**RE: PHASE I ENVIRONMENTAL SITE ASSESSMENT
1 BRENNER DRIVE
CONGERS, NEW YORK 10920
EPS JOB # - N1195**

Dear Mr. Mandracchia:

Environmental Products & Services, Inc. is pleased to provide Hudson Technologies, Inc. with a copy of the Phase I Environmental Site Assessment for the above-referenced property.

If you have any questions, or we can clarify any of the items discussed, please do not hesitate to contact myself at (914) 561-0707.

Very truly yours,

ENVIRONMENTAL PRODUCTS & SERVICES, INC.

Robert A. Hulihan, Senior Hydrogeologist
Newburgh Branch

1.0 **INTRODUCTION**

1.1 **Purpose and Background**

Environmental Products & Services, Inc. was retained by Hudson Technologies, Inc. to perform a Phase I environmental site assessment at 1 Brenner Drive in the Town of Congers, Rockland County, New York. The building is owned by Wilsonart Laminate Corp. and is currently leased to Hudson Technology, Inc..

The objective of this study is to identify the presence of environmental concerns associated with past and/or current activity on the subject property. The selected approach consisted of a background data and literature review of available information relevant to site activities and a site inspection.

The site consists of a large building containing an office and warehouse with an area of approximately 30,000 square feet. The building is part of a corporate park and is located adjacent to several other industrial building of similar size in an area of predominantly industrial land use in the Town of Congers. The existing building was constructed in 1969 .

1.2 **Objectives of the Phase I Assessment**

The objectives of the Environmental Products & Services, Inc., Phase I environmental site assessment are presented as follows:

- Identification of environmental concerns associated with the presence of hazardous wastes or constituents due to past or present activity at the subject property;
- Identification of contravention of local, state or federal regulations which result in environmental degradation of the subject property; and
- Recommendations for additional investigations to be conducted at the subject property in the event the presence of environmental concerns are confirmed or suspected.

1.3 Limiting Conditions and Methodology Used

The above-defined Phase I environmental site assessment objectives were accomplished utilizing the following selected approach:

- A review of available, applicable site information provided by the subject property owner or his (her) designated representative or the prospective owner;
- Discussions and/or correspondence with individuals and local, state and federal agencies having pertinent knowledge and/or information of the subject property and the surrounding area(s); and
- A site inspection of the subject property.

The Project Manager responsible for the implementation of the Phase I environmental site assessment and the preparation of this report is Mr. Robert A. Hulihan for Environmental Products & Services, Inc. The site inspection and the regulatory interviews/conversations were conducted by Mr. Hulihan and Mr. Louis J. Mastro also of Environmental Products & Services, Inc. .

The New York State Department of Environmental Conservation (NYSDEC) Region 3, New Paltz Office, Rockland Co. Department of Health (RCDOH), and the Town of Clarkstown Local Departmental Offices were contacted via written Freedom of Information Act requests for information concerning the environmental status of the subject property.

Additionally, the following local agencies were contacted for information:

- Town of Clarkstown Assessor's Office
- Town of Clarkstown Building & Planning Department
- Town of Clarkstown Fire Prevention Bureau
- Town of Clarkstown Engineering Office
- Rockland County Department of Planning

Copies of correspondence are included in Appendix D of this report.

1.4 Applicable Local, State and Federal Laws and Regulations

The following list of applicable laws and regulations were examined with respect to the environmental site assessment of the subject property:

- Resource Conservation and Recovery Act/Hazardous and Solid Waste Act (RCRA/HSWA)
- The U.S. Environmental Protection Agency (USEPA) maintains a list of Superfund sites requiring immediate investigation and/or remediation. The list of sites is also known as the National Priority List (NPL).
- Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)
- Under the CERCLA ("Superfund Act") as amended by the Superfund Amendment and Reauthorization Act (SARA) of 1986, non-operational, regulated sites are listed.
- New York State Solid and Hazardous Waste Site Remediation Division and the New York State Department of Health

A specific regulation does not exist which mandates the listing of inactive hazardous waste sites. However, the above agencies have prepared a listing of sites that have been investigated to some degree or are suspected of contributing to environmental degradation.

1.5 Report Organization

This Phase I environmental site assessment report was prepared by Environmental Products & Services, Inc., in accordance with the ASTM Standard Practice E 1527-94. The organization of the report is such that Section 1.0 presents the objectives, methodology, and sources of information contacted and/or received during the preparation of this report. Section 2.0 presents information specific to the subject property with regards to its location, physical description, and normal operating procedures. Section 3.0 is a discussion of the results of the database search and regulatory agencies contacted during this assessment. A summary of the site inspection and observations are discussed in Section 4.0. These are further defined and their impact upon the environment is presented for consideration in Section 5.0 of the report. Conclusions and recommendations for potential investigation\remedial efforts are presented in Section 6.0. Section 7.0 contains a certification relative to the performance of the Phase I environmental site assessment and a statement of qualifications of the person conducting the assessment.

1.6 Disclaimer

Environmental Products & Services, Inc. conducts interviews with owners, occupants, local governmental officials, and others with knowledge of the site in accordance with ASTM E 1527-97.

Environmental Products & Services, Inc. accepts that the questions asked by the environmental professional are answered in good faith by the interviewee. However, Environmental Products & Services, Inc. cannot guarantee the accuracy of these answers.

2.0 **SITE DESCRIPTION AND BACKGROUND**

2.1 **Location**

The subject site is located at 1 Brenner Drive in the Town of Congers (Rockland County), New York.

The approximate location of the site with respect to the Haverstraw, New York quadrangle maps (Figure 1) prepared by the U.S. Geological Survey, (USGS) is approximately 41°15'93" North Latitude and 73°93'56" West Longitude. A site plan is included as Figure 2 and a site map is depicted as Figure 3.

2.2 **Building**

The site consists of a building containing a large warehouse and an office area with surrounding parking lot, grass area and woods. The building is of steel frame and masonry construction with poured concrete floors. The exterior of the building is finished with concrete block and brick. The footprint of the building is approximately 30,000 square feet, of which approximately 27,000 square feet is warehouse and 3,000 square feet is office space. Three large loading docks are present in front of the building. A large glue room formally used for laminate material storage is located in the south west corner of the building.

2.3 **Facility Operations**

At the time of the site inspection on February 4, 1998, the building was occupied by Hudson Technology, Inc. (A refrigerant recycler) and is currently up for sale. According to records, the site was formerly used by Wilson Laminates of Ralph Wilson Plastics Co. of Texas to manufacture counter and cabinet laminates.

2.4 **Site History**

A review of the site's history was performed in an effort to determine previous land use. Documents, site plans, maps, business directories and historic photographs can provide insight about the potential for present environmental liabilities resulting from previous land use.

