CASE NARRATIVE

Client: FPM Group Ltd

Project: 90-30 Metro Groundwater Sampling

Report Number: 460-336983-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/09/2025; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.5 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC/MS)
Samples A-15 (460-336983-1), ME-8 (460-336983-2), ME-13 (460-336983-3), MW-113 (460-336983-4), A-02 (460-336983-5), A-06 (460-336983-6), A-066 (460-336983-7), A-08 (460-336983-8), A-07 (460-336983-9), A-05 (460-336983-10), A-09 (460-336983-11), A-10 (460-336983-12), FB1008 (460-336983-13) and Trip Blank (460-336983-14) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. The samples were analyzed on 10/20/2025.

No difficulties were encountered during the Volatiles analysis.

All quality control parameters were within the acceptance limits.

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods . Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
- Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

DATA USABILITY SUMMARY REPORTS

DATA USABILITY SUMMARY REPORT
FOR MAY 2024 GROUNDWATER SAMPLING
VOLATILE ORGANIC COMPOUNDS
LAB REPORT #460-304107-1
90-30 METROPOLITAN AVENUE SITE
REGO PARK, QUEENS, NEW YORK

This DUSR was prepared using the entire original laboratory report, including the sample data summary report and the extended data package. The sampling event included 11 groundwater samples collected from the existing groundwater monitoring well network. This sampling event reflects the NYSDEC approved reduction in sampling as recommended in the 2022-2023 Period Review Report.

Sample Collection Procedures

The samples were collected in laboratory-provided glassware utilizing dedicated or disposable sampling equipment. Samples for Quality Assurance/Quality Control (QA/QC) were also obtained to evaluate field sampling methods and laboratory procedures. All sample collection was conducted under Chain of Custody (COC) procedures and in accordance with the QA/QC procedures presented in the approved Remedial Action Work Plan (November 2005), Operation Maintenance and Monitoring Plan and modifications.

Sample Analyses

The samples were transmitted via overnight courier and analyzed by Eurofins at their Edison, New Jersey facility, which is a New York State Department of Health-certified for the analyses performed. The samples were prepared and analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) using Methods 5030C/8260D. The analytical methods and analytes are appropriate for the intended use of the data. The sample holding times were met and no problems with sample receipt or handling were reported by the laboratory.

Sample A-08 (460304107-9) required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Four surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: ME-8 (460-304107-2). The result has been reported and qualified.

An equipment blank sample was collected to evaluate potential contamination from field sampling procedures. No analytes were detected in the field blank sample. Based on this information cross-contamination from field sampling procedures does not appear to present a significant concern for the VOCs of interest at this site.

A trip blank sample was used to verify that cross-contamination of samples did not occur in the field or laboratory. No analytes were detected in the trip blank sample. Based on this information cross-contamination from field sampling procedures does not appear to present a significant concern for this site.

A duplicate sample was collected and utilized to evaluate the precision of the laboratory analysis.

The results from the duplicate sample (A-066) and the associated parent sample (A-06) are similar and, therefore, the laboratory results are likely to be precise.

Method blank (MB) samples were analyzed by the laboratory to evaluate the potential for cross-contamination associated with the sample preparation and analysis. The MB results did not show concentrations of VOCs above their method detection limits. Therefore, potential laboratory contamination does appear to present a concern for the constituents of concern at this site.

Matrix spike/matrix spike duplicate (MS/MSD) samples were prepared to evaluate the effect of the matrix on the reliability of the analytical results. Spiking occurs in the laboratory prior to sample preparation and analysis. The MS/MSD percent recoveries and relative percent differences were all within established limits. Therefore, matrix effects do not appear to have significantly affected the sample data.

Laboratory control samples (LCSs) were used by the laboratory to verify the accuracy and precision of the analyses. The LCS percent recoveries and relative percent differences were all within established limits. Therefore, the laboratory results are likely to be accurate and precise.

Questions and Responses

1. Is the data package complete as defined under the current requirements for the NYSDEC ASP Category B or USEPA CLP deliverables?

   The data package is complete. The external and internal chain of custody forms are present and complete. The case narrative and sample analysis summaries are present and complete. The analytical QA/QC summary forms, including surrogate recovery forms, LCS forms, IDL forms, initial and continuing calibration summary forms, standards raw data, tuning criteria report, and MB data are all present and complete. The data report forms, including sample prep logs, and injection logs are all present and complete. The raw data used to identify and quantify the contract-specified analytes are present and complete.

   Data completeness for the field program was also verified. The numbers and types of samples collected are in agreement with the reduction in sampling as requested 2022 - 2023 Period Review Report which was approved by the NYSDEC.

