SECTION 1.0
INTRODUCTION AND SITE OVERVIEW

1.1 Introduction

This Periodic Review Report (PRR) was prepared to document operation, monitoring and maintenance (OM&M) activities at 90-30 Metropolitan Avenue, Rego Park, Queens, New York (Site) conducted between January 31, 2024 and January 31, 2026 under the New York State (NYS) Voluntary Cleanup Program (VCP) administered by the New York State Department of Environmental Conservation (NYSDEC). The Site is being remediated in accordance with the Voluntary Cleanup Agreement (VCA) Index # D2-0001-04-02, Site V00253-2, which was issued on June 4, 2002. The remedial activities were documented in the November 2009 Final Engineering Report, which the NYSDEC approved on November 13, 2009. A copy of this approval and pertinent correspondence during the reporting period is included in Appendix A. The approved FER included an Operation, Monitoring and Maintenance Plan under which the ongoing activities are conducted by FPM Group (FPM) on behalf of the Site owner. A corrective measure was also implemented in substantial conformance to FPM's approved work plan during the remedial action and consisted of the injection of an in-situ chemical oxidant to reduce site-related COC's. The OM&M Plan was updated at the request of the NYSDEC and approved in March 2025 and included new procedures for the implementation of low flow sampling procedures and management of purge water waste. The resumes of the environmental professionals implementing the OM&M Plan on behalf of the Site owners are included in Appendix B.

1.2 Executive Summary

The findings in this PRR are summarized as follows:

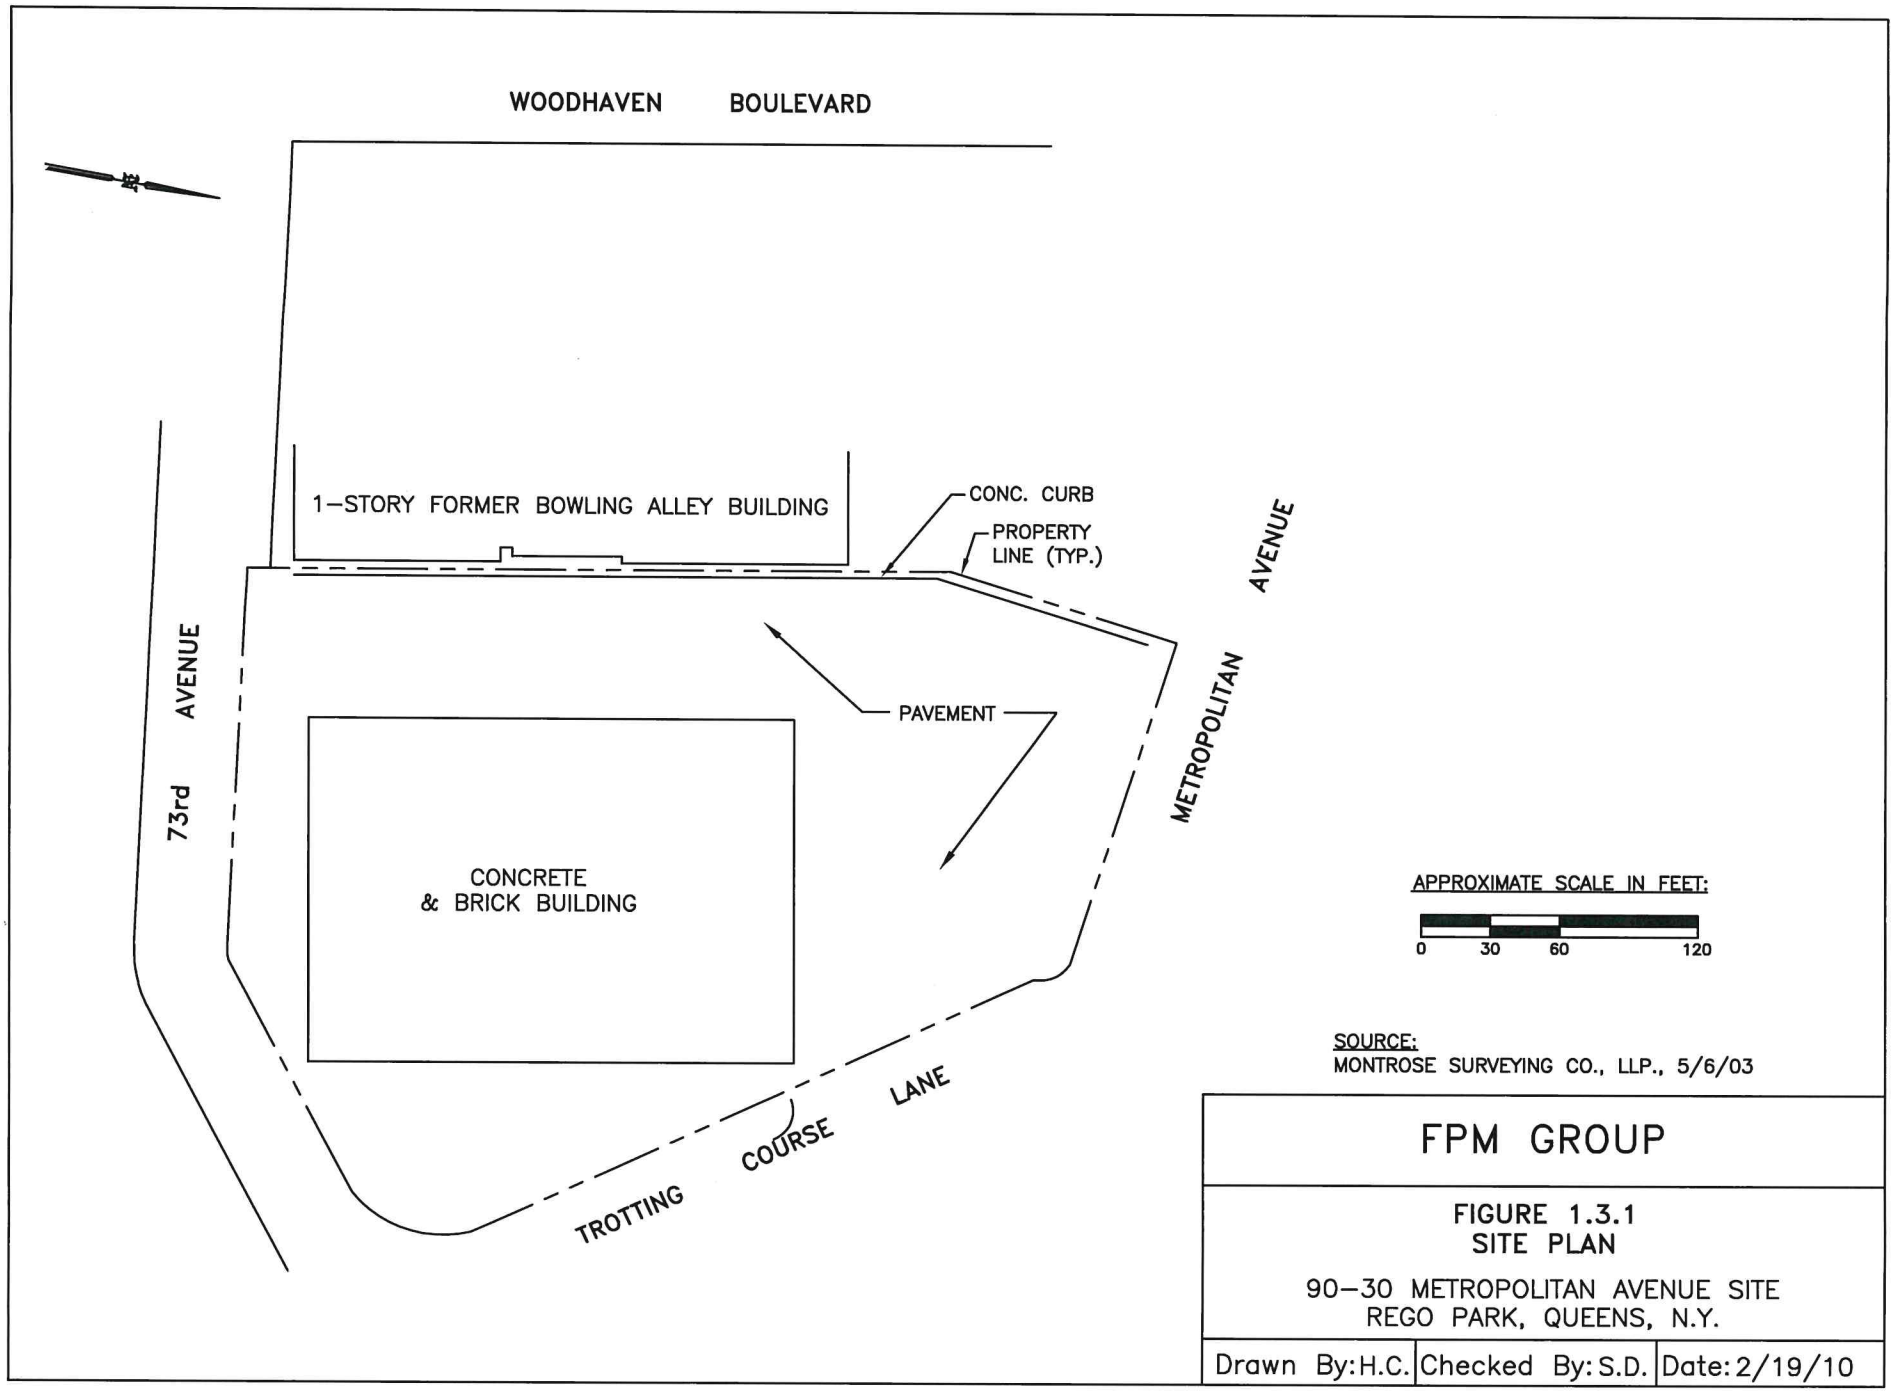
- Groundwater impacted with tetrachloroethene (PCE) is present onsite (main site plume) and is also migrating onsite from an offsite source.
- Engineering and Institutional Controls (ECs/ICs) are present, including the AS/SVE remediation system (EC), and a Deed Restriction (IC), a copy of which is included in Appendix A. This IC is in full force and effect. The remediation system (EC) remains offline and a corrective action consisting of the injection of an in-situ chemical oxidant (PersulfOx™) was conducted in December 2020 in accordance with a NYSDEC approved corrective measure work plan as the EC was no longer effective and mitigation for potential SVI was no longer required.
- Based upon the analytical testing performed following the ISCO injection the corrective action appears to have provided improvement at the site as the plume

