## **LIST OF APPENDICES**

### Appendix

- A Groundwater Field Sampling Records
- B Laboratory Analytical Results
- C Historical Groundwater Total VOC Concentration Figures
- D Historical SVOC Analytical Test Results
- E Part 375 Soil Cleanup Objectives

## SECTION 1 - SITE BACKGROUND

### 1.1 Site Location

The site is located at the intersection of Fillmore Avenue and Fremont Street in the City of Tonawanda (City) as shown on Figure 1. The 1.7-acre parcel is bounded on the east by an active railroad line, to the north and south by small commercial/industrial operations, and on the west by Fillmore Avenue. The subject property is located in a small industrial area adjacent to a residential neighborhood.

### 1.2 Site History

City directories for the period between 1946 to 1957, list Tonawanda Roofing and Paint Company at 141 Fillmore Avenue (adjacent property immediately north of site) and National Manufacturing Corporation at 153 Fillmore under Roofing Materials and Supplies. This is consistent with reports from local workers in the area that roofing materials were produced at the National Manufacturing site and installed by Tonawanda Roofing and Paint. This is further supported by the presence of four large aboveground storage tanks (ASTs) and associated piping on the site that contain heavy, viscous, tar like material.

In 1957, National Manufacturing Corporation added paint manufacturing facilities at the subject property. Raw materials for paint production were shipped to the facility in bulk and were stored in ASTs located in the tank rooms or underground storage tanks (USTs). The raw materials were transferred from the tank rooms to the manufacturing room where the paint was produced. The finished paint was then transferred to the warehouse where it was stored prior to shipment. National Manufacturing Corporation closed the facility in 1981.

In 1981, Envirotek Ltd, a solvent recycling company, reopened the facility as a Resource Conservation and Recovery Act (RCRA) treatment, storage, and disposal (TSD) facility. Containers of RCRA hazardous wastes were transported to the facility where they were stored pending reshipment to a RCRA disposal facility. Containers of RCRA characteristic ignitable, corrosive, and toxic hazardous wastes were stored at the facility from 1981 to 1986. A number of containers were left at the facility when Envirotek Ltd abandoned the facility in 1988.

The New York State Department of Environmental Conservation (NYSDEC) contacted the United States Environmental Protection Agency (USEPA) concerning the subject property on June 29, 1987. The USEPA conducted a preliminary assessment (PA) under the Comprehensive Environmental Response, Compensation and Liabilities Act (CERCLA) on November 30, 1988 to determine if the subject property should be included on the National Priority List (NPL). The PA disclosed that an estimated 770 55-gallon drums and 1,000 smaller containers of RCRA flammable, combustible, and corrosive hazardous wastes were present on the subject property. Several process vessels, four large ASTs, two UST's, and six transformers were also present at the subject property.

On July 18, 1989 the USEPA initiated remedial action activities at the site. These initial remedial action activities were completed on October 15, 1990, and included:

- the identification and categorization of all RCRA hazardous wastes;
- repackaging of 31,165 gallons of liquids and 11,655 pounds of solids and shipping off-site for incineration;
- repackaging 204 cubic yards of solids and shipping off-site for land disposal; and,
- repackaging 61,975 pounds of solids and shipping off-site for recycling.

A summary of remedial action activities are presented in a report entitled, "Federal On-Scene Coordinator's Report - Envirotek 1, Tonawanda, Erie County, New York," prepared by Roy F. Weston, Inc. and dated November 1990.

The NYSDEC conducted a limited site investigation in November 1997. This investigation was intended to determine if the site posed a significant threat to human health or the environment. This investigation consisted of the collection of soil samples from the site and surface water samples from Ellicott Creek.

The results of this investigation indicated no impairment of the Creek sediments or surface waters associated with the site. Analytical results of surface soils detected exceedances of NYSDEC soil cleanup objectives for polynuclear aromatic hydrocarbons (PAHs), PCBs, and numerous metals. The highest concentrations were observed in the northeast corner of the site.

A Site Investigation/Remedial Alternatives Report was completed by URS Corporation in 2002 indicating that the primary contaminants on-site were volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). These contaminants were present in surface and subsurface soils, and groundwater. Some metals and minor concentrations of PCBs were detected in surface soils.

The remedial activities completed at 153 Fillmore Avenue were separated into two phases. Phase I, completed in 2001, consisted of the demolition and removal of various structures, the removal of three (3) underground storage tanks, backfilling with clean material, and the stockpiling of contaminated soil. Phase II, completed in October 2002, consisted of the following:

1. Excavation, removal, and disposal of contaminated soils from Phase I.
2. Decontamination and removal of four (4) above ground storage tanks.
3. Removal and disposal of ACM coatings on tanks.
4. Removal of piping, supports and associated structures.
5. Sampling, analysis, and characterization of site materials.
6. Removal and off-site disposal of 11.6 tons of hazardous materials
7. 200 CY of concrete crushed and placed as fill material.
8. Installation of 1-foot of clean cover material over the entire site of clay and topsoil.
9. Asphalt paving for two (2) parking areas.

A Site Management Plan presented in Section 4, was completed after the Site Investigation/Remedial Alternatives Report, which detailed a Groundwater Monitoring Plan.

## SECTION 2 - GROUNDWATER MONITORING ACTIVITIES

The 2021 monitoring program at the 153 Fillmore Avenue Site in the City consisted of one annual sampling event completed on July 29, 2021. Groundwater samples were collected from monitoring wells MW-1, MW-2, MW-5, MW-6, MW-7, and MW-8, located on the perimeter of the property as presented in Figure 2.

Groundwater samples were collected using low-flow purging and sampling techniques. Prior to sampling, monitoring wells MW-5, MW-6, MW-7 and MW-8 were purged using a peristaltic pump and dedicated tubing. Monitoring wells, MW-1 and MW-2 were purged using a dedicated bailer. Groundwater from monitoring wells MW-1, MW-2, MW-5, MW-6, MW-7 and MW-8 were tested for field parameters to include: pH, conductance, dissolved oxygen (DO), temperature, and oxidation-reduction potential (ORP).