2. Have all holding times been met?

   All samples were received and analyzed within the EPA-recommended holding times for the analyses performed.

3. Do all the QC data: blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data, fall within the protocol-required limits and specifications?

   No – One surrogate for one of the primary samples was noted to be outside laboratory criteria.

   A review of the primary sample data and historical observations of prior analysis does not suggest a significant concern with these QC issues.

4. Have all of the data been generated using established and agreed-upon analytical protocols?

   Yes - all of the data were generated using Method 5030C/8260D (VOCs).

5. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

   Yes – a representative number of raw data results were compared with the reported data results to confirm that the reported analytical results (identification and quantification) are substantiated by the raw data.

6. Have the correct data qualifiers been used?

   Yes – results below the quantitation limit and above the method detection limit have been J-qualified, and results analyzed for but not detected have been U-qualified. No other qualifiers were indicated or applied.

7. Have any quality control (QC) exceedances been specifically noted in the DUSR and have the corresponding QC summary sheets from the data package been attached to the DUSR?

   No QC exceedances were noted except as discussed above.

Conclusions

The groundwater samples were collected in accordance with NYSDEC guidance and the approved plans. No field or laboratory conditions occurred that would result in non-valid analytical data other than as noted above. The data appear to be adequate for their intended purpose.

CASE NARRATIVE

Client: FPM Group Limited

Project: Metro Regency Centers

Report Number: 460-304107-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 5/16/2024 7:55 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.4°C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples A-15 (460-304107-1), ME-8 (460-304107-2), ME-13 (460-304107-3), ME-113 (460-304107-4), A-02 (460-304107-5), A-06 (460-304107-6), A-066 (460-304107-7), A-07 (460-304107-8), A-08 (460-304107-9), A-05 (460-304107-10), A-09 (460-304107-11), A-10 (460-304107-12), FB0515 (460-304107-13) and Trip Blank (460-304107-14) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. The samples were analyzed on 05/22/2024 and 05/23/2024.

Sample A-08 (460-304107-9)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Four surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: ME-8 (460-304107-2). The result has been reported and qualified.

The following sample was diluted to bring the concentration of target analytes within the calibration range: A-08 (460-304107-9). Elevated reporting limits (RLs) are provided.

Refer to the QC report for details.

No other difficulties were encountered during the Volatiles analysis.

DATA USABILITY SUMMARY REPORT
FOR OCTOBER 2024 GROUNDWATER SAMPLING
VOLATILE ORGANIC COMPOUNDS
LAB REPORT #460-312971-1
90-30 METROPOLITAN AVENUE SITE
REGO PARK, QUEENS, NEW YORK

This DUSR was prepared using the entire original laboratory report, including the sample data summary report and the extended data package. The sampling event included 11 groundwater samples collected from the existing groundwater monitoring well network. This sampling event reflects the NYSDEC approved reduction in sampling as recommended in the 2022-2023 Period Review Report.

Sample Collection Procedures

The samples were collected in laboratory-provided glassware utilizing dedicated or disposable sampling equipment. Samples for Quality Assurance/Quality Control (QA/QC) were also obtained to evaluate field sampling methods and laboratory procedures. All sample collection was conducted under Chain of Custody (COC) procedures and in accordance with the QA/QC procedures presented in the approved Remedial Action Work Plan (November 2005), Operation Maintenance and Monitoring Plan and modifications.

Sample Analyses

The samples were transmitted via overnight courier and analyzed by Eurofins at their Edison, New Jersey facility, which is a New York State Department of Health-certified for the analyses performed. The samples were prepared and analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) using Methods 5030C/8260D. The analytical methods and analytes are appropriate for the intended use of the data. The sample holding times were met and no significant problems with sample receipt or handling were reported by the laboratory.

Sample A-08 (460304107-9) required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The continuing calibration verification (CCV) associated with batch 460-1000443 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-1000575 was outside the method criteria for the following analyte(s): Vinyl chloride. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

An equipment blank sample was collected to evaluate potential contamination from field sampling procedures. No analytes were detected in the field blank sample. Based on this information cross-contamination from field sampling procedures does not appear to present a significant concern for the VOCs of interest at this site.

A trip blank sample was used to verify that cross-contamination of samples did not occur in the field or laboratory. No analytes were detected in the trip blank sample. Based on this information

cross-contamination from field sampling procedures does not appear to present a significant concern for this site.

A duplicate sample was collected and utilized to evaluate the precision of the laboratory analysis. The results from the duplicate sample (A-066) and the associated parent sample (A-06) are similar and, therefore, the laboratory results are likely to be precise.

