1. EXECUTIVE SUMMARY

a) Summary

- i) This Periodic Review Report (PRR) is required as an element of the Site Management Plan (SMP) instituted at 140 Steamboat Road (also known as the Alert Fire Company Property) in Great Neck, NY (hereinafter referred to as the "Site") administered by New York State Department of Environmental Conservation (NYSDEC). The Site was remediated in accordance with Voluntary Cleanup Agreement (VCA), Site No.: V00522, which was executed on May 30, 2002. A Site investigation was performed and identified soils in several areas contaminated with volatile organic compounds and semi-volatile organic compounds. Contaminated soils were excavated and disposed off-Site. Upon completing the soil removal, the excavation was backfilled with clean soil. Currently the Site is vacant with the exception of a two-story garage on-slab located in the southern portion of the property. The remainder of the Site consists of an open grass covered area. All on-Site buildings are evaluated for soil vapor intrusion. An air sparge and soil vapor extraction system (AS/SVE) was installed to remediate on-Site groundwater contamination and the system is expected to control sub-slab soil vapor beneath the adjacent Fire House Building. After completion of the remedial work required by the Remedial Action Work Plan (RAWP) in April 2018 an SMP was instituted to: (1) implement, maintain and monitor Institutional and Engineering Control (IC/ECs) systems; (2) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination and groundwater use restrictions; and, (3) limit the use and development of the Site, including industrial use and restricted commercial use excluding day care and child care. The purpose of this Periodic Review Report is to document that the IC/ECs remain in place and continue to be effective.

b) Effectiveness of the Remedial Program

A summary of the results of the periodic monitoring described in this report are as follows:

- i) The AS/SVE System and soil vapor mitigation measures are engineering controls for this Site. Deed restrictions were imposed on the Site serving as an Institutional Control. The Institutional Control remains in place and specifically restricts the use of the property to industrial use and restricted commercial use excluding day care and child-care.
- ii) Groundwater sampling events were conducted on December 29, 2020 and July 2, 2021. Tetrachloroethylene was detected above the groundwater guidance value of 5 ug/l in MW-2S at a concentration of 28.6 ug/L in the sample collected December 29, 2020 and in MW-2I at a concentration of 17.2 ug/L in the sample collected July 2, 2021. Sub-slab, indoor and outdoor

PERIODIC REVIEW REPORT
140 STEAMBOAT ROAD
GREAT NECK, NY

October 7, 2021

vapor samples were collected on January 14, 2021. Tetrachloroethylene was detected at a concentration of 980 ug/m³ in the sub-slab sample within the fire house basement. Comparing vapor sampling results to the NYSDOH Decision Matrices indicated no further action required; however, the results were close to the mitigation level of 1,000 ug/m³. A decision was made to continue operating the SVE system to mitigate the risk within the fire house.

- c) Compliance
 - i) Based on the soil vapor sampling results, a determination was made to increase the horsepower of the extraction blower to maintain vacuum beneath the fire house. The upgraded SVE blower was operational as of September 15, 2021.
 - ii) AS/SVE was operating effectively until the soil vapor extraction blower mechanically failed on April 12, 2021. An upgraded replacement blower was installed and the AS/SVE was re-started on September 15, 2021. No other areas of non-compliance with the SMP or the operation of Institutional/Engineering Controls were noted. No Site improvements have been made to change the use of the Site from industrial or commercial use.
- d) Recommendations
 - i) H2M does not recommend any changes to the SMP or annual inspection schedule at this time.

PERIODIC REVIEW REPORT
140 STEAMBOAT ROAD
GREAT NECK, NY

October 7, 2021

2. SITE OVERVIEW

The subject property, located at 140 Steamboat Road in Great Neck, New York, is also known as the Alert Fire Company, and encompasses approximately 0.16 acres. The Deed Restriction for the property identified the tax map number as Section 001, Block 17, Lot 107. The Site was remediated in accordance with Voluntary Cleanup Agreement (VCA) Site No.: V00522. The Site location and boundaries are shown on Figure 1.

Currently the Site is vacant with the exception of a two-story, 750 square foot garage on slab located in the southern portion of the property. The garage is currently used to store a fire engine, associated maintenance equipment and materials. The remainder of the Site consists of an open grass covered area. The Site is zoned commercial and is currently used by the Alert Fire Company as a garage. The Site is not occupied.

According to a Phase I Site Assessment by Kost Environmental Services, Inc. in 1993, the Site initially comprised a one-story concrete block building (i.e., main building) and a one-story concrete block garage which were constructed in 1950. The property was utilized as a dry cleaner with the main building used for offices and a shop, and the garage used for storage. The garage building was later expanded to the current two-story garage.

