Rural Background Study for Per- and Polyfluoroalkyl Substances (PFAS) in Soil in New York

Dear Elliot Baird,

AECOM USA, Inc. (AECOM) is pleased to provide the New York State Department of Environmental Conservation (NYSDEC) with this Rural Background Study Letter for Per- and Polyfluoroalkyl Substances (PFAS) in Soil in New York (NY) State.

The objective of the Work Assignment (WA) issued by NYSDEC under contract D009803-44 was to collect state-wide background soil samples for PFAS analysis, at the same sample locations throughout NY state used during the 2005 NYSDEC rural background soil survey.

1. Site Description and Background Information

In 2005, the statewide Survey to Describe Concentration Ranges for Selected Analytes in Rural New York State Surface Soils ("Rural Soil Survey") was conducted jointly by the NYSDEC and the New York State Department of Health (NYSDOH). The objective of the study was to define analyte concentration ranges in rural surface soils from points of human contact with soil and from habitat areas.

Rural properties (n = 125) were randomly selected for sampling using a digitized grid map and a random number generator. The survey determined ranges for analytes in the following three types of surface soil samples: source-distant samples were obtained from areas that were reasonable points of human contact with soil; remote samples were collected from areas distant from margins of human activity; and, near source samples were collected near a roadway or driveway.

All samples were free of readily discernible contamination. The survey protocol called for the avoidance of orchards and exclusion of remote areas that were not habitat areas. Soil samples from the 2005 survey were analyzed for selected volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), organochlorine (OC) pesticides, Aroclor mixtures of polychlorinated biphenyls (PCBs), metals, amenable cyanide, and total cyanide using analytical methods commonly employed during contaminated site investigations. Laboratory analytical data included 118 source-distant, 96 remote and 28 near source samples, for a total of 242 samples.

This 2023 study was designed to mimic the procedures and sampling locations used during the 2005 NYSDEC rural background soil survey, with analysis of soil samples for PFAS.

2. Property Access Outreach Efforts and Response

NYSDEC provided AECOM with a list of the previous parcels that were sampled. This list was used to develop a mailing list for current property owners of 120 parcels. Each parcel (property) was assigned a unique 3-digit code. Letters requesting property access for the purposes of sampling for PFAS were first mailed out to each current

property owner on March 20, 2023. Due to a limited response, a second letter was mailed to these properties on April 13, 2023. This first outreach effort yielded 55 properties that were willing to participate in this study. These properties are identified as numbers without letters.

It was also determined that state-owned properties would be covered by a blanket authorization from NYSDEC. There were 12 state-owned properties included in this study.

Alternate Property Outreach #1 (A/B identifier added to the end of the original site number)

Since many of the initial properties were unresponsive, the contact information for two adjacent parcels of the original parcels was obtained, and an additional 120 access request letters were mailed out on May 5, 2023 with a second notice on June 13, 2023, to adjacent property owners. This second outreach effort yielded 29 properties that were willing to participate in this study. These properties are identified as numbers with A or B letters.

Alternate Property Outreach #2 (C/D identifier added to the end of the original site number)

By August 2023, approximately 25 properties had still been unresponsive. The contact information for an additional two adjacent parcels of the first alternate parcels was obtained, and another 50 access request letters were mailed out on August 2, 2023 with a second notice on September 1, 2023, to second-adjacent property owners. This third outreach effort yielded 14 properties that were willing to participate in this study. These properties are identified as numbers with C or D letters. In addition, the next closest property for site #017 was state owned, therefore it was selected to be sampled as site #017C.

Alternate Property Outreach #3 (E/F identifier added to the end of the original site number)

By October 2023, nine properties had still been unresponsive. The contact information for an additional two adjacent parcels of the second alternate parcels was obtained, and another 18 access request letters were mailed out on October 25, 2023. This fourth outreach effort yielded four properties that were willing to participate in this study. These properties are identified as numbers with E or F letters.

Since six different property owners were unresponsive for site #040, a nearby state-owned property was sampled instead, which was identified as #040G.

The overall outreach efforts resulted in access permission being received for 116 of the targeted 120 parcels (original or adjacent).

3. Field Activities

The field activities as part of this Rural Background Study for PFAS were performed by AECOM staff between October 10, 2023, and December 6, 2023. Refer to **Attachment A** for the photo logs. All field activities were documented digitally using EQuIS collect forms set-up specifically for the project to efficiently track sample IDs and times, soil logging information, sample point coordinates, and site photos.