continues to generally decrease in size and concentration, continued monitoring is recommended.

- Groundwater monitoring has been conducted during the reporting period in substantial conformance with the approved OM&M Plan.

➢ Effectiveness of Remedial Program

- The remedial program for the main site plume was effective, as evidenced by an improvement in groundwater conditions during the reporting period relative to conditions prior to the start of remediation and implementation of the corrective measure. The main site plume remains present primarily in the shallow and intermediate levels, with the center of the plume located beneath the southwestern portion of the onsite building, primarily at the intermediate level.
- A corrective measure was conducted in December 2020 utilizing an in-situ chemical oxidant and subsequent monitoring has shown improvement in groundwater conditions. Although the levels of PCE in the main site plume have been significantly reduced since the remedy was implemented, concentrations above Standards remain present and the plume is expected to continue to decrease in size and degrade over time as shown by the groundwater monitoring data.



➢ Recommendations

Based on the current Site conditions, FPM recommends the following:

- Groundwater monitoring will be conducted quarterly for the next reporting period and continue to include shallow wells A-02, A-05, A-06, A-09, A-15, ME-8, and ME-13, intermediate wells A-08 and A-10, and deep wells A-07 and MW-113 to monitor groundwater conditions.
- Periodic review reporting at a frequency of 1 year.

1.3 Site Overview

Titan Management LP entered into a VCA with the NYSDEC in June 2002 and DPSW Forest Hills LLC became a co-Volunteer in May 2005 for a 1.87-acre property located at 90-30 Metropolitan Avenue in Rego Park, Queens, New York (Site). The Site boundary is shown in Figure 1.3.1. The VCA required the co-Volunteers to investigate and remediate contaminated media at the Site. On September 1, 2011 Forest Hills LLC sold the Site to Equity One

(Metropolitan) LLC. In April 2017 Regency Centers purchased the assets of Equity One (Metropolitan) LLC.

The Site was initially developed for commercial purposes in 1951 and was operated as a pharmaceutical distribution warehouse by Foremost-McKesson, Inc. until 1976. Between 1977 and 1988 the property was owned by Heidelberg Eastern, Inc., which manufactured and distributed printing presses and parts. The Site was used primarily for administration, equipment repair, and warehousing. In late 1988 the New York City Industrial Development Agency took title to the property, although Heidelberg Eastern continued to operate at the Site. In 1993 Heidelberg Eastern became EAC USA. The Site building became vacant at about that time and remained vacant until 2007 when it was redeveloped for commercial (retail) use. Redevelopment activities began in 2006 and were completed in 2007. PCE was first detected in the groundwater beneath the Site in December 1992. Subsequent investigations were performed to further characterize the PCE-impacted groundwater and have shown that the PCE is present in two plumes: the main site plume, which is present beneath the southern portion of the Site building and extends to the south, and the western bowling alley plume, which extends onto the western portion of the Site from an offsite source. No significant concentrations of PCE in onsite soil suggestive of a source were ever identified by any of the investigations. PCE was present in sub-slab soil vapors at levels for which monitoring and/or mitigation was indicated. PCE was not detected in the indoor air. Each of these media were addressed as part of the remedial action.

As part of the remedial action, an EC consisting of an AS/SVE system with 24 AS wells and seven SVE wells was installed at the Site to remediate the PCE-impacted groundwater. The AS/SVE system was placed into operation in August 2007 and was generally operated continuously, except when it was down for maintenance and repair. The portion of the system installed to address the western bowling alley plume was shut down on January 6, 2010, in accordance with Section 2.2.2 of the NYSDEC-approved OM&M Plan and with written notification to the NYSDEC on January 8, 2010. Operation of the EC was continued until January 2019 when it was found offline due to mechanical issues. An assessment of the EC at this time found that it was no longer effective at improving groundwater conditions and corrective action was implemented to further address remaining impacts to groundwater.

The Site IC is a Deed Restriction which requires implementation of the required IC and EC, limitation of Site usage to commercial or industrial use, and restriction of groundwater use. This IC (copy in Appendix A) was recorded on September 11, 2009; the Site has been in compliance with the terms of the IC throughout the reporting period.