2.4.1 Ownership

An Abstract of the Title was not available for review by Environmental Products & Services, Inc. for establishing a Chain-of-Ownership of the property. The site is currently owned by WilsonArt Laminates of Ralph Wilson Plastics Co. The building was constructed in 1969 and is reported to be in excellent condition. Prior to the construction of the building the site was reportedly vacant land. Records review of 1958 aerial photos verifies this fact.

2.4.2 Land Use

Land use was determined by reviewing historical maps, aerial photographs and interviews with people familiar with the property. The subject site is located at 1 Brenner Drive in the Town of Congers. Historic maps and documents indicate that the site was formerly undeveloped land until the building was constructed in 1969. The site currently belongs to Ralph Wilson of Wilson Plastics Co. The site appears to have always been used for commercial purposes.

A 1958 aerial photograph available at the Rockland Co. Department of Planning illustrates the site as an undeveloped wooded area. Aerial photograph taken in 1987 depict the site as thoroughly developed and surrounded by similar industrial \ commercial type buildings.

According to New England DataMap Technology Corporation. , the Sanborn Fire Insurance Map coverage of the site does not exist. Research into prior land use of the surrounding area indicates that the area was primarily undeveloped till the late 1960s. 1 Brenner Drive was constructed in 1969 and appears to be in excellent condition.

2.4.3 Recent Site Usage

Since the late 1960's the site has been owned by WilsonArt Laminates of Ralph Wilson Plastics Co. The site is currently leased and up for sale at this time. The are surrounding the site is primarily used for industrial \ commercial purposes.

2.4.4 Sanborn Fire Insurance Maps

Sanborn fire insurance maps depicting the area apparently do not exist.

2.5 Geologic Conditions

2.5.1 Regional Geology

The site is located near the boundary of the Hudson Valley region of the Great Valley lowlands and the intersection of the Piedmont and the New England physiographic provinces. The type of bedrock present at the site was not determined. Information regarding bedrock types was inconclusive at the time of this report.

Topography of the site and surrounding property consists of conical hills and wooded lowlands. Located southwest of the site property are two local lakes, Congers lake and De Forest Lake with elevations of 137 feet and 85 feet above Mean Sea Level respectively. The groundwater flow direction in the immediate vicinity of the site is unknown.

North of the site property is an area classified as New York State Department of Environmental Conservation Wetlands.

The subject property was not identified on the Flood Insurance Rate Map, Town of Clarkstown, Rockland Co., NY, Panel # 3606790005D, March 2, 1983

2.5.2 Soils

Soils at the site are classified by the United States Department of Agriculture's Soil Conservation Service (Rockland Co.) as belonging to the Wethersfield gravelly silt loam (WeB) with three to eight percent slopes. Wethersfield gravelly silt loam soil was developed from glacial till and is located throughout the entire site.

3.0 REGULATORY REVIEW

3.1 Regulatory Agencies

The NYSDEC Region 3 Office, New Paltz, Rockland County Department of Health (RCDOH), and the Town of Clarkstown Local Departmental Offices were contacted by means of a Freedom of Information Act request concerning the environmental status of the subject property. Documents obtained through the freedom of information request are included in Appendix D.

3.2 Database Search

A search was performed by New England DataMap, Technology Corp., of various environmental agency databases which targeted the project site or properties within a one-mile radius of the project site. A copy of the New England DataMap report is included in Appendix E. The following federal and state databases were searched:

Federal ASTM Databases:

- Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS).
- Emergency Response Notification System (ERNS).
- National Priority List (NPL) database.
- Resource Conservation and Recovery Information System (RCRIS-TSDF, SQG, & LQG).

Federal Non-ASTM Databases:

- Facility Index System (FINDS).
- PCB Activity Database (PADS).
- RCRA Administration Action Tracking System (RAATS).
- Toxic Release Inventory System (TRIS).
- Toxic Substances Control Act (TSCA).
- Hazardous Materials Incident Report System (HMIRS).

State ASTM Databases:

- Leaking Underground Storage Tanks (LUST).
- Underground Storage Tanks (UST).
- Hazardous Waste Disposal Sites (SHWS).
- Solid Waste Facilities/Landfills (SWF/LF).

The above lists are inventories only and are not an indication of environmental non-compliance or violation.

The subject property was not identified on any of the database lists. Eighty five sites within a one-mile radius were reported in the database listings. The search distances indicated are in conformance with ASTM E-1527-94 for Phase I Site Assessments. The following table summarizes the site listings.

Database	Target Property	Search Distance (Miles)	1/4	1/2	3/4	1 0	Zip
NPL		1.000	0	0	0	0	0
CERCLIS		.500	0	0	NR	NR	0
RCRIS-TSD		1.000	0	1	0	0	0
RCRIS-COR		1.000	-	-	-	-	-
RCRIS-GEN		0.250	4	-	-	-	3
RCRIS-NLR		0.250	-	-	-	-	-
ERNS		0.250	1	-	-	-	1

AQUIFERS		0.500	-	-	-	-	-
ACEC		0.500	-	-	-	-	-

TP = Target Property

The subject site was not listed in any of the databases searched.

4.0 SITE INSPECTION

The site inspection was completed on February 4, 1998. General weather conditions during the site inspection were partly cloudy skies, with temperatures in the 40°s F. Environmental Products & Services, Inc. personnel conducted the site inspection. The purpose of the site inspection was to determine the presence or absence of the following potential indicators of environmental concern:

- stained or discolored ground;
- the absence of vegetation or dead vegetation;
- areas of visibly different soil;
- hills, mounds, or depressions that do not appear to be part of the natural topography of the area;
- discolored or odorous liquids, whether flowing, standing or ponded;
- obnoxious odors from whatever source;
- waste containers, including the labels on the container, if any; the integrity of the container and the risk of leakage and the extent to which the container is exposed to the elements or to humans;
- the general presence of debris on the property;
- sources of surface water drainage from the property including ditches, manholes, culverts, etc.
- roads, railroad tracks, paths, etc. present on the property;
- obvious areas of potential contamination, whether waste disposal or treatment areas, including process pits, ponds, lagoons, vats, tanks, etc.;
- the presence of structures, type of structures, approximate age, and the nature of the activities which occurred there;
- the presence of waste containers, inside structures on the property, or other evidence of waste disposal practices occurring in such structures;
- unpaved parking lots or other such areas where polychlorinated biphenyl (PCB) oils may have been used for dust control;
- fuel storage and transfer lines;
- receiving and storage areas for raw materials and final products;
- the presence of pollution control equipment;

- discharge points from structures on the property for the possible presence of polychlorinated biphenyls (PCBs);
- standing structures and unremoved debris from demolished structures, if currently situated on the subject property, will be inspected for the possible presence of asbestos;
- the nature of immediately adjacent properties, including whether they are developed or undeveloped and the type of industries present, if any; and
- other areas of possible concern, or where sampling may be desired, which are discernible from professional experience.

Site photographs are included in Appendix A of this report.

