Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD75674

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75674-5	066-SD-0-2	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks RB-10262023 and RB-10272023 were identified in this SDG. All Equipment Blank results were undetected.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using samples JD75674-11/ 104B-SD-2-12-ACTD-JD75674SO and JD75674-14/104B-R-2-12-ACTD-JD75674SO. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD75647-11	104B-SD-2-12-ACTD-JD75674SO	Recovery < lower control limit of 70%	PFMBA 3:3FTCA	UJ UJ
JD75674-14	104B-R-2-12-ACTD-JD75674SO	Recovery < lower control limit of 70%	PFMBA 3:3FTCA	UJ UJ
		RPD outside control limit of 30%	Perfluoroheptanesulfonic acid	UJ

VII.) Laboratory Control Samples (LCS):

LCS OP50156-LLBS reported ADONA, NFDHA, 4:2 Fluorotelomer sulfonate, 6:2 Fluorotelomer sulfonate, and 8:2 Fluorotelomer sulfonate at > the upper control limit of 130%. The associated results were non-detected and no action was taken.

LCS OP50155-LLBS and OP50155-BS reported PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated results in samples JD75674-11, JD75674-12, JD75674-13, JD75674-15, JD75674-16, JD75674-17, JD75674-18, JD75674-19, JD75674-20, JD75674-21, JD75674-22, JD75674-23, JD75674-24 were qualified as estimated (J/UJ).

LCS OP50155-LLBS reported EtFOSAA at > the lower control limit of 130%. The associated results were non-detected and no action was taken.

LCS OP50154-LLBS reported PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated samples JD75674-1, JD75674-2, JD75674-3, JD75674-4, JD75674-5, JD75674-6, JD75674-7, JD75674-8, JD75674-10, and JD75674-14 were qualified as estimated (J/UJ).

LCS OP50155-LLBS reported PFMBA at > the lower control limit of 130%. The associated results were non-detected and no action was taken.

VIII.) Field Duplicates:

One set of field duplicate samples (104B-SD-2-12-ACTD-JD75674SO / FD-10272023) were identified as part of this SDG. The 30% Relative Percent Difference criteria were met for all results that were greater than the reporting limit.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	**CLIENT ID**	**EIS Analyte**	**Associated Analyte**	**Qualification**
JD75674-1	052A-SD-0-2	13C4PFBA	PFBA	UJ

JD75674-24	113B-R-2-12	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD75822

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75822-16	059C-R-2-12-ACTD-JD75822SO	13C4PFBA	PFBA	R
JD75822-31	058-SD-0-2-ACTD-JD75822SO	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks RB-10302023 and RB-10312023 were identified in this SDG. All Equipment Blank results were undetected.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using samples JD75822-16/ 059C-R-2-12-ACTD-JD75822SO and JD75822-25/ 068-SD-0-2-ACTD-JD75822SO. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD75647-16	104B-SD-2-12-ACTD-JD75822SO	Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ
		MSD RPD outside 30% control limit	Perfluorononanesulfonic acid	UJ
JD75822-25	068-SD-0-2-ACTD-JD75822SO	Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ

VII.) Laboratory Control Samples (LCS):

LCS OP50240-LLBS reported Perfluorodecanesulfonic acid and NFDHA at < the lower control limit of 70%. The associated results in samples JD75822-9 and JD75822-35 were qualified as estimated (UJ).

OP50240-BS Perfluorohexanesulfonic acid had an RPD outside the 30% control limit. The associated results in samples JD75822-9 and JD75822-35 were qualified as estimated (UJ).

LCS OP50154-LLBS and OP50213-BS reported PFMPA and 3:3 FTCA at < the lower control limit of 70%. The associated samples JD75822-19, JD75822-20, JD75822-21, JD75822-22, JD75822-23, JD75822-24, JD75822-25, JD75822-26, JD75822-27, JD75822-28, JD75822-29, JD75822-30, JD75822-31, JD75822-32, JD75822-33, JD75822-34 were qualified as estimated (J/UJ).

VIII.) Field Duplicates:

One set of field duplicate samples (059C-NS-2-12-ACTD-JD75822SO /FD-10312023) were identified as part of this SDG. The 30% Relative Percent Difference criteria were met for all results that were greater than the reporting limit.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75822-1	071-SD-0-2	13C4PFBA	PFBA	UJ

JD75822-34	058-R-2-12-ACTD-JD75822SO	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD75951

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD75951-6	111-SD-0-2	13C4PFBA	PFBA	R
JD75951-7	111-SD-2-12	13C4PFBA	PFBA	R
JD75951-8	111-R-0-2	13C4PFBA	PFBA	R
JD75951-17	108-SD-0-2	13C4PFBA	PFBA	R
JD75951-18	108-SD-2-12	13C4PFBA	PFBA	R
JD75951-19	108-R-0-2	13C4PFBA	PFBA	R
JD75951-20	108-R-2-12	ALL	ALL	R
JD75951-21	105A-SD-0-2	ALL	ALL	R
JD75951-22	105A-SD-2-12	ALL Except PFTeDA	ALL Except PRTeDA PFTrDA	R Except PFTeDA PFTrDA
JD75951-23	105A-R-0-2	ALL Except D9-EtFOSE	All Except EtFOSE	R Except EtFOSE
JD75951-24	105A-R-2-12	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blank, RB-11012023 was free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD74836-15/046-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD75951-5	107-R-2-12	RPD > 30%	9ClPF3ONS 911PF3OUdS 3:3FTCA	UJ
		Recovery < lower control limit of 70%	PFMPA	UJ
JD75951-18	108-SD-2-12	RPD > 30%	PFBA	Already R for EIS
		Recovery < lower control limit of 70%	PFMPA NFDHA 3:3FTCA	UJ

VII.) Laboratory Control Samples (LCS):

All Low Level LCS recovery criteria were met, with the following exceptions:

Batch	Analyte(s)	Lab ID	Client ID	Qualification
OP50293	PFMPA 3:3FTCA	JD75951-18 JD75951-19 JD75951-20 JD75951-21 JD75951-22 JD75951-23 JD75951-24	108-SD-2-12 108-R-0-2 108-R-2-12 105A-SD-0-2 105A-SD-2-12 105A-R-0-2 105A-R-2-12	UJ UJ R for EIS R for EIS R for EIS R for EIS R for EIS UJ
OP50295	PFDoS	JD75951-25	RB-11012023	UJ

All LCS recovery criteria were met, with the following exceptions:

Batch	Analyte(s)	Lab ID	Client ID	Qualification
OP50349	PFMPA 3:3FTCA	JD75951-1 JD75951-2 JD75951-3 JD75951-4 JD75951-5 JD75951-6 JD75951-7 JD75951-8 JD75951-9 JD75951-10 JD75951-11 JD75951-12 JD75951-13 JD75951-14 JD75951-15 JD75951-16 JD75951-17	107-SD-0-2 107-SD-2-12 107-R-0-2 FD-11012023-1 107-R-2-12 111-SD-0-2 111-SD-2-12 111-R-0-2 111-R-2-12 114C-SD-0-2 114C-SD-2-12 114C-R-0-2 114C-R-2-12 108-NS-0-2 108-NS-2-12 FD-11012023-2 108-SD-0-2	UJ

VIII.) Field Duplicates:

One set of field duplicate samples (046-R-0-2 / FD-10132023) was identified as part of this SDG. The 30% Relative Percent Difference criteria were met except for PFOS which was 45%. This analyte in both samples is considered estimated and has been qualified "J"/

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and

required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD76131

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD76131-1	125-SD-0-2	13C4PFBA	PFBA	R
JD76131-2	125-SD-2-12	13C4PFBA	PFBA	R
JD76131-3	125-R-0-2	13C4PFBA	PFBA	R
JD76131-4	125-R-2-12	13C4PFBA	PFBA	R
JD76131-5	117-SD-0-2	13C4PFBA	PFBA	R
JD76131-7	117-R-0-2	13C4PFBA	PFBA	R
JD76131-11	116-SD-0-2	13C4PFBA	PFBA	R
JD76131-13	116-R-0-2	13C4PFBA	PFBA	R
JD76131-15	119-SD-0-2	13C4PFBA	PFBA	R
JD76131-16	119-SD-2-12	13C4PFBA	PFBA	R
JD76131-17	FD-11022023	13C4PFBA	PFBA	R
JD76131-18	119-R-0-2	13C4PFBA	PFBA	R
JD76131-19	119-R-2-12	13C4PFBA	PFBA	R
JD76131-21	122A-SD-0-2	13C3PFHxS	PFHxS PFPeS	R R
JD76131-23	122A-R-0-2	13C4PFBA	PFBA	R
JD76131-27	103C-R-0-2	13C4PFBA	PFBA	R
JD76131-28	103C-R-2-12	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-11022023 and RB-11032023, were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD76131-19/119-R-2-12. All criteria were met, with the

following exceptions. Qualification is applied to the parent sample only.

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD76131-19	119-R-2-12	RPD > 30%	8:2FTS	UJ
		Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ

VII.) Laboratory Control Samples (LCS):

LCS, OP050383-LCS, met all criteria. No qualification was made based on this finding.

LCS, OP50295-LCS, met all criteria. No qualification was necessary.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are estimated "J/UJ". Samples JD76131-8, and JD76131-21 were associated with an LLCS and LCS with recoveries for PFBA > 130%. The positive results for this analyte in these samples have been qualified estimated "J". Other positive results for PFBA in samples associated with these LLCS and LCS samples were previously qualified "R" for low EIS recoveries.

LCS ID	Associated Samples	Analytes
OP50294-LLCS OP50294-LLCS	JD76131-6 JD76131-7 JD76131-8 JD76131-9 JD76131-10 JD76131-11 JD76131-12 JD76131-13 JD76131-14 JD76131-15 JD76131-16 JD76131-17 JD76131-18 JD76131-19 JD76131-21 JD76131-22 JD76131-23 JD76131-24 JD76131-25	PFMPA 3:3FTCA PFDoS NFDHA
OP50293-LLCS OP50293LCS	JD76131-1 JD76131-2 JD76131-3 JD76131-4 JD76131-5	PFMPA 3:3FTCA
OP50383-LLCS	JD76131-26 JD76131-27 JD76131-28	PFDoS EtFOSAA PFMPA 3:3FTCA

VIII.) Field Duplicates:

One set of field duplicate samples (119-SD-212 / FD-11022023) was identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Attachment A

Sample Result Forms (FORM Is) Corrected for Validation Qualifiers

AECOM

VALIDATION REPORT – JD76288 Correction/Replacement

Project Name: NYSDEC WA#44.1 Rural Background Study for PFAS in Soil

AECOM Project #60679961

The detected result for PFDoS was qualified 'UJ' on the Form I for sample JD76288-5 (field sample ID 112-R-0-2) by 3rd party validator – Validata Chemical Services Inc. (Validata). This was an error. The blanks associated with this sample did not show any detections for this compound. The correct qualification should be 'J' due to the low % recovery of the laboratory control sample. This is what was indicated in the text of the validation report and also verified by AECOM by reviewing the laboratory report. The 'UJ' qualifier has been crossed out and a 'J' qualifier applied to the Form I in the validation report. The changes are noted in red and initialed/dated.

No other changes have been made to the validation report.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD76288

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-11062023 and RB-11072023, were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using the samples listed below. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD76288-1	112-NS-0-2	RPD > 30%	PFOS	UJ
		Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ
JD76288-16	007-R-2-12	Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ

VII.) Laboratory Control Samples (LCS):

LCS, OP050383-LCS, met all criteria. No qualification was made based on this finding.

LLCS, OP50390-LLCS, met all criteria. No qualification was made.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are estimated "J/UJ", unless "R" for low EIS recoveries. Several analytes reported recoveries > 130% limit in OP50382-LLCS. All associated sample results were non-detect. No qualification was made based on recoveries > 130%.

LCS ID	Associated Samples	Analytes
OP50390-LCS	JD76288-11 JD76288-27	PFMPA 3:3FTCA PFDoS NFDHA
OP50383-LLCS	JD76288-1 JD76299-2 JD76288-3 JD76288-4 JD76288-5 JD76288-6 JD76288-7 JD76288-8 JD76288-9 JD76288-10	PFDoS EtFOSAA PFMPA 3:3FTCA

VIII.) Field Duplicates:

One set of field duplicate samples (007-SD-2-12 / FD-11072023) was identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	**CLIENT ID**	**EIS Analyte**	**Associated Analyte**	**Qualification**

JD76288-18	001-SD-2-12	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD76441

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD76441-6	012-SD-0-2	13C4PFBA	PFBA	R
JD76441-7	012-SD-2-12	13C4PFBA	PFBA	R
JD76441-12	011-R-0-2	13C4PFBA	PFBA	R
JD76441-13	011-R-2-12	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blank, RB-11082023 was free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD76441-5/015B-R-2-12. All criteria were met. No qualification was necessary.

VII.) Laboratory Control Samples (LCS):

All Low Level LCS Recovery criteria were met. No qualification was necessary.

LCS OP50419-LBS reported Relative Percent Differences (RPDs) out for PFOS, 8:2FTS and EtFOSAA. Sample, JD76441-20/RB-11082023 is associated with this LCS>. All sample results are non-detect are estimated and have been qualified “UJ”.

LCS OP50418-LBS reported PFDoS < the 70% lower control limit. This analytes in in all nineteen (19) soil samples were non-detects. These analytes are estimated and have been qualified “UJ”.

VIII.) Field Duplicates:

One set of field duplicate samples (015B-2-12 / FD-11082023) was identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD76441-6	012-SD-0-2	13C5-PFPeA	PFPeA 3:3FTCA PFMPA PFMBA	J UJ UJ UJ
JD76441-7	012-SD-2-12	13C5-PFPeA	PFPeA 3:3FTCA PFMPA PFMBA	UJ UJ UJ UJ
JD76441-8	012R-0-2	13C4PFBA	PFBA	J
JD76441-12	011-R-0-2	13C5-PFPeA	PFPeA 3:3FTCA PFMPA PFMBA	UJ UJ UJ UJ
JD76441-13	011-R-2-12	13C5-PFPeA	PFPeA 3:3FTCA PFMPA PFMBA	UJ UJ UJ UJ
JD76441-14	014-SD-0-2	13C4PFBA	PFBA	UJ
JD76441-16	014-R-0-2	D3MeFOSA D5EtFOSA	MeFOSA EtFOSA	J UJ
JD76441-18	014-NS-0-2	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

AECOM

VALIDATION REPORT – JD76818 Correction/Replacement

Project Name: NYSDEC WA#44.1 Rural Background Study for PFAS in Soil

AECOM Project #60679961

Sample JD76818-12 (field sample ID 006-R-0-2) was incorrectly reported by the laboratory as having a preparation weight of 500 grams. The laboratory report was re-issued on 1/7/25 using the correct weight for this sample of 5.01 grams. This resulted in the detections and reporting limits for this sample to be changed.

Revised laboratory Form Is have been added to the end of the Validata report and marked in red as new. The original Form Is for the sample have been crossed out in red. No other changes were made to the Validata report. We have also carried any qualifiers applied by Validata to that sample over to the revised Form Is.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD76818

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD76818-10	006-SD-0-2	13C2PFDoDA 13C2PFTeDA D3-MeFOSA D4-EtFOSA	PFDoDA PFTeDA PFTrDA MeFOSA EtFOSA	R
JD76818-11	006-SD-2-12	13C2PFTeDA D9EtFOSA 13C26:2FTS	PFTeDA PFTrDA EtFOSE 6:2FTS	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-11092023 and RB-11102023, were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD76818-8/002-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD76818-9	002-R-2-12	Recovery < lower control limit of 70%	PFDoS PFMPA 3:3FTCA	UJ UJ UJ

VII.) Laboratory Control Samples (LCS):

LLCS, OP50457-LLCS, and LCS, OP50457-LCS met all criteria. No qualification was made based on this finding.

LLCS, OP50454-LLCS, met all criteria, except PFHxS, PFHpS, PFOS and EtFOSAA reported recoveries > the upper control limit. These analytes were non-detect in the associated samples. The following samples reported positive results for PFOS, these results are estimated and have been qualified "J".

LCS ID	Associated Samples	Analytes
OP50454-LLCS	JD76818-12 JD76818-13 JD76818-14 JD76818-15 JD76818-16 JD76818-17	PFOS
OP50454-LLCS	JD76818-18 JD76818-19 JD76818-21 JD76818-22 JD76818-23 JD76818-24	PFOS

LCS, OP50454-LCS, met all criteria. No qualification was made.

LLCS, OP50453-LLCS, met all criteria, except PFHxS and 6:2FTS, reported recoveries > the upper control limit. These analytes were non-detect in the associated samples. No qualification was necessary.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are all associated results are non-detects and have been qualified "UJ".

LCS ID	Associated Samples	Analytes
OP50453-LCS	JD76818-1 JD76818-2 JD76818-3 JD76818-4 JD76818-5 JD76818-6 JD76818-7 JD76818-8 JD76818-9 JD76818-10 JD76818-11	PFDoS

VIII.) Field Duplicates:

Field Duplicate pair 002-SD-212/FD-11092023 set in this SDG. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

DATA USABILITY SUMMARY REPORT

COMPANY:	AECOM Technical Services Northeast, Inc.
PROJECT NAME/#:	WAA44 Rural Background Project #60679961
CONTRACTED LAB:	SGS North America
QA/QC LEVEL:	DUSR
ANALYTICAL METHOD(S):	EPA Draft Method 1633
VALIDATION GUIDELINES:	*USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review,* 2020; NYSDEC *Guidelines for Sampling and Analysis of PFAS* 2023 Professional Judgment
SAMPLE MATRIX:	Water and Soil
TYPES OF ANALYSES:	Polyfluoroalkyl Substances (PFAS)
DATA REVIEWER(S):	Cathi Lesher
SDG NUMBER:	JD77514
SAMPLING DATE(S):	November 20 and 21, 2023

SAMPLES:

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD77514

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD77514-7	106-R-0.0-2.0	13C4PFBA	PFBA	R
JD77514-8	106-R-2.0-12.0	13C4PFBA	PFBA	R
JD77514-9	093-SD-0.0-2.0	13C4PFBA	PFBA	R
JD77514-15	085-SD-0.0-2.0	13C4PFBA	PFBA	R
JD77514-21	099F-R-0.0-2.0	13C4PFBA	PFBA	R
JD77514-22	099F-R-2.0-12.0	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-11202023 and RB-11212023, were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed on the following samples. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD77514-2	121-SD-2.0-12.0	RPD > 30%	PFHxA	J
		Recovery < lower control limit of 70%	MeFOSE	UJ
			PFMPA	UJ
			3:3FTCA	UJ

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD77514-17	085-R-0.0-2.0	Recovery < lower control limit of 70%	PFMPA	UJ
			3:3FTCA	UJ

VII.) Laboratory Control Samples (LCS):

LCS and Low Level LCS, OP50708-LCS and OP50708-LLCS met all criteria. No qualification was made based on this finding.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are estimated "J/UJ".

LCS ID	Associated Samples	Analytes
OP50702-LCS	JD77514-1 JD77514-2 JD77514-3 JD77514-4 JD77514-5 JD77514-6 JD77514-7 JD77514-8 JD77514-9 JD77514-10 JD77514-11 JD77514-12 JD77514-13 JD77514-14 JD77514-15 JD77514-16	PFMPA 3:3FTCA

OP50727-LLCS OP50727-LCS	JD77514-17 JD77514-18 JD77514-19 JD77514-20 JD77514-21 JD77514-22 JD77514-25	PFMPA 3:3FTCA MeFOSE PFNS

VIII.) Field Duplicates:

One set of field duplicate samples (121-SD-2.0-12.0 / FD-11202023) was identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD77514-1	121-SD-0.0-2.0	13C4PFBA	PFBA	UJ

JD77514-25	FD-11202023	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD77742

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD77742-2	109-SD-2-12	13C4PFBA	PFBA	R
JD77742-3	109-R-0-2	13C4PFBA	PFBA	R
JD77742-5	102-SD-0-2	13C4PFBA 13C5PFPeA	PFBA PFPeA 3:3FTCA PFMPA PFMBA	R
JD77742-6	102-SD-212	13C4PFBA	PFBA	R
JD77742-7	FD-11272023	13C4PFBA	PFBA	R
JD77742-11	024-NS-0-2	13C4PFBA	PFBA	R
JD77742-13	024-SD-0-2	13C4PFBA	PFBA	R
JD77742-14	024-SD-2-12	13C4PFBA	PFBA	R
JD77742-15	024-R-0-2	13C4PFBA	PFBA	R
JD77742-16	024-R-2-12	13C4PFBA 13C5PFPeA	PFBA PFPeA 3:3FTCA PFMPA PFMBA	R
JD77742-24	020B-R-0-2	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination, except OP50767-MB reported PFNA and PFUnA with positive results. The associated samples were non-detects for these analytes. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-11022023 and RB-11032023, were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using the following samples. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD77742-9	102-R-2-12	RPD >30%	PFBA PFHpS PFOS PFNS PFDoS ADONA 9Cl-PF3ONS	J UJ J UJ UJ UJ UJ
JD77742-9	102-R-2-12	RPD > 30%	PFEESA 5:3FTCA 7:3FTCA	UJ
		Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ
JD77742-25	020B-R-2-12	RPD > 30%	PFTeDA PFMPA PFMBA 3:3FTCA	**UJ**

VII.) Laboratory Control Samples (LCS):

LLCS, OP50767-LLCS and LCS, OP50767-LCS met all criteria. No qualification was made based on this finding.