Groundwater field parameters provided an indication that water drawn from the well is representative of the groundwater in the surrounding formation. The results of these field parameters are presented on Table 1. The groundwater field sampling logs that were used to record field information at each sampling point are provided in Appendix A. After the field parameters stabilized, groundwater samples were collected with a dedicated disposable bailer or dedicated tubing into sample containers provided by the laboratory.

Historically, the water level indicator was not able to pass the total depth of monitoring well MW-7 due to an obstruction. A smaller water level indicator probe has been able to pass by the obstruction and obtain the height of water in the monitoring well from 2017 to 2020. However, in 2021, the smaller probe was not able to pass by an obstruction approximately 4.5' from the top of the well. Given this obstruction and the unsafe location of monitoring well, MW-7, along a steep embankment adjacent to an active railway line, the City is requesting to abandon MW-7 from future sampling activities.

Purge water generated during the groundwater sampling activities was emptied on-site away from the sampled well. In accordance with the Site Management Plan prepared by NYSDEC in 2009, quality control samples including a trip blank and a field duplicate were collected during the sampling event. A matrix spike (MS) and matrix spike duplicate (MSD) were collected and a Data Usability Summary Report (DUSR) was prepared for previous sampling events. In 2016 after further review in of the Site Management Plan and discussions with the NYSDEC it was determined that the MS/MSD samples and a DUSR were not required.

Samples were delivered under a chain of custody to Eurofins TestAmerica for analysis of TCL VOCs by USEPA Method 8260 and Target Analyte List (TAL) Metals by USEPA Method 200.7, with mercury analyzed under USEPA Method 245.2 with results reported using ASP Category A. Historically, the presence of Target Compound List (TCL) VOCs at monitoring well MW-5 has been not been detected. In 2016 the NYSDEC stated that testing for TCL VOCs at monitoring well MW-5 was no longer required. SVOCs were analyzed for during previous sampling events. In 2016 after further review of the Site Management Plan and discussions with the NYSDEC it was determined that analyzing for SVOCs was not required.

## SECTION 3 - GROUNDWATER MONITORING RESULTS

This section includes the results of the 2021 annual groundwater sampling event. Included are descriptions of site-specific hydrogeology, the identification and distribution of constituents present in groundwater, and a comparison of historical data. Constituents were compared to the applicable NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) Groundwater Standards and Guidance Values.

### 3.1 Site Hydrogeology

Groundwater levels were collected at each monitoring well and are presented in Table 2. Figure 3 illustrates the groundwater elevation contours based on the groundwater levels measured on July 29, 2021. The groundwater elevation data indicates that groundwater flows toward the west. The upgradient monitoring well is identified as monitoring well MW-7.

### 3.2 Groundwater Analytical Results

A summary of the compounds detected in groundwater during the 2021 Groundwater Sampling Event is presented on Tables 3, 4 and 5. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, June 1998, Class GA was used for the reporting limits. The groundwater samples were analyzed for volatiles, semi-volatiles, and metals on the Target Compound List (TCL). Laboratory analytical data reports are provided in Appendix B. Historical groundwater analytical test data is presented on Tables 3, 4 and 5. Historical groundwater total VOC concentration Figures displaying the lateral extent of the total VOC concentration plume from previous sampling events are provided in Appendix C.

#### 3.2.1 Volatile Organic Analytical Test Results

The volatile organic analytical test results for the sampling event of 2021 varied depending on the monitoring well and specific compounds detected in groundwater in comparison with previous annual sampling events. Results showed increasing and decreasing volatile organic concentrations when comparing test data from all sampling events to 2020 test results. Volatile organic analytical test results are presented in Table 3.

**Exceeding Groundwater Standards:** The volatile organic analytical test results detected concentrations of vinyl chloride (MW-2) and benzene (MW-2) exceeding groundwater quality standards.

#### **Vinyl chloride:**

- The concentration of vinyl chloride increased in groundwater sampled from monitoring well MW-2, which exceeded the groundwater quality standard.
- The concentration of vinyl chloride decreased to non-detectable results in groundwater sampled from monitoring well MW-8.

#### **Benzene:**

- The concentration of benzene increased in groundwater sampled from monitoring well MW-2, which exceeded the groundwater quality standard.
- The concentration of benzene decreased to non-detectable results in groundwater sampled from monitoring well MW-8.

#### **Cis-1,2-dichloroethene:**

- The concentration of cis-1,2-dichloroethene decreased to non-detectable results in groundwater sampled from monitoring well MW-1.

#### **Cyclohexane:**

- The concentration of cyclohexane increased in groundwater sampled from monitoring well MW-2.

**Carbon Disulfide:**

- The concentration of carbon disulfide decreased to non-detectable results in groundwater sampled from monitoring well MW-1.

As presented in Appendix C, historical total VOC concentration groundwater plume figures show the total VOC plume has migrated in a westward direction over time in a similar direction of groundwater flow. The following observations have been made in regard to VOC plume migration and movement as reported in the specific year.

**2001 Reporting** - The October 2001 figure shows a total VOC concentration plume that is centered on the east side of the site with total VOC concentrations of approximately 2,681 ppb detected in groundwater from monitoring well MW-7.

**2007 Reporting** - The total VOC concentration plume from the 2007 sampling event indicates decreasing total VOC concentration centered on monitoring well MW-7.

**2008 Reporting** - The center of the total VOC concentration plume migrated in a westward direction due to higher VOC concentrations detected in groundwater from monitoring wells MW-6 and MW-8.

**2009 Reporting** - The total VOC concentration plume expanded westward with the addition of sampling and test results from monitoring wells MW-1 and MW-2.

