RE: Second Data Submittal
Oak Materials - River Road 1, 2 and 3 (442008), Town of Hoosick,
Rensselaer County, New York
Former Oak Materials Fluorglas Division - John Street (442049),
Village of Hoosick Falls, Rensselaer County, New York

Dear Mr. McAuliffe:

This letter transmits the remaining validated analytical results from environmental sampling conducted at the above-referenced properties.

This sampling and analysis was conducted in accordance with the Final Phase 1 Site Characterization Field Sampling and Analysis Plan (SC FSAP) approved by New York State Department of Environmental Conservation (NYSDEC) (ERM, 2016). The sampling was performed at the above-referenced properties pursuant to the Order on Consent and Administrative Settlement Index Number CO 4-20160415-79 dated 3 June 2016 (the Order).

The data presented in this second data submittal include the results from the groundwater samples collected from sixty-four (64) groundwater monitoring wells in 2017 and from surface water and soil samples that were collected in 2016 but had not been validated at the time of the Initial Data Submittal, which was submitted on 14 February 2017.

Former Oak Materials Fluorglas Division – John Street (442049) – Hoosick Falls, New York
Oak Materials – River Road 1, 2 and 3 (442008), Town of Hoosick, New York
Second Data Transmittal – June 2017
NYSDEC Site Numbers 442008 and 442049
9 June 2017
Page 2

The data from both submittals will be combined and presented in the Site Characterization Report, which is under development.

Thank you and please contact me at 315-256-5352 if you have any questions.

Sincerely,

Jon Fox, P.G.
Principal Geologist

1.0

INTRODUCTION

This document transmits all remaining validated analytical results for environmental samples collected pursuant to the Phase 1 Site Characterization Field Sampling and Analysis Plan (SC FSAP) (ERM, 2016a) and the Additional Phase 1 Site Characterization scope of work (ERM, 2016b). The sampling was performed on and in the vicinity of the following properties pursuant to the Order on Consent and Administrative Settlement Index Number CO 4-20160415-79 (the Order).

- Oak Materials - River Road 1, 2 and 3 (442008) (River Road)
- Former Oak Materials Fluorglas Division - John Street (442049) (John Street)

An initial submittal of validated analytical data was transmitted on 14 February 2017.

1.1

SAMPLE COLLECTION

Sample media for the data included in this submittal include groundwater, soil, and surface water:

- River Road:
 - Three (3) surface water samples (OS-SW-001, -009, and -010)
 - Four (4) soil samples and three field duplicates from locations OS-B-011, -021, -022, and -023); and
 - Groundwater samples from thirty-four (34) newly installed monitoring wells.
- John Street:
 - One soil sample (OS-B-031 (15 to 17 ft)) and
 - Groundwater samples from thirty (30) newly installed monitoring wells.

The monitoring wells were installed at selected previous Waterloo Advanced Profiling System sampling and profiling locations. One, two, three or four overburden monitoring wells with different screened intervals were installed at each location. Shallow monitoring wells, designated "A", were screened at the water table. In the John Street area, intermediate wells, designated "B", were screened just below the clay unit near the top of the lower sand and gravel unit, and deep wells, designated "C" and "D", were screened near the bottom of the overburden deposits.

In the River Road area, wells designated "B" were screened near the bottom of the overburden deposits.

Sample collection methodologies were:

- Groundwater samples were collected from using low-flow sampling techniques;
- Subsurface soil samples were collected using direct-push sampling technology; and
- Surface water-designated samples were collected directly into laboratory-provided glassware.

Additional information on sample collection is provided in the SC FSAP and Additional Phase 1 Site Characterization scope of work.

All samples were analyzed for perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS) and 10 other perfluorinated compounds, collectively known as perfluorinated alkyl substances (PFAS) or, more commonly perfluorinated compounds (PFCs), as well as pH and Total Organic Carbon (TOC). Specific analytical methods include:

- PFCs by USEPA Method 537-1.1 (modified);
- Total Organic Carbon (TOC) by Lloyd Kahn method; and
- pH by Standard Method 9045D.

Select samples were also analyzed for one or more additional parameters:

- Target Compound List (TCL) and NYSDEC Spill Technology and Remedial Series Memorandum Number One (STARS-#1) Volatile Organic Compounds (VOCs) plus 10 tentatively identified compounds (TICs) by USEPA Method 8260;
- TCL and NYSDEC STARS-#1 Semivolatile Organic Compounds (SVOCs) plus 20 TICs by USEPA Method 8270C;
- Pesticides by USEPA Method 8081;
- Polychlorinated Biphenyls (PCBs) by USEPA Method 8082;
- Target Analyte List (TAL) metals by USEPA Method 6010B;
- Mercury by USEPA Method 7471A (soil) and 7470 (groundwater); and
- Total Cyanide by USEPA Method 9010.

Analytical results for the samples collected from on- and off-property locations at the former River Road and the former John Street facilities are summarized in Tables 1 through 8. Analytical results are also presented on the attached maps (Figures 1 to 9).

1.2

COMPARISION WITH STANDARDS, CRITERIA, AND GUIDANCE

Sample results were compared to potentially applicable NYS Standards, Criteria and Guidance (SCGs) by media as summarized below.