LCS, OP50765-LCS, met all criteria. No qualification was necessary.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are estimated "J/UJ", unless R for EIS failure.

LCS ID	Associated Samples	Analytes
OP50766-LLCS OP50766-LCS	JD77742-1 JD77742-2 JD77742-3 JD77742-4 JD77742-5 JD77742-6 JD77742-7 JD77742-8 JD77742-9 JD77742-11 JD77742-12 JD77742-13 JD77742-14 JD77742-15 JD77742-16 JD77742-17 JD77742-18 JD77742-19	PFMPA 3:3FTCA PFDoS

OP50765-LLCS	JD77742-20 JD77742-21 JD77742-22 JD77742-23 JD77742-24 JD77742-25 JD77742-26 JD77742-27 JD77742-28 JD77742-29	PFDoS

VIII.) Field Duplicates:

One set of field duplicate samples (1102SD-2-12 / FD-11272023) and (020B-SD-2-12/FD-11282023) were identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	**CLIENT ID**	**EIS Analyte**	**Associated Analyte**	**Qualification**

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Attachment A

Sample Result Forms (FORM Is) Corrected for Validation Qualifiers

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD77883

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD77883-5	019B-R-0-2	13C4PFBA	PFBA	R
JD77883-6	019B-R-2-12	13C4PFBA	PFBA	R
JD77883-8	010C-SD-2-12	13C4PFBA	PFBA	R
JD77883-9	010C-R-0-2	13C4PFBA	PFBA	R
JD77883-10	010C-R-2-12	13C4PFBA	PFBA	R
JD77883-11	017C-SD-0-2	13C4PFBA	PFBA	R
JD77883-25	008A-R-0-2	13C4PFBA	PFBA	R
JD77883-26	008A-R-2-12	13C4PFBA	PFBA	R
JD77883-29	023-R-0-2	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-11292023 and RB-11302023, were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD76131-19/119-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD77883-8	010C-SD-2-12	RPD > 30%	6:2 FTS	UJ
		control limit of 70%	PFMPA 3:3FTCA	UJ UJ
JD77883-19	004A-R-2-12	RPD > 30%	PFMPA PFMBA 3:3FTCA	UJ UJ UJ

LAB ID	CLIENT ID	QC Failure	Analyte	Qualification
JD77883-19	004A-R-2-12	control limit of 70%	PFMPA	UJ
JD77883-39	124C-R-2-12	RPD > 30%	MeFOSA	UJ
		control limit of 70%	PFMPA 3:3FTCA	UJ UJ

VII.) Laboratory Control Samples (LCS):

LLCS, OP50852-LCS and LCS, OP50852-LCS met all criteria. No qualification was made based on this finding.

LCS, OP50889-LCS, met all criteria. No qualification was necessary.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are estimated "J/UJ".

LCS ID	Associated Samples	Analytes
OP50866-LLCS OP50866-LCS	JD77883-1 JD77883-2 JD77883-3 JD77883-4 JD77883-5 JD77883-6 JD77883-7 JD77883-8 JD77883-9 JD77883-10 JD77883-11 JD77883-12 JD77883-13 JD77883-14 JD77883-15 JD77883-16	PFMPA 3:3FTCA

LCS ID	Associated Samples	Analytes
OP50850-LLCS OP50850-LCS	JD77883-34 JD77883-35 JD77883-36	PFMPA 3:3FTCA
OP50889-LLCS	JD77883-37 JD77883-38 JD77883-39	PFHxA PFMPA 3:3FTCA

VIII.) Field Duplicates:

Two sets of field duplicate samples (004A-SD-2-12 / FD-11292023) and (124C-SD-2-12/FD-11302023) were identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification

JD77883-39	124C-R-2-12	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD78193

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

The following Extracted Internal Standards (EIS) reported recoveries less than the expanded lower control limit of 10%. The results are unusable and have been qualified "R".

LAB ID	CLIENT ID	EIS Analyte	Associated Analyte	Qualification
JD78193-2	096C-NS-2-12	13C4PFBA	PFBA	R
JD78193-5	096-R-0-2	13C4PFBA	PFBA	R
JD78193-6	096-R-2-12	13C4PFBA	PFBA	R
JD78193-7	009-SD-0-2	13C4PFBA	PFBA	R
JD78193-9	009-R-0-2	13C4PFBA	PFBA	R
JD78193-18	118-R-0-2	13C4PFBA	PFBA	R
JD78193-19	118-R-2-12	13C4PFBA	PFBA	R
JD78193-22	120-SD-0-2	13C4PFBA	PFBA	R
JD78193-24	120-R-0-2	13C4PFBA	PFBA	R

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-12042023 and RB-12052023, were free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample JD78193-1/096-NS-0-2. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD78193-1	0966-NS-0-2	Recovery < lower control limit of 70%	PFMPA 3:3FTCA	UJ UJ

VII.) Laboratory Control Samples (LCS):

LCS, OP050943-LCS, met all criteria. No qualification was made based on this finding.

LLCS, OP50943-LCS, met all criteria, except EtFOSAA reported a recovery > the upper control limit. This analyte was non-detect in the associated samples. No qualification was necessary.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are estimated "J/UJ".

LCS ID	Associated Samples	Analytes
OP50942-LLCS OP50942-LCS	JD78941-12 JD78941-13 JD78941-14 JD78941-15 JD78941-16 JD78941-17 JD78941-18 JD78941-19 JD78941-20 JD78941-21 JD78941-22 JD78941-23 JD78941-24 JD78941-25	PFMPA 3:3FTCA
OP50941-LLCS OP50941-LCS	JD78941-1 JD78941-2 JD78941-3 JD78941-4 JD78941-5 JD78941-6 JD78941-7 JD78941-8 JD78941-9 JD78941-10	MeFOSA PFMPA 3:3FTCA

VIII.) Field Duplicates:

There was no identified Field Duplicate set in this SDG. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

*All EIS recoveries were < the 50% lower control limit,(16 of 24) except;13C6PFDA, 13C7PFUnDA,13C2PFDoDA, d3MeFOSAA, d5EtFOSAA, 13C24:2FTS, 13C26:2FTS, and 13C28:2FTS. Positive results are estimated "J", and non-detects estimated "UJ".

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

Suffix Codes: DL= DILUTION, MS = MATRIX SPIKE,
MSD = MATRIX SPIKE DUPLICATE, RE = REANALYSIS

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been “tentatively identified” or “presumptively” as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
R	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DATA USABILITY SUMMARY REPORT

SGS North America – JD76131

PERFLOROALKYL SUBSTANCES (PFAS)

SUMMARY

I.) General:

The analyses for Perfluoroalkyl Substances were performed by Liquid Chromatography Tandem Mass Spectrometry (LC/MS/MS) per EPA Method 1633 Draft.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no major issues with the data in this set. No qualification was needed based on this finding.

MINOR ISSUES

I.) Laboratory Data Package:

The required documentation was present and complete. The laboratory presented a complete case narrative in the data package. The data package contains results for all samples listed on the COC.

II.) Sample Receipt, Preservation, and Holding Times:

The samples were received intact with proper COC documentation and signatures. The samples were received within the method temperature requirements. The samples were extracted and analyzed within the method hold times.

III.) Initial Calibration (ICAL) and Initial Calibration Verification (ICV):

All Initial Calibration and Initial Calibration Verification criteria were met. No data qualification was necessary.

IV.) Continuing Calibration (CCV):

All Continuing Calibration Verification criteria were met. No qualification was necessary.

V.) Blanks:

Blank results were evaluated based on project guidelines in the following table:

Blank Result	Sample Result	Qualification
Any detection	< Reporting Limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting Limit	>Reporting limit and	J+ biased high

Instrument Blank (IB):

All instrument blanks were free from contamination. No qualification was made based on this finding.:

Method Blank (MB):

All method blanks were free from contamination. No data were qualified based on method blank contamination.

Field Blank (FB):

There were no Field Blanks identified in this SDG. No data qualification was necessary.

Equipment Blank:

Equipment Blanks, RB-12062023, was free from contamination. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using samples JD78296-10/040G-SD-2-12, and JD78296-5/091B-R-2-12. All criteria were met, with the following exceptions. Qualification is applied to the parent sample only.

LAB ID	**CLIENT ID**	**QC Failure**	**Analyte**	**Qualification**
JD78296-5	091B-R-2-12	Recovery < lower control limit of 70%	PFDoS PFMPA 3:3FTCA	UJ

VII.) Laboratory Control Samples (LCS):

LLCS, OP050988-LLCS, and LCS, OP50988-LCS met all criteria. No qualification was made based on this finding.

LCS, OP51050-LCS, and LCS, OP51050-LCS, met all criteria. No qualification was necessary.

The following LCS recoveries were outside the 70-130% limits. Qualification for recoveries < 70% are estimated "J/UJ".

LCS ID	**Associated Samples**	**Analytes**
OP51054-LCS	JD78296-5 JD78296-13 JD78296-14 JD78296-15 JD78296-16	PFMPA 3:3FTCA
LCS ID	**Associated Samples**	**Analytes**

OP51054-LCS	JD78296-17 JD78296-18 JD78296-19 JD78296-20 JD78296-21 JD78296-22	PFMPA 3:3FTCA
OP51050-LLCS	JD78296-23	PFHxA

VIII.) Field Duplicates:

One set of field duplicate samples (091B-SD-2-12 / FD-12052023) and (040G-NS-2-12/FD-12062023) were identified as part of this SDG. The 30% Relative Percent Difference criteria were met. No qualification was made.

IX.) Extracted Internal Standards (EIS):

EIS recoveries (%R) were within the lower control criteria of 50%, with the following exceptions:

LAB ID	**CLIENT ID**	**EIS Analyte**	**Associated Analyte**	**Qualification**
JD78296-1	091B-SD-0-2	13C4PFBA	PFBA	UJ

JD78296-22	049E-R-2-12	13C4PFBA	PFBA	UJ

For EIS recoveries greater than the upper control limit all associated sample results were non-detect and required no qualification

X.) Ion Transitions:

All ion Transition criteria were within laboratory limits. No qualification was needed.

XI.) Reporting limits (RLs):

All reporting limit criteria were met.

XII.) Instrument Performance criteria:

All Instrument Performance criteria were met. No data qualification was necessary.

XIII.) Sample and QC Calculation Verification:

All Sample and QC Calculation Verification criteria were met. No discrepancies were noted.

NYSDEC Background Study for Per- and Polyfluoroalkyl Substances (PFAS) in Soil

Task 4 - Review of Northeast Regional Studies

Dear Elliot Baird,

AECOM USA, Inc. (AECOM) is pleased to provide the New York State Department of Environmental Conservation (NYSDEC) with this letter summarizing our review of northeast regional studies that have been conducted for per- and polyfluoroalkyl substances (PFAS) in background soil.

The objective of this portion of the Work Assignment (WA) issued by NYSDEC under contract D009803-44.1 was to review and analyze background studies on PFAS from several states to support the calculation of representative anthropogenic levels of PFAS concentrations in rural New York State background soils.

1. Review of Northeast Regional Studies

AECOM reviewed available PFAS background studies from several states in the northeast region, including Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont. An overview of each study is provided in the following subsections. The calculated soil background threshold values (BTVs) for perfluorooctane sulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) from each state are presented in the following table:

	Soil Background Threshold Value (ppb, ng/g)					
	Connecticut	**Maine**	**Massachusetts**	**New Hampshire**	**Rhode Island**	**Vermont**
PFOS	-	3.036 (urban) 0.551 (non-urban)	3.07	3	0.842	3.4
PFOA	-	2.18	2.03	3	0.639	1.6

Notes: ppb = parts per billion

A summary of each study is provided in attached **Table 1**, outlining the study purpose and the methodology utilized to:

- Identify sample number and locations (including sampling goals and strategy);
- Analyze the soil PFAS data obtained (i.e., laboratory analytical methods);
- Select the statistical analysis based on appropriate thresholds for conducting the analysis, including screen for outliers, incorporate samples with non-detect concentrations, handle duplicate samples, create or update soil background levels, and create or update soil cleanup objectives (and what their classes/categories were), as applicable;

- Analyze any leaching testing performed, as applicable; and
- Limitations and any “lessons learned”, as applicable.

AECOM also attempted to obtain the data spreadsheets from the PFAS background studies for Connecticut, Maine, Massachusetts, Rhode Island, and Vermont from each state agency.

1.1 Review of Connecticut PFAS Study

The Connecticut PFAS Background Study (Pagano, et al., 2022) was completed by students at the University of Connecticut, who collected shallow soil background concentrations of PFAS throughout the state, to aid the Connecticut Department of Energy and Environmental Protection (CT DEEP) in determining PFAS standards. Shallow (0-6”) and deep (18-24”) soil samples (n=110) were collected from 16 state forests and parks, in 8 counties. Laboratory analysis included 18 PFAS compounds using EPA Method 8327, completed by Complete Environmental Testing Labs (CET Labs).

Statistical analysis was not completed on the soil data, and therefore soil background values were not calculated as part of this study. There are no background soil values for PFAS available from the CT DEEP. There are clean up alternative criteria for the sum of five PFAS compounds, based on exposure. CT DEEP has indicated that they will be working with the U.S. Geological Survey (USGS) to complete a formal anthropogenic background study of PFAS in soils statewide in 2025.

1.2 Review of Maine PFAS Study

The Maine PFAS Background Study (Sanborn Head, 2022) was completed by environmental consultants, Sanborn, Head & Associates Inc. (Sanborn Head), who collected samples and quantified background concentrations (urban and non-urban) of PFAS and polycyclic aromatic hydrocarbons (PAHs) in shallow soils throughout the state, on behalf of the Maine Department of Environmental Protection (ME DEP). The study also determined if there are significant correlations between PFAS, PAHs, and soil parameters. Shallow (0-6”) soil samples (n=64) were collected from 16 counties throughout the state, at urban (n=32) and non-urban (n=32) properties. Laboratory analysis included 28 PFAS compounds using modified EPA Method 537.1; 19 PAHs using EPA Method 8270D; total organic carbon (TOC) using Lloyd Kahn Method; and various parameters to assess agricultural soils for fertility, completed by Alpha Analytical Laboratories Inc. Select laboratory analysis was also completed by the University of Maine Soil Testing Services.

Statistical analysis was completed on the soil data, using USEPA ProUCL version 5.1. Initially, nonparametric two-sample tests were completed to test for significant differences between urban and non-urban concentrations. Subsequent statistical analyses including calculation of background values were performed separately for urban and non-urban settings if statistically significant differences were identified (PFOS and perfluorodecanoic acid [PFDA]). Potential outliers were identified, and one obvious outlier (urban sample WL-02) was removed due to high concentrations. Non-detect concentrations were evaluated using Kaplan-Meier estimation methods when at least four detected concentrations were present. If two to four detected concentrations were present, nonparametric methods were used to calculate BTVs; if only one detected concentration was present, the detected concentration was selected for the BTV and if no detected concentrations were present the maximum method detection limit (MDL) was selected. Soil interim BTVs and interim upper bound of the mean concentrations were established.

The study concluded that the most frequently detected PFAS were PFOS, and perfluoroalkyl carboxylic acids (PFCAs) with 3-10 carbon alkyl chains (Sanborn Head, 2022). The strongest and most consistent correlations were among PFAS (i.e., PFAS concentrations tend to increase together). PAHs had weak or no correlations with PFAS; sulfur had strong positive correlations with PFAS; and soil organic content was strongly correlated with PFAS. PFAS had strong negative correlations with sand, and strong positive correlations with silt and clay. Greater moisture content in soil samples was associated with higher PFAS concentrations (Sanborn Head, 2022).

The Maine PFAS Background Study also collected 33 soil samples for Synthetic Precipitation Leaching Procedure (SPLP) using EPA Method 1312. The study indicated that PFCAs and perfluoroalkyl sulfonic acids (PFSAs) were commonly detected in the SPLP leachate (Sanborn Head, 2022). PFOA was detected in 31 of 33 SPLP samples, and PFOS was detected in 30 of 33 SPLP samples. Detection rates for PFOA, PFOS, and some other PFAS were greater

for SPLP than for the regular soil analyses, which was at least partially attributed to the relatively low detection limits achieved for aqueous matrices (Sanborn Head, 2022).

The ME DEP established screening level remedial action guidelines (RAGs) for seven PFAS parameters in November 2023, based on land use and exposure. ME DEP indicated that they do factor background data into remedial decisions as part of the RAGs; and, the PFAS background study was incorporated into the development of the PFAS RAGs, by including the BTVs as a column in the list of RAGs.

1.3 Review of Massachusetts PFAS Studies

The Massachusetts PFAS Background Study (Woodard and Curran, 2024) was completed by environmental consultants, Woodard and Curran, who collected shallow soil background concentrations of PFAS through the state, to broaden the understanding of the levels and distribution in MA and inform the Massachusetts Department of Environmental Protection (MassDEP) and/or calibrate the Massachusetts Contingency Plan (MCP) soil standards for PFAS. The study also determined if there are significant correlations between PFAS and TOC. Shallow (0-6") soil samples (n=100) were collected from 25 undeveloped conservation areas, largely in mature forest or meadow, in four geographical regions throughout the state. Laboratory analysis included 36 PFAS compounds using modified EPA Method 537.1 and TOC using EPA Method 9060 completed by Alpha Analytical Laboratories Inc. There were limitations identified with the soil type of the samples – 88% of samples were loam, consistent with most locations occurring in mature forests.

Statistical analysis was completed on the soil data, using USEPA ProUCL version 5.2. Potential outliers were identified based on box and whisker plots. Non-detect concentrations were evaluated using Kaplan-Meier estimation methods. Soil background values were calculated based on 95% upper tolerance limits (UTL95).

The study concluded that PFOS and PFOA were detected at the highest frequencies and at the overall highest concentrations (Woodard and Curran, 2024). Findings suggest that atmospheric deposition, either via dry and/or wet depositional processes, likely plays a key role in both the localized and widespread distribution of PFAS in both the atmosphere and the ground (Woodard and Curran, 2024).

The MassDEP established MCP clean up soil standards for six PFAS parameters on December 13, 2019, based on land use and exposure. MassDEP indicated that they are currently considering several PFAS soil background studies conducted in New England to inform any changes to their soil standards. They are currently using the Vermont background study conducted in 2019 to obtain PFAS soil background values.

1.4 Review of New Hampshire PFAS Study

The New Hampshire Department of Environmental Services (NHDES, 2023) prepared a Technical Background Report for the proposed soil remediation standards (SRS) for four PFAS compounds – PFOA, PFOS, perfluorohexane sulfonic acid (PFHxS), and perfluorononanoic acid (PFNA). The NHDES did not consider background values for SRS derivation, because PFAS are anthropogenic contaminants and therefore are not naturally occurring in the environment, and because although certain PFAS were detected in soil sampling locations across the state, the presence of PFAS was generally limited to shallow soil (i.e., not distributed throughout the soil column) and the reported concentrations varied by location (i.e., were not spatially consistent) (NHDES, 2023).

Nevertheless, NHDES did develop BTVs for the four PFAS for shallow soil that can be considered by responsible parties during their initial screening of PFAS data to evaluate whether soils are impacted solely due to anthropogenic ambient background conditions, as presented in Attachment C of NHDES (2023).

The NH PFAS information was based on background studies completed by the USGS in 2021 (Santangelo et al., 2022) and in 2022 (Santangelo et al., 2023), with the data sets available online. The 2021 data were utilized by NHDES to calculate BTVs. USGS collected shallow (0-6") soil samples (n=100), intermediate (6-12") soil samples (n=50), and deep (up to 36") soil samples (n=6), from undisturbed areas (forested, shrubland, scrubland, grassland, herbaceous, wetlands, or barren land) throughout the state. Laboratory analysis included 36 PFAS compounds using liquid chromatography/mass spectrometry (LC-MS/MS); and, total oxidizable precursor assay (TOPA), TOC, moisture, pH and extractable protein, completed by Eurofins.

Statistical analysis was completed by NHDES on the soil data, using USEPA ProUCL versions 5.1 and 5.2. Potential outliers were screened using Rosner's Outlier Test and by reviewing boxplots and Q-Q plots; some outliers were removed from the statistical analysis. Non-detect concentrations were evaluated using both regression on order statistics (ROS) and Kaplan-Meier estimation methods; substitution methods were not used; and the statistical analysis was run both with and without non-detects. Soil BTVs were calculated for four PFAS compounds based on 95% upper tolerance limits (UTL95-95).