4.1 Building Interior

The site consists of one large building with a warehouse, glue room and office area. The building is constructed of steel frame and masonry construction with poured concrete floors and fluorescent lighting. The exterior of the building is finished with concrete blocks and brick. The footprint of the building is approximately 30,000 square feet, of which approximately 27,000 square feet is warehouse space. Three large loading docks are present in front of the building. The glue room located at the southwest corner of the building houses air handling equipment and is currently empty. A few storage rooms and lavatory facilities are located adjacent to the office area.

The footprint of the office portion of the building is approximately 3,000 square feet in area. The office area has sheetrock walls, carpeted floors and dropped acoustical tile ceilings with fluorescent lighting. The office area is heated by a gas-fired forced air furnace located in the warehouse.

The interior of the building appeared to be in good condition and well maintained.

4.2 Exterior and Surrounding Grounds

The site consists of a building with an office area and adjoining parking. The grounds in the immediate vicinity of the building consist predominantly of asphalt pavement, concrete sidewalks and ramp, shrubbery, wooded and grassy areas. The western side of the property line is bordered by a sanitary easement and the New York Central Railroad.

A large concrete pad is present in the front parking lot. The reason for the concrete pad was not determined, but may have been used as a truck maneuvering area for the loading docks. No stained soil or distressed vegetation was observed on the site although two large piles of debris were located on the northeast side of the property. (See Site Photos) Exterior walls of the building are finished with concrete block with the front of the building composed of brick, paneling and glass windows. The front of the building is equipped with three loading docks. A depression was observed in front of the loading dock. (See Site Photo's) This area is a potential pathway for contaminants to reach the subsurface in the event of a release from a truck or from spillage on the loading dock.

There were no fill pipes or vents observed on site that would indicate the presence of an underground storage tank.

The building's water is supplied by public water from the Spring Valley Public Water Supply. The building reportedly has a private septic system and is not connected to a public sanitary sewer system. (See Appendix D - Correspondence) The date of installation or age of the septic system is unknown at this time.

Natural gas and electric services enter the structure on the northeast end of the building. A concrete pad-mounted non PCB electrical transformer is located at the northeast corner of the building (See Figure 3).

4.2.1 Adjacent Properties

The site is located in an area of industrial \ commercial land use and is surrounded by similar types of builings:

North - Reynolds, Inc.

South - Rexall Drug Corp..

East - Congers Associates.

West - New York Central Railroad.

5.0 SUMMARY OF FINDINGS

5.1 Polychlorinated Biphenyls (PCBs)

Numerous fluorescent light fixtures are present within the building. Due to the age and the condition of the light fixtures, the presence of PCB's is not suspected but was not confirmed.

Electric service is provided to the facility by an underground electrical conduit. One concrete pad-mounted transformer is located adjacent to the north-east corner of the building. This electrical transformer is owned and maintained by, Orange & Rockland Power Corporation. The transformer was recently installed and is reportedly non PCB .

No other suspected sources of PCB's were observed on site.

5.2 Asbestos and or Lead Containing Materials (ACM)

Possible asbestos containing material observed in the office area include the suspended ceiling tiles and floor tiles. No asbestos containing materials were observed in the warehouse portion of the building. Considering the 1969 date of construction it is unlikely that the building materials contain asbestos although the potential may exist.

A field test for lead based paint on the primer of several doors located in the warehouse was performed. Field test results did reveal the presence of lead based paint.

5.3 Underground Storage Tanks (UST) and Above Ground Storage Tanks (AST)

There were no fill pipes or vents observed on site that would indicate the presence of USTs. Records confirm a former 12,000 and 6,000 fuel oil UST's did exists on site but were removed in October of 1987. (See Appendix D - Correspondence) The database search did not disclose the presence of USTs on the subject property although it did report a total of 6 registered UST's within a ¼ mile radius.

No Aboveground Storage Tanks (AST) were present on site.

5.4 Radon

Information or records regarding the areas local radon conditions was not available at this time. Considering the industrial nature of the property, the lack of a basement within the buildings and the high levels of ventilation provided by the loading docks, radon gas infiltration is not considered to pose an environmental concern at this site.

5.5 Hazardous Materials

Currently there are no significant quantities of hazardous materials observed to be stored or used on site. Previous records and observations show prior storage of contact adhesive, contact solvent, and liquid cement. (See Appendix D - Correspondence) A glue storage room equipped with air handling equipment was designed to store these materials. Obvious signs of a release were present in the glue room. Stains on the walls and floor of the glue room were observed. (See Site Photos)

Under the freedom of information request a Hazardous Material Storage Inspection Report dated February 1, 1985 was available from the Rockland County Health Department. A total of three violations were reported including; Emergency plans, floor plans and hazardous material inventory statement were not submitted to RCDOH or maintained on the premises. Portable containers or tanks not properly stored or handled, required posting or labeling not present or satisfactory. A copy of the inspection report is included in Appendix D.

5.6 Regulatory Concerns

The response to the freedom of information request to the NYSDEC is included in Appendix D. According to NYSDEC files and the New England DataMap database (Appendix E) 40 documented Spills have occurred within a ¼ - ½ mile radius of the subject site. Review of the spill files indicate that the majority of these incidents involve the release of petroleum compounds. Many of these spills have resulted in local soil and groundwater contamination. The available records date back to pre 1990. Considering the industrial nature of the area the potential for spills to occur does exist.

According to the New England DataMap database (Appendix E) a total of 10 Leaking Underground Storage (LUST) incidences have occurred within a ¼ - ½ mile radius of the subject site.

The New England DataMap database also revealed the presence of one Large Quantity and one Small Quantity Hazardous Waste Generator (RCRIS) within a ¼ mile radius of the subject property.

The response to the freedom of information request to the Rockland County Department of Health is included in Appendix D. Records were reviewed regarding information concerning underground storage tanks, hazardous material storage, water and sewer applications, and site maps.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

These conclusions are based on available information in the form of surveys, maps, plans, publications, conversations and a physical inspection of the subject property by a qualified environmental professional.

- The site is currently not serviced by the public sanitary sewer system. The age or the condition of the septic system is unknown at this time.
- Two debris piles currently exist on the side the building. The contents of the debris piles was not identified at this time. Although no hazardous materials were visually observed, the potential for hazardous materials does exist.
- A field test for lead based paint was performed on numerous doors located in the warehouse. Test results did reveal the presence of lead based paint.
- Obvious signs of a release were observed in the glue room where laminate materials were stored. The effects of this release is unknown at this time.
- Suspended ceiling tiles in the office and maintenance areas may contain asbestos. Concerns regarding asbestos containing materials are based upon the potential for human exposure to airborne asbestos fibers. There are no mandates that would require the removal of asbestos containing materials for the subject building if the materials are in good condition and are to remain undisturbed.
- Due to the operations of the laminate facility, proximity to the railroad, off-site spills, leaking underground storage tank incidences and in particular the handling and use of large volumes of hazardous materials on neighboring properties there is a potential for soil and groundwater contamination at the site. NYSDEC files indicate that 40 documented spills have occurred within ¼ - ½ mile of the subject property.
- No indications of underground storage tanks were observed on the subject site. Two former fuel oil tanks had existed on site but were removed in October 1987.