**2010 Reporting** - The total VOC concentration plume remained similar to the 2009 total VOC concentration plume, however, shows decreased VOC concentrations from monitoring well MW-6.

**2011 Reporting** - The total VOC plume migrated further west with test results from sampling detecting increased total VOC concentrations at monitoring well MW-1. Total VOC concentrations continued to decrease to non-detectable results from monitoring well MW-6.

**2012 Reporting** - The total VOC plume increased in VOC concentrations groundwater from monitoring well MW-1 for the third year. Plume migration appears to have moved southwest since total VOC concentrations in monitoring well MW-1 have increased every year from 2009 to 2012.

**2013 Reporting** - The total VOC plume decreased in size and VOC concentrations in monitoring wells MW-1 and MW-2. VOC concentrations were not detected in monitoring well MW-8 in 2013. Plume migration should be migrating to the southwest with the direction of groundwater flow. Total VOC concentrations in monitoring well MW-1 have increased every year from 2009 to 2012 with a decrease in concentration in 2013.

**2014 Reporting** - The total VOC plume increased in size and decreased total VOC concentrations. Total VOC concentrations in monitoring well MW-1 have increased every year from 2009 to 2012 with a decrease in VOC concentration in 2013. In 2014, VOC concentrations slightly increased in comparing 2013 results as presented below:

- 2009 - 5.5 µg/l
- 2010 - 16.0 µg/l
- 2011 - 26.0 µg/l
- 2012 - 73.3 µg/l
- 2013 - 14.3 µg/l
- 2014 - 14.8 µg/l

**2015 Reporting** - The total VOC plume increased in size and decreased in total VOC concentrations.

**2016 Reporting** - The total VOC plume decreased in size and increased in total VOC concentrations.

**2017 Reporting** - The total VOC plume decreased in size and decreased in total VOC concentrations.

**2018 Reporting** - The total VOC plume increased in size and in total VOC concentrations. The total VOC concentration in monitoring wells MW-6 and MW-7 increased from non-detectable in 2017 to 1.5 µg/l and 10.1 µg/l in 2018.

**2019 Reporting** - The total VOC plume decreased in size and decreased in total VOC concentrations. The total VOC concentration in monitoring well MW-6 decreased to non-detectable levels. The total VOC concentration in monitoring wells MW-7 and MW-8 decreased from 10.1 µg/l and 21.3 µg/l in 2018 to 4.7 µg/l and 17.7 µg/l in 2019.

**2020 Reporting** - The total VOC plume decreased in size and decreased in total VOC concentrations. The total VOC concentration in monitoring well MW-6 remained at non-detectable levels. The total VOC concentration in monitoring well MW-7 increased from 4.7 µg/l in 2019 to 6.8 µg/l in 2020. The total VOC concentration in monitoring well MW-8 decreased from 17.7 µg/l in 2019 to 6.1 µg/l in 2020.

**2021 Reporting** - The total VOC plume decreased in size and decreased in total VOC concentrations. The total VOC concentration in monitoring well MW-6 remained at non-detectable levels. The total VOC concentration in monitoring well MW-2 increased from 5.9 µg/l in 2020 to 7.6 µg/l in 2021. The total VOC concentration in monitoring wells MW-1 and MW-8 decreased to zero in 2021. From 2009 to 2021, there is a decreasing trend in total VOC concentrations from groundwater sampled from monitoring wells MW-1 and MW-2. Monitoring wells MW-1 and MW-2 VOC concentrations have been totaled as presented below:

- 2009 - 98.2 µg/l
- 2010 - 134.0 µg/l
- 2011 - 82.0 µg/l
- 2012 - 99.9 µg/l
- 2013 - 25.8 µg/l
- 2014 - 26.9 µg/l
- 2015 - 21.9 µg/l
- 2016 - 26.0 µg/l
- 2017 - 12.0 µg/l
- 2018 - 10.7 µg/l
- 2019 - 11.0 µg/l
- 2020 - 7.3 µg/l
- 2021 - 7.6 µg/l

The following observations have been made regarding total VOC concentrations:

- **2007 and 2008** - There was no VOC test data from monitoring wells MW-1 and MW-2 since the wells were nonfunctional until being re-drilled/installed in 2009.
- **2001 to 2009** - Total VOC concentrations increased consistently in groundwater monitoring well MW-8.
- **2010, 2011, 2012** Total VOC concentrations in monitoring wells MW-2 and MW-8 decreased.
- **2012** - Total VOC concentrations in monitoring wells MW-1 and MW-7 increased.
- **2013** - Total VOC concentrations in monitoring wells MW-1, MW-2 and MW-8 decreased.

- **2014** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-7 and MW-8 decreased from total VOC concentrations detected in 2013 of 107.2 µg/l to 77.2 µg/l as reported in 2014.
- **2015** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-7 and MW-8 decreased from total VOC concentrations detected in 2014 of 77.2 µg/l to 68.8 µg/l as reported in 2015.
- **2016** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-7 and MW-8 increased from 68.8 µg/l in 2015 to 106.6 µg/l as reported in 2016.
- **2017** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-7 and MW-8 decreased from 106.6 µg/l in 2016 to 40.88 µg/l as reported in 2017.
- **2018** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-6, MW-7 and MW-8 increased from 40.88 µg/l in 2017 to 43.60 µg/l as reported in 2018.
- **2019** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-6, MW-7 and MW-8 decreased from 43.60 µg/l in 2018 to 33.40 µg/l as reported in 2019.
- **2020** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-6, MW-7 and MW-8 decreased from 33.40 µg/l in 2019 to 20.24 µg/l as reported in 2020.
- **2021** - Total VOC concentrations in monitoring wells MW-1, MW-2, MW-6 and MW-8 decreased from 20.24 µg/l in 2020 to 7.60 µg/l as reported in 2021.

### 3.2.2 Semi-Volatile Organic Analytical Test Results

Semi-volatile organic compounds were not analyzed for in 2021, per the SMP and correspondence with NYSDEC. Historical SVOC test results are presented in Appendix D.