Although not discussed by NHDES, a USGS summary presentation of the PFAS soil data (Tokranov, 2023) discussed Spearman rho correlation of PFAS concentrations with protein (positive), pH (negative), latitude (negative), TOC (positive), percent organic layer/humus (%O) in the soil horizon (positive), and percent subsoil/deposited minerals and metal salts (%B) in the soil horizon (negative).

The NHDES established screening level soil standards for four PFAS parameters on December 11, 2019, for direct contact exposure. NHDES indicated that they did not identify ambient background values for PFAS that are applicable to the entire state since PFAS are anthropogenic, their presence was limited to shallow soil, and reported concentrations varied by location; however, remediation sites in NH are able to propose site-specific background values to derive site-specific remediation standards.

1.5 Review of Rhode Island PFAS Study

The Rhode Island PFAS Background Study was completed by the State of Rhode Island Department of Environmental Management (RIDEM, 2023), who provided background information and discussion on PFAS in RI, including groundwater studies, pre-remedial areas, Superfund sites, Department of Defense (DOD) sites, landfills, wastewater treatment plants (WWTPs), textile mills, fire training, and others.

Section 11 of the RIDEM (2023) report discusses regulations and a soil background study completed for six PFAS compounds. Soil samples (0-24", n=50) were collected from 50 undisturbed State-owned properties, excluding wetlands, throughout the state. Laboratory analysis included 24 PFAS compounds using LC-MS/MS completed by Alpha Analytical Laboratories Inc.

Statistical analysis was completed on the soil data, using USEPA ProUCL version 5.2. Potential outliers were identified, and one obvious outlier with several maximum detections was removed from the analyses. The method for handling non-detect concentrations was not specified. Soil background values were calculated based on 95% upper tolerance limits (UTL95-95). Since no concentrations were detected for PFHxS, the soil background value was set as the maximum MDL.

The RIDEM has not established soil standards for PFAS at this time. No feedback was obtained from RIDEM at this time.

1.6 Review of Vermont PFAS Study

The Vermont PFAS Background Study (Zhu et al., 2019) was completed by the University of Vermont for the Vermont Department of Environmental Conservation (VTDEC). Soil samples were collected in 2018 to determine the background concentrations of a number of PFAS in Vermont shallow soils. The study also determined if there are significant correlations between PFAS and TOC, percent solids, and the sum of PFAS compounds. Shallow (0-6") soil samples (n=66) were collected from 66 properties consisting of municipal or state lands, parks, forests, green lands, or building or school lawns throughout the state. Laboratory analysis included 17 PFAS compounds and the sum of PFAS compounds using LC-MS/MS; TOC using ASTM Method 2000; and percent solids using ASTM Method D2216-10, completed by Alpha Analytical Laboratories Inc. There were limitations identified with the variation in soil data due to PFAS releases and time; samples limited to publicly owned properties; and analysis on only 17 PFAS parameters.

Statistical analysis was completed on the soil data, using USEPA ProUCL version 5.1. Potential outliers were identified. One sample location (sample J6) with obviously high outlier concentrations was identified; statistics were run with and without the outlying concentration for each affected analyte. Based on the large effects observed on summary statistics when including the J6 sample, the decision was made to exclude the J6 data from background calculations. Non-detect concentrations were evaluated using Kaplan-Meier estimation methods. Soil background values were calculated based on 95% upper tolerance limits (UTL95).

The study concluded that PFOS was quantitively detected at the highest frequency and was observed in all soil samples (Zhu et al., 2019). At a majority of locations, PFOA and PFOS were the greatest contributors of total PFAS. No significant correlation was observed between TOC and individual or total PFAS (Zhu et al., 2019).

The VTDEC established screening level soil guidance values for five PFAS parameters in January 2023, for direct contact exposure. VTDEC indicated that since the regulatory soil standard is for direct contact and the standard is well over the background numbers, the PFAS soil background data are not utilized in the development of soil standards. They do use the PFAS background information for site specific decision making and also when looking at possible soil to groundwater guidance values where the soil numbers would be near or below the background soil values determined in the study.

Table 1 - Summary of PFAS Background Studies in Northeastern United States

State	CT	ME	MA	NH	RI	VT
Statistics Completed?	No	Yes	Yes	Yes	Yes	Yes
Statistical Analysis	-	USEPA ProUCL Version 5.1 Gehan Test and Tarone-Ware (T-W) Test for urban vs. non-urban data. Separate background levels were calculated if urban and non-urban results were significantly different. Background levels calculated using UPL90, UTL90-95, UTL95-95, and UCL95. See Study Table 9 (PDF pg. 42)	USEPA ProUCL Version 5.2 to calculate summary stats, data distribution, outlier tests, UTLs, and correlation w/ PFAS and TOC. Background levels calculated using 95% UTLs	USEPA ProUCL Version 5.1/5.2, with and without non-detects Calculated UP95, UPL95, USL95, and UTL95-95, chose UTL95-95 for BTVs.	USEPA ProUCL Version 5.2 UTL95-95 selected as BTV	USEPA ProUCL Version 5.1 using various UTLs, chose 95% UTL No BTVs for PFAS detected <10%
Threshold for statistics? How many detects were needed	-	At least 10 observations	Not discussed	Enough to achieve selected confidence of 95%.	Enough detections to run ProUCL	>10% detection frequency
Outliers	-	15 potential outliers were identified at 6 samples, based on visual screening of Q-Q plots. Removed 1 obvious outlier (urban WL-02) w/ high concentrations.	Looked at outliers based on box and whisker plots. No information if outliers were removed.	Outlier screening using Rosner's Outlier Test in ProUCL and by reviewing boxplots and Q-Q plots. Outliers were individually assessed by reviewing multiple factors, some were removed from stats.	1 sample was statistical outlier (had several max PFCA detections) and was removed from analyses based on statistics.	Stats run with and without 1 obvious outlier w/ high concentrations (sample J6). Value was excluded due to large impact on summary statistics. No other outliers identified, and no outlier stats were performed.
Non-Detects	-	Kaplan-Meier (KM) estimation methods. If <4 detects, nonparametric methods selected. If 1 detect, max detected value used. If no detects, max ND MDL was used.	Kaplan-Meier method	Ran both regression on order statistics (ROS) and Kaplan-Meier (KM) estimation methods, but selected KM estimates. Did not use substitution methods.	Method for handling non-detects was not specified. PFHxS did not have enough detections to perform statistics, so used max MDLs.	Kaplan-Meier (KM) estimation
Duplicates	-	5 field duplicates were only for QAQC (not included in stats).	8 laboratory duplicates, included in stats. Max detected concentration, or the lowest RDL if non-detect, was used as representative concentration for that sample.	15 field duplicates and 3 field triplicates were only for QAQC (not included in stats). 1 sample w/ high RPD was reanalyzed, and resample was within limit.	3 field duplicates only used for QAQC (not included in stats).	2 field duplicates included in stats. Arithmetic average of concentrations were applied.
Other Stats / Correlations	-	Mann-Kendall (MK) analysis for correlation testing between PFAS, PAHs, and soil parameters.	ProUCL for correlation between PFAS and TOC.	Not included in NH summary. USGS summary discussed Spearman rho correlation w/ protein (positive), pH (negative), latitude (negative), TOC (positive), %O in soil horizon (positive), and %B in soil horizon (negative)	No	Pearson correlation coefficients between TOC, % solids and PFAS. Pearson correlation coefficients between individual PFAS and sum PFAS.
Leachate Testing	-	33 samples for Synthetic Precipitation Leaching Procedure (SPLP) using EPA Method 1312. PFCAs and PFSAs were commonly detected in the SPLP leachate. PFOA was detected in 31 of 33 SPLP samples, and PFOS was detected in 30 of 33 SPLP samples. Detection rates for PFOA, PFOS, and some other PFAS were greater for SPLP than for the regular soil analyses, which is at least partially attributed to the relatively low detection limits achieved for aqueous matrices. TOP Assay was also performed.	-	-	-	-
Limitations (Identified by Report Author)	Low resolution / # of samples Not peer-reviewed	-	88% of samples were loam, consistent with most locations occurring in mature forests; limitation re: soil type. Could collect from urban vs. non-urban	-	-	Variation in data due to PFAS releases and time; samples limited to publicly owned properties; analysis only for 17 PFAS
Other Notes	MI and VT are at forefront of regulating PFAS	Study was adapted from, and compared to, the VT study.	White paper includes more detailed information on stats.	Reviewed MN, ME and VT studies	-	-

Table 1 - Summary of PFAS Background Studies in Northeastern United States

State	CT	ME	MA	NH	RI	VT
Conclusions	-	Most frequently detected were PFOS and PFCAs with 3-10 carbon alkyl chains. The strongest and most consistent correlations were among PFAS (i.e. PFAS concentrations tend to increase together). PAHs had weak or no correlations w/ PFAS. Sulfur had strong positive correlations w/ PFAS. Soil organic content were strongly correlated with PFAS. PFAS had strong negative correlations with sand, and strong positive correlations with silt and clay. Greater moisture content in soil samples was associated with higher PFAS concentrations.	PFOS and PFOA were detected at the highest frequencies and at the overall highest concentrations. Findings suggest that atmospheric deposition, either via dry and/or wet depositional processes, likely plays a key role in both the localized and widespread distribution of PFAS in both the atmosphere and the ground.	PFAS detected in every 0 to 6 inch and 6 to 12 inch soil sample; soil represents a "reservoir" of PFAS; PFAS concentrations typically decreased with depth in the soil, suggesting PFAS are, to some extent, retained by the soil; TOPA results indicate low concentrations of precursors in shallow soil in NH; Many variables correlate with PFAS	The maximum detection was a sample collected at Jerimoth Hill, coincidentally the highest point in RI. This sample was determined to be an outlier and removed from subsequent analyses.	PFOS was quantitively detected at the highest frequency and was observed in all soil samples. At a majority of locations, PFOA and PFOS were the greatest contributors of total PFAS. No significant correlation was observed between TOC and individual or total PFAS. Higher total PFAA levels in northern Vermont.
Soil Background Established?	No	Yes - Interim Background Threshold Value (BTV) and Interim Upper Bound of the Mean	Yes - UTL95	Yes - background threshold values (BTVs) for PFOA, PFNA, PFHxS and PFOS	Yes - background threshold values (BTVs) for PFHpA, PFOA, PFNA, PFDA, PFHxS and PFOS	Yes - background threshold values (BTVs)
PFOS + PFOA Background Levels (1 ppb = 1 ug/kg = 1 ng/g)	-	PFOS (urban) = 3.036 ng/g PFOS (non-urban) = 0.551 ng/g PFOA = 2.18 ng/g	PFOS = 3.07 ug/kg PFOA = 2.03 ug/kg	PFOS = 3 ng/g PFOA = 3 ng/g	PFOS = 0.842 ug/kg PFOA = 0.639 ug/kg	PFOS = 3.4 ng/g PFOA = 1.6 ng/g
Rural background values released?	No	Yes - via PFAS Background Study	No	Yes - via PFAS Background Study	Yes - via PFAS Background Study	Yes - via PFAS Background Study
Soil Cleanup Objectives Established?	Yes - Additional Polluting Substances (APS) Alternative Criteria	Yes - PFAS Screening Levels (December 2023)	Yes - MCP Soil Standards (December 2019)	Yes - Direct Contact Soil Standards (December 2019)	No - but standards are being developed	Yes - Residential and Commercial Soil Values (January 2023)
If yes, was there a public comment period and what were the comments?	-	Not for BTVs. Comment period for updated RAGs, some people were concerned that the standards were not low enough, but b/c study was external there were not main concerns.	Yes - Sanborn and Head provided formal comments. S-1 soil standards were too conservative and did not consider background. MassDEP updated the standards incorporating the comments.	Yes - NHDES Public announcement in May 2024 proposing to revise various sections of Env-Or 600 Contaminated Site Management Rules (Env-Or 600) to include PFAS. Comments were due May 31, 2024. Comments were not released.	-	No
Did SCOs incorporate BTVs?	No	No - most BTVs are lower than RAGs, and RAGs driver is exposure	No - most BTVs are lower than soil standards, and the driver is exposure; however, individual SCOs were added for 6 PFAS, instead of sum PFAS criteria as initially presented	No - PFAS are anthropogenic, presence was generally limited to shallow soil, and reported concentrations varied by location	No - but standards are being developed	No - not added to soil standards table
Were there leaching standards established?	-	Yes	Yes	Yes	-	No
How were soil standards presented?	-	Screening Levels on 1 pager	Part of MCP standards tables	-	-	Screening Levels on 1 pager

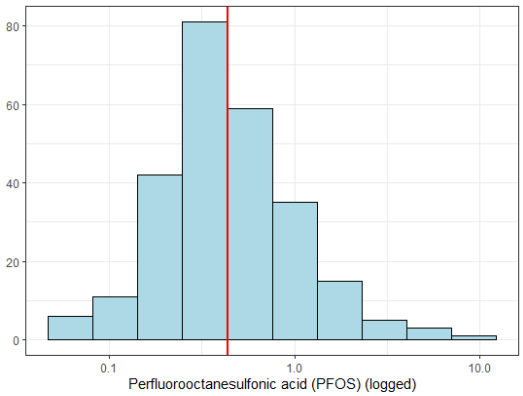
Task 5 – Data Analysis

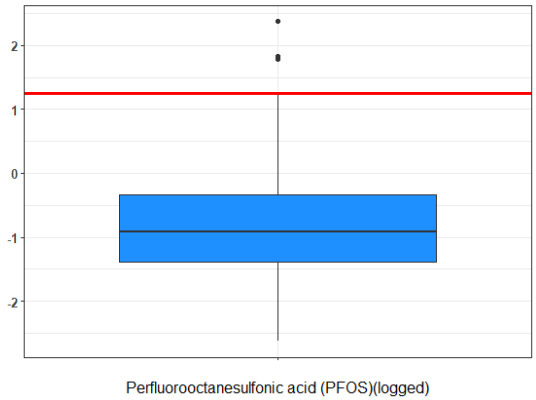
2025-01-31



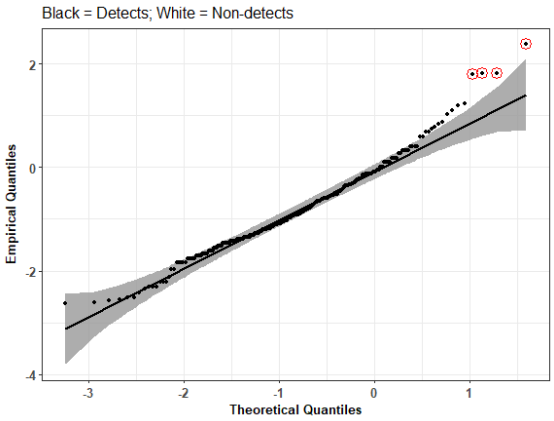
Perfluorooctanesulfonic acid (PFOS)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 258
Number of non-detects: 6.



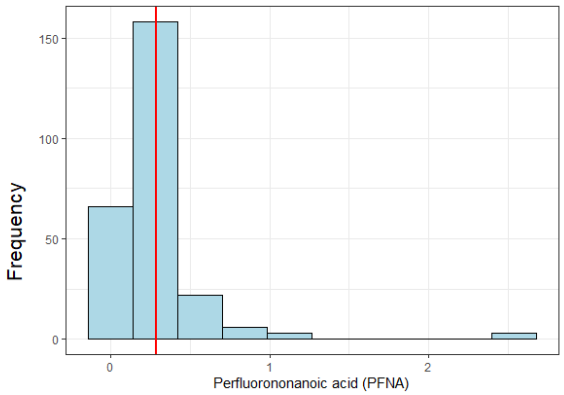
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

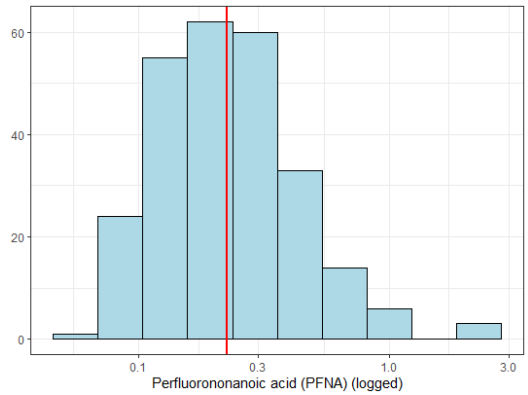
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

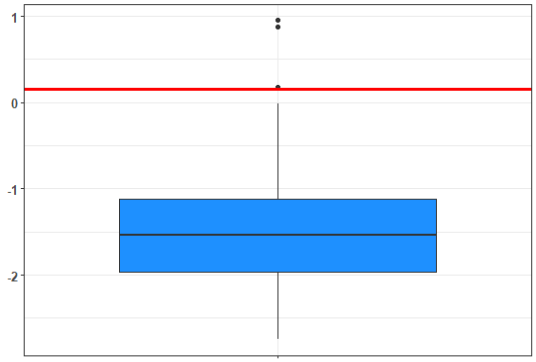
Rosner test confirmed 1 outlier.



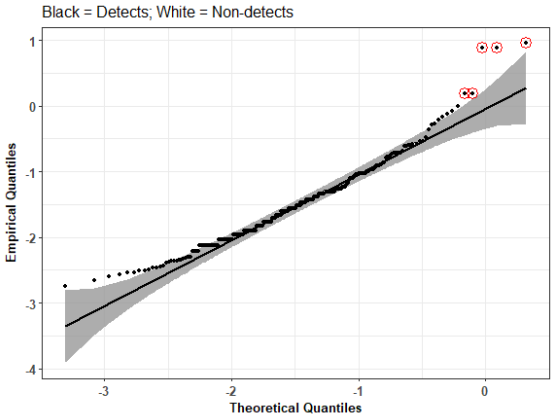
Perfluorononanoic acid (PFNA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 258
Number of non-detects: 30.



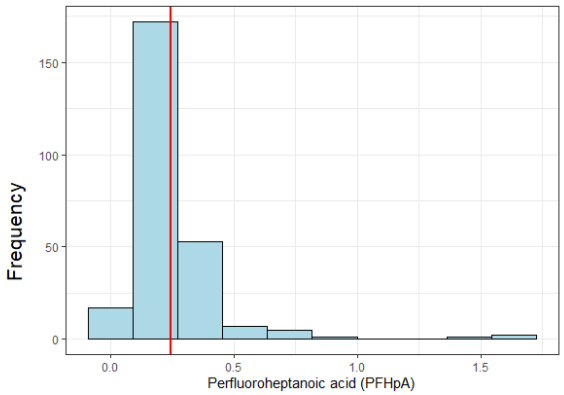
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

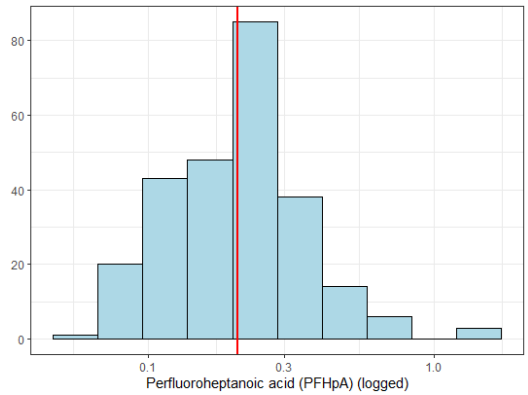
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

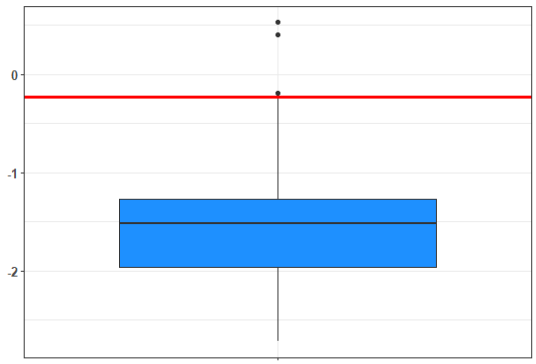
Rosner test confirmed 3 outliers.



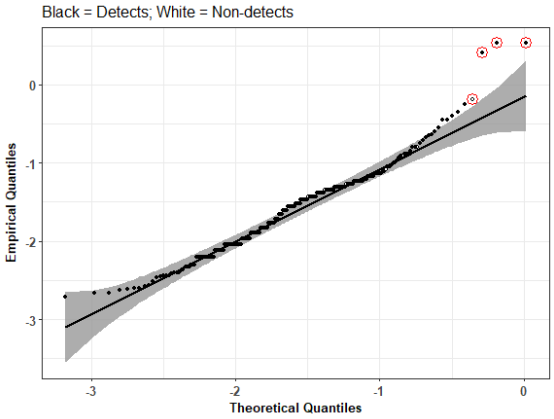
Perfluoroheptanoic acid (PFHpA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 258
Number of non-detects: 62.