Method blank (MB) samples were analyzed by the laboratory to evaluate the potential for cross-contamination associated with the sample preparation and analysis. The MB results did not show concentrations of VOCs above their method detection limits. Therefore, potential laboratory contamination does appear to present a concern for the constituents of concern at this site.

Matrix spike/matrix spike duplicate (MS/MSD) samples were prepared to evaluate the effect of the matrix on the reliability of the analytical results. Spiking occurs in the laboratory prior to sample preparation and analysis. The MS/MSD percent recoveries and relative percent differences were all within established limits. Therefore, matrix effects do not appear to have significantly affected the sample data.

Laboratory control samples (LCSs) were used by the laboratory to verify the accuracy and precision of the analyses. The LCS percent recoveries and relative percent differences were all within established limits except for trans-1,2-Dichloroethene which failed the recovery criteria high, however a review of the primary sample data did suggest a concern. Therefore, the laboratory results are likely to be accurate and precise.

Questions and Responses

1. Is the data package complete as defined under the current requirements for the NYSDEC ASP Category B or USEPA CLP deliverables?

   The data package is complete. The external and internal chain of custody forms are present and complete. The case narrative and sample analysis summaries are present and complete. The analytical QA/QC summary forms, including surrogate recovery forms, LCS forms, IDL forms, initial and continuing calibration summary forms, standards raw data, tuning criteria report, and MB data are all present and complete. The data report forms, including sample prep logs, and injection logs are all present and complete. The raw data used to identify and quantify the contract-specified analytes are present and complete.

   Data completeness for the field program was also verified. The numbers and types of samples collected are in agreement with the reduction in sampling as requested 2022 - 2023 Period Review Report which was approved by the NYSDEC.

2. Have all holding times been met?

   All samples were received and analyzed within the EPA-recommended holding times for the analyses performed.

3. Do all the QC data: blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data, fall within the protocol-required limits and specifications?

   No – The continued calibration curve was outside of laboratory limits.

4. Have all of the data been generated using established and agreed-upon analytical protocols?

   Yes - all of the data were generated using Method 5030C/8260D (VOCs).

5. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

   Yes – a representative number of raw data results were compared with the reported data results to confirm that the reported analytical results (identification and quantification) are substantiated by the raw data.

6. Have the correct data qualifiers been used?

   Yes – results below the quantitation limit and above the method detection limit have been J-qualified, and results analyzed for but not detected have been U-qualified. No other qualifiers were indicated or applied.

7. Have any quality control (QC) exceedances been specifically noted in the DUSR and have the corresponding QC summary sheets from the data package been attached to the DUSR?

   No QC exceedances were noted except as discussed above.

Conclusions

The groundwater samples were collected in accordance with NYSDEC guidance and the approved plans. No field or laboratory conditions occurred that would result in non-valid analytical data other than as noted above. The data appear to be adequate for their intended purpose.

CASE NARRATIVE

Client: FPM Group Limited

Project: (Metro) 90-30 Metropolitan Ave

Report Number: 460-312971-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 10/4/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C.

Receipt Exceptions
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. No site name or state recorded on the1st page of the COC.

The following sample(s) was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): sample #14 (A-09). Test put on hold. Sample activated 10/16/24 per client.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC/MS)
Samples A-15 (460-312971-1), ME-8 (460-312971-2), ME-13 (460-312971-3), MW-113 (460-312971-4), A-02 (460-312971-5), A-06 (460-312971-6), A-066 (460-312971-7), A-08 (460-312971-8), A-07 (460-312971-9), A-05 (460-312971-10), A-10 (460-312971-11), FB1003 (460-312971-12), Trip Blank (460-312971-13) and A-09 (460-312971-14) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. DATA USABILITY SUMMARY REPORT
FOR APRIL 2025 GROUNDWATER SAMPLING
VOLATILE ORGANIC COMPOUNDS
LAB REPORT #460-325324-1
90-30 METROPOLITAN AVENUE SITE
REGO PARK, QUEENS, NEW YORK

This DUSR was prepared using the entire original laboratory report, including the sample data summary report and the extended data package. The sampling event included 11 groundwater samples collected from the existing groundwater monitoring well network. This sampling event reflects the NYSDEC approved reduction in sampling as recommended in the 2022-2023 Period Review Report.

Sample Collection Procedures

The samples were collected in laboratory-provided glassware utilizing dedicated or disposable sampling equipment. Samples for Quality Assurance/Quality Control (QA/QC) were also obtained to evaluate field sampling methods and laboratory procedures. All sample collection was conducted under Chain of Custody (COC) procedures and in accordance with the QA/QC procedures presented in the approved Remedial Action Work Plan (November 2005), Operation Maintenance and Monitoring Plan and modifications.

