Remedy Proposed for Manufactured Gas Plant Site Public Comment Period Announced

To limit the community spread of COVID-19, Governor Cuomo issued Executive Order 202.15 suspending in-person public meetings relating to proposed site remedies. The NYSDEC remains committed to providing the public with ample opportunity to provide input on proposed remedies in your community. You are encouraged to provide comments in writing to the NYSDEC Project Manager, during the 30-day public comment period:

April 22 through May 22, 2020

The public is invited to comment on a remedy being proposed by the New York State Department of Environmental Conservation (NYSDEC) in consultation with the New York State Department of Health (NYSDOH) to address contamination related to the NYSEG – Auburn Green St MGP site (“site”) located on Green Street in the City of Auburn, Cayuga County, New York. Please see the map for the site location. The estimated cost to implement the remedy is \$511,000.

How to Comment: NYSDEC is accepting written comments about the proposed plan, called a Proposed Remedial Action Plan (PRAP) for 30 days, from **April 22** through **May 22, 2020**.

- Access the PRAP and other project documents online through the DECinfo Locator: <https://www.dec.ny.gov/data/DecDocs/706009/>.
- Documents also are available at the location(s) identified at left under “Where to Find Information.”
- Please submit comments to the NYSDEC project manager listed under Project-Related Questions in the “Who to Contact” area at left.

NYSDEC is proposing the following remedy to address the contamination at this MGP site:

Proposed Remedial Action Plan: The remedy proposed for the site includes:

- Excavating 27 cubic yards of contaminated surface soil to accommodate a site cover;
- Importing clean material that meets the established Soil Cleanup Objectives for use as backfill;

- Treating contaminated groundwater by enhanced bioremediation;
- Collecting and analyzing end-point soil samples and post-remedial groundwater samples to evaluate the effectiveness of the remedy;
- Implementing a Health and Safety Plan and Community Air Monitoring Plan during all ground intrusive activities;
- Implementing a Site Management Plan (SMP) for long term maintenance of the remedial systems; and
- Recording of an Environmental Easement to ensure proper use of the site.

NYSDEC developed the proposed remedy after reviewing the detailed investigation of the site and evaluating the remedial options in the "Feasibility Study" submitted under New York's MGP Program by New York State Electric and Gas (NYSEG).

Next Steps: NYSDEC will consider public comments as it finalizes the remedy for the site. The selected remedy will be described in a document called a "Record of Decision" that will explain why the remedy was selected and respond to public comments. A detailed design of the selected remedy will then be prepared, and the cleanup will be performed.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Site Description: The NYSEG - Auburn Green St. MGP site is a 0.6-acre rectangular shaped area located in a mixed commercial/residential area of the City of Auburn, Cayuga County. The site is bordered by Green Street to the east, Water Street to the north, Hulbert Street to the west, and a parking lot to the south. The site formerly contained a Manufactured Gas Plant (MGP) distribution holder. This holder received gas generated at other nearby MGPs. The foundation and lower walls of a former MGP gas holder are present beneath the surface of the site.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, 706009) at:

<http://www.dec.ny.gov/cfmx/extapps/derexternal/index.cfm?pageid=3>

Summary of the Investigation: The primary contaminants of concern at this site include arsenic in surface soils, volatile organic compounds (VOCs), semi-VOCs, and arsenic in subsurface soils, and VOCs, SVOCs, and cyanide in groundwater. Subsurface soil and groundwater are most heavily impacted within the remaining foundation and lower walls of the former MGP gas holder.

Manufactured Gas Plant Program: New York's MGP Program oversees the investigation and cleanup of former MGP sites. These sites undergo a process of investigation, evaluation, cleanup and long-term monitoring.

The gas manufacturing process involved the heating of coal and/or petroleum products to produce a gas mixture. Once cooled and purified, the gas was distributed through a local pipeline network. The gas was used for heating and cooking much like natural gas is used today. In the early years, the gas was also used for lighting in homes and streetlights.

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