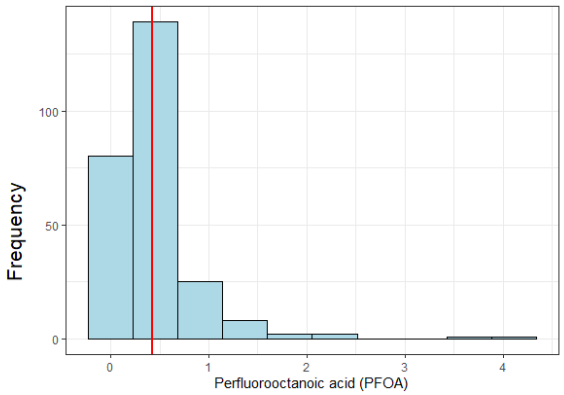
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

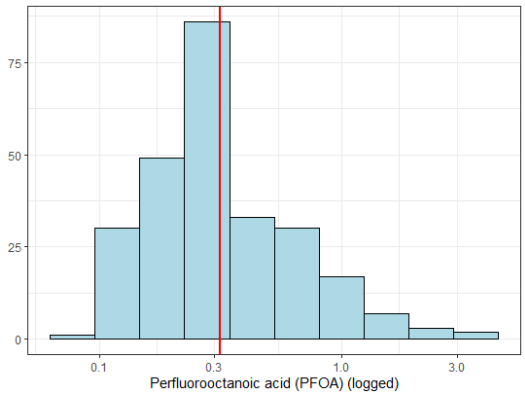
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

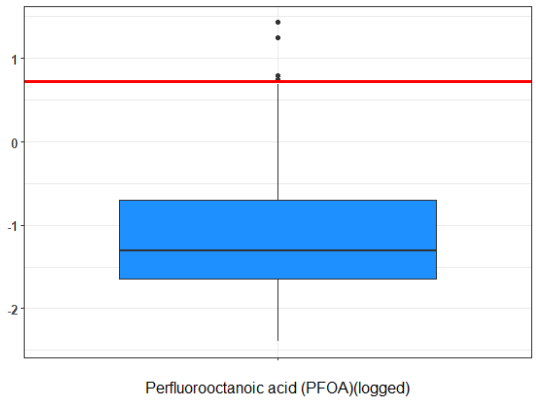
Rosner test confirmed 3 outliers.



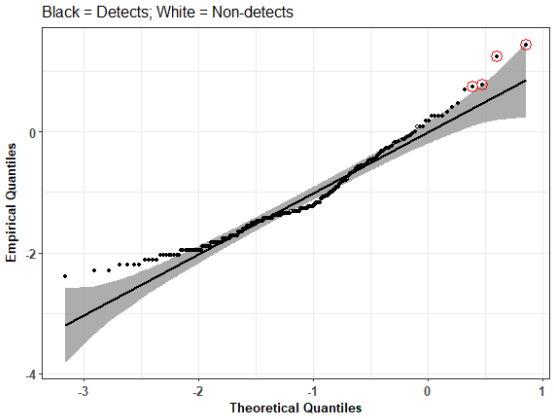
Perfluorooctanoic acid (PFOA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 258
Number of non-detects: 62.



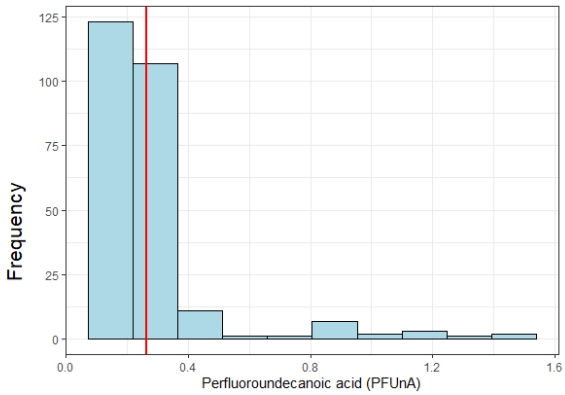
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

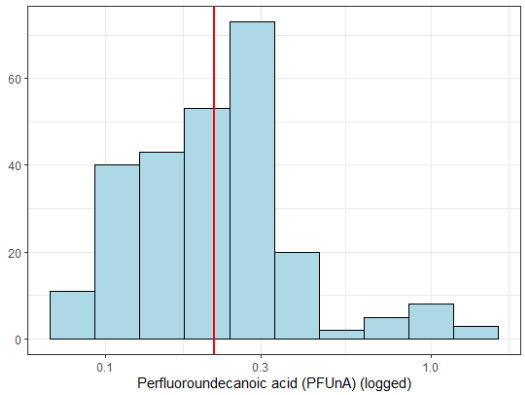
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

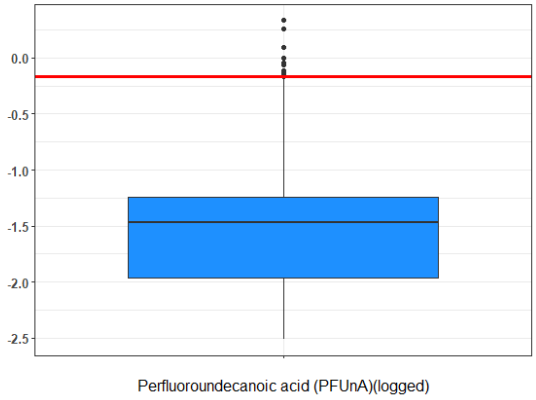
Rosner test confirmed 1 outlier.



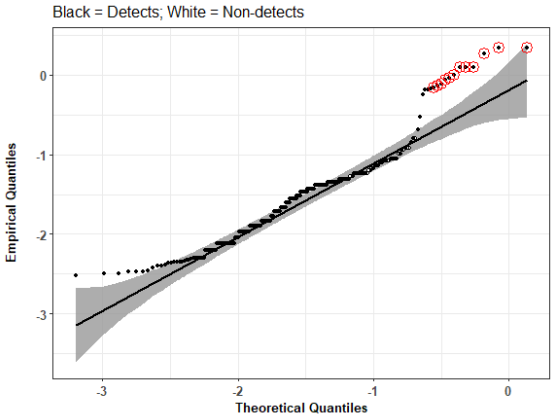
Perfluoroundecanoic acid (PFUnA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 258
Number of non-detects: 82.



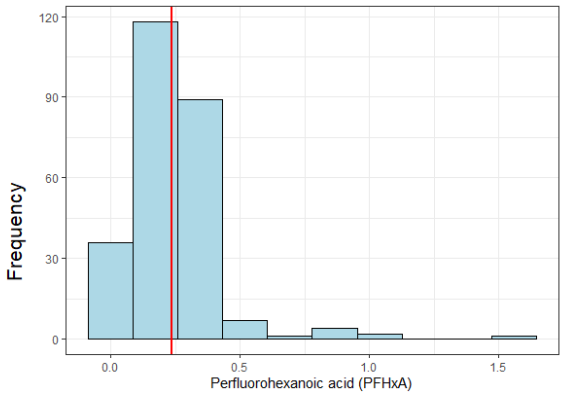
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

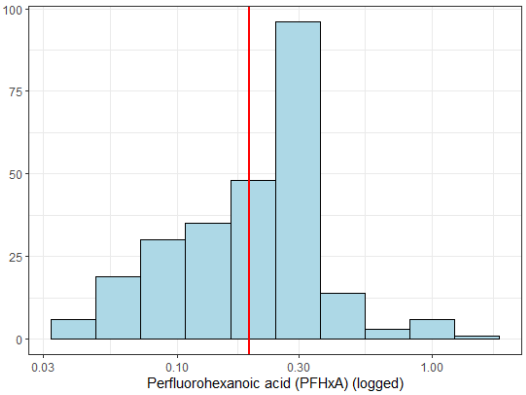
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

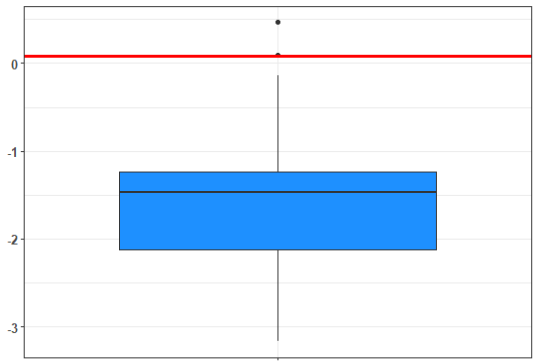
Rosner test confirmed no outliers.



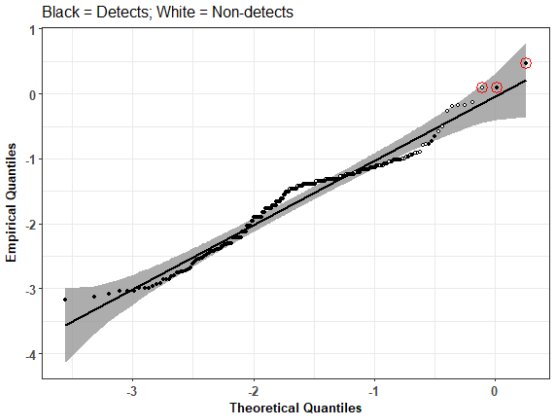
Perfluorohexanoic acid (PFHxA)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 258
Number of non-detects: 108.



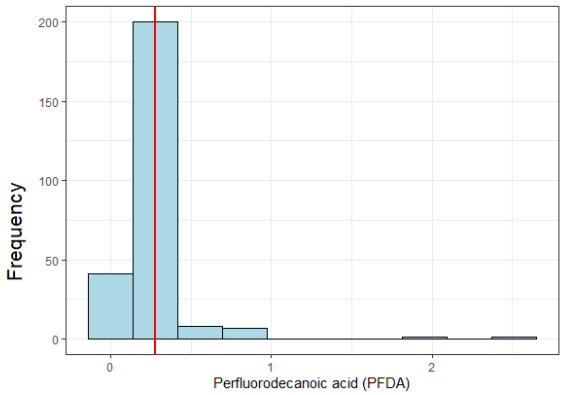
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

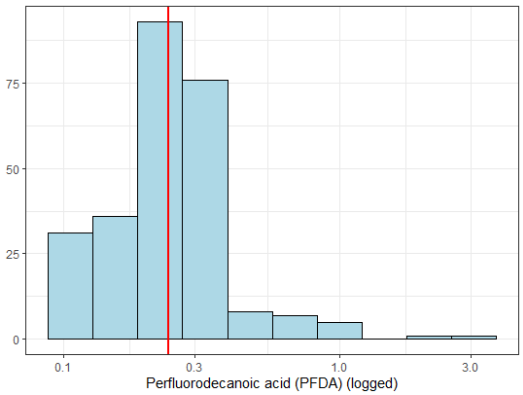
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

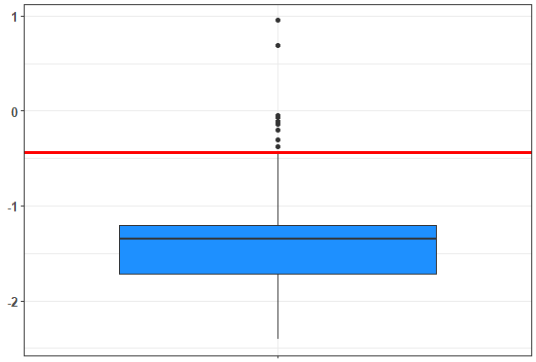
Rosner test confirmed no outliers.



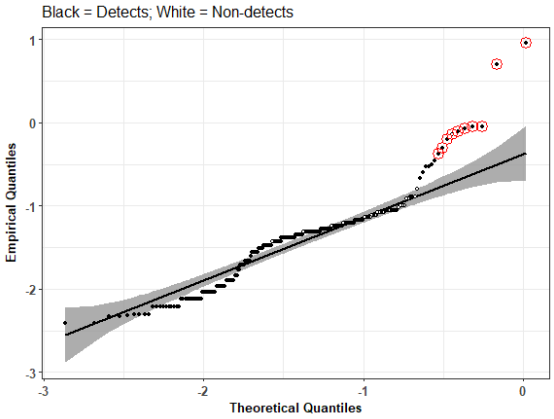
Perfluorodecanoic acid (PFDA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 258
Number of non-detects: 142.



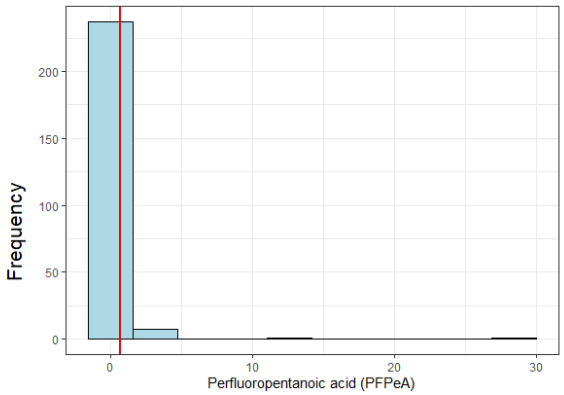
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

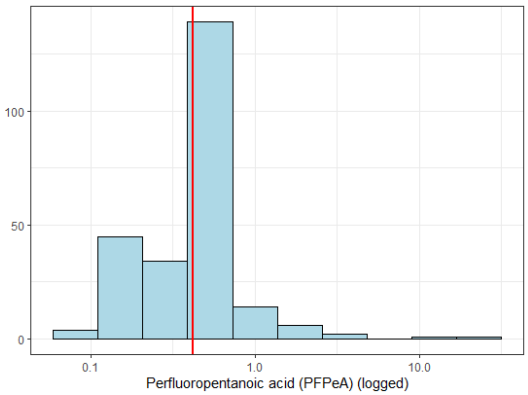
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

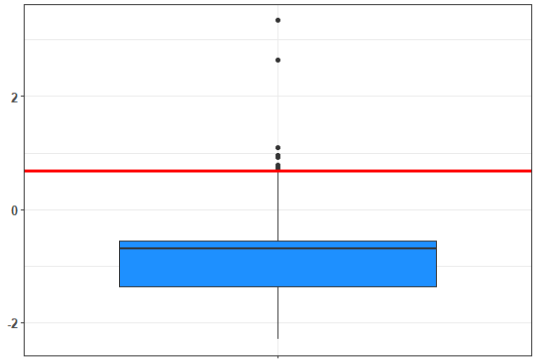
Rosner test confirmed 2 outliers.



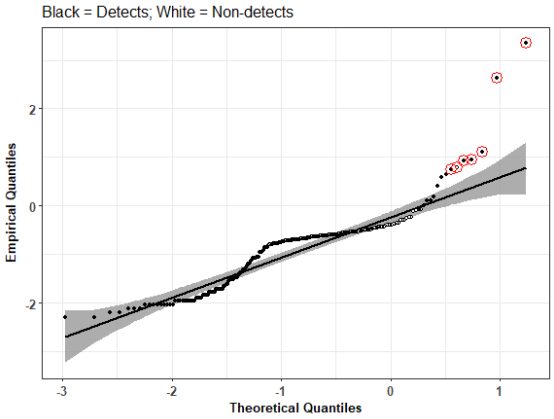
Perfluoropentanoic acid (PFPeA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 246
Number of non-detects: 136.



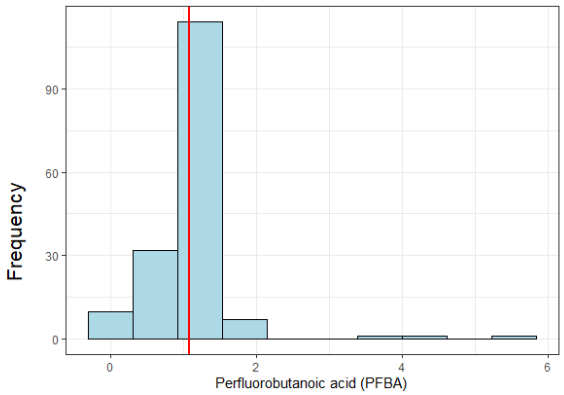
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

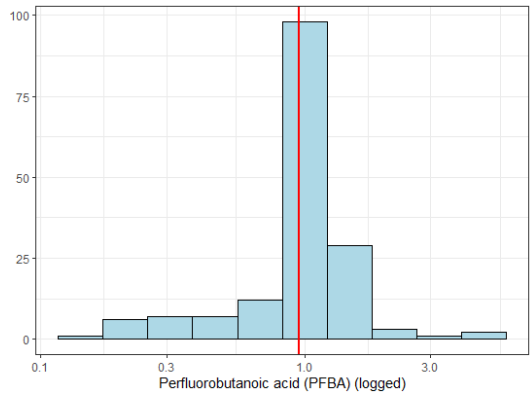
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

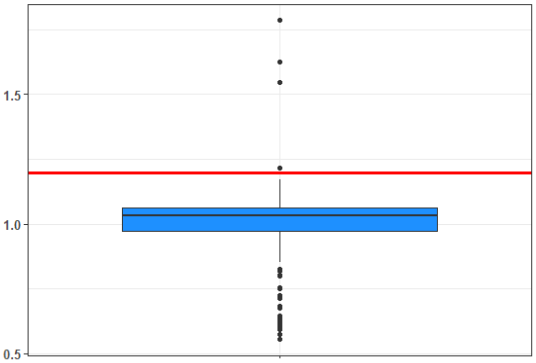
Rosner test confirmed 2 outliers.



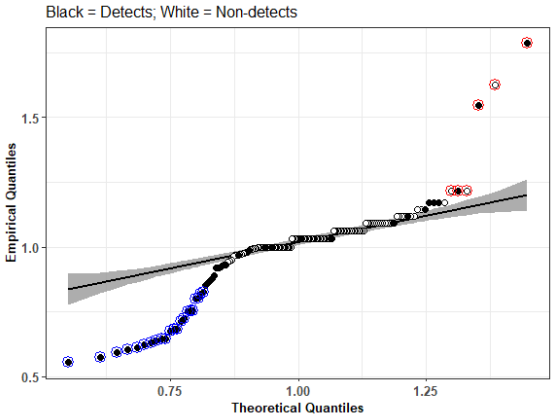
Perfluorobutanoic acid (PFBA)

Distribution

The identified distribution is Gamma. A gamma-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 166
Number of non-detects: 118.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

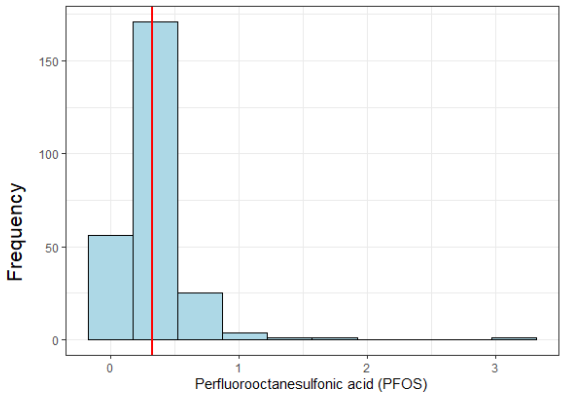
QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were gamma-transformed

Rosner Test Results

Rosner test confirmed 3 outliers.

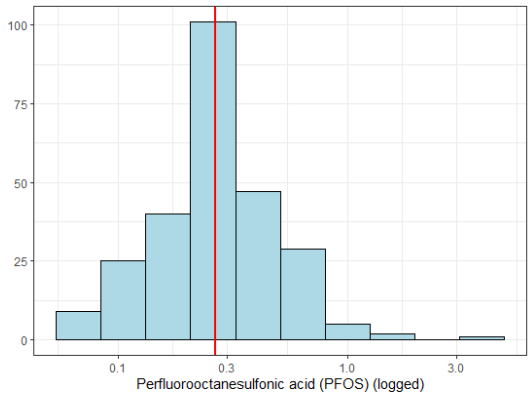
Appendix C-2 Outlier Testing Figures – 2-12 inches

NYSDEC Background Study for Per- and Polyfluoroalkyl Substances (PFAS) in Soil, 2-12 inches



Task 5 – Data Analysis

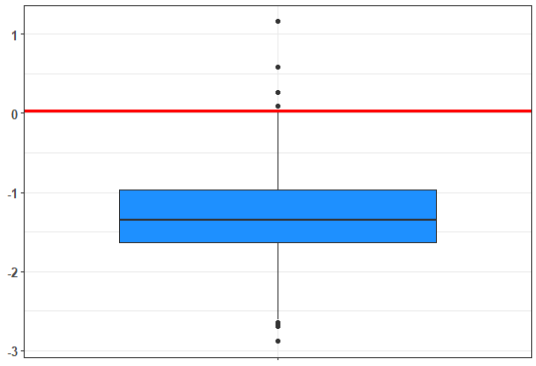
2025-01-31



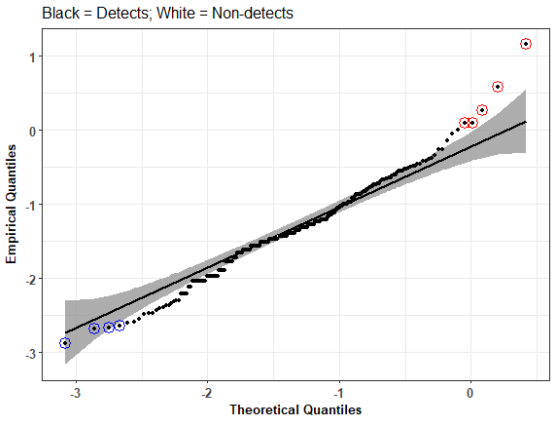
Perfluorooctanesulfonic acid (PFOS)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 259
Number of non-detects: 19.