Sample Analyses

The samples were transmitted via overnight courier and analyzed by Eurofins at their Edison, New Jersey facility, which is a New York State Department of Health-certified for the analyses performed. The samples were prepared and analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) using Methods 5030C/8260D. The analytical methods and analytes are appropriate for the intended use of the data. The sample holding times were met and no significant problems with sample receipt or handling were reported by the laboratory.

The continuing calibration verification (CCV) analyzed in batch 460-1035985 was outside the method criteria for the following analyte: Bromoform. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however,any detection for the affected analyte is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-1035770 was outside the method criteria for the following analyte(s): 1,1-Dichloroethene, cis-1,2-Dichloroethene and Bromoform (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-1035827 was outside the method criteria for the following analyte(s): 1,1,2,2-Tetrachloroethane and Bromoform (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

An equipment blank sample was collected to evaluate potential contamination from field sampling procedures. No analytes were detected in the field blank sample. Based on this information cross-contamination from field sampling procedures does not appear to present a significant concern for the VOCs of interest at this site.

A trip blank sample was used to verify that cross-contamination of samples did not occur in the field or laboratory. No analytes were detected in the trip blank sample. Based on this information cross-contamination from field sampling procedures does not appear to present a significant concern for this site.

A duplicate sample was collected and utilized to evaluate the precision of the laboratory analysis. The results from the duplicate sample (A-066) and the associated parent sample (A-06) are similar and, therefore, the laboratory results are likely to be precise.

Method blank (MB) samples were analyzed by the laboratory to evaluate the potential for cross-contamination associated with the sample preparation and analysis. The MB results did not show concentrations of VOCs above their method detection limits. Therefore, potential laboratory contamination does appear to present a concern for the constituents of concern at this site.

Matrix spike/matrix spike duplicate (MS/MSD) samples were prepared to evaluate the effect of the matrix on the reliability of the analytical results. Spiking occurs in the laboratory prior to sample preparation and analysis. The MS/MSD percent recoveries and relative percent differences were all within established limits. Therefore, matrix effects do not appear to have significantly affected the sample data.

Laboratory control samples (LCSs) were used by the laboratory to verify the accuracy and precision of the analyses. The LCS percent recoveries and relative percent differences were all within established limits. Therefore, the laboratory results are likely to be accurate and precise.

Questions and Responses

1. Is the data package complete as defined under the current requirements for the NYSDEC ASP Category B or USEPA CLP deliverables?

   The data package is complete. The external and internal chain of custody forms are present and complete. The case narrative and sample analysis summaries are present and complete. The analytical QA/QC summary forms, including surrogate recovery forms, LCS forms, IDL forms, initial and continuing calibration summary forms, standards raw data, tuning criteria report, and MB data are all present and complete. The data report forms, including sample prep logs, and injection logs are all present and complete. The raw data used to identify and quantify the contract-specified analytes are present and complete.

   Data completeness for the field program was also verified. The numbers and types of samples collected are in agreement with the reduction in sampling as requested 2022 - 2023 Period Review Report which was approved by the NYSDEC.

2. Have all holding times been met?

   All samples were received and analyzed within the EPA-recommended holding times for the analyses performed.

3. Do all the QC data: blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data, fall within the protocol-required limits and specifications?

   No – The continued calibration curve was outside of laboratory limits.

4. Have all of the data been generated using established and agreed-upon analytical protocols?

   Yes - all of the data were generated using Method 5030C/8260D (VOCs).

5. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

   Yes – a representative number of raw data results were compared with the reported data results to confirm that the reported analytical results (identification and quantification) are substantiated by the raw data.

6. Have the correct data qualifiers been used?

   Yes – results below the quantitation limit and above the method detection limit have been J-qualified, and results analyzed for but not detected have been U-qualified. No other qualifiers were indicated or applied.

7. Have any quality control (QC) exceedances been specifically noted in the DUSR and have the corresponding QC summary sheets from the data package been attached to the DUSR?

   No QC exceedances were noted except as discussed above.

Conclusions

The groundwater samples were collected in accordance with NYSDEC guidance and the approved plans. No field or laboratory conditions occurred that would result in non-valid analytical data other than as noted above. The data appear to be adequate for their intended purpose.

