The Buck Take Objective (BTO) for a WMU represents the number of antlered bucks expected to be harvested per square mile when the deer population is at the desired level. BTOs are based upon recommendations made by Citizen Task Forces in each WMU. BTOs are not the estimated take for a particular hunting season but rather help guide management efforts to adjust local deer populations. DEC biologists use the annual buck harvest as a gauge of population size and its relationship to the desired population level.

* Buck take in many Adirondack and highly urban/suburban WMUs is not a strong index to the overall population size due to low hunter density and the relative importance of other mortality sources such as winter kill and collisions with vehicles. Thus, no Buck Take Objective has been established for these units.

Deer Management Assistance Program (DMAP)

The Deer Management Assistance Program enables DEC to help landowners and resource managers implement site specific deer management on their lands. DMAP permits are valid for use only during the open deer hunting seasons and can only be used by licensed hunters. More information about DMAP can be found at www.dec.ny.gov/animals/33973.html.

The figures presented here are estimates. The precision of the statewide take estimate is within 1-2 percent. Figures become less precise as the size of the area considered is reduced.

2010 Buck Take vs. Buck Take Objectives

Boundaries shown represent
NYSDEC Wildlife Management Units

Buck Take Objectives

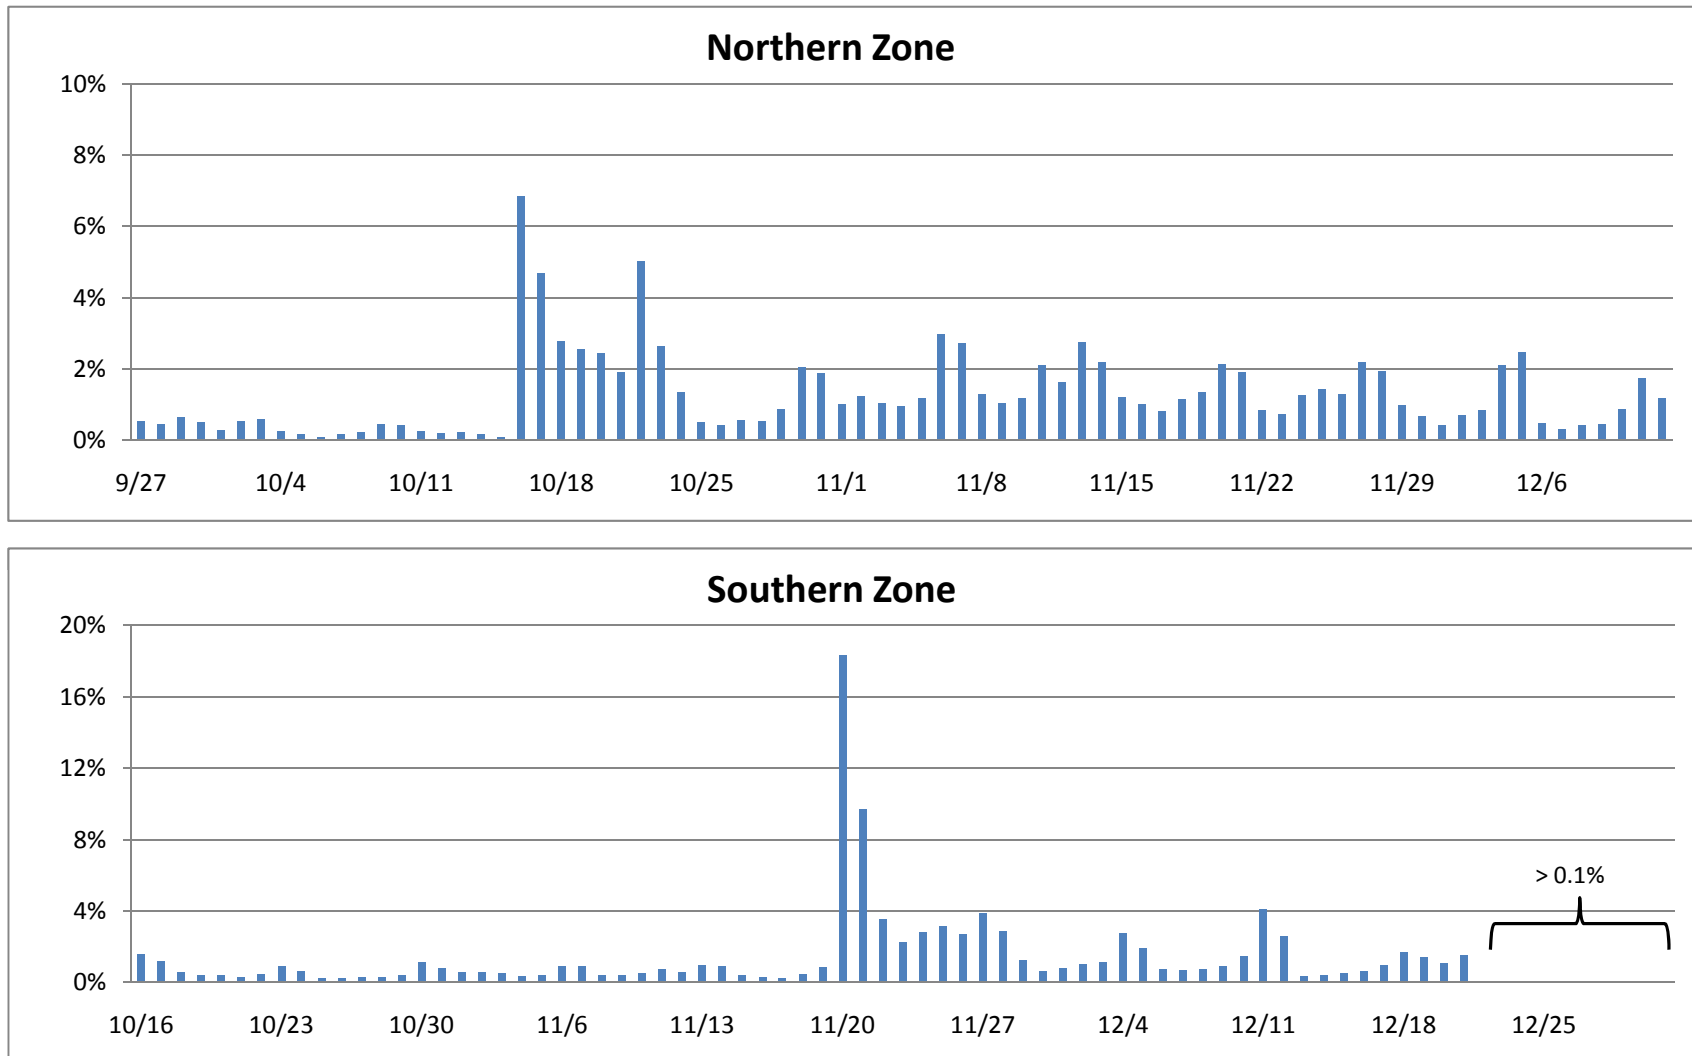

Note: The Buck Take Objectives (BTO) for a WMU represents the number of antlered bucks expected to be harvested per square mile when the deer population is at the desired level. BTOs are based upon recommendations of local stakeholders in each WMU. BTOs are not the estimated take for a particular hunting season but rather help guide the direction of population management efforts in an area. In many Adirondack and highly suburban units, buck take is not a strong index to the overall population size, so no BTO has been established for these units.

Deer Management Assistance Program (DMAP)

The Deer Management Assistance Program enables DEC to help landowners and resource managers implement site specific deer management on their lands. DMAP permits are valid for use only during the open deer hunting seasons and can only be used by licensed hunters. More information about DMAP can be found at www.dec.ny.gov/animals/33973.html.

