1.0 INTRODUCTION

Bergmann is submitting this groundwater characterization report for the second quarter 2023 sampling event, conducted on May 18th and 19th, 2023, on behalf of the Dormitory Authority of the State of New York (DASNY) and the New York State Office of People with Developmental Disabilities (OPWDD) for activities conducted at the former Gowanda Day Habilitation Center facility at 4 Industrial Place, Gowanda, NY. The OPWDD, as the volunteer, entered into a Voluntary Cleanup Agreement (VCA) with the New York State Department of Environmental Conservation (NYSDEC) to conduct investigations and implement remedial measures in accordance with VCA Site No. V-00463-9, effective August 16, 2001.

1.1 SCOPE OF WORK

This report documents the site-wide groundwater monitoring and laboratory analytical sampling event conducted on May 18th and May 19th, 2023. Field measurements, sampling procedures and laboratory analysis were conducted in accordance with the October 2006 Operations, Monitoring, and Maintenance (OM&M) Manual and as modified with NYSDEC approval. During this sampling event, groundwater from twenty-one (21) of twenty-one (21) site-related groundwater monitoring wells and all seven (7) groundwater recovery wells were sampled for laboratory analysis.

The pervious groundwater sampling event was conducted in March 2023 and included analysis of groundwater samples from the (21) site-related groundwater monitoring wells and all seven (7) groundwater recovery wells.

1.2 SITE BACKGROUND

The Gowanda Day Habilitation site consists of a 5.94-acre parcel located at 4 Industrial Place, Gowanda, New York. The building, previously used by several manufacturing operations, was built in stages between circa 1948 and 1987 and was renovated in 1987-1988. Manufacturing operations occurred at the site between 1956 and 1987. New York State agencies occupied the building since 1982. New York State acquired the parcel in 1989. The building was most recently operated by the OPWDD, which at that time was known as the Western New York Developmental Disabilities Services Office, as a Day Habilitation Center for mental care clients. In April 2001, on-site operations ceased. The nature and extent of contamination at the Gowanda Day Habilitation Center was detailed as part of the 2003 Site Investigation and 2004 Supplemental Site Investigation Reports. Trichloroethene (TCE) was the most commonly detected compound. TCE degradation products cis-1,2, Dichloroethene (Cis-1,2-DCE), trans-1,2-Dichloroethene (Trans-1,2-DCE) and Vinyl Chloride (VC) were also detected. The source of these CVOCs were releases that occurred during the manufacturing operations that occurred at the facility.

Following Interim Remedial Measure (IRM) system installation, the Groundwater Treatment System (GTS) and the Soil Vapor Extraction System (SVES) was operated from 2005 to 2013 recovered 2-5 gallons per minute (gpm) of groundwater. The GTS portion consisted of seven (7) groundwater recovery wells (four dual phase recovery wells and three groundwater-only recovery wells), an air compressor, a network of controller-less pneumatic pumps and an air stripper treatment system to process recovered groundwater. Recovered groundwater was pumped to the equalization tank for settling of the sediment and transferred to the air stripper using a consistent flow rate. Air discharge from the air stripper was routed to the SVE for treatment prior to discharge. Groundwater was discharged to the village of Gowanda Sewage Treatment Plant (STP). Quarterly groundwater sampling with Operation and Maintenance of the remediation system has been ongoing since 2002.

In January 2014, the condition of the SVE and GTS was discussed with the NYSDEC representative, and it was agreed that these systems would be deactivated to allow for groundwater level recovery during the preparation

of an In-Situ Chemical Oxidation (ISCO) Remedial Action Plan (RAP) for the implementation of an ISCO treatment. Bergmann submitted an ISCO RAP for groundwater treatment to the NYSDEC to address the remaining contamination at the Site in lieu of costly repair of the SVE and GTS. The SVE and GTS equipment will remain on-site in the event that re-activation is required in the future. The SVES system was deactivated in 2013, and an ISCO treatment was implemented in May 2015 and a second round of injections in September 2015. An ISCO Report was prepared and submitted under a separate cover.