CASE NARRATIVE

Client: FPM Group Ltd

Project: (Metro) 90-30 Metropolitan Ave

Report Number: 460-325354-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 05/01/2025; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.7 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

DATA USABILITY SUMMARY REPORT
FOR OCTOBER 2025 GROUNDWATER SAMPLING
VOLATILE ORGANIC COMPOUNDS
LAB REPORT #460-336983-1
90-30 METROPOLITAN AVENUE SITE
REGO PARK, QUEENS, NEW YORK

This DUSR was prepared using the entire original laboratory report, including the sample data summary report and the extended data package. The sampling event included 11 groundwater samples collected from the existing groundwater monitoring well network. This sampling event reflects the NYSDEC approved reduction in sampling as recommended in the 2022-2023 Period Review Report.

Sample Collection Procedures

The samples were collected in laboratory-provided glassware utilizing dedicated or disposable sampling equipment. Samples for Quality Assurance/Quality Control (QA/QC) were also obtained to evaluate field sampling methods and laboratory procedures. All sample collection was conducted under Chain of Custody (COC) procedures and in accordance with the QA/QC procedures presented in the approved Remedial Action Work Plan (November 2005), Operation Maintenance and Monitoring Plan and modifications.

Sample Analyses

The samples were transmitted via overnight courier and analyzed by Eurofins at their Edison, New Jersey facility, which is a New York State Department of Health-certified for the analyses performed. The samples were prepared and analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) using Methods 5030C/8260D. The analytical methods and analytes are appropriate for the intended use of the data. The sample holding times were met and no significant problems with sample receipt or handling were reported by the laboratory.

An equipment blank sample was collected to evaluate potential contamination from field sampling procedures. No analytes were detected in the field blank sample. Based on this information cross-contamination from field sampling procedures does not appear to present a significant concern for the VOCs of interest at this site.

A trip blank sample was used to verify that cross-contamination of samples did not occur in the field or laboratory. No analytes were detected in the trip blank sample. Based on this information cross-contamination from field sampling procedures does not appear to present a significant concern for this site.

A duplicate sample was collected and utilized to evaluate the precision of the laboratory analysis. The results from the duplicate sample (A-066) and the associated parent sample (A-06) are similar and, therefore, the laboratory results are likely to be precise.

Method blank (MB) samples were analyzed by the laboratory to evaluate the potential for cross-contamination associated with the sample preparation and analysis. The MB results did not show concentrations of VOCs above their method detection limits. Therefore, potential laboratory contamination does appear to present a concern for the constituents of concern at this site.

Matrix spike/matrix spike duplicate (MS/MSD) samples were prepared to evaluate the effect of the matrix on the reliability of the analytical results. Spiking occurs in the laboratory prior to sample preparation and analysis. The MS/MSD percent recoveries and relative percent differences were all within established limits. Therefore, matrix effects do not appear to have significantly affected the sample data.

Laboratory control samples (LCSs) were used by the laboratory to verify the accuracy and precision of the analyses. The LCS percent recoveries and relative percent differences were all within established limits. Therefore, the laboratory results are likely to be accurate and precise.

Questions and Responses

1. Is the data package complete as defined under the current requirements for the NYSDEC ASP Category B or USEPA CLP deliverables?

   The data package is complete. The external and internal chain of custody forms are present and complete. The case narrative and sample analysis summaries are present and complete. The analytical QA/QC summary forms, including surrogate recovery forms, LCS forms, IDL forms, initial and continuing calibration summary forms, standards raw data, tuning criteria report, and MB data are all present and complete. The data report forms, including sample prep logs, and injection logs are all present and complete. The raw data used to identify and quantify the contract-specified analytes are present and complete.

   Data completeness for the field program was also verified. The numbers and types of samples collected are in agreement with the reduction in sampling as requested 2022 - 2023 Period Review Report which was approved by the NYSDEC.

2. Have all holding times been met?

   All samples were received and analyzed within the EPA-recommended holding times for the analyses performed.

3. Do all the QC data: blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data, fall within the protocol-required limits and specifications?

   Yes – all laboratory QAQC is reported to be within specified criteria.

4. Have all of the data been generated using established and agreed-upon analytical protocols?

   Yes - all of the data were generated using Method 5030C/8260D (VOCs).

5. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

   Yes – a representative number of raw data results were compared with the reported data results to confirm that the reported analytical results (identification and quantification) are substantiated by the raw data.

6. Have the correct data qualifiers been used?

   Yes – results below the quantitation limit and above the method detection limit have been J-qualified, and results analyzed for but not detected have been U-qualified. No other qualifiers were indicated or applied.

7. Have any quality control (QC) exceedances been specifically noted in the DUSR and have the corresponding QC summary sheets from the data package been attached to the DUSR?

   No QC exceedances were noted except as discussed above.

Conclusions

The groundwater samples were collected in accordance with NYSDEC guidance and the approved plans. No field or laboratory conditions occurred that would result in non-valid analytical data other than as noted above. The data appear to be adequate for their intended purpose.