3.1 Sampling Points

This state-wide background study of PFAS in soil in NY State mimicked the procedures from the 2005 Rural Soil Survey. At each property, up to three (3) types of surface soil samples were collected:

- **Source-distant samples** (labelled as “00#-SD”) were obtained from areas that were reasonable points of human contact with soil, such as yards and trails, but at least 10 meters (m) distant from roads, pavement, structures, outfalls, drainage swales, drip lines, or trash. Primarily soil; free from unusual odors, discoloration or non-soil materials; at least half a mile from an active or inactive industrial facility, waste disposal site, orchard, or other major pollution source; and not in a swamp, bog, wilderness, or other area where soil contact is rare.
- **Remote samples** (labelled as “00#-R”) were collected from areas that were at least 15 m distant from the edge of regular human activity such as yards, golf courses, farms, athletic fields, areas of fill, mines, roads, pavement, structures, burn barrels, outfalls, drainage swales, drip lines, etc. Primarily soil; free from unusual odors, discoloration or non-soil materials; at least half a mile from an active or inactive industrial facility, waste disposal

site, orchard, or other major pollution source; and not in areas inundated by water at the time of sample collection.

- **Near source samples** (labelled as “00#-NS”) were collected at a randomly selected subset of properties that met the conditions listed above and were collected approximately 2 m from a roadway or driveway.

Geographic coordinates and maps indicating designated sampling areas and site contact/owner information were provided to AECOM field staff, who visited the properties and evaluated sampling opportunities. If a designated sampling area was not accessible by automobile, field staff proceeded as near as possible to the designated area.

Sample points were surveyed by the field team using a handheld iPad GPS with an accuracy of +/- 10 m. Locations were also noted on aerial photos in the field. Surveyed locations were later plotted and compared to the locations sketched on the aerial photos in the field notes. Any locations that appeared to be significantly off were manually adjusted, resulting in an accuracy of +/- 1 to 2 m.

3.2 Utility Clearance

Utility clearances were not required given that only surface soil samples were collected at shallow depths using hand tools.

3.3 Community Air Monitoring

Community air monitoring was not required as there was no intrusive or excavation work as part of the field activities.

3.4 Soil Sampling

A total of 548 soil samples, including 232 source distant, 232 remote, 58 near source, and 26 field duplicate samples, were collected between October 10 and December 6, 2023, at 116 properties (Site IDs 001 to 031, 033 to 050, 052 to 055, 057 to 059, 061 to 064, 066 to 069, 071 to 074, 076 to 081, 083 to 114, and 116 to 125), as shown on **Figure 1**.

Hand implements, including a stainless-steel trowel, teaspoon, scoopula, or similar, were utilized to collect surface soil samples at 0 to 2 inch depth intervals. Hand augers, including a bucket auger, extension rod and T-handle, were utilized to collect soil samples at 2 to 12 inch depth intervals. Soils were placed in a stainless-steel mixing bowl to homogenize the sample, and then placed into the appropriate sampling containers. Matrix spikes, matrix spike duplicates and rinse blanks were also collected for quality assurance / quality control (QA/QC) purposes. Sampled locations were backfilled with soils not utilized for sampling. Equipment decontamination procedures are discussed in Section 3.5.

An AECOM geologist classified the soils in accordance with the Unified Soil Classification System. Refer to **Attachment B** for the soil boring logs.

Soil samples were collected according to NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC’s Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), the AECOM October 2023 Field Activities Plan (FAP), and the AECOM October 2023 Quality Assurance Project Plan (QAPP). Soil samples were placed in jars, labeled, placed in coolers, and sent under chain-of-custody protocol by courier to the analytical laboratory, SGS North America Inc. (SGS) of Dayton, New Jersey, a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory. Soil samples were analyzed for 40 PFAS compounds in accordance with the United States Environmental Protection Agency (USEPA) 4th Draft Method 1633. Upon receipt from the laboratory, the analytical results were validated by subcontracted chemists at Validata Chemical Services, Inc. (Validata) of Duluth, Georgia (GA), in accordance with NYSDEC DER-10, USEPA Region II data validation procedures, and the NYSDEC PFAS Guidance. The Data Usability Summary Reports (DUSRs), along with the revised pages (showing qualifiers added or changed) from the laboratory reports, are provided in **Attachment C**.

3.5 Decontamination and Management of Investigation Derived Waste

In accordance with NYSDEC PFAS Guidance and the QAPP, equipment used for soil sampling was decontaminated with a non-phosphate detergent (Alconox) and potable water solution followed by a PFAS-free distilled/deionized

water rinse, between each sample location. Due to the sampling for PFAS, PFAS-free water was obtained from the laboratory; the use of an untreated potable water supply was not an acceptable substitute.