2.0 GROUNDWATER SAMPLING OVERVIEW AND METHODS

2.1 WELL MAINTENANCE ACTIVITIES

During the May 2023 site visit, all monitoring wells were accessible, and the integrity of the wells was not compromised. Repairs or maintenance to the network of groundwater monitoring wells or recovery wells has were not required. All protective casings and flush-mount curb boxes were found to be intact and secure. Exterior monitoring wells are secured with locking stick-up protective casings. The monitoring wells within the building are secured with flush-mount roadway covers. Well maintenance was not performed during the May 2023 sampling event.

2.2 GROUNDWATER FIELD MONITORING AND SAMPLING ACTIVITIES

Groundwater measurements and sampling activities were conducted in accordance with the October 2006 OM&M Manual. The depths to groundwater in groundwater monitoring wells are measured quarterly to monitor site-wide changes in the water table elevation and to allow for adjustment at recovery wells. Past operation of the recovery wells was intended to establish hydraulic containment of the impacted groundwater plume beneath the former Day Habilitation building and improve recovery and treatment of impacted groundwater.

Groundwater samples were collected from the twenty-one (21) site-related groundwater monitoring wells for laboratory analysis on May 18 and May 19, 2023. Depth to groundwater measurements were obtained from twenty-eight (28) wells (including recovery wells).

Groundwater samples were collected from monitoring wells after each well was gauged. Measurements of purged groundwater including turbidity, temperature, pH, oxygen, and conductivity were determined by analyzing a quantity of groundwater in a cup using a YSI Quatro prior to sampling. Groundwater samples were collected from monitoring and recovery wells using dedicated bailers, to allow for an accurate representation of groundwater without collecting sediment from within the wells. Sampling was performed based on discussion and direction from a telephone conversation with David Szymanski (NYSDEC project manager at the time) in January 2018 in which no noticeable changes in test results were noticed comparing bailing and slow purge methods. This was first noted in Q3 2018 and is also noted in the approved PRR dated 2019. A single duplicate sample and a field blank sample were collected and submitted for laboratory analysis.

The samples were transported from the project site via a chain-of-custody protocol to ALS Environmental, a NYSELAP certified laboratory located in Rochester, New York. The samples were then tested for Volatile Organic Compounds (VOCs), using EPA Method 8260. Analytical results for each individual monitoring well have been posted in Table 3 for comparative purposes from sampling events completed 2012 – 2023.

3.0 LOCAL GROUNDWATER FLOW CHARACTERIZATION

The Site potentiometric surface and groundwater flow direction was determined for May 2023 using water table elevations measured at each well. Groundwater elevations and well reference elevations were calculated using depth to water measurements obtained on May 18 and May 19, 2023. The well gauging values and groundwater elevations are provided in Table 1 – Groundwater Elevations and Field Measurements – May 2023.

The May 2023 potentiometric surface map shows a flow pattern similar to groundwater flow pattern observed historically since 2002. Groundwater at the Site is flowing generally in a northerly direction. Torrance Place is hydraulically down-gradient from the Day Habilitation Center building. It is noted that the residential properties along Torrance Place utilize municipal/public water. The May 2023 water table elevations range from 764.86 feet (ft) above mean sea level (AMSL) at MW-21, to 773.26 ft. AMSL at MW-9. The average table water elevation was 769.30 ft AMSL, which is a decrease from the average groundwater elevation of the previous sampling event in March of 2023 (769.87 ft AMSL).

The site-wide average groundwater elevation decreased by approximately 0.57 ft when compared to the previous sampling event from March 2023. This decrease in the elevation of groundwater appears to be seasonal.

Measured depth to water at all gauged monitoring and recovery wells is presented in Table 1 and May 2023 Groundwater Elevation Contours are presented on Figure 1 – May 2023 Groundwater Elevation Contour Map.