1.2.1

Groundwater

Groundwater results are compared to NYS ambient water quality standards and guidance values¹ (Class GA) for TCL and TAL constituents. No NYS ambient water quality standards or guidance values for groundwater are available for PFOA and PFOS.

1.2.2

Soil

Soil results are compared to NYS Soil Cleanup Objectives² (SCOs) for the current land use for TCL and TAL constituents while results for PFOA and PFOS are compared to the USEPA screening value³ for soil of 1,000 micrograms per kilogram ($\mu\text{g}/\text{kg}$) for the combined level of PFOA and PFOS.

1.2.3

Surface Water

Certain grab samples of water present at ground surface were designated surface water. These samples were in: 1) low lying areas where surface water accumulates; 2) areas of potential groundwater discharge; or, 3) drainage ditches or small creeks which may eventually lead to the Hoosic River. The locations of these samples do not directly fit an environment that is suitable for one or more of the best use classification for fresh surface water descriptions contained in 6 NYCRR Part 701.2 through 701.9. Therefore, the results of surface water samples are compared to the groundwater GA SCGs for TCL and TAL constituents and the USEPA HA for PFOA and PFOS set forth in Section 1.2.1.

¹ New York State Department of Environmental Conservation (NYSDEC) Division of Water Technical and Operational Guidance Series (TOGS) Memorandum 1.1.1 values for Class GA groundwater.

² New York State Department of Environmental Conservation (NYSDEC) Soil Cleanup Objectives (SCOs) Title 6 Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Subpart 375-6.8.

³ Developed by USEPA based on the Health Advisory for PFOA and PFOS of 70 ng/L for drinking water. <https://www.epa.gov/ny/hoosick-falls-water-contamination>

1.3

GEOLOGY AND HYDROGEOLOGY

Geologic units above bedrock in the area (collectively referred to as overburden units) typically consist of the following materials.

- Fine-grained alluvium (predominantly silt and clay) deposited adjacent to the Hoosic River channel.
- Coarse-grained alluvium, consisting predominantly of sand and gravel deposited in the Hoosic River channel.
- Silts and clays deposited in an ancient lake that previously existed in the Hoosic Valley.
- Glacial outwash (predominantly sand and gravel) deposited by meltwaters flowing from glacier ice during the ice ages.
- Glacial till, which is a typically dense, compact, poorly-sorted mixture of silt, clay, sand, gravel, cobbles, and boulders that was deposited beneath the glacier.

Groundwater flow in these overburden units is variable but generally flows toward the Hoosic River.

Bedrock in the area consists predominantly of dark gray to black slate mapped as the Walloomsac Formation. The bedrock stratigraphy and structural geology of the Hoosick Falls area is variable and complex. Groundwater flow in bedrock occurs predominantly through joints, fractures, faults, foliation, and other partings or separations in the bedrock.

2.0 OAK MATERIALS - RIVER ROAD 1, 2, AND 3

The River Road property is located in the Town of Hoosick and is comprised of former Plants 1, 2, and 3. The property is an approximate 11-acre property with buildings located on the northern and southern portions.

This data transmittal reports the results of the following samples:

- Groundwater samples from thirty-four (34) newly installed monitoring wells;
- Four (4) soil samples and three field duplicates from locations OS-B-011, -021, -022, and -023; and
- Three (3) surface water samples from locations OS-SW-001, -009, and -010.

2.1 PFOA AND OTHER PERFLUORINATED COMPOUNDS (PFC)

2.1.1 *PFOA and Other PFCs in Groundwater Monitoring Well Samples - River Road*

The analytical results for PFOA and other PFCs from groundwater samples collected from thirty-four (34) monitoring wells in on- and off-property locations and one 3-foot diameter concrete well, which is located off-property and appears to have been previously used as a water supply well (designated “old water well” in figures and tables) are presented in Table 1. PFOA results are shown on the map in Figure 1.

2.1.1.1 *On-Property Groundwater - River Road*

PFOA concentrations in groundwater from on-property monitoring wells ranged from less than the detection limit to a maximum of 660 J ng/L⁴. The highest concentration of PFOA was detected at RR-MW-004B, which is located at the western property boundary near Building 2. At locations with monitoring wells screened at two different depths, lower PFOA concentrations were observed in the sample from the deeper interval, with the exception of the RR-MW-004A/B pair.

⁴ “J” is a data qualifier that indicates an estimated value.

PFOS concentration ranged from below the detection limit to a maximum concentration of 3 J ng/L. Other PFCs were detected at concentrations ranging from below the detection limits to a maximum concentration of 26 ng/L.

2.1.1.2 *Off-Property Groundwater - River Road*

PFOA concentrations in groundwater from off-property monitoring wells and the old water well ranged from less than the detection limit to a maximum of 940 ng/L.

PFOS was detected in approximately one-half of the monitoring well samples with concentrations ranging from below the detection limit to 12 ng/L. Other PFAS were detected at concentrations ranging from 2 J to a maximum concentration of 120 ng/L.

2.1.2 *PFOA and Other PFCs in Soil - River Road*

The analytical results for PFOA and other PFCs in four soil samples and three duplicates collected from off-property locations are presented in Table 2. PFOA results are shown on the map in Figure 2, along with the previously transmitted off-site soil data.