6.2 Recommendations

- Based on the information developed during this environmental site assessment, Environmental Products & Services, Inc. recommends that a subsurface investigation be conducted in the former tank area and loading dock area to determine if any soil and groundwater contamination is present at the site. Due to its industrial nature and close proximity to known areas of spill incidences, a series of borings on the perimeter of the site may also be recommended.
- Due to the unknown age of the septic tank Environmental Products & Services, Inc. recommends an inspection and sampling of the septic tank. Plans to provide the facility with sanitary sewer services should be considered. Since the facility operates on a public water supply contamination from the septic system may exist but has not been revealed.
- Due to the confirmed presence of lead based paints and the associated health hazards, a lead based paint survey of the site should be implemented.
- The area of the debris piles on the side of the building should be investigated for content and possible hazardous materials.

*Only a concern if sanding, repainting etc.
 Under N.Y. hazardous materials law, we don't have
 to worry if it is not to have to inform the state +
 sample that we suspect it is.*

7.0 QUALIFICATIONS OF THE PERSONS CONDUCTING THIS PHASE I ESA

Robert A. Hulihan, Senior Hydrogeologist

Mr. Robert A. Hulihan, Geoscience Manager/Senior Hydrogeologist of Environmental Products & Services, Inc., has total responsibility for performing this Phase I ESA, including the site inspection, records review, interviews, and preparation of this report. His professional and educational qualifications are summarized below:

As the Branch Geoscience Manager/Senior Hydrogeologist at Environmental Products & Services, Inc., Mr. Hulihan offers more than 16 years of experience in the environmental field. His experience as senior hydrogeologist and project manager, as well as his 16 total years of industry and consulting experience, makes him uniquely qualified to provide technical services for the Company's clients. He is responsible for the supervision of hydrogeologic investigations, remediation system installation, reporting and maintenance, supervision of field technicians, bid preparation and onsite activities at hazardous waste sites.

Mr. Hulihan is currently responsible for the project management of over 20 different remediation sites. Some of the clients Mr. Hulihan represents as their consultant include; New York State Department of Environmental Conservation, New York State Thruway Authority, Coastal Oil of New York, International Paper Corporation, Balchem Corporation, and Hudson Technologies, Inc.

Before joining Environmental Products & Services, Inc. Mr. Hulihan was a principal at HKS Environmental, Inc. Mr. Hulihan supervised the hydrogeologic investigation of two neighboring landfill Superfund sites in Brooklyn, NY, under the New York City Department of Environmental Protection. His responsibilities included the construction of over 40 monitoring wells, many in excess of 200 feet deep, waste sampling, groundwater sampling, air sampling, obtaining synoptic water levels from all wells to determine tidal influences, and an off-shore boring project. He developed and implemented the hydrogeologic assessment of long-term leakage from septic systems that received multiple commercial waste streams. The results of the study were used to demonstrate a lack of connection to the contamination of a public well field.

Mr. Hulihan has a Bachelors of Science Degree in Geology from the State University of New York at New Paltz. He has completed Hazardous Materials Operations/Health and Safety Training, University of Pittsburgh, Center for Hazardous Materials Research, Pittsburgh, Pennsylvania. Mr. Hulihan is licensed to perform Subsurface Investigations (#0010907) for the State of New Jersey Department of Protection. He is also a member of the National Groundwater Association - Association of groundwater Scientist and Engineers.

Louis J. Mastro, Staff Scientist

Mr. Louis J. Mastro, Staff Scientist of Environmental Products & Services, Inc., has two years of solid experience in performing environmental site assessments. His responsibilities have included organization of all data base searches, interviews, site visits and site walk through's involving Phase I site assessments. Mr. Mastro is also responsible for the generation of draft geologic, hydrogeologic, and environmental site assessment reports.

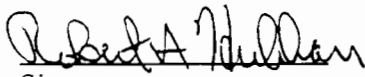

Along with reporting experience, Mr. Mastro has participated in the field support of numerous geoscience investigations including sampling, groundwater remediation systems, underground storage tank closure investigations, and monitoring well installation. Acting directly under the Branch Geoscience Manager, Mr. Mastro is also responsible for the assistant management of remediation projects and compliance reporting for Phase II investigations and Phase III remediation projects.

Prior to employment with Environmental Products & Services, Inc. Mr. Mastro served as an intern for the New York State Department of Environmental Conservation, Region 3 Spills Division. Mr. Mastro worked directly under the Regional District Engineer to review and evaluate Phase I, Phase II and Phase III site assessments. In completing his internship, Mr. Mastro gained extensive knowledge of New York State Department of Environmental Conservation guidelines and regulations.

Mr. Mastro has a Bachelor of Science Degree in Biology with a minor in Environmental Science from the State University of New York at Cortland. He has participated in educational programs including environmental seminars, field biology, geology and chemistry. Mr. Mastro is trained and certified in OSHA 40-Hour Health & Safety, Confined Space & Entry, Trenching & Shoring, and HM-181 Hazardous Materials Transport Training.