4.0 LABORATORY ANALYSIS

4.1 LABORATORY ANALYSIS ON GROUNDWATER SAMPLES

Laboratory analysis was completed on the groundwater samples from twenty-one (21) monitoring wells and seven (7) recovery wells collected May 18 and May 19, 2023. Samples were analyzed for VOCs via EPA Method 8260. Analysis was performed in accordance with the October 2006 OM&M Manual. The following chlorinated VOCs (CVOCS) were analyzed for:

- Trichloroethene (TCE)
- 1,1,1 Trichloroethane (TCA)
- Cis-1,2-Dichloroethene (Cis-DCE)
- Trans-1,2-Dichloroethene (Trans-1,2-DCE)
- Vinyl Chloride (VC)

CVOCs values, as present throughout this report, in the text, charts, and Tables 2, 3, and 4, are not representative of all CVOCs detected, but are the of the sum of detected concentration of TCE, Cis-DCE, Trans-1,2-DCE, VC, and TCA.

4.2 MONITORING WELL GROUNDWATER ANALYSIS SUMMARY

The May 2023 analytical results indicate detection of four (4) chlorinated VOCs in monitoring well samples: TCE, Cis-DCE, Trans-1,2-DCE, and VC. Chlorinated VOCs were detected in groundwater samples from eleven (11) of the twenty-one (21) monitoring wells sampled. Analytical results are summarized in Table 2 – May 2023 Analytical Results Summary, which compares detected VOCs and applicable NYSDEC Class GA Standards for each analyte. The complete laboratory analytical report is provided in Appendix A – Laboratory Analytical Results Report May 2023 Sampling Event. Table 3 – Historic Groundwater Analysis Results Summary includes the historical CVOC concentrations at each well since the groundwater monitoring of the wells began in 2002.

VOCs were not detected in groundwater from ten (10) of the sampled monitoring wells.

As depicted in Table 5, groundwater samples from eleven (11) monitoring wells had detectable chlorinated VOCs at concentrations above applicable Class GA Standards. The monitoring well with the highest total CVOCs detected at monitoring wells MW-1 (600 parts per billion (ppb), which is consistent with previously collected historical data.

Concentrations in nine (9) of the twenty-one (21) monitoring well groundwater samples increased when compared to the March 2023 sampling event while concentrations in two (2) of the twenty-one (21) monitoring well groundwater samples decreased. The concentrations of CVOCs in ten (10) monitoring wells remain unchanged. The current sampling analytical results indicate an average site-wide decrease in CVOCs of approximately 88.21% since the activation of the GTS in May 2005.

The area of highest concentration of CVOCs groundwater is in the area of monitoring wells MW-1 and MW-11, which is consistent with historical concentrations of CVOCs.

In monitoring wells located in the source area (MW-1, MW-6, MW-7, MW-11, MW-12, MW-14, MW-15, and MW-17) the analytical results show a contaminant reduction in CVOC concentrations by approximately 80.56% monitoring of these wells since 2002.

- The CVOC concentrations decreased at monitoring well MW-1 relative to the prior sampling event. The CVOC concentration at monitoring well MW-1 for the May 2023 sampling event was 600 ppb, a decrease from the March 2023 value of 449.00 ppb. Since activation of the GTS in May 2005 through subsequent deactivation of the GTS in 2013 to present, detected CVOCs at MW-1 have increased by 21.88%.