From 1988 to 1993, it was reported that the property was not utilized. Prior to 1988, Pristine Cleaners occupied the Site with the main building used for dry cleaning operations and offices. Tetrachloroethylene (PCE) was used at the Site. During the Kost Phase I, a five-gallon pail recessed into the ground in the southern portion of the main building was identified and may have been used for drainage purposes. Two subsurface drainage structures or drywells (DW-1 and DW-2) were identified during a geological survey. The drainage structures were suspected to have been connected to a roof drain from the former building or a surface drain from a paved area on the north side of the former building. The Phase I Site Assessment reported that the former building was demolished circa March 1998.

Phase II Environmental Assessments were conducted at the Site in August and October 1998 by C.E. Boss Company, Inc. Soil borings identified PCE and semi-volatile organic compound (SVOC) contamination in Site soils.

The Site was entered into the VCP Program in May 2002. Between 2004 and 2009, H2M conducted a remedial investigation to further define the nature and extent of contamination. Contaminants of concern identified during the remedial investigation were tetrachloroethylene (PCE), benzo(a)pyrene, benzo(b)fluoranthene, benzo(a)anthracene, benzo(k)fluoranthene, dibenz(a,h)anthracene,

PERIODIC REVIEW REPORT
140 STEAMBOAT ROAD
GREAT NECK, NY

October 7, 2021

indeno(1,2,3-cd)pyrene and chrysene. The contaminants of concern exceeded the applicable Standards, Criteria and Guidance (SCG) established for the Site in groundwater, soil, soil vapor and indoor air.

The soil vapor component of the remedial investigation was conducted at on-Site and off-Site properties in six phases. The concentration of PCE in soil vapor was detected as high as 30,000,000 ug/m³ beneath the location of the former dry cleaning building at 5 feet below grade during the first phase of sampling.

In 2005, PCE was detected at concentrations ranging from 4.7 ug/m³ to 3,600,000 ug/m³ in soil vapors along the perimeter of the Site and at 190 ug/m³ in an indoor air sample from the basement of the adjacent firehouse. To the east, PCE was detected at 31,000 ug/m³ within 50 feet of the Site but was non-detectable 90 feet east of the Site. PCE concentrations in soil vapor were significantly lower northwest and northeast of the Site. PCE was detected in sub-slab soil vapor and indoor air samples collected from the on-Site garage at 8,100 ug/m³ and 23 ug/m³ respectively. PCE was detected in the sub-slab soil vapor sample collected from the adjacent firehouse basement floor at 640,000 ug/m³. PCE was detected in the indoor air samples from the firehouse basement, first floor and second floor at 2,000 ug/m³, 44 ug/m³ and 20 ug/m³, respectively.

In 2006, PCE was detected at 1,900 ug/m³ in the sub-slab vapor sample and 3.3 ug/m³ in the indoor air in the basement of a residential property located 75 feet southwest of the Site. The Alert Fire Company (AFC) has since acquired the residential property. The Alert Fire Company initially intended to demolish the residence and construct a garage on the property. At this time, the residence is presently vacant. Should the residence be planned for demolition and new construction planned, an evaluation must be performed for potential soil vapor intrusion and whether any mitigation methods are required. PCE and its breakdown products were non-detectable in both indoor air samples collected from the basement and the first floor of the religious center located approximately 140 feet east of the Site.

In 2009, to further evaluate for possible off-Site migration of soil vapor contamination, sampling was conducted at private residential properties to the west-southwest and southwest of the Site. At a private residence on Morris Lane to the west-southwest, PCE was detected in a sub-slab soil vapor sample at a concentration of 8.94 ug/m³ and at a concentration of 2.71 ug/m³ in an indoor air sample. At a private residence on Potters Lane to the southwest, PCE was detected in a sub-slab vapor sample at a concentration of 27.8 ug/m³ and at a concentration of 0.934 ug/m³ in an indoor air sample. No further actions were performed at the private residences based on a comparison of the PCE sampling data

PERIODIC REVIEW REPORT
140 STEAMBOAT ROAD
GREAT NECK, NY

October 7, 2021

with decision matrices and action levels identified in the NYSDOH Final Soil Vapor Intrusion Guidance (October 2006).

