

The Proposed Final New York State
**2018 Section 303(d) List of
Impaired Waters Requiring a TMDL/Other Strategy**

June 2020

Presented here is the *FINAL New York State 2018 Section 303(d) List of Impaired/TMDL Waters*. The list identifies those waters that do not support best uses and that require development of a Total Maximum Daily Load (TMDL) or other restoration strategy. A summary addressing public comments received regarding the previously issued Draft 2018 Section 303(d) List is also available.

The Federal Clean Water Act (Act) requires states to periodically assess and report on the quality of waters in their state. 33 U.S.C. § 1313(d). Section 303(d) of the Act also requires states to identify Impaired Waters, where specific designated uses are not fully supported, and for which the state must consider the development of a Total Maximum Daily Load (TMDL) or other strategy to reduce the input of the specific pollutant(s) that restrict waterbody uses, in order to restore and protect such uses. An outline of the process used to monitor and assess the quality of New York State waters is contained in the New York State *Consolidated Assessment and Listing Methodology (CALM)*. The CALM describes the water quality assessment and Section 303(d) listing process in order to improve the consistency of assessment and listing decisions.

The waterbody listings in the New York State Section 303(d) List are grouped into a number of categories. The various categories, or Parts, of the list are outlined below.

**The Proposed Final New York State 2018 Section 303(d) List of Impaired Waters
Requiring a TMDL/Other Strategy**

Part 1. Individual Waterbody Segments with Impairments Requiring TMDL Development

These are waters with verified impairments that are expected to be addressed by a segment/pollutant-specific TMDL.

Part 2. Multiple/Categorical Waterbody Segments with Impairment Requiring TMDL Development

These are groups of waters affected by similar causes/sources where a single TMDL may be able to address multiple waters with the same issue. Part 2 is subdivided into:

- a) Waterbody Segments Impaired by Atmospheric Deposition/Acid Rain
- b) Waterbody Segments Impaired due to Fish Consumption Advisories
- c) Waterbody Segments Impaired due to Shellfishing Restrictions

Part 3. Waterbodies for which TMDLs are/may be Deferred

These are waters where the development of a TMDL may be premature and may be deferred pending further verification of the suspected impairment, verification for the cause/pollutant/source, or the evaluation of TMDL alternatives. Part 3 is subdivided into:

- a) Waterbodies Requiring Verification of Impairment
- b) Waterbodies Requiring Verification of Cause/Pollutant/Source
- c) Waterbodies Awaiting Development/Evaluation of Other Restoration Measures

Impaired/Delisted Waters NOT Included on the Section 303(d) List

Not all impaired waters of the state are included on the Section 303(d) List. By definition, the List is to be comprised of impaired waters *that require development of a Total Maximum Daily Load (TMDL) plan.* 33 U.S.C. § 1313(d); 40 C.F.R. § 130.7. Although separate from the Section 303(d) List, a compilation of waterbody/pollutants representing those impairments that are not included on the List provides additional information toward understanding listing decisions and clarifies how impairments are considered.

Waterbody Segments Not Listed Because TMDL is Not Necessary (separate list)

The *List of Integrated Report (IR) Category 4a/b/c Waters* is available to facilitate the review of Section 303(d) List. The purpose of this supplement is to provide a more comprehensive inventory of waters of the state that do not fully support designated uses and that are considered to be impaired.

There are three (3) justifications for not including an impaired water on the Section 303(d) List:

Category 4a Waters - TMDL development is not necessary because a TMDL has already been established for the segment/pollutant.

Category 4b Waters - TMDL is not necessary because other required control measures are expected to result in restoration in a reasonable period of time.

Category 4c Waters - TMDL is not appropriate because the impairment is the result of pollution, rather than a pollutant that can be allocated through a TMDL.

Waterbody/Pollutant Delisting (separate list)

A separate list of water/pollutant combinations that were included on the previous Section 303(d) List, but that are NOT included on the current List is also available. This listing provides some linkage and continuity between the previous and proposed new Lists. The specific reason why a waterbody/pollutant no longer appears on the List (i.e., delisting action, reassessment, re-segmentation, etc.) is included in this document. Some of these waters (those that have been delisted but that remain *Impaired*) also appear on the list of *List of Integrated Report (IR) Category 4a/b/c Waters*.