- Monitoring well MW-11 increased in CVOCs relative to the prior sampling event. The CVOC concentration at MW-11 for the May 2023 sampling event is 355 ppb, an increase from the March 2023 value of 304 ppb. Since activation of the GTS in May 2005 through subsequent deactivation of the GTS in 2013 to present, detected CVOCs at MW-11 have decreased by 92.36%.
- Monitoring well MW-12 increased in CVOCs relative to the prior sampling event. The CVOC concentration at MW-12 for the May 2023 sampling event is 221 ppb, an increase from the March 2023 value of 170 ppb. MW-12 is nearest to recovery well DR-2, in close proximity to the center of the building. Since activation of the GTS in May 2005 through subsequent deactivation of the GTS in 2013 to present, detected CVOCs at MW-12 have decreased by 98.25%.
- Monitoring well MW-13 had no change in CVOCs relative to the prior sampling event. The CVOC concentration at monitoring well MW-13 for the May 2023 sampling event was non-detect (ND), which was no change from the March 2023 sampling event, which was ND ppb. Since activation of the GTS in May 2005 through subsequent deactivation of the GTS in 2013 to present, detected CVOCs at MW-13 have decreased by 100%.
- Monitoring well MW-14 increased in CVOCs relative to the prior sampling event. The CVOC concentration at MW-14 for the May 2023 sampling event is 60.00 ppb, a decrease from the March 2023 value of 63.9 ppb. MW-14 is nearest to recovery well DR-3. Since activation of the GTS in May 2005 through subsequent deactivation of the GTS in 2013 to present, detected CVOCs at MW-14 have decreased by 80.95%.
- Monitoring well MW-15 increased in CVOCs relative to the prior sampling event. The CVOC concentration at MW-15 for the May 2023 sampling event was 6.9 ppb, an increase from the March 2023 sampling event, which was non-detect. MW-15 is nearest to recovery well DR-4. Since activation of the GTS in May 2005, through subsequent deactivation of the GTS in 2013 to present, the detected CVOCs at MW-15 have decreased by 99.05%.

Six (6) groundwater monitoring wells are located along the Site's north perimeter, down-gradient from the area of impacted groundwater (MW-5, MW-6, MW-7, MW-16, MW-17, and MW-21). The current analytical data exhibits an overall decrease in CVOCs at the sampled monitoring wells along the north perimeter, compared to the March 2023 sampling event.

Monitoring wells MW-18, MW-19R and MW-21 are located off-site along Torrance Place. These three (3) wells are considered to be beyond the historic radius of influence for the GTS. The current analytical results indicate a detection of 6.3 ppb for CVOCs for MW-18. Monitoring well MW-21 was added to the sampling list at the request of the NYSDEC beginning with the June 2015 sampling event. Well MW-19R had a CVOC concentration that was non-detect, and well MW-21 had a CVOC concentration of 5.80 ppb during the May 2023 sampling event.

Laboratory analytical reports are included in Appendix A. Monitoring well locations and concentrations of CVOCs are shown on Figure 2 – May 2023 Distribution of Groundwater Analytical Results: Monitoring Wells.

4.3 SENTRY WELL GROUNDWATER ANALYSIS SUMMARY

Sentry groundwater monitoring wells monitor a separate occurrence of contaminated groundwater at the Gowanda Electronics Site (NYSDEC Site 905025), immediately east of Industrial Place and east of the Day Habilitation Center property. The eastern sentry wells sampled for this event were MW-19R and MW-4. CVOCs were not detected in monitoring wells MW-19R and MW-4. Results for MW-20, a well situated on the eastern side of the site north of MW-4 and south of MW-19R, were non-detect.

The Gowanda Electronics CVOC plume may be migrating to an area near Industrial Place and CVOCs are intermittently detected in MW-19R. The Gowanda Electronics CVOC groundwater plume does not appear to

extend to the Day Habilitation Center property, based on consistent non-detect values at the eastern sentry wells. Conversely, impacted groundwater from the Day Habilitation Center does not appear to extend off-site to the east toward Industrial Place. A ISCO injection application was implemented for the Gowanda Electronics site in June 2014.

Laboratory analytical results are included in Appendix A. Sentry well locations and analytical results are shown on Figure 2.

4.4 RECOVERY WELL GROUNDWATER ANALYSIS SUMMARY

During the May 2023 sampling event, all of the seven (7) recovery wells were sampled.

