Niagara Mohawk
A National Grid Company

August 4, 2005

Mr. Scott Deyette
New York State Department of Environmental Conservation
Division of Environmental Remediation
625 Broadway
Albany, New York 12233

Re: Site Characterization Data Summary for Oswego (West Utica St.) Former Manufactured Gas Plant, Oswego, New York

Dear Mr. Deyette:

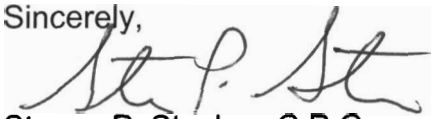
Please find attached the *Site Characterization Data Summary Report, Oswego (West Utica St.) Former MGP in Oswego, New York* prepared by Brown and Caldwell Associates. This Site Characterization (SC) Data Summary Report comprises tables, figures and logs that relate the findings of the initial SC activities, and is being submitted in accordance with: the *Site Characterization/Interim Remedial Measure Work Plan for Site investigations at Oswego Non-Owned Former MGP Site* (EECS, Inc., January 2004) (hereafter referred to as the "SC Work Plan"); the August 17, 2004 letter addendum to the SC Work Plan; and the Voluntary Consent Order (VCO) between the New York State Department of Environmental Conservation (NYSDEC) and Niagara Mohawk, A National Grid Company (Niagara Mohawk) dated January 25, 2002.

The Data Usability Summary Report (DUSR), presenting the results of the independent validation of the analytical data for the initial SC, was previously submitted to the NYSDEC.

Data and information obtained during the SC investigation activities indicate that MGP-related constituents are present at the site. Niagara Mohawk recommends that a Remedial Investigation (RI) be conducted at this site to further evaluate the nature and extent of the MGP-related constituents and assess whether remedial activities are required to address them. Accordingly, Niagara Mohawk would like to schedule a meeting with the NYSDEC to discuss the findings of the SC and potential RI activities. After you have had an opportunity to review the attached SC Data Summary Report, please contact me to schedule this meeting.

Please contact me at (315) 428-5652 if you have any questions.

Sincerely,



Steven P. Stucker, C.P.G.
Senior Analyst

Notes:
U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit. The method detection limit is the associated numerical value.
J - Estimated concentration. The result is below the quantitation limit but above the method detection limit.
D - The sample was diluted.
UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported method detection limit is approximate and may or may not represent the actual limit of the quantitation necessary to accurately and precisely measure the analyte in the sample.
E - Value exceeds calibration range.
SB - Site Background. Site background concentrations have not been established.
NE - Not established.
NA - Not analyzed.
ND - Not detected.
Boxed values indicate concentrations above the NYSDEC Recommended Soil Cleanup Objectives. Boxed and X rejected value.

°C - degrees centigrade
mS/cm - milliSiemens per centimeter
mV - millivolts
mg/l - milligrams per liter
NTU - nephelometric turbidity units

TABLE 5

SUMMARY OF VISUAL/OLFACTORY FIELD OBSERVATIONS
Oswego (West Utica St.) MGP Site

Location	Depth (ft., BGS)	Description
Soil Borings		
B-102A	6-8	Moderate tar odor
	8-10	Strong iridescent sheen. Intermittent brown-black NAPL @8.5-10.
	10-12	Black-brown viscous NAPL coat fragments of sandstone. Strong iridescent sheen. Strong tar odor.
	12-12.8	Strong tar odor (in Till)
B-105	8-10	Slight petroleum odor in lower part of sample.
	14-16	14.1-14.3: Slight tar odor in sand lens
B-105A	2-4	Slight tar odor.
	4-6	@4.8: wood with little black-brown NAPL. Stong tar odor. Sheen.
	6-8	Wood fragments with black-brown NAPL, stains. Tar odor. Few droplets of NAPL on water in sample.
	8-10	Droplets of NAPL on water in sample. Tar odor.
	10-12	Moderate tar odor
	12-14	Slight tar odor, slight sheen.
	14-16	Faint tar odor
	16-18	Dark yellow-light brown NAPL throughout soil sample. Stong tar odor, slight petroleum odor. Strong sheen.
	18-20	Black stain @19.8. Droplets of NAPL. Strong sheen. Stong tar odor.
	20-21.1	Local black stains. Strong tar odor.
B-106	2-4	Moderate detergent-like odor. Sheen on water in borehole.
	4-6	@5.8: black sand and gravel, wood fragments with stong tar odor and sheen.
	10-12	Black stain. Strong sheen. Petroleum odor.
	12-14	Slight tar odor, slight sheen.
	14-16	Slight sheen.
	16-18	Slight tar odor.
	20-21.4	@20.5: strong tar odor, sheen. @ base of sample: black stain, strong tar odor.
MW-101	4-6	@5.2-5.6: Black stain with moderate tar odor.
	6-8	Intermittent black stain. Tar odor.
	8-10	Intermittent black stain. Tar odor.
	10-12	Faint tar odor. (Top of till).
	12-14	Slight tar odor.
	14-16	Slight tar odor.
	16-18	Moderate tar odor.
	18-20	Moderate tar odor.
	20-20.4	Moderate tar odor.

TABLE 5

SUMMARY OF VISUAL/OLFACTORY FIELD OBSERVATIONS
Oswego (West Utica St.) MGP Site

Location	Depth (ft., BGS)	Description
MW-102	0-2	Faint tar odor.
	4-6	Occasional dark mottling of soil.
	8-10	In Till: NAPL coating gravel grains in till; Silt & Clay in till matrix is mottled with NAPL and stained. Sheen. Tar odor.
	10-12	Black stained mottles or layers throughout sample. NAPL in pockets (usually associated with gravel grains). NAPL is brown-black and iridescent. Strong sheen. Strong tar odor.
	12-14	Black, iridescent NAPL mottling and/or veins throughout sample and coating gravel. Strong tar odor.
	14-16	Black, iridescent NAPL in pockets and/or veins throughout sample. Moderate tar odor..
	16-18	Occasional black mottling of soil. Moderate tar odor.
MW-103	6-8	Slight tar odor.
	8-10	Slight tar odor.
		Note: Collected soil samples from well screen interval only--See description of adjacent boring B-105 for description of soil from above and below.
MW-104		No observations or odor indicative of MGP-related materials.
Test Pits		
TP-101A	0.5	Moderate tar odor.
TP-101B	0.5-1.5	Lens of nearly-solid tar on west side of pit (outside of holder wall).
	3	Thin layer of LNAPL on surface of water east (inside) of holder wall. Gasoline odor.
TP-102	3	East-west pipe cast iron (±12 in. diameter) with slight tar odor.
	8	Initially, a thin, clear LNAPL layer was observed on water surface with gasoline odor. Later, dark NAPL with strong tar odor flowed into pit.
TP-103	3.5	East-west pipe cast iron (±12 in. diameter) with slight tar odor.
	5.5	Groundwater in pit with sheen.
TP-104A		South side of sewer line: No observations or odor indicative of MGP-related materials.
TP-104B		North side of sewer line:
	4	Moderate tar odor.
	5	Groundwater in pit with moderate tar odor and sheen. Thin layer of clear LNAPL on water surface.
	6	Strong tar odor. Sheen. (Note: GC fingerprint analysis indicate 30W lubricating oil).
Monitoring Wells/Piezometers		
MW-101		No observations or odor indicative of MGP-related materials.
MW-102		Tar-like odor during 12/16/04 groundwater sampling.
MW-103		Slight petroleum odor during 12/16/04 groundwater sampling.
MW-104		No observations or odor indicative of MGP-related materials.