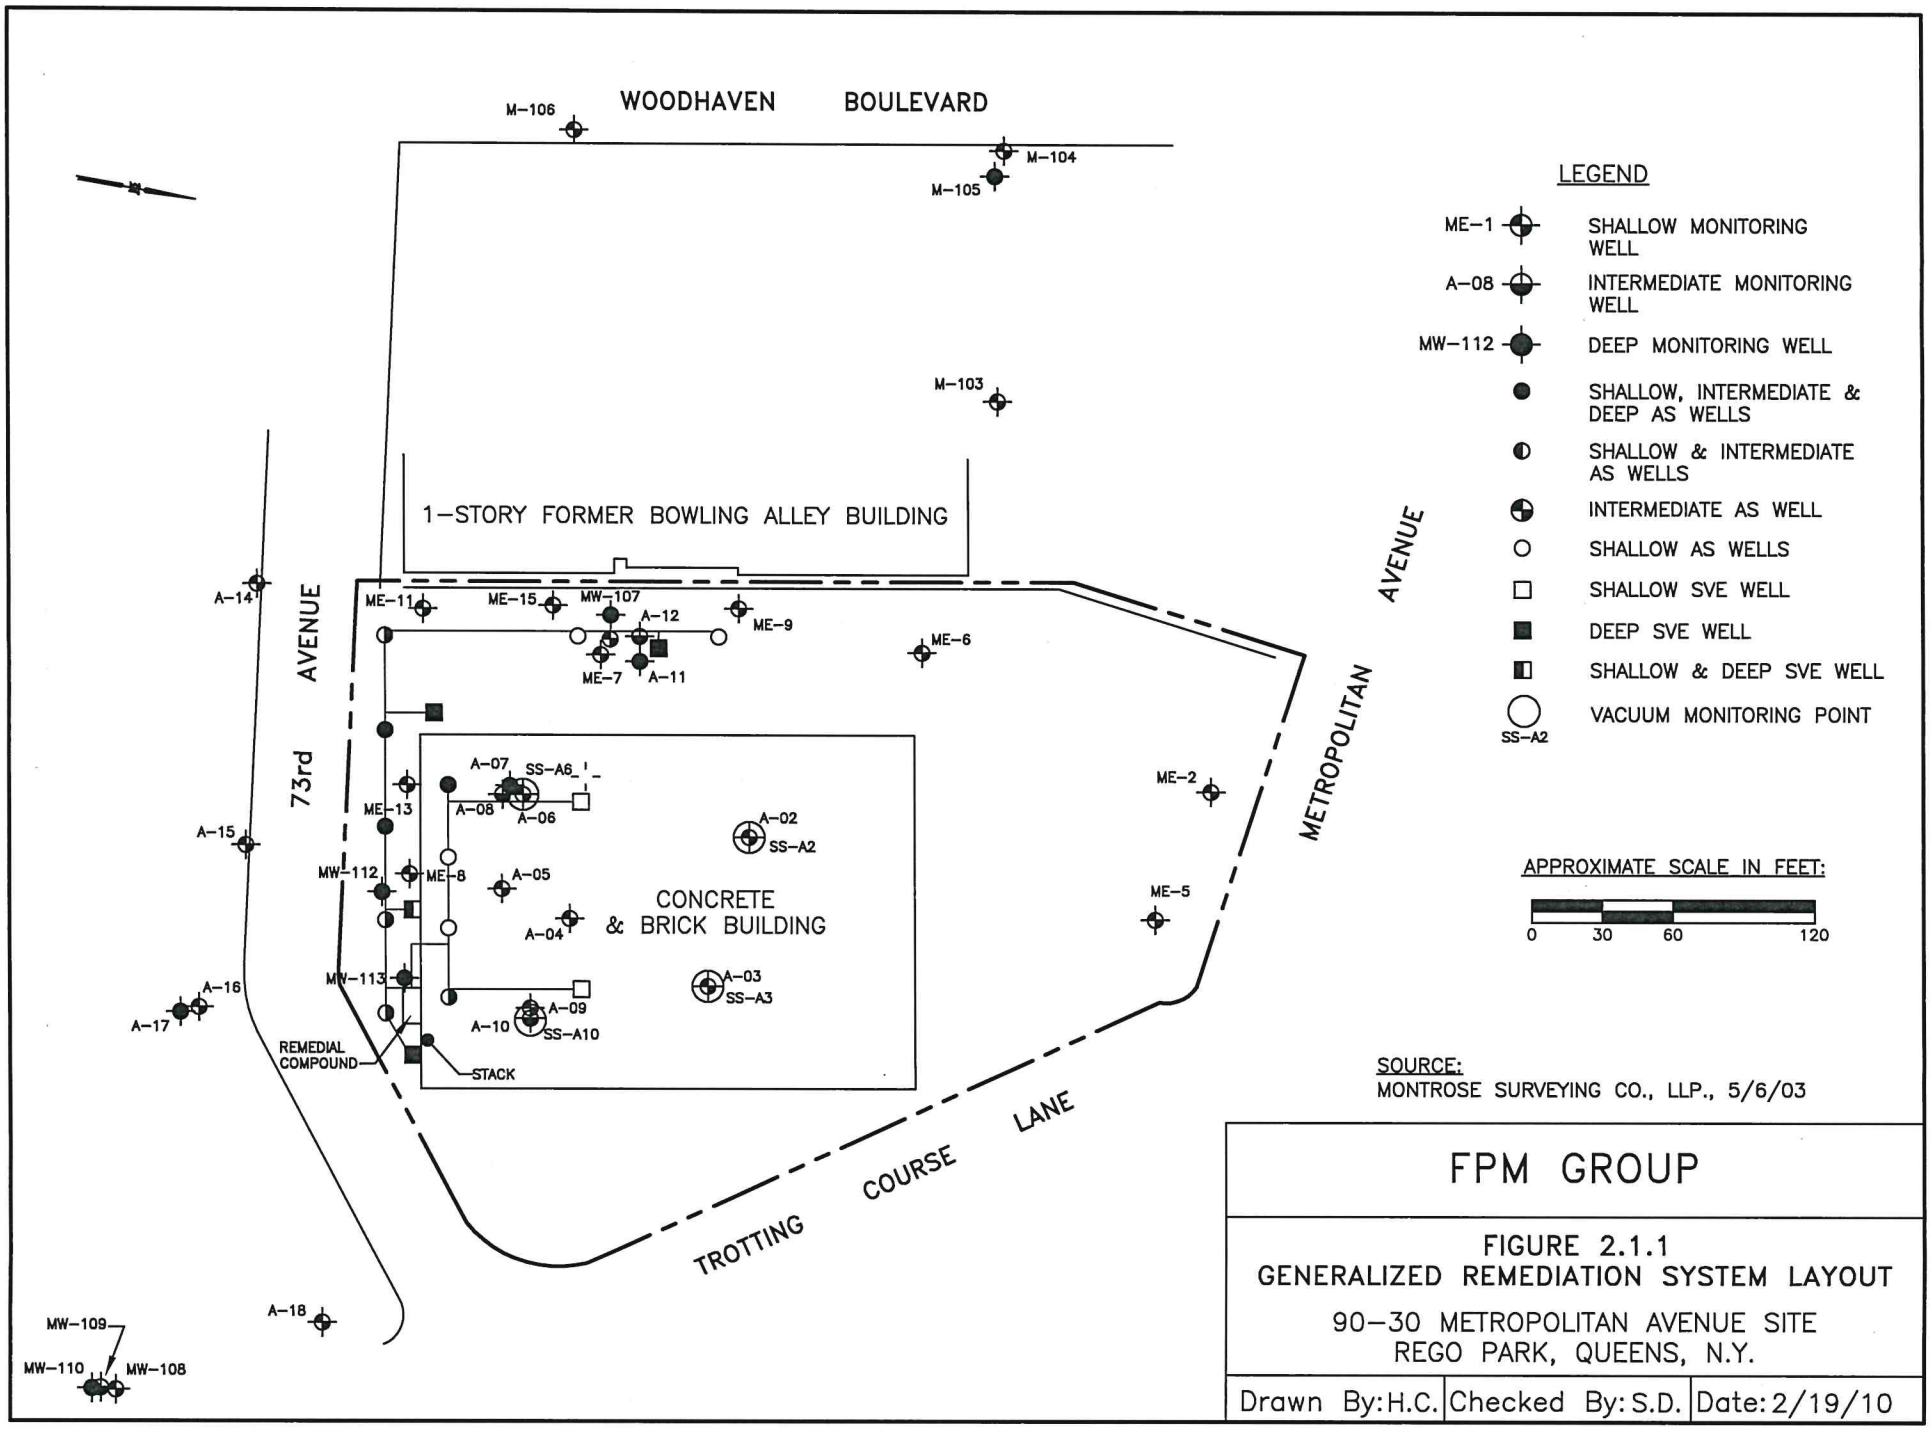
1.4 Evaluation of Remedy Performance, Effectiveness and Protectiveness

The remedy has been implemented in compliance with the submitted work plans and associated NYSDEC correspondence and continues to be managed in general compliance with the approved OM&M Plan.