### 3.2.3 Inorganic Metals Analytical Test Results

Detected concentrations of inorganic metals in groundwater sampled in 2021 that exceeded groundwater quality standards and increased in concentrations when compared with 2020 analytical test results include the following: iron (MW-6); magnesium (MW-2) and manganese (MW-6 and MW-8) exceeding groundwater quality standards as presented in Table 4.

#### Aluminum:

- The concentration of aluminum decreased in groundwater sampled from monitoring wells MW-1 and MW-2, but exceeded the groundwater quality standard.
- The concentration of aluminum increased in groundwater sampled from monitoring wells MW-5, MW-6 and MW-8, which was below the groundwater quality standard.

#### Antimony:

- The concentration of antimony in groundwater sampled from all wells remained non-detectable.

#### Arsenic:

- The concentration of arsenic decreased in groundwater sampled from monitoring well MW-1, but exceeded the groundwater quality standard.
- The concentration of arsenic decreased in groundwater sampled from monitoring well MW-2, which was below the groundwater quality standard.
- The concentration of arsenic in groundwater sampled from all other wells remained non-detectable.

**Barium:**

- The concentration of barium increased in groundwater sampled from monitoring wells MW-5 and MW-8, which was below the groundwater quality standard.
- The concentration of barium decreased in groundwater sampled from monitoring wells MW-1, MW-2 and MW-6, which was below the groundwater quality standard.

**Beryllium:**

- The concentration of beryllium decreased in groundwater sampled from monitoring wells MW-1 and MW-2, which was below the groundwater quality standard.
- The concentration of beryllium in groundwater sampled from all other wells remained non-detectable.

**Cadmium:**

- The concentration of cadmium increased in groundwater sampled from monitoring wells MW-5 and MW-8, which was below the groundwater quality standard.
- The concentration of cadmium decreased in groundwater sampled from monitoring well MW-1, which was below the groundwater quality standard.
- The concentration of cadmium in groundwater sampled from monitoring well MW-2 decreased to non-detectable.
- The concentration of cadmium in groundwater sampled from monitoring well MW-6 remained non-detectable.

**Chromium:**

- The concentration of chromium increased in groundwater sampled from monitoring wells MW-5 and MW-8, which was below the groundwater quality standard.
- The concentration of chromium decreased in groundwater sampled from monitoring well MW-1 and MW-2, which was below the groundwater quality standard.
- The concentration of chromium in groundwater sampled from monitoring well MW-6 remained non-detectable.

**Copper:**

- The concentration of copper increased in groundwater sampled from monitoring wells MW-5 and MW-8, which was below the groundwater quality standard.
- The concentration of copper decreased in groundwater sampled from monitoring wells MW-1 and MW-2, which was below the groundwater quality standard.
- The concentration of copper in groundwater sampled from monitoring well MW-6 remained non-detectable.

**Iron:**

- The concentration of iron increased in groundwater sampled from monitoring well MW-6, which exceeded the groundwater quality standard.
- The concentration of iron decreased in groundwater sampled from monitoring wells MW-1, MW-2 and MW-5, but exceeded the groundwater quality standard.

- The concentration of iron decreased in groundwater sampled from monitoring well MW-8, which was below the groundwater quality standard.

**Lead:**

- The concentration of lead increased in groundwater sampled from monitoring wells MW-5, MW-6 and MW-8, which was below the groundwater quality standard.
- The concentration of lead decreased in groundwater sampled from monitoring wells MW-1 and MW-2, which was below the groundwater quality standard.

**Magnesium:**

- The concentration of magnesium increased in groundwater sampled from monitoring well MW-2, which exceeded the groundwater quality standard.
- The concentration of magnesium decreased in groundwater sampled from monitoring wells MW-1, MW-5, MW-6 and MW-8, which was below the groundwater quality standard.

**Manganese:**

- The concentration of manganese increased in groundwater sampled from monitoring wells MW-6 and MW-8, which exceeded the groundwater quality standard.
- The concentration of manganese decreased in groundwater sampled from monitoring well MW-1, but exceeded the groundwater quality standard.
- The concentration of manganese decreased in groundwater sampled from monitoring wells MW-2 and MW-5, which was below the groundwater quality standard.

**Mercury:**

- The concentration of mercury in groundwater sampled from monitoring well MW-2 decreased to non-detectable.
- The concentration of mercury in groundwater sampled from all other wells remained non-detectable.

**Nickel:**

- The concentration of nickel increased in groundwater sampled from monitoring wells MW-5 and MW-8, which was below the groundwater quality standard.
- The concentration of nickel decreased in groundwater sampled from monitoring wells MW-1 and MW-2, which was below the groundwater quality standard.
- The concentration of nickel in groundwater sampled from monitoring well MW-6 remained non-detectable.

**Selenium:**

- The concentration of selenium in groundwater sampled from all wells remained non-detectable.

**Silver:**

- The concentration of silver in groundwater sampled from all wells remained non-detectable.

**Thallium:**

- The concentration of thallium in groundwater sampled from all wells remained non-detectable.

**Zinc:**

- The concentration of zinc increased in groundwater sampled from monitoring wells MW-5, MW-6 and MW-8, which was below the groundwater quality standard.
- The concentration of zinc decreased in groundwater sampled from monitoring wells MW-1 and MW-2, which was below the groundwater quality standard.

**3.3 Quality Assurance/Quality Control Analytical Results**

Groundwater samples were analyzed for VOCs by USEPA SW-846 Method 8260, and TAL Metals at Eurofins TestAmerica in Amherst, New York. The quality control samples include a field duplicate, method blank and a laboratory control sample analysis.

