Certification

I Aron Krasnopoler certify that I am currently a NYS registered professional engineer as defined in 6 NYCRR Part 375 and that this Interim Remedial Measures Work Plan for the Former Sperry Remington Site – North Portion dated 11 July 2017 was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10).

Aron Krasnopoler, P.E.

1. INTRODUCTION

1.1 Background

On behalf of Unisys Corporation (Unisys), Geosyntec Consultants, Inc. and its New York affiliate Beech and Bonaparte Engineering, P.C. (collectively Geosyntec) are submitting this Interim Remedial Measure (IRM) Work Plan for the Former Sperry Remington Site – North Portion (Site #808022) (Site) in Elmira, New York. On 26 April 2016, Unisys applied to enter the Site into the NYSDEC Brownfields Cleanup Program (BCP) with the consent of Elmira City School District (ECSD). NYSDEC gave an initial determination that the BCP application is complete on 10 June 2016 and received public comments until 22 July 2016. BCP Agreement for the Site were executed on 23 March 2017. Unisys is proposing an IRM at the Site in accordance with the BCP Agreement.

An Order on Consent and Administrative Settlement (Order) with the New York State Department of Environmental Conservation (NYSDEC) for the Site approved by NYSDEC on 7 July 2014. This Order was terminated on 28 November 2016. Unisys conducted Site Characterization (SC) activities at the Site in accordance with the Order, the Site Characterization Work Plan (SC Work Plan) dated 29 July 2014 (revised 27 October 2014) and subsequent addenda dated 22 May 2016, 8 January 2016, 9 August 2016, 3 February 2017, and 16 March 2017.

The Site is located at the Elmira High School (EHS) property (formerly known as Southside High School), 777 South Main Street in Elmira, Chemung County, New York (see **Figure 1**). The EHS property is approximately thirty-four (34) acres and as shown on **Figure 2** is bounded by South Main Street to the west, the Southern Tier Commerce Center (STCC) to the south, the Consolidated Rail Corp. property to the east and vacant land to the north. Miller Pond is located approximately one thousand (1,000) feet to the east. EHS property has been the subject of multiple environmental investigations between 1998 and 2016. In 2003, New York State Department of Health (NYSDOH) completed a Health Consultation for Southside High School (now EHS) that recommended that ECSD develop a written soil management plan to "minimize potential public exposures to contaminated subsurface materials…"

In June 2009, ECSD prepared an Environmental Management Plan (EMP) in response to a request from the State Education Department (SED) to formalize environmental management operations and practices at EHS. NYSDEC and NYSDOH provided technical assistance to SED in development and review of the EMP. The intent of the EMP is to advise construction personnel and the general community regarding the potential for exposure to Compounds of Potential Concern (COPC) that may be present in soil, groundwater and soil vapor on EHS property. In February 2016, Unisys submitted an interim Site Management Plan (SMP) to update the EMP based on Site Characterization activities completed, address institutional controls and engineering

controls that have been implemented as interim measures until a Site remedy has been selected, and to describe required monitoring and operation and maintenance (O&M) activities.

1.2 Previous Site Characterization Activities

In June 2013, NYSDEC identified potential areas of concern (PAOCs) at the EHS property based on information related to historical use of the EHS property and previous environmental investigations results. The SC Work Plan dated July 2014 and revised October 2014 was submitted to NYSDEC to collect data to document environmental conditions at the Site as it relates to PAOCs, and historical information. Implementation of the SC Work Plan was expedited in order to complete most field activities and obtain preliminary results prior to start of classes at EHS on 3 September 2014. Verification of previous analytical results in surface (zero to two [0-2] inches below ground surface [bgs][1]) and shallow sub-surface (0.17 to two [2] feet bgs) soils were conducted in July 2014 in order to confirm that COPCs did not pose an unacceptable level of risk to human health and the environment prior to the start of classes. NYSDEC and NYSDOH provided oversight and review during field activities. Preliminary, un-validated analytical results for polychlorinated biphenyls (PCBs) and semi-volatile organic compounds (SVOCs) in surface soils were submitted to NYSDEC and NYSDOH on 31 July 2014. Additional surface, shallow subsurface and subsurface (greater than 2 feet bgs) soil investigations, groundwater investigation and former combined storm sewer inspections for Site Characterization were conducted at the Site between August and October 2014. The SC Data Report was submitted to NYSDEC on 6 February 2015 following data validation completion on 10 November 2014.

The SC Data Report identified PCBs, polycyclic aromatic hydrocarbons (PAHs), and metals as COPCs at the Site based on comparison to Restricted Residential Soil Cleanup Objectives[2] (SCOs). A meeting to discuss analytical results for PCBs in soils was held on 17 March 2015 among ECSD, NYSDOH, NYSDEC and Unisys. NYSDOH and NYSDEC presented results of an evaluation that included PCB analytical data from samples collected from zero to two (0-2) feet bgs between 2000 and 2014 and vegetative cover conditions with respect to preventing potential exposures to shallow soils. According to NYSDOH, 2014 surface soil data are consistent with surface soil data previously collected by NYSDEC/NYSDOH and do not alter conclusions or recommendations presented in the 2003 Health Consultation prepared by NYSDOH. The 2003 Health Consultation also stated that well-established and maintained grass cover minimizes human exposures to soil by limiting direct contact with the soil. As a precaution, a temporary short-term response action (STRA) was undertaken by Unisys to evaluate cover systems in areas where PCBs exceed one (1) milligram per kilogram (mg/kg) in surface or shallow subsurface soils at the EHS

[1] Below ground surface is interpreted as below vegetative cover.
[2] 6 NYCRR Subpart 375

and additional protective measures were implemented to prevent potential exposure to shallow soils in unpaved areas. A report on STRA activities was submitted to NYSDEC on 15 May 2015.

The SC Data report included recommendations for additional delineation of PCBs in soils from select areas of the Site. SC Work Plan Addendum #1 was submitted to NYSDEC on 22 May 2015 with responses to NYSDEC comments on 2 July 2015. Field activities for SC Work Plan Addendum #1 were conducted between 13 July and 7 August 2015. Subsurface soil borings were installed to delineate the horizontal and vertical extent of PCBs in subsurface soils. A summary of field activities and analytical results for SC Work Plan Addendum #1 were presented in SC Work Plan Addendum #2 dated 8 January 2016 along with plans for additional delineation of PCBs in soils and evaluation of potential PCB migration in groundwater. Field activities for SC Work Plan Addendum #2 were conducted between 29 February and 24 March 2016. A summary of field activities and analytical results for SC Work Plan Addendum #2 were provided in SC Work Plan #3 dated 9 August 2016 along with plans for additional delineation of COPCs in soils and evaluation of potential PCB migration in groundwater. Other SC activities addressed 2 June 2015 comments from NYSDEC on the SC Data Report requesting evaluation of intermediate groundwater east of the gymnasium, characterization of volatile organic compounds (VOCs) in groundwater in the vicinity of the F-Wing, and catch basin inspection and sampling. Field activities for SC Work Plan Addendum #3 were conducted between 22 August and 28 September 2016. A summary of field activities and analytical results for SC Work Plan Addendum #3 were in SC Work Plan #4 dated 3 February 2017 along with plans for additional delineation of PCBs in soils. Field activities for SC Work Plan Addendum #4 were conducted between 6 and 16 February 2017. Review of unvalidated data received indicated the need for additional data collection to complete a design of the IRM described herein to be conducted at the Site in summer 2017. Plans for additional delineation of PCBs in soils were submitted as SC Work Plan Addendum #5 on 16 March 2017. Field activities for SC Work Plan Addendum #5 were conducted between 20 and 24 March 2017 and with modifications between 10 and 13 April 2017 and 15 and 23 May 2017.

Analytical reports for SC Work Plan Addenda #4 and #5 are included as **Appendix A**. Analytical reports from previous SC activities have been included in the SC Data Report and previous SC Work Plan addenda. Data validation reports completed to date are included in **Appendix B**.

A summary of borings installed, sampling locations, and sampling depths within the area of IRM to be proposed and planned ECSD capital improvements is presented on **Table 1**. Soil boring locations are shown on **Figure 3**. Soil samples were collected using direct push technology (DPT). Soil samples were handled in accordance with the Quality Assurance Project Plan/Field Sampling Plan (QAPP/FSP) and shipped to the TestAmerica Pittsburgh Laboratory for analyses for PCBs, PAHs, metals and SVOCs in accordance with SC Work Plan, subsequent addenda and field modifications. **Tables 2** to **4** present summaries of analytical results for soils within the area of IRM to be proposed and planned ECSD capital improvements for summer 2017. Analytical results for other portions of the Site have been presented previously.

Analytical results from surface and shallow subsurface soil samples are summarized on **Table 2**. Total PCB concentrations in soil are compared to the Restricted Residential SCO for total PCBs of one (1) mg/kg and to the limit of fifty (50) mg/kg for PCB remediation wastes as defined in 40 CFR §761.3 Toxic Substances Control Act (TSCA). TSCA limits are considered in PCB delineation for identification of those soils that may be classified as hazardous waste containing PCBs as defined in 6 NYCRR Part 371.4 (e). **Figures 4** and **5** present the extent of total PCBs in surface and shallow subsurface soils, respectively.

Figures 6 to **12** present the extent of total PCBs in subsurface soils at two-foot (2 ft) intervals to a total depth of sixteen (16) feet bgs. Analytical results from subsurface soil samples from below two (2) feet bgs are summarized on **Table 3.** Total PCB concentrations in soil are compared to a screening value of ten (10) mg/kg for delineation and to the TSCA limit of fifty (50) mg/kg.

PCBs were detected in monitoring well MW-15S in September 2016 above the groundwater quality standard of 0.09 micrograms per liter (µg/L) with total and dissolved total PCB concentrations of 0.48 and 0.59 µg/L, respectively. Analytical results from subsurface soil samples from between fourteen (14) feet bgs and the water table depth of approximately seventeen (17) ft bgs[3] are summarized on **Table 4.** Total PCB concentrations in soil are compared to the Protection of Groundwater SCO for total PCBs of 3.2 mg/kg for delineation and to the TSCA limit of fifty (50) mg/kg.

1.3 Purpose

Unisys has identified Site soils with concentrations of total PCBs that exceed TSCA limits of fifty (50) mg/kg and that may be considered PCB remediation waste. Surface and shallow subsurface soils at the Site have been identified with concentrations of total PCBs greater than the Restricted Residential SCO for total PCBs of one (1) mg/kg. A portion of those soils are within or adjacent to areas of the Site in which ECSD plans to construct capital improvements beginning in late Spring 2017. A non-emergency IRM for soil removal is applicable to mitigate environmental or human exposures prior to capital improvement construction. Soil removal will be conducted with following cleanup goals:

- Total PCB concentrations less than or equal to one (1) mg/kg in soils at depths less than two (2) feet bgs;
- Total PCB concentrations less than or equal to ten (10) mg/kg at depths between two (2) feet bgs and the water table; and

[3] Depth to water as measured at monitoring well MW-15 in September 2016

- Total PCB concentrations less than or equal to 3.2 mg/kg at the water table where PCB have been detected above groundwater standards.

Additional IRMs may be applicable in the future in coordination with future ECSD plans for capital improvements. Additional Site investigation may be conducted under the BCP to design future IRMs or to address data gaps in the delineation of the nature and extent of COPCs.

This IRM Work Plan presents a scope of work that includes excavation, soil management, backfilling, off-Site transport and disposal and site restoration. The IRM Work Plan also addresses temporary construction facilities, controls, health and safety, and confirmation sampling in accordance with NYSDEC *Technical Guidance for Site Investigation and Remediation* (DER-10).

1.4 Report Organization

The remainder of this report is organized into the following sections:

- Section 2 – Scope of Work;
- Section 3 – Permits and Temporary Controls;
- Section 4 – Health and Safety;
- Section 5 – Institutional Controls; and
- Section 6 – Schedule and Deliverables.

2. SCOPE OF WORK

The IRM scope of work is presented in the Construction Drawings (Appendix C) and Construction Specifications (Appendix D). The following sections summarize key elements of the work.

2.1 Excavation and Soil Management

In coordination with ECSD capital improvement construction, soil removal will be conducted at and around the tennis courts and the main parking lot as shown on **Figure 2**. Soils will be excavated in two-foot (2-ft) intervals excavation to meet the cleanup goals presented in Section 1.3. Site Characterization data have been used to pre-delineate the limits of excavation and the limits of PCB remediation waste within the excavation as shown on **Figures 4** to **12**. Excavation side walls are pre-delineated by samples collected with a maximum spacing of thirty (30) feet and EHS infrastructure that is not scheduled for capital improvements in 2017 (e.g., building foundation, running track). Excavation below two (2) ft bgs adjacent to the running track will be conducted during future IRMs so that the IRM presented herein will meet ECSD schedule milestones for parking lot construction. Bottom walls of the excavation of the two-foot interval are shown where applicable. **Table 5** presents the proposed bottom areas and the number of bottom wall samples collected to date. For each excavation, the bottom wall is pre-delineated by at least one (1) sample per nine hundred (900) square feet, except where noted. Limits of excavation may be revised due to low recovery in pre-delineation sampling intervals and submitted to NYSDEC for approval prior to excavation.

In areas where pre-delineation is incomplete, confirmation sampling of excavation side walls and bottom will be required as follows in accordance with Section 5.4 (b) of DER-10 or at an alternative frequency to be proposed to NYSDEC for approval:

- one sample from the bottom of each sidewall for every thirty (30) linear feet of sidewall; and
- one sample from the excavation bottom for every nine hundred (900) square feet of bottom area.

Confirmation samples will be analyzed for PCBs in accordance with the SC Work Plan Quality Assurance Project Plan (QAPP). Additional confirmation samples may be required based on visual or olfactory observations or field screening during excavation. A qualified environmental professional (QEP) will request analyses of those samples for COPCs (not limited to PCBs) in accordance with the QAPP and in consultation with NYSDEC.

Prior to excavation, monitoring wells MW-15S and MW-15D will be abandoned in accordance with NYSDEC Policy CP-43. Monitoring well MW-15S will be replaced following IRM completion. Unisys will submit plans to update the Site groundwater monitoring network as part of continuing

Site investigations under the BCP. The need for replacement of monitoring well MW-15D will be evaluated at that time.

During excavation, subsurface utilities including potable water, electric, and sanitary sewer, within the work area will be abandoned temporarily. No active utilities will be permanently abandoned.

Upon excavation, excavated soils will be managed in three (3) categories:

- Soils with total PCB concentrations less than or equal to ten (10) mg/kg will be stockpiled (noted below) for use as IRM backfill below two (2) ft bgs in accordance with Section 5.4 of DER-10;
- Soils with total PCB concentrations greater than ten (10) mg/kg and less than fifty (50) mg/kg will be stockpiled for transport and off-Site disposal as non-hazardous waste (noted below); and
- Soils with total PCB concentrations greater than or equal to fifty (50) will be transported directly off-Site for disposal as hazardous waste.

Soil to be used as IRM backfill or transported off-Site for disposal as non-hazardous waste will be stockpiled within a secure area of the STCC property[4] to the south of the Site as shown on the Construction Drawings (Appendix C). Soil will be stockpiled in windrows and characterized for approval for reuse or off-Site disposal at a maximum frequency of approximately one hundred (100) cubic yards in volume. The STCC property will be accessed by a temporary haul road to be constructed so haul trucks will not need to access South Main Street except for off-Site transport and disposal. Existing conditions at the stockpile area and along the temporary haul road will be documented by photographs and soil sampling prior to and after completion of construction.

Direct loading of non-hazardous soils for off-Site disposal is not feasible because of the acceptance requirements of the receiving facility, including waste characterization and daily volume limits. Stockpiling will allow excavation activities to proceed uninterrupted and avoid schedule delays. Stockpiling on EHS property is not feasible because of i) potential impacts to ECSD construction schedule and activities in the main parking lot and reopening of EHS on 5 September 2017; ii) potential impacts to EHS infrastructure (e.g. football field and athletic fields); iii) planned use of the rear parking lot for staging ECSD construction equipment; and iv) a lack of secure areas without the addition of temporary fencing.

Each soil stockpile to be used for backfilling below two (2) ft bgs as part of the IRM will be inspected by the QEP for visual or olfactory impacts, solid waste, bricks or debris and screened with a photoionization detector (PID) for elevated VOC vapor levels. Soils will be sampled for analyses for PCBs, metals, SVOCs, and VOCs at the frequency presented in Table 5.4 (e) 10 of

[4] An agreement in principle has been reached with the STCC property owner for this activity. Confirmation of a written agreement is provided in Appendix G.

DER-10. Soils that exhibit visual or olfactory impacts or that exhibited elevated PID readings will be segregated for additional testing at the direction of the QEP prior to re-use as backfill. Stockpiles with observed solid waste or debris will be segregated for potential off-Site disposal. Stockpiles with observed bricks, concrete, or other inert materials will be evaluated for use in structural backfill.

Soils stockpiled for off-Site transport and disposal will be sampled for waste characteristics as required by the receiving facility.

2.1.1 Tennis Courts

Soils beneath and near the tennis courts will be excavated to a depth of two (2) ft bgs to achieve the cleanup goal of one (1) mg/kg total PCBs. The limit of excavation is presented on **Figure 4**. Site Characterization data collected to date have shown that total PCB concentrations in soils in this area are less than ten (10) mg/kg to a depth of four (4) ft bgs. Excavated soils will be stockpiled for use as backfill below two (2) ft bgs. Soils will be tested as described above prior to use as backfill.

Pre-delineation has been limited by asbestos containing materials (ACM) present in the tennis court coating. ECSD conducted asbestos abatement and demolish the tennis courts in May 2017 as part of EHS capital improvements. Pre-delineation of the proposed excavation was completed after ACM was removed in May 2017. Unisys completed IRM pre-delineation of the tennis courts under SC Work Plan Addendum #5.

2.1.2 Main Parking Lot

Soils in the main parking lot and areas to the east will be excavated in 2-ft intervals to achieve the relevant cleanup goal for each depth. Temporary cover installed during the 2015 STRA will be removed prior to excavation. For the depth interval from zero to two (0-2) ft bgs, the cleanup goal will be total PCB concentrations less than or equal to one (1) mg/kg. The limit of excavation and the limit of PCB remediation waste (total PCBs greater than fifty or equal to [50] mg/kg) are presented on **Figure 5**. Site Characterization data have shown that total PCB concentrations in soils within the limits of excavation are less than or equal to ten (10) mg/kg in some areas. Excavated soils from those areas will be stockpiled for use as backfill between two (2) and fourteen (ft) bgs. Soils with total PCB concentrations greater than ten (10) mg/kg and less than fifty (50) mg/kg will be stockpiled for transport and off-Site disposal as non-hazardous waste. Soils from within the limits of PCB remediation waste (greater than fifty (50) mg/kg) will be direct loaded for off-Site disposal.

Between two (2) and fourteen (14) ft bgs, soils will be excavated in 2-ft intervals to achieve a cleanup goal of total PCBs in soil less than or equal to ten (10) mg/kg. The limit of excavation and the limit of PCB remediation waste for excavations in 2-ft intervals between four (4) and

sixteen (16) ft bgs are presented on **Figures 6** to **12**, respectively. Because PCBs have been detected in groundwater at monitoring well MW-15S with a depth to water of approximately seventeen (17) ft bgs, the Protection of Ground-water SCO of 3.2 mg/kg may be applicable at the water table in this area. Soils between fourteen (14) ft bgs and the water table will be excavated to achieve a cleanup goal of total PCBs in soils less than or equal to 3.2 mg/kg. The limits of excavation between sixteen (16) ft bgs and the water table are presented on **Figure 13**. Data gaps in pre-delineation of the excavations will be addressed prior to IRM construction. Unisys will complete IRM pre-delineation under SC Work Plan Addendum #5.

Temporary support of excavation (SOE) and benching will be required for areas of the Site with excavation depths of four (4) feet or greater. Excavation side slopes of two (2) horizontal to one (1) vertical (2H:1V) will be implemented in areas of the Site with adequate space, as shown on the Construction Drawings (Appendix C). For the excavation area located along the south side of the EHS building and south of the athletic stands, steel sheet piles are proposed to provide SOE for excavation depths of approximately ten (10) ft bgs. Vibration monitoring will be required during installation of the temporary SOE. A building condition survey will be performed to assess the pre- and post-construction conditions of the EHS building. The building condition survey and vibration monitoring shall be performed in accordance with the requirements of the Construction Specifications (Appendix D). Written approval for building condition surveys and vibration monitoring will be obtained from ECSD and provided to NYSDEC prior to construction.

Soils with total PCB concentrations greater than ten (10) mg/kg and less than fifty (50) mg/kg will be stockpiled for transport and off-Site disposal as non-hazardous waste. Soils from within the limits of PCB remediation waste will be direct loaded for off-Site disposal. Soils with total PCB concentrations less than or equal to ten (10) mg/kg will be stockpiled for use as backfill between two (2) and fourteen (14) ft bgs.

2.2 Off-Site Disposal

2.2.1 Hazardous Waste

Soils with total PCB concentrations greater than or equal to fifty (50) mg/kg will be classified as PCB remediation waste under TSCA and as hazardous waste containing PCBs as defined in 6 NYCRR Part 371.4 (e). Soils classified as hazardous waste will be directly loaded for off-Site disposal at an appropriate treatment storage and/or disposal facility. Each shipment will have the required manifest, labeling and placarding in accordance with Federal and state laws and regulations.

2.2.2 Non-hazardous waste

Soils with total PCB concentrations greater than ten (10) mg/kg and less than fifty (50) mg/kg will be stockpiled on the STCC property to the south of the Site and staged for disposal as non-

hazardous waste. Stockpiles will be maintained and secured so that soils do not migrate from staging and stockpile locations. Waste profiles will be developed for transport and disposal off-Site at an appropriate treatment storage and/or disposal facility. Composite samples will be collected for analyses for waste characteristics at a frequency consistent with the requirements of the receiving facility.

2.2.3 Estimated Truck Traffic

Based on proposed soil volumes to be excavated and PCB remediation waste, truck traffic necessary for off-Site disposal and stockpiling has been estimated as follows:

- Stockpiling of non-hazardous soil for off-Site disposal or backfilling: 500 to 600 (10 to 12 trucks per day);
- Direct loading of PCB remediation waste for off-Site disposal: 150 to 190 (5 to 7 trucks per day); and
- Off-Site disposal of non-hazardous soil: 180 to 250 (4 to 5 trucks per day).

The planned on-site journey management plan for the material which will be handled during the IRM has been discussed with the City of Elmira Traffic Engineering Department. All trucks hauling impacted soils on the public roadway will have a valid NYS Part 364 Waste Transporter Permit. Proposed haul routes are presented on **Figure 14**. Routes have been selected to avoid planned road construction in Elmira during the IRM, difficult traffic areas as well as to utilize routes with the most marked pedestrian crossings to ensure maximum safety. Truck traffic will not take place during student arrival/departure times.

Materials from the Tennis Courts Area will be loaded into on-road tri-axle trucks which will transport the material via South Main Street to the temporary stockpile area on the STCC property. Left hand turns on to South Main Street will be controlled through a flagman. All materials other than PCB remediation waste will be hauled from the Main Parking Lot Area to the temporary stockpile area using the temporary haul road around the back of EHS. All non-hazardous materials determined to be available for reuse will be transported from the stockpile area back to the Site via the temporary haul road as well. PCB remediation waste will be direct loaded into over the road tractor trailers which will enter and exit the Site via South Main Street in coordination with ECSD capital improvement construction.

All trucks leaving the Site or the temporary stockpile area for off-Site disposal will travel north on South Main Street, cross the Chemung River and travel east on East Water Street to the interchange with Interstate 86. Each vehicle will be inspected prior to shipment. Each vehicle will be lined and covered and the tailgate secured. The wheels, sides and underbody will be decontaminated prior to departure from the Site as described in the Construction Specifications (Appendix D).

2.3 Backfilling

Excavations will be backfilled to final grades as shown on the Construction Drawings (Appendix C). Prior to backfilling, a demarcation layer, consisting of orange snow fencing material, white geotextile or equivalent material, will be placed in the excavation to provide a visual reference of the limit of fill material for future excavations. Backfilling will begin in excavations that have been pre-delineated to indicate that soil removal to achieve cleanup goals are complete. In excavations where pre-delineation is incomplete, backfilling will begin after achievement of cleanup goals has been demonstrated by confirmation sampling. In most cases, final grades will be equivalent to existing conditions prior to IRM construction. In areas where ECSD will be constructing capital improvements following IRM completion, final grades will be consistent with ECSD design documents. During backfilling, temporarily abandoned active utilities will be restored to original use.

Backfill material will include imported fill and soils stockpiled for backfill. Soils stockpiled for backfill will meet the requirements of Section 5.4 of DER-10 for use below a soil cover system over a demarcation layer. Stockpiled soils will not be used for backfilling within one (1) foot of the seasonal high water table or above two (2) ft bgs. Imported fill to be used above two (2) ft bgs will be certified to meet the requirements of Section 5.4 of DER-10 for restricted residential use as fill for soil cover system.

2.4 Site Restoration

After backfilling, the project area will be restored to original conditions to allow for future use except for areas scheduled for capital improvements in 2017, i.e. the tennis courts, main parking lot and sidewalk between the school building and the running track. The final condition for those areas will be consistent with ECSD design requirements. Unpaved areas will be restored with a minimum of four (4) inches of topsoil and reseeded based on original conditions. Typical sections are presented in the Construction Drawings (Appendix C). Areas within the construction limits (e.g. staging areas, haul roads) or other areas potentially impacted by dust from the IRM excavation will cleaned and decontaminated following construction. Post-use conditions will be documented by verification sampling. Restored conditions within the construction limits will be documented by photographs. Unisys will coordinate with ECSD and STCC to determine the final requirements for Site restoration.

3. PERMITS AND TEMPORARY CONTROLS

3.1 Permits and Notifications

A storm water construction permit is required as the area of disturbance from construction activities for the IRM is expected to be greater than one acre. To meet the requirements of the General Permit, a Stormwater Pollution Prevention Plan (SWPPP) will be prepared and submitted to NYSDEC for review and approval.

Unisys will notify the United States Environmental Protection Agency (EPA) of PCB waste activities by filing EPA Form 7710–53 in accordance with 40 CFR §761.205. Unisys will submit EPA Form 8700-12 to provide initial notification of Resource Conservation and Recovery Act (RCRA) Subtitle C Activity and to obtain an EPA Identification Number for the Site.

3.2 Temporary Facilities

During IRM construction, temporary facilities for stockpiling non-hazardous excavated soils will be established on the adjacent STCC property to the south as shown on the construction drawings presented in Appendix C.

3.3 Soil and Sediment Erosion Control

The SWPPP will document the selection, design, installation, implementation and maintenance of control measures and practices that will be used to minimize the discharge of pollutants in storm water and prevent a violation of water quality standards. Soil and sediment erosion controls will be established within the limit of disturbance as shown on the construction drawings presented in Appendix C to control runoff during construction and prevent sediment from entering the existing storm sewer system. Erosion and sediment controls will be in accordance with the "New York State Standards and Specification for Erosion and Sediment Control" (NYSDEC, 2016) and will be inspected weekly during active construction with additional inspections following rain events.

3.4 Storm Water Management

Existing storm sewer connections south of the athletic stands will be abandoned during excavation. By-pass pumping of disconnected storm sewer piping will be provided, as required. During backfilling, temporarily abandoned utilities will be restored to original use.

3.5 Dust Control and Monitoring

Dust control and monitoring shall be conducted throughout the Site during all phases of work in accordance with the Soil/Dust Control and Monitoring Plan (SDCMP, Appendix E). The SDCMP has been developed to be consistent with New York State Department of Health's (NYSDOH's)

Generic Community Air Monitoring Plan (CAMP, Appendix E). The QEP will be responsible for the implementation of the dust monitoring, control and mitigation measures.

Dust control shall be conducted to prevent the presence of visible dust as determined by visual observation and continuous dust monitoring. Visible dust shall not leave the exclusion zone. Dust control measures shall be applied periodically throughout each work day. Dust control may be conducted by sprinkling with water until the surface is wet; restricting vehicle speeds, covering excavation areas and stockpile areas; and reducing the excavation size and/or number of excavations. Additional dust control measures will be considered during intrusive activities within twenty (20) feet of potentially exposed populations or occupied structures including dust barriers and special ventilation devices.

Air monitoring for dust will be conducted in accordance with the Soil/Dust Control and Monitoring Plan (Appendix E). Continuous real-time particulate monitoring will be conducted at the upwind and downwind perimeter of the exclusion zone(s) using portable monitors. A minimum of one (1) upwind and four (4) downwind locations shall be monitored. The four (4) downwind locations shall be equally distributed along the perimeter of the work area. During work activities within twenty (20) feet of potentially exposed populations or occupied structures, continuous monitoring locations will be selected based on the nearest potentially exposed individual and the location of ventilation system intakes for nearby structures. Air monitoring shall be conducted during excavation, grading, placement of clean fill, or other activities which may generate fugitive dust. Action levels for dust are presented in the SDCMP. If an action level for dust is reached, Site operations will be stopped and dust control measures in the working area will be implemented. Mitigation measures for dust may include increasing the level of personal protection for on-Site personnel, increasing water spraying, or stopping work. If dust suppression techniques being utilized at the Site do not lower particulates to an acceptable level, work will be suspended until appropriate corrective measures are approved by the QEP to remedy the situation.

3.6 Temporary Use Restrictions

ECSD has agreed to temporary use restrictions of the EHS property during the to ensure safe access during construction work (Appendix G). ECSD will have limited operations at EHS during the summer. No student activities will be occurring, and only a limited number of the full-year staff will be working on site. All individuals accessing the building will do so through the south parking lot and entrance, thereby avoiding all remedial and capital work being performed north of the building. Public access, such as new enrollments, will be accommodated through the south entrance. No staff or visitor will have access to the work areas.

4. HEALTH AND SAFETY

All Site activities will be performed in such a manner as to ensure the safety and health of all personnel and the surrounding community. All Site activities shall be conducted in accordance with all pertinent general industry (29 CFR 1910) and construction (29 CFR 1926) Occupational Health and Safety Administration (OSHA) standards, as well as any other applicable New York State and municipal codes or ordinances. All Site activities will comply with those requirements set forth in OSHA's final rule entitled Hazardous Waste Operation and Emergency Response (HAZWOPER), 29 CFR 1910.120, Subpart H.

To ensure that all Site activities are in compliance, each contractor will prepare a Health and Safety Plan (HASP) in accordance with the aforementioned regulations. Each HASP shall conform to the requirements of 29 CFR 1910.120 and all applicable state, federal, local, and other health and safety requirements and safe construction practices not specifically identified in these requirements. An addendum to add the IRM tasks to the Site-specific HASP for SC activities is included as Appendix F. A contingency for chemical specific PCB monitoring should be developed in the event the State determines that it is necessary.

The IRM Contractor will provide a "competent person" per 29 CFR 1926 Subpart P – Excavations on-site during excavations. The qualifications of the designated "competent person" are provided in Appendix F.

5. INSTITUTIONAL CONTROLS

Institutional controls (ICs) will be implemented at the Site in accordance with the EMP (Sterling, 2009). A revised interim SMP will be submitted following IRM completion that includes all SC data collected to date and details of cover systems which are part of the IRM to ensure the ongoing site management at the EHS remains protective. ECSD has agreed to accept an Environmental Easement on the property since the IRM will include a cover system (Appendix G).

6. SCHEDULE AND DELIVERABLES

6.1 Schedule

The proposed schedule for the IRM is presented in **Figure 15**. The following are milestone dates applicable to this IRM:

- 4 April 2017 – Submittal of notification to NYSDEC of modification to SC Work Plan Addendum #5 to complete excavation pre-delineation at the main parking lot;
- 5 April 2017 – IRM Work Plan Submittal;
- 11 to 14 April 2017 – Completion of excavation pre-delineation the main parking lot and vicinity;
- 7 April 2017 – Solicitation of bids for IRM construction;
- 10 April 2017 – Closure of EHS fields by ECSD;
- 1 May 2017 – Abatement and demolition of tennis courts by ECSD with tentative date of completion of 12 May 2017;
- 17 May 2017 – NYSDEC response to IRM Work Plan;
- 15 to 23 May 2017 – Completion of excavation pre-delineation at tennis courts;
- 30 May 2017 – Procurement of an IRM contractor no later than twenty (20) days from receipt of written notice to proceed from NYSDEC;
- 12 June 2017 – Mobilization of IRM contractor to the Site, weather permitting;
- 19 June 2017 - Excavation at the tennis courts following demolition of the tennis courts by ECSD and completion of excavation pre-delineation;
- 26 June 2017 - Excavation of the main parking lot and areas to the east;
- 22 July 2017 – Backfilling of excavation in the main parking lot to be completed by to allow for ECSD to construct capital improvements in that area;
- 15 August 2017 – Backfilling of excavation east of the main parking lot to be completed by to allow for ECSD to construct capital improvements in those areas;
- 30 August 2017 – Site restoration at EHS;

- 30 September 2017 – Completion of transport of soil stockpiles from STCC for off-Site disposal; and

- 30 October 2017 – Site restoration at STCC and demobilization.

Anticipated working hours are Monday through Saturday during daylight hours.

6.2 Deliverables

A construction completion report (CCR) will be prepared in accordance with Section 5.8 of DER-10 to document the implementation of the IRM. The CCR will include a description of IRM construction activities, as-built drawings, daily field reports, analytical data reports, and disposal manifests. The CCR will be delivered to NYSDEC within ninety (90) days of completing transport of soil stockpiles from STCC for off-Site disposal, site restoration, and demobilization.

Notes:
J - estimated value
U - non-detect
mg/kg - milligram per kilogram
ft bgs - feet below ground surface
PCBs - polychlorinated biphenyls
Concentrations detected above the soil criteria for PCBs (0-2 ft bgs) of 1 mg/kg (NYSDEC CP-51) are presented in grey.
PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

TABLE 3
SUMMARY OF PCB RESULTS FOR SUBSURFACE SOILS (Below 2 ft bgs)

Former Sperry Remington Site - North
Elmira, New York

				Polychlorinated Biphenyls									
				Aroclor 1016	Aroclor 1221	Aroclor 1232	Aroclor 1242	Aroclor 1248	Aroclor 1254	Aroclor 1260	Aroclor 1268	Aroclor 1262	Total PCBs
				mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg

Notes:
J - estimated value
U - non-detect
mg/kg - milligram per kilogram
ft bgs - feet below ground surface
PCBs - polychlorinated biphenyls
Concentrations detected above the soil cleanup criteria for PCBs (below 2 ft bgs) of 10 mg/kg are presented in grey.
PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

TABLE 4
Summary of PCB Results for Subsurface Soils near Water Table
Former Sperry Remington Site - North
Elmira, New York

				Polychlorinated Biphenyls

Notes:
J - estimated value
U - non-detect
mg/kg - milligram per kilogram
ft bgs - feet below ground surface
PCBs - polychlorinated biphenyls
Concentrations detected above the protection of groundwater soil cleanup criteria for PCBs 3.2 mg/kg (6 NYCRR Part 375) are presented in grey.
PCB concentrations detected above New York State hazardous waste threshold (6 NYCRR Part 371.4 (e)) are presented in dark grey

TABLE 5
Potential Bottom Excavation Areas and Proposed Bottom Sampling
Former Sperry Remington Site - North Portion
Elmira, New York

Figure	Label	Bottom Depth (ft)	Bottom of Excavation Area[1] (SF)	Perimeter (ft)	Proposed Bottom Samples		
					Number of Samples	Range of Total PCB Concentration (mg/kg)	Proposed Sampling Rationale
4	TC-1	2	34,747	1178	38	Non-Detect - 2.74 mg/kg	1 per 914 square feet; no sample in 0-2 ft bgs interval exceeds 10 mg/kg
6	2-1	2	7,760	415	12	0.094 - 9.35 mg/kg	1 per 900 square feet
7	4-1	4	259	100	1	2.667 mg/kg	Small area; 1 sidewall sample from 4-6 ft bgs
7	4-2	4	5,970	533	7	Non-Detect - 4.54 mg/kg	1 per 900 square feet
7	4-3	4	555	126	2	0.053 - 1.515 mg/kg	Small area; 2 sidewall samples from 4-6 ft bgs
7	4-4	4	568	118	3	0.249 - 3.7 mg/kg	Small area; 3 sidewall samples from 4-6 ft bgs
8	6-1	6	3,026	277	4	Non-Detect - 0.183 mg/kg	1 per 900 square feet
8	6-2	6	1,931	274	3	0.075 - 0.422 mg/kg	1 per 900 square feet
8	6-3	6	328	84	3	Non-Detect - 3.51 mg/kg	Small area; 3 sidewall samples from 6-8 ft bgs
8	6-4	6	1,712	190	2	0.0254 - 0.037 mg/kg	1 per 900 square feet
8	6-5	6	3,446	234	5	Non-Detect - 2.7 mg/kg	1 per 900 square feet
9	8-1	8	271	76	3	0.65 - 7.77 mg/kg	Small area; 3 sidewall samples from 8-10 ft bgs
9	8-2	8	671	139	1	1.627 mg/kg	1 per 900 square feet
9	8-3	8	138	60	2	0.225 - 5.31 mg/kg	Small area; 2 sidewall samples from 8-10 ft bgs
9	8-4	8	175	61	2	0.053 - 4.26 mg/kg	Small area; 2 sidewall samples from 8-10 ft bgs
9	8-5	8	989	136	2	0.152 - 2.76 mg/kg	1 per 900 square feet
10	10-1	10	1,054	158	3	0.0316 - 7.4 mg/kg	1 per 900 square feet including 3 sidewall samples from 10-12 ft bgs south of sidewalk
10	10-2	10	2,962	264	4	Non-Detect - 0.682 mg/kg	1 per 900 square feet
10	10-3	10	2,640	220	3	0.017 - 9.39 mg/kg	1 per 900 square feet
10	10-4	10	332	74	1	Non-Detect	Small area; 1 sidewall sample from 10-12 ft bgs
10	10-5	10	450	98	4	Non-Detect - 0.11 mg/kg	Small area; 4 sidewall sample from 10-12 ft bgs
11	12-1	12	2,788	246	3	0.203 - 8.86 mg/kg	1 per 929 square feet
11	12-2	12	1,642	313	9	0.128 - 3.85 mg/kg	Narrow area; 8 sidewall sample from 12-14 ft bgs
12	14-1	14	1,766	161	2	Non-Detect - 0.045 mg/kg	1 per 900 square feet
12	14-2	14	4,012	442	9	Non-Detect - 0.369 mg/kg	Narrow area on west and south; 6 south and west sidewall sample from 14-16 ft bgs
12	14-3	14	165	61	1	Non-Detect	1 per 900 square feet
12	14-4	14	1,713	170	2	0.345 - 0.96 mg/kg	1 per 900 square feet
12	14-5	14	1,070	151	1 + Pending (next phase)	4.23 mg/kg	Future Phase of IRM
12	14-6	14	639	113	1	Non-Detect	1 per 900 square feet

Notes
1 Bottom of excavation of each two-foot interval in areas where the two-foot interval below may not be removed for remedial purposes.
ft feet
SF square feet
mg/kg milligrams per kilogram
ft bgs feet below ground surface
PCB polychlorinated biphenyls

Proposed Bottom Areas

Label	Depth (ft bgs)	Area (sq ft)	Perimeter (ft)	Total Samples	Required Samples	Range of Total PCB Concentration
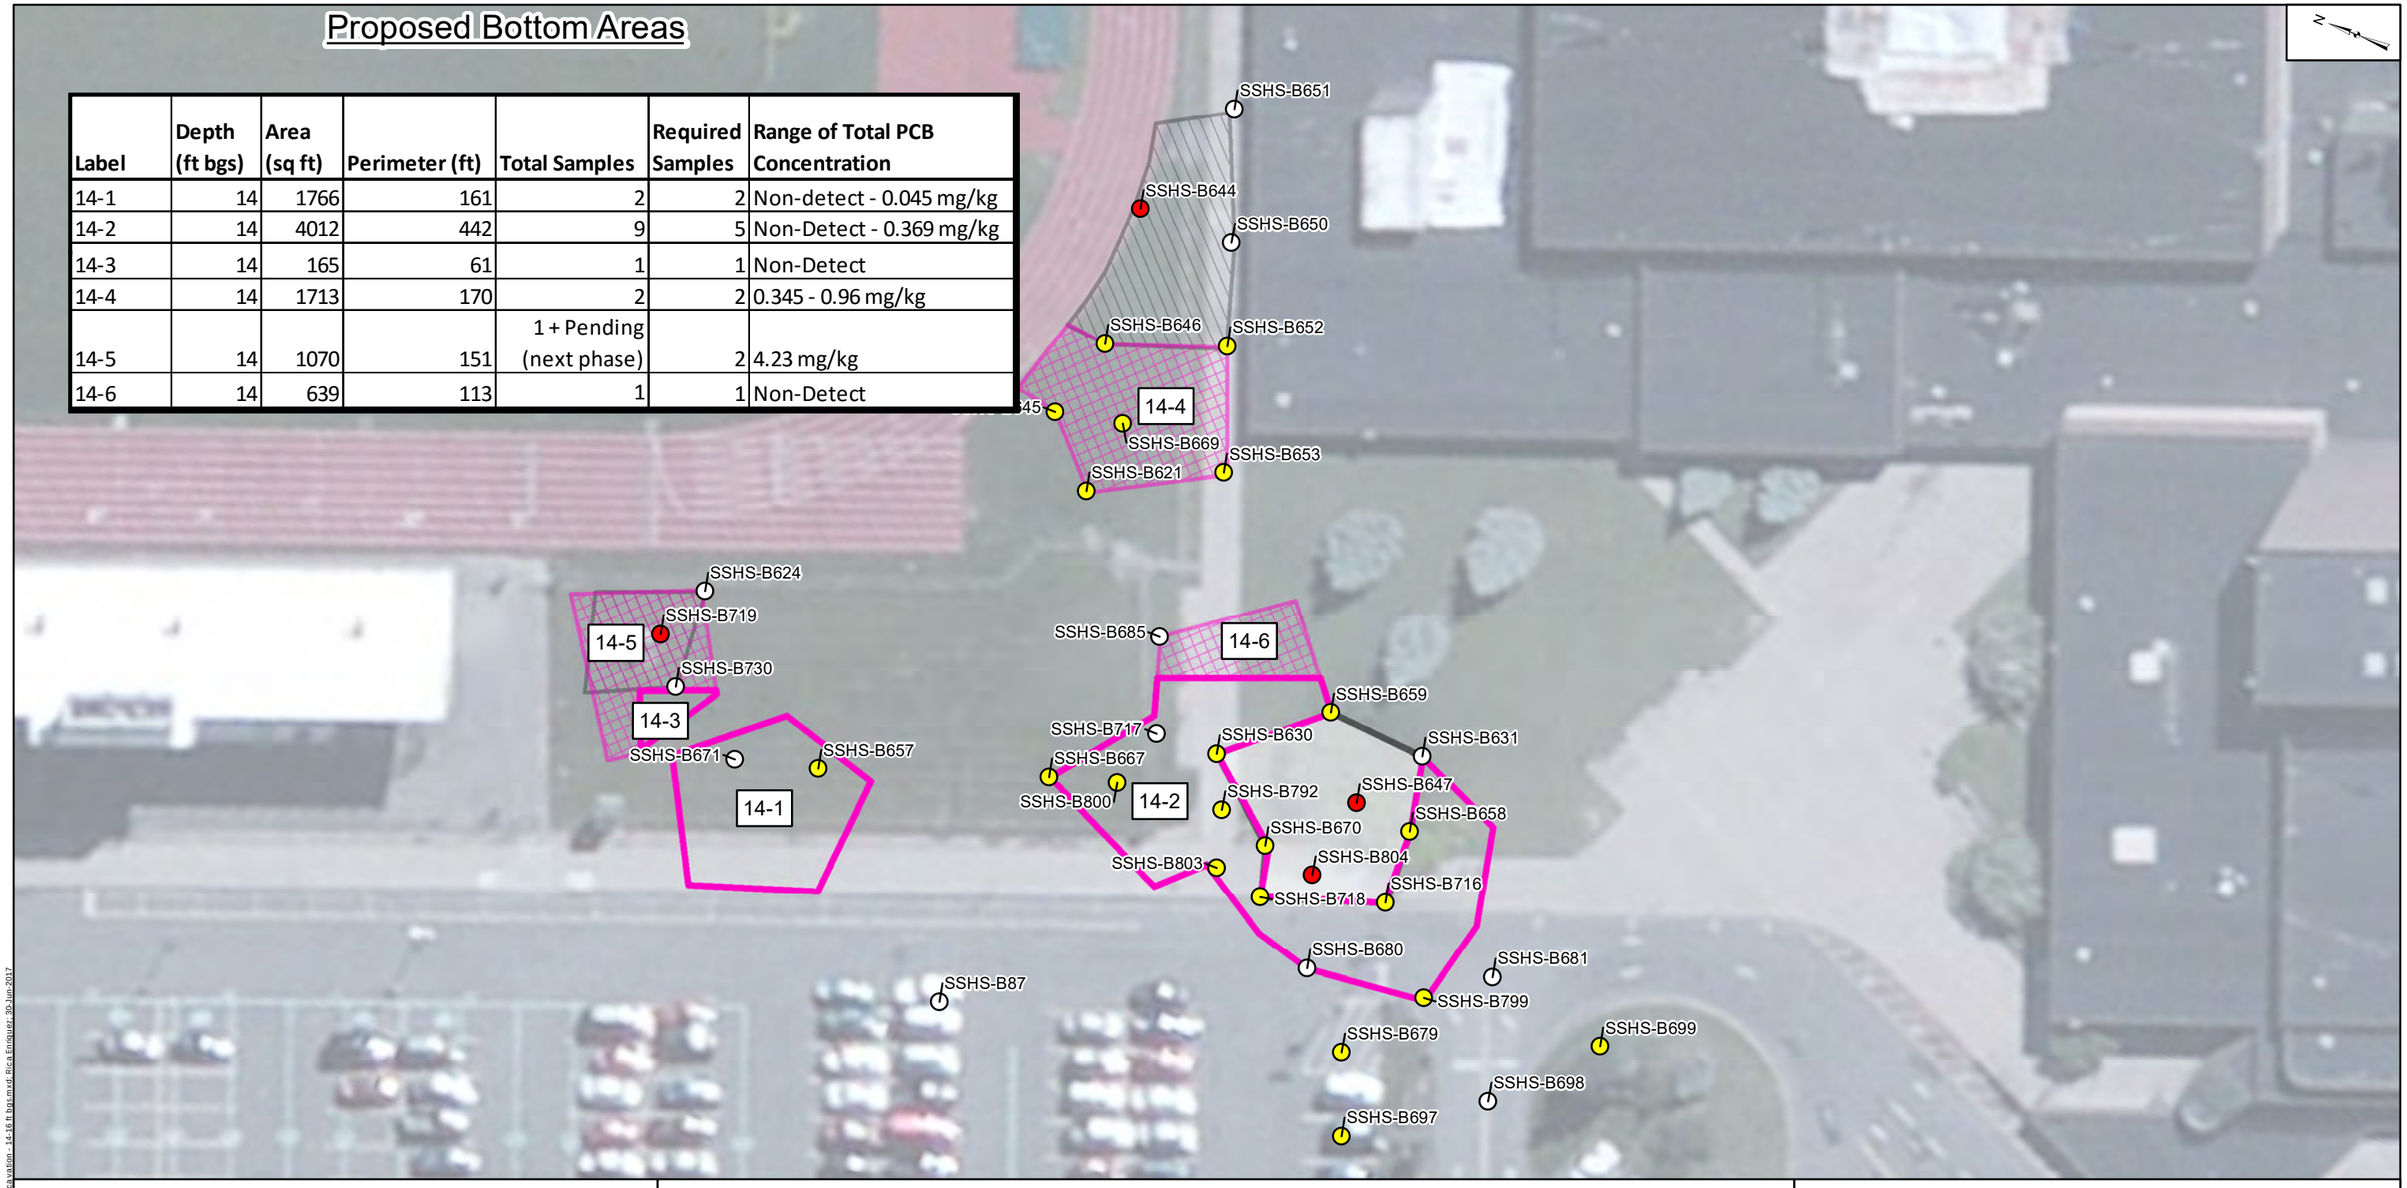
14-1	14	1766	161	2	2	Non-detect - 0.045 mg/kg
14-2	14	4012	442	9	5	Non-Detect - 0.369 mg/kg
14-3	14	165	61	1	1	Non-Detect
14-4	14	1713	170	2	2	0.345 - 0.96 mg/kg
14-5	14	1070	151	1 + Pending (next phase)	2	4.23 mg/kg
14-6	14	639	113	1	1	Non-Detect



Legend

Total PCB Concentration

- Non-Detect
- >0 to 3.2 mg/kg
- >3.2 to 50 mg/kg
- >50 mg/kg

- Estimated Limit of PCB Remediation Waste
- Proposed Limits of Excavation
- Proposed Limits of Excavation (Future)
- Proposed Excavation Bottom (14 ft bgs)
- Proposed Excavation Bottom (Future, 14 ft bgs)

Notes
PCB - Polychlorinated Biphenyl
ft bgs - Feet below ground surface
mg/kg - milligram per kilogram

PCB Remediation Waste – Total PCB concentration of fifty (50) mg/kg or greater as defined in 40 CFR §761.3 (TSCA)

Protection of Groundwater Soil Cleanup Objective of 3.2 mg/kg (6 NYCRR Part 375)

Aerial imagery accessed via ArcGIS Online and provided by Microsoft on 30 June 2017. Image is dated 2 June 2010.

40 20 0 40 Feet

Proposed Soil Excavation - Main Parking Lot (14-16 ft bgs)

Former Sperry Remington - North Portion #808022
Elmira, New York

Geosyntec consultants

Columbia, Maryland | June 2017

Legend

Total PCB Concentration

- Non-Detect
- >0 to 3.2 mg/kg
- >3.2 to 50 mg/kg
- >50 mg/kg
- Proposed Limits of Excavation to Water Table (17 ft bgs)

Notes
PCB - Polychlorinated Biphenyl
ft bgs - Feet below ground surface
mg/kg - milligram per kilogram

Protection of Groundwater Soil Cleanup Objective of 3.2 mg/kg (6 NYCRR Part 375)

Depth of excavation will be 6-12 inches below the water table based on field observations.

Aerial imagery accessed via ArcGIS Online and provided by Microsoft on 12 June 2017. Image is dated 2 June 2010.

40 20 0 40 Feet

Proposed Soil Excavation - Main Parking Lot (16-18 ft bgs)

Former Sperry Remington - North Portion #808022
Elmira, New York

Geosyntec consultants

Columbia, Maryland | June 2017

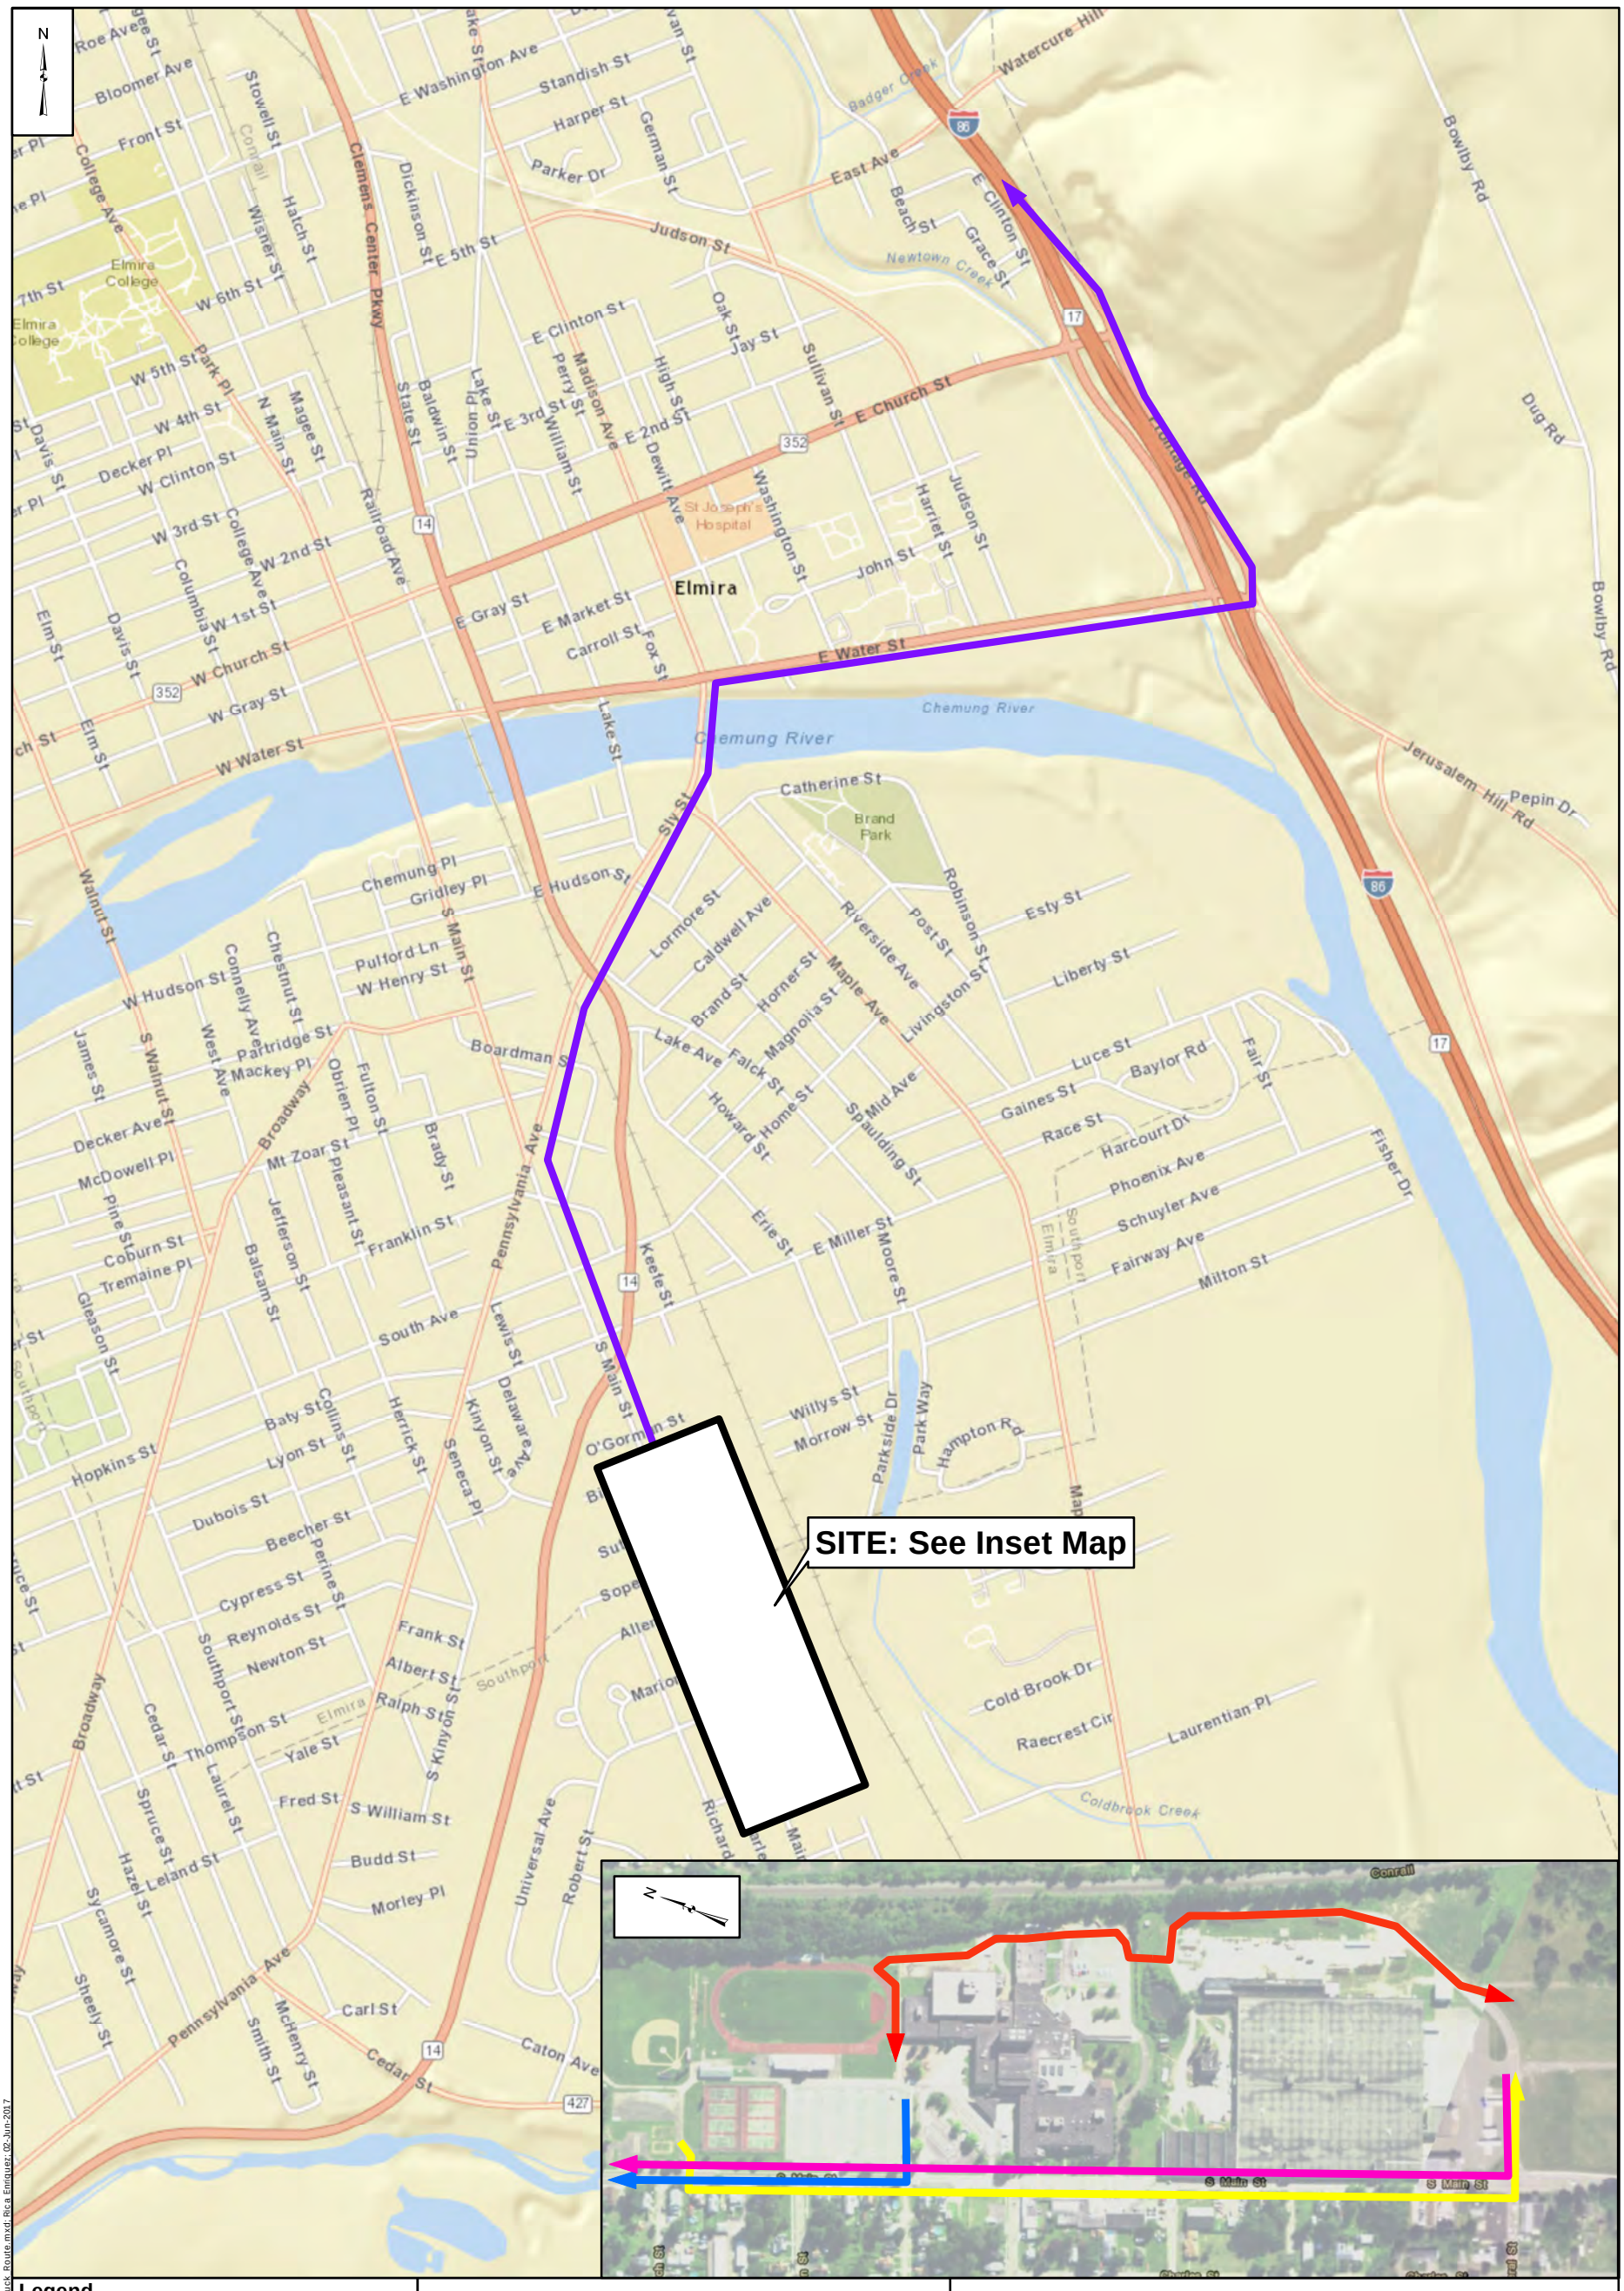
\\minneapolis-01\DATA\GIS\Elmira - MN\8321\Maps\NYDEC AOCs\RM_2017\Excavation - gJ6 ft bgs.mxd; Rica Enriquez; 12-Jun-2017



Legend

- Direct Load to Off-Site Hazardous Waste Disposal
- Main Parking Lot to/from Stockpile
- Stockpile to Off-Site Non-Hazardous Waste Disposal
- Tennis Courts to Stockpile
- Site to Off-Site Disposal

Notes

The planned on-site journey management plan for the material which will be handled during the IRM has been discussed with the City of Elmira Traffic Engineering Department. Routes have been selected to avoid planned road construction in Elmira during the IRM, difficult traffic areas as well as to utilize routes with the most marked pedestrian crossings to ensure maximum safety. Truck traffic will not take place during student arrival/departure times. Left hand turns on to South Main Street will be controlled through a flagman.

Aerial imagery and street map accessed via ArcGIS Online and provided by Microsoft on 02 June 2017. Image is dated

0.25 0.125 0 0.25 Miles
