962
WALDEN ASSOCIATES

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

Volatile Organics – Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 5030B/8260B.

The spike compound percent recoveries were within the laboratory generated guidelines in the independent source quality control samples except for styrene in 66589-2LCS.

Sample SB-4 16-18 was analyzed twice due to results exhibiting internal standard area suppression and surrogate recoveries outside QC limits. One set of data was reported since matrix interference was proven.

Sample Calculation:

Sample ID-SB-1 20-22
Compound- Methylene Chloride

$$\frac{(166665 \text{ area})(125\text{ng})(1)}{(2288286 \text{ area})(.346 \text{ area/ng})(5.14 \text{ g})(.941)} = 5.44 = 5.4 \text{ ug/Kg.}$$

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Peter Frick

Integrator: HP RTE Compound Sublist: 8260BAP9.sub
Target Version: 4.10
Processing Host: CONMSONT

Concentration Formula: Amt * DF * Uf *1/(Ws * (100 - M)/100) * CpndVariable

Name	Value	Description
DF	1.000	Dilution Factor
Uf	5.000	ng unit correction factor
Ws	5.280	Weight of sample extracted (g)
M	7.200	% Moisture (not decanted)
Va	100.000	Volume of aliquot extract added (uL)
Cpnd Variable		Local Compound Variable

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
H - Operator selected an alternate compound hit.

THE LEADER IN ENVIRONMENTAL TESTING

December 14, 2007

Ms. Kristin Scroope
Walden Associates
16 Spring Street
Oyster Bay, NY 11771

Re: Laboratory Project No. 27000
Case: 27000; SDG: NY123354

Dear Ms. Scroope:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on December 7th, 2007. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 12/07/07 ETR No: 123354		
734823	SG-1	12/06/07	AIR
734824	SG-2	12/06/07	AIR
734825	SG-3	12/06/07	AIR
734826	SG-4	12/06/07	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

Certain of the samples in this delivery group were analyzed at dilution to ensure quantitation of all target constituents within the range of calibrated instrument response.

The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: Greater than 40% difference for detected concentrations between two GC columns. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

* Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

THE LEADER IN ENVIRONMENTAL TESTING

December 14, 2007

Ms. Kristin Scroope
Walden Associates
16 Spring Street
Oyster Bay, NY 11771

Re: Laboratory Project No. 27000
Case: 27000; SDG: NY123354

Dear Ms. Scroope:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on December 7th, 2007. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 12/07/07 ETR No: 123354		
734823	SG-1	12/06/07	AIR
734824	SG-2	12/06/07	AIR
734825	SG-3	12/06/07	AIR
734826	SG-4	12/06/07	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

Certain of the samples in this delivery group were analyzed at dilution to ensure quantitation of all target constituents within the range of calibrated instrument response.

The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: Greater than 40% difference for detected concentrations between two GC columns. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

*: Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.

Cooler 5	°C	Cooler 10	°C	Cooler 15	°C	Cooler 20	°C

Unless otherwise documented, the recorded temperature readings are adjusted readings to account for the CF of the IR Gun

EPA Criteria: 0-6°C, except for air and geo samples which should be at ambient temperature and tissue samples, which may be frozen.

Some clients require thermal preservation criteria of 2-4°C or other such criteria. The PM must notify SM when alternate criteria is specified.

SAMPLE CONDITION	YES	NO	NA	COMMENTS
Sample containers were received intact	X			
Legible sample labels are affixed to each container	X			

CHAIN OF CUSTODY (COC)	YES	NO	NA	COMMENTS
COC is present and includes the following information for each container:				
• Sample ID / Sample Description	X			
• Date of Sample Collection	X			
• Time of Sample Collection	X			
• Identification of the Sampler		X		
• Preservation Type			X	
• Requested Tests Method(s)	X			
• Necessary Signatures	X			
Internal Chain of Custody (ICOC) Required		X		
If yes to above, ICOC Record initiated for every Worksheet			X	

SAMPLE INTEGRITY / USABILITY	YES	NO	NA	COMMENTS
The sample container matches the COC	X			
Appropriate sample containers were received for the tests requested	X			
Samples were received within holding time	X			
Sufficient amount of sample is provided for requested analyses	X			
VOA vials do not have headspace or a bubble >6mm (1/4" diameter)			X	
Appropriate preservatives were used for the tests requested			X	
pH of inorganic samples checked and is within method specification			X	
If no, attach Inorganic Sample pH Adjustment Form