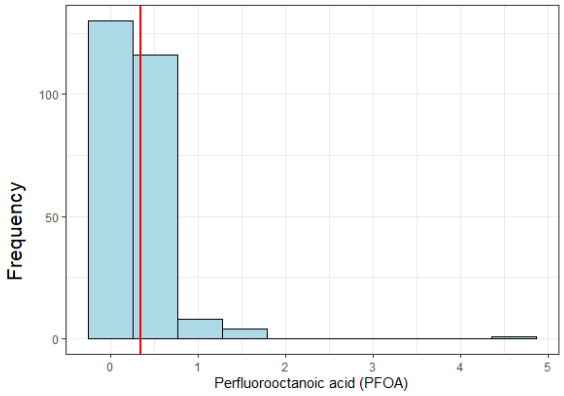
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

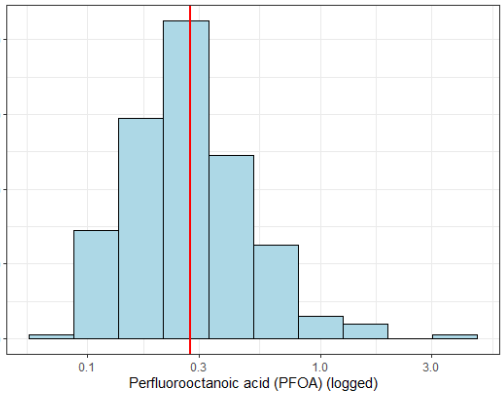
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

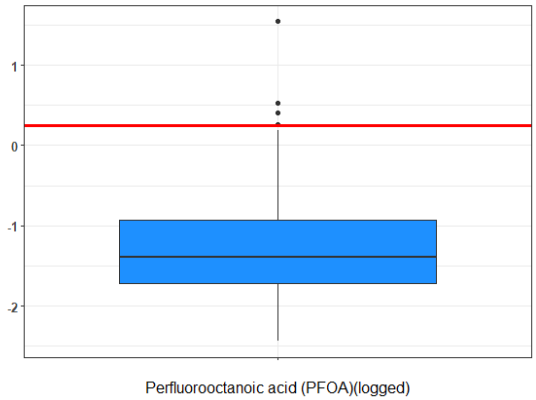
Rosner test confirmed 1 outlier.



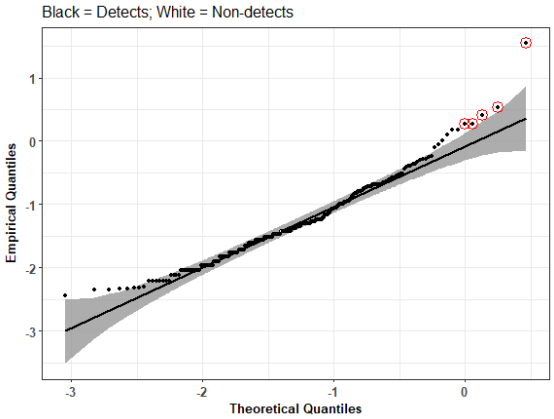
Perfluorooctanoic acid (PFOA)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 259
Number of non-detects: 33.



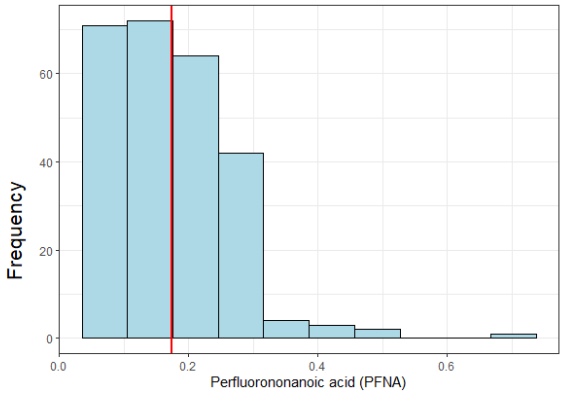
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

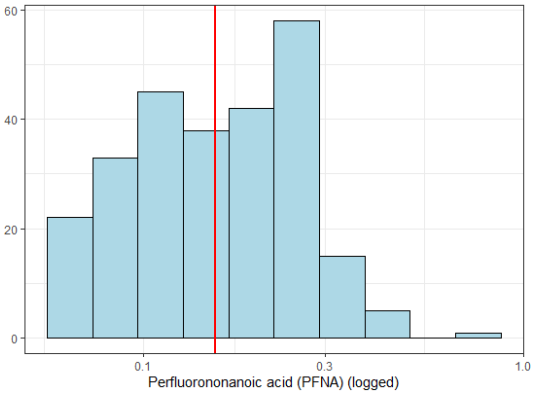
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

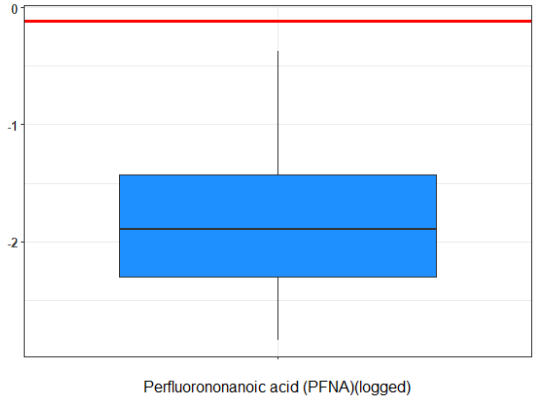
Rosner test confirmed 1 outlier.



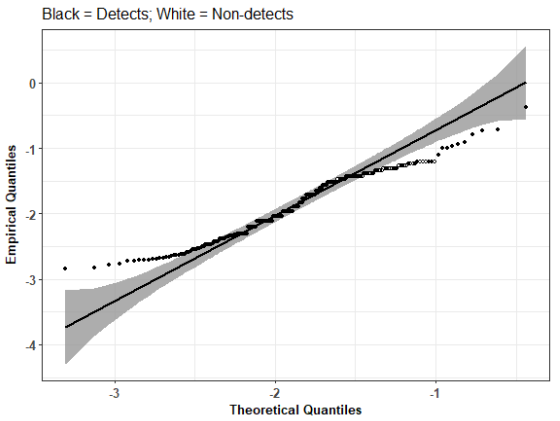
Perfluorononanoic acid (PFNA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 259
Number of non-detects: 61.



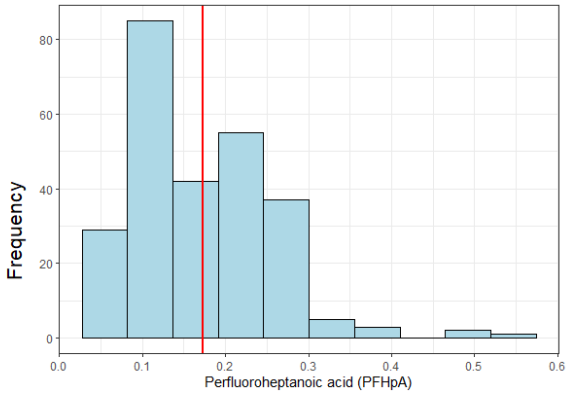
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

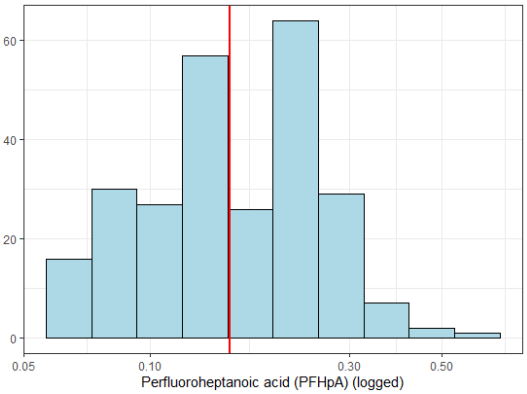
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

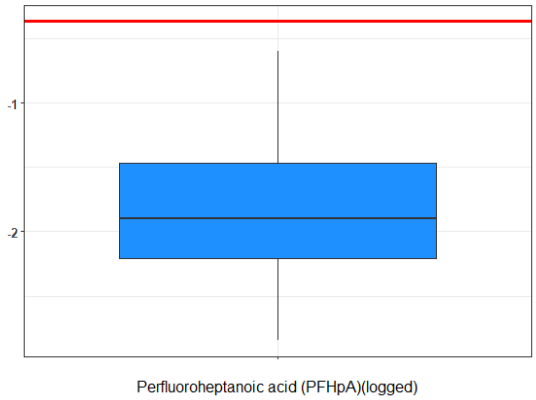
Rosner test was not performed, there were no potential outliers.



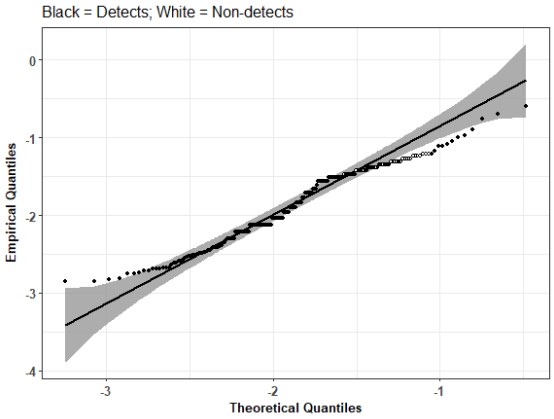
Perfluoroheptanoic acid (PFHpA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 259
Number of non-detects: 66.



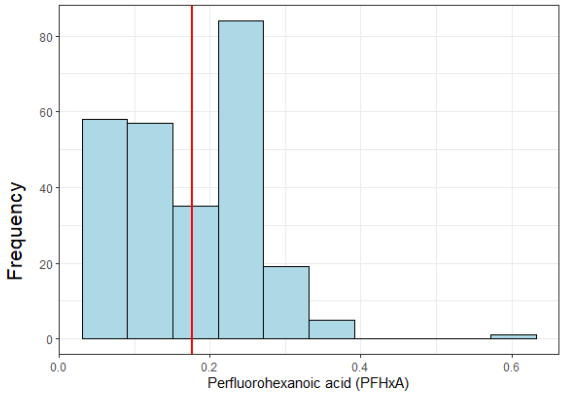
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

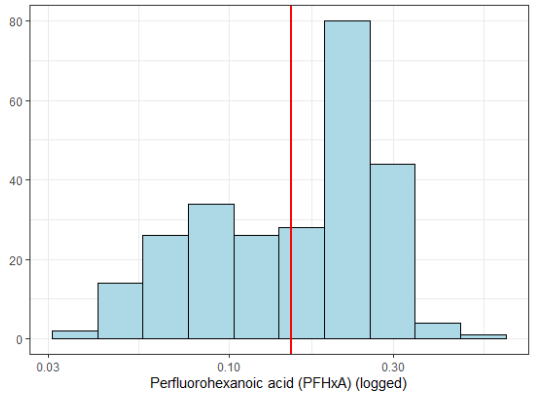
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

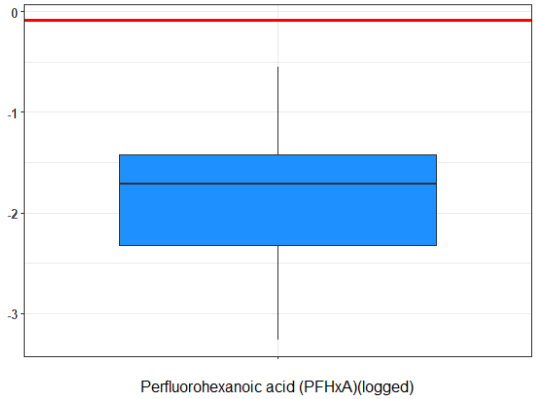
Rosner test was not performed, there were no potential outliers.



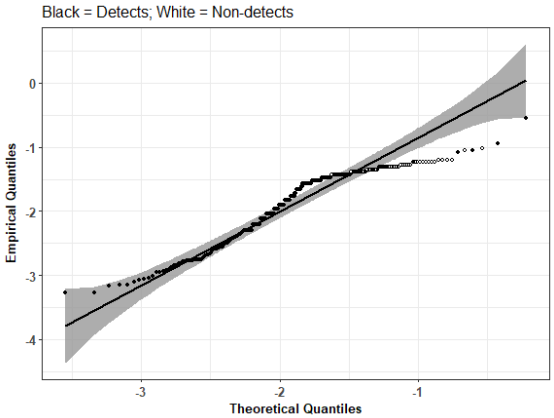
Perfluorohexanoic acid (PFHxA)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 259
Number of non-detects: 100.



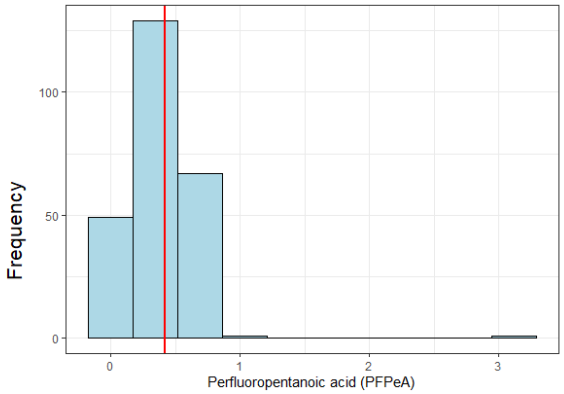
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

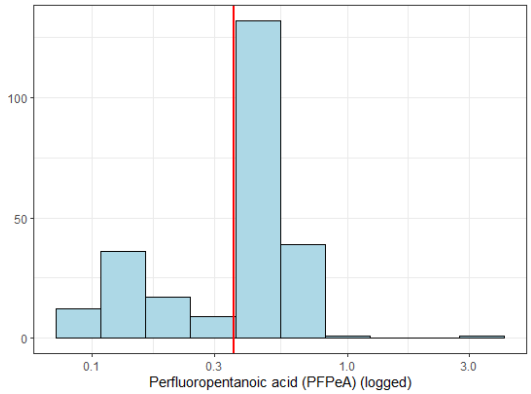
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

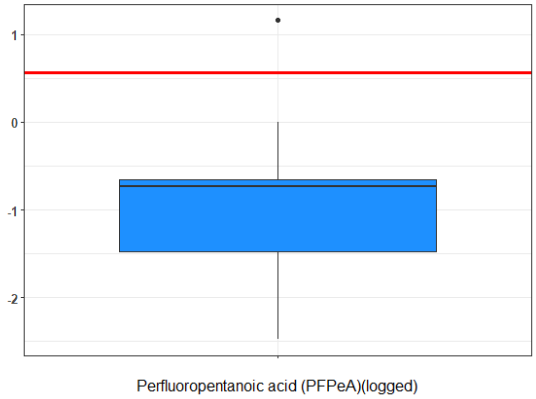
Rosner test was not performed, there were no potential outliers.



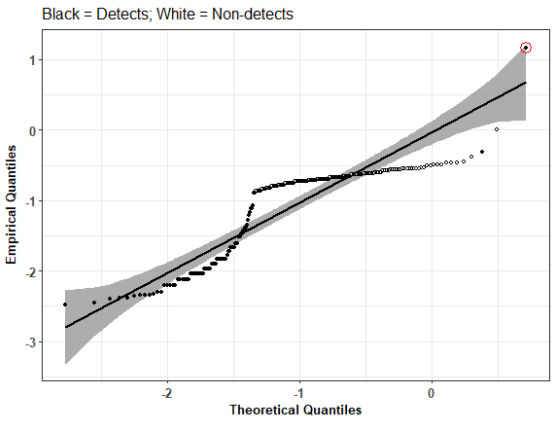
Perfluoropentanoic acid (PFPeA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 247
Number of non-detects: 169.



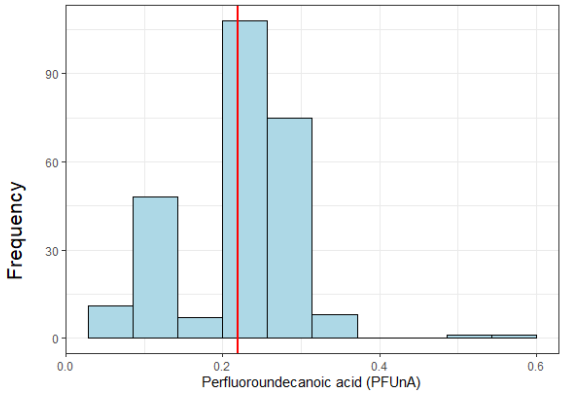
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

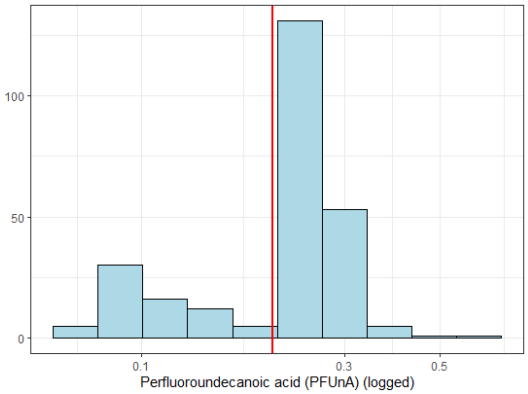
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

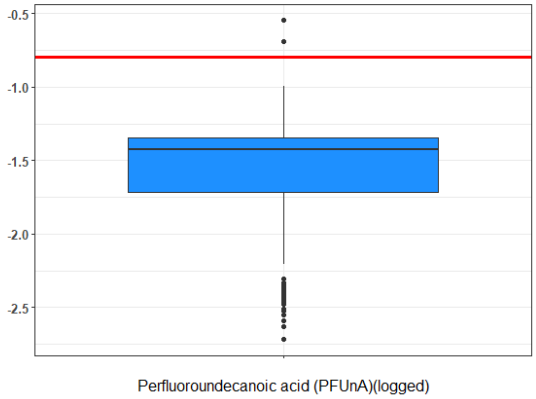
Rosner test confirmed no outliers.



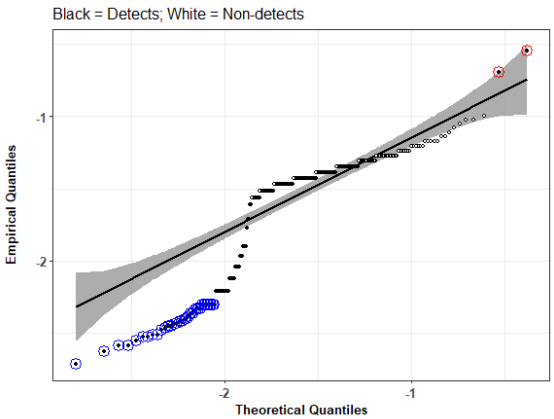
Perfluoroundecanoic acid (PFUnA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 259
Number of non-detects: 187.



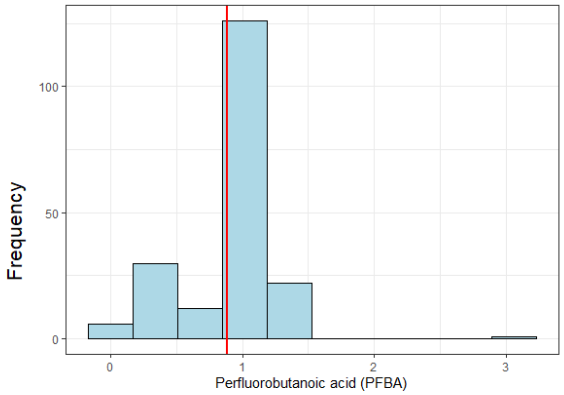
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

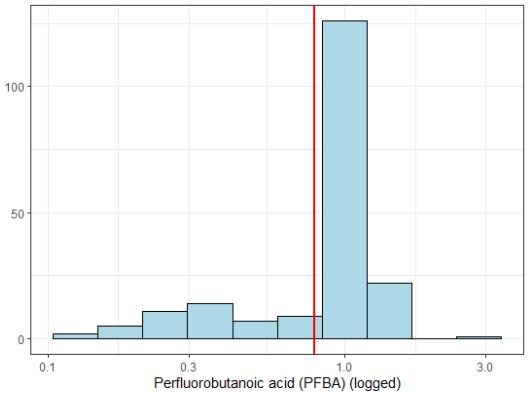
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

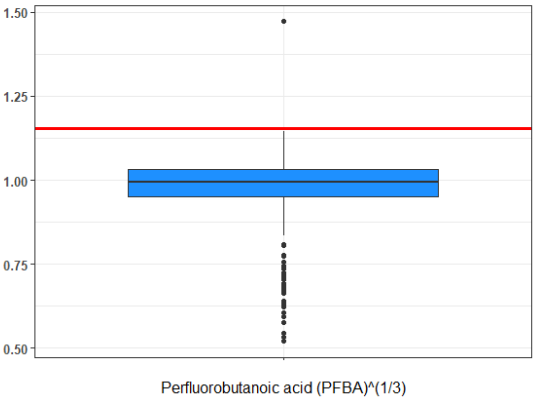
Rosner test confirmed no outliers.