2011 Buck Take vs. Buck Take Objectives

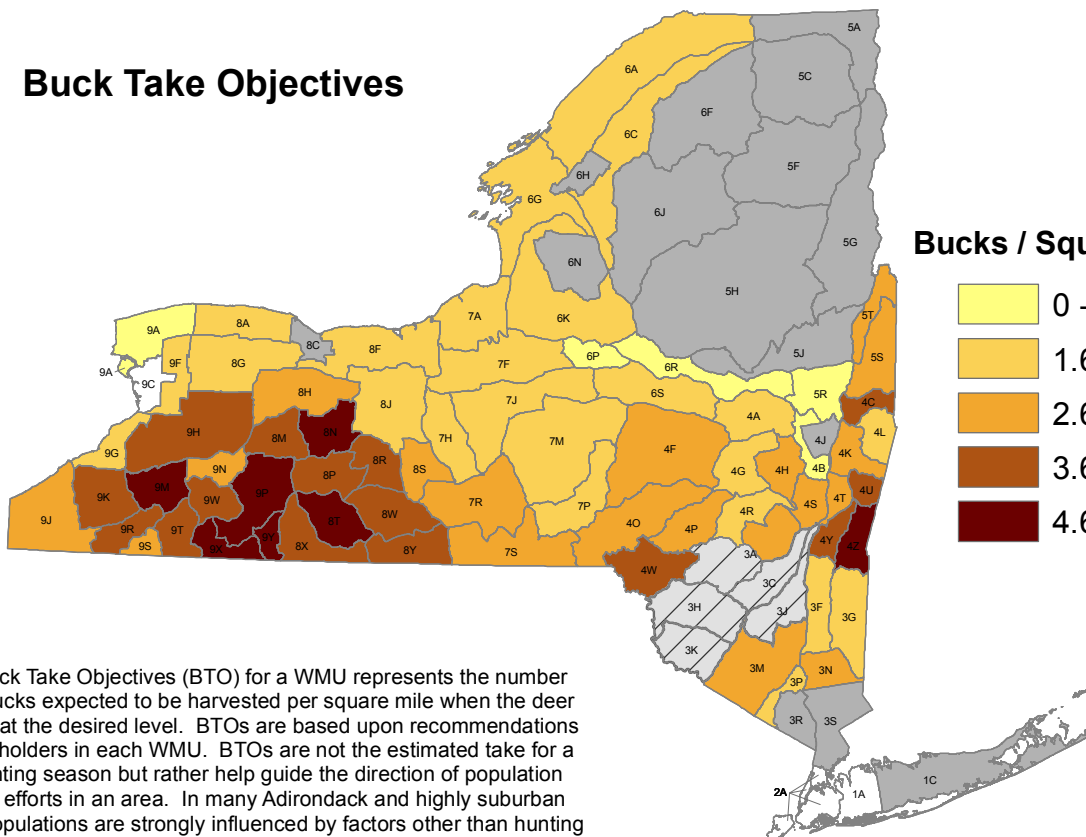

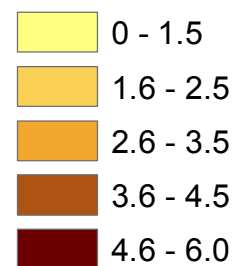

Boundaries shown represent
NYSDEC Wildlife Management Units

Buck Take Objectives

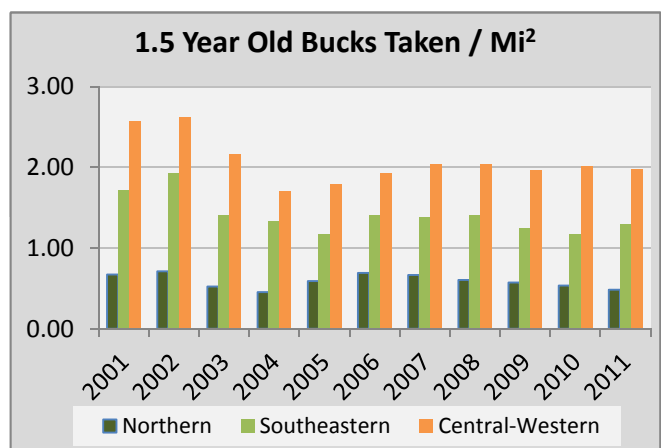

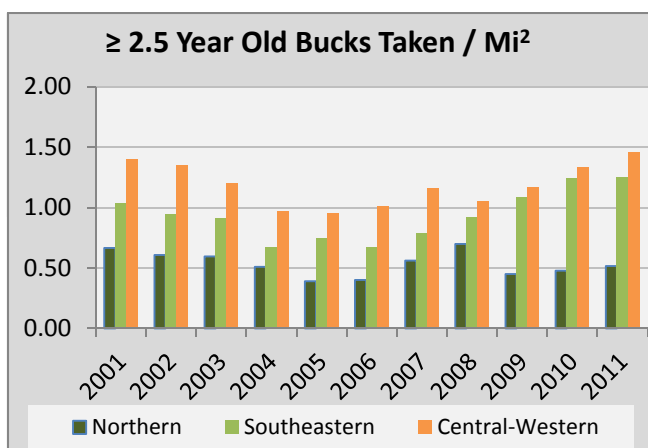

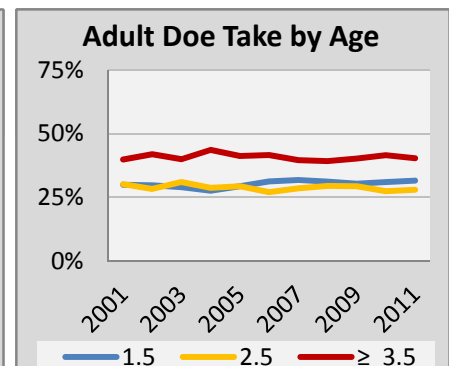

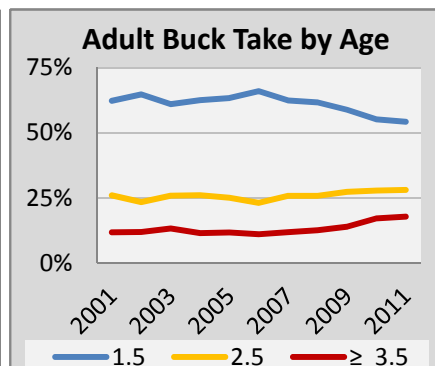

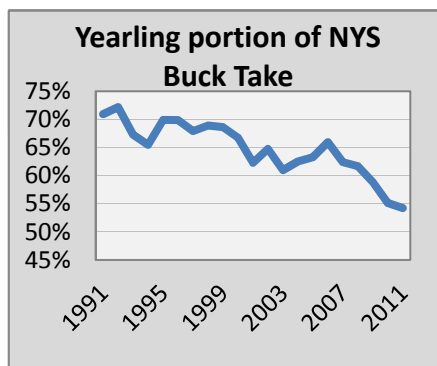

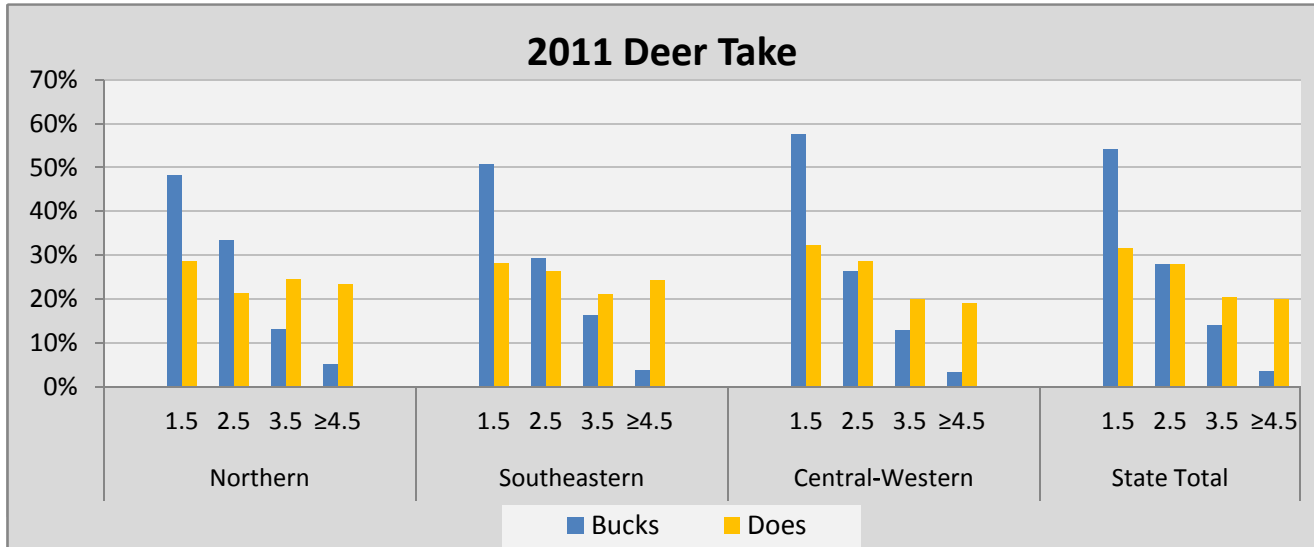

Bucks / Square Mile

Note: The Buck Take Objectives (BTO) for a WMU represents the number of antlered bucks expected to be harvested per square mile when the deer population is at the desired level. BTOs are based upon recommendations of local stakeholders in each WMU. BTOs are not the estimated take for a particular hunting season but rather help guide the direction of population management efforts in an area. In many Adirondack and highly suburban units, deer populations are strongly influenced by factors other than hunting (winter mortality, deer vehicle collisions, lack of hunter access), and no BTO has been established for these units.