The May 2023 analytical results indicate detection of CVOCs in all seven (7) recovery well samples that include: TCE, Cis-DCE, VC and Trans-1,2-DCE. CVOCs detected in the seven (7) recovery wells for which past data is available have decreased overall since activation of the GTS in May 2002. The average decrease in CVOCs for the current sampling event is 91.48% relative to concentrations prior to GTS activation in 2002. Relative percent decrease in CVOCs for all monitoring wells and recovery wells are shown on Table 4 – Percent Reductions in Total Groundwater CVOCs.

- The concentrations of CVOCs at recovery well DR-1 decreased from March 2023 to May 2023. The CVOC concentration at DR-1 for the May 2023 sampling event is 370.00 ppb, a decrease from the March 2023 value of 570.0 ppb. The current sampling event indicates a decrease in CVOCs at DR-1 of 95.38% since activation of the GTS in May 2005, through subsequent deactivation of the GTS in 2013 to present. Recovery well DR-1 is located in the source area.

- The concentrations of CVOCs at recovery well DR-4 decreased from March 2023 to May 2023. The CVOC concentration at DR-4 for the May 2023 sampling event is 14.00 ppb, a decrease from the March 2023 value of 15.00 ppb. The current sampling event indicates a decrease in CVOCs at DR-4 of 99.21% since activation of the GTS in May 2005, through subsequent deactivation of the GTS in 2013 to present.
- The concentrations of CVOCs at recovery well G-1 increased from March 2023 to May 2023. The CVOC concentration at G-1 for the May 2023 sampling event is 34.50 ppb, an increase from the March 2023 value of 33.50 ppb. The current sampling event indicates a decrease in CVOCs at G-1 of 93.85% since activation of the GTS in May 2005, through subsequent deactivation of the GTS in 2013 to present.
- The concentrations of CVOCs at Recovery well G-2 decreased from March 2023 to May 2023. The CVOC concentration at G-2 for the May 2023 sampling event is 24.00 ppb, a decrease from the March 2023 value of 30.0 ppb. The current sampling event indicates a decrease in CVOCs at G-2 of 93.77% since activation of the GTS in May 2005, through subsequent deactivation of the GTS in 2013 to present.
- The concentrations of CVOCs at recovery well G-3 increased from March 2023 to May 2023. The CVOC concentration at G-3 for the May 2023 sampling event is 138.00 ppb, an increase from the March 2023 value of 127.0 ppb. The current sampling event indicates an increase in CVOCs at G-3 of 65.76% since activation of the GTS in May 2005, through subsequent deactivation of the GTS in 2013 to present.

Laboratory analytical results are included in Appendix A. Recovery well locations and analytical results are shown on Figure 3 – May 2023 Distribution of Groundwater Analytical Results: Recovery Wells.

4.5 QUALITY ASSURANCE AND QUALITY CONTROL SAMPLES

The VOCs were not detected in the equipment blank or trip blank in May 2023.

A field duplicate (labeled as MW-X) was taken from MW-11. The results of this field duplicate were generally consistent with the results of the sample labeled MW-11 as shown in Tables 2 and 3.

Laboratory analytical results are included in Appendix A.

5.0 REMEDIATION SYSTEM EFFICIENCY

5.1 IMPACT OF THE GTS RECOVERY WELLS

Groundwater analytical charts for the seven (7) sampled recovery wells and the nearest relative monitoring well were created to illustrate the impact of the GTS on recovery wells at the Day Habilitation Center.

Chart 1 compares the sample results from the sampled groundwater recovery wells (DR-1, DR-2, DR-3, DR-4, G-1, G-2, G-3). The GTS operated from May 2005 to 2013. All seven (7) sampled groundwater recovery wells have demonstrated a general decrease in CVOC concentration since activation of the GTS in May 2005, through subsequent deactivation of the GTS in 2013 to present.

