

Onondaga Lake TSMP Fish Collection (Survey #:722013)

James Everard, Region 7 Fisheries

1/17/23

This survey was part of an ongoing effort to track contaminant trends in in Onondaga Lake fish as pollution in and around the lake is cleaned up. Largemouth bass were collected by angling on July 11 (n=12) and August 2 (n=18). The 33 largemouth bass collected had a length range of 11.5 to 18.7 inches, with an average length of 16.0 inches (Table 1). Ages ranged from age-3 to 12, with mean age of 7.2. Collected bass were frozen and will be taken to the DEC Hale Creek Field Station. No contaminant analysis results are available from these fish yet.