PFOA concentrations in soil from off-property sampling locations ranged from below the detection limit to 3.2 µg/kg with no exceedances of the USEPA screening value of 1,000 µg/kg.

PFOS and other PFC concentrations ranged from below the detection limit to 1.3 J µg/kg with no exceedances of the screening value of 1,000 µg/kg.

These results are within the same range of soil concentrations that were reported in the initial data transmittal.

2.1.3 *PFOA and Other PFCs in Surface Water - River Road*

The analytical results for PFOA and other PFCs from surface water samples collected from three off-property locations are presented in Table 3. PFOA results are shown on the map in Figure 3, along with the previously transmitted surface water data.

PFOA concentrations in the three surface water samples ranged from 45 to 51 ng/L and are within the previously reported range of 40 to 230 ng/L.

PFOS and other PFC concentrations ranged from below the detection limit to 2 J ng/L.

These results are within the range of surface water concentrations that were reported in the initial data transmittal.

2.2 VOLATILE ORGANIC COMPOUNDS (VOCS)

2.2.1 *VOCs in Groundwater Monitoring Well Samples - River Road*

The analytical results for VOCs from groundwater samples collected from six monitoring wells in on- and off-property locations and the off-property old water well are presented in Table 4. The results for the monitoring well with VOCs that exceed NYS GA Standards are shown on the map in Figure 4.

2.2.1.1 *On-Property Groundwater - River Road*

Six VOCs - 1,1,2-trichloroethane (1,1,2-TCA), 1,1-dichloroethene (1,1-DCE), 1,2-dichloroethane (1,2-DCA), methyl tertiary butyl ether (MTBE), trichloroethene (TCE), and vinyl chloride were detected. Only 1,2-DCA and vinyl chloride exceeded their respective NYS GA Standards at one monitoring well, RR-MW-005B. This well is located in the center of the property in the same location as RR-APS-005 where VOCs were detected in discrete-depth groundwater samples. TCE was also detected but below its NYS GA Standard at the shallow well, RR-MW-005A. The buildings on the River Road property are currently not occupied.

2.2.1.2 *Off-Property Groundwater - River Road*

No VOCs were detected at concentrations exceeding NYS GA Standards or guidance in groundwater samples from off-property locations. TCE was detected at 0.9 J and 0.8 J µg/L at OS-MW-023A, which is located to the west of the River Road property along NY 22.

2.2.2 *VOCs in Surface Water - River Road*

The analytical results for VOCs in the three surface water samples collected from off-property locations are presented in Table 5.

No VOCs were detected in off-property surface water samples.

2.3 SEMIVOLATILE ORGANIC COMPOUNDS (SVOCS)

2.3.1 *SVOCs in Groundwater Monitoring Well Samples - River Road*

The analytical results for SVOCs from groundwater samples collected from two off-property monitoring wells are presented in Table 4.

No SVOCs were detected in the two groundwater samples.

2.3.2 *SVOCs in Surface Water - River Road*

The analytical results for SVOCs in three surface water samples collected from off-property locations are presented in Table 5.

No SVOCs were detected in surface water samples.

2.4 PESTICIDES

2.4.1 *Pesticides in Groundwater Monitoring Well Samples - River Road*

The analytical results for pesticides in the four groundwater samples collected from on- and off-property locations are presented in Table 5.

No pesticides were detected in the groundwater monitoring well samples.

2.4.2 *Pesticides in Surface Water - River Road*

The analytical results for pesticides in the surface water samples collected from off-property locations are presented in Table 7.

No pesticides were detected in the surface water samples.

2.5 POLYCHLORINATED BIPHENYLS (PCBS)

2.5.1 *PCBs in Groundwater Monitoring Well Samples - River Road*

The analytical results for PCBs in groundwater samples collected from six groundwater monitoring wells in on- and off-property locations are presented in Table 4.

No PCBs were detected in the groundwater samples from wells RR-MW-001A, OS-MW-001B, 007B, -009A, -011B, and -016A.

2.5.2 *PCBs in Surface Water - River Road*

The analytical results for PCBs in the three surface water samples collected from off-property locations are presented in Table 5.

No PCBs were detected in the three surface water samples.

2.6 *METALS*

2.6.1 *Metals in Groundwater Monitoring Well Samples - River Road*

The analytical results for metals in groundwater samples collected from monitoring wells at on- and off-property locations are presented in Table 5. The results for metals (other than iron, manganese and sodium) that exceed NYS GA Standards or guidance are shown on Figure 5.

2.6.1.1 *On-Property Groundwater - River Road*

Iron, manganese and sodium exceedances were detected in multiple wells. These metals are naturally occurring and are commonly found in groundwater. The use of sodium in road salt commonly contributes to its occurrence in groundwater.

Arsenic, chromium, lead and magnesium exceedances were detected. Antimony and selenium, which had been detected above NYS GA Standards in several Waterloo APS samples were not detected above Standards in the monitoring well samples.

2.6.1.2 *Off-Property Groundwater - River Road*

Iron, manganese and sodium exceedances were detected in multiple wells. These metals are naturally occurring and are commonly found in groundwater. The use of sodium in road salt commonly contributes to its occurrence in groundwater.