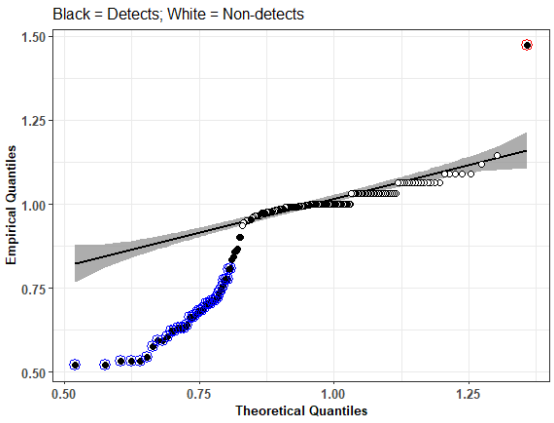
Perfluorobutanoic acid (PFBA)

Distribution

The identified distribution is Gamma. A gamma-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 197
Number of non-detects: 149.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were gamma-transformed

Rosner Test Results

Rosner test confirmed 1 outlier.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	251	95% UTL with95% Coverage	3
Approx, f used to compute achieved CC	1.651	Approximate Actual Confidence Coefficient achieved by UTL	0.947
Approximate Sample Size needed to achieve specified CC	234	95% UPL	2.005
95% USL	10.8	95% KM Chebyshev UPL	5.123

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	251	95% UTL with95% Coverage	0.92
Approx, f used to compute achieved CC	1.651	Approximate Actual Confidence Coefficient achieved by UTL	0.947
Approximate Sample Size needed to achieve specified CC	234	95% UPL	0.702
95% USL	2.6	95% KM Chebyshev UPL	1.579

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	251	95% UTL with95% Coverage	1
Approx, f used to compute achieved CC	1.651	Approximate Actual Confidence Coefficient achieved by UTL	0.947
Approximate Sample Size needed to achieve specified CC	234	95% UPL	0.841
95% USL	1.4	95% KM Chebyshev UPL	1.175

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	239	95% UTL with95% Coverage	2.1
Approx, f used to compute achieved CC	1.572	Approximate Actual Confidence Coefficient achieved by UTL	0.928
Approximate Sample Size needed to achieve specified CC	234	95% UPL	1.1
95% USL	28.5	95% KM Chebyshev UPL	9.324

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	252	95% UTL with95% Coverage	1.2
Approx, f used to compute achieved CC	1.658	Approximate Actual Confidence Coefficient achieved by UTL	0.949
Approximate Sample Size needed to achieve specified CC	234	95% UPL	0.78
95% USL	4.7	95% KM Chebyshev UPL	1.932

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	252	95% UTL with95% Coverage	0.3
Approx, f used to compute achieved CC	1.658	Approximate Actual Confidence Coefficient achieved by UTL	0.949
Approximate Sample Size needed to achieve specified CC	234	95% UPL	0.29
95% USL	0.58	95% KM Chebyshev UPL	0.415

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20. Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.

The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Appendix E Habitat Sample Data Analysis

APPENDIX E

PFAS Rural Soil Background Study

Habitat Sample Data Analysis

To establish PFAS Rural Soil Background Concentrations for protection of ecological resources, only data from the remote samples were used. Data were available for 232 remote samples from 116 locations. Using sampling notes, site photographs, and aerial imagery, sampling locations were reviewed by NYSDEC Division of Fish & Wildlife to ensure that they met the requirements of habitat areas, as defined in Appendix D of the New York State Brownfield Cleanup Program Development of Soil Cleanup Objectives Technical Support Document (2006):

> "locations that (1) provided environmental conditions that could sustain plant and animal life and (2) were at least 15 meters distant from the edge of areas of regular human activity such as yards, golf courses, farms, athletic fields, areas of fill, mines, etc."

Of the 116 remote sample locations, 17 did not meet habitat requirements as determined by NYSDEC Division of Fish & Wildlife. Of the 99 locations (198 samples) designated as habitat, results from two samples (differing locations) were rejected during validation. Since sample results from one of the two depth intervals at two locations were rejected, these two locations could not be included. Therefore, data from 97 locations were retained for analysis as the final habitat data set.

For the 0-2 and 2-12 inch depth intervals, data processing and statistical evaluation were performed as described in the main text. Descriptive statistics, outlier analysis, and background threshold values (BTVs) are presented in **Tables E-1** through **Table E-4** and **Attachment E-1** through **Attachment E-6**.

In addition, for PFOA and PFOS, weighted 95% UTLs with 95% confidence were calculated for the combined 0-12 inch depth interval using the method described in the main text but replacing the mean and standard deviations used in the parametric methods with weighted means and standard deviations of concentrations in the 0-2 and 2-12 inch intervals. ProUCL was used to evaluate the underlying distribution of the combined (unweighted) data for each analyte. Both were concluded to be lognormally distributed (**Attachment E-7**). Since ProUCL does not provide weighted calculations, R Statistical Software was used to calculate the weighted BTVs. For this analysis, non-detects were estimated as described in Section 2.1.1 of the main text. The calculated BTVs for the 0-12 inch interval of the Habitat Sample set are presented for PFOS and PFOA on **Table E-5**

Attachment E-1 Outlier Testing Figures – 0-2 Inches

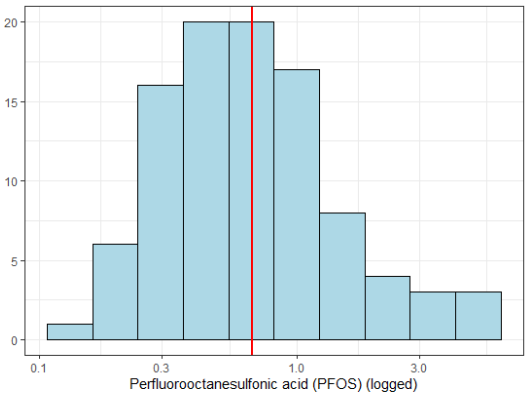
NYSDEC Background Study for Per- and Polyfluoroalkyl Substances (PFAS) in Soil, Habitat 0-2 inches

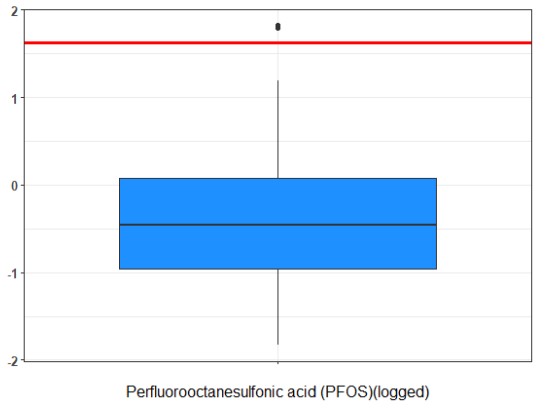
2025-02-14



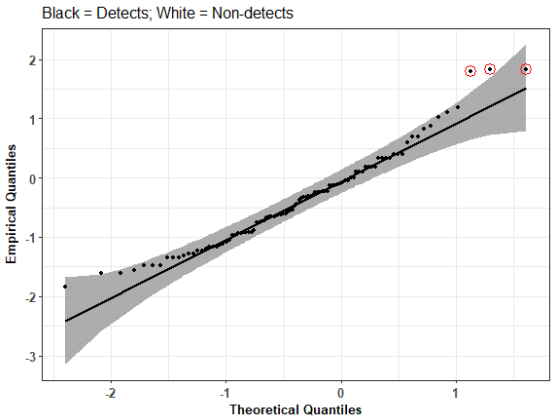
Perfluorooctanesulfonic acid (PFOS)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 0.



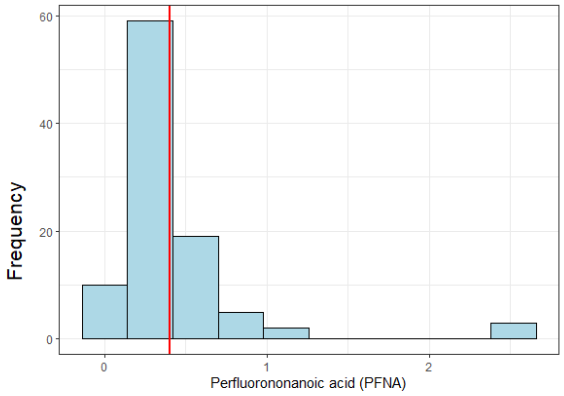
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

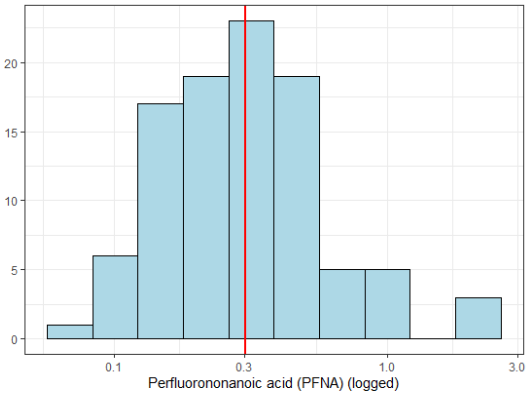
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

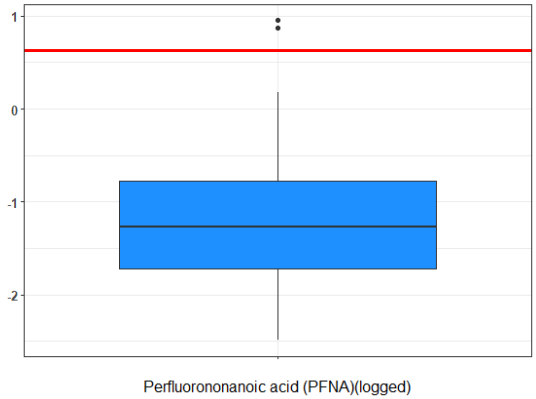
Rosner test confirmed no outliers.



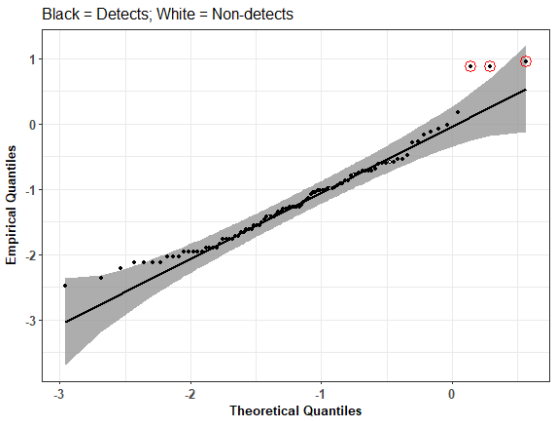
Perfluorononanoic acid (PFNA)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 4.



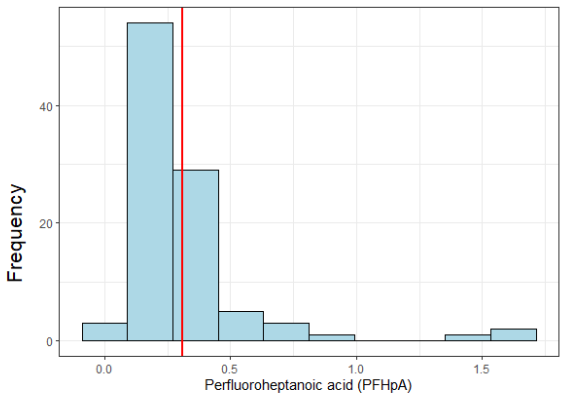
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

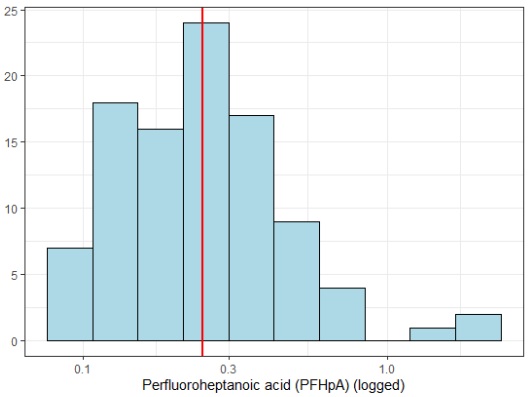
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

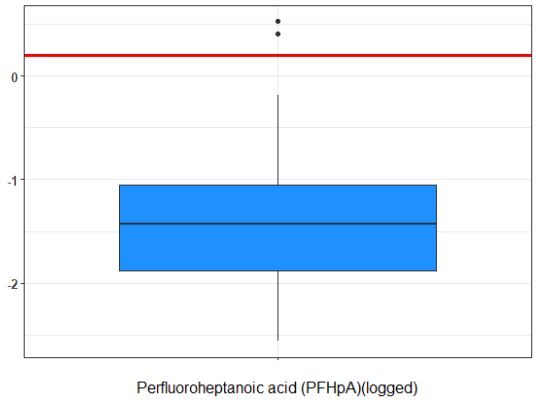
Rosner test confirmed 3 outliers.



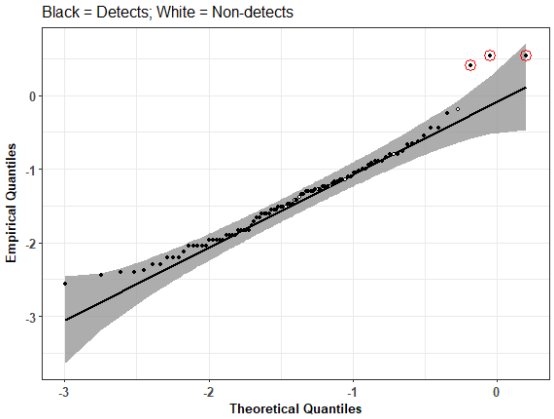
Perfluoroheptanoic acid (PFHpA)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 8.



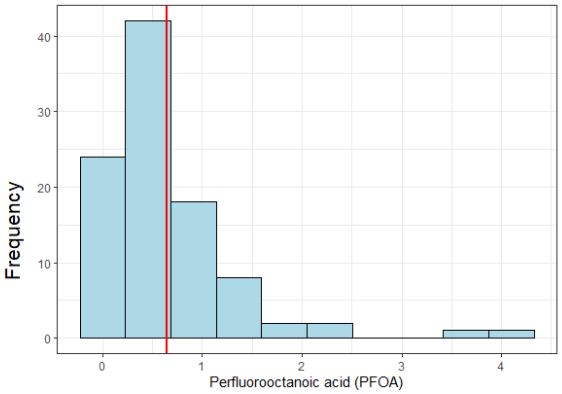
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

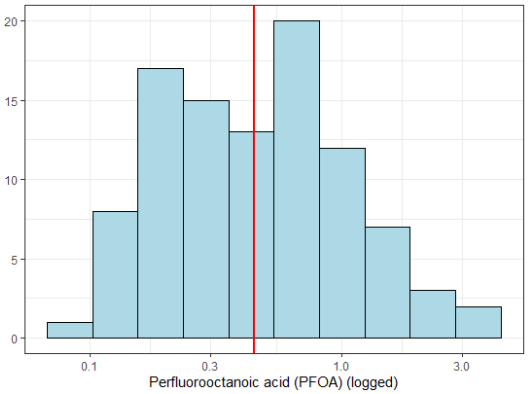
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

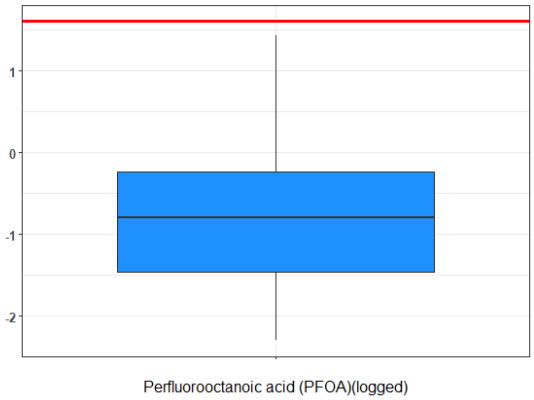
Rosner test confirmed no outliers.



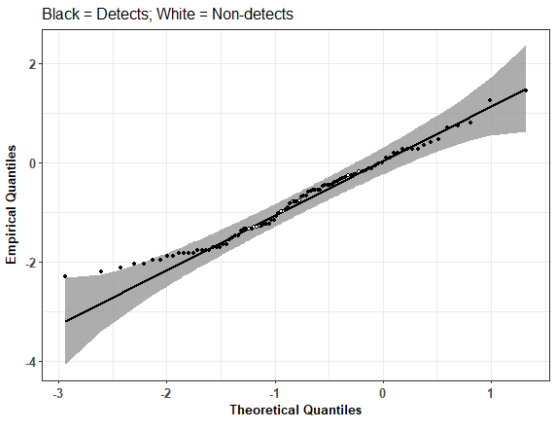
Perfluorooctanoic acid (PFOA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 10.



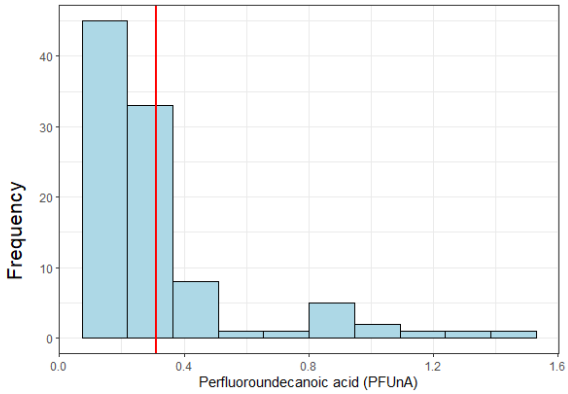
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

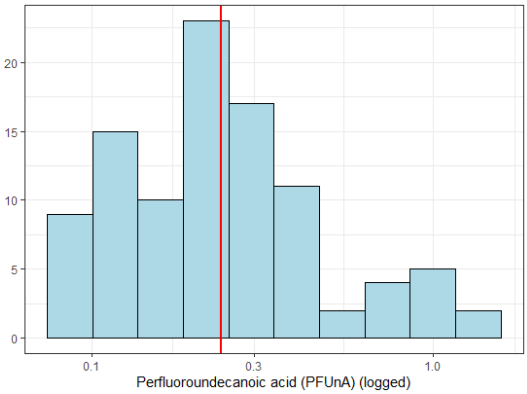
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

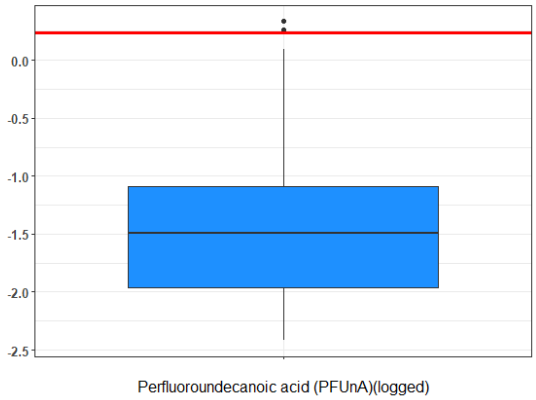
Confirmed No Outliers.



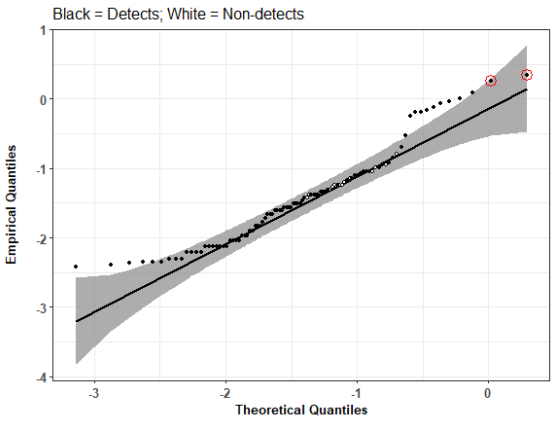
Perfluoroundecanoic acid (PFUnA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 14.