The AS/SVE system at the Site was operated and monitored in general compliance with the OM&M Plan while in operation. The AS/SVE system was effective and protective in that it reduced PCE concentrations in groundwater in the main site plume and protected the public from residual sub-slab soil vapor. Groundwater monitoring demonstrates that groundwater concentrations within the main site plume improved significantly since the AS/SVE remedial system was placed into operational. A corrective action consisting of the injection of an in-situ chemical oxidant (ISCO) pilot test of Persulfox™ was initiated in December 2020 in accordance with a NYSDEC-approved work plan. Post ISCO monitoring continues to show a reduction in the main plume size and concentration since implementation of the corrective action and is further discussed in Section 3.2.2.

SECTION 2.0
ENGINEERING AND INSTITUTIONAL CONTROLS COMPLIANCE

Investigation activities for Site soil, groundwater and soil vapor have been completed. No soil contamination in excess of applicable NYSDEC guidance has been identified onsite. Groundwater with PCE concentrations in excess of the NYSDEC Class GA Ambient Water Quality Standard (Standard) is present onsite. PCE was also present in sub-slab soil vapor prior to the start of remediation at levels for which monitoring and/or mitigation was indicated. The EC (AS/SVE system) was completed and placed into service in August 2007 to remediate groundwater and provide for sub-slab depressurization. The IC (Deed Restriction) was recorded on September 11, 2009 and a copy can be found in Appendix A. The EC and IC implemented at the Site are summarized as follows:



- The EC consisted of an AS/SVE remediation system to remediate PCE-impacted groundwater and to act as a sub-slab depressurization system to prevent potential exposure to sub-slab soil vapor. This system has been offline since January 2019 when the system became inoperable and reached its useful life. SVI testing was performed in 2019 and 2021 when the system became inoperable, this testing determined that mitigation was no longer necessary;
- A corrective measures work plan was developed for an ISCO pilot test and was implemented in December 2020. Monitoring of the groundwater for the main site plume since this time has generally shown a reduction in the size and concentration of the main site groundwater plume and is further discussed below; and
- The IC is a Deed Restriction.

Monitoring of the EC and IC was performed during the reporting period and the results are documented below. Certification of the IC and EC is presented at the end of this section.

2.1 Engineering Control Component

An AS/SVE system is installed beneath the southern portion of the concrete slab of the building, in the landscaped area along the southern side of the Site, and in the central parking area located along the western side of the building. The system has been operated to remediate onsite PCE-impacted groundwater in the main site plume and to provide for sub-slab depressurization beneath the Site building. This system consisted of 24 AS wells and seven SVE wells, as shown on Figure 2.1.1. Three of the SVE wells were constructed with shallow-screened intervals to provide for sub-slab depressurization to prevent potential soil vapor intrusion into the Site - building. Three of the AS wells and one SVE well were installed on the western side of the Site

to remediate PCE impacted groundwater associated with the western plume. The remaining AS/SVE wells were installed to remediate PCE-impacted groundwater associated with the main site plume.

In accordance with Section 2.2.2 of the NYSDEC-approved OM&M Plan for this Site, "if the PCE concentrations are not below NYSDEC Standards, are not asymptotic, or do not remain below NYSDEC Standards or at asymptotic levels following shutdown of the AS/SVE system and the system has operated for two years, then the operation of the system treating the western bowling alley plume will be terminated by the Volunteer." As the Volunteer had operated the AS/SVE system for over two years, the Volunteer terminated the portion of the AS/SVE system treating the western bowling alley plume (two shallow and one intermediate AS wells and one deep SVE well on the western side of the Site) on January 6, 2010. The NYSDEC was notified of this termination in a January 8, 2010 correspondence.

The portion of the AS/SVE system treating the main site plume remained in operation until February 2019 when it was found to be in a state of disrepair. As the AS/SVE system has reached its limits of effectiveness, it was recommended that the AS/SVE system remain offline. A corrective measures work plan was subsequently developed for an ISCO pilot test and approved by the NYSDEC in January 2020 and was implemented in December 2020. Monitoring of the groundwater for the main site plume since this time has shown a reduction in the size and concentration of the main site groundwater plume and is further discussed in section 3.2.

2.2 Institutional Control Component

The IC for the Site is a deed restriction, which was recorded on September 11, 2009. A copy is included in Appendix A. The provisions of this IC are:

- The Site Owner shall continue in full force and effect any engineering and institutional controls required and maintain such controls unless the Owner first obtains permission to discontinue such controls from the NYSDEC;
- The deed restriction shall be deemed a covenant that shall run with the land and shall be binding upon all future owners of the Site, and shall provide that the Owner and its successors and assigns consent to enforcement by the NYSDEC of the prohibitions and restrictions contained therein and covenant not to contest the authority of the NYSDEC to seek enforcement;

- Any deed of conveyance of the Site, or any portion thereof, shall recite, unless the NYSDEC has consented to the termination of such covenants and restrictions, that said conveyance is subject to this deed restriction;
- Use of groundwater underlying the Site will be prohibited without treatment rendering it safe for the intended purpose; and
- The Site may be used for commercial or industrial use only unless an express written waiver of this restriction is provided by the NYSDEC.

Adherence to these provisions of the IC is required in accordance with the approved FER. The Site has remained in substantial compliance with the provisions of the deed restriction throughout the reporting period, except as discussed above.

2.3 EC/IC Certification

The EC/IC Certification Form provided by the NYSDEC has been completed in accordance with the associated certification instructions and is included in Appendix C. As discussed above, the EC is presently offline and a corrective action was developed and implemented to help further reduce main site plume concentrations.

SECTION 3.0
MONITORING PLAN COMPLIANCE

The monitoring plan for the Site includes measures for evaluating the performance and effectiveness of the implemented EC (AS/SVE system) in remediating PCE-impacted groundwater. Monitoring of the EC is performed by evaluating the performance of the AS/SVE system, while it was in operation and by conducting groundwater monitoring.

3.1 AS/SVE System Monitoring

The AS/SVE system has been offline since early 2019 when it was determined that the system had reached its useful life and was no longer effective at remediating groundwater nor was it necessary to prevent potential SVI. No monitoring of the AS/SVE System was conducted during the reporting period.

3.2 Groundwater Monitoring System Components

The network of groundwater monitoring wells is designed to monitor both upgradient and downgradient groundwater conditions at the Site. The wells were monitored for VOCs on a quarterly basis during the reporting period. The network of wells is situated across the Site and includes the areas of the main site plume, the western bowling alley plume, upgradient groundwater, and downgradient groundwater. These wells are installed into the water table aquifer at three different intervals: shallow (0 to 10 feet below the water table), intermediate (30 to 40 feet below the water table), and deep (65 to 80 feet below the water table). The current status of the monitoring well network is summarized in Table 3.2.1 and shown on Figure 3.2.1.