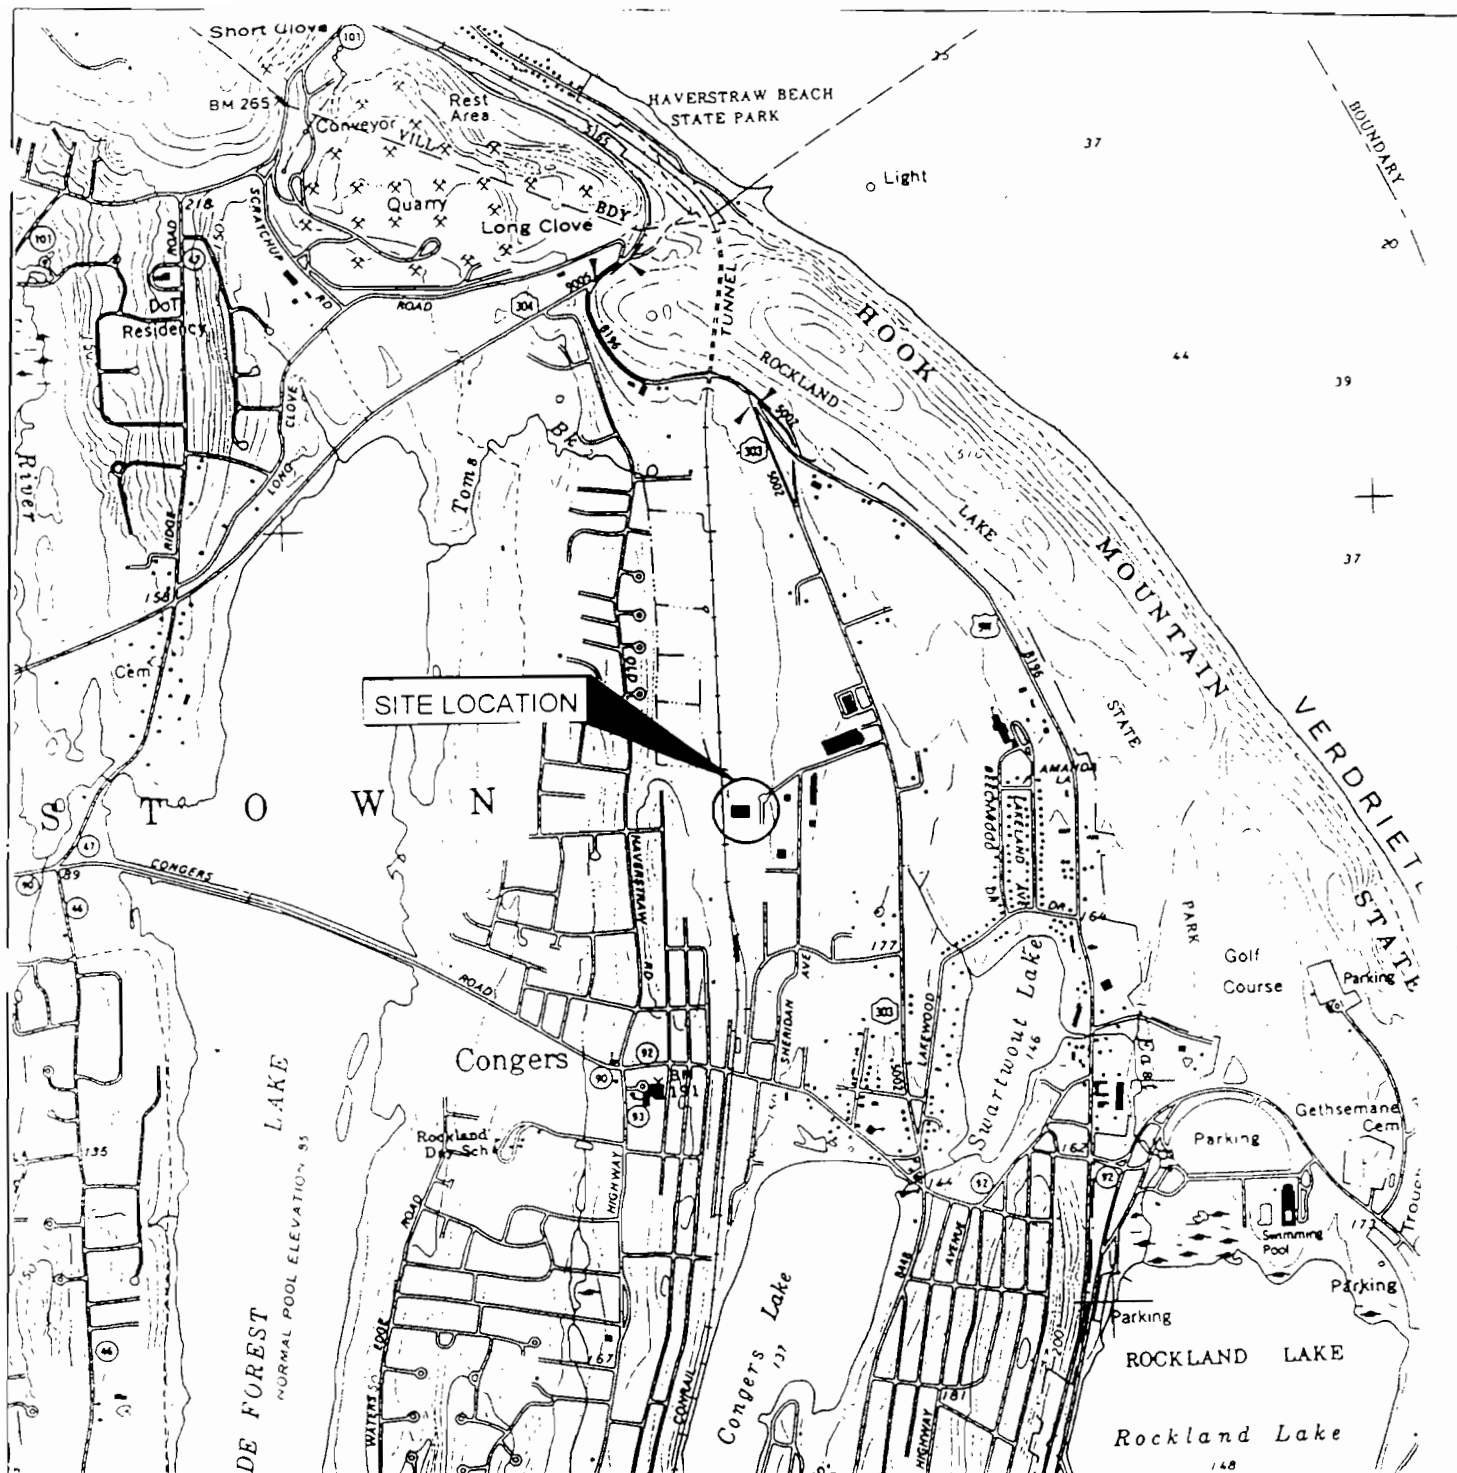

8.0 CERTIFICATION

This Phase I environmental site assessment has been performed and prepared by Environmental Products & Services, Inc. for Hudson Technologies, Inc. in conformance with the scope and limitations of ASTM Practice E-1527-94 for the property located at 1 Brenner Drive, Congers, New York, by the undersigned project manager. Mr. Robert Hulihan is an environmental professional with more than 15 years working experience in environmental site assessments and geology.

**RE: RECORDS FOR PROPERTY LOCATED AT:
FORMER WILSONART LAMINANTS BUILDING
1 BRENNER DRIVE
CONGERS, NEW YORK 10920**

Dear: Sir/Madam

Environmental Products & Services, Inc. has been retained to perform an environmental assessment of a site in Congers, New York. We would appreciate receiving any information which you may have on file pertaining to the environmental conditions at the site.

The site currently consists of a 32,000 square feet building composed of offices and a large warehouse. Attached to this letter is a map that illustrates the site location.

As part of Environmental Products & Services, Inc. environmental assessment, we are asking the assistance of the Town of Clarkstown to obtain records pertaining to any potential environmental liabilities on this property. Environmental Products & Services, Inc. is especially interested in any information pertaining to wetlands, flood plains, wells (testing records), and any available aerial photos. Can you please forward a copy of this letter to the following departments: Assessor's Office, Building Department, Environmental Dept., and Fire Prevention (regarding Underground Storage Tanks) for information regarding any other potential environmental liabilities.

