**Re: Final Remediation Report for the Cornell Vineyard  
Research Laboratory (Taschenberg Laboratory)**

**RECEIVED**

FEB 27 2009

NYSDEC REG 9  
FOIL  
REL UNREL

Dear Mr. Walia:

The following letter report summarizes the remedial activities which occurred at the Cornell University Vineyard Research Laboratory located at 412 East Main Street in Fredonia, New York. The remedial activities at the site were conducted according to the Revised Work Plan submitted to the NYSDEC on November 13, 2008 and approved on December 3, 2008.

**Remedial Work Summary**

In accordance with the approved work plan, contractors retained by the University (Abscope Environmental Inc.) mobilized at the site on January 19-21, 2009 and completely removed soils within the area identified as the "restricted area" to a depth of 8 feet below ground surface. The concrete slab within the former building footprint identified within the deed restriction as a former pesticide storage room was also removed and disposed (see attached photographs). All soils and concrete debris (including the slab, shed foundation, and concrete footings) were mechanically excavated and disposed of at Chafee Landfill, Sardinia, NY, NYS Permit No, 9-1462-00001/00006 (waste disposal forms included in Appendix A).

At the completion of excavation activities, grab soil samples were collected from each sidewall and bottom of the excavated pit and sent to Life Science Laboratories for pesticide analysis using EPA analytical method 8081. Soil sample analytical results are attached (see Appendix B).

After the collection of the soil samples, the pit was backfilled using clean gravel soils originating from an offsite location. Excavated soils were staged on plastic sheeting and covered. Soil was loaded and hauled for disposal on January 21.

### **Closure Soil Sample Analytical Data Results**

Upon completion of excavation activities, representative grab soil samples were collected from each sidewall and bottom of the excavated pit. Samples were collected using the excavator bucket and contained soils originating from a depth of approximately 6-8 feet below grade. Samples were submitted to Life Sciences Laboratories in Syracuse, NY for pesticide analysis using EPA analytical method 8081A TCL pesticides. Samples did not reveal the presence of pesticide contamination exceeding commercial soil cleanup objectives. A summary of the detected contaminants appears in the table below:

<b>Summary of detected compounds: Detection levels in ppm</b>						
<b>Analyte</b>	<b>N Sidewall</b>	<b>E Sidewall</b>	<b>W Sidewall</b>	<b>S Sidewall</b>	<b>Bottom</b>	<b>Commercial Soil Cleanup Objective (ppm)</b>
4'4' - DDE	0.40	<0.04	<0.04	<0.04	0.12	62
4'4' - DDT	1.3	0.045	0.13	<0.04	0.59	47

### **Deed Restriction Alteration Request**

As discussed prior to the remedial activities conducted at the property, Cornell University requests that the deed restriction for the subject property be altered to allow commercial/industrial uses to be conducted at the site.

Thank you for your continued assistance with this site. Please contact me with comments regarding this remedial activity report or deed restriction alteration request at your earliest convenience.

Sincerely,  
CORNELL UNIVERSITY  
OFFICE OF ENVIRONMENTAL COMPLIANCE AND SUSTAINABILITY

Matthew Kozlowski  
Project Coordinator