3.2.1 Summary of Groundwater Monitoring Program

The procedures and results for all of the monitoring events conducted during the reporting period are summarized herein and were conducted in accordance with an approved OM&M Plan. The OM&M plan was during the reporting period in accordance with discussions with the NYSDEC project manager and implemented in 2025 to include low flow sampling procedures and purge water management.

The depth-to-groundwater information from the May 2024 sampling event was utilized to evaluate the groundwater flow direction at the Site during the reporting period. The groundwater was noted to be generally consistent with a southerly groundwater flow as documented in previous reports for the Site. Depth to groundwater was noted to range from 40.11 to 42.53 feet below grade

All groundwater monitoring procedures for each monitoring event during the reporting period were in accordance with an approved OM&M Plan and were recorded in a field book and on groundwater sampling logs. Copies of the completed sampling logs for the reporting period are included in Appendix E. At each well to be sampled, the depth to the static water level and the depth of the well were measured using an interface probe. A decontaminated low-flow submersible pump was then used to purge each monitoring well of three to five purge volumes during the 2024 reporting period. After discussions with the NYSDEC project manager US EPA low flow sampling techniques were employed in 2025. This method minimizes well disturbance and ensures representative groundwater samples by pumping at slow, stable rates (less than 0.5 L/min) to minimize drawdown. Stability parameters including pH, turbidity, specific conductivity, dissolved oxygen, redox, and/or temperature, were monitored until the parameters were stabilized (within ~10% for three successive readings) after which a sample was collected. It is noted that containerization of purge water was also initiated in late 2025 at the NYSDECs request. A "contained-in determination" has been submitted to determine the classification of the generated purge water waste. The OM & M plan was updated in 2025 to reflect these changes to the monitoring program.

Following stabilization of field parameters sampling was performed. The groundwater sampling matrix provided in the OM&M Plan was followed with respect to the types of sample containers, preservatives, and handling, the analyses to be performed, and the laboratory deliverables. Appropriate quality assurance/quality control (QA/QC) samples, including a trip blanks, field blank, field duplicate, and matrix spike/matrix spike duplicate (MS/MSD) samples, were collected and analyzed during each monitoring event in accordance with the site-specific Quality Assurance Project Plan (QAPP).

All groundwater and QA/QC samples collected were analyzed by NYSDOH-certified labs using the most recent NYSDEC Analytical Services Protocol (ASP). Analytical data were provided in complete ASP Category B data packages. A data usability summary report (DUSR) was also prepared for each laboratory package. The DUSRs are included in Appendix G.

3.2.2 Groundwater Monitoring Results and Comparison with Remedial Objectives

The data collected during the reporting period for the wells associated with the main site plume are summarized in Tables 3.2.2.1 through 3.2.2.3 together with the data from previous sampling events for comparison purposes. The data are evaluated with respect to the NYSDEC Standards; exceedances of the NYSDEC Standards are highlighted. Iso-concentration maps of the distribution of PCE in groundwater in May 2024, and April 2025 are shown in Figures 3.2.2.1 through 3.2.2.6. Graphs depicting the changes in PCE concentrations in key Site monitoring wells

throughout the reporting period are shown in Figures 3.2.2.7 through 3.2.2.9. Figures showing post ISCO injection are included as Figures 3.2.2.10 through 3.2.2.12.

The following observations were noted with respect to the main site plume:

- PCE remains present in the shallow wells, with the center of the plume located beneath the onsite building (in proximity to A-06), and extending to the south and east, as shown on Figure 3.2.2.1 and 3.2.2.4. The concentrations in the shallow wells have generally decreased following implementation of the ISCO Pilot Test. Wells A-05, A-06, A-02, A-09, A-15, ME -08 and ME-13 were generally noted to continue to be above Standards but decreased in concentration over the reporting period;
- PCE also remains present in the intermediate-level wells, with the center of this portion of the plume also beneath the southwest corner of the onsite building and has shown a decrease in concentration from 490 ug/l in May 2024 to 300 ug/l in October 2025 in A-08, these observed concentrations are below historic observations for this location. At well A-10 PCE concentrations continue to remain low and have shown some fluctuating over the reporting period, PCE continue to remain above Standards at a generally low concentration; and
- PCE was noted to be present in sampled deep wells at generally low concentrations with some variations during the reporting period.

In summary, the main site plume remains present primarily in the shallow and intermediate levels, with the center of the plume located beneath the southwestern portion of the onsite building and is continuing to decrease in size and concentration with some variations.

Upgradient monitoring well A-02 continues to have low detections of PCE at concentrations above Standards indicating that offsite sources continue to migrate onsite.

3.3 Groundwater Monitoring Deficiencies

No deficiencies were noted during the reporting period, monitoring was conducted in accordance with the approved monitoring plan and subsequent modifications.

3.4 Groundwater Monitoring Conclusions

The groundwater monitoring results for the reporting period show that the main site plume remains present primarily in the shallow and intermediate levels, with the center of the plume located beneath the southwestern portion of the onsite building. The PCE plume continues to decrease in size and concentrations relative to pre-remediation conditions.

Groundwater monitoring will be conducted on a quarterly frequency during the reporting period with shallow wells A-02, A-05, A-06, A-09, A-15, ME-8, and ME-13, intermediate wells A-08 and A-10, and deep wells A-07 and MW-113.

SECTION 4.0
OPERATION AND MAINTENANCE PLAN COMPLIANCE

The Site has O&M requirements for the AS/SVE system and the groundwater monitoring wells. The AS/SVE system is no longer in operation and therefore O & M was not performed for this during the reporting period.

The groundwater monitoring wells are checked during groundwater monitoring events to evaluate whether maintenance (redevelopment, repair) is necessary.

Site-wide inspections have been performed annually to document OM&M activities and the Site status; copies of the completed site-wide inspection forms are included in Appendix D.

4.1 Summary of O&M Activities

During the reporting period no maintenance of the groundwater monitoring wells has been necessary other than occasional repair of manholes due to routine wear and parking lot activities.

4.2 Evaluation of O&M Activities

The O&M activities enabled the groundwater monitoring network to operate as intended during the reporting period.

4.3 O&M Deficiencies

No O & M deficiencies occurred during the reporting period.