Very truly yours,

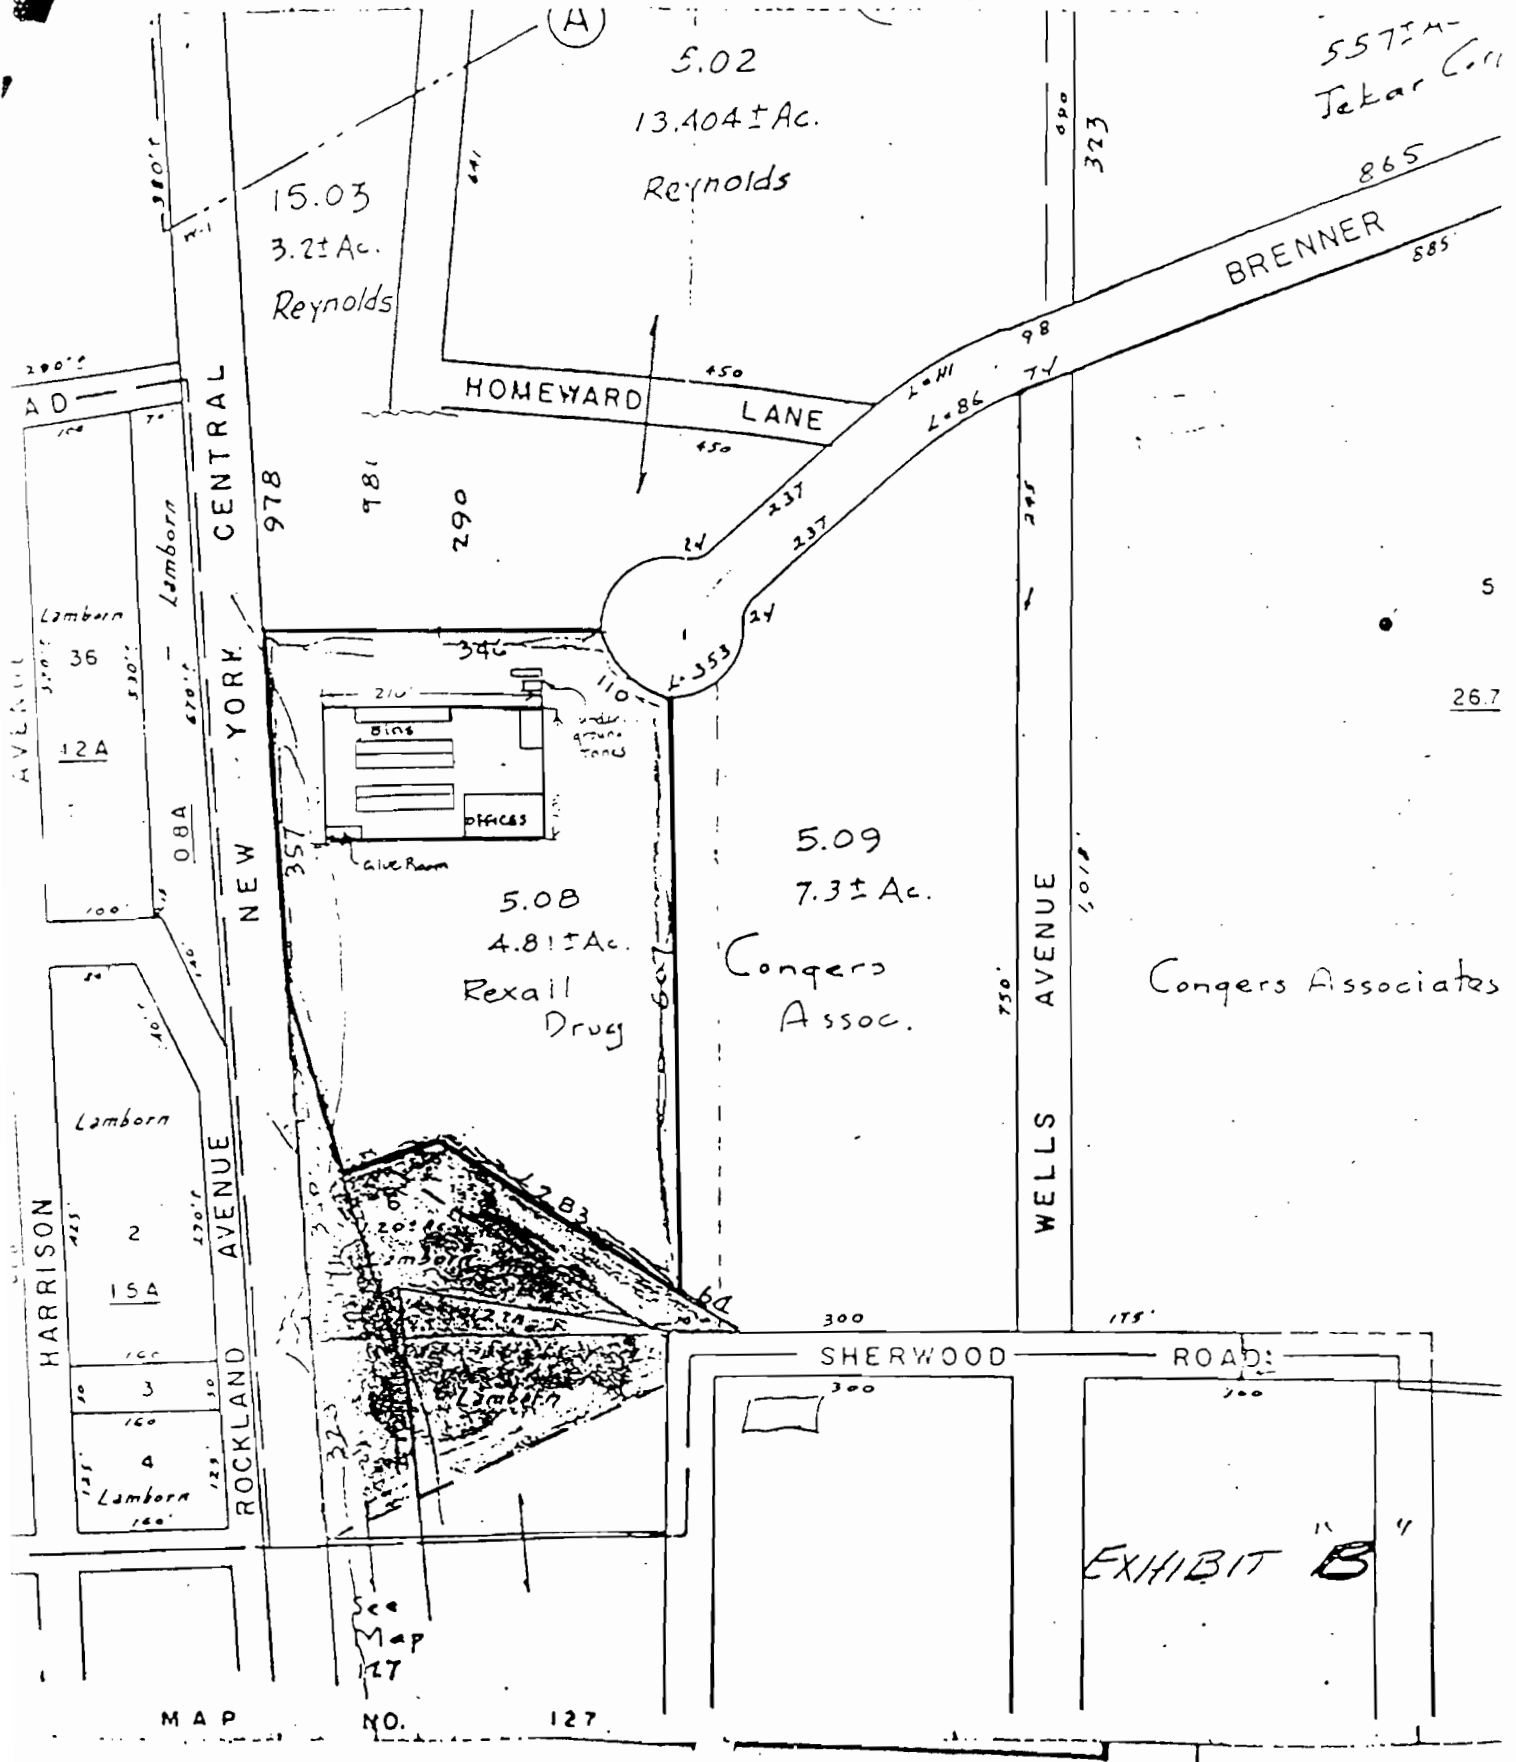

ENVIRONMENTAL PRODUCTS & SERVICES, INC.

**RE: RECORD SEARCH FOR PROPERTY LOCATED AT:
#1 BRENNER DRIVE
CONGERS, NEW YORK 10920**

Dear Mr. Hornberger:

Environmental Products & Services, Inc. has been retained to perform an environmental assessment at 1 Brenner Drive in Congers, New York. We would appreciate receiving any information in your files pertaining to the environmental conditions of the site. It is my understanding that petroleum bulk storage records do exist for this site - Rockland County PBS # 89. Any other available information pertaining to this site would be very helpful.