Several other metals (chromium, lead, magnesium, and zinc) were detected above their NYS GA Standards in several groundwater samples. Eight metals exceeded NYS GA standards at only one monitoring well OS-MW-005B, which is located to the southeast of the River Road property.

2.6.2 *Metals in Surface Water – River Road*

The analytical results for metals in the three surface water samples collected from off-property locations are presented in Table 5.

Metal concentrations did not exceed NYS GA Standards or guidance.

2.7 *TOTAL CYANIDE*

2.7.1 *Total Cyanide in Groundwater Monitoring Well Samples – River Road*

The analytical results for total cyanide in any of the six groundwater samples from on- and off-property locations are presented in Table 4.

Total cyanide was not detected in the six groundwater samples.

2.7.2 *Total Cyanide in Surface Water – River Road*

The analytical results for total cyanide in three surface water samples off-property locations are presented in Table 5.

Total cyanide was not detected in any of the three surface water samples.

2.8 *TOTAL ORGANIC CARBON (TOC) AND pH*

2.8.1 *TOC and pH in Groundwater Monitoring Well Samples – River Road*

The analytical results for TOC and pH from groundwater samples collected from on- and off-property locations are presented in Table 1. The results are also shown on the map in Figure 1.

2.8.1.1 *On-Property Groundwater – River Road*

TOC concentrations in groundwater ranged from below the detection limit to 2.7 mg/L.

The pH values in groundwater were slightly alkaline with values ranging from 7.1 to 7.8 and within the NYS GA Standard range of 6.5 to 8.5.

2.8.1.2 *Off-Property Groundwater – River Road*

TOC concentrations in groundwater ranged from below the detection limit to 2.7 mg/L.

The pH values in groundwater were near neutral to slightly alkaline and ranged from 6.9 to 8.6 and within the NYS GA Standard range of 6.5 to 8.5, with the exception of OS-MW-009B at 8.6.

2.8.2 *TOC and pH in Soil – River Road*

The analytical results for TOC and pH from soil samples collected from four off-property locations are presented in Table 2. The results are also shown on the map in Figure 2.

TOC concentrations ranged from below the detection limit to 12,500 mg/kg.

The pH values in soil from off-property locations range from 6.6 to 9.26.

2.8.3 *TOC and pH in Surface Water – River Road*

The analytical results for TOC and pH from three surface water samples collected from off-property locations are presented in Table 3. The results are also shown on the map in Figure 3.

pH values in the surface water samples were slightly alkaline at 7.9 for all samples and within the NYS GA Standard range of 6.5 to 8.5.

TOC was detected in the surface water samples at concentrations ranging from 3.1 to 3.3 mg/L.

3.0

FORMER OAK MATERIALS FLUORGLAS DIVISION - JOHN STREET

The Former Oak Materials Fluorglas Division - John Street (former John Street facility) is located in the Village of Hoosick Falls and is an approximate 0.6-acre property that is currently vacant. The former structure was demolished in 2012. The property is located in a mixed-use commercial and residential portion of the Village.

This data transmittal reports the results of the following samples:

- Groundwater samples from thirty (30) newly installed monitoring wells; two shallow wells (OS-MW-024A and OS-MW-028A) yielded insufficient water for sampling; and
- One (1) soil samples from location OS-B-031023.

3.1

PFOA AND OTHER PERFLUORINATED COMPOUNDS (PFCS)

3.1.1

PFOA and Other PFCS in Groundwater Monitoring Well Samples - John Street

The analytical results for PFOA and other PFCS from groundwater samples collected from twenty-eight (28) monitoring wells from on- and off-property locations are presented in Table 9. Concentrations of PFOA are shown on the map in Figure 6.

3.1.1.1

On-Property Groundwater - John Street

PFOA concentrations in on-property groundwater ranged from 140 J to 6,400 ng/L, which is similar to the range of 180 to 5,300 J ng/L observed in the previous Waterloo APS groundwater sampling.

PFOS was only detected in five of the 11 on-property groundwater samples. Concentrations of PFOS ranged from below the detection limit to a maximum concentration of 8 ng/L.

Other PFC concentrations ranged from below the detection limits to a maximum concentration of 160 ng/L.

3.1.1.2

Off-Property Groundwater - John Street

PFOA concentrations in groundwater samples collected from 17 off-property sampling locations ranged from below the detection limit to

4,400 ng/L and are similar to those detected in on-property groundwater samples. The highest concentration of PFOA was detected in the deep sand and gravel layer at well OS-MW-028C.

PFOS was only detected in eight off-property groundwater samples at a maximum of 14 J ng/L.

Other PFCs were detected at concentrations ranging from below the detection limit to a maximum concentration of 140 ng/L.

3.1.2

PFOA and Other PFCs in Soil – John Street

The analytical results for PFOA and other PFCs from one soil sample collected from an off-property location are presented in Table 10. Concentrations of PFOA are shown on the map in Figure 7, along with the previously transmitted off-site soil data.

PFOA concentration in off-property soil sample OS-B-031(15-17 feet) was 0.53 J µg/kg and was within the range from below the detection limit to 5.1 µg/kg that was reported for previous soil samples with no exceedances of the USEPA screening value of 1,000 µg/kg.

