1.0 INTRODUCTION

This *Quarterly Groundwater Monitoring Report* (Report) has been prepared by P.W. Grosser Consulting Engineer & Hydrogeologist, DPC (PWGC) on behalf of Roanoke Sand & Gravel Corp. (herein referred to as "the Mine" or "the Site"). The overall objective of this report is to document routine groundwater monitoring and sampling activities for the second quarter of 2025 (April 2025-June 2025) in accordance with Mined Land Reclamation Permit (MLRP) 1-4722-00611/00005 and the approved Groundwater Monitoring Well Sampling Procedure Plan (GMWSPP) developed by PWGC dated June 2023.

The current MLRP authorizes continuation of below-water-table mining within the permitted excavation area to a maximum depth of 140 feet below the groundwater table, as well as the continued excavation of sand and gravel to form a 172.2-acre lake on the property. A permit renewal and minor modification was issued in June 2025, authorizing continuation of operations as approved in the Request for Mining Permit Modification (RMPM) prepared by PWGC (June 2010) and renewed in 2016.

This Report documents groundwater elevation measurements and sampling activities performed on June 9 and 10, 2025, in accordance with the approved GMWSPP. As per the plan, groundwater monitoring and sampling are conducted quarterly at the following wells: 2A, 2B, 3A, 3B, 4A, 4B, 5A, 5B, 6A, 6B, 7A, 7B, 8A, 8B, 9A, 9B, 10A, and 10B.

2.0 SITE DESCRIPTION

2.1. Past and Present Land Use

The Mine is located at the intersection of Miller Place-Yaphank Road and Rocky Point Road, west of William Floyd Parkway and north of Route 25, in Middle Island, New York. The Project area is separated from adjacent land uses by a vegetated buffer zone. Refer to **Figure 1 – Vicinity Map**.

Historical aerial photographs indicates the site has been utilized for mining purposes since at least 1962. Vegetated berms and buffers are maintained to provide visual and acoustical screening. A perimeter fence is maintained for site security.

Sand and gravel are excavated with an electrically powered wet dredge and/or Skyline Dredge Excavator (SDE). Materials are conveyed to the processing area, screened, sorted, stockpiled, and then loaded for delivery to residential, commercial, and municipal construction projects.

Surrounding land uses include residential properties, undeveloped woodland, and commercial properties. The nearest residence is approximately 380 feet west of the Mine. An active mining facility, Coram Materials, is located approximately 4,340 feet northwest of the site.

3.0 GROUNDWATER MONITORING PLAN COMPLIANCE

Routine groundwater monitoring has been performed at the Mine since at least 2006. A Supply Well Protection Management Plan prepared by PWGC (2008) in support of a Spill Prevention & Response Plan documented installation of seven (7) dual-level monitoring well clusters. Under the permit in effect at that time, samples were analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Sampling was performed quarterly in active working zones (dredging active) and biannually in inactive zones (dredging complete).

Per the 2016 permit application, groundwater samples were analyzed for VOCs, SVOCs, and total metals, with baseline analyses for PCBs, pesticides, and herbicides collected in March 2020. The Groundwater Monitoring Well Sampling Procedure Plan (GMWSPP) submitted in December 2020 proposed routine analyses for TCL VOCs, TCL SVOCs, and total/dissolved metals. This plan has since been superseded by the June 2023 GMWSPP, developed voluntarily to align with the Groundwater Study at Long Island Mines requirements.

The groundwater monitoring program implemented during this quarter, and documented herein, consisted of the following activities:

Monitoring Program	Frequency
Inspection condition of active groundwater monitoring wells	Quarterly
Collect groundwater measurements from active groundwater monitoring wells	Quarterly
Collect groundwater samples from the active groundwater monitoring wells	Quarterly

4.0 GROUNDWATER MONITORING AND SAMPLING

Groundwater monitoring and sampling for this reporting period were performed by two PWGC hydrogeologists on June 9 and 10, 2025.