Water Index Number	Waterbody Name (WI/PWL ID)	County	Type	Class	Cause/Pollutant	Suspected Source	Year
--------------------	----------------------------	--------	------	-------	-----------------	------------------	------

2018 Section 303(d) List of Impaired Waters

Segments and/or pollutants listed in **Bold Type** are new listings; i.e., they were not included in the previous (2016) Section 303(d) List.

/+ Denotes Priority Waters for TMDL/restoration strategy scheduled for development in 2018 () and over longer term, through 2022 (+).

Part 1 - Individual Waterbody Segments with Impairment Requiring TMDL Development

¹ Waters exceeding the New York State Water Quality Standard for dissolved oxygen are listed for 'Oxygen Demand' if a specific oxygen demanding pollutant has not been identified.

² **The low dissolved oxygen observed in this system is likely an observed effect of the nutrient pollutant also present.**

More Information Regarding Fish Consumption

Designation of waters as impaired for fish consumption and inclusion in the Section 303(d) List is based on New York State Department of Health advisories contained in its annual Chemicals in Sportfish and Game publications. Where available water quality data for a waterbody is in conflict with these health advisories, decisions regarding listing will reflect the health advisories. Because the specific extent and conditions of the health advisories are reported more precisely/frequently through these advisories than through the Section 303(d) List, the health advisories provide better delineated and more timely information regarding fish consumption recommendations for the waters of New York than does the Section 303(d) List. For the most current shellfishing certification information, refer to <http://www.health.state.ny.us/environmental/outdoors/fish/fish.htm>

A general health advisory to eat no more than one meal per week of fish from any freshwaters and some marine waters of the state is also in place. NYSDOH has issued this advisory because 1) some chemicals (mercury and PCBs, for example) are commonly found in New York State fish, 2) fish from all waters have not been tested, and 3) fish may contain unidentified contaminants. The general advisory is less restrictive than the waterbody-specific advisories. Because the general advisory is less restrictive, is largely precautionary, and applies to almost all waters of the state, these waters are not listed individually on the Section 303(d) List.

Water Index Number	Waterbody Name (WI/PWL ID)	County	Type	Class	Cause/Pollutant	Suspected Source	Year
--------------------	----------------------------	--------	------	-------	-----------------	------------------	------

Part 2c - Multiple Segment/Categorical Waterbody Segments Impaired due to Shellfishing Restrictions

Might be addressed by a waterbody specific TMDL or a pollutant/source specific TMDL or other strategy to attain water quality standards.

More Information Regarding Shellfishing Impairment Listings

Designation of waters as impaired for shellfishing use and inclusion in the Section 303(d) List is based on shellfishing certifications issued by NYSDEC Shellfisheries Program per 6 NYCRR Part 47.3 and the National Shellfish Sanitation Program. Where available water quality data for a waterbody is in conflict with its shellfishing certification status, decisions regarding listing will reflect the shellfishing certification status. Because the specific extent and conditions of the closures are reported more precisely/frequently through the shellfishing programs than through the Section 303(d) List, these programs provide better delineated and more timely information regarding shellfishing certification in the waters of New York than does the Section 303(d) List. For the most current shellfishing certification information, refer to <http://www.dec.state.ny.us/website/dfwmr/marine/shellfish/sfntsh/index.htm>.

⁸ Morphology and other natural conditions may contribute to periodic dissolved oxygen (D.O.) depletion at lower depths in in this water. However, bottom water conditions are not necessarily representative of the waterbody as a whole and the aquatic life best use within this waterbody are fully supported. To the best of NYSDEC's knowledge there are no anthropogenic pollutants driving D.O. excursions within the waterbody. NYSDEC will continue to monitor this water for D.O. and other pollutants that drive oxygen depletion and upon verification of impairment to these waters from other than natural sources or conditions, NYSDEC will move this segment to Part 1 of the 303(d) List.

⁹ This listing is a result of impairments due to extensive algal blooms (Cladophora) that are thought to be the result of multiple factors, including elevated phosphorus levels. Further study is necessary to determine the relative contribution of these multiple factors, the role of phosphorus loading to the Lake, whether a TMDL is the most appropriate management response, and if so, what is the appropriate TMDL target/endpoint. Until issues regarding the causes and pollutants and degree of impact, as well as an appropriate water quality standard are clarified, a Part 3b listing for the most significantly affected shoreline waters is considered to be the most appropriate way to recognize these water quality issues on the Section 303(d) List. Other additional Lake Ontario shoreline, embayment and tributary waterbodies were also considered for listing due to elevated phosphorus levels. NYSDEC believes decisions regarding these additional listings are more appropriately deferred pending the outcome of the NYSDEC effort, currently underway, to develop more appropriate numerical nutrient water quality criteria to replace the existing narrative standards and criteria for ponded waters. However USEPA requested that four specific waterbodies be added to the Section 303(d) List; these waterbodies are: Irondequoit Bay (0302-0001), Sodus Bay (0302-0020), East Bay (0302-0011) and North Pond (0303-0002). As noted above, TMDL development for Part 3b waterbodies may be deferred pending verification of the cause/pollutant.