Investigation-derived waste (IDW) was managed in accordance with NYSDEC DER-10. IDW generated during field activities included decontamination water, personal protective equipment (PPE) and paper towels. Solid IDW was placed in black trash bags and disposed of in the municipal trash. Spent decontamination water was poured directly over the sampling locations following sampling activities.

3.6 Equipment Rinse Blanks

One rinse blank was collected each day that soil samples were collected, over the decontaminated soil sampling equipment (stainless steel auger, mixing bowl, trowel, and spoons). Rinse blank samples were analyzed for 40 PFAS compounds in accordance with the USEPA 4th Draft Method 1633.

4. ANALYTICAL RESULTS

The validated analytical results are presented in **Table 1.** Based on the data validation completed, some soil analytical results were rejected due to deficiencies identified, which are summarized in **Table 2**. The rinse blank results are presented in **Table 3**.

4.1 Rejected Soil Results

Some data was rejected due to serious deficiencies in the ability to analyze the samples and to meet published method and project quality control criteria, which are summarized in attached **Tables 1 and 2**. The deficiencies identified for all rejected data were that the Extracted Internal Standards (EIS) reported recoveries were less than the expanded lower control limit of 10%.

Based on the data validation completed, two (2) soil samples submitted for laboratory analysis identified as 105A-SD-0-2 and 108-R-2-12 were rejected (for all 40 analytes) due to serious deficiencies identified above. Similarly, sample 105A-SD-2-12 was rejected for 38 of 40 of the analytes and 105A-R-0-2 was rejected for 39 of the 40 analytes. Individual PFAS parameters were also rejected due to deficiencies identified above, including one (1) soil sample rejected for 1H,1H,2H,2H-perfluorooctane sulfonic acid (6:2FTS), 2H,2H,3H,3H-perfluorooctanoic acid (5:3FTCA), 9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS), n-methyl perfluorooctanesulfonamide (NMeFOSA), perfluorododecanoic acid (PFDoA), perfluorohexanesulfonic acid (PFHxS), perfluoropentanesulfonic acid (PFPeS), and perfluorotridecanoic acid (PFTriA/PFTrDA); two (2) samples rejected for perfluorotetradecanoic acid (PFTeDA); 23 soil samples rejected for 3-perfluoropropyl propanoic acid (3:3FTCA); 24 soil samples rejected for perfluoro-3-methoxypropanoic acid (PFMPA) and perfluoro-4-methoxybutanoic acid (PFMBA); 25 soil samples rejected for perfluoropentanoic acid (PFPeA); and, 160 soil samples rejected for perfluorobutanoic acid (PFBA).

Out of 21,920 analyses (548 samples x 40 analytes each), there were 424 analyses flagged as rejected. This is approximately 1.9% of the data.

4.2 Excluded Sample Results

During review of the data set it was noticed that the detected results for sample 033C-SD were uncharacteristically elevated for all analytes. The laboratory (SGS) was contacted, and it was confirmed that this sample was inadvertently spiked during the analysis, and therefore, is not representative of Site conditions. These results have been excluded from **Table 1** and from the entire data set.

4.3 Applicable Standards, Criteria, and Guidance

For PFAS constituents, soil analytical results are compared to Unrestricted Use guidance values presented in the NYSDEC PFAS Guidance. As shown in Table 1, there are only soil guidance values available for 2 of the 40 compounds analyzed. The two compounds for which guidance values exist are perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA).

4.4 Soil Analytical Results

A total of 548 soil samples, including 26 field duplicate samples, were collected between October 10 and December 6, 2023, at 116 properties (Site IDs 001 to 031, 033 to 050, 052 to 055, 057 to 059, 061 to 064, 066 to 069, 071 to 074, 076 to 081, 083 to 114, and 116 to 125) and submitted for laboratory analysis of PFAS, as shown on **Table 1**.

One or more PFAS compounds were detected in the majority of soil samples submitted for laboratory analysis. A total of 56 soil samples exceeded the Unrestricted Use guidance value for PFOS, including 49 soil samples collected from 0 to 2 inches and seven (7) collected from 2 to 12 inches. Of the exceedances, 41 soil samples were collected from remote locations, 14 samples were collected from source-distant locations, and one (1) was collected from a near-source location.