4.1. Groundwater Monitoring Network

Eighteen (18) monitoring wells (2A, 2B, 3A, 3B, 4A, 4B, 5A, 5B, 6A, 6B, 7A, 7B, 8A, 8B, 9A, 9B, 10A, and 10B) comprise the network (see **Figure 2 – Monitoring Well Locations**). The network is configured to monitor upgradient and downgradient conditions to provide early indication of potential groundwater impacts related to mining operations. All wells were inspected during the June 2025 event and were clear, accessible, and in good overall condition.

4.2. Groundwater Level Gauging

4.2.1. Groundwater Level Gauging Procedure

Depth to water (DTW) measurements were obtained on June 10, 2025. Well logs are included as **Attachment A** and field notes as **Attachment B**. An interface probe was lowered slowly into each well to avoid splashing; no non-aqueous phase liquid (NAPL) was observed. Due to dedicated pump installations, depth-to-bottom (DTB) was not measured. DTW measurements were taken from the top of casing (TOC) at the compass-north side or designated notch. The interface probe was decontaminated between wells. The instrument reads to 0.01 foot. Groundwater flow direction was interpreted from the resulting elevations.

4.2.2. Groundwater Level Gauging Results

Data collected on June 10, 2025 were used to generate groundwater elevation contour maps for shallow and deep intervals (**Figure 3 – Groundwater Contours June 2025 Shallow** and **Figure 4 – Groundwater Contours June 2025 Deep**).

Summary of June 2025 Groundwater Elevations (ft AMSL, NAVD 88):
Shallow wells: 51.07 (8A) to 48.87 (7A)
Deep wells: 51.09 (8B) to 48.89 (7B)

Flow in both shallow and deep zones was interpreted to be southeasterly, consistent with previous events.

Groundwater monitoring was conducted at the designated site wells to evaluate water level elevations and hydraulic gradients across the property. The table below summarizes the well identification, location, and gauging results obtained during the most recent monitoring event:

4.3. Groundwater Monitoring Well Sampling

Groundwater sampling is performed quarterly (March, June, September, and December). For this period, sampling occurred on June 9 and 10, 2025. Activities followed the MLRP (6/20/2025) and the GMWSPP (June 2023).

4.3.1. Groundwater Monitoring Well Sampling Procedure

Prior to 2024, samples were collected using Geotech Geosub 2 portable submersible pumps with dedicated polyethylene tubing. To improve efficiency and reduce waste, dedicated submersible pumps were installed with NYSDEC approval. On March 8, 2024, PWGC installed Proactive Sample Champ XL dedicated submersible pumps at the approximate mid-screen depth in each well with dedicated HDPE tubing; four (4) equipment blanks were collected prior to installation.

The Proactive Sample Champ XL submersible pump wire lengths are listed for each well in the following table:

Table 2 – Dedicated Pump Lengths

Well ID	Wire Length (ft)
2A	40
2B	86
3A	38
3B	86
4A	17
4B	40
5A	22
5B	96
6A	94

6B	103
7A	94
7B	150
8A	23
8B	124
9A	23
9B	115
10A	22
10B	141

Wells were purged at approximately **300 mL/min**, and two **Horiba U-52** meters with flow-through cells recorded field parameters (turbidity, pH, temperature, dissolved oxygen, specific conductance, ORP) every **3–5 minutes**. Stabilization is achieved when three (3) consecutive measurements are within the following limits:

- Turbidity (10% for values greater than 5 NTUs; if three turbidity values are less than 5 NTUs, consider the values as stabilized),
- Dissolved oxygen (10% for values greater than 0.5 mg/L, if three dissolved oxygen values are less than 0.5 mg/L, consider the values as stabilized),
- Specific conductance (3%),
- Temperature (3%),
- pH (± 0.1 unit),
- Oxidation/reduction potential (±10 millivolts).

Samples were collected upon stabilization of field parameters using the above criteria.