4.4 Recommendations

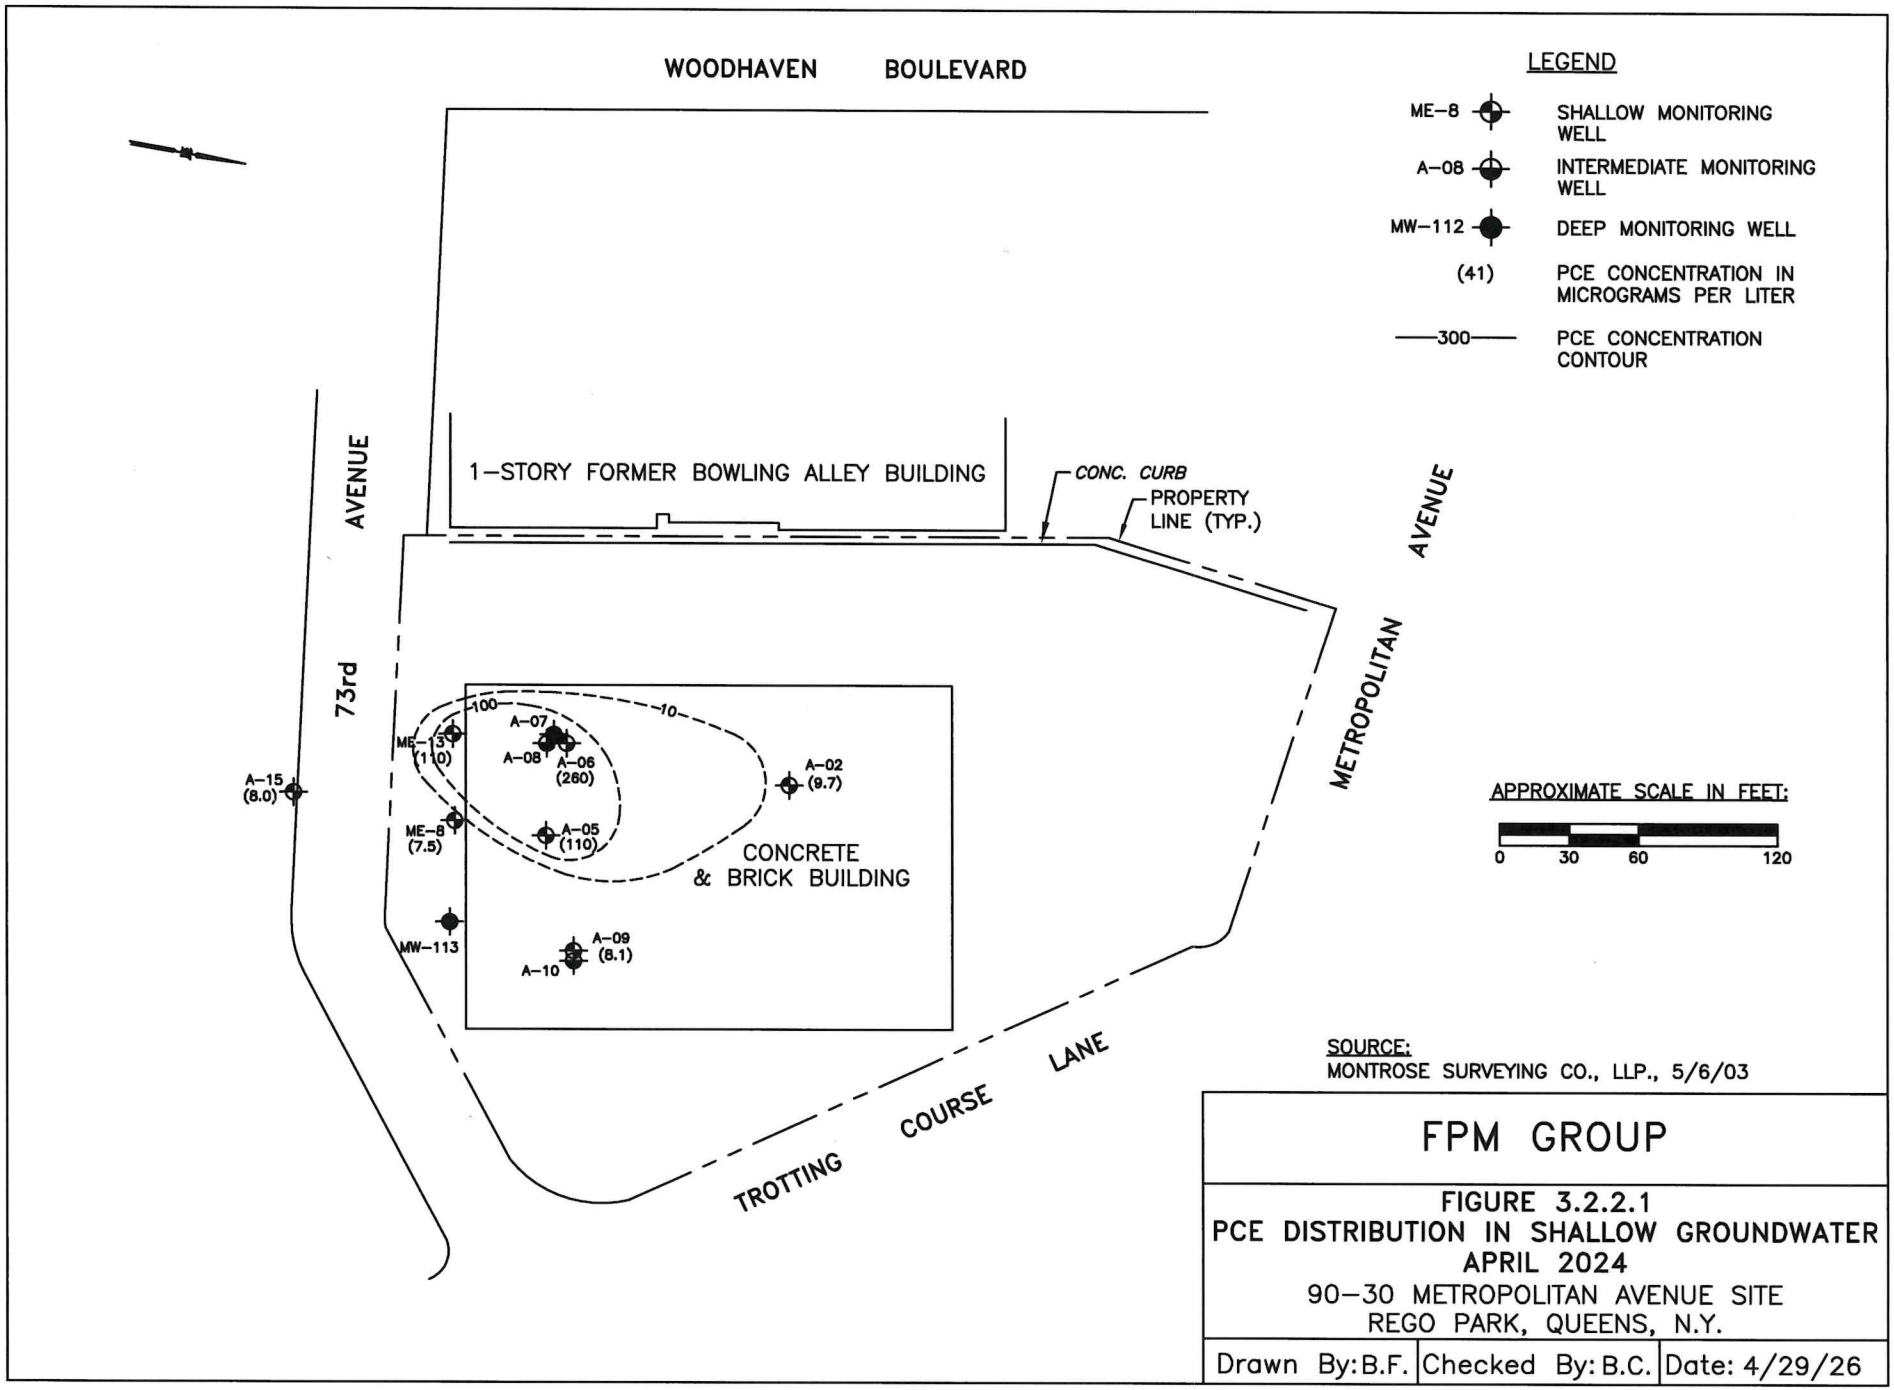
Continued groundwater monitoring as discussed in Section 3.4 is recommended.

SECTION 5.0
CONCLUSIONS AND RECOMMENDATIONS

5.1 Compliance with OM&M Plan

Assessment of the overall Site condition and compliance with the OM&M Plan during the reporting period are summarized as follows:

- EC and IC Compliance
  - The EC (AS/SVE system) has reached its useful life and was not in operation during the reporting period. A corrective measure was implemented in 2020 and groundwater conditions have shown improvement during the reporting period.
  - The IC (deed restriction) was recorded on September 11, 2009. The provisions of this IC were maintained throughout the reporting period.
- Monitoring and O&M
  - Groundwater monitoring was performed during the reporting period in substantial compliance with the OM&M Plan.