A total of 60 soil samples exceeded the Unrestricted Use guidance value for PFOA, including 38 soil samples collected from 0 to 2 inches and 22 collected from 2 to 12 inches. Of the exceedances, 49 soil samples were collected from remote locations, ten (10) samples were collected from source-distant locations, and one (1) was collected from a near-source location.

4.5 Rinse Blank Samples

A total of 33 rinse blank samples were collected between October 10 and December 6, 2023, and submitted for laboratory analysis of PFAS, as shown on **Table 3**. All PFAS parameters were not detected, except for one parameter each at four (4) rinse blank samples, including PFOA at RB-11212023, perfluorononanoic acid (PFNA) at RB-11282023, 6:2FTS at RB-11292023, and perfluoroheptanoic acid (PFHpA) at RB-12062023.

Rinse blanks are used to determine whether the sampling equipment decontamination procedures have been adequately performed during sampling, thereby assuring that no “carryover” contamination has been introduced before (or during) sample collection (USEPA, 2014). 6:2FTS was not detected in any soil samples collected on 11/29/2023, the same day as the rinse blank detection, which means that there was no potential for cross contamination on this day. However, PFOA, PFNA, and PFHpA were detected in several soil samples collected on 11/21/2023, 11/28/2023, and 12/06/2023, respectively, on the same days as the rinse blank detections, which may indicate the potential for cross contamination on those days. Of note, two (2) of the four (4) soil samples collected on 11/21/2023 had exceedances of PFOA. Nevertheless, the magnitude of the PFAS detections in the rinse blank samples (ranging from 0.00061 to 0.0010 µg/L or parts per billion [ppb]) are unlikely to significantly affect the soil concentrations on those dates, which ranged from 0.062 to 2.4 µg/kg (or parts per billion [ppb]).

5. SUMMARY

The objective of this Rural Background Study for PFAS in Soil was to collect state-wide background soil samples for PFAS analysis, at the same sample locations throughout NY state used during the 2005 NYSDEC rural background soil survey. The field activities were performed by AECOM staff between October 10, 2023, and December 6, 2023.

A total of 548 soil samples, including 26 field duplicate samples, were collected at 116 properties (Site IDs 001 to 031, 033 to 050, 052 to 055, 057 to 059, 061 to 064, 066 to 069, 071 to 074, 076 to 081, 083 to 114, and 116 to 125) and submitted for laboratory analysis of PFAS. At each property, up to the following three (3) types of surface soil samples were collected:

- **Source-distant samples** were collected from areas that were reasonable points of human contact with soil, such as yards and trails.
- **Remote samples** were collected from areas that were distant from the edge of regular human activity.
- **Near source samples** were collected at a randomly selected subset of properties, and approximately 2 m from a roadway or driveway.

Of the 546 soil samples submitted for laboratory analysis, a total of 56 soil samples exceeded the Unrestricted Use guidance value for PFOS, and a total of 60 soil samples exceeded the Unrestricted Use guidance value for PFOA.

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

Notes:
Bold = Parameter was detected
Highlight = Concentration exceeds guidance value
(1) = NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (NYSDEC PFAS Guidance), dated April 2023 (NYSDEC, 2023), Guidance Values for Unrestricted Use
N = Normal sample
FD = Field duplicate sample
J = The reported results was an estimate value
U = The analyte was not detected
UJ = The analyte was not detected and detection limit was estimated
R = The result was affected by serious deficiencies and data was rejected

DATA USABILITY SUMMARY REPORT

COMPANY:	AECOM Technical Services Northeast, Inc.
PROJECT NAME/#:	WAA44 Rural Background Project #60679961
CONTRACTED LAB:	SGS North America
QA/QC LEVEL:	DUSR
ANALYTICAL METHOD(S):	EPA Draft Method 1633
VALIDATION GUIDELINES:	*USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review,* 2020; NYSDEC *Guidelines for Sampling and Analysis of PFAS* 2023 Professional Judgment
SAMPLE MATRIX:	Water
TYPES OF ANALYSES:	Polyfluoroalkyl Substances (PFAS)
DATA REVIEWER(S):	Robert Thielke
SDG NUMBER:	FC7325
SAMPLING DATE(S):	June 27, 2023

SAMPLES:

LAB ID	CLIENT ID	PFAS
FC7325-1	EB-230627	X

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – FC7325

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no major issues associated with this SDG.

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The sample was analyzed outside of holding time and all results were qualified as estimated (J/UJ).