In 2009, based on the RI data, an interim remedial measure (IRM) for soils was completed to remove PCE impacted soils in the source area located in the central section of the Site, and SVOC impacted soils in two drywells and at the pipe terminus leading to drywell No. 2. Prior to implementing the IRM, additional soil borings were conducted in and around the source area to define the extent of PCE-impacted soils. PCE concentrations ranged from non-detectable to 8,800 ppm. Approximately 74 tons of PCE-impacted soils and 27 tons of SVOC-impacted soils were removed and disposed of off-Site at a permitted facility. Confirmatory endpoint sampling results showed two compounds chrysene and benzo(b)fluoranthene slightly above the unrestricted use SCOs (1100 ppb and 1200 ppb respectively vs 1000 ppb) and only one compound chrysene, slightly exceed the protection of groundwater SCOs (1100 ppb vs 1000 ppb). Upon completion of the soil removal, the excavation was backfilled with clean soil.

Based on isoconcentration contours developed from the multiple rounds of soil vapor testing during the remedial investigation, PCE concentrations in excess of 100 ug/m³ relative to the property lines were estimated to extend approximately 200 feet west of the Site, approximately 130 feet south of the Site, less than 75 feet east of the Site and less than 50 feet north of the Site. The only buildings within this isoconcentration contour are the on-Site garage, adjacent fire house and vacant house. Any new building on tax lots 4, 103, 106,107 and 203 will be evaluated for soil vapor intrusion if new construction is planned. A tax map is shown on Figure 2.1.

With NYSDEC approval, in 2013, an air sparge/soil vapor extraction (AS/ SVE) system was installed at the Site. Extracted vapors were treated by granulated activated carbon prior to discharge. On-Site groundwater was monitored and sub-slab vapor was monitored. In September of 2017, the AS/SVE system was modified to remediate the groundwater around the fire house.

A Deed Restriction was implemented as an Institutional Control to prevent future Site activities that result in direct contact with contaminated subsurface soils and groundwater. Uncontrolled excavations, which could potentially expose subsurface soils with residual contamination, are prohibited, and as an additional Institutional Control, an Excavation Work Plan requirement has been implemented, which is summarized in the Site Management Plan (SMP). Since the remedy resulted in some contamination remaining at the Site, a long-term monitoring program is required. This program allows the effectiveness of the selected remedy to be monitored and continues to be a component of the operation and maintenance for the Site. This Periodic Review Report is part of this requirement.

**PERIODIC REVIEW REPORT
140 STEAMBOAT ROAD
GREAT NECK, NY**

October 7, 2021

The AS/SVE system was temporarily shut down on January 18, 2019 until the next heating season as approved by the NYSDOH. Based on the groundwater sampling results from July 2020, the AS/SVE system was re-started. The on and off-Site buildings were sampled for soil vapor intrusion (SVI) on January 14, 2021. Results indicated no further action was required to mitigate the sub-slab vapor; however, results were close to the limit for mitigation and the system remained operational. The SVE blower failed in April 2021. An upgraded blower was installed and started in September 2021.

3. EVALUATION OF REMEDY PERFORMANCE, EFFECTIVENESS AND PROTECTIVENESS

The SMP was approved by the NYSDEC and implemented in April 2018. To evaluate the remedy performance, an inspection was performed of the Site on September 15, 2021 by H2M. The institutional/engineering control of surface cover, air sparge and soil vapor extraction systems were inspected for performance, effectiveness and protectiveness. All paved and unpaved areas of the Site were inspected. No significant cracks, settlement or deterioration of the paved areas were observed. No pavement material has been removed. No signs of vehicular traffic were observed on the unpaved areas of the Site, with the exception of landscape equipment. No new structures or improvements have been made on the unpaved areas of the Site. No problems were identified with the landscaped areas of the Site. There was no evidence of soil washing or erosion on-Site. No evidence of drilling, digging, trenching, grading or excavations were present. No changes have been made to adversely affect the remedy.

The on and off-Site buildings will be sampled for soil vapor intrusion during the upcoming heating season (2021-2022) to determine if continued operation of the AS/SVE system is needed. The periodic groundwater monitoring will continue until the remedial objectives have been achieved, or until the NYSDEC, in consultation with the NYSDOH, determines that continued monitoring is not necessary because the remedial goals were achieved, or the concentration of contaminants are asymptotic.

4. IC/EC PLAN COMPLIANCE REPORT

The institutional/engineering control on-Site is an AS/SVE system. The AS/SVE was operating until the SVE vacuum blower failed in April 2021. The SVE blower was upgraded to increase vapor removal on-Site and restarted in September 2021. No corrective measures are recommended at this time. Please see the attached Certification Forms for evaluation of the surface cover in Appendix A and Appendix B.