Chart 2 displays the relationship between monitoring wells MW-1, MW-11, and recovery well DR-1. The current CVOCs at MW-1 (600.00 ppb) show an increase from the March 2023 sampling event (449.00 ppb). The current CVOCs at MW-11 (355.00 ppb) show an increase from the March 2023 sampling event (304.0 ppb). The current CVOCs at DR-1 (370.00 ppb) shows a decrease from the March 2023 sampling event (570.0 ppb).

Chart 3 compares analytical results between recovery well DR-2 and MW-12. These wells are located north of the wells outlined in Chart 1 and represent the northern limit of the highest concentration within the source area. The current CVOCs at MW-12 (221.00 ppb) show an increase from the March 2023 sampling event (170.0 ppb). The current CVOCs at recovery well DR-2 (77.00 ppb) show a decrease from the March 2023 sampling event (86.0 ppb).

Chart 4 compares the relationship between wells DR-3 and MW-14 which are located in the central portion of the Gowanda Day Habilitation building. The current CVOCs at MW-14 (60.00 ppb) show a decrease from the March 2023 sampling event (63.90 ppb). The current CVOCs at recovery well DR-3 (53.00 ppb) show an increase from the March 2023 sampling event (41.0 ppb).

Chart 5 compares analytical results between recovery well DR-4 and MW-15. These wells are located at the center-north portion of the building. The current CVOCs at MW-15 (6.90 ppb) show an increase from the March 2023 sampling event (non-detect). The current CVOCs at recovery well DR-4 (14.0 ppb) show a decrease from the March 2023 sampling event (15.0 ppb).

Chart 6 compares analytical results between recovery well G-1 and monitoring well MW-17. The recovery well is located in the northern portion of the building and MW-17 is located along the northern property line. The current sampling event CVOCs at recovery well MW-17 (181.00 ppb) showed an increase from the March 2023 sampling event (7.30 ppb). The current CVOCs at recovery well G-1 (34.50 ppb) show an increase from the March 2023 sampling event (33.50 ppb).

Chart 7 compares analytical results between recovery well G-2 and MW-7 which are located in the northeastern portion of the building. This area is at the apparent western perimeter of the plume. Recovery well G-2 had a CVOC concentration of 24.00 ppb, which shows a decrease from the March 2023 sampling event (30.0 ppb). The May 2023 CVOCs of MW-7 (50.00 ppb) show an increase from the March 2023 sampling event (22.0 ppb).

Chart 8 compares analytical results between recovery well G-3 which is located at the northeastern portion of the building and MW-17 which is located along the northern property boundary of the plume. This area is at the western perimeter of the plume. The May 2023 CVOCs at monitoring well MW-17 (181.00 ppb) showed an increase from the March 2023 sampling event (7.30 ppb). The current CVOCs at recovery well G-3 (138.00 ppb) show an increase from the March 2023 sampling event (127.0 ppb).

5.2 EXTENT OF IMPACTED GROUNDWATER

The bulk of the contaminant mass appears to be concentrated beneath the building in the source area, in the vicinity of monitoring well MW-1 and MW-11, extending north to recovery well DR-2. In May 2023, this area has had samples with the highest concentrations of impacted groundwater, consistent with prior sampling events. The concentration of CVOCs in the source area have been reduced as a result of historic cleanup activities.

When operating, the GTS maintained an area of hydraulic containment for recovery wells within the source area of the plume. The GTS was successful in hydraulically containing most of the contaminant plume on the property and minimizing further migration. The GTS was not operating during this monitoring period and overall sample results are similar to previous quarterly sampling results. Therefore, residual CVOCs in the plume have not migrated and appear to be stabilized when compared to sample results with the operation of the GTS during previous monitoring events.

Overall reduction of contaminants in the majority of the monitoring and recovery wells has occurred due to completed remediation at the Site when compared to pre-remediation levels during the past fifteen (15) years of sampling.