5.2 Performance and Effectiveness of the Remedy

The remedy has been implemented in compliance with the applicable work plans and NYSDEC approvals and continues to be managed in compliance with the OM&M Plan with modifications approved by the NYSDEC. The main site plume remains present primarily in the shallow and intermediate levels, with the center of the plume located near the southwestern portion of the onsite building, primarily at the intermediate level. Groundwater monitoring has confirmed that the levels of PCE in Site groundwater in the area of the main site plume have significantly improved since the remedy and corrective action were implemented. Continued groundwater monitoring is proposed to monitor groundwater conditions.

5.3 Recommendations

Based on the current Site conditions, FPM recommends the following:

- Continued monitoring is needed to evaluate changes in groundwater PCE concentrations. The groundwater monitoring frequency is recommended on a quarterly basis for shallow wells A-02, A-05, A-06, A-09, A-15, ME-8, and ME-13, intermediate wells A-08 and A-10, and deep wells A-07 and MW-113. Procedures should continue to be performed in accordance with the OM&M Plan and NYSDEC-approved modifications as applicable.
- Periodic review reporting will be performed annually.

SECTION 4.0
OPERATION AND MAINTENANCE PLAN COMPLIANCE

The Site has O&M requirements for the AS/SVE system and the groundwater monitoring wells. The AS/SVE system is no longer in operation and therefore O & M was not performed for this during the reporting period.

The groundwater monitoring wells are checked during groundwater monitoring events to evaluate whether maintenance (redevelopment, repair) is necessary.

Site-wide inspections have been performed annually to document OM&M activities and the Site status; copies of the completed site-wide inspection forms are included in Appendix D.

4.1 Summary of O&M Activities

During the reporting period no maintenance of the groundwater monitoring wells has been necessary other than occasional repair of manholes due to routine wear and parking lot activities.

4.2 Evaluation of O&M Activities

The O&M activities enabled the groundwater monitoring network to operate as intended during the reporting period.

4.3 O&M Deficiencies

No O & M deficiencies occurred during the reporting period.

4.4 Recommendations

Continued groundwater monitoring as discussed in Section 3.4 is recommended.

SECTION 5.0
CONCLUSIONS AND RECOMMENDATIONS

5.1 Compliance with OM&M Plan

Assessment of the overall Site condition and compliance with the OM&M Plan during the reporting period are summarized as follows:

- EC and IC Compliance
  - The EC (AS/SVE system) has reached its useful life and was not in operation during the reporting period. A corrective measure was implemented in 2020 and groundwater conditions have shown improvement during the reporting period.
  - The IC (deed restriction) was recorded on September 11, 2009. The provisions of this IC were maintained throughout the reporting period.
- Monitoring and O&M
  - Groundwater monitoring was performed during the reporting period in substantial compliance with the OM&M Plan.

5.2 Performance and Effectiveness of the Remedy

The remedy has been implemented in compliance with the applicable work plans and NYSDEC approvals and continues to be managed in compliance with the OM&M Plan with modifications approved by the NYSDEC. The main site plume remains present primarily in the shallow and intermediate levels, with the center of the plume located near the southwestern portion of the onsite building, primarily at the intermediate level. Groundwater monitoring has confirmed that the levels of PCE in Site groundwater in the area of the main site plume have significantly improved since the remedy and corrective action were implemented. Continued groundwater monitoring is proposed to monitor groundwater conditions.

5.3 Recommendations

Based on the current Site conditions, FPM recommends the following:

- Continued monitoring is needed to evaluate changes in groundwater PCE concentrations. The groundwater monitoring frequency is recommended on a quarterly basis for shallow wells A-02, A-05, A-06, A-09, A-15, ME-8, and ME-13, intermediate wells A-08 and A-10, and deep wells A-07 and MW-113. Procedures should continue to be performed in accordance with the OM&M Plan and NYSDEC-approved modifications as applicable.
- Periodic review reporting will continue every two years as currently approved.

Re: Reminder Notice: Site Management Periodic Review Report and IC/EC Certification Submittal
Site Name: 90-30 Metropolitan Avenue
Site No.: V00253
Site Address: 90-30 METROPOLITAN AVENUE
Rego Park, NY 11374

Dear Eric Silvers:

This letter serves as a reminder that sites in active Site Management (SM) require the submittal of a periodic progress report. This report, referred to as the Periodic Review Report (PRR), must document the implementation of, and compliance with, site-specific SM requirements. Section 6.3(b) of DER-10 *Technical Guidance for Site Investigation and Remediation* (available online at http://www.dec.ny.gov/regulations/67386.html) provides guidance regarding the information that must be included in the PRR. Further, if the site is comprised of multiple parcels, then you as the Certifying Party must arrange to submit one PRR for all parcels that comprise the site. The PRR must be received by the Department no later than **April 06, 2026**. Guidance on the content of a PRR is enclosed.

Site Management is defined in regulation (6 NYCRR 375-1.2(at)) and in Chapter 6 of DER-10. Depending on when the remedial program for your site was completed, SM may be governed by multiple documents (e.g., Operation, Maintenance, and Monitoring Plan; Soil Management Plan) or one comprehensive Site Management Plan.

A Site Management Plan (SMP) may contain one or all of the following elements, as applicable to the site: a plan to maintain institutional controls and/or engineering controls ("IC/EC Plan"); a plan for monitoring the performance and effectiveness of the selected remedy ("Monitoring Plan"); and/or a plan for the operation and maintenance of the selected remedy ("O&M Plan"). Additionally, the technical requirements for SM are stated in the decision document (e.g., Record of Decision) and, in some cases, the legal agreement directing the remediation of the site (e.g., order on consent, voluntary agreement, etc.).

When you submit the PRR (by the due date above), include the enclosed forms documenting that all SM requirements are being met. The Institutional Controls (ICs) portion of the form (Box 6) must be signed by you or your designated representative. The Engineering Controls (ECs) portion of the form (Box 7) must be signed by a Professional Engineer (PE). If you cannot certify that all SM requirements are being met, you must submit a Corrective Measures Work Plan that identifies the actions to be taken to restore compliance. The work plan must include a schedule to be approved by the Department. The Periodic Review process will not be considered complete until all necessary corrective measures are completed and all required controls are certified. Instructions for completing the certifications are enclosed.

All site-related documents and data, including the PRR, must be submitted in electronic format to the Department of Environmental Conservation. The required format for documents is an Adobe PDF file with optical character recognition and no password protection. Data must be submitted as an electronic data deliverable (EDD) according to the instructions on the following webpage:

https://www.dec.ny.gov/chemical/62440.html

Documents may be submitted to the project manager by contacting the project manager for a link to DEC's file transfer service.

The Department will not approve the PRR unless all documents and data generated in support of the PRR have been submitted using the required formats and protocols.

You may contact Marlen Salazar, the Project Manager, at 718-482-7129 or marlen.salazar@dec.ny.gov with any questions or concerns about the site. Please notify the project manager before conducting inspections or field work. You may also write to the project manager at the following address:

Note that this **Certification** form must be submitted even if an IC or EC cannot be certified; however, the certification process will not be considered complete until corrective action is completed.

If the Department concurs with the explanation, the proposed corrective measures, and the proposed schedule, a letter authorizing the implementation of those corrective measures will be issued by the Department's Project Manager. Once the corrective measures are complete, a new Periodic Review Report (with IC/EC Certification) must be submitted within 45 days to the Department. If the Department has any questions or concerns regarding the PRR and/or completion of the IC/EC Certification, the Project Manager will contact you.