No other PFCs were detected.

3.2

VOLATILE ORGANIC COMPOUNDS (VOCS)

3.2.1

VOCs in Groundwater Monitoring Well samples – John Street

The analytical results for VOCs from 30 groundwater samples collected from on- and off-property locations are presented in Table 13. The results for monitoring wells with VOCs that exceed NYS GA Standards are shown on the map in Figure 8.

3.2.1.1

On-Property Groundwater – John Street

Seven VOCs were detected in groundwater from on-property locations at concentrations that exceed their respective NY GA Standards at one or more locations. No VOCs were detected above detection limits at JS-MW-004A and -004C and JS-MW-005.

Trichloroethene (TCE) and 1,1,1-trichloroethane (1,1,1-TCA) were detected in the shallow wells at concentrations similar to those detected in the shallow Waterloo APS samples previously reported.

Soil vapor intrusion evaluations have already been conducted at nearby occupied buildings as discussed below in Section 3.3.12.

3.2.1.2 *Off-Property Groundwater – John Street*

Seven VOCs were detected in groundwater at concentrations above their respective GA Standards. The highest concentrations of both TCE and 1,1,1-TCA were detected in samples from deep well OS-MW-026B with maximum concentrations of 1300 µg/L for TCE and 1700 µg/L for 1,1,1 TCA. The highest concentrations of TCE and 1,1,1-TCA in shallow groundwater were detected at OS-MW-031A at 56 and 160 µg/L, respectively.

Soil vapor intrusion evaluations were conducted at nineteen (19) buildings in the vicinity of the shallow monitoring wells where groundwater exhibited exceedances of VOCs. Data from these evaluations were previously submitted to NYSDEC.

3.3 SEMIVOLATILE ORGANIC COMPOUNDS (SVOCS)

3.3.1 *SVOCs in Groundwater Monitoring Well Samples – John Street*

The analytical results for SVOCs from one groundwater sample that was collected from an off-property location are presented in Table 13.

No SVOCs were detected in the off-property groundwater sample.

3.4 PESTICIDES

3.4.1 *Pesticides in Groundwater Monitoring Well Samples – John Street*

The analytical results for pesticides from one groundwater monitoring well sample collected from an off-property location are presented in Table 13.

No pesticides were detected in the off-property groundwater sample from monitoring well OS-MW-030D.

3.5 POLYCHLORINATED BIPHENYLS (PCBS)

3.5.1 PCBs in Groundwater Monitoring Well Samples – John Street

The analytical results for PCBs from one groundwater monitoring well sample collected from an off-property location are presented in Table 13.

No PCBs were detected in the sample from monitoring well OS-MW-030D.

3.6 METALS

3.6.1 Metals in Groundwater Monitoring Well Samples – John Street

The analytical results for metals from 28 groundwater samples collected from on- and off-property locations are presented in Table 13. The results for metals (other than iron, manganese and sodium) that exceed NYS GA Standards or guidance are shown on the map in Figure 9.

3.6.1.1 On-Property Groundwater – John Street

Four metals (iron, manganese, selenium, and sodium) were detected at concentrations that exceed their respective NYS GA Standards in one or more groundwater samples from on-property locations. The exceedance for selenium was detected at one monitoring well JS-MW-001A. No exceedance for cadmium, which was previously detected above the NYS GA standard in a Waterloo APS sample, was detected.

Iron and manganese are naturally occurring metals that are commonly found in groundwater. Sodium is a naturally occurring metal and its use in road salt commonly contributes to its occurrence in groundwater. Selenium is also a naturally occurring metals but is less commonly found in groundwater. Additional evaluation is needed to determine whether the detected concentrations are within background concentrations in the area.

3.6.1.2 Off-Property Groundwater – John Street

Seven metals (barium, chromium, iron, lead, magnesium, manganese and sodium) exhibited exceedances of NYS GA Standards in groundwater from off-property locations.

Barium and chromium exhibited only one exceedance each at monitoring wells OS-MW-030B and OS-MW-031B, respectively. The two lead and magnesium exceedances were also detected in these two wells.

3.7 TOTAL CYANIDE

3.7.1 *Total Cyanide in Groundwater Monitoring Well Samples - John Street*

The analytical results for total cyanide from the one groundwater monitoring well sample collected from an off-property location is presented in Table 13.

Total cyanide was not detected in the off-property groundwater sample from monitoring well OS-MW-031A.

3.8 TOTAL ORGANIC CARBON (TOC) AND PH

3.8.1 *TOC and pH in Groundwater Monitoring Well Samples - John Street*

The analytical results for TOC and pH from groundwater monitoring well samples collected from on- and off-property locations are presented in Table 9. The results are also shown on the map in Figure 6.

3.8.1.1 *On-Property Groundwater - John Street*

The pH values in on-property groundwater monitoring well samples were slightly alkaline and ranged from 7.3 to 8.7. The pH of only one sample (JS-MW-004C) was above the NYS GA Standard range of 6.5 to 8.5.

TOC concentrations ranged from 0.95 J to 31.9 mg/L.