## **SECTION 4 - SOILS MANAGEMENT PLAN**

### **4.1 Objective**

The objective of this Soils Management Plan (SMP) is to set guidelines for the maintenance and repair of the cover system at the Site, and for the management of soil and fill disturbed during any future intrusive work that breaches this cover system. This SMP addresses environmental concerns related to soil management and has been reviewed and approved by the NYSDEC.

### **4.2 Nature and Extent of Contamination**

The data obtained during the investigation and remediation of the Site reveal that the contaminants of concern at this Site for surface soil consist primarily of semivolatile organic compounds (SVOCs) and metals. The primary SVOCs of concern includes benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene. These contaminants belong to a class of SVOCs known as polycyclic aromatic hydrocarbons (PAHs). PAHs are a group of over 100 different chemicals that are ubiquitous in the environment. Sources of PAHs include incomplete combustion of coal, oil, gasoline, garbage, wood and incinerators. PAHs are also found in coal tar, crude oil, creosote, roofing tar, medicines, dyes, plastics and pesticides. The primary metals of concern in surface soil include barium, cadmium, chromium, lead and mercury.

The contaminants of concern at the Site for subsurface soil consist primarily of VOCs and SVOCs. The primary VOCs of concern includes acetone, benzene, ethylbenzene and xylene, while the primary SVOCs of concern include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and chrysene.

The contaminants of concern at the Site for groundwater consist primarily of VOCs and metals. The primary VOCs of concern includes dichloroethene and vinyl chloride, although historic groundwater samples also contained benzene, ethylbenzene, toluene, trichloroethene and xylene. The primary metals of concern in groundwater include aluminum, cadmium, iron, lead and manganese.

### **4.3 Contemplated Use**

Following the remediation of the Site, the property was purchased by Manth Manufacturing for use as parking and warehousing for the company's existing manufacturing operations at 131 Fillmore Avenue. The Deed Restriction specifically prohibits the use of the Site for any type of residential, agricultural or school/day care purposes.

### **4.4 Purpose and Description of the Cover System**

The purpose of the cover system is to prevent public exposures with contaminated soil, fill and groundwater, and to prevent the migration of contaminants off-site via groundwater or surface water runoff. The cover system at the Site consists of the following:

- A 1-foot thick clean soil cover without a demarcation layer;
- A 1-foot thick asphalt and sub base cover at two areas used for parking and access;
- A concrete and sub base cover consisting of sidewalks and the floors of Site buildings. Vapor barriers are not present under any of the concrete buildings slabs.

### **4.5 Cover System Maintenance and Repair**

The cover system will be periodically inspected and maintained. Maintenance includes controlling surface erosion and run-off from the Site, and includes proper maintenance of the vegetative cover. In the event that damage to the cover system is observed (e.g., ruts, erosion, cracked or broken asphalt, etc.), repairs will be made to restore the cover system to its pre-damaged condition. These repairs are required to maintain the integrity of the cover system.

Future use of the Site should preclude as described in the Deed Restriction, whenever possible, excavation or disturbance of the cover system. Should any future intrusive work breach the cover system, the requirements of Sections 4.6 thru 4.9 of this SMP must be followed. Once the intrusive activities are

complete, the cover system must be restored in a manner that is consistent with the original construction. If the type of cover system changes from that which existed prior to the intrusive activities (i.e., a soil cover is replaced by asphalt, concrete or a building), a figure showing the modified surface should be included in the appropriate annually submitted Periodic Review Report, and in any updates to the Site Management Plan. The Periodic Review Report should also certify that all intrusive and cover system repair activities were conducted in conformance with this SMP.

#### **4.6 Management of Subsurface Soil and Fill**

The purpose of this section is to provide environmental guidelines for the management of soil and fill encountered during any future intrusive work that breaches the cover system. This SMP includes the following conditions:

- Any breach of the cover system, including for the purposes of construction or utilities work, must be replaced or repaired using an acceptable borrow source free of industrial and/or other potential sources of chemical or petroleum contamination. The repaired area must be covered with clean soil and reseeded, or covered with impervious product such as concrete or asphalt to prevent future erosion;
- During any intrusive activities that breach the cover system, the Contingency Plan of Section 4.7 must be implemented, if conditions so warrant. Dust monitoring and control techniques (e.g., wetting road surfaces, covering soil stockpiles, stopping intrusive activities during windy conditions, etc) must also be implemented;
- Soil and fill excavated at the Site that is intended to be removed from the property must be managed, characterized, and properly disposed of in accordance with NYSDEC regulations as referenced in Section 4.8;
- Soil and fill excavated at the Site may be reused as backfill material on-site provided it contains no visual or olfactory evidence of contamination, and is placed beneath a cover system component as referenced in Section 4.4;
- Any off-site material brought to the Site for filling and grading purposes shall be from an acceptable borrow source free of industrial and/or other potential sources of chemical or petroleum contamination. Off-site borrow sources will be subject to the collection of one representative composite sample per source. The sample should be analyzed for TCL VOCs, TCL SVOCs, TCL pesticides, TCL PCBs, TAL metals and cyanide by a NYSDOH ELAP-certified laboratory. The soil will be acceptable for use as cover material provided that all parameters meet the 6 NYCRR Part 375 residential soil cleanup objectives (Appendix E);
- Prior to any construction activities, workers are to be notified of Site conditions with clear instructions regarding how the work is to proceed. Invasive work performed at the property will be performed in accordance with all applicable local, state, and federal regulations to protect worker health and safety, including all applicable personal protective equipment.

#### **4.7 Contingency Plan**

If underground storage tanks or other previously unidentified contaminant sources are encountered during future intrusive work, excavation activities will be suspended until sufficient equipment is mobilized to address the situation. Such findings will be promptly communicated to the NYSDEC Region 9 Office in Buffalo, New York. Reportable quantities of petroleum product will also be reported to the NYSDEC spills hotline. Representative samples of product, soil and fill will be collected for chemical analysis to determine the nature of the material and proper disposal method. The samples should be analyzed for TCL VOCs, TCL SVOCs, TCL pesticides, TCL PCBs, TAL metals and cyanide by a NYSDOH ELAP certified laboratory. Disposal of this material should take place as referenced in Section 4.8.