4.3.2. Groundwater Monitoring Well Analytical Results

Samples were analyzed by Pace Analytical for:

- VOCs (EPA 8260D)
- SVOCs (EPA 8270E)
- Total and dissolved metals (EPA 200.7)
- Total dissolved solids (TDS) (SM 2540)
- Ammonium (EPA 711)
- Cations/Anions (various standard methods)

Results were compared to 6 NYCRR Part 703.5 Class GA standards and TOGS 1.1.1 criteria. Summary tables are provided in **Attachment C**; laboratory reports in **Attachment D**.

Exceedances – Metals (Total):

- Chromium (total) AWQS 50 µg/L: 148 µg/L @ 4B
- Iron (total) AWQS 300 µg/L: 412 @ 2A; 2,130 @ 4B; 1,160 @ 8B; 568 @ 10B
- Manganese (total) AWQS 300 µg/L: 2,290 @ 7A

Exceedances – Metals (Dissolved):

- Antimony (diss.) AWQS 3 µg/L: 11.7 @ 5B; 7.5 @ 6A (total antimony not reported at 5B/6A)
- Iron (diss.) AWQS 300 µg/L: 932 @ 8B; 469 @ 10B
- Manganese (diss.) AWQS 300 µg/L: 2,250 @ 7A

Exceedances – SVOCs:

- Indeno(1,2,3-cd)pyrene AWQS 0.002 µg/L: 0.07 µg/L (J) @ 3B (estimated; >MDL, <RL)

Exceedances – Anions (Guidance):

- Sulfide GV 0.05 mg/L: 0.4 mg/L (J)(H1)(M1) @ 8A

VOCs were not reported at concentrations that exceed their respective AWQS standards.

Total iron concentrations were reported above their respective AWQS standards at monitoring wells 2A, 4B, 8B and 10B. Although total iron was reported at a concentration that exceeded the AWQS standard at wells 2A and 4B, dissolved iron concentrations were reported at concentrations below its reporting limit (50 ug/L). The elevated total iron concentration reported at 2A and 4B may be attributed to suspended sediment that was filtered out of solution by the 0.45-micron in-line filter.

The concentrations of dissolved iron reported at monitoring well 8B and 10B and total/dissolved manganese reported at 7A exceeded their AWQS standards established in TOGS 1.1.1. Iron and manganese are naturally occurring in soil and groundwater across Long Island and are considered secondary drinking water contaminants and generally not a risk to human health. While the Environmental Protection Agency (EPA) established secondary drinking water standards for these metals to assist public water systems in managing their drinking water for aesthetic consideration such as taste, color, and odor, the EPA does not enforce these.

Dissolved antimony was reported at concentrations that exceeded its AWQS standard at wells 5B and 6A. Total antimony was not reported 5B and 6A.

Indeno(1,2,3-cd)pyrene was reported at a concentration that exceeded its AWQS standard at monitoring well 3B. These concentrations were flagged with a J-qualifier, indicating that the target compound was detected at or above the minimum detection limit (MDL) but below the reporting limit (RL). As such, the reported value is considered an estimate, since it falls below the instrument's ability to quantify with full accuracy. This compound is known as a polycyclic aromatic hydrocarbon (PAH), which is a known byproduct of fossil fuel combustion. This is the first time that Indeno(1,2,3-cd)pyrene was reported at monitoring well 3B. Indeno(1,2,3-cd)pyrene was reported at monitoring well 2B and 3A in Quarter 4 2024 and at monitoring well 6B in Quarter 1 2025.

Sulfide exceeded its AWQS guidance value at monitoring well 8A. The established guidance value for total sulfides is specifically for hydrogen sulfide, which was not specifically analyzed by the laboratory. The laboratory result was accompanied by an M1 qualifier, meaning that the matrix spike recovery performed on the 8A MS/MSD samples exceeded the QC limits, however the batch was accepted based on the laboratory control sample (LCS). The reported sulfide concentration at upgradient monitoring well 8A suggests potential migration onto the site from an upgradient source.

The stabilization parameters at the time of collection at 8A (ORP-186 mV, DO-5.07 mg/L) and the fact that iron and manganese were reported below the AWQS standard do not support the notion that sulfate reducing bacteria are responsible for this reported concentration or that reduction oxidation (redox) conditions occur at this well location.