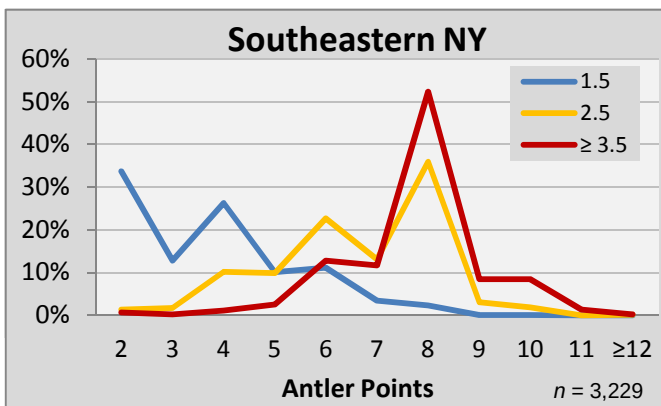

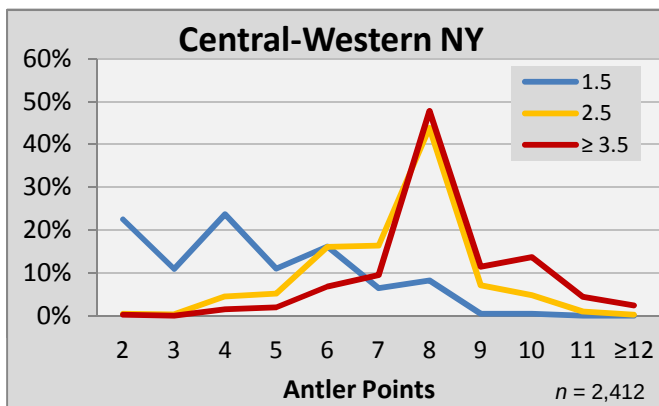

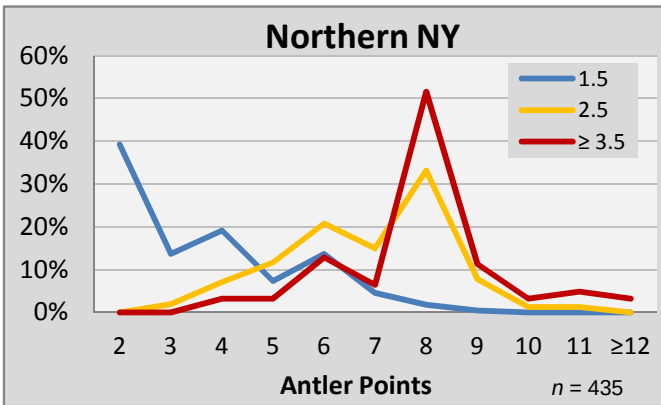

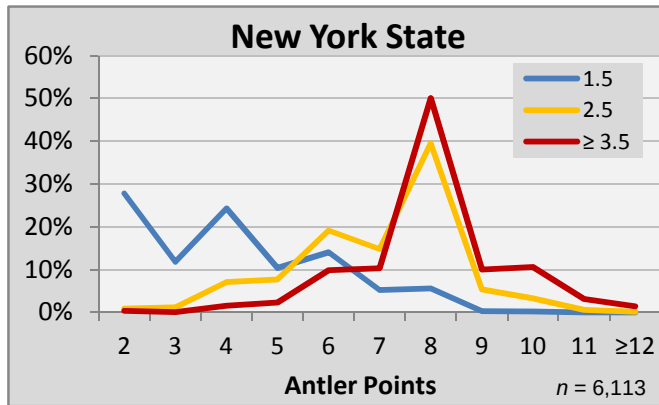

Deer Harvest by Age

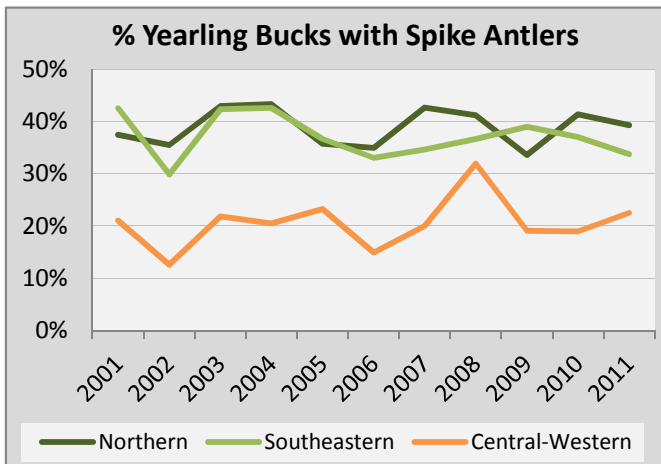

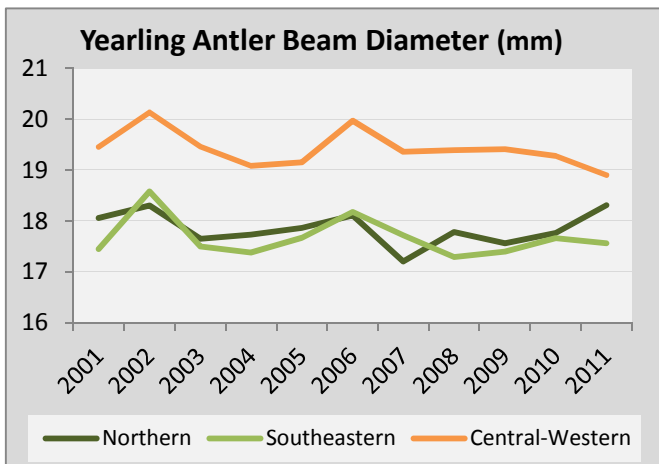

Note: samples from Long Island are included in the state totals only. DEC determines deer age by examining tooth wear and replacement patterns of hunter-killed deer in each WMU. Approximately 15,300 deer were checked in 2011.

