February 22, 2023

Dear Angler,

Thank you for participating in the 2022 Canandaigua Lake Volunteer Angler Diary Program, the 50th year of the program on Canandaigua Lake. Continuous fifty-year data sets are hard to find, and the value of this program is huge.

Enclosed is a summary of your personal catch information referenced to the code number on the cover of your diary, a summary of 1973 through 2022 catch statistics, your 2022 diary, and a diary for the 2023 season. Please contact our office if you need more diary books.

In 2022, 18 diary cooperators recorded 284 fishing trips (diary cooperators and party members). Anglers caught a total of 459 lake trout, 195 rainbow trout, and 21 brown trout. Like 2021, anglers averaged 1.5 hours to catch a legal trout in 2022. Anglers caught at least one legal length trout during 80% of trips reported.

Lake Trout

Four hundred fifty-nine lake trout were caught with 117 harvested in 2022. Anglers who specifically target lake trout had another good year, averaging only 1.2 hours to catch a legal lake trout. Average length of all lake trout caught was 21.9 inches, while average length of harvested lake trout was 22.3 inches. Average weight of lake trout weighed was 5.0 pounds, while average weight of harvested lake trout that were weighed was 4.4 pounds.

Fin clips reported indicated that 83% of the catch consisted of stocked lake trout while 17% of the catch consisted of wild lake trout. This is consistent with diary data from the previous three years and during our standard lake trout netting survey in 2021. For 2023, we will continue our current stocking of 12,100 spring yearlings (8-9 inches at stocking) and 24,100 fall fingerlings (5-6 inches at stocking).

Rainbow Trout

One hundred ninety-five rainbow trout were caught with 25 harvested in 2022. Anglers who were specifically targeting rainbow trout had an excellent catch rate of 1.5 hours to catch a legal rainbow trout. Average length of all rainbow trout caught was 18.1 inches, while average length of harvested rainbow trout was 22.7 inches. Average weight of rainbow trout weighed was 4.4 pounds, while average weight of harvested rainbow trout that were weighed was 4.2 pounds.

The Canandaigua Lake rainbow trout fishery continues to be one of the best in the Finger Lakes. Natural

reproduction in Naples Creek and its tributaries continues to support this excellent fishery. We are aware of a blockage and stream diversion that was slowing migration of adult rainbow trout to spawning areas in the headwaters of Naples Creek. This situation is improving as the stream adjusts. We also verified a significant number of juvenile rainbow trout in the headwaters, indicating that some adult rainbow trout reached the upper portions of the stream and spawned successfully. A summary of our juvenile rainbow trout sampling is enclosed. Our spring electrofishing on Naples Creek is scheduled for Thursday, March 23 beginning at 9:00 AM at the State Route 245 bridge.

Brown Trout

Twenty-one brown trout were caught with 12 harvested in 2022. Average length of all brown trout caught was 18.2 inches, while average length of harvested brown trout was 19.8 inches. Average weight of the 10 brown trout weighed was 3.6 pounds. Our annual stocking of 8,000 yearling brown trout is not providing the desired angler catch rates. Our hatchery strain of brown trout is being modified in an attempt to improve survival. We are hopeful that this will lead to better catch rates in Canandaigua Lake.

Thank you again for the valuable information you provide. If you know of a potential volunteer diary keeper, please let us know.

Good Fishing,

Pete Austerman
Aquatic Biologist

Summary of 2022 Canandaigua Lake Angler Diary Cooperator Results.