PERIODIC REVIEW REPORT
140 STEAMBOAT ROAD
GREAT NECK, NY

October 7, 2021

5. MONITORING PLAN COMPLIANCE REPORT

A Site-wide inspection was performed to evaluate the maintenance of the Site cover in accordance with the SMP. The air sparge and soil vapor extraction systems were inspected weekly. Operational parameters were compared to design requirements. Semi-annual groundwater sampling was performed in accordance with the SMP. Sub-slab and indoor air samples were collected and analyzed for TO-15 in accordance with the SMP.

Groundwater samples were collected in December 2020 and July 2021. The NYSDEC TOGS Class GA Standards and Guidance Value is 5 ug/L for PCE. PCE exceeded the guidance value in one well MW-2. Exceedances are documented in Table 1.

Table 1. Groundwater Exceedances in the Current Monitoring Period

Date	Contaminant	Monitoring Well	SCG	Level
12/29/2020	PCE	MW-2S	5 ug/L	28.6 ug/L
7/2/2021	PCE	MW-2I	5 ug/L	17.2 ug/L

See **Table 2** for a full list of all groundwater sampling results for VOCs. Please see **Figure 3** for groundwater monitoring well sample location. Laboratory results are included in **Appendix C**.

A Soil Vapor Intrusion sampling event was performed on January 14, 2021. One (1) sub-slab vapor sample and one (1) indoor air sample was collected from the on-Site garage (SS-3B, IA-3B), the adjacent vacant residence (SS-3A, IA-3A) and adjacent fire house basement (SS-3C, IA-3C). Air samples were analyzed for volatile organic compounds via method TO-15 and results were compared to the NYSDOH Guidance for Evaluating Soil Vapor Intrusion Matrices A/B/C May 2017 Update. PCE was detected at a concentration of 980 ug/m³ in the sub-slab sample within the fire house basement. Comparing vapor results to the NYSDOH Decisions Matrices indicated no further action required; however, the results were close to the mitigation level of 1,000 ug/m³. See **Table 3** for additional analytical results detailing the sub-slab vapor sampling. Laboratory results are included in **Appendix C**.

6. OPERATION & MAINTENANCE (O&M) PLAN COMPLIANCE REPORT

The following system components were inspected for function and maintained as required: air sparge compressor, soil vapor extraction blower, vapor phase carbon filter, moisture separator, trailer conditions, pitot tubes, level switches, electrical control boxes and panel. The AS/SVE was operating

PERIODIC REVIEW REPORT
140 STEAMBOAT ROAD
GREAT NECK, NY

October 7, 2021

until the SVE vacuum blower failed in April 2021. The SVE blower was upgraded to increase vapor removal on-Site and restarted in September 2021.

7. OVERALL PRR CONCLUSIONS AND RECOMMENDATIONS

The Site is in compliance with the terms set forth in the SMP and the Institutional/Engineering Control of a surface cap and vapor mitigation system are being maintained properly. Maintenance of the surface cap and vapor mitigation system will ensure the protection of human health in the future.

The on and off-Site buildings will be sampled for SVI testing during the upcoming heating season 2021-2022. The AS/SVE system will be turned off at least one month prior to this next round of soil vapor intrusion sampling. Additionally, monitoring for vapor intrusion will continue for any buildings occupied or developed on-Site including the garage if the current use changes, and on the adjacent properties owned by the Alert Fire Company.

The following tasks shall be completed in association with the SMP:

1. Continue monitoring the groundwater and soil vapor to assess the performance and effectiveness of the remedy;
2. Monitoring for vapor intrusion for any buildings occupied or developed on-Site, on the adjacent properties owned by the Alert Fire Company, and if the use of the on-Site garage changes in the future.

APPENDIX A

CERTIFICATION FORMS

Enclosure 2
NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
Site Management Periodic Review Report Notice
Institutional and Engineering Controls Certification Form

**Site Details****Box 1**

Site No. V00522

Site Name Alert Fire Company Site

Site Address: 140 Steamboat Road Zip Code: 11024
City/Town: Great Neck
County: Nassau
Site Acreage: 0.160

Reporting Period: September 17, 2020 to September 17, 2021

YES NO

1. Is the information above correct?

If NO, include handwritten above or on a separate sheet.

2. Has some or all of the site property been sold, subdivided, merged, or undergone a tax map amendment during this Reporting Period?

3. Has there been any change of use at the site during this Reporting Period (see 6NYCRR 375-1.11(d))?

4. Have any federal, state, and/or local permits (e.g., building, discharge) been issued for or at the property during this Reporting Period?

If you answered YES to questions 2 thru 4, include documentation or evidence that documentation has been previously submitted with this certification form.