#### **4.8 Disposal of Subsurface Soil and Fill**

Soil and fill that is excavated at the Site but cannot be used as fill below the cover system will be further characterized prior to transportation off-site for disposal at a permitted facility. For excavated soil and fill

with visual evidence of contamination (i.e., staining or elevated PID measurements), one composite sample and one duplicate sample will be collected for every 100 cubic yards of material. For excavated soil and fill that does not exhibit visual evidence of contamination but must be sent for off-site disposal, one composite sample and one duplicate sample will be collected for every 2,000 cubic yards of material. A minimum of one composite sample and one duplicate sample will be collected for volumes less than 2,000 cubic yards.

The composite sample will be collected from five locations within each stockpile. A duplicate composite sample will also be collected. PID measurements will be recorded for each of the five individual locations. If elevated PID measurements are documented, one grab sample will be collected from the individual location with the highest PID measurement. If none of the individual samples exhibit PID readings, one grab sample will be selected at random. The composite sample will be analyzed for pH (EPA Method 9045C), TCL SVOCs, TCL pesticides, TCL PCBs, TAL metals and cyanide by a NYSDOH ELAP certified laboratory. The grab sample will be analyzed for TCL VOCs.

Samples will be composited by placing equal portions of soil and fill from each of the five composite sample locations into a pre-cleaned, stainless steel (or Pyrex glass) mixing bowl. The soil and fill will be thoroughly homogenized using a stainless steel trowel or disposable scoop, and transferred to pre-cleaned sample bottles provided by the laboratory. The sample bottles will be labeled and a chain-of-custody form will be prepared.

Additional characterization sampling for off-site disposal may be required by the disposal facility. To potentially reduce off-site disposal requirements/costs, the owner or site developer may also choose to characterize each stockpile individually.

If the analytical results indicate that concentrations exceed the standards for RCRA characteristics, the material will be considered a hazardous waste and must be properly disposed off-site at a permitted disposal facility within 90 days of excavation. If the analytical results indicate that the soil is not a hazardous waste, the material will be properly disposed off-site at a non-hazardous waste facility. Stockpiled soil cannot be transported on or off-site until the analytical results are received from the laboratory.

#### **4.9 Subgrade Material**

Subgrade material used to backfill excavations or placed to increase surface grades must meet the following criteria.

- Excavated on-site soil and fill that appears to be visually impacted shall be sampled and analyzed as described in Section 4.8. If analytical results indicate that contaminants are present at concentrations below the 6 NYCRR Part 375 commercial soil cleanup objectives (Appendix E), the soil and fill can be used as backfill on-site;
- Any off-site material brought to the Site for filling and grading purposes shall be from an acceptable borrow source free of industrial and/or other potential sources of chemical or petroleum contamination, and cannot otherwise be defined as a solid waste in accordance with 6 NYCRR Part 360-1.2(a);
- If the contractor designates a source as “virgin” soil, it shall be further documented in writing to be native soil material from areas not having supported any known prior industrial or commercial development or agricultural use;
- Virgin soil will be subject to the collection of one representative composite sample per source. The sample should be analyzed for TCL VOCs, TCL SVOCs, TCL pesticides, TCL PCBs, arsenic, barium, cadmium, chromium, lead, mercury, selenium, silver and cyanide by a NYSDOH ELAP certified laboratory. The soil will be acceptable for use as backfill provided that all parameters meet the 6 NYCRR Part 375 commercial soil cleanup objectives as referenced in Appendix E;

- Non-virgin soil will be tested via collection of one composite sample per 500 cubic yards of material from each source. If more than 1,000 cubic yards of soil are borrowed from a given off-site non-virgin source, and both samples of the first 1,000 cubic yards meet the 6 NYCRR Part 375 commercial soil cleanup objectives as referenced in Appendix E, the sample collection frequency will be reduced to one composite for every 2,500 cubic yards of additional soils from the same source, up to 5,000 cubic yards. For borrow sources greater than 5,000 cubic yards, sampling frequency may be reduced to one sample per 5,000 cubic yards, provided all earlier samples met the 6 NYCRR Part 375 commercial soil cleanup objectives.

#### **4.10 2021 Site Usage**

No excavation took place on-site in 2021.

## SECTION 5 - CONCLUSIONS

1. The volatile organic analytical 2021 test results detected concentrations of vinyl chloride (MW-2) and benzene (MW-2) that exceeded groundwater quality standards.
2. Detected concentrations of inorganic metals in groundwater sampled in 2021 that exceeded groundwater quality standards concentrations include the following: aluminum (MW-1 and MW-2); arsenic (MW-1 and MW-2); iron (MW-1, MW-2, MW-5 and MW-6); magnesium (MW-2) and manganese (MW-1, MW-6 and MW-8).
3. Based on 2021 analytical test results, the total VOC concentration plume appears to be migrating in a southwestward direction with groundwater flow. Total VOC concentrations slightly increased in groundwater from monitoring well MW-2.
4. Total VOC concentrations in all monitoring wells sampled and analyzed for decreased from 20.24 µg/l in 2020 to 7.60 µg/l as reported in 2021.
5. Trend analysis of total VOC plume decreased in size and decreased in total VOC concentrations. Groundwater sampled from monitoring wells MW-1 and MW-2 represent the furthest most westward edge of the VOC plume. From 2009 to 2020, there is a trending decrease in total VOC concentrations from groundwater sampled from monitoring wells MW-1 and MW-2.
6. Monitoring well MW-7 was not sampled due to an obstruction approximately 4.5' from the top of the well. Given this obstruction and the unsafe location of monitoring well, MW-7, along a steep embankment adjacent to an active railway line, the City is requesting to abandon MW-7 from future sampling activities.