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and <10x the blank result	J+ biased high

Instrument Blank (IB):

EtFOSA, Perfluorooctanoic acid, and Perfluorononanoic acid were detected in instrument blanks and continuing calibration blanks. No qualification was made based on this finding because all sample results were non-detected.

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blank, EB-230627 was free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

The MS / MSD analyses were performed on a sample not associated with this SDG. No action was taken.

VII.) Laboratory Control Samples (LCS):

All LCS and Low Level LCS Recovery criteria were met for this SDG. No qualification was necessary.

VIII.) Field Duplicates:

No Field Duplicates were associated with this SDG.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were greater than the lower control criteria of 50% for all EIS.

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance Criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

AECOM

VALIDATION REPORT – JD74737 Correction/Replacement

Project Name: NYSDEC WA#44.1 Rural Background Study for PFAS in Soil

AECOM Project #60679961

The text of the validation report by 3rd party validator – Validata Chemical Services Inc. (Validata) indicated certain compounds should be rejected. However, this was not done on the associated Form Is in the validation report. The Form Is noted below have been changed by AECOM.

The Form I for sample JD74737-42 (field sample ID 039-R-2-12) had PFBA incorrectly flagged with a 'J' by Validata. The 'J' qualifier was crossed out and an 'R' qualifier applied to the Form I.

The Form I for sample JD74737-49 (field sample ID 048B-SD-0-2) had PFMPA, PFMBA, and 3:3FTCA incorrectly flagged with a 'UJ' by Validata. The 'UJ' qualifiers were crossed out and 'R' qualifiers applied to the Form I.

The detected result for PFBA was qualified 'UJ' on the Form I for sample JD74737-70 (field sample ID 026-R-0-2) by Validata. The validation text also has a 'UJ' listed. This was an error. The blanks associated with this sample did not show any detections for this compound. The correct qualification should be 'J' due to the low % recovery of the extracted internal standard (EIS) as indicated in the text of the validation report. The 'UJ' qualifier has been crossed out and a 'J' qualifier applied to the Form I in the validation report and the text corrected in the validation report.

The changes are noted in red and initialed/dated. No other changes have been made to the validation report.

SGS North America – JD74737

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and	No qualification

	>10x the blank result	
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blank, RB-10102023, RB-10112023, RB-10122023 were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using samples JD74737-6/037-SD-2-12, JD74737-13/030-NS-0-2, JD74737-20/034-SD-2-12, JD74737-42/039-R-2-12, JD74737-67/031A-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD74737-13	030-NS-0-2	RPD > 30%	4:2 FTS	UJ
JD74737-20	034-SD-2-12	Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ
JD74737-67	031A-R-2-12	RPD > 30% Recovery < lower control limit of 70%	PFBS PFMPA 3:3FTCA	UJ R for EIS R for EIS

For MS/MSD recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification.

VII.) Laboratory Control Samples (LCS):

All Low Level LCS (LLCS) recovery criteria were met with the following exceptions:

J added AMK 1/16/25

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification, with the exception of D5EtFOSAA which resulted in the qualification of J for EtFOSAA in sample JD74737-1.

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD74836

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD74836-1	050-NS-0-2	13C4PFBA	PFBA	R
JD74836-14	FD-10132023	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blank, RB-101302023 was free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD74836-15/046-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD74836-15	046-R-2-12	RPD > 30%	PFMPA 3:3FTCA	UJ UJ
		Recovery < lower control limit of 70%	3:3FTCA 5:3FTCA 7:3FTCA	UJ UJ UJ

VII.) Laboratory Control Samples (LCS):

All Low Level LCS Recovery criteria were met. No qualification was necessary.

LCS OP49934-LBS met all recovery criteria. No qualification was necessary.

LCS OP49970-LBS reported PFTrDA < the lower control limit of 70%. The associated sample, 74836-20, reported this analyte as non-detect. This result is estimated and has been qualified “UJ”.

LCS OP50063-LBS reported PFMPA and 3:3FTCA < the 70% lower control limit. These analytes in

samples 74836-11 and 74836-12 were non-detects. These analytes are estimated and have been qualified "UJ".