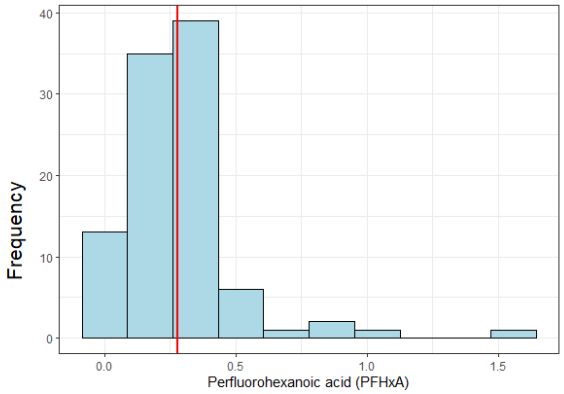
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

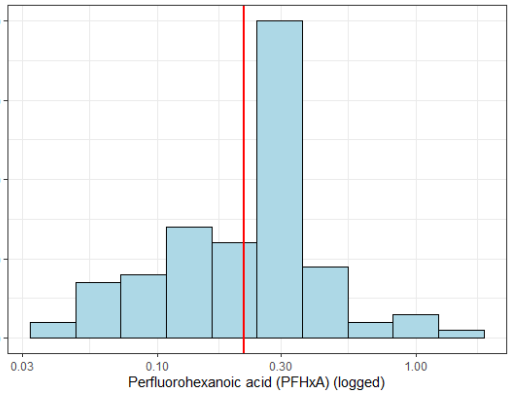
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

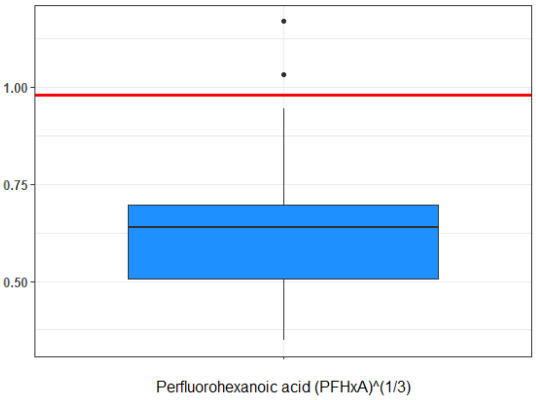
Rosner test confirmed no outliers.



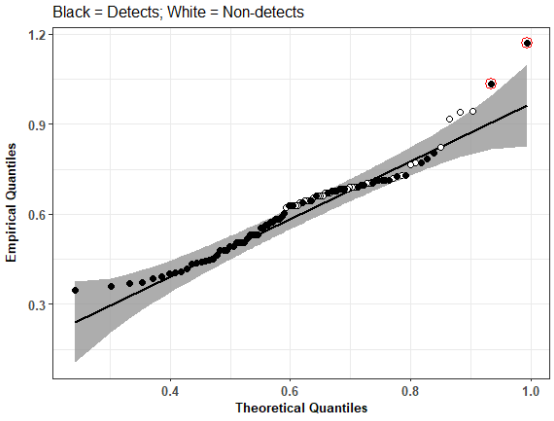
Perfluorohexanoic acid (PFHxA)

Distribution

The identified distribution is Gamma. A gamma-transform will applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 28.



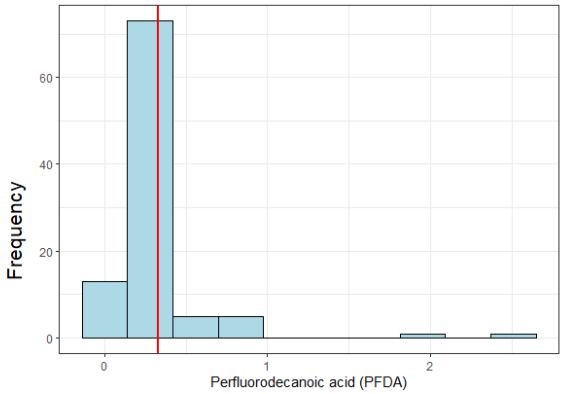
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

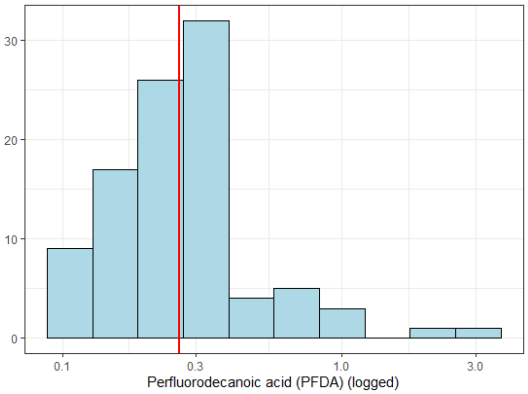
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were gamma-transformed



Rosner Test Results

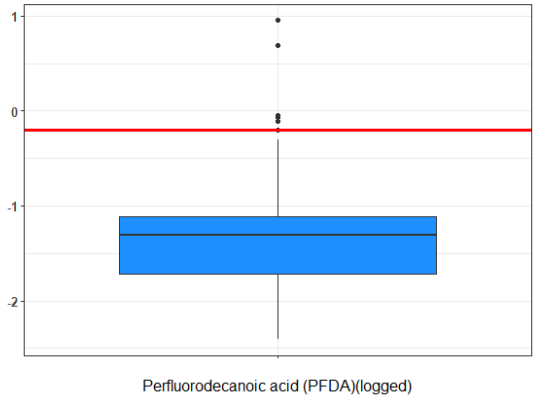
Rosner test confirmed 1 outliers.



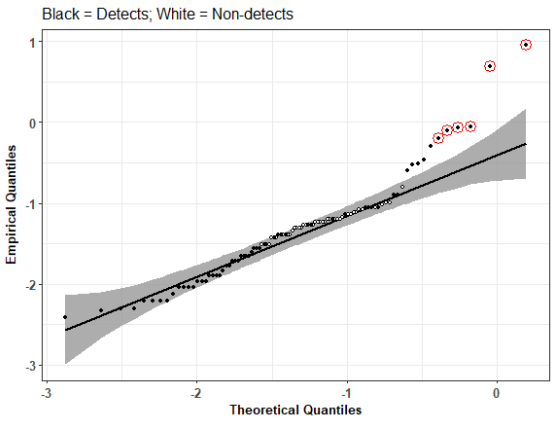
Perfluorodecanoic acid (PFDA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 37.



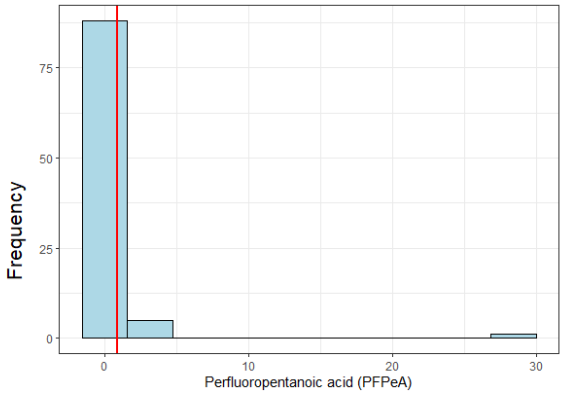
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

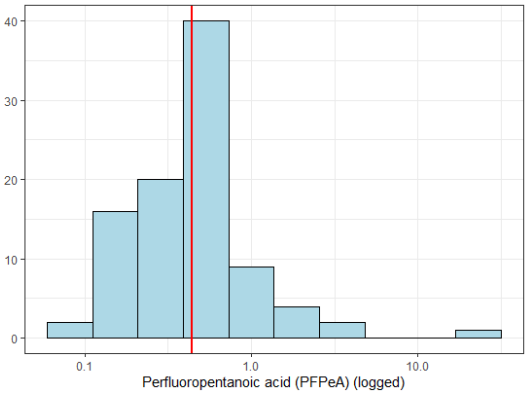
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

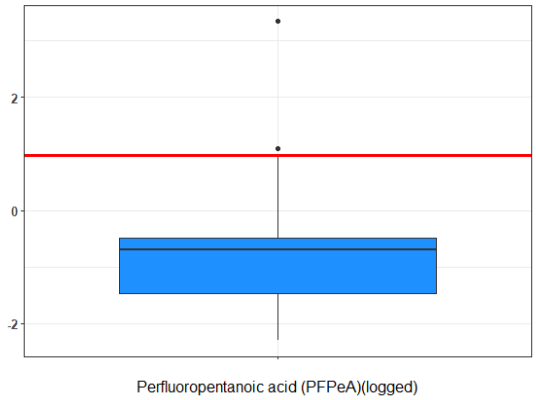
Rosner test confirmed 2 outliers.



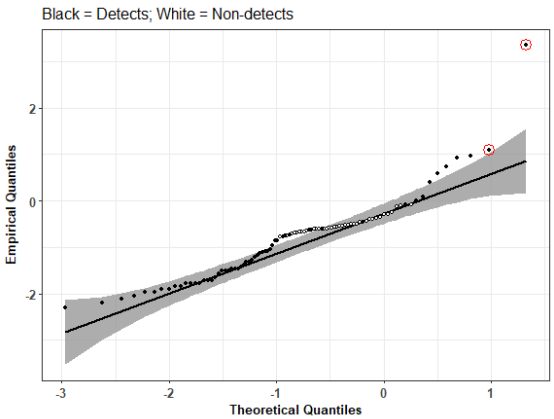
Perfluoropentanoic acid (PFPeA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 94
Number of non-detects: 37.



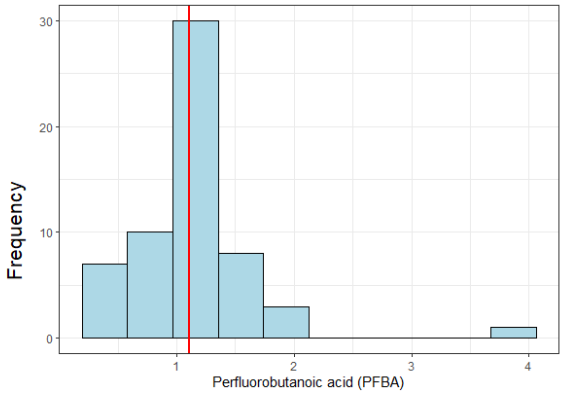
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

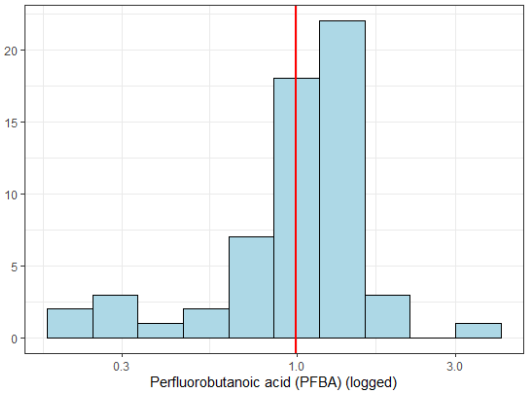
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

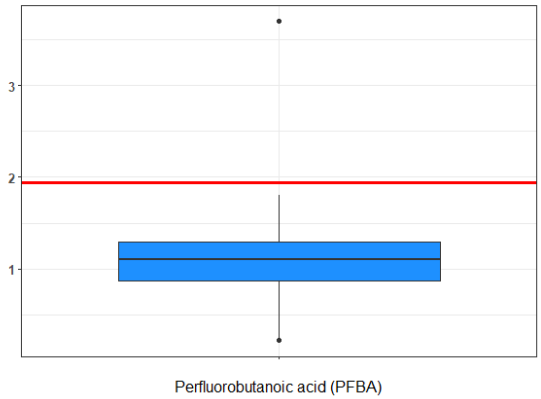
Rosner test confirmed 1 outliers.



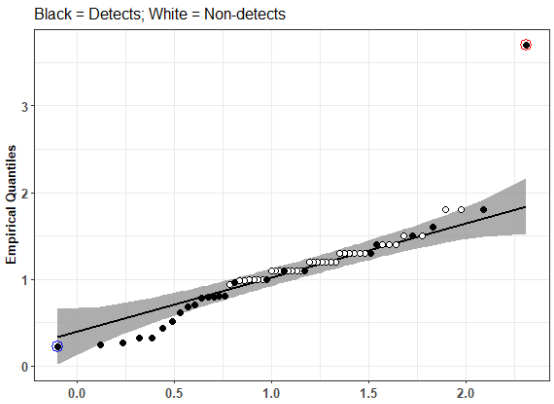
Perfluorobutanoic acid (PFBA)

Distribution

The identified distribution is Normal. No transform will applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 59
Number of non-detects: 34.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

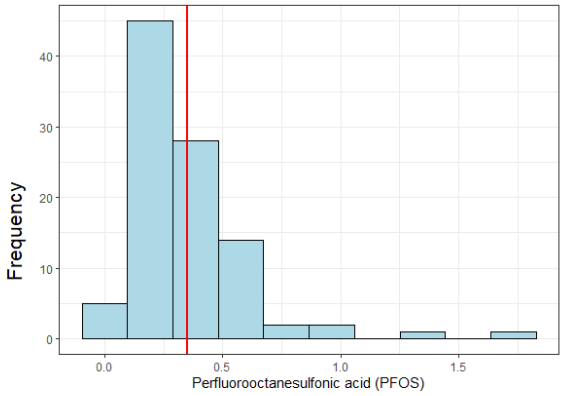
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue

Rosner Test Results

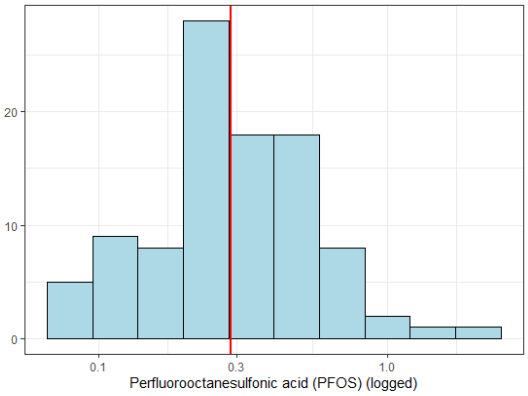
Rosner test confirmed 1 outliers.

Attachment E-2 Outlier Testing Figures – 2-12 Inches



NYSDEC Background Study for Per- and Polyfluoroalkyl Substances (PFAS) in Soil, Habitat 2-12 inches

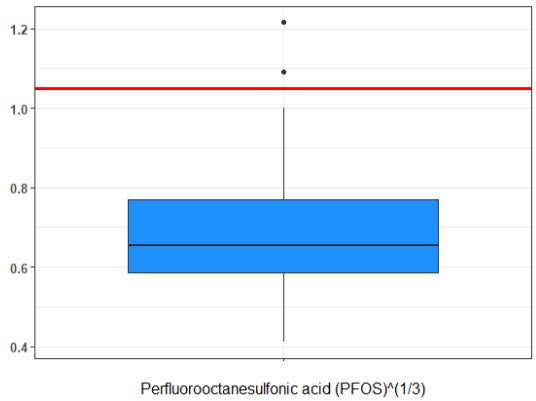
2025-02-14



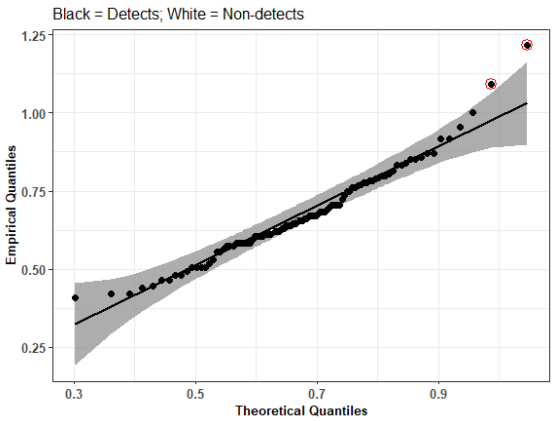
Perfluorooctanesulfonic acid (PFOS)

Distribution

The identified distribution is Gamma. A gamma-transform will applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 3.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

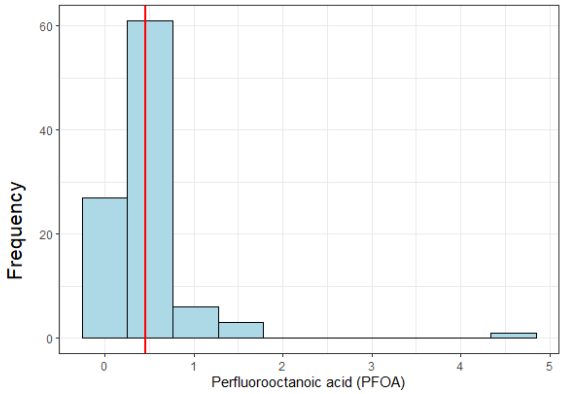
Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

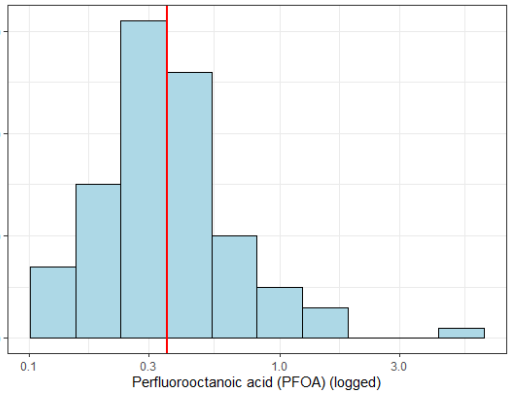
QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were gamma-transformed

Rosner Test Results



Rosner test confirmed 1 outliers.

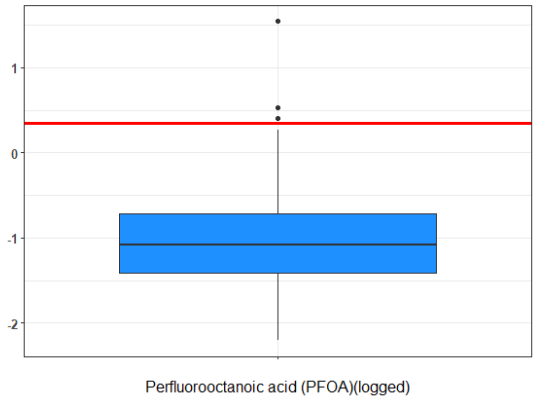
Habitat Outlier Testing 2-12 inches



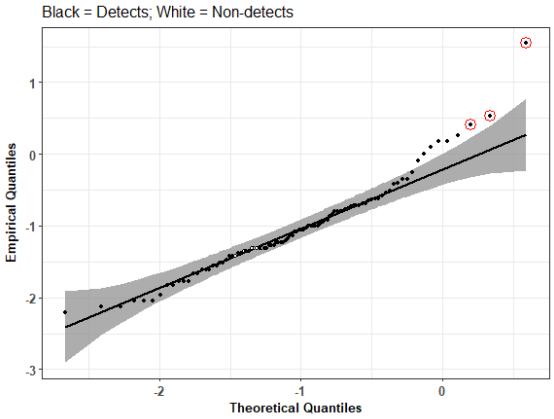
Perfluorooctanoic acid (PFOA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 6.



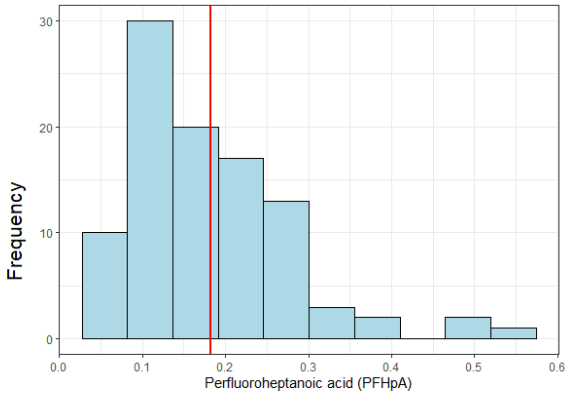
Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

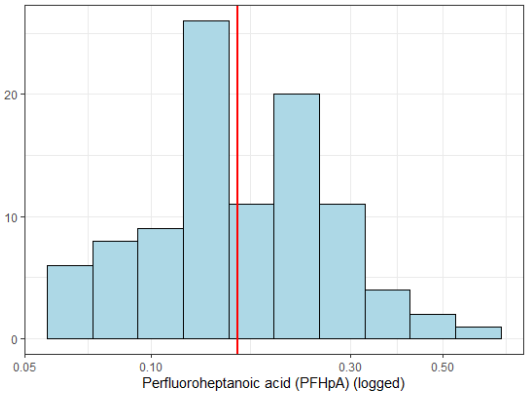
The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed



Rosner Test Results

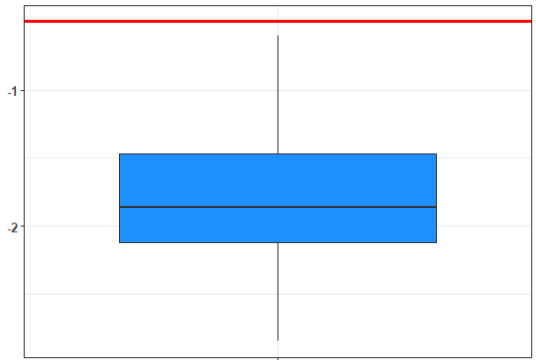
Rosner test confirmed 1 outliers.