3.8.1.2 *Off-Property Groundwater - John Street*

The pH values in off-property APS groundwater samples ranged from 6.9 to 8.8, which is within the NYS GA Standard range of 6.5 to 8.5. The pH of two samples (OS-MW-027C and OS-MW-030B) were above the NYS GA Standard range of 6.5 to 8.5.

TOC concentrations ranged from below the detection limit to 14 mg/L.

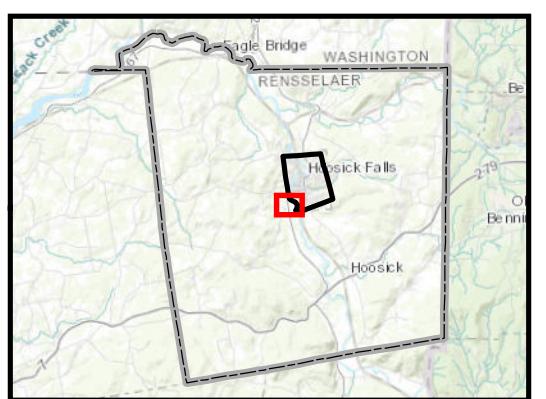

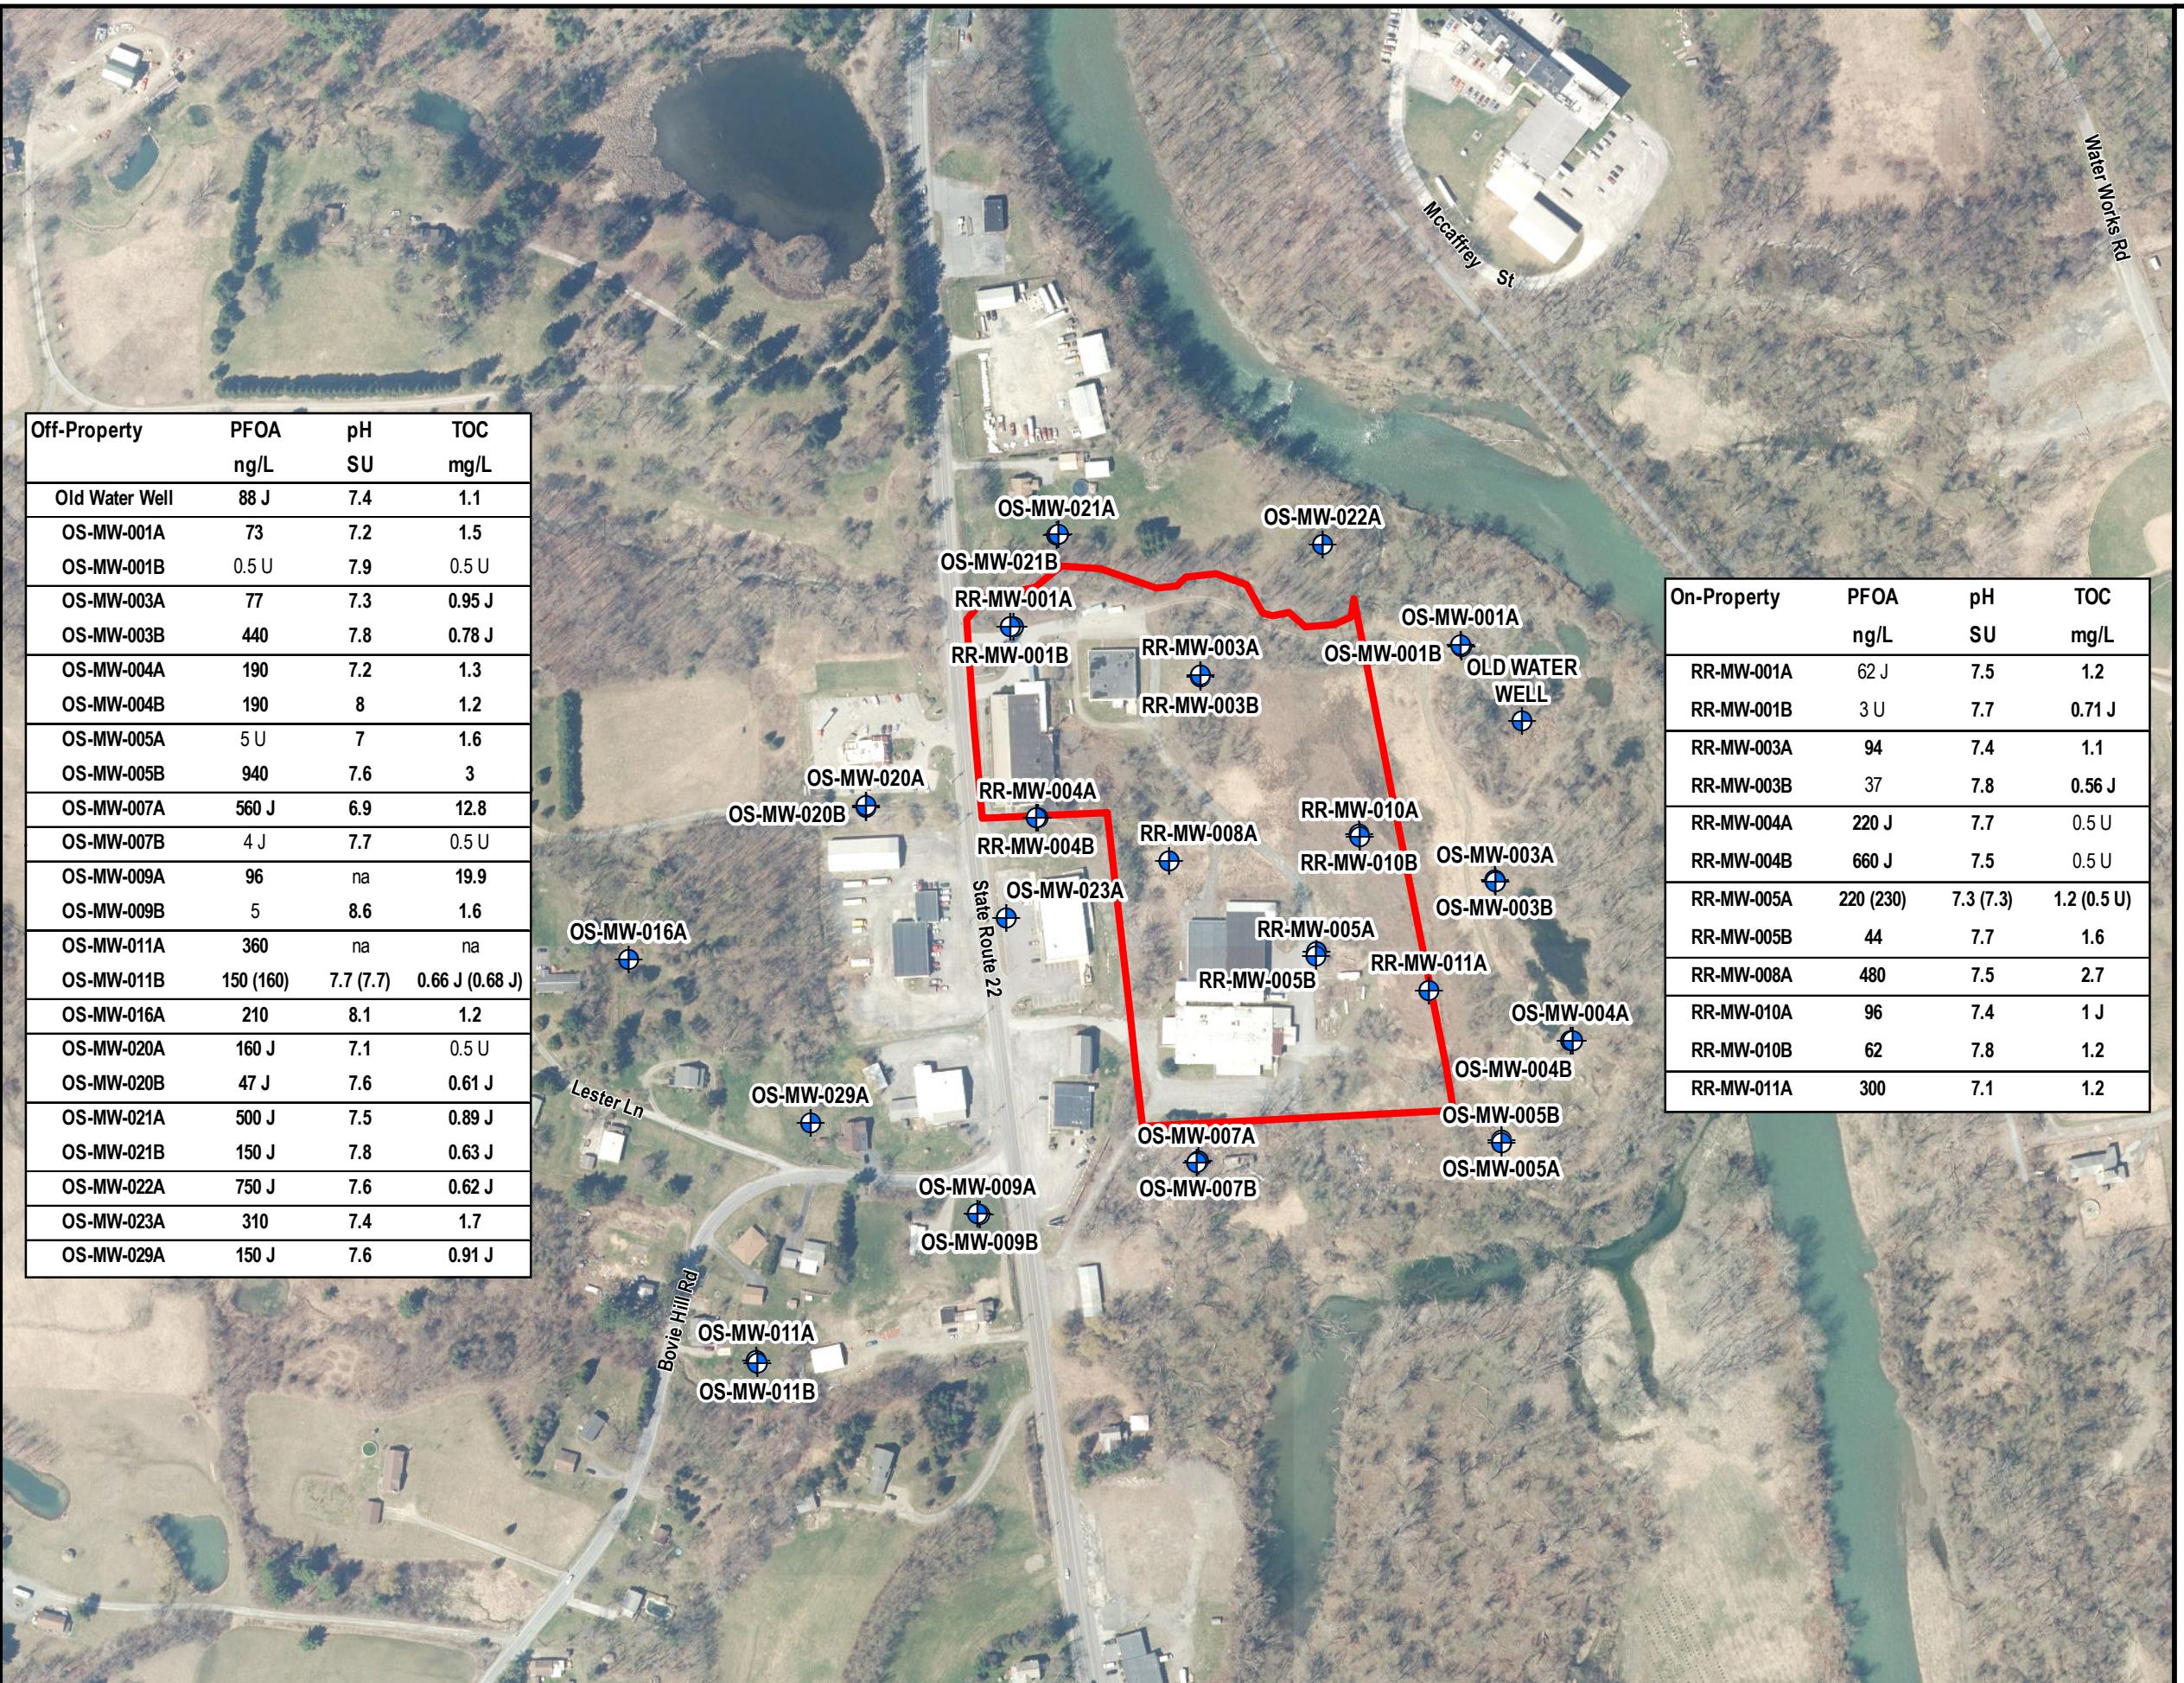

3.8.2

TOC and pH in Soil

The analytical results for TOC from the only soil sample collected from an off-property location is presented in Table 10. The result is shown on the map in Figure 7.

The TOC concentration was 2,050 mg/kg and within the range of 695 to 4,020 mg/kg that was reported for previous subsurface soil samples.

mg/L - milligrams per liter

U - Compound not detected

J - Estimated value

N - Primary sample

FD - Field duplicate sample

na - Sample not analyzed for this parameter

Bold value indicates detected value

Shaded value indicates value equal to, or greater than, standard or guidance