**Note:** 1. There was an obstruction in the well at a depth of 8.8 feet in which the water level indicator could not proceed further down the well. The initial static water level from 2007 and 2008 were used to determine the amount of water to be purged.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98 Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

\* Dilution factor of 5 used

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98 Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

\* Dilution factor of 5 used

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98 Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

\* Dilution factor of 5 used

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98 Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

\* Dilution factor of 5 used

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

- = The analyte was not sampled for.

\*NA - Unable to purge or sample due to equipment failure or no water was able to be removed from well. No water was retrievable.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98 Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

\* Dilution factor of 5 used

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98. Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

B - Compound was found in the blank and sample.

^ - Instrument related QC is outside acceptance limits.

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98. Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

B - Compound was found in the blank and sample.

^ - Instrument related QC is outside acceptance limits.

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98. Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

B - Compound was found in the blank and sample.

^ - Instrument related QC is outside acceptance limits.

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98. Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

B - Compound was found in the blank and sample.

^ - Instrument related QC is outside acceptance limits.

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 06/98. Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

B - Compound was found in the blank and sample.

^ - Instrument related QC is outside acceptance limits.

- = The analyte was not sampled for.

Field Tests: Temp: 20.35 °C  
 pH 7.87  
 Conductivity 0.619 mS/cm  
 DO 6.8 mg/L  
 Turbidity 12.9 NTUs  
 Oxidation Reduction Potential (ORP) -75.0 mV

Sampling: Time: 12:30 PM

Sampling Method: Peristaltic Pump X  
 Disposable Bailer \_\_\_\_\_  
 Disposable Tubing X

### Observations:

Weather/Temperature: Partly Cloudy, 70° F

Physical Appearance and Odor of Sample: Clear with slight oil residue. No odor.

Comments: \_\_\_\_\_

## GROUNDWATER FIELD SAMPLING RECORD

SITE 153 Fillmore Avenue DATE 07/29/21

Sampler: Brian Doyle SAMPLE ID MW-07  
Jason LaMonaco

Depth of well (from top of casing)..... 23.5 ft EL 562.76  
 Initial static water level (from top of casing).... 13.20 ft EL 573.06  
 Top of PVC Casing Elevation 586.26

### Evacuation Method:

### Well Volume Calculation

Peristaltic X Centrifugal \_\_\_\_\_ 1 in. casing: 10.3 ft. of water x .09 = 0.93 gallons  
 Airlift \_\_\_\_\_ Pos. Displ. \_\_\_\_\_ 2 in. casing: \_\_\_\_\_ ft. of water x .16 = \_\_\_\_\_ gallons  
 Bailer \_\_\_\_\_ >>> No. of bails \_\_\_\_\_ 3 in. casing: \_\_\_\_\_ ft. of water x .36 = \_\_\_\_\_ gallons

### Qualifiers

#### GC/MS VOA

| Qualifier | Qualifier Description                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------|
| *+        | LCS and/or LCSD is outside acceptance limits, high biased.                                                     |
| J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

#### Metals

| Qualifier | Qualifier Description                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------|
| B         | Compound was found in the blank and sample.                                                                    |
| J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

### Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|-------------------------------------------------------------------------------------------------------------|
| □              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery                                                                                            |
| CFL            | Contains Free Liquid                                                                                        |
| CFU            | Colony Forming Unit                                                                                         |
| CNF            | Contains No Free Liquid                                                                                     |
| DER            | Duplicate Error Ratio (normalized absolute difference)                                                      |
| Dil Fac        | Dilution Factor                                                                                             |
| DL             | Detection Limit (DoD/DOE)                                                                                   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision Level Concentration (Radiochemistry)                                                               |
| EDL            | Estimated Detection Limit (Dioxin)                                                                          |
| LOD            | Limit of Detection (DoD/DOE)                                                                                |
| LOQ            | Limit of Quantitation (DoD/DOE)                                                                             |
| MCL            | EPA recommended "Maximum Contaminant Level"                                                                 |
| MDA            | Minimum Detectable Activity (Radiochemistry)                                                                |
| MDC            | Minimum Detectable Concentration (Radiochemistry)                                                           |
| MDL            | Method Detection Limit                                                                                      |
| ML             | Minimum Level (Dioxin)                                                                                      |
| MPN            | Most Probable Number                                                                                        |
| SQL            | Method Quantitation Limit                                                                                   |
| NC             | Not Calculated                                                                                              |
| ND             | Not Detected at the reporting limit (or MDL or EDL if shown)                                                |
| NEG            | Negative / Absent                                                                                           |
| POS            | Positive / Present                                                                                          |
| PQL            | Practical Quantitation Limit                                                                                |
| PRES           | Presumptive                                                                                                 |
| QC             | Quality Control                                                                                             |
| RER            | Relative Error Ratio (Radiochemistry)                                                                       |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)                                                         |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)                                                                         |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)                                                                       |
| TNTC           | Too Numerous To Count                                                                                       |

# Case Narrative

Client: City of Tonawanda  
Project/Site: 153 Fillmore Avenue Groundwater Analysis

Job ID: 480-187756-1

## Job ID: 480-187756-1

Laboratory: Eurofins TestAmerica, Buffalo

### Narrative

#### Job Narrative 480-187756-1

### Comments

No additional comments.

### Receipt

The samples were received on 7/29/2021 3:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.6° C.

### GC/MS VOA

Method 8260C: The following volatiles samples were diluted due to foaming at the time of purging during the original sample analysis: MW-02 (480-187756-2), MW-06 (480-187756-4) and MW-08 (480-187756-5). Elevated reporting limits (RLs) are provided.

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-591564 recovered outside acceptance criteria, low biased, for 2-Hexanone, Trichlorofluoromethane and 2-Butanone (MEK). A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported. The following samples were affected : MW-01 (480-187756-1), MW-02 (480-187756-2), MW-06 (480-187756-4), MW-08 (480-187756-5), TRIP BLANK (480-187756-6) and FD@MW-01 (480-187756-7).

