

**Honeoye Lake Fish Kill Investigation (Survey #: 819018)**  
Pete Austerman, Region 8 Fisheries

06/07/2022

During the week of August 5, 2019, Region 8 Fisheries staff responded to reports of thousands of dead yellow perch on Honeoye Lake. Most of the dead yellow perch we observed were young-of-year. Eight moribund yellow perch were collected and delivered to Cornell University School of Veterinary Medicine. Laboratory results suggested that systemic bacterial infection with *Aeromonas sobria* contributed to the fish kill. High water temperature and low dissolved oxygen in Honeoye Lake may contributed as well.