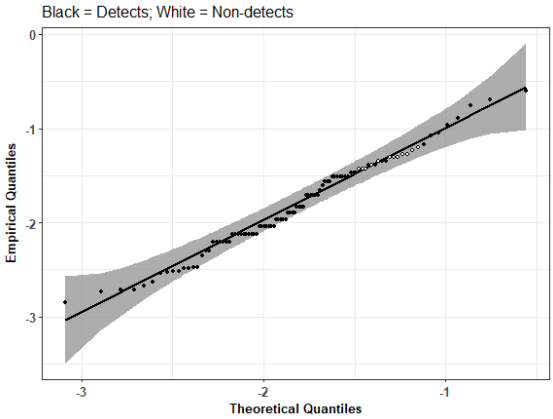
Perfluoroheptanoic acid (PFHpA)

Distribution

The identified distribution is Lognormal. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 12.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

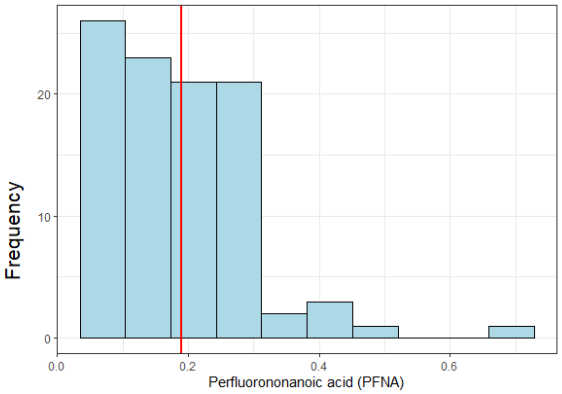
Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

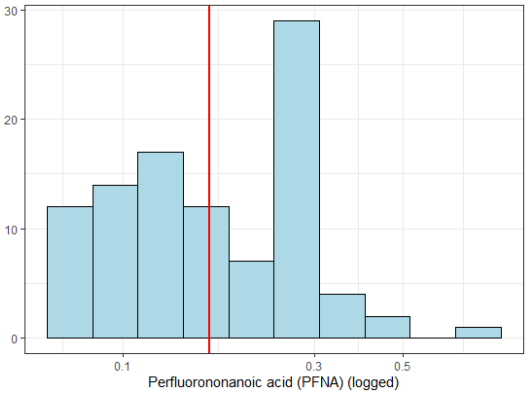
QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed

Rosner Test Results



Confirmed No Outliers.

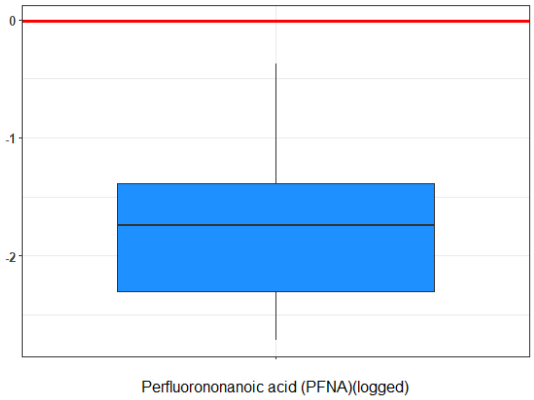
Habitat Outlier Testing 2-12 inches



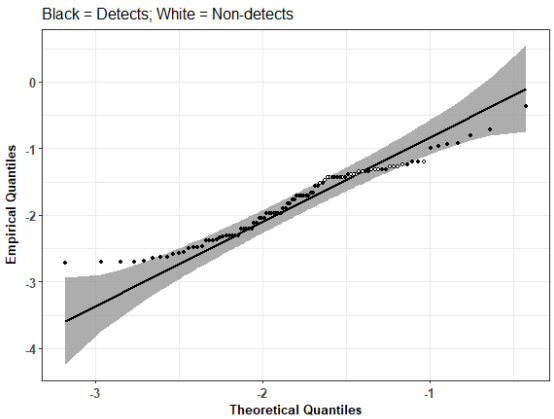
Perfluorononanoic acid (PFNA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 18.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

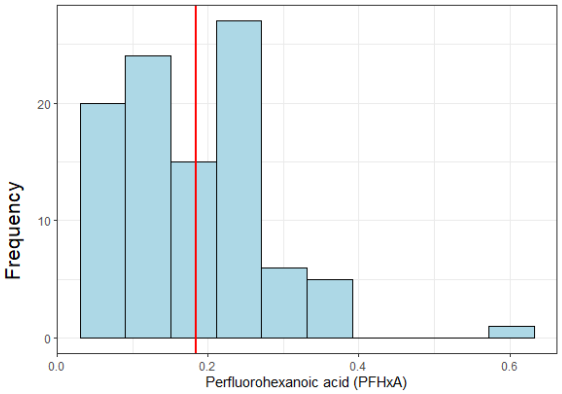
Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

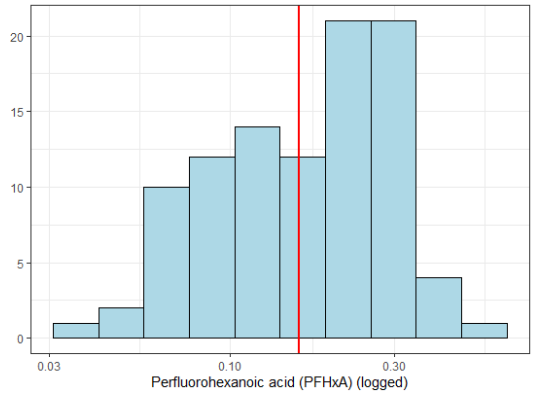
QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed

Rosner Test Results



Confirmed No Outliers.

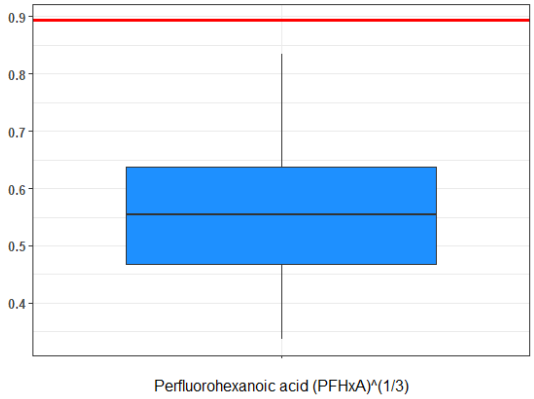
Habitat Outlier Testing 2-12 inches



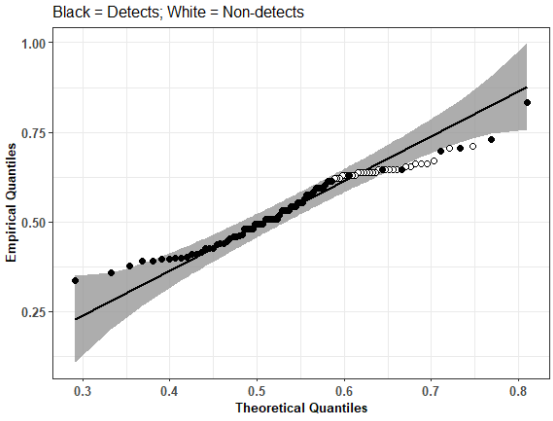
Perfluorohexanoic acid (PFHxA)

Distribution

The identified distribution is Gamma. A gamma-transform will applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 28.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

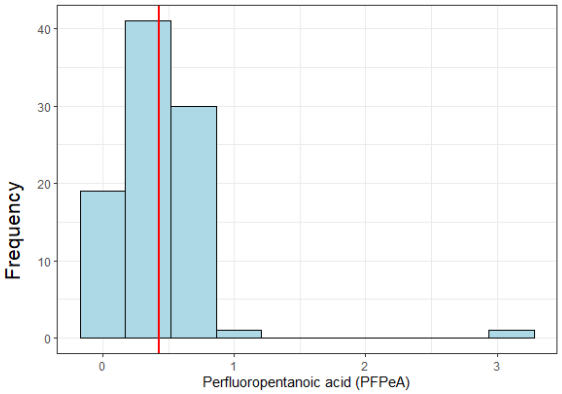
Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

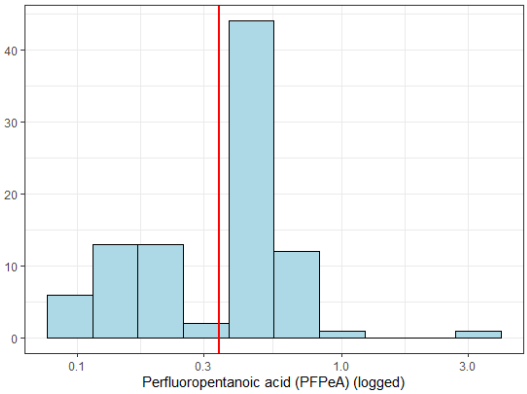
QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were gamma-transformed

Rosner Test Results



Confirmed No Outliers.

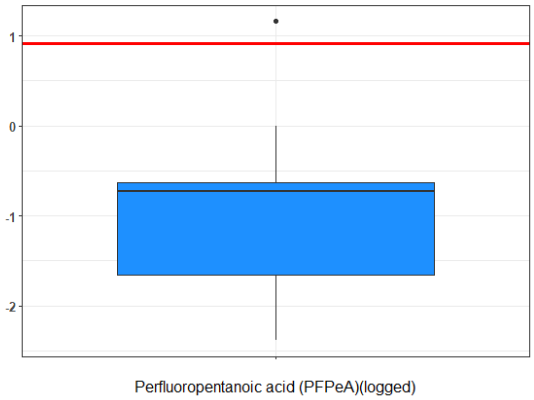
Habitat Outlier Testing 2-12 inches



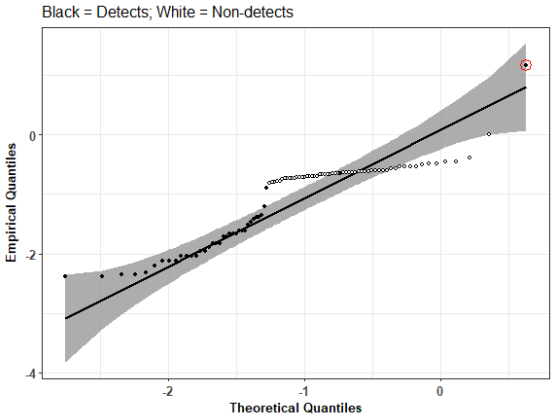
Perfluoropentanoic acid (PFPeA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 92
Number of non-detects: 55.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

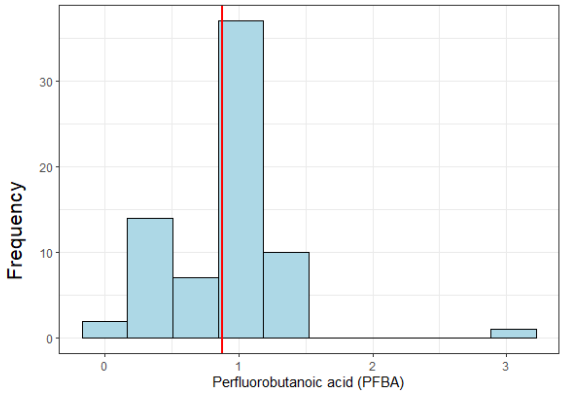
Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

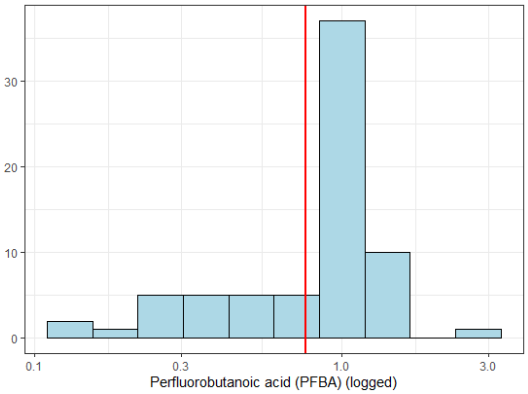
QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed

Rosner Test Results



Rosner test confirmed no outliers.

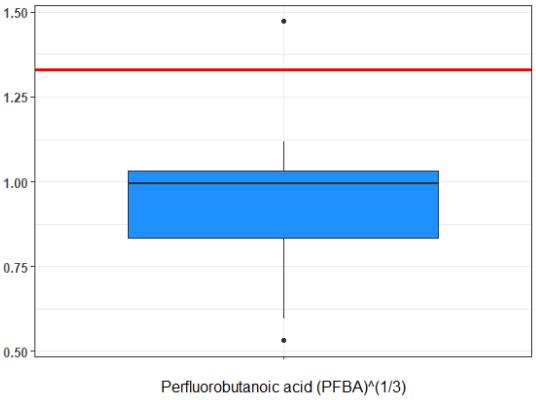
Habitat Outlier Testing 2-12 inches



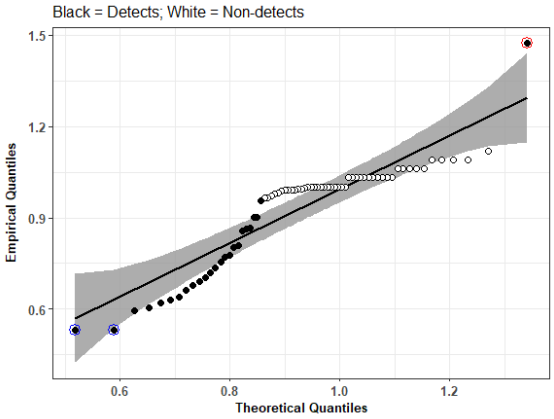
Perfluorobutanoic acid (PFBA)

Distribution

The identified distribution is Gamma. A gamma-transform will applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 71
Number of non-detects: 46.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

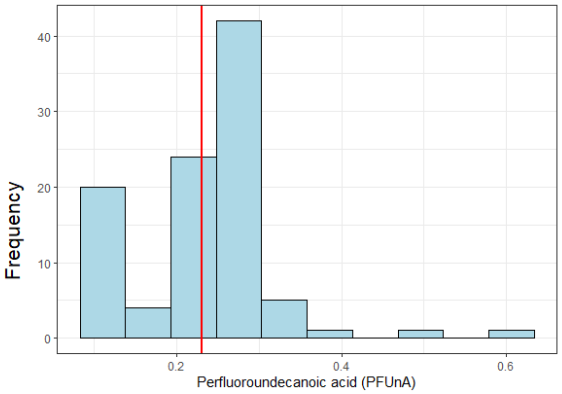
Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

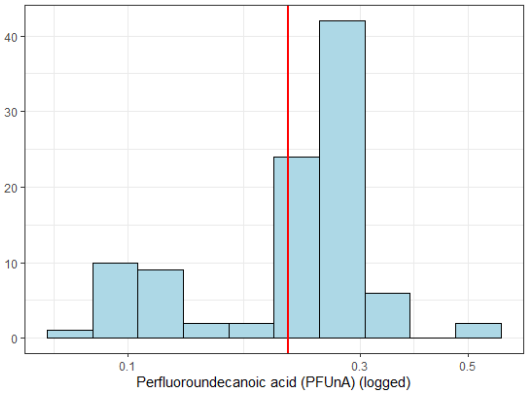
QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were gamma-transformed

Rosner Test Results



Rosner test confirmed no outliers.

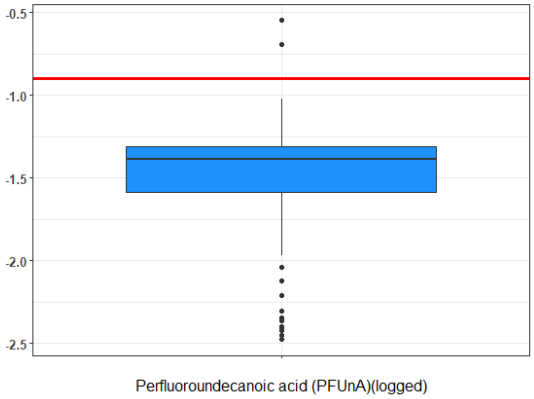
Habitat Outlier Testing 2-12 inches



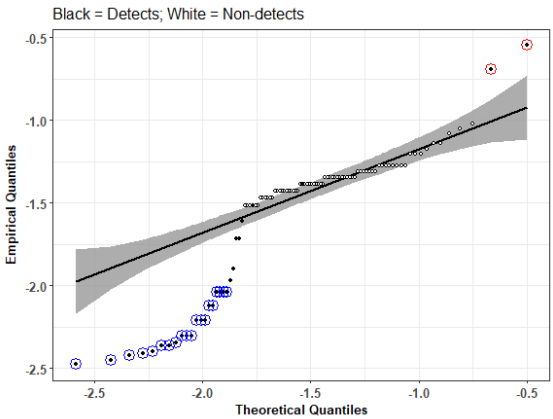
Perfluoroundecanoic acid (PFUnA)

Distribution

The identified distribution is None. A log-transform will be applied for outlier testing.



Frequency histogram of raw data.
Red line indicates arithmetic mean.
Number of samples: 98
Number of non-detects: 69.



Frequency histogram of natural log-transformed data.
Red line indicates geometric mean.

Outlier Testing

Potential Outliers

The red line indicates the upper limit used to identify potential outliers
Upper limit = 75th percentile + 1.5(IQR)

QQ plot: Potential high outliers are circled red, potential low outliers circled blue
Data were log-transformed

Rosner Test Results

Rosner test confirmed 2 outliers.

	95% Chebyshev UPL	5.834		99% Percentile	6.2
	95% USL	6.2			

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	96	95% UTL with95% Coverage	1.7
Approx, f used to compute achieved CC	1.684	Approximate Actual Confidence Coefficient achieved by UTL	0.873
Approximate Sample Size needed to achieve specified CC	93	95% UPL	0.783
95% USL	1.7	95% KM Chebyshev UPL	1.504

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.265

DL/2 is not a Recommended Method. DL/2 provided for comparisons and historical reasons.

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	96	95% UTL with95% Coverage	2
Approx, f used to compute achieved CC	1.684	Approximate Actual Confidence Coefficient achieved by UTL	0.873
Approximate Sample Size needed to achieve specified CC	93	95% UPL	0.902

95% USL	2.6	95% KM Chebyshev UPL	1.797

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	93	95% UTL with95% Coverage	0.99
Approx, f used to compute achieved CC	1.632	Approximate Actual Confidence Coefficient achieved by UTL	0.859
Approximate Sample Size needed to achieve specified CC	93	95% UPL	0.856
95% USL	1.2	95% KM Chebyshev UPL	1.268

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	91	95% UTL with95% Coverage	2.6
Approx, f used to compute achieved CC	1.596	Approximate Actual Confidence Coefficient achieved by UTL	0.85
Approximate Sample Size needed to achieve specified CC	93	95% UPL	1.89
95% USL	3	95% KM Chebyshev UPL	2.734

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	96	95% UTL with95% Coverage	1.7
Approx, f used to compute achieved CC	1.684	Approximate Actual Confidence Coefficient achieved by UTL	0.873
Approximate Sample Size needed to achieve specified CC	93	95% UPL	1.205
95% USL	4.7	95% KM Chebyshev UPL	2.745

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers

and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Nonparametric Distribution Free Background Statistics

Data appear to follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	96	95% UTL with95% Coverage	0.39
Approx, f used to compute achieved CC	1.684	Approximate Actual Confidence Coefficient achieved by UTL	0.873
Approximate Sample Size needed to achieve specified CC	93	95% UPL	0.35
95% USL	0.58	95% KM Chebyshev UPL	0.504

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Nonparametric Distribution Free Background Statistics

Data do not follow a Discernible Distribution

Nonparametric Upper Limits for BTVs(no distinction made between detects and nondetects)

Order of Statistic, r	96	95% UTL with95% Coverage	0.5
Approx, f used to compute achieved CC	1.684	Approximate Actual Confidence Coefficient achieved by UTL	0.873
Approximate Sample Size needed to achieve specified CC	93	95% UPL	0.341
95% USL	0.58	95% KM Chebyshev UPL	0.441

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Approximate Sample Size needed to achieve specified CC	93	95% UPL	0.32
95% USL	0.36	95% KM Chebyshev UPL	0.293

Note: The use of USL tends to yield a conservative estimate of BTV, especially when the sample size starts exceeding 20.
Therefore, one may use USL to estimate a BTV only when the data set represents a background data set free of outliers and consists of observations collected from clean unimpacted locations.
The use of USL tends to provide a balance between false positives and false negatives provided the data represents a background data set and when many onsite observations need to be compared with the BTV.

Attachment E-7 ProUCL Outputs – Distribution Testing for Combined 0-2 and 2-12 Inch Data Set

Goodness-of-Fit Test Statistics for Data Sets with Non-Detects