Antler Point Distribution by Buck Age Class - 2011

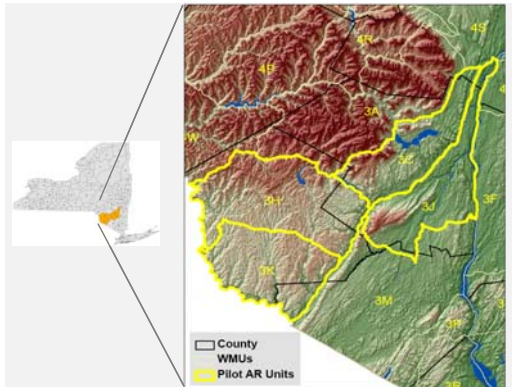

Indices of Deer Herd Condition and Habitat Quality

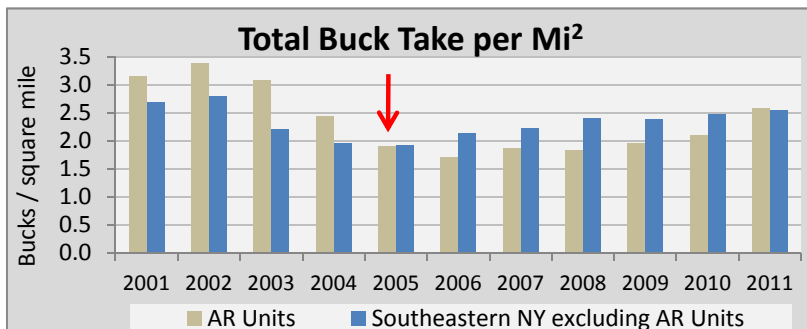

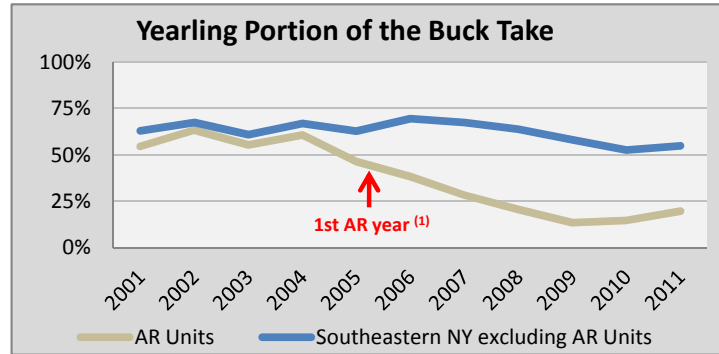

Note: samples from Long Island are included in the state total only. Antler point and age data are generated through examination of hunter-killed deer in each WMU by DEC staff. In 2011, DEC checked approximately 15,300 deer throughout New York.

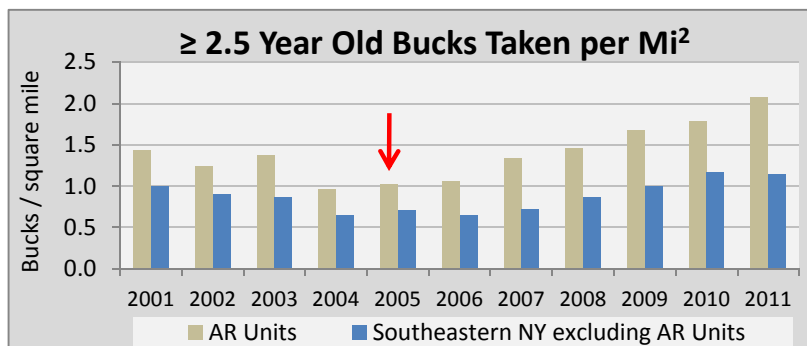

Antler Restriction Program

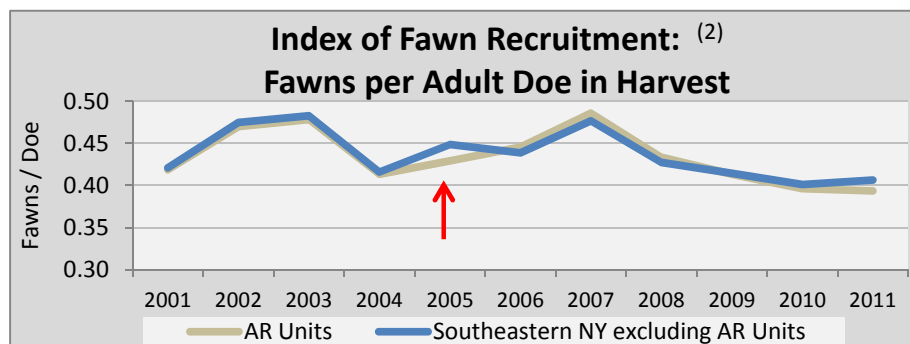

- Adult bucks must have at least 1 antler with ≥ 3 points
- Intended to reduce harvest of yearling (1.5 years old) bucks

	Total Buck Take	
	<u>% Change</u>	
	Ave. 2002-04 to 2009-11	2004 to 2011
AR Units	-25.5%	+ 5.7%
Other Southeastern Units	+ 6.4%	+ 30.3%

	≥ 2.5 Year Old Buck Take	
	<u>% Change</u>	
	Ave. 2002-04 to 2009-11	2004 to 2011
AR Units	+ 55.3%	+ 116.2%
Other Southeastern Units	+ 37%	+ 77.3%

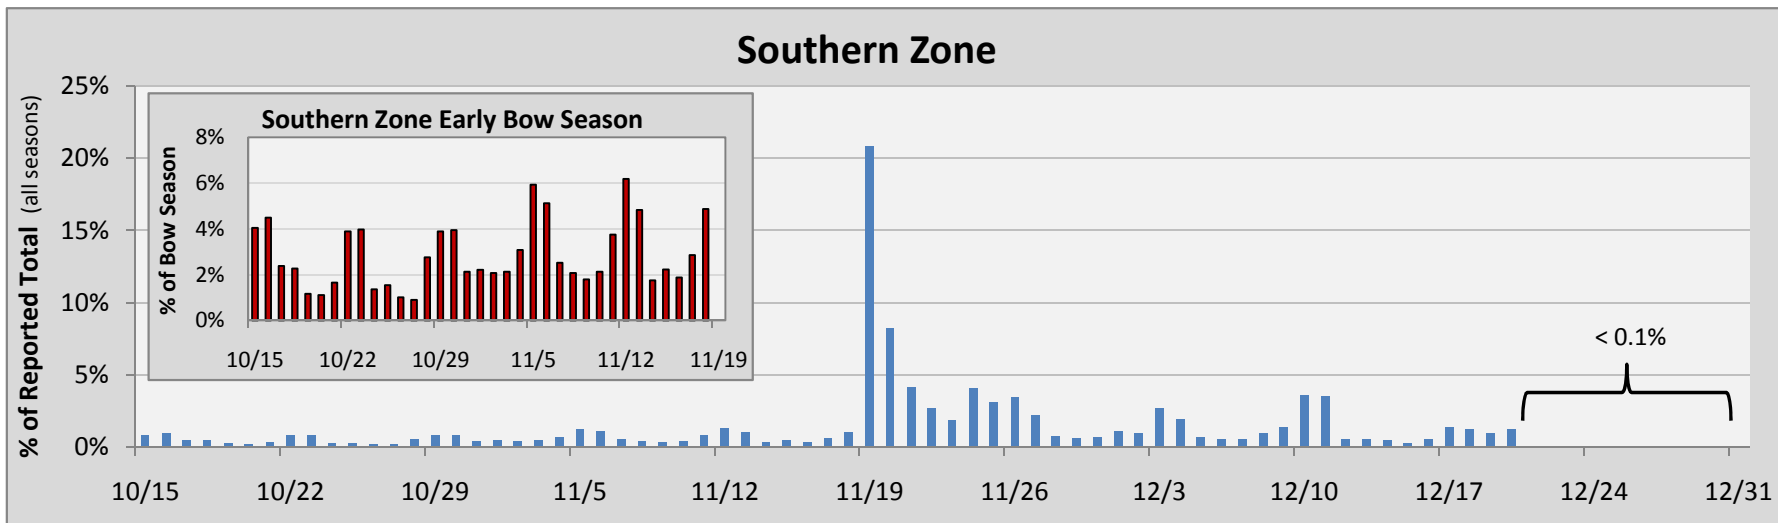

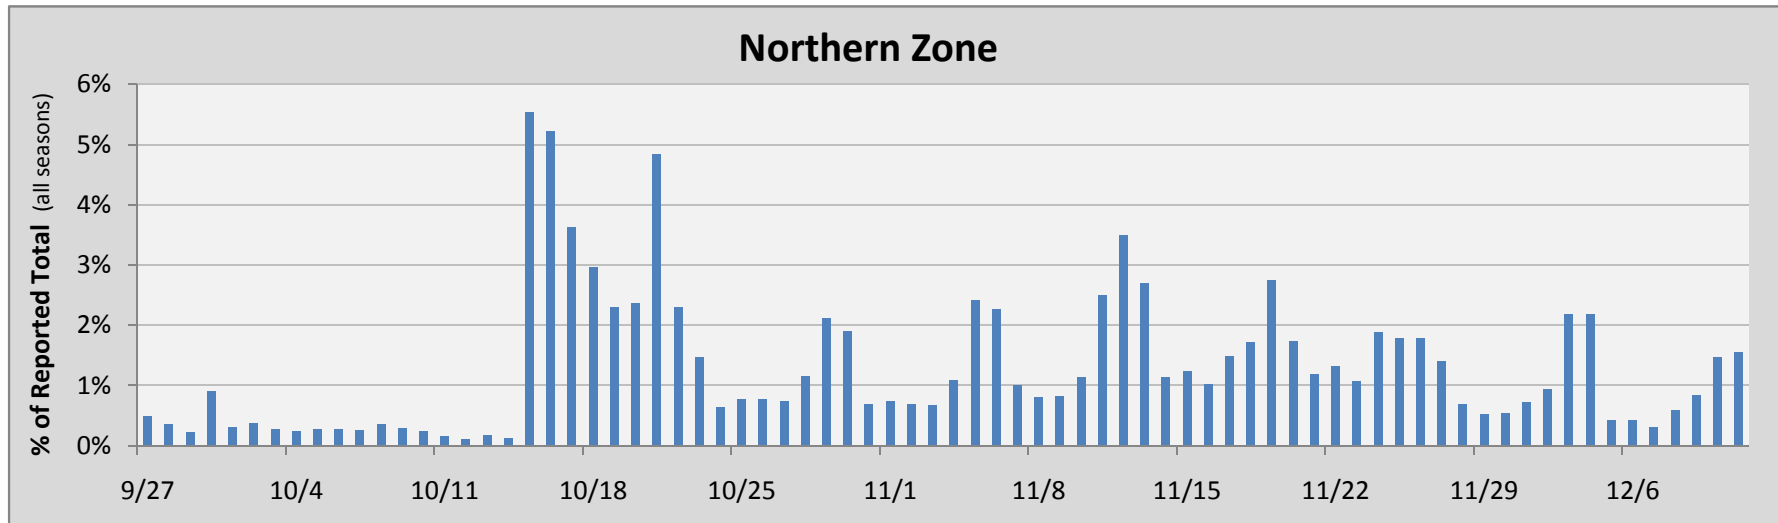

⁽¹⁾ Arrows indicate when mandatory antler restrictions began in WMUs 3C and 3J. WMUs 3H and 3K were added in 2006. In 2011, the NYS Legislature extended mandatory antler restrictions into the southwestern half of WMU 3A. Because the law affects only part of WMU 3A, data from WMU 3A are not included with the antler restriction units in this summary.

⁽²⁾ Fawn recruitment is a measure of the number of fawns per adult doe (≥ 1.5 years old) in the population prior to the hunting season. The ratio of fawns per adult doe in the harvest provides an index of recruitment for monitoring trends and comparing areas.

Deer Management Assistance Program (DMAP)

The Deer Management Assistance Program enables DEC to help landowners and resource managers implement site specific deer management on their lands. DMAP permits are valid for use only during the open deer hunting seasons and can only be used by licensed hunters. More information about DMAP can be found at www.dec.ny.gov/animals/33973.html.

¹ The number of carcass tags with each DMAP permit varies by need and property size. Hunters may generally only use 2 DMAP tags per person.

² Permits may be issued for more than one category of complaint, so the sum of categories may not equal total applications approved in each region.

Deer Damage Permit Summary

Deer Damage Permits (DDPs) are issued by DEC to reduce deer-related damage on individual properties while damage is occurring, generally outside of hunting seasons. DDPs typically authorize removal of antlerless deer only, though take of antlered deer is authorized for some permits. DDPs authorize deer culling, not deer hunting. The reported take on DDPs is not included in annual deer harvest totals. More information can be found at www.dec.ny.gov/animals/7199.html#DDP.
