RE: Drywell Closure Report
Safeguard Storage Properties LLC Facility
1170 Atlantic Avenue
Baldwin, New York 11510

Dear Mr. Lovejoy:

Enclosed please find one (1) copy of the Drywell Closure Report prepared by ATC Associates, Inc. (ATC) in relation to the closure of one (1) drywell at the facility referenced above.

As documented within the drywell closure report, analytical results obtained from an endpoint sample indicate that elevated concentrations of volatile organic compounds, in excess of the applicable New York State Department of Environmental Conservation (NYSDEC) standards, remain in the vicinity of the former drywell. However, the endpoint soil sample was collected from 12.5-13.5 feet below ground surface (approximately seven (7) feet below shallow groundwater). Any impacts to groundwater will be addressed in the Voluntary Cleanup Program with the NYSDEC.

If you have any questions regarding this report, please feel free to call our office.

Sincerely,

ATC ASSOCIATES INC.

Nicole I. Gorelick

1.0 INTRODUCTION

Safeguard Storage Properties LLC retained ATC Associates Inc. (ATC) to close one (1) abandoned drywell at the Safeguard Storage Property LLC Facility located at 1170 Atlantic Avenue, Baldwin, New York (the "Site"). The general location of the Site is illustrated on Figure 1.

On December 21, 2004 and February 2, 2005, ATC supervised the removal of approximately six (6) tons and 12.45 tons, respectively, of impacted soil from the drywell at the Site. The closure of this drywell is regulated by the Nassau County Department of Health (NCDH) and was performed under NCDH oversight. The following provides the drywell closure report for the drywell closure program performed at the Site.

2.0 HISTORICAL OVERVIEW

ATC performed a Phase I Environmental Site Assessment (ESA) of the Site. The Phase I ESA identified an abandoned drywell at the Site. A liquid sample from the abandoned drywell located at the southeast portion of the Site was collected and submitted for laboratory analysis of volatile organic compounds (VOCs). This method was selected because a prior occupant of the Site (Lightalarms Electronics Corp.) is known to have used chlorinated VOCs in metal parts cleaning/degreasing. Three (3) chlorinated VOCs were detected in this liquid sample; however none were detected in excess of applicable criteria.

A sludge sample was also collected from the sediments within the drywell. This sediment sample was submitted for analysis of semi-volatile organic compounds (SVOCs), VOCs under EPA Method 8260, total petroleum hydrocarbons (TPH) and 8 RCRA heavy metals. These parameters are required by NCDH when evaluating and closing drywells.

Laboratory analysis of the drywell sludge sample detected only chromium and mercury at concentrations that slightly exceeded applicable regulatory limits. No VOCs or SVOCs were detected in the sludge sample.

Since the drywell is no longer active, in accordance with NCHD regulations, ATC recommended this drywell be closed.

3.0 REMEDIAL ACTIVITIES

On December 21, 2004, Brookside Environmental (Brookside) was on site with a backhoe to remove the soils above the drywell. These soils were stockpiled adjacent to the drywell. Following the removal of the soils above the drywell, RGM Liquid Waste Removal (RGM) utilized a guzzler-truck to remove the contaminated sludge/soils and water from the interior of the drywell Refer to Appendix A for a copy of the waste disposal manifest. Since the drywell is in close proximity to the Milburn Creek, the cleanout was preformed at low tide to minimize the flow of groundwater into the drywell. Soil was removed to a depth of 11.5-feet below ground surface (bgs) until no visual or olfactory evidence of contamination was observed. At that time an endpoint sample (DW-1) was collected and submitted for analysis of NCHD parameters for closing drywells. The parameters included are listed below:

- Total Petroleum Hydrocarbons (TPH USEPA Method 8015)
- RCRA Metals (USEPA Method 6010)
- Volatile Organic Compounds (VOC USEPA Method 8260)
- Semi-Volatile Organic Compounds (SVOC USEPA Method 8270)

The endpoint sample as well as a field and trip blank was submitted to AmerSci Laboratories of Weymouth, MA (ELAP #10982) a New York State Department of Health certified laboratory.