Method 8260C: Due to the coelution of Ethyl Acetate with 2-Butanone in the full spike solution, these analytes exceeded control limits in the laboratory control sample (LCS) and/or laboratory control sample duplicate (LCSD) associated with batch 591564. The following samples were affected : MW-01 (480-187756-1), MW-02 (480-187756-2), MW-06 (480-187756-4), MW-08 (480-187756-5), TRIP BLANK (480-187756-6) and FD@MW-01 (480-187756-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Detection Summary

Eurofins TestAmerica, Buffalo

# QC Sample Results

Client: City of Tonawanda  
Project/Site: 153 Fillmore Avenue Groundwater Analysis

Job ID: 480-187756-1

## Method: 8260C - Volatile Organic Compounds by GC/MS (Continued)

Lab Sample ID: MB 480-591564/9

Matrix: Water

Analysis Batch: 591564

Client Sample ID: Method Blank

Prep Type: Total/NA

| Question                                                                         | Answer | Comment |
|----------------------------------------------------------------------------------|--------|---------|
| Radioactivity either was not measured or, if measured, is at or below background | True   |         |
| The cooler's custody seal, if present, is intact.                                | True   |         |
| The cooler or samples do not appear to have been compromised or tampered with.   | True   |         |
| Samples were received on ice.                                                    | True   |         |
| Cooler Temperature is acceptable.                                                | True   |         |
| Cooler Temperature is recorded.                                                  | True   |         |
| COC is present.                                                                  | True   |         |
| COC is filled out in ink and legible.                                            | True   |         |
| COC is filled out with all pertinent information.                                | True   |         |
| Is the Field Sampler's name present on COC?                                      | True   |         |
| There are no discrepancies between the sample IDs on the containers and the COC. | True   |         |
| Samples are received within Holding Time (Excluding tests with immediate HTs)..  | True   |         |
| Sample containers have legible labels.                                           | True   |         |
| Containers are not broken or leaking.                                            | True   |         |
| Sample collection date/times are provided.                                       | True   |         |
| Appropriate sample containers are used.                                          | True   |         |
| Sample bottles are completely filled.                                            | True   |         |
| Sample Preservation Verified                                                     | True   |         |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True   |         |
| VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.     | True   |         |
| If necessary, staff have been informed of any short hold time or quick TAT needs | True   |         |
| Multiphasic samples are not present.                                             | True   |         |
| Samples do not require splitting or compositing.                                 | True   |         |
| Sampling Company provided.                                                       | True   | COT     |
| Samples received within 48 hours of sampling.                                    | True   |         |
| Samples requiring field filtration have been filtered in the field.              | N/A    |         |
| Chlorine Residual checked.                                                       | N/A    |         |

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. 06/98, Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

B - Analyte detected in the associated Method Blank

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. 06/98, Class GA.

Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

B - Analyte detected in the associated Method Blank

- = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. 06/98, Class GA.  
 Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.  
 NE = NYSDEC TOGS 1.1.1 water quality standard not established.  
 ND - Not detected for at or above reporting limit  
 J - Analyte detected estimated value below quantitation limits  
 B - Analyte detected in the associated Method Blank  
 - = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. 06/98, Class GA.  
 Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.  
 NE = NYSDEC TOGS 1.1.1 water quality standard not established.  
 ND - Not detected for at or above reporting limit  
 J - Analyte detected estimated value below quantitation limits  
 B - Analyte detected in the associated Method Blank  
 - = The analyte was not sampled for.

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. June 1998. Class GA.

Bolded concentrations indicated the analyte was detected.

Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.

NE = NYSDEC TOGS 1.1.1 water quality standard not established.

ND - Not detected for at or above reporting limit

J - Analyte detected estimated value below quantitation limits

- = The analyte was not sampled for.

\*NA - Unable to purge or sample due to equipment failure or no water was able to be removed from well. No water was retrievable.

**Monitoring Well MW-8**  
**Semi-Volatile Organic Analytical Test Results**  
**153 Fillmore Avenue Site**

1. NYSDEC TOGS (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. 06/98, Class GA.  
 Bolded concentrations indicated the analyte was detected. Bolded and shaded concentrations indicate exceedance of TOGS 1.1.1 criteria.  
 NE = NYSDEC TOGS 1.1.1 water quality standard not established.  
 ND - Not detected for at or above reporting limit  
 J - Analyte detected estimated value below quantitation limits  
 B - Analyte detected in the associated Method Blank  
 - = The analyte was not sampled for.

All soil cleanup objectives (SCOs) are in parts per million (ppm).

NS=Not specified. See Technical Support Document (TSD).

#### Footnotes

<sup>a</sup> The SCOs for residential, restricted-residential and ecological resources use were capped at a maximum value of 100 ppm. See TSD section 9.3.

<sup>b</sup> The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3.

<sup>c</sup> The SCOs for industrial use and the protection of groundwater were capped at a maximum value of 1000 ppm. See TSD section 9.3.

<sup>d</sup> The SCOs for metals were capped at a maximum value of 10,000 ppm. See TSD section 9.3.

<sup>e</sup> For constituents where the calculated SCO was lower than the contract required quantitation limit (CRQL), the CRQL is used as the SCO value.

<sup>f</sup> For constituents where the calculated SCO was lower than the rural soil background concentration as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 2 SCO value for this use of the site.

<sup>g</sup> This SCO is derived from data on mixed isomers of BHC.

<sup>h</sup> The SCO for this specific compound (or family of compounds) is considered to be met if the analysis for the total species of this contaminant is below the specific SCO.

<sup>i</sup> This SCO is for the sum of endosulfan I, endosulfan II, and endosulfan sulfate.

<sup>j</sup> This SCO is the lower of the values for mercury (elemental) or mercury (inorganic salts). See TSD Table 5.6-1.
