1

1.0 Organization of CQC Team

The CQC team shall be organized as depicted in Figure 1 (below). Descriptions and duties of the various personnel are as follows:

1.1 Project Engineer

The Project Engineer, David MacDougall of D.A. Collins (DAC), shall be responsible for the following tasks and duties:

- Development and implementation of the CQC Plan.
- Management and oversight of the CQC Manager, Project Superintendent, and DAC Subcontractors.
- Review and delivery of project submittals related to the CQC Plan.

1.2 Project Superintendent

The Project Superintendent, Mike Landon of DAC, shall be responsible for the following tasks and duties:

- Coordination with the Project Engineer and CQC Team in order to schedule CQC inspections and testing.
- Compliance with any CQC requirements that may govern project construction activities.
- Monitoring of dredge depth and QA/QC activities in conjunction with dredge operator using hydrographic software package, GPS sensors and telemetry gauges.

1.3 CQC Manager

The CQC Manager will be Scott Serviss of DAC. The CQC Manager shall be responsible for the following tasks and duties:

- Managing and documenting activities related to CQC at the CSXT Genesee River site in accordance with this CQC Plan.
- Directing the CQC inspection staff, D.A. Collins employees, subcontractors, and laboratories in the execution of the CQC Plan.
- Reporting directly to DAC's Project Engineer, David MacDougall.
- Responsible for receipt and review of field-testing results, laboratory results, and related CQC data from the field inspection staff.
- Submission of Daily Activity Reports (DAR), and Quality Control Summary Reports to the Client.
- Construction water discharge quality and turbidity monitoring.

A copy of this CQC Plan has been provided to the CQC Manager and Superintendent in order to fully describe their responsibilities and authority.

1.4 CQC Inspectors

The CQC Inspectors shall include the following personnel:

- Thew Associates (Hydrographic and land survey, qualifications submitted under separate cover)
- Cable Arm (Dredging QC specialist, qualifications submitted under separate cover)
- Riverside Towing (Commercial diver)

Field inspection activities to be performed or supervised by the CQC Inspectors include the following. Refer to the summary chart attached to this plan for a detailed list of inspection tasks and specifications.

- Construction dewatering samples of treated water, sampled at the frequencies specified in accordance with discharge criteria provided by NYS DEC for the CWMP.
- Inspection of the Turbidity Control Barrier and documentation including deployment configuration(s), inspection logs, repair documentation, and related operational notes.
- Inspection of sediment excavation (dredging) limits, and verification of waste transportation and disposal.
- Inspection of sediment solidification and handling. Performance of Resistance to Penetration testing and paint filter sampling.
- Inspections during installation of subaqueous cap.
- Underwater inspection of dredging activities to provide verification of excavation upon completion.

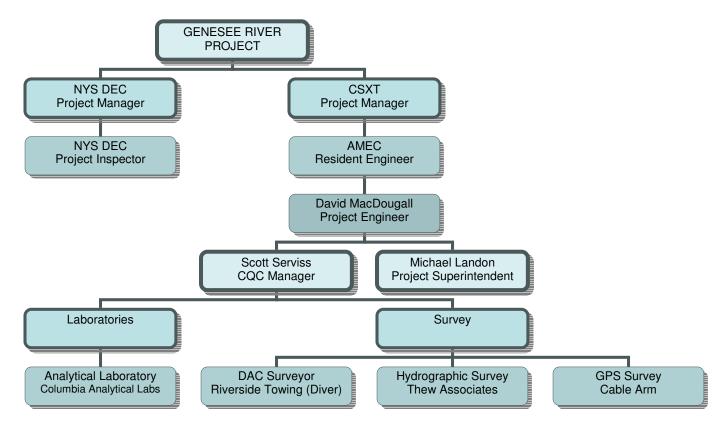

FIGURE 1 – CQC ORGANIZATION CHART

2.0 Submittals

Submittal procedures shall be managed and directed by the Project Engineer. In general submittal procedures and schedules shall include the following:

- The Project Engineer shall request subcontractor, manufacturer, and fabricator submittals prior to delivery of materials or site services. This information shall be submitted to the Engineer as soon as it is available.
- The CQC Manager shall collect laboratory test reports and field inspection reports and submit them to the Project Engineer. The Project Engineer shall review all submittals prior to submission to the Engineer.

3.0 Construction Deficiencies

Upon identification of a deficiency, the Engineer and Contractor will be informed verbally, and where necessary the verbal notification is immediately confirmed in writing. Additionally the CQC Manager will mark a descriptive entry on the daily CQC report. A Deficiency Log will be maintained to track corrective actions and to confirm that the deficiencies have been satisfactorily resolved. Also, a Deficiency Report Form will be completed which will document the corrective action, change in procedure, work practices, or other actions taken to prevent reoccurrence. The Deficiency Log and Report Form are attached to the CQCP.

4.0 Laboratories

The following laboratories shall be utilized in implementation of this CQC Plan

| TYPE OF SERVICE | LABORATORY |
|-----------------------|-------------------------------------|
| Analytical Laboratory | Columbia Analytical (Rochester, NY) |

5.0 Turbidity Control Barrier

The outer deflection barrier and inner containment barrier will be maintained and inspected in accordance with the manufacturer's SOP. Daily surface inspections will be performed by the CQC Manager. Turbidity curtain inspections will also be performed after every stormy/windy day. All observations will be recorded using the Turbidity Control Barrier Inspection Logs (attached).

Table 1 - CQC Summary Table

| Section | Task Description | Method | Frequency | Inspector | Laboratory | Notes |
|---------|-------------------------------|---|---|--------------------------------|------------------------|---|
| 1500 | Construction Dewatering | pH, Oil & Grease, TSS, EPA 8260 | In accordance with CWMP. | D.A. Collins | Columbia Analytical | Certify permit compliance |
| | | Record | Post installation Daily surface check | D.A. Collins | Field | Deployed configuration, daily inspection logs (attached) |
| 2921 | Turbidity Control Barriers | Turbidity Monitor | Daily, Real Time | Cable Arm | Field | Work area turbidity monitoring for early warning. Engineer to perform perimeter turbidity monitoring. |
| | | Acetone and Methylene Chloride Analysis (Method 8260) | One sample per day | AMEC | Columbia Analytical | As determined by Engineer. |
| | | Paint filter test | One test per 100CY | DAC | Columbia Analytical | Required for landfill disposal (US only) |
| 1640 | Sediment | Resistance to Penetration test | One test per 100CY | DAC | Field | Required for landfill disposal (Canada only) |
| | Processing | Acetone and Methylene Chloride Analysis (Method 8260) | One sample per 100CY | AMEC | Columbia Analytical | Required for waste characterization and landfill selection. |
| | | Hydrographic Surveys | Off-shore surveys to verify pre- and post dredging elevations | Thew Assoc. & CableArm | Field | For record drawings & volume calculations. |
| 2900 | Dredging | Underwater Observation | As needed. | Riverside Towing (Diver) | Field | As needed to inspect turbidity controls, locate debris, & verify dredging activities. |
| | | Confirmatory - Chemical Analysis | Post final backfill | AMEC | Columbia Analytical | Verify the acetone and methylene chloride cleanup levels. |