As the analytical results indicate, elevated concentrations of VOCs were detected above the applicable NYSDEC soil cleanup standards in the soil sample.

Therefore, a follow up soil excavation took place on February 2, 2005, and was preformed by Trade Winds Environmental (Trade Winds). Soils in the drywell were excavated to a total depth of 13.5-feet bgs and stockpiled in a roll-off adjacent to the drywell. Following the removal of the impacted soils an endpoint sample (DW-2) was collected and submitted for analysis of NCHD parameters as described above. Following the removal of the impacted soils, 40 yards of clean fill was placed in the drywell. Refer to Appendix B for a copy of the clean fill receipt. The excavated soils were placed in a lined roll-off container which was stored on site. A waste characterization sample was collected. Upon receipt of the waste classification results, the soil was transported to Clean Earth of Maryland for proper disposal. Refer to Appendix C for a copy of the executed manifest.

4.0 SOIL ANALYTICAL RESULTS

Analytical soil results from DW-1 detected elevated concentrations of VOCs, TPHs, SVOCs, and Metals. With the exception of two (2) VOCs (1,1-Dichloroethane and 1,1,1-Trichloroethane) and one metal (Arsenic), none of these concentration were detected in excess of their NYSDEC standards. With respect to 1,1-Dichloroethane, 1,1,1-Trichloroethane and Arsenic, these concentrations were detected above their NYSDEC standards. Therefore, the follow-up excavation activities were performed. Refer to Table 1 for a Summary of Analytical Soil Results and to Appendix D for the soil sample analytical report.

Analytical soil results from DW-2 detected elevated levels of VOCs and Metals. With the exception of two (2) VOCs (1,1-Dichloroethane and 1,1,1-Trichloroethane) none of these concentration were detected in excess of their NYSDEC standards. With respect to 1,1-Dichloroethane, 1,1,1-Trichloroethane, these concentrations were detected above their NYSDEC standards. Refer to Table 1 for a Summary of Analytical Soil Results and to Appendix E for the soil sample analytical report.

5.0 CONCLUSIONS AND RECOMMENDATIONS

On December 21, 2004, approximately six (6) tons of impacted sludge/soils were removed from the drywell to a depth of 11.5-feet bgs. The endpoint soil sample detected elevated of VOCs that were above the applicable NYSDEC standards. A follow-up soil excavation was performed on February 2, 2005 and an additional 12.45 tons of impacted soils were removed to a final depth of 13.5 bgs. At the direction of the NCHD, clean fill was used to backfill the drywell.

Based on these activities, the majority of the impacted soils within this former drywell have been removed. Futher, soil removal activities extended approximately seven (7) feet into shallow groundwater. Since Safeguard is in a Voluntary Cleanup Program (VCP) with the NYSDEC any impact to groundwater will be addressed during the VCP program.

2,4-Dichlorophenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
1,2,4-Trichlorobenzene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Naphthalene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Hexachlorobutadiene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
4-Chloro-3-methylphenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
2-Methyl Naphthalene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Hexachlorocyclopentadiene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
2,4,6-Trichlorophenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
2,4,5-Trichlorophenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
2-Chloronaphthalene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Acenaphthylene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Dimethyl Phthalate	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Acenapthene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
2,4-Dinitrophenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
2,4-Dinitrotoluene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
4-Nitrophenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Fluorene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
4-Chlorophenyl Phenyl Ether	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Diethyl Phthalate	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
2-Methyl-4,6-dinitrophenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
N-Nitrosodiphenylamine	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
4-Bromophenyl Phenyl Ether	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Hexachlorobenzene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Pentachlorophenol	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Phenanthrene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Anthracene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Di-n-butylphthalate	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Fluoranthene	EPA 8270C	ND	ug/Kg	1200	LMS	02/03/2005	
Benzidine	EPA 8270C	ND	ug/Kg	5800	LMS	02/03/2005	

Certifications: MA: MA069 NY:10982 CT: PH0119 RI:A45 CA:2050 NJ: 59744
ND = Not Detected **PQL= Practical Quantitation Limit**