5.3 FUTURE GROUNDWATER MONITORING AND ANALYSIS ACTIVITIES

The condition of the SVE and GTS was discussed with the NYSDEC representative, and it was agreed upon that these remediation systems would be deactivated to allow for groundwater level recovery during the implementation of an ISCO groundwater treatment and subsequent sampling events. Bergmann performed an ISCO injection application in May (round 1) and September (round 2) 2015 to address the remaining residual contamination at the Site in lieu of costly repair of the SVE and GTS. The SVE and GTS equipment remains on site in the event that re-activation is required in the future. However, system components may need repair and/or replacement prior to re-activation. The next site-wide groundwater sampling and laboratory analysis event is scheduled for Q3 2023. Future groundwater sampling events will be conducted to track the effects of the ISCO injections on impacted groundwater and to evaluate seasonal changes in water table elevations. In addition, the evaluation of groundwater flow direction and movement of plume at the site will be monitored and recorded during future sampling events.

NOTES

btoc = Below top of casing (inner riser) All measurements are in feet, referenced to Mean Sea Level
NS = Not Sampled
ND = No floating product encountered
Minimum purge volume = 3 X well volume, 0.163 gallon per foot in a 2" diameter well. 0.653 gallon per foot in a 4" diameter well.
Monitoring well MW-19 was removed and the area restored on July 23, 2003 immediately after the well was developed, purged of 3 volumes and sampled.
The borehole for MW-19 was backfilled with a cement-bentonite grout after the PVC screening and casing was successfully removed.
Wells MW-19R, MW-20 and MW-21 were installed in October 2004.

NS= This well not included in this sampling event.
ND = Not Detected. results less than Method Detection Limit.
Impacted north property line wells: MW-5. MW-6. MW-7. MW-16. MW-17. MW-21
All compounds are measured in parts per billion (ppb).
VOC - Volatile Organic Compounds.
DUP - Duplicate Sample
EB - Equipment/Field Blank Sample
* - Sample was broken in transit and not able to be analyzed
DWS- Different Well Sampled than previously tested.

Total VOCs values are not the total VOCs detected, but the sum of TCE, CIS, TRANS, VC, and TCA detected.

Plume Area = MW-1, MW-11, MW-12, MW-14, MW-15, MW-7, MW-17, MW-6

% reduction = percent reduction in total Volatile Organic Compounds (VOCs) since groundwater monitoring was initiated

†Negative values indicate an increase in total VOCs since monitoring commenced in 2002. The percent increase in total groundwater VOCs is shown below for MW-1.

Total VOCs values are not the total VOCs detected, but the sum of TCE, CIS, TRANS, VC, and TCA detected.

Laboratory Results for: Q2 Gowanda 2023

Dear Ariadna,

Enclosed are the results of the sample(s) submitted to our laboratory May 19, 2023
For your reference, these analyses have been assigned our service request number **R2304484.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7476. You may also contact me via email at Chris.Leavy@alsglobal.com.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

Sample Receipt:

Twenty water samples were received for analysis at ALS Environmental on 05/19/2023. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Volatiles by GC/MS:

Method 8260C, 05/31/2023: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Laboratory Results for: Q2 Gowanda 2023

Dear Ariadna,

Enclosed are the results of the sample(s) submitted to our laboratory May 19, 2023
For your reference, these analyses have been assigned our service request number **R2304485.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7476. You may also contact me via email at Chris.Leavy@alsglobal.com.

Respectfully submitted,

REPORT QUALIFIERS AND DEFINITIONS

U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.

J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).

B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.

E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.

E Organics- Concentration has exceeded the calibration range for that specific analysis.

D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.

* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.

H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.

Spike was diluted out.

+ Correlation coefficient for MSA is <0.995.

N Inorganics- Matrix spike recovery was outside laboratory limits.

N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.

S Concentration has been determined using Method of Standard Additions (MSA).

W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.

P Concentration >40% difference between the two GC columns.

C Confirmed by GC/MS

Q DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).

X See Case Narrative for discussion.

MRL Method Reporting Limit. Also known as:
LOQ Limit of Quantitation (LOQ)
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.

MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).

LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.

ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.