4.3.3. Quality Assurance/Quality Control Procedures

In accordance with the NYSDEC guidance document, QA/QC analysis was performed for this sampling event. The following QA/QC samples were included in the analysis:

- **Duplicate Sample-** A blind duplicate, identified as DUP001 on the chain of custody and lab results, was collected as a duplicate sample associated with parent well 3A.
- **MS/MSD-** A matrix spike/matrix spike duplicate, identified as 8A MS/MSD, was collected from well 8A.
- **Trip Blanks-** One (1) trip blank was present in a sample collection cooler containing bottle ware for volatile organic compounds (VOCs) provided by Pace Analytical Services, LLC (Pace Analytical), which is recognized as a New York State Environmental Laboratory Approval Program (ELAP) certified analytical laboratory. The trip blank was maintained in its designated cooler from bottle ware drop off at the PWGC office, located in Bohemia, NY, through sample pickup by a Pace Analytical courier at the PWGC office.

4.3.4. Data Usability Evaluation

The overall objective of the QA/QC program for this groundwater sampling event is to ensure that all procedures produce data of known, documented, and defensible quality. Key QA/QC parameters include precision, accuracy, representativeness, completeness, and comparability. The purpose of the QA/QC measures established for this site is to verify the integrity of all field and analytical activities and to confirm that the resulting data are of the type and quality required to support their intended use.

The QA/QC program for this sampling event included the preparation and analysis of a trip blank for each cooler containing volatile organic compound (VOC) samples, one (1) blind duplicate sample, and the collection and evaluation of a matrix spike (MS) and matrix spike duplicate (MSD). One trip blank was analyzed during this event, and no VOCs were detected above method reporting limits. The blind duplicate was collected from monitoring well 3A to evaluate field precision, and the MS/MSD samples were collected from monitoring well 8A to assess analytical accuracy and precision within the laboratory. The results of these QA/QC samples indicate that sample handling, analytical performance, and data quality objectives were met for this sampling event.

The majority of analytical results from the blind duplicate sample were consistent with those obtained from the parent sample (monitoring well 3A). Both samples were collected in quick succession using a dedicated pump, with pump placement and discharge rate maintained throughout collection to minimize variability. As such, sampling methodology is not considered to have influenced the analytical results. The consistency between the parent and duplicate sample results demonstrates acceptable field precision and indicates that the sampling and analytical procedures were properly implemented and produced reliable data.

As per the provided case narrative issued in the laboratory report, the following details were provided in reference to the analyses of Total Metals:

- The WG2082283-7/-8 MS/MSD recoveries performed on L2536247-12 are outside the acceptance criteria for potassium (134%/136%). A post digestion spike was performed and yielded an unacceptable recovery of 131%. The serial dilution recovery was not applicable therefore, this element fails the matrix test and the result reported in the native sample should be considered estimated.

The following details were provided in reference to the analyses of Dissolved Metals:

- L2536247-01 and -09: Dissolved results are greater than Total results for Antimony. The sample containers were verified as being labeled correctly by the laboratory.
- L2536247-02, -06, and -07: The dissolved result is greater than the total result for zinc. The sample containers were verified as being labeled correctly by the laboratory, and aliquots were analyzed from each bottle, confirming the original results.
- The WG2082734-3/-4 MS/MSD recoveries performed on L2536247-12 are outside the acceptance criteria for potassium (130%/131%) and silver (128%/128%). A post digestion spike was performed and was within acceptance criteria.

The following details were provided in reference to the analyses of SVOCs:

- The WG2078864-1 Method Blank associated with L2536247-01 through -18 and -20 has a concentration above the reporting limit for naphthalene. Since the associated sample concentrations are non-detect to the RL for this target analyte, no corrective action is required. Any results reported below the reporting limit are qualified with a "B".

The following details were provided in reference to the analyses of anions by ion chromatography:

- The WG2081862-3/-4 MS/MSD recoveries performed on L2536247-12 are outside the acceptance criteria for bromide (74%/72%); however, the associated LCS recovery is within criteria. No further action was taken.