III. IC/EC Certification by Signature (Box 6 and Box 7**):**

If you certified "YES" for each Control, please complete and sign the IC/EC Certifications page as follows:

Description of Institutional Controls

Parcel	Owner	Institutional Control
3884-34	Regency Centers, L.P.	Monitoring Plan O&M Plan

Site management at the 90-30 Metropolitan Avenue, Rego Park, NY Voluntary Cleanup Program Site (#V00253-2) is conducted under an Operation, Maintenance, and Monitoring (OM&M) Plan submitted as an appendix to the November 2009 Final Engineering Report. The OM&M Plan includes a summary of the existing Site conditions and a description of the approved remedial program, an Engineering and Institutional Control (EC/IC) Plan, a Monitoring Plan with provisions for groundwater and EC remedial system monitoring, an Operation and Maintenance (O&M) Plan with procedures for EC and monitoring system O&M, and an O&M Reporting Plan with procedures for reporting site inspections, monitoring results, and EC/IC certification.

Box 4

Description of Engineering Controls

Parcel	Engineering Control
3884-34	Air Sparging/Soil Vapor Extraction

The EC for the Site consists of an air sparge/soil vapor extraction (AS/SVE) system designed to remediate a plume (main site plume) of tetrachloroethylene (PCE) -impacted groundwater. Part of the SVE portion of the system was also designed to prevent the migration of sub-slab soil vapor into the Site building. A portion of the AS/SVE system was installed to treat PCE-impacted groundwater migrating onto the Site from an adjoining property (western bowling alley plume). The performance of the EC is monitored via effluent monitoring and groundwater monitoring. The ICs for the Site consist of site restrictions implemented under a Declaration of Covenants and Restrictions (deed restriction). Site restrictions include restriction of Site usage to commercial and industrial purposes, prohibition of Site groundwater use without treatment to render it suitable for its intended purpose, and maintenance of the ECs and ICs.

Description of Engineering Controls

Parcel	Engineering Control
3884-34	Air Sparging/Soil Vapor Extraction

The EC for the Site consists of an air sparge/soil vapor extraction (AS/SVE) system designed to remediate a plume (main site plume) of tetrachloroethylene (PCE) -impacted groundwater. Part of the SVE portion of the system was also designed to prevent the migration of sub-slab soil vapor into the Site building. A portion of the AS/SVE system was installed to treat PCE-impacted groundwater migrating onto the Site from an adjoining property (western bowling alley plume). The performance of the EC is monitored via effluent monitoring and groundwater monitoring. The ICs for the Site consist of site restrictions implemented under a Declaration of Covenants and Restrictions (deed restriction). Site restrictions include restriction of Site usage to commercial and industrial purposes, prohibition of Site groundwater use without treatment to render it suitable for its intended purpose, and maintenance of the ECs and ICs.

90-30 Metropolitan Avenue, Rego Park, New York

Date of Inspection: October 2024

Site-wide inspections will be performed annually, at a minimum. A site-wide inspection shall also be performed after severe events that may affect the Engineering Controls (ECs) or monitoring wells.

The following inspection form shall be completed during each site-wide inspection. Supporting documentation shall be attached, as necessary. The completed site-wide inspection checklist and supporting documentation shall be included in the associated Annual Operation, Monitoring and Maintenance (OM&M) Report.

Compliance with Institutional Controls

Institutional Controls (ICs) are required for this Site to restrict Site usage and will be implemented with a deed restriction. These ICs are described conceptually in Section 2.3 of the OM&M Plan and the IC checklist will become applicable following the filing of the deed restriction. The following checklist will be modified as necessary to match the final ICs for the Site and will be completed during each Site-wide inspection following recording of the deed restriction to confirm compliance with the Site ICs:

- The Site may be used for commercial use only (to exclude daycare, child care, and medical care uses) unless express written waiver of this covenant is provided by the NYSDEC. Confirm that Site usage is compliant: Yes, the site usage complies. Tenants include Staples, Trader Joe's, and Michael's Arts and Crafts.

- The Site Owner shall continue and maintain the ICs required until the Owner obtains permission to discontinue such controls from the NYSDEC. Confirm that the ICs are in place or confirm that permission to discontinue the ICs has been obtained: Yes, the IC's are in place (Deed restriction recorded 9/11/09). The IC's include restrictions on site usage (commercial or industrial) and restriction on groundwater usage.

- The deed restriction is a covenant that shall run with the land and shall be binding upon all future owners of the Site. The deed restriction shall provide that the Owner and its

successors and assigns consent to enforcement by the NYSDEC of the prohibitions and restrictions required for the Site under the deed restriction. Confirm that the deed restriction remains in effect or that the NYSDEC has consented to termination of the deed restriction: Yes, the deed restriction remains in effect and was recorded on 9/11/09.

- Any deed of conveyance of the Site, or any portion thereof, shall recite that the conveyance is subject to the deed restriction, unless the NYSDEC has consented to the termination of the deed restriction. Confirm whether any new deeds of conveyance have been recorded during the reporting period. If so, is the necessary language regarding the deed restriction included? On September 1, 2011 the deed was conveyed from DPSW Forest Hills LLC to Equity One (Metropolitan) LLC. The deed conveyance states that it is subject to all restrictions and covenants pertaining to the premises. Regency Centers purchased the assets of Equity One (Metropolitan) LLC in April 2017, including all restrictions and covenants associated with the premises. FPM was subsequently retained by Regency Centers to implement the OM&M Plan.

CASE NARRATIVE

Client: FPM Group Limited

Project: Metro Regency Centers

Report Number: 460-304107-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 5/16/2024 7:55 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.4°C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC/MS)
Samples A-15 (460-304107-1), ME-8 (460-304107-2), ME-13 (460-304107-3), ME-113 (460-304107-4), A-02 (460-304107-5), A-06 (460-304107-6), A-066 (460-304107-7), A-07 (460-304107-8), A-08 (460-304107-9), A-05 (460-304107-10), A-09 (460-304107-11), A-10 (460-304107-12), FB0515 (460-304107-13) and Trip Blank (460-304107-14) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. The samples were analyzed on 05/22/2024 and 05/23/2024.

Sample A-08 (460-304107-9)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Four surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: ME-8 (460-304107-2). The result has been reported and qualified.

The following sample was diluted to bring the concentration of target analytes within the calibration range: A-08 (460-304107-9). Elevated reporting limits (RLs) are provided.

Refer to the QC report for details.

No other difficulties were encountered during the Volatiles analysis.

All other quality control parameters were within the acceptance limits.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods . Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

CASE NARRATIVE

Client: FPM Group Limited

Project: (Metro) 90-30 Metropolitan Ave

Report Number: 460-312971-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/4/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C.

Receipt Exceptions
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. No site name or state recorded on the1st page of the COC.

The following sample(s) was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): sample #14 (A-09). Test put on hold. Sample activated 10/16/24 per client.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC/MS)
Samples A-15 (460-312971-1), ME-8 (460-312971-2), ME-13 (460-312971-3), MW-113 (460-312971-4), A-02 (460-312971-5), A-06 (460-312971-6), A-066 (460-312971-7), A-08 (460-312971-8), A-07 (460-312971-9), A-05 (460-312971-10), A-10 (460-312971-11), FB1003 (460-312971-12), Trip Blank (460-312971-13) and A-09 (460-312971-14) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. The samples were analyzed on 10/09/2024 and 10/17/2024.

trans-1,2-Dichloroethene failed the recovery criteria high for LCSD 460-1001940/6. Refer to the QC report for details.

Sample A-08 (460-312971-8)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) associated with batch 460-1000443 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-1000575 was outside the method criteria for the following analyte(s): Vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No other difficulties were encountered during the Volatiles analysis.

All other quality control parameters were within the acceptance limits.

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