The site was formerly Wilson Art Laminates and consists of a 32,000 sq. ft. building with attached offices and surrounding commercial property. Attached to this letter is a map that illustrates the site location.

As part of Environmental Products & Services, Inc. environmental assessment, we are asking the assistance of the Rockland County Department of Health to obtain records pertaining to any potential environmental liabilities on this property.

Very truly yours,

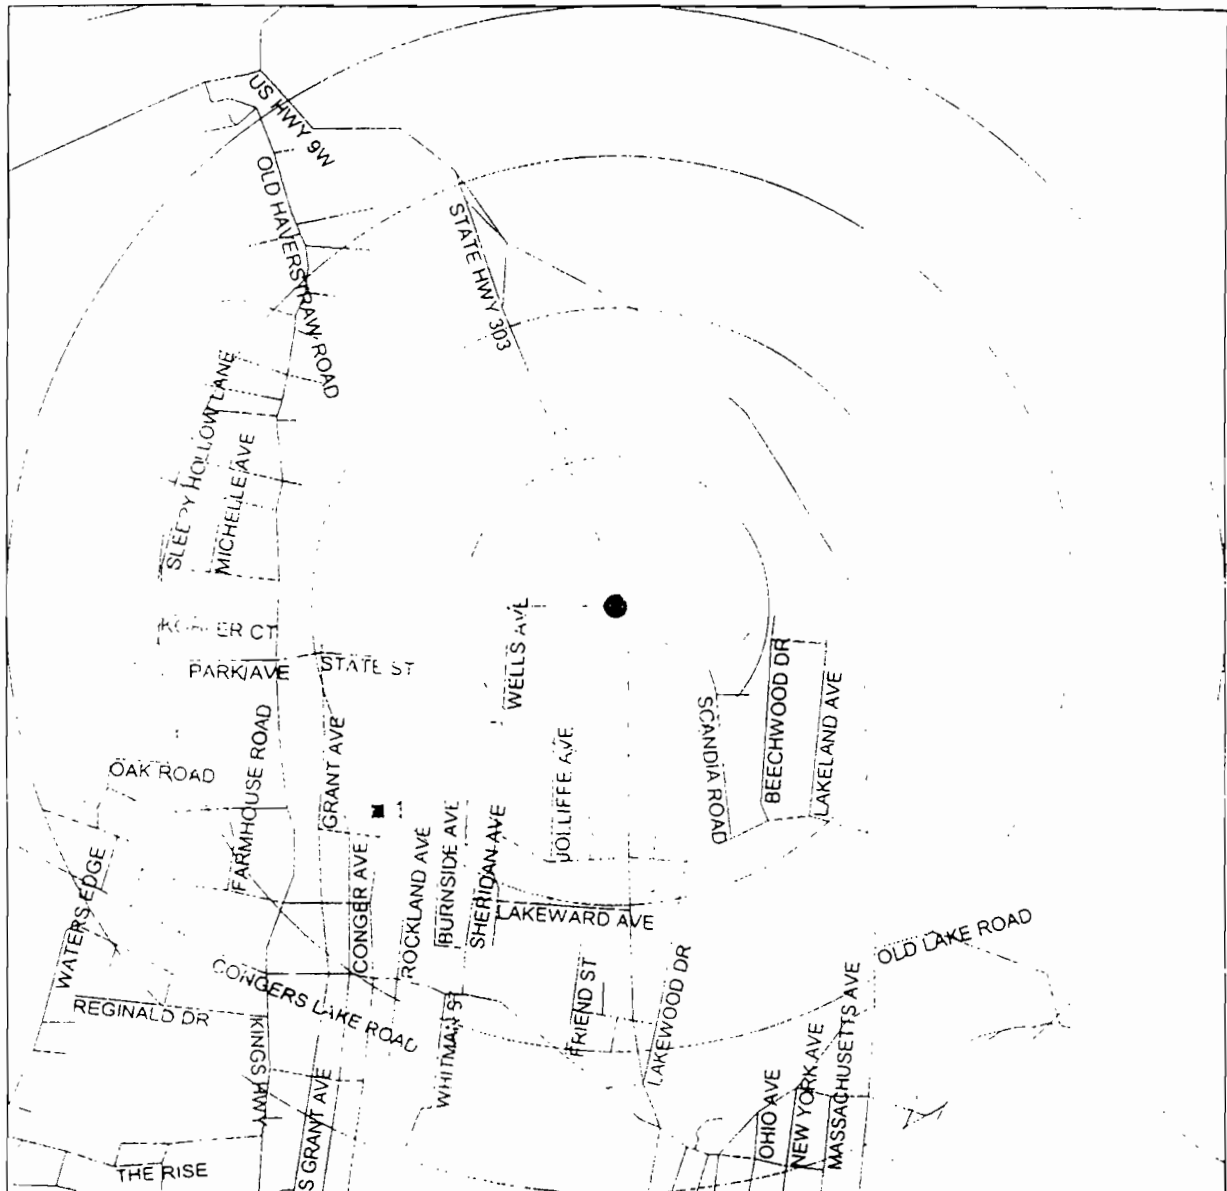

ENVIRONMENTAL PRODUCTS & SERVICES, INC.

