FOIL  
REL UNREL

Dear Mr. Glazer,

The following has been prepared to address the sampling in the area of the removed USTs and excavation of petroleum-contaminated material from 303 Woodward Ave. in Tonawanda, New York. The following attachments are provided in support of this report:

- Drawing 1 Site Excavation Sketch and Sample Locations
- Attachment 1 Analytical Data
- Attachment 2 Waste Manifests
- Attachment 3 Town of Tonawanda Industrial Sewer Connection Permit
- Attachment 4 NYSDEC Emergency Waste Transporter Permit

Environmental Service Group (ESG) was contracted by the Town of Tonawanda, the property owner, to excavate one 5,000-gallon UST, one 8,000-gallon UST, and one 500-gallon AST. All tanks were cut, cleaned and transported to a metal recycler. Tank bottoms were drummed and scheduled for transportation and disposal. In addition, the piping was cleaned and removed.

Contaminated soil was found in the tank area and was subsequently excavated. The excavated material was screened using a PID until readings were below 25 ppm or until further excavation would not be possible due to property limits or underground utilities. The excavation was then sampled. A total of 5 samples were collected in the area: 4 sidewall composite samples (north, south, east, and west) and one floor composite sample. All samples were screened with a PID for volatile compounds for headspace analysis. The 4-sidewall samples were collected at a depth of approximately three to seven feet below ground surface. The floor samples were collected at a depth of approximately eight to ten feet. All confirmatory soil samples were analyzed for NYSDEC STARS parameters for volatile and semi-volatile compounds. A copy of the confirmatory soil excavation analysis is included as Attachment 1.

A total of approximately 570 tons (by truck count) of contaminated soils were sent to the Town of Tonawanda Landfill for disposal. Copies of the waste disposal manifests are included as Attachment 2. To control groundwater in the area, an Industrial Sewer Connection Permit from the Town of Tonawanda Sewer Authority was obtained to allow

discharge to the sanitary sewer (Attachment 3). An NYSDEC Emergency Waste Transporter Permit was issued to the Town of Tonawanda for four trucks to be permitted to transport the contaminated soil to the Town of Tonawanda Landfill (Attachment 3).

All sample results met TAGM 4046 cleanup levels. Based on the analytical results, EnSol is satisfied that contaminated material was removed to the furthest extent practicable.

The results of sampling confirm that the excavation has been remediated sufficiently to warrant a "closed" status by NYSDEC.

Based on the discussion above, no further action is recommended. EnSol requests that NYSDEC give the site a "closed" status. Call me if you have any questions.

Sincerely,

**EnSol, Inc.**