VIII.) Field Duplicates:

One set of field duplicate samples (046-R-0-2 / FD-10132023) was identified as part of this SDG. The 30% Relative Percent Difference criteria were met except for PFOS which was 45%. This analyte in both samples is considered estimated and has been qualified "J"/

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD74836-1	050-NS-0-2	13C5-PFPeA	PFPeA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD74986

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification

JD74986-49	100A-R-2-12	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks RB-10162023-ACTD-JD74986AQ and RB-10172023-ACTD-JD74986AQ were identified in this SDG. All Equipment Blank results were undetected.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD74986-19/090-R-2-12-ACTD-JD74986SO, JD74986-30/095-R-2-12-ACTD-JD74986SO, and JD74986-45/087E-R-2-12-ACTD-JD74986SO. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD74986-19	090-R-2-12-ACTD-JD74986SO	Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ
JD74986-30	095-R-2-12-ACTD-JD74986SO	RPD > 30%	Perfluoroheptanesulfonic acid	UJ
		Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ
JD74986-45	087E-R-2-12-ACTD-JD74986SO	RPD > 30%	Perfluorododecanesulfonic acid	UJ

VII.) Laboratory Control Samples (LCS):

All Low Level LCS Recovery criteria were met. No qualification was necessary.

LCS OP49924-LLBS reported Perfluorotridecanoic acid, Perfluorotetradecanoic acid, MeFOSAA, PFMPA, and 3:3 FTCA at < the lower control limit of 70%. The associated samples, JD74986-11, JD74986-12, JD74986-13, JD74986-14, JD74986-15, JD74986-16, JD74986-17, JD74986-18, JD74986-19, JD74986-20, JD74986-21, JD74986-22, JD74986-23, JD74986-24, JD74986-25, JD74986-27, JD74986-28, JD74986-29 were qualified as estimated (J/UJ).

LCS OP49924-BS reported PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated samples, JD74986-11, JD74986-12, JD74986-13, JD74986-14, JD74986-15, JD74986-16, JD74986-17, JD74986-18, JD74986-19, JD74986-20, JD74986-21, JD74986-22, JD74986-23, JD74986-24, JD74986-25, JD74986-27, JD74986-28, JD74986-29 were qualified as estimated (J/UJ).

LCS OP49924-LLBS reported Perfluoropentanesulfonic acid, ADONA, PFMBA, 19Cl-PF3ONS, 911Cl-PF3OUdS, and PFEESA at > the upper control limit of 130%. The associated detected results in samples, JD74986-11, JD74986-12, JD74986-13, JD74986-14, JD74986-15, JD74986-16, JD74986-17, JD74986-18, JD74986-19, JD74986-20, JD74986-21, JD74986-22, JD74986-23, JD74986-24, JD74986-25, JD74986-27, JD74986-28, JD74986-29 were qualified as estimated (J).

LCS OP49935-LLBS and OP49935-BS reported PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated samples JD74986-1, JD74986-2, JD74986-3, JD74986-4, JD74986-5, JD74986-6, JD74986-7, JD74986-8, JD74986-9, JD74986-10, JD74986-30, JD74986-31, JD74986-32, JD74986-33, JD74986-34, JD74986-35, and JD74986-36 were qualified as estimated (J/UJ).

LCS OP49995-LLBS reported Perfluoroundecanoic acid, PFOSA, 3:3 FTCA at < the lower control limit of 70%. The associated samples JD74986-37, JD74986-38, JD74986-39, JD74986-40, JD74986-41, JD74986-42, JD74986-43, JD74986-44, JD74986-45, JD74986-46, JD74986-47, JD74986-48, and JD74986-49 were qualified as estimated (J/UJ).

LCS OP49995-BS reported, PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated samples JD74986-37, JD74986-38, JD74986-39, JD74986-40, JD74986-41, JD74986-42, JD74986-43, JD74986-44, JD74986-45, JD74986-46, JD74986-47, JD74986-48, and JD74986-49 were qualified as estimated (J/UJ).

VIII.) Field Duplicates:

Two sets of field duplicate samples (090-R-0-2 / FD-10162023; 087E-NS-2-12/ FD-10172023) were identified as part of this SDG. The 30% Relative Percent Difference criteria were met for all results that were greater than the reporting limit.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

AECOM

VALIDATION REPORT – JD75085 Correction/Replacement

Project Name: NYSDEC WA#44.1 Rural Background Study for PFAS in Soil

AECOM Project #60679961

The detected result for PFPeA was qualified 'UJ' on the Form I for sample JD75085-9 (field sample ID 080-NS-0-2) by 3rd party validator – Validata Chemical Services Inc. (Validata). The validation text also has a 'UJ' listed. This was an error. The blanks associated with this sample did not show any detections for this compound. The correct qualification should be 'J' due to the low % recovery of the extracted internal standard (EIS) as indicated in the text of the validation report. The 'UJ' qualifier has been crossed out and a 'J' qualifier applied to the Form I in the validation report and the text corrected in the validation report. The changes are noted in red and initialed/dated.