5. Is the site currently undergoing development?

 Box 2

YES NO

6. Is the current site use consistent with the use(s) listed below?
Commercial and Industrial

7. Are all ICs in place and functioning as designed?

**IF THE ANSWER TO EITHER QUESTION 6 OR 7 IS NO, sign and date below and
DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.**

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

Signature of Owner, Remedial Party or Designated Representative

SITE NO. V00522

Box 3

Description of Institutional Controls

<u>Parcel</u>	<u>Owner</u>	<u>Institutional Control</u>
	Alert Engine, Hook and ladder and Hose C	
		Ground Water Use Restriction
		Landuse Restriction
		Building Use Restriction
		Monitoring Plan
		Site Management Plan
		O&M Plan
		IC/EC Plan
		Soil Management Plan
Imposition of an institutional control in the form of a deed restriction for the controlled property that:		
a.	requires the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8 (h)(3);	
b.	allows the use and development of the controlled property for restricted commercial excluding day care, child care and industrial uses as defined by Part 375-1.8(g), although land use is subject to local zoning laws;	
c.	restricts the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYS Department of Health (DOH) or Nassau County DOH;	
d.	prohibits agriculture or vegetable gardens on the controlled property; and	
e.	requires compliance with the Department approved Site Management Plan.	

Box 4

Description of Engineering Controls

<u>Parcel</u>	<u>Engineering Control</u>
	Vapor Mitigation
	Air Sparging/Soil Vapor Extraction

The AS/SVE system and soil vapor intrusion mitigation measures.
Inspection of concrete slab in the fire house, on-site garage and a vacant residence.

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

- a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the Engineering Control certification;
- b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES NO

2. For each Engineering control listed in Box 4, I certify by checking "YES" below that all of the following statements are true:

- (a) The Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;
- (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;
- (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;
- (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and
- (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES NO

**IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and
DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.**

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

APPENDIX B

ANNUAL INSPECTION FORM

Annual Inspection Form

140 Steamboat Road Great Neck NY

Inspector's Name:	Joseph Loesch	Weather Conditions:	Sunny
Inspection Date:	09/15/2021	Air Temperature (°F):	80
Inspection Time:	12:00	Comments:	
<hr/>			

A. Vapor Mitigation/Air Sparge/Soil Vapor Extraction – Inspection

- 1. Walk and inspect the entire perimeter of the Site.**
- 2. Walk and inspect all of the paved areas (concrete and asphalt) of the Site.**
- 3. Walk and inspect all of the unpaved areas of the Site.**

- Are there any signs of significant cracks, settlement or deterioration of the paved areas? NO
- Has any of the pavement material been removed? NO
- Are there signs of vehicular use on the unpaved areas (tire tracks, rutting, etc.)? NO
- Have any structures been constructed on the unpaved areas? NO
- Inspect landscaped area(s). Any problems identified? NO
- Are there any signs of soil washing or erosion (gullies, soil washed out onto pavement)? NO
- Are there any signs of intrusive activities (drilling, digging, trenching, grading, excavating, etc.)? NO
- Are the AS/SVE systems functional and operational? YES
- Have any modifications been made to the vapor mitigation system? YES
- Comments: System SVE Blower Upgraded

B. Repair

Summarize needed/completed repairs to Engineering Controls: NONE

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 30, 2020 and listed below. The project was identified as your project: **ALFC 1301 Groundwater Sampling**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 20L1316

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

- QR-02 The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
- QM-01 The spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
- ICV-E The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
- CCV-E The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
- Cal-E The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
- B Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 06, 2021 and listed below. The project was identified as your project: **ALFC1301 Alert**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 21G0148

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

- VOA-HDSP Sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).-NON-COMPLIANT
- U Analyte included in the analysis, but not detected
- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
- CCV-E The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 15, 2021 with a temperature of C. The project was identified as your project: **ALFC 1301**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 21A0588

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

- TO-VAC The final vacuum in the canister was less than -2 inches Hg vacuum. The time integrated sampling may be affected and not reflect proper sampling over the time period. The data user should take note.
- TO-LCS-L The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
- TO-IPA The value for isopropanol is estimated. Dilutions are not conducted for this species as not to preclude actionable analytes by dilution.
- TO-CCV The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
- QR-01 Analyses are not controlled on RPD values from sample concentrations less than 10 times the reporting limit. QC batch accepted based on LCS and/or LCSD QC results.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
- B Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

- * Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
- ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
- RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
- LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
- LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
- MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
- Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
- NR Not reported
- RPD Relative Percent Difference
- Wet The data has been reported on an as-received (wet weight) basis
- Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