TestAmerica

THE LEADER IN ENVIRONMENTAL TESTING

January 14, 2008

Ms. Kristin Scroope
218 Lakeville Associates
375 North Broadway
Jericho, NY 11773

Re: Laboratory Project No. 27000
Case: 27000; SDG: NY123553

Dear Ms. Scroope:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on December 21st, 2007. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 12/21/07 ETR No: 123553		
736405	SG-1	12/20/07	AIR
736406	SG-2	12/20/07	AIR
736407	SG-3	12/20/07	AIR
736408	SG-4	12/20/07	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The analysis of the samples in this delivery group were analyzed at dilution to ensure quantitation of all target constituents within the range of calibrated instrument response.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: Greater than 40% difference for detected concentrations between two GC columns. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

*: Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

Method Codes:

P	ICP-AES
MS	ICP-MS
CV	Cold Vapor AA
AS	Semi-Automated Spectrophotometric

10.0

CALCULATION:

$$\frac{\text{Preadjusted Pressure("Hg)} + 29.92\text{"Hg}}{29.92\text{"Hg}} + 2.7\text{L} = \text{Preadjusted Volume (L)}$$

$$\frac{\text{Adjusted Pressure(psig)} + 14.7\text{ psig}}{14.7\text{ psig}} + 2.7\text{L} = \text{Adjusted Volume (L)}$$

$$\frac{\text{Adjusted Volume (L)}}{\text{Preadjusted Volume (L)}} = \text{Dilution Factor}$$

Where:
29.92 "Hg = Standard atmospheric pressure in inches of Mercury ("Hg).
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig).
2.7 L = Volume of SUMMA canister at atmospheric pressure.

4a Express Package Service — Packages up to 150 lbs.
- [ ] FedEx Priority Overnight — Next business morning.* Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [x] FedEx Standard Overnight — Next business afternoon.* Saturday Delivery NOT available.
- [ ] FedEx First Overnight — Earliest next business morning delivery to select locations.* Saturday Delivery NOT available.
- [ ] FedEx 2Day — Second business day.* Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx Express Saver — Third business day.* Saturday Delivery NOT available.

FedEx Envelope rate not available. Minimum charge: One-pound rate. * To most locations.

4b Express Freight Service — Packages over 150 lbs.
- [ ] FedEx 1Day Freight* — Next business day.** Friday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 2Day Freight — Second business day.** Thursday shipments will be delivered on Monday unless SATURDAY Delivery is selected.
- [ ] FedEx 3Day Freight — Third business day.** Saturday Delivery NOT available.

* Call for Confirmation. ** To most locations.

5 Packaging
- [ ] FedEx Envelope*
- [ ] FedEx Pak* — Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak.
- [ ] FedEx Box
- [ ] FedEx Tube
- [x] Other

* Declared value limit $500.

6 Special Handling — Include FedEx address in Section 3.
- [ ] SATURDAY Delivery — Not available for FedEx Standard Overnight, FedEx First Overnight, FedEx Express Saver, or FedEx 3Day Freight.
- [ ] HOLD Weekday at FedEx Location — Not available for FedEx First Overnight.
- [ ] HOLD Saturday at FedEx Location — Available ONLY for FedEx Priority Overnight and FedEx 2Day to select locations.

Does this shipment contain dangerous goods? One box must be checked.
- [x] No
- [ ] Yes — As per attached Shipper's Declaration.
- [ ] Yes — Shipper's Declaration not required.
- [ ] Dry Ice — Dry Ice, 9, UN 1845 ____ x ____ kg
- [ ] Cargo Aircraft Only

Dangerous goods (including dry ice) cannot be shipped in FedEx packaging.

7 Payment Bill to: Enter FedEx Acct. No. or Credit Card No. below. Obtain Recip Acct. No. [ ]
- [ ] Sender — Acct. No. in Section 1 will be billed.
- [ ] Recipient
- [ ] Third Party
- [ ] Credit Card
- [ ] Cash/Check

Total Packages 1 Total Weight 15 lbs Credit Card Auth.

†Our liability is limited to $100 unless you declare a higher value. See the current FedEx Service Guide for details.

8 Residential Delivery Signature Options — If you require a signature, check Direct or Indirect.
- [ ] No Signature Required — Package may be left without obtaining a signature for delivery.
- [ ] Direct Signature — Someone at recipient's address may sign for delivery. Fee applies.
- [ ] Indirect Signature — If no one is available at recipient's address, someone at a neighboring address may sign for delivery. Fee applies.