No other changes have been made to the validation report.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75085-6	081C-SD-2-12-ACTD-JD75085SO	13C4PFBA	PFBA	R
JD75085-9	080-NS-0-2-ACTD-JD75085SO	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks RB-10182023 was identified in this SDG. All Equipment Blank results were undetected.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD75085-15/080-R-2-12-ACTD-JD75085SO. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD75085-15	080-R-2-12-ACTD-JD75085SO	Recovery < lower control limit of 70%	3:3FTCA	UJ

VII.) Laboratory Control Samples (LCS):

LCS OP49991-LLBS reported Perfluorododecanoic acid, EtFOSA, and EtFOSE at < the lower control limit of 70%. The associated results in sample JD75085-24 were qualified as estimated (J/UJ).

LCS OP49971-LLBS reported Perfluorobutanoic acid Perfluoropentanesulfonic acid, Perfluorooctanesulfonic acid , PFOSA, and MeFOSAA at < the lower control limit of 70%. The associated results in samples JD75085-1, JD75085-2, JD75085-3, JD75085-4, JD75085-5, JD75085-6, JD75085-7, JD75085-8, JD75085-9, JD75085-10, JD75085-11, JD75085-12, JD75085-13, JD75085-14, JD75085-15, JD75085-16, JD75085-17, and JD75085-18 were qualified as estimated (J/UJ).

LCS OP49995-LLBS reported Perfluoroundecanoic acid, PFOSA, PFMBA, and 3:3 FTCA at < the lower control limit of 70%. The associated results in samples JD75085-19, JD75085-20, JD75085-21, JD75085-22, and JD75085-23 were qualified as estimated (J/UJ).

LCS OP49971-BS reported PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated samples JD75085-1, JD75085-2, JD75085-3, JD75085-4, JD75085-5, JD75085-6, JD75085-7, JD75085-8, JD75085-9, JD75085-10, JD75085-11, JD75085-12, JD75085-13, JD75085-14, JD75085-15, JD75085-16, JD75085-17, and JD75085-18 were qualified as estimated (J/UJ).

LCS OP49995-BS reported PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated samples JD75085-19, JD75085-20, JD75085-21, JD75085-22, and JD75085-23were qualified as estimated (J/UJ).

VIII.) Field Duplicates:

One set of field duplicate samples (080-NS-2-12-ACTD-JD75085SO/FD-10182023-ACTD-JD75085SO) were identified as part of this SDG. The 30% Relative Percent Difference criteria were met for all results that were greater than the reporting limit.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification

JD75085-23	089C-R-2-12-ACTD-JD75085SO	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD74836

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75251-5	078-NS-0-2	13C4PFBA	PFBA	R
JD75251-18	057-R-0-2	13C4PFBA	PFBA	R
JD75251-21	086-SD-0-12	13C4PFBA	PFBA	R
JD75251-23	086-R-0-2	13C4PFBA	PFBA	R
JD75251-25	077B-R-0-2	13C4PFBA	PFBA	R
JD75251-26	FD-10202023	13C4PFBA	PFBA	R
JD75251-32	069-SD-0-2	13C4PFBA	PFBA	R
JD75251-34	069-R-0-2	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-1019202023 and RB-10202023 were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using samples JD75251-9/078-SD-2-12 and JD75251-27/077B-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD75251-9	078-SD-2-12	RPD > 30%	PFMPA PFMBA PFHxA PFNS PFDS 3:3FTCA	UJ UJ UJ UJ UJ UJ
		Recovery < lower control limit of 70%	PFMPA PFMBA	UJ UJ

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD75251-27	077B-R-2-12	Recovery < lower control limit of 70%	PFMPA PFMBA	UJ UJ

VII.) Laboratory Control Samples (LCS):

Low Level LCS (LLCS) criteria were not met for the lower control limit as follows:

LLCS	LAB ID	CLIENT ID	ANALYTE	QUALIFICATION
OP49993-LLCS	JD75251-1	076-SD-0-2	PFTrDA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD7533

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75433-1	092A-SD-0-2	13C4PFBA	PFBA	R
JD75433-3	092A-R-0-2	13C4PFBA	PFBA	R
JD75433-4	092A-R-2-12	13C4PFBA	PFBA	R
JD75433-9	101-NS-0-2	13C4PFBA	PFBA	R
JD75433-17	055-SD-0-2	13C4PFBA	PFBA	R
JD75433-23	063-R-0-2	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-102302023 and RB-10242023 were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD75433-15/101-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD75433-15	101-R-2-12	Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ

VII.) Laboratory Control Samples (LCS):

All Low Level LCS Recovery criteria were met, with the following exceptions; PFBA, PFHxA, PFNS, EtFOSAA, NFDHA, PFEESA, ADONA and 13-Cl-PF3ONS all reported recoveries > the upper control limit. All associated sample results were non-detect. No qualification was necessary.