ENVIRONMENTAL CONTROL
TOWN OF CLARKSTOWN

Dear Mr. Yacyshn:

Our office is in receipt of and has reviewed a site plan prepared by Corless & Associates for the above referenced project which was last revised August 14, 1996. We thank you for the opportunity to comment on this plan. Our comments are as follows:

1. The District does not object to the proposed site plan as it does not provide sanitary sewer service within the Town of Clarkstown portion of the building. If future sanitary sewer service is proposed within the Town of Clarkstown portion of the building, then the District must review and approve that design.

Please keep us informed of all developments in this project. If you have any questions, please contact this office.

RE: FOIL #97-173
CONGERS ROCKLAND CO
DATE RECEIVED MARCH 21, 1997 BY PHONE

DEAR LOUIS MASTRO:

In response to your request for the records referenced above, enclosed are the following lists:

Solid Waste (SW)	Hazardous Waste Generators (HWG)
Spills	Hazardous Waste Remediation (HWR)
Petroleum Bulk Storage (PBS)	S.A.R.A. Title III, Section 313 (SARA)
Mined Land Reclamation (MLR)	

Please review the enclosed lists and identify in writing the names and numbers of any records to which you seek access. Also reference **FOIL #97-173**. Summaries are available only for Spill, PBS and HWR files.

Spill, PBS and Chemical Bulk Storage lists are available on computer disk from our Albany Office. Please contact NYS DEC, Spills Management, 50 Wolf Road, Albany, NY 12233-3530.

Most of our records are filed by number under the names of individuals or corporations. We have no way of locating or retrieving records if they are filed under names or addresses other than those you have provided. If no records have been located, this does not necessarily mean, and should not be interpreted to mean that there have never been any violations, complaints, claims, investigations or inquiries involving those names or addresses. We cannot make any representations as to whether there are or have been any such violations, complaints, claims, investigations or inquiries.

Please send in the enclosed envelope one check or money order for **\$3.25 payable to NYS DEC** **(13 PAGES)**.

344042	2	Cornell Manufacturing Co. Inc.	25 Ramland Road	Orangeburg	10962

SITE CLASSIFICATION CODES

1. Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or environment -- immediate action required.
2. Significant threat to the public health or environment -- action required.
- 2a. Temporary classification assigned to sites that have inadequate and/or insufficient data for inclusion in any of the other classifications.
3. Does not present a significant threat to the public health or environment -- action may be deferred.
4. Site properly closed -- requires continued management.
5. Site properly closed, no evidence of present or potential adverse impact -- no further action required.
- D. Site has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites.

Spill Prevention & Response Data Section

1 | 93

Petroleum Bulk Storage (PBS) Database - Delegated Counties:

- 1) According to 6 NYCRR part 612.5, local governments may apply for delegation of the PBS program. Programs in the counties of Nassau, Suffolk, Cortland and Rockland have been approved. These counties enforce their own regulations and maintain their own data files. This data is not contained in DEC files, but it is available by calling or writing the appropriate county agencies, as noted below.
- 2) At this time, there is **no** county delegation for Spills, CBS, or MOSF.

Nassau County

Fuel Oil Storage with regard to oil burning equipment

Nassau County Department of Health
240 Old Country Road
Mineola, NY 11501

Marvin Feisher
Director of Land Resources Management
(516) 535-3314

John Oeckler
Engineer, PBS Program
(516) 535-2404

Howard Schaefer
Chief of Article XI Regulation
(516) 535-3314

Tom Norris
Public Health Sanitarian 2
(516) 535-2402

All Other Petroleum Bulk Storage

Nassau County Fire Commission
Office of the Fire Marshal
899 Jerusalem Avenue
P.O. Box 128
Uniondale, NY 11553

David Bartow
Supervising Fire Inspector
(516) 566-5832

Cliff Newman
Fire Inspector/Computer Systems Administrator
(516) 566-5817

Richard Kulner
Fire Inspector/Plan Examiner
(516) 566-5818

Ted Honishny
Fire Inspector/Testing & Permits
(516) 566-5972

Suffolk County

Suffolk County Department of Health Services
15 Horseblock Place
Farmingdale, NY 11738
(516) 854-2252

James Pim
Associate Public Health Engineer
Chief, Bureau of Hazardous Materials Management
(516) 854-2518

Steve Giordano
Assistant Public Health Engineer
(516) 854-2521

Cortland County

Cortland County Health Department
60 Central Avenue
P.O. Box 5590
Cortland, NY 13045-5590
(607) 753-5035

Notice of Disclaimer / Waiver of Liability

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to New England DataMap Technology, certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in New England DataMap Technology's databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for maintaining the detailed files for each specific site. Although New England DataMap Technology uses its best efforts to research the actual location of each site, New England DataMap Technology does not and can not warrant the accuracy of these sites with regard to exact location or size. All authorized users of New England DataMap Technology's services generating this report did so with an understanding of New England DataMap Technology's search and mapping conventions, and agreed to waive any and all liability claims associated with search and map results showing incomplete or inaccurate site locations.

***Environmental FirstSearch
Federal Databases and Sources***

1. NPL: National Priority List. The EPA's list of confirmed or proposed Superfund sites. Updated quarterly.
2. CERCLIS: Comprehensive Environmental Response Compensation and Liability Information System. The EPA's database of current and potential Superfund sites currently or previously under investigation.
Updated quarterly.
3. RCRIS: Resource Conservation and Recovery Information System. The EPA's database of registered hazardous waste generators and treatment, storage and disposal facilities. Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List).
Updated quarterly.
4. ERNS: Emergency Response Notification System. The EPA's database of EPA emergency response actions.
Updated quarterly.
5. NPDES: National Pollution Discharge Elimination System. The EPA's database of all permitted facilities receiving and discharging effluents to and from the environment.
Updated semi-annually.
6. FINDS: The Facility Index System. The EPA's Index of identification numbers associated with a property or facility which the EPA has investigated or has been made aware of in conjunction with various regulatory programs. Each record indicates the EPA office that may have files on the site or facility.
Updated quarterly.