NYSDEC TOGS111 - Standards listed are the New York State Department of Envi

Series (TOGS) 1.1.1 values for Class GA groundwater.

 Exceedance of NYS GA Guidance

 Exceedance of NYS GA Standard

Notes and Abbreviations

µg/L - micrograms per liter

mg/L - milligrams per liter

I - Samples with location IDs ending in "I" were collected using inertial pun

U - Compound not detected

J - Estimated value

N - Primary sample

FD - Field duplicate sample

na - Sample not analyzed for this parameter

Bold value indicates detected value

Shaded value indicates value equal to, or greater than, standard or guidance

NYSDEC TOGS111 - Standards listed are the New York State Department of Environmental Conservation (NYSDEC) Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 values for Class GA

 Exceedance of NYS GA Guidance

 Exceedance of NYS GA Standard

Notes and Abbreviations

µg/L - micrograms per liter

mg/L - milligrams per liter

I - Samples with location IDs ending in "I" were collected using inertial pump

U - Compound not detected

J - Estimated value

N - Primary sample

FD - Field duplicate sample

na - Sample not analyzed for this parameter

Bold value indicates detected value

Shaded value indicates value equal to, or greater than, standard or guidance

NYSDEC TOGS11 - Standards listed are the New York State

Department of Environmental Conservation (NYSDEC) Division of

Water Technical and Operational Guidance Series (TOGS) 1.1.1 values

Exceedance of NYS GA Guidance

</

Notes and Abbreviations

µg/L - micrograms per liter

mg/L - milligrams per liter

I - Samples with location IDs ending in "I" were collected using inertial p

U - Compound not detected

J - Estimated value

N - Primary sample

FD - Field duplicate sample

na - Sample not analyzed for this parameter

Bold value indicates detected value

Shaded value indicates value equal to, or greater than, standard or guida

NYSDEC TOGS111 - Standards listed are the New York State

Department of Environmental Conservation (NYSDEC) Division of

Water Technical and Operational Guidance Series (TOGS) 1.1.1 values

 Exceedance of NYS GA Guidance

 Exceedance of NYS GA Standard
