TE No. 932014 Summer 2025

NYSDEC REGION 9

FMC Corporation Site, Middleport, NY Off-Site Cleanup

State Superfund Program

100 Niagara Street, Middleport, NY 14105

WHO TO CONTACT

Comments and questions are always welcome and should be directed as follows:

QUESTIONS RELATED TO THE OFFSITE CLEANUP:

Anna Calderon, Project Manager Department of Environmental Conservation (NYSDEC), Division of Environmental Remediation 625 Broadway, 12th Floor Albany, NY 12233-7017 Phone: (518) 402 - 9583 Email: anna.calderon@dec.ny.gov

David Prusak

Remediation Project Manager FMC Corporation 2929 Walnut Street Philadelphia, PA 19104 Phone: (215) 299 - 5977 Email: david.prusak@fmc.com

HEALTH-RELATED QUESTIONS:

Stephanie Selmer, Project Manager Department of Health (NYSDOH), Bureau of Environmental Exposure Investigation
Corning Tower, Room 1787
Albany, NY 12237
Phone: (518) 402 - 7860
Email: stephanie.selmer@health.ny.gov

FMC COMMUNITY OFFICE:

FMC Community Liaison 8 South Vernon Street Middleport, NY 14015 Phone: (716) 735 - 9769 Email: Middleport.Community@fmc.com

FOR INFORMATION ON NEW YORK'S STATE SUPERFUND PROGRAM, SITE NO. 932014:

https://www.dec.ny.gov/chemical/54220 .html The New York State Department of Environmental Conservation (NYSDEC) is overseeing the comprehensive cleanup of arsenic and other contamination by FMC Corporation (FMC) involving a multi-year cleanup of properties nearby and adjacent to the FMC facility (Site No. 932014) located at 100 Niagara Street in Middleport, Niagara County, New York. This work complies with requirements in the May 2013 Final Statement of Basis for Air Deposition Area #1 (2013 FSOB) and a 2019 consent order between the parties. These documents specify the required cleanup activities, which include removal of impacted soil from residential and commercial parcels in the community, called Operable Units or OUs (OU2 and OU5), and from the Royalton-Hartland Central School District (Roy-Hart) Middleport campus (OU4). The NYSDEC-selected remedy includes removal of arsenic in soils to levels that meet site-specific state health and environmental guidelines

and, when removal is not an option, implementing actions to prevent potential human health exposures.

Prior to FMC conducting the work, NYSDEC conducted extensive cleanup activities from 2015 through 2020 through the state's Superfund program. FMC took over implementation of the remedy for remaining properties in 2021 and will continue that work in 2025.

Cleanup activities for this season began in April 2025 and will continue through the fall. Construction activities may include, but are not limited to, removal of building slabs and 2 feet of soil on certain industrial/commercial parcels; removal/replacement of Elizabeth Street; soil removal/ sampling; and restoration activities throughout the area.

FMC continues to meet with owners of affected properties, including those

identified for remedial construction activities, to review and discuss their data, the proposed remedial plans and restoration activities, and to obtain their consent for the work to take place. This is consistent with the process completed in prior years.

Highlights of Activities Planned for 2025

In 2025, FMC will be continuing remedial construction activities on remaining OU2 properties and OU5 properties located north of the Erie Canal. NYSDEC and the New York State Department of Health (NYSDOH) will review and approve the remedial plans prior to implementation by FMC. A NYSDEC field representative will inspect and oversee the work performed by FMC's contractors and consultants to ensure it is consistent with state standards and guidelines to protect the community.

OU2 consists of Air Deposition Area 1, south of the Erie Canal and west of the Niagara/Orleans County Line (See Figure 1), OU5 consists of Culvert 105 and Flood Zone (See Figure 2), with the proposed work to include:

- Soil sampling and remediation at one vacant residential property south of the Erie Canal on Telegraph Road.
- Soil remediation of the former Norco parcels. This work will include removal and replacement of Elizabeth Street.
- Excavated soils, demolition debris, and other materials removed from the properties will be disposed of at permitted disposal facilities. Truck traffic patterns are designed to minimize traffic on Village of Middleport roads, to the extent practicable, and to maintain public safety along the truck routes and within and near the work areas.
- The existing construction staging area located on Telegraph Road (Route 31) will continue to be used.
- "Soft"-mobilization in Reach C3 of OU5, including tree removal and access point construction in preparation for 2026 remedial activities.
- Pre-Design Investigation (PDI) activities including, but not limited to, survey and soil sampling will occur on properties in OU3 - Air Deposition Area 2, and OU6 - Tributary One and Flood Plain South of Pearson/Stone Roads.
- Areas that are disturbed during cleanup will be restored as close to pre-existing conditions as reasonably practical in consultation with each property owner. All backfill materials will be tested to demonstrate that they meet NYSDEC requirements for protection of public health and the environment prior to use.