The following details were provided in reference to the analyses of Total Dissolved Solids (TDS):

- The WG2079011-3 Laboratory Duplicate RPD performed on L2536247-12 is outside the acceptance criteria for solids, total dissolved (18%) due to the non-homogeneous nature of the native sample. The WG2079011-4 Laboratory Duplicate RPD performed on L2536247-13 is outside the acceptance criteria for solids, total dissolved (34%) due to the non-homogeneous nature of the native sample.

The following details were provided in reference to the analyses of sulfides:

- The samples were analyzed within the method required hold times with any exceptions noted below.
    - H1: Analysis conducted outside the EPA method holding time.
        - DUP001 (Lab ID: 70361011019)

5.0 DEVIATIONS FROM THE APPROVED WORKPLAN

5.1. Sample Collection/ Laboratory Analysis Deviations

Upon review of analytical results from Alpha Analytical / Pace Analytical, PWGC identified that certain analytes did not meet the reporting limits specified in Appendix 4 of the Groundwater Study at Long Island Mines Workplan (NYSDEC, June 2022). These deviations reflect laboratory reporting thresholds and do not indicate analytical error or sample handling deficiencies. All associated results remain usable for groundwater quality evaluation because concentrations were below method detection limits or within acceptable ranges for environmental assessment

Although these analyses did not meet the specified reporting limits for the listed analytes, the majority of the reported results met or were below the applicable AWQS established in NYSDEC TOGS 1.1.1. Exceedances relative to AWQS (because the RL exceeds the standard) were limited to the analytes listed below.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Groundwater monitoring and sampling for this reporting period were performed by PWGC on June 9 and 10, 2025.

Monitoring wells were observed to be properly secured, maintained, and readily accessible at the time of sampling.

Groundwater elevations measured in June 2025 ranged from 51.07 feet AMSL (NAVD 88) at well 8A to 48.87 feet AMSL (NAVD 88) at well 7A in the shallow well network, and from 51.09 feet AMSL (NAVD 88) at well 8B to 48.89 feet AMSL (NAVD 88) at well 7B in the deep wells. Both shallow and deep groundwater flow were directed southeastward during this monitoring period.

The total iron concentration exceeded the applicable Ambient Water Quality Standard (AWQS) at monitoring wells 2A and 4B; however, the dissolved iron concentrations at these locations were below the corresponding AWQS. Elevated total and dissolved iron concentrations were also observed at wells 8B and 10B, and total and dissolved manganese exceeded the AWQS at well 7A. Iron and manganese are secondary drinking water contaminants associated with aesthetic rather than health-based criteria.

Indeno(1,2,3-cd)pyrene was reported at monitoring well 3B and qualified with a “J” laboratory flag, indicating that the compound was detected above the method detection limit (MDL) but below the reporting limit (RL) and should therefore be considered an estimated value.

Sulfide exceeded its AWQS guidance value at monitoring well 8A. As this well is located upgradient of the active mining area, the elevated sulfide concentration likely reflects migration from an upgradient source rather than site-related activity.

No volatile organic compounds (VOCs) were detected at concentrations exceeding Class GA groundwater standards. The remaining cations, anions, and total dissolved solids (TDS) do not have applicable groundwater standards for comparison.

Historical groundwater monitoring results continue to indicate that mining operations have not adversely impacted groundwater quality at the site. Ongoing groundwater monitoring will continue to evaluate water quality conditions both within and immediately downgradient of the excavation area. Long-term results from the monitoring network demonstrate that the existing operation has not introduced contaminants into the underlying aquifer system.

Given the elevated turbidity observed during well purging and discharge, and recognizing that the wells are equipped with dedicated pumps intended to minimize screen agitation, PWGC recommends that Roanoke Sand & Gravel consider redevelopment of the following wells: 2A, 3A, 3B, 4B, 8B, and 9B. Redevelopment would likely improve hydraulic efficiency and reduce suspended solids during subsequent sampling events.