THE LEADER IN ENVIRONMENTAL TESTING

January 14, 2008

Ms. Kristin Scroope
218 Lakeville Associates
375 North Broadway
Jericho, NY 11773

Re: Laboratory Project No. 27000
Case: 27000; SDG: NY123553

Dear Ms. Scroope:

Enclosed are the analytical results for the samples that were received by TestAmerica Burlington on December 21st, 2007. Laboratory identification numbers were assigned, and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 12/21/07 ETR No: 123553		
736405	SG-1	12/20/07	AIR
736406	SG-2	12/20/07	AIR
736407	SG-3	12/20/07	AIR
736408	SG-4	12/20/07	AIR

Documentation of the condition of the samples at the time of their receipt and any exception to the laboratory's Sample Acceptance Policy is documented in the Sample Handling section of this submittal.

The analysis of the samples in this delivery group were analyzed at dilution to ensure quantitation of all target constituents within the range of calibrated instrument response.

Any reference within this report to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.) The analytical results associated with the samples presented in this test report were generated under a quality system that adheres to requirements specified in the NELAC standard. Release of the data in this test report and any associated electronic deliverables is authorized by the Laboratory Director's designee as verified by the following signature.

If there are any questions regarding this submittal, please contact me at 802 660-1990.

Sincerely,

Don Dawicki
Project Manager

TestAmerica Burlington Data Qualifier Definitions

Organic

U: Compound analyzed but not detected at a concentration above the reporting limit.

J: Estimated value.

N: Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds (TICs) where the identification of a compound is based on a mass spectral library search.

P: SW-846: Greater than 40% difference for detected concentrations between two GC columns. Unless otherwise specified the higher of the two values is reported on the Form I.

CLP SOW: Greater than 25% difference for detected concentrations between two GC columns. Unless otherwise specified the lower of the two values is reported on the Form I.

C: Pesticide result whose identification has been confirmed by GC/MS.

B: Analyte is found in the sample and the associated method blank. The flag is used for tentatively identified compounds as well as positively identified compounds.

E: Compounds whose concentrations exceed the upper limit of the calibration range of the instrument for that specific analysis.

D: Concentrations identified from analysis of the sample at a secondary dilution.

A: Tentatively identified compound is a suspected aldol condensation product.

X,Y,Z: Laboratory defined flags that may be used alone or combined, as needed. If used, the description of the flag is defined in the project narrative.

Inorganic/Metals

E: Reported value is estimated due to the presence of interference.

N: Matrix spike sample recovery is not within control limits.

* Duplicate sample analysis is not within control limits.

B: The result reported is less than the reporting limit but greater than the instrument detection limit.

U: Analyte was analyzed for but not detected above the reporting limit.

ACCREDITED IN ACCORDANCE WITH nelac

Case Narrative for Job: 220-3884-1

Client: Walden Associates
Date: January 22, 2008

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Lawrence Decker
Laboratory Director

January 22, 2008
Date

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

FORMULAS FOR NYSDEC SAMPLE CALCULATIONS

Volatiles

$$\frac{(Ax)(IS)(DF)}{(AIS)(RRF)(V)(\%\ solids)} = C$$

$$\frac{(AX)(IS)(VT)(1000)(DF)}{(AIS)(RRF)(VA)(V)(\%\ solids)} = C \quad \text{(for medium level soils)}$$

SemiVolatiles

$$\frac{(AX)(IS)(VE)(DF)(GPC\ factor\ is\ 2\ if\ needed)}{(AIS)(RRF)(volume\ injected)(V)(\%\ solids)} = C$$

Pesticides

$$\frac{(AX)(VE)(DF)}{(RRF)(V)(\%\ solids)(volume\ injected)} = C$$

PCBs for compound/retention time

$$\frac{(AX)(VE)(DF)}{(RRF\ of\ compound\ at\ the\ stated\ retention\ time)(V)(\%\ solids)(volume\ injected)} = C$$

DRO/CTETPH

$$\frac{(AX)(VE)(DF)}{(RRF)(V)(\%\ solids)(volume\ injected)} = C$$

AX = area of the target Ion
AIS = Area of Internal standard
C = concentration as ug/L or ug/Kg
DF = dilution
IS = Internal standard concentration (ng)
RRF = average RF (from initial cal except CLP methods from continuing cal)
V = sample volume for liquids in mls or sample weight for solids in grams
VA = volume of aliquot for medium level soils
VE = volume of concentrated extract
VT = volume of methanol for volatile medium level soils

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.

QC Flag Legend

H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.

QC Flag Legend

H - Operator selected an alternate compound hit.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.8C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True