¹⁰ The Department is conducting a detailed review of monitoring data received from the Onondaga County Ambient Monitoring Program required under the Onondaga Amended Consent Judgement (ACJ), the Microbial Trackdown Study performed by Onondaga Environmental Institute (OEI), and additional environmental sampling performed by others to determine the overall impacts of various restoration measures, the water quality in these tributaries, and the need for moving these listings to Part 1 of the 303(d) List and consideration for development of a TMDL. Impairments to these waters continue to be addressed through a combination of the following measures: 1) completion of the requirements under the ACJ, 2) development and implementation of the Onondaga County CSO Long Term Control Planning (LTCP), 3) potential implementation of additional Microbial Trackdown Studies, and 4) potential Consent Orders and other agreements with municipalities, including regulated Municipal Separate Stormwater Sewer Systems (MS4) entities, and private entities to address industrial contamination, storm water combined sewer overflows, and other urban sources.

(MW8.5a) JB-241	Valley Stream, Upper, and tribs (1701-0225)	Nassau	River	C	Unknown (biol impacts)	Urban/Storm Runoff	2010

¹¹ This segment was moved from Part 1 of the List, where it was originally listed for impairments cause by 'Silt/Sediment' attributed to 'Urban/Storm Runoff'. An updated assessment for this waterbody indicated causes and sources of impairments to this water are not fully understood and it is most appropriate to place it in Part 3b until more sampling is conducted.

¹² Because of the hydrology and bathymetry, nitrogen levels may not be causing macroalgae growth – or a water quality standards exceedence – in Reynolds Channel. However nitrogen discharges to the Channel support macroalgae growth in adjacent waters, significant amounts of which are pushed into the Channel by tides and prevailing winds and currents. Additionally the impact of the transported macroalgae into the Channel and deposits along the shore result in the impairment of uses. A nitrogen TMDL specifically for Reynolds Channel is not planned, however nitrogen levels in the Channel will be addressed through the Western Bays Nitrogen TMDL and other efforts to restore water quality and coastal habitat in Hempstead Bay and other adjacent waters.

¹⁷ These waters were appended to Section 303(d) List by USEPA in 2012. At that time NYSDEC had concluded that elevated turbidity in these waterbodies were the result of the aftermath of severe storm and flooding events. NYSDEC had not included these waterbodies on its Proposed Final 2012 Section 303(d) List submitted by NYSDEC to USEPA based on its determination that deviations from the narrative water quality standard for turbidity (“no increase that will cause a substantial visible contrast to natural conditions”) would have occurred under such conditions in the absence of any human-induced discharges or alterations to the waterbodies. Additionally, while extreme storm events are by nature infrequent, NYSDEC believes it is reasonable to consider such events and the resulting effects to be primarily natural events which may not, in fact, exceed the narrative standard nor meet the criteria for inclusion on the Section 303(d) List. NYSDEC also notes that water quality conditions in the stream have returned to what they were prior to the storm and flood events. While evaluating the necessity and appropriateness of developing a TMDL for these waterbodies, NYSDEC will fully explore other allowable regulatory mechanisms and TMDL alternatives, such as environmental reviews to evaluate any potential significant impacts and optimize future operations among sometimes competing uses and interests, in order to address these issues.

¹⁸ These waterbody/pollutant combinations are covered under the 2012 NYC CSO Consent Order (the Order) and/or the 2011 First Amended Nitrogen Consent Judgement (the Judgement). Many of the subject waters are also covered by a waterbody specific Long Term Control Plan (LTCP) which was submitted to both USEPA and NYSDEC for review and was approved by NYSDEC. Because the Order, Judgement and LTCPs are expected to result in attainment of relevant water quality standards within those waterbodies, TMDLs will not provide additional value and are, therefore, deferred while the required construction and improvement projects are planned and completed. The TMDL need and priority will be re-evaluated once post construction monitoring is completed and NYSDEC has performed a thorough analysis of the data generated.