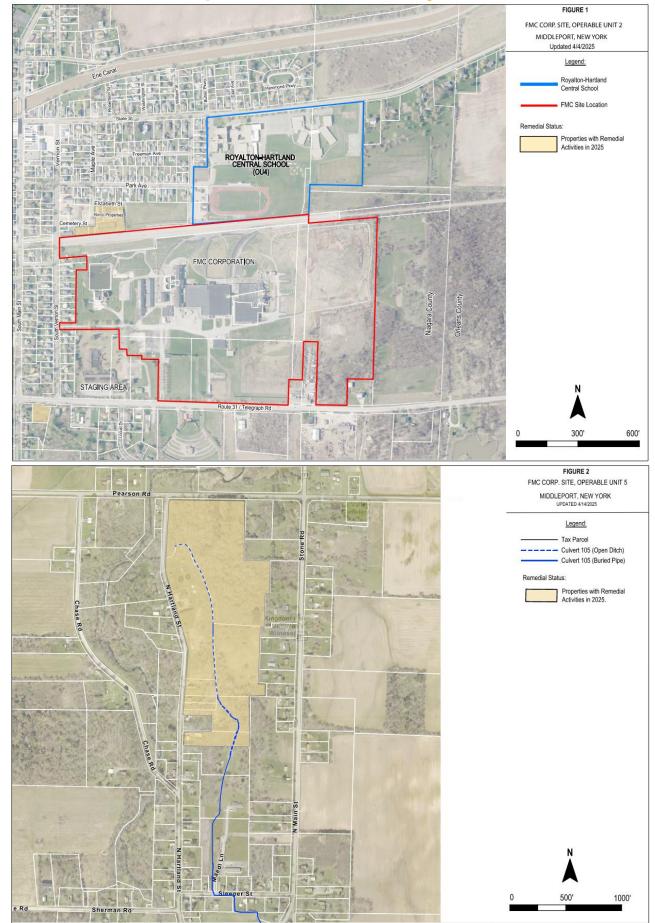

FMC has contacted, and will continue to work with, all affected property owners regarding permissible access
and information about the scope of the remedial construction activities and health and safety procedures. FMC
will keep affected property owners and residents updated with respect to the schedule and scope of the work
activities.

Site Background

The FMC facility is at southern portion of the Village of Middleport in Niagara County. The facility is bounded by residential properties to the west (along South Vernon Street), the Roy-Hart Middleport campus and commercial and residential properties to the north, agricultural lands to the east, and commercial properties and State Highway Route 31 to the south.

The plant site was formerly used for the manufacturing of pesticides, including products containing arsenic, between the 1920s and the 1980s. In the mid-1980s, the current site operation shifted from manufacturing to only formulation of pesticide products (i.e., mixing and packaging). Arsenic containing pesticides ceased to be made at the facility in the mid-1970s. FMC started implementation of a number of environmental studies and remedial programs in the 1970s. FMC is now completing remediation of the OUs associated with the Middleport facility as required by NYSDEC.

2025 Proposed Remedial Activity Locations

Community Safety During Construction Activities

FMC is committed to preforming the remediation construction work in a manner that will ensure safety. FMC and its contractors will work with the affected property owners and residents, Village of Middleport officials, NYSDEC and NYSDOH to complete remediation construction work in a safe manner that will also seek to minimize inconvenience and disruption to the community.

Safety precautions will include installation of construction fencing and signage around work areas to restrict access to only authorized personnel; providing appropriate traffic control and/or personnel to direct residents and the public safely around work areas and equipment; and continuing open and frequent communications regarding the construction activities, including reviewing property-specific safety plans with affected owners/residents including safe ingress/egress to their homes during construction on their properties.

A Community Air Monitoring Plan (CAMP) approved by NYSDEC and NYSDOH will include continuous air monitoring during ground intrusive activities as added protection to avoid the potential for any public exposure or impacts to the environment during the cleanup. Dust suppression techniques will be used whenever activities that might create airborne dust are preformed, including applying water in the work area and on the roads.

FMC Corporation is providing this fact sheet under DEC oversight pursuant to FMC obligations contained in the 2019 consent order governing cleanup activities at the site.

More information about the cleanup action is available at:
