

New York State  
Department of Environmental Conservation

**Designation Criteria for Identifying Regulated  
Municipal Separate Storm Sewer Systems  
(MS4s)**

January 2003  
Revised May 2010

## **DESIGNATION CRITERIA FOR IDENTIFYING REGULATED MUNICIPAL SEPARATE STORM SEWER SYSTEMS (MS4S)**

The universe of small Municipal Separate Storm Sewer Systems (MS4) is quite large. However, only a sub-set of small MS4s, referred to as “regulated” small MS4s, are covered by the Federal stormwater regulations. A small MS4 can be designated as a regulated MS4 through automatic designation by EPA or by meeting designation criteria developed by the NPDES permitting authority, the New York State Department of Environmental Conservation (DEC) in New York State.

### **Automatic Designation Criteria Required by EPA**

The EPA’s automatic designation criteria are based strictly on population and density. An area is automatically designated if the population is at least 50,000 and has an overall population density of at least 1,000 people per square mile based on the 2000 Census. Maps showing the urbanized areas that are automatically designated are available on DEC’s website.

### **Additional Designation Criteria**

EPA requires the DEC to develop a set of criteria for designating additional MS4 areas. The following criteria, using a combination of population and environmental factors, have been adopted to designate additional MS4s in NYS.

**Criterion 1:** MS4s discharging to waters for which an EPA-approved Total Maximum Daily Load (TMDL) requires reduction of a pollutant associated with stormwater beyond what can be achieved with existing programs (and the area is not already covered under automatic designation).

**Criterion 2:** MS4s contiguous to automatically designated urbanized areas (town lines) that discharge to sensitive waters classified as AA-Special (fresh surface waters), AA (fresh surface waters) with filtration avoidance determination or SA (saline surface waters).

**Criterion 3:** Automatically designated MS4 areas are extended to Town, Village or City boundaries, but only for Town, Village or City implementation of Minimum Control Measures (4) Construction Site Stormwater Runoff Control and (5) Post Construction Stormwater Management in Development and Redevelopment. This additional designation may be waived, by written request to the Department, where the automatically designated area is a small portion of the total area of the Town, Village or City (less than 15 %) and where there is little or no construction activity in the area outside of the automatically designated area (less than 5 disturbed acres per year).

### **For More Information**

MS4s located wholly or partially within the Automatically Designated Urbanized Areas or the New York State Additionally Designated Areas will be required to develop Phase II stormwater programs for that portion of the MS4 located within the regulated area.

If you are a municipality, including special districts or “other public entities,” check the interactive map on DEC’s website of New York State “Urbanized and Designated Areas” to help determine whether your MS4 is located within the Automatically Designated Urbanized Areas or the Additionally Designated Areas boundaries.

Appendix 1 contains a list of the automatically designated MS4s and the municipalities added under the New York State designation criteria. Appendix 2 contains a list of MS4s currently covered by the General Permit or waived.

# APPENDIX 1

## NEW YORK STATE REGULATED AREAS

### New York State Automatically Designated Urbanized Areas

MS4s located wholly or partially within the Urbanized Area portion of these listed municipalities are regulated. To find out more details, or if you are a special district or “other public entity,” check the interactive map on DEC’s website to help determine whether your MS4 is located within the Urbanized Area boundaries. The list below is believed to be reasonably accurate; however, it is wise to consult the map to be sure.

## APPENDIX 3

### Definitions

Note to Reader: Definitions are listed in the order that they appear in the Designation Criteria.

#### 1. Summary of EPA Requirements<sup>1</sup>

Small MS4s that are designated as *regulated MS4s* are required to seek coverage under the general permit for stormwater discharges. Under its Stormwater Phase II Final Rule USEPA has established three ways a small MS4 can be designated as a regulated MS4.

1. Automatic Nationwide Designation: “All operators of small MS4s that are located within the boundaries of a Bureau of Census defined ‘urbanized area’ (UA) based on the latest decennial Census.”
2. Designation by the NPDES Permitting Authority (New York State DEC): “An operator of a small MS4 located outside of a UA may be designated as a regulated small MS4 if the NPDES permitting authority determines that its discharges cause or have the potential to cause an adverse impact on water quality. The Phase II Final Rule requires the NPDES permitting authority to develop a set of designation criteria and apply them, at a minimum, to all small MS4s located outside of a UA serving a jurisdiction with a population of at least 10,000 people and a population density of at least 1000 people/square mile....” EPA recommends that the NPDES permitting authority use a balanced consideration of the following designation criteria on a watershed or other local basis:
  - \* Discharge to sensitive waters;
  - \* High population density;
  - \* High growth or growth potential;
  - \* Contiguity to an Urbanized Area;
  - \* Significant contributor of pollutants to waters of the United States; and
  - \* Ineffective protection of water quality concerns by other programs.”
3. Designation by the NPDES Permitting Authority: “...NPDES permitting authority is required to designate any small MS4 located outside of a UA that contributes substantially to the pollutant loadings of a physically interconnected MS4 regulated by the NPDES storm water program.”

**2. Total Maximum Daily Load (TMDL):** A numerical limit on how much of a specified pollutant can enter a waterbody each day from all sources combined. Examples of pollutants associated with stormwater that might have limits include silt/sediment and Phosphorus.

#### 3. Surface Water Classifications<sup>2</sup>

AA-Special (fresh surface water): The best usages are a source of water supply for drinking, culinary or food processing purposes. There shall be no discharge or disposal of sewage, industrial wastes or other wastes into these waters. Waters designated AA-Special are: Lake George, Brant Lake, Loon Lake and waters within Connecticut water supply drainage basin within Westchester County.

---

<sup>1</sup> Excerpts from EPA’s Fact Sheet 2.1

<sup>2</sup> Definitions of the sensitive waters are excerpted from *Surface Water and Groundwater Classifications and Standards, New York State Codes, Rules and Regulations, Title 6, Chapter X, Parts 700-706* (August 1999)

AA (fresh surface water): The best usages are a source of water supply for drinking, culinary or food processing purposes. For purposes of the designation criteria, the double AA waters must also be the subject of a filtration avoidance determination. Waters designated “AA with filtration avoidance” are the Skaneateles Watershed and the Catskill and Delaware Reservoirs of the NYC Watershed.

SA (saline surface waters): The best usages are shellfishing for market purposes. Waters designated “SA” are certain coastal waters bordering Westchester, Nassau, Suffolk and portions of New York City (the Rockaways and southern end of Staten Island).