LCS OP50061-LBS met all recovery criteria with the following exceptions; PFPeS and 4:2-FTS reported recoveries > the upper control limit. All associated sample results were non-detect. No qualification was necessary.

LCS OP50062-met all recovery criteria. No qualification was necessary.

LCS OP50063-LBS reported PFMPA and 3:3FTCA < the 70% lower control limit. These analytes in samples 75433-15, 75433-16, 75433-17, 75433-18, 75433-19, 75433-20, 75433-21, 75433-22, 75433-23, 75433-24, 75433-25, 75433-26, 75433-27, 75433-28 were non-detects. These analytes are estimated and have been qualified "UJ".

VIII.) Field Duplicates:

One set of field duplicate samples (101-NS-2-12 / FD-10232023) was identified as part of this SDG. All Relative Percent Difference criteria were met. No qualification was needed.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Attachment A

Sample Result Forms (FORM Is) Corrected for Validation Qualifiers

AECOM

VALIDATION REPORT – JD75523 Correction/Replacement

Project Name: NYSDEC WA#44.1 Rural Background Study for PFAS in Soil

AECOM Project #60679961

The text of the validation report by 3rd party validator – Validata Chemical Services Inc. (Validata) indicated certain compounds should be rejected. However, this was not done on the associated Form Is in the validation report. The Form Is noted below have been changed by AECOM.

The Form I for sample JD75523-5 (field sample ID 067-SD-0-2) had PFMPA, PFMBA, and 3:3FTCA incorrectly flagged with a 'UJ' by Validata. The 'UJ' qualifiers were crossed out and 'R' qualifiers applied to the Form I. The changes are noted in red and initialed/dated.

No other changes have been made to the validation report.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD75523

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75523-4	054A-R-2-12	13C4PFBA 13C5PFPeA	PFBA PFPeA 3:3FTCA PFMPA PFMBA	R
JD75523-5	067-SD-0-2	13C4PFBA 13C5PFPeA	PFBA PFPeA 3:3FTCA PFMPA PFMBA	R
JD75523-6	067-SD-2-12	13C4PFBA	PFBA	R
JD75523-7	067-R-0-2	13C4PFBA 13C5PFPeA	PFBA PFPeA 3:3FTCA PFMPA PFMBA	R
JD75523-8	067-R-2-12	13C4PFBA	PFBA	R
JD75523-9	064-SD-0-2	13C4PFBA	PFBA	R
JD75523-10	064-SD-2-12	13C4PFBA	PFBA	R
JD75523-12	FD-10252023	13C4PFBA	PFBA	R
JD75523-14	053B-NS-0-2	13C4PFBA	PFBA	R
JD75523-15	053B-NS-2-12	13C4PFBA	PFBA	R
JD75523-16	053B-SD-0-2	13C4PFBA	PFBA	R

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75523-17	053B-SD-2-12	13C4PFBA	PFBA	R
JD75523-19	053B-R-2-12	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. All samples were extracted and analyzed within holding time criteria.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blank, RB-101252023 was free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD74836-15/046-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD75523-13	064-R-2-12	RPD > 30%	PFMPA 3:3FTCA ADONA PFMBA NFDHA 9Cl-PF3ONS 11Cl-PF3OUdS	UJ
		Recovery < lower control limit of 70%	MeFOSE PFMPA NFDHA 3:3FTCA	UJ

VII.) Laboratory Control Samples (LCS):

All Low Level LCS Recovery criteria were met. No qualification was necessary.

All LCS recovery criteria were met with the following exception: LCS OP50088, which is associated with sample JD75523-19 / RB 10252023, reported the RPD for 4:2 FTS outside the 30% criteria. This analyted in the sample is estimated and has been qualified "UJ".

VIII.) Field Duplicates:

One set of field duplicate samples (064-R-0-2 / FD-10252023) was identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was necessary.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75523-1	054A-SD-0-1	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

	13C3-PFHxS	109%		40-130%

ND = Not detected MDL = Method Detection Limit
RL = Reporting Limit
E = Indicates value exceeds calibration range
J = Indicates an estimated value
B = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound
